07 84 00 - Firestopping

07 92 00 - Joint Sealants

07 95 00 - Preformed Traffic Durable Sealant Systems

DIVISION 08 – OPENINGS

08 08 00 - Commissioning of Openings

08 11 13 - Hollow Metal Doors and Frames

08 14 16 - Flush Wood Doors

08 31 13 - Access Doors and Frames

08 36 16 - Single Panel Doors

08 38 00 - Traffic Doors

08 41 13 - Aluminum Framed Entrances and Storefronts

08 42 45 - Sliding Aluminum Doors

08 44 13 - Glazed Aluminum Curtainwalls

08 71 00 - Door Hardware

08 81 00 - Glazing

08 87 13 - Solar Control Film

DIVISION 09 – FINISHES

09 05 61 - Common Work Results for Flooring Preparation

09 21 16 - Gypsum Board Assemblies

09 30 00 - Tiling

09 30 01 - Tiling Schedule

09 51 13 - Acoustic Panel Ceilings

09 51 14 - Acoustic Panel Ceilings Schedule

09 54 23 - Linear Metal Ceilings

09 65 19 - Resilient Flooring

09 65 20 - Resilient Flooring Schedule

09 65 66 - Resilient Athletic Sports Surface

09 67 23 - Resinous Flooring

09 68 13 - Tile Carpeting

09 68 14 - Tile Carpeting Schedule

09 72 00 - Wall Coverings

09 72 01 - Wall Coverings Schedule

09 75 00 - Interior Stone

09 75 01 - Interior Stone Schedule

09 84 30 - Sound Absorbing Wall and Ceiling Units

09 91 00 - Painting

09 91 01 - Painting Schedules

DIVISION 10 – SPECIALTIES

10 14 00 - Signage

10 21 13.16 - Plastic Laminate Toilet Compartments

10 22 36 - Coiled Wire Fabric and Attachment Systems

10 23 26 - Glass Partition Systems

10 28 13 - Toilet and Bath Accessories

10 28 19 - Glass Shower Doors

10 44 00 - Fire Protection Specialties

DIVISION 11 – EQUIPMENT

11 08 00 - Commissioning of Equipment

11 21 73 - Commercial Laundry Equipment

11 40 00 - Food Service Equipment

11 66 00 - Athletic Equipment

DIVISION 12 – FURNISHINGS

12 36 00 – Solid Surfacing Countertops and Sills

12 56 90 - Spa Furniture

12 92 00 - Artificial Plants/ Green Walls

DIVISION 13 – SPECIAL CONSTRUCTION

13 08 00 - Commissioning of Special Construction

13 11 13 - Below Grade Swimming Pools

13 11 14.5 – Shotcrete for Pools

13 11 15 - Swimming Pool Finishes

13 11 16 - Swimming Pool Piping & Valves

13 11 46 - Swimming Pool Equipment and Accessories

13 14 13 - Waterslides

13 24 16 - Saunas

13 48 13 - Manufactured Sound and Vibration Control Components

DIVISION 14 – CONVEYING EQUIPMENT

14 08 00 - Commissioning of Conveying Systems

14 21 50 - MRL Electric Traction Elevators

DIVISION 21 – FIRE SUPPRESSION

21 01 00 - General Provisions for Fire Suppression

21 05 00 - Common Work Results for Fire Suppression

21 05 29 - Hangers and Supports for Fire Suppression

21 05 48 – Vibration and Seismic Controls for Fire Suppression Piping and Equipment

21 05 53 - Identification for Fire Suppression Piping and Equipment

21 08 00 - Commissioning of Fire Suppression Systems

21 13 13 - Wet-Pipe Fire Sprinkler Systems

DIVISION 22 – PLUMBING

22 05 00 - Common Work Results for Plumbing

22 05 23 - General-Duty Valves for Plumbing

22 05 29 - Hangers and Supports for Plumbing and Equipment

22 05 48 – Vibration and Seismic Controls for Plumbing and Equipment

22 05 53 - Identification for Plumbing and Equipment

22 05 93 – Testing, Adjusting, and Balancing for Plumbing

22 07 19 – Plumbing Piping Insulation

22 08 00 - Commissioning of Plumbing Systems

22 11 16 - Domestic Water Piping

22 11 19 - Domestic Water Piping Specialties

22 11 23.21 – Inline, Domestic Water Pumps

22 13 16 - Sanitary Waste and Vent Piping

22 13 19 - Sanitary Waste Piping Specialties

22 14 14 - Storm Drainage Piping

22 14 23 - Storm Drainage Piping Specialties

22 14 29 - Sump Pumps

22 31 00 – Domestic Water Softeners

22 34 00 – Fuel-Fired, Domestic Water Heaters

22 42 00 – Commercial Plumbing Fixtures

22 52 13 - Steam Room Generators

DIVISION 23 – HEATING, VENTILATING AND AIR CONDITIONING (HVAC)

23 05 00 - Common Work Results for HVAC

23 05 23 - General-Duty Valves for HVAC

23 05 29 - Hangers and Supports for HVAC

23 05 48 – Vibration and Seismic Controls for HVAC

23 05 53 - Identification for HVAC

23 05 93 - Testing, Adjusting, and Balancing for HVAC

23 07 13 – Duct Insulation

23 07 16 – HAVC Equipment Insulation

23 07 19 – HVAC Piping Insulation

23 08 00 - Commissioning of HVAC

23 09 34 – Variable-Frequency Motor Controllers

23 11 23 – Facility Natural-Gas Piping

23 21 13 - Hydronic Piping

23 21 16 – Hydronic Piping Specialties

23 21 23 - Hydronic Pumps

23 31 13 - Metal Ducts

23 31 16 - Nonmetal Ducts

23 33 00 – Air Duct Accessories

23 34 23 – HVAC Power Ventilators

23 36 00 - Air Terminal Units

23 37 13 – Air Diffusers, Registers, Grilles and Louvers

23 51 16 - Breechings, Chimneys and Stacks

23 52 16 - Condensing Boilers

23 57 00 - Hydronic Heat Exchangers

23 72 23.29 – Packaged, Outdoor, Fixed Plate Energy Recovery Units

23 74 16.13 - Packaged, Large-Capacity, Rooftop Air-Conditioning Units

DIVISION 25 – INTEGRATED AUTOMATION

25 08 00 - Commissioning of Building Automation Systems

25 10 00 – Building Automation System - Network Systems

25 20 00 - Building Automation System - Instrumentation

25 90 00 - Building Automation System - Sequence of Operations

DIVISION 26 – ELECTRICAL

26 01 00 - General Electrical Requirements

26 05 00 – Common Work Results for Electrical

26 05 19 - Low-Voltage Electrical Power Conductors and Cables

26 05 23 – Control-Voltage Electrical Power Cables

26 05 26 - Grounding and Bonding for Electrical Systems

26 05 29 - Hangers and Supports for Electrical Systems

26 05 33 – Raceway and Boxes for Electrical Systems

26 05 36 - Cable Trays for Electrical Systems

26 05 43 – Underground Ducts and Raceways for Electrical Systems

26 05 44 – Sleeves and Sleeve Seals for Electrical Raceways and Cabling

26 05 48 - Vibration and Seismic Controls for Electrical Systems

26 05 53 - Identification for Electrical Systems

26 05 74 – Overcurrent Protective Device and Arc-Flash Study

26 08 00 - Electrical Commissioning Requirements

26 09 23 – Distributed Digital Lighting Control System

26 22 00 – Low-Voltage Transformers

26 24 13 – Switchboards

26 24 16 – Panelboards

26 27 13 – Electricity Metering

26 27 26 - Wiring Devices

26 27 26.1 - Wiring Devices Schedule

26 28 13 – Fuses

26 28 16 – Enclosed Switches and Circuit Breakers

26 29 01 – Switchboard and Integrated Low-Voltage Distribution and Controls

26 29 13 – Enclosed Controllers

26 29 23 – Variable-Frequency Motor Controllers

26 33 23 – Central Battery Equipment for Emergency Lighting

26 43 13 – Surge Protection for Low-Voltage Electrical Power Circuits

26 51 00 - Interior Lighting

26 56 00 - Exterior Lighting

DIVISION 27 – COMMUNICATIONS

27 05 10 - Basic Requirements for Communications Systems

27 08 00 - Commissioning of Communications Systems

27 11 00 - Communications Equipment Room Fittings and Pathways Part 1

27 12 00 - Identification for Communications Systems

27 12 50 - Operation, Maintenance, and Warranties for Communications Systems

27 13 00 - Structured Cabling General Requirements

27 13 50 - Structured Cabling for Voice and Data

27 15 00 - Communications Backbone Cabling

27 16 00 - Testing of Communications Systems

27 20 00 - Ambient Sound Distribution and Masking System

27 25 00 - Audio/Visual Systems and Displays

27 41 33 - Broadband Television Distribution System

DIVISION 28 – ELECTRONIC SAFETY AND SECURITY

28 08 00 - Commissioning of Safety and Security Systems

28 10 04 - Access Control Devices and Equipment

28 21 00 - Video Surveillance

28 31 11 - Digital Addressable Fire Alarm System

28 31 19 - Distributed Antenna System (Emergency Response)

28 31 20 - Distributed Antenna System (Internal Communications)

28 31 29 - Area of Refuge/Rescue Assistance Systems

DIVISION 31 – EARTHWORK

31 10 00 - Site Clearing

31 11 23 – Aggregate Base

31 22 13 – Rough Grading – Site

31 22 16 – Fine Grading - Site

31 23 00 - Excavation and Fill

31 23 16 - Excavation

31 23 19 – Dewatering

31 23 23 - Fill

DIVISION 32 – EXTERIOR IMPROVEMENTS

32 12 16 – Asphalt Paving – Superpave Method

32 13 13 - Concrete Paving and Site Elements (Civil)

32 13 14 - Concrete Paving (Landscape)

32 14 00 - Unit Paving

32 17 23 - Pavement Marking

32 18 23 - Synthetic Field Sport Surfacing

32 18 25 - Athletic Surfacing

32 31 13 - Pickleball Fences, Gates and Windscreens

32 31 15 - Pickleball Nets, Posts, Divider Nets and Backdrop Curtains

32 31 19 - Decorative Metal Fences and Gates

32 32 23 – Keystone Concrete Retaining Wall

32 33 00 - Site Furnishings

32 35 15 - Landscape Shade Tops

32 35 16 - Outdoor Shade Structures

32 84 00 - Planting Irrigation

32 92 00 - Turf and Grasses

32 93 00 - Plants

DIVISION 33 - UTILITIES

33 08 00 - Commissioning of Utilities

33 11 16 – Site Water Utility Distribution Piping

33 11 19 – Fire Suppression Utility Water Distribution Piping

33 33 13 – Sanitary Utility Sewerage

33 41 16 – Site Storm Utility Drainage Piping

SECTION 00 31 00
AVAILABLE PROJECT INFORMATION

PART 1 - GENERAL

1.01 DOCUMENT INCLUDES

A. Information that is made available to Bidders is for reference only, and is not intended to be part of the Contract.
   1. **Geotechnical Evaluation Report (Available on Pro Core)**
   2. **Existing Building Drawings (Available on Pro Core)**

1.02 USE OF INFORMATION PROVIDED

A. Bidders are encouraged to review information available to Bidders prior to submitting a Bid, and obtain additional information if Bidder desires.

B. Owner will not consider requests for additional compensation for extra Work due to conditions that reasonably could have been anticipated from the information provided.

1.03 INTERPRETATION

A. Owner supplied information is provided only for information and convenience to Bidders. Owner and Architect disclaim responsibility for accuracy of information that has been prepared by others. Owner and Architect further disclaim responsibility for interpretation of that information by Bidders.

1.04 GEOTECHNICAL DATA

A. ***Owner has engaged services of testing agency indicated below to report on subsurface conditions to provide design information.***

B. ***Borings: Soil data and logs may be available for inspection at office of Owner and Contractor***

C. ***Data Use Limitations: Because sub-surface conditions indicated by borings are sampling in relation to entire construction area, and for other reasons, Owner, Architect, or firm reporting sub-surface conditions based on borings, do not warrant conditions below depths of borings or that strata logged from borings are necessarily typical of entire site.***

D. ***Parties using soil information described in this Document accept full responsibility for its use and obtaining additional soil information that may be required.***

E. ***Extra Payment Limitations: No consideration for extra payment will be given for conditions occurring that could have been anticipated from soil information. If conditions occur resulting in extra Work that could not have been anticipated or reasonably inferred from the soil information, Conditions of the Contract for changes in Work will apply.***

1.05 EXISTING BUILDING DRAWINGS

A. ***Owner has made drawings of the existing building available on the project website (Pro Core).***

B. ***Owner does not warrant conditions of existing building as it currently exists. Drawings are provided for reference only and does not relieve Contractors of obligation to provide field verification.***

C. ***Parties using existing drawings described in this Document accept full responsibility for its use and obtaining additional information that may be required.***

D. ***Extra Payment Limitations: No consideration for extra payment will be given for conditions occurring that could have been anticipated from information provided. If conditions occur resulting in extra Work that could not have been anticipated or reasonably inferred from the information, Conditions of the Contract for changes in Work will apply.***

1.0 EXECUTIVE SUMMARY

Soils on the site consist mainly of silt and clay with layers of silty or clayey gravel. Some of these soils exhibit collapse potential with an increase in moisture content. The soils also vary across the site.

The clay and silt soils are difficult to compact in cold and wet weather.

Foundations, slabs, pool decks, and pool shells should be placed upon non-collapsible native soils or on engineered fill extending to non-collapsible soils as recommended in the report.

The Seismic Site classification for IBC 2021 is “C” based upon the average shear wave velocity profile. Settlement and lateral spread for the site is not anticipated.

Fifteen additional borings were done to determine the depth of collapsible soils below the existing ground surface. Samples were taken and collapse tests were performed at different depths to determine the extent of the collapsible soils below the surface. The depth of the collapsible soils ranged from 2 feet to 8 feet below the existing ground surface.

2.0 PURPOSE

This report contains the results of our geotechnical evaluation for a proposed Life Time Facility – Herriman to be located in Herriman, Utah. The purpose of these services is to provide information and recommendations regarding:

- Subsurface conditions
- Foundation design parameters
- Lateral earth pressures
- Earthwork guidelines
- Pavement sections
- Groundwater
- Corrosivity (soil to concrete)
- Slabs-on-grade
- Seismic conditions
- Excavation conditions

- Drainage
- Infiltration rates
- Geologic hazards
- Geology

Results of the field exploration, field tests, and laboratory testing program are presented in the Appendices.

3.0 PROJECT DESCRIPTION

Project information supplied by Mr. Justin Schmidt on January 8, 2025 indicates the proposed Life Time Facility will be a EBox + prototype using steel superstructure construction. The maximum wall and column loads as given in the RFP are as follows:

- Wall loads 20 kips per lineal foot (klf)
- Interior Columns 600 kips
- Perimeter Columns 450 kips
- Floor slab-on-grade 150 pounds per square foot
- Lightly loaded structures (i.e. bistro, water slides, etc.) 25 kips per column and 3 klf

The allowable settlements are as follows:

- Total settlement of foundations: less than 2 inches
- Differential settlement for building and pavement areas less than 1 inch in 100 feet and ½ inch in 30 feet
- Differential settlement for pool vessel, slabs and pool deck ½ inch in 100 feet and ¼ inch in 30 feet
- Differential settlement between pool deck and pool: less than ½ inch

Asphalt concrete paved parking areas and drives will be included as part of the proposed development. Final site grading plans were not available at the time of this report. Should this information not be correct we should be notified immediately.

4.0 SCOPE OF SERVICES

4.1 Field Exploration

Eleven borings were drilled to depths of about 26.5 feet below existing site grade in the proposed building and pool areas. Thirteen borings were drilled to depths of about 11.5

feet in the proposed paved parking, drive and sport court areas. The borings were at the approximate locations shown on the attached Boring Location Diagram. A field log was prepared for each boring. These logs contain visual classifications of the materials encountered during drilling as well as interpolation of the subsurface conditions between samples. Final logs, included in Appendix A, represent our interpretation of the field logs and may include modifications based on laboratory observations and tests of the field samples. The final logs describe the materials encountered, their thickness, and the locations where samples were obtained.

Fifteen additional borings were drilled to depths of about 11.5 feet below existing site grade in the proposed building and pool areas. The borings were at the approximate locations shown on the attached Boring Location Diagram. A field log was prepared for each boring. These logs contain visual classifications of the materials encountered during drilling as well as interpolation of the subsurface conditions between samples. Final logs, included in Appendix A, represent our interpretation of the field logs. The final logs describe the materials encountered, their thickness, and the locations where samples were obtained.

The Unified Soil Classification System was used to classify soils. The soil classification symbols appear on the boring logs and are briefly described in Appendix A. Local and regional geologic characteristics were used to estimate the seismic design criteria, and the shear wave velocity to 100 feet deep as measured.

4.2 Laboratory Analyses

Laboratory analyses were performed on representative soil samples to aid in material classification and to estimate pertinent engineering properties of the on-site soils for preparation of this report. Testing was performed in general accordance with applicable standard test methods. The following tests were performed and the results are presented in Appendix B.

- Water content
- Dry density
- Plasticity
- Minus #200 and #4 sieves
- Consolidation/collapse
- Soluble sulfate content

4.3 Analyses and Report

This geotechnical engineering report includes a description of the project, a discussion of the field and laboratory testing programs, a discussion of the subsurface conditions, and

design recommendations as appropriate to its purpose. The scope of services for this project does not include, either specifically or by implication, any environmental assessment of the site, discovery of underground storage tanks or other underground structures, or identification of contaminated or hazardous materials or conditions. If there is concern about the potential for such contamination, other studies should be undertaken. We are available to discuss the scope of such studies with you.

5.0 SITE CONDITIONS

5.1 Surface

At the time of our exploration, the site was essentially undeveloped. The ground surface was relatively flat sloping down towards the southeast and contained a moderate growth of brush and grasses. Site drainage trended to the southeast as sheet surface flow. Other site features included a large fill pile in the northeast portion of the site.

5.2 Subsurface

As presented on the Boring Logs in the building and pool areas, surface soils to the full depth of exploration consisted of layers of very soft to very stiff silt and clay plus layers of loose to very dense clayey sand, sandy gravel and silty sand. Near surface soils are of low to high plasticity.

Soils in the pavement and sport court areas consisted mainly of silt and clay with some silty sand and clayey sand to the full depth explored.

Collapsible soils were present in the surface soils to a depth of 7 to 8 feet. Additional borings have been done and collapse testing is in process to define the depth of the collapsible soils in the building and pool areas. An addendum will be issued when the collapse testing is completed.

5.3 Groundwater

Groundwater was not encountered in any test boring at the time of exploration. These observations represent the groundwater conditions at the time of exploration and may not be indicative of other times. Groundwater levels can be expected to fluctuate with varying seasonal conditions.

5.4 Geology and Geologic Hazards

The Site is located in the Jordan Valley west of the western slope of the Central Wasatch Range section of the Middle Rocky Mountains Province. The Wasatch Range trends north-south and includes broad alluvial valley bottoms and low hills in the north and rugged mountains cut by deep valleys in the south. The Site is in an area bounded by the Great Salt Lake to the north, the Oquirrh Mountains to the west, the Traverse Mountains to the south, and the Wasatch Mountains to the east. The Site is located on lacustrine sand and silt consisting of fine- to coarse-grained sand and silt with minor gravel (*Geologic Map of the Copperton Quadrangle, Salt Lake County, Utah*, Utah Geological Survey, 2007).

5.5 Geologic Hazards

The nearest mapped fault is approximately 8 miles to the east. According to the Salt Lake County *Surface Fault Rupture Liquefaction Potential Special Study Areas Map,* the Site is located in a "very low" liquefaction potential area and surface fault rupture is not expected.

6.0 GEOTECHNICAL PROPERTIES & ANALYSIS

6.1 Laboratory Tests

Laboratory test results (see Appendix B) indicate that on-site subsoils near shallow foundation level exhibit low to medium compressibility or slight expansion at existing water contents. Low to medium additional compression occurs when the water content is increased.

Near-surface soils are of low to high plasticity. These soils typically exhibit low expansion potential when recompacted, confined by loads approximating floor loads and saturated. Slabs-on-grade supported on recompacted on-site soils have a low potential for heaving if the water content of the soil increases.

Chemical tests were performed on representative samples of the surficial on-site soils to determine the amount of water-soluble sulfate and chloride. The tests were performed by Chemtech-Ford Laboratories, and the test results are presented in Appendix B.

6.2 Field Tests

On-site subsoils near shallow foundation level exhibited medium resistance to penetration using the standard penetration test method (ASTM D1586) and ring-lined barrel sampler (ASTM D3550). Penetration resistance values exhibited some variability between test locations. This represents a potential for differential movement within structures supported on existing soils in their present condition.

The boring logs included in this report are indicators of subsurface conditions only at the specific location and date noted. Variations from the field conditions represented by the borings may become evident during construction. If variations appear, we should be contacted to re-evaluate our recommendations.

7.0 RECOMMENDATIONS

7.1 General

Recommendations contained in this report are based on our understanding of the project criteria described in Section 2.0 and the assumption that the soil and subsurface conditions are those disclosed by the explorations. Others may change the plans, final elevations, number and type of structures, foundation loads, and floor levels during design or construction. Substantially different subsurface conditions from those described herein may be encountered or become known. Any changes in the project criteria or subsurface conditions shall be brought to our attention in writing.

7.2 Design Considerations

Some of the surficial on-site soils encountered are very soft in consistency. In addition, laboratory test results indicate that these soils become weaker and collapsible with an increase in moisture content. These soils are not suitable for support of foundations in their present state and should be over-excavated and recompacted as recommended in the **EARTHWORK** section of this report. Proper drainage should be provided to help prevent infiltration of moisture below the foundations.

7.3 Depth of Collapsible Soils

Based upon the additional borings, the following table summarizes the depth of collapsable soils below the existing ground surface at the time of exploration:

Additional Boring Number	Depth of Collapsible Soil (feet)
AB-1	6
AB-2	6
AB-3	8
AB-4	8
AB-5	6
AB-6	6
AB-7	6
AB-8	8
AB-9	8
AB-10	2
AB-11	6
AB-12	6
AB-13	6
AB-14	6
AB-15	3

7.4 Foundations

Because of variations in bearing soils, foundation bearing levels, structural loads and settlement criteria given, we considered the following foundation systems. These alternative foundation systems present various economic, design, and performance comparisons for your consideration.

- Shallow footings on engineered fills
- Shallow footings on recompacted native soils

7.4.1 Spread Foundations on Recompacted Native Soils

Shallow spread-type footings may be used to support the proposed structures. Since the on-site soils exhibit variable settlement potentials, the foundations should bear on engineered fills achieved by removal and recompaction soils below foundations, slabs,

pool decks, and pool shells. The depth and lateral extent of the engineered fills is presented in the **EARTHWORK** section of this report. The existing fill, collapsible soils, and topsoil on the site should not be used for support of foundations.

Alternative footing depths and allowable bearing capacities on recompacted native soils fill as recommended in the earthwork section are presented in the following tabulation:

Footing Depth Below Finished Grade[1] (ft)	Net Allowable Bearing Capacity[2] (psf)
2.5[3] exterior	1500
1.5 interior	1500

The allowable bearing capacity is based upon the thickness of engineered fill as presented in the earthwork section of this report. An increase in bearing capacity for interior footings placed deeper than the minimum depth above is not allowed.

Minimum frost depth is 30 inches for exterior footings or footings in unheated spaces. This depth may be mitigated by using frost protection methods for footings as allowed by the building code.

We anticipate that total settlement of the proposed structures, supported as recommended, should be as follows:

- Total settlement of foundations: less than 2 inches
- Differential settlement for building and pavement areas: less than 1 inch in 100 feet and ½ inch in 30 feet
- Pool Vessel, Slabs, and Pool Deck: ½ inch in 100 feet and ¼ inch in 30 feet
- Differential settlement between Pool Deck and Pool: less than ½ Inch

[1] Finished grade is the lowest adjacent grade for perimeter footings and floor level for interior footings.

[2] Allowable bearing capacities assume fulfillment of **EARTHWORK** recommendations. Pounds per square foot (psf). The net bearing capacity means the weight of the concrete for footings and foundation is not included in the design of structural load on the soil. A 1/3 increases for short term loads may be used only if the alternative load combinations given in section 1605.3.2 of the IBC are used.

[3] Minimum depth for frost protection of exterior footings or footings in unheated spaces.

7.4.2 Spread Foundations on Engineered Fills

If higher bearing capacities are required, shallow spread-type footings on imported engineered fill may be used to support the proposed structures. The engineered fill should extend to the non-collapsible native soils The depth and lateral extent of the engineered fills is presented in the **EARTHWORK** section of this report.

Alternative footing depths and allowable bearing capacities on imported engineered fill as recommended in the earthwork section are presented in the following tabulation:

Footing Depth Below Finished Grade[4] (ft)	Net Allowable Bearing Capacity[5] (psf)
2.5[6] exterior	3000
1.5 interior	3000

The allowable bearing capacity is based upon the thickness of engineered fill as presented in the earthwork section of this report. An increase in bearing capacity for interior footings placed deeper than the minimum depth above is not allowed.

Minimum frost depth is 30 inches for exterior footings or footings in unheated spaces. This depth may be mitigated by using frost protection methods for footings as allowed by the building code.

We anticipate that total settlement of the proposed structures, supported as recommended, should be as follows:

- Total settlement of foundations: less than 2 inches

[4] Finished grade is the lowest adjacent grade for perimeter footings and floor level for interior footings.

[5] Allowable bearing capacities assume fulfillment of **EARTHWORK** recommendations. Pounds per square foot (psf). The net bearing capacity means the weight of the concrete for footings and foundation is not included in the design of structural load on the soil. A 1/3 increase for short term loads may be used only if the alternative load combinations given in section 1605.3.2 of the IBC are used. WT should be allowed to review the increased loads if used.

[6] Minimum depth for frost protection of exterior footings or footings in unheated spaces.

- Differential settlement for building and pavement areas: less than 1 inch in 100 feet and ½ inch in 30 feet
- Pool Vessel, Slabs, and Pool Deck: ½ inch in 100 feet and ¼ inch in 30 feet
- Differential settlement between Pool Deck and Pool: less than ½ Inch

7.5 Lateral Design Criteria

Lateral loads may be resisted by concrete interface friction and by passive resistance. For shallow foundations bearing on properly recompacted soils or imported engineered fill at this site, we recommend the following lateral resistance criteria:

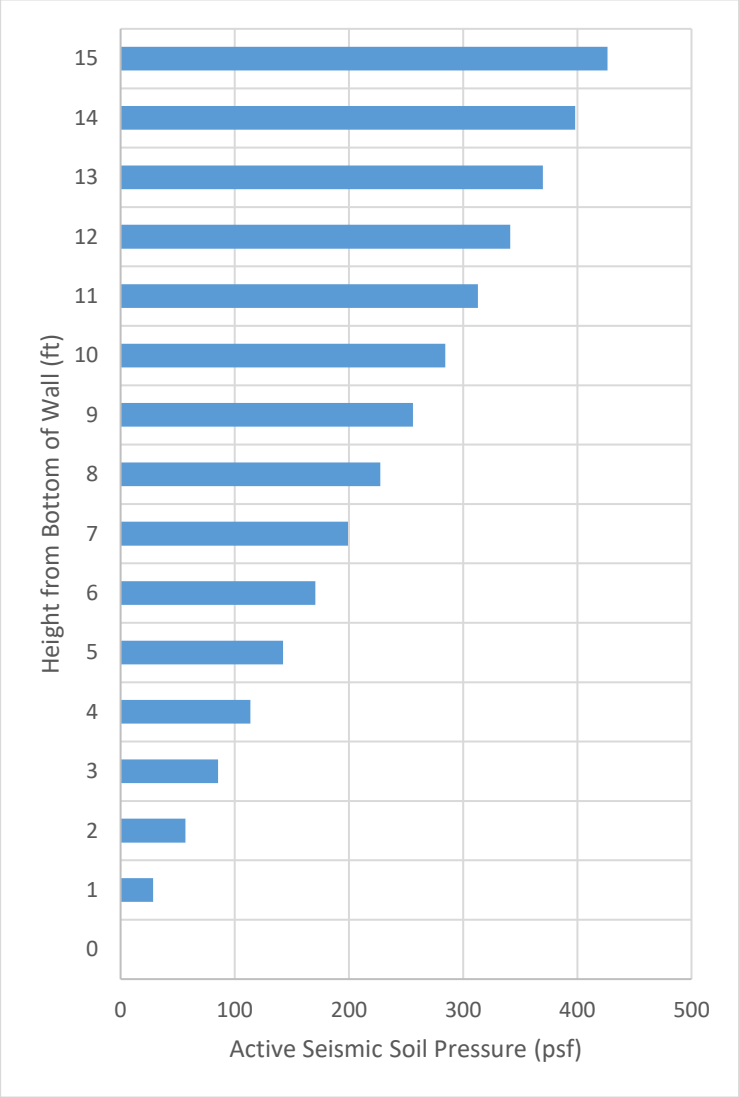
- Recompacted Native Soils Passive:
  Shallow wall footings.....250 psf/ft
  Shallow column footings.....375 psf/ft

- Coefficient of allowable base friction (passive).....0.30

Earth retaining structures less than 10 feet in height, above any free water surface, with level backfill and no surcharge loads may be designed using the equivalent fluid pressure method. Recommended active equivalent fluid pressures and coefficients of base friction for unrestrained elements are:

- Active:
  Undisturbed subsoil.....45 psf/ft
  Compacted granular backfill.....35 psf/ft
  Clay site soils.....not recommended for use

- Coefficient of base friction (active).....0.40



The active base friction should be reduced to 0.30 when used in conjunction with passive pressures.

Where the design includes restrained elements, the following equivalent fluid pressures are recommended:

- At-rest:
  Undisturbed subsoil.....65 psf/ft
  Compacted granular backfill.....55 psf/ft

- Seismic:

  The following pressure distribution for undisturbed subsoil and compacted granular backfill may be used for seismic lateral loads for both active and at rest retaining walls:

The equivalent fluid pressures presented herein do not include the lateral pressures arising from the presence of:

- hydrostatic conditions, submergence or partial submergence
- sloping backfill, positively or negatively
- surcharge loading, permanent or temporary

We recommend a free-draining soil layer or manufactured geosynthetic (drain tile) material be constructed adjacent to the back of any retaining walls. A filter may be required between the soil backfill and drainage layer. This drainage zone should help prevent development of hydrostatic pressure on the wall. This vertical drainage zone should be tied into a gravity drainage system at the base of the wall. It is important that all backfill be properly placed and compacted. Backfill should be mechanically compacted in layers. Flooding or jetting should not be permitted. Care should be taken not to damage the walls when placing the backfill. Backfills should be observed and tested during placement.

Fill against footings, stem walls, and any retaining walls should be compacted to densities specified in **EARTHWORK**. Clayey soils should not be used as backfill against retaining walls. Compaction of each lift adjacent to walls should be accomplished with hand-operated tampers or other lightweight compactors. Over-compaction may cause excessive lateral earth pressures that could result in wall movements.

7.6 Post Tensioned Sport Courts

Post tensioned sport court slabs should be placed on engineered fill extending to non-collapsible soils. The engineered fill should extend beyond the post tensioned slabs a minimum of 5 feet. A minimum of 6 inches of untreated base should be placed below the post tensioned slabs.

7.7 Landscape Berm and Screen Wall

A landscape berm and screen wall is proposed along the north edge of the site. Soil placed for the berm should be compacted to the requirements for engineered fill. Footings for the screen wall may be placed in the compacted engineered fill of the berm.

7.8 Pools

It is our understanding that the pools require a 1/16-inch differential settlement tolerance for the larger pools and a 1/8-inch differential settlement tolerance for the smaller pools. This tolerance is different than the tolerances stated in the request for proposal. Pool shells should be supported on imported untreated base. The untreated base should extend to native undisturbed soils and have a minimum thickness of 2 feet below the shell. The untreated base should extend a minimum of 2 feet beyond the pool shell. In addition, the pool should be surcharged (filled) prior to placement of the pool gutter edge/overflow lip. The lip should be surveyed prior to surcharge and again after surcharge to see if significant settlement occurs. If significant settlement is measured then the

surcharged pool should be allowed to settle and be resurveyed until no significant settlement is observed. Clean gravel may be used as engineered fill below pools and in drain areas below the shell provided a geotextile filter fabric is placed between the gravel and soils containing fines. The pool shell should be relatively consistent in thickness. Large blocks of concrete for areas such as stairs or shallow shelves should not be placed but the shell thickness should be limited using Geofoam, clean gravel in sand bags, etc. in these areas. Voids caused by side wall collapse requiring back forming should be filled with clean gravel.

7.9 Seismic Considerations

A refraction micro-tremor (ReMi) seismic test was performed to estimate the shear wave velocity profile at the site for assessment of the seismic site classification in accordance with the 2021 IBC. The test was performed at the approximate location shown on the attached Boring Location Diagram.

Based upon the interpreted shear wave velocity profile (see Plate C-1), the average velocity, using the IBC calculation method, between the approximate depths of 0 and 100 feet was estimated to be 2221.8 feet per second. Based upon the calculated average shear wave velocity and the 2021 IBC, the site may be assigned a "C" soil classification. The Shear Wave Velocity Profile generated from the seismic data obtained at the site is provided in Appendix C.

Structures should be designed in accordance with applicable building codes. The seismic design parameters presented in the following table, in accordance with the 2021 International Building Code and ASCE 7-16, are applicable to the project site:

Seismic Design Parameters International Building Code 2021, ASCE 7-16	
Soil Site Class	C
Mapped Spectral Response Acceleration at 0.2 sec period (S_s)	1.08g
Mapped Spectral Response Acceleration at 1.0 sec period (S_1)	0.388g
Site Coefficient for 0.2 sec period (F_a)	1.2
Site Coefficient for 1.0 sec period (F_v)	1.5
Design Spectral Response Acceleration at 0.2 sec period (S_{DS})	0.864g
Design Spectral Response Acceleration at 1.0 sec period (S_{D1})	0.388g

7.10 Conventional Slab-on-Grade Support

Floor and deck slabs can be supported on properly placed and compacted fill. The slab subgrade should be prepared by the procedures outlined in this report. A minimum 4-inch layer of clean ¾ inch aggregate or base course should be provided beneath all slabs to help prevent capillary rise and a damp slab.

For design of slabs-on-grade, we recommend using a modulus of subgrade reaction (k) of 225 pounds per cubic inch (pci) for a minimum of 12 inches of the imported fill material.

Life Time Property Development standard design requires a 15 mil vapor barrier below slabs-on-grade where the floor will be covered by products using water based adhesives, wood, vinyl backed carpet, impermeable floor coatings (urethane, epoxy, acrylic terrazzo, etc.) or where the floor will be in contact with moisture sensitive equipment or product. The design and installation should be in accordance with the recommendations given in ACI 302.1R and 302.2R and Life Time standards.

All concrete placement and curing operations should follow the American Concrete Institute manual recommendations. Improper curing techniques and/or high slump (high water-cement ratio) could cause excessive shrinkage, cracking or curling. Concrete slabs should be allowed to cure adequately before placing vinyl or other moisture sensitive floor covering.

7.11 Drainage

A major cause of soil problems in this vicinity is moisture increase in the soils below structures. It is important that positive drainage be provided during construction and maintained throughout the life of the structures. Infiltration of water into utility or foundation excavations must be prevented during construction. In areas where sidewalks or paving do not immediately adjoin the structures, protective slopes should be provided with an outfall of 5 percent for at least 10 feet from perimeter walls. Scuppers and drainpipes should be designed to provide drainage away from the structures for a minimum of 10 feet. Backfill against footings, exterior walls, and in utility and sprinkler line trenches should be well compacted and free of all construction debris to minimize the possibility of moisture infiltration.

Water and sewer utility lines should be properly installed to avoid possible sources for subsurface saturation. It is important that all utility trenches be properly backfilled. If

practicable, planters and/or landscaping should not be constructed adjacent to or near structures. If planters and/or landscaping are adjacent to or near the structures, we recommend the following:

- Grades should slope away from the structures
- Only shallow rooted landscaping should be used
- Watering should be kept to a minimum

Soils below sidewalks, paver areas and sport courts should be prepared according to the **Section 8.7 Exterior Slab Preparation**. The soils directly below the sidewalks, pavers and sport courts should consist of a minimum of 4 inches of untreated base.

7.12 Drain Tile

All pools and below-grade structures should be provided with a perimeter drain tile. Swimming pool drain tiles should follow Life Time standard design requirements, namely a perimeter drain tile with a segment also running beneath the main drain sumps as well as possibly running beneath the pool floor slabs. Additional drain tile may be required in elevators, shower cores, pools/spas, outdoor turf areas as well as pump pits and surge tanks.

7.13 Corrosivity to Concrete

The chemical test results indicate that the soils at the site classify as Class S0 in accordance with Table 19.3.1.1 of ACI 318-19. Concrete should be made that has a maximum water-cementitious materials ratio and minimum compressive strength set forth in Table 19.3.2.1 of ACI 318-19 according to the requirements for this classification.

7.14 Storm Water Infiltration

Infiltration testing has been performed within the proposed retention/detention basin. Three 8-inch diameter borings were drilled to depths of 3 to 4 feet below the existing site grade. A 2–inch inside-diameter slotted PVC pipe was placed into the boring and clean ¾-inch gravel was placed around the pipe. The borings were filled with water and allowed to saturate over night. Falling-head infiltration tests were performed within the 8 inch boring. The test results are as follows:

Infiltration Test No.	Depth below Existing Grade to Top of Surface Being Tested, (feet)	Approximate Stabilized Rate of Infiltration, (minutes/inch)
PT-1	3.25	14
PT-2	3.5	5
PT-3	2.5	83

The test results are only applicable at the depth and location indicated in the report. The varying areas of soil could affect the infiltration rates and possibly stop infiltration. We recommend the geotechnical engineer or his qualified representative review the basin excavations when they have been excavated to grade. Additional infiltration testing may be required.

7.15 Pavements

Based on the traffic loads provided in the RFP design parameters, traffic loads will be as follows:

- Light-Duty Pavement Areas – 5 equivalent 18-kip axle loads (ESALs) per day
- Heavy-Duty Pavement Areas – 15 ESALs per day

Therefore, based on the existing subgrade conditions, a design CBR-value of 3, a reliability value of 90 percent, and a resilient modulus of 4500 psi and a Terminal Serviceability Index of 2.5, the following pavement sections are recommended for a 20-year design life:

Traffic Area	Asphalt Concrete Pavement (inches)	Base Course (inches)	Subbase Course (inches)	PCC (inches)	Base Course (inches)
Light-Duty Pavements	3	8	--	5	4
Heavy-Duty Pavements	3	12	--	6	6
	3	6	9	6	6

The minimum portland cement pavement section is based on a minimum compressive strength of 4,500 pounds per square inch and being placed on a properly prepared subgrade and base course.

PCC non-reinforced pavements should contain properly spaced weakened plane control joints in both the longitudinal and transverse directions. Normal control joints should be square patterns not to exceed 10 feet per side. All control joints should have a depth of at least 1/3 of the slab thickness. Depending on the method used, control joints should be cut as soon as possible during curing operations to prevent random cracking. Structures and features projecting into the pavement should be isolated from the pavement with a 1-inch thick pre-molded expansion joint material. Transverse expansion joints should be placed at proper intervals to provide expansion/contraction relief. All joints should be cleaned and sealed with an approved material prior to opening to traffic.

The American Concrete Institute's, Guide for the Design and Construction of Concrete Parking (ACI 330R), should be used for reference. Field and laboratory testing of the concrete and base materials should be performed to determine whether specific requirements have been meet.

8.0 EARTHWORK

8.1 General

The conclusions contained in this report for the proposed construction are contingent upon compliance with recommendations presented in this section. Any excavating, trenching, or disturbance that occurs after completion of the earthwork must be backfilled, compacted and tested in accordance with the recommendations contained herein. It is not reasonable to rely upon our conclusions and recommendations if any future unobserved and untested trenching, earthwork activities or backfilling occurs.

Although underground facilities such as septic tanks, cesspools, basements, utilities, and dry wells were not observed, such features might be encountered during construction. These features should be demolished in accordance with the recommendations of the geotechnical engineer. Any loose or disturbed soils resulting from demolition should be removed or recompacted as engineered fill and any excavations should be backfilled in accordance with recommendations presented herein.

8.2 Site Clearing

Strip and remove any existing fill material, organic topsoil, vegetation, debris, collapsible soil and any other deleterious materials from the building, pool, pool deck, and sport court areas. The building area is defined as that area within the building footprint plus 5 feet beyond the perimeter of that footprint. All exposed surfaces should be free of mounds and depressions that could prevent uniform compaction.

8.3 Excavation

We anticipate that excavations for shallow foundations and utility trenches for the proposed construction can be accomplished with conventional equipment.

On-site silt and clay soils will pump or become unworkable at high water contents. Workability may be improved by scarifying and drying. In cold or wet weather, compaction may not be achievable in the clay soils. Over-excavation of wet zones and replacement with granular materials may be necessary. The use of lightweight excavation and compaction equipment may be required to minimize subgrade pumping.

The soils to be penetrated by the proposed excavations may vary significantly across the site. Our soil classifications are based solely on the materials encountered in widely spaced exploratory test borings. The contractor should verify that similar conditions exist throughout the proposed area of excavation. If different subsurface conditions are found at the time of construction, we should be contacted immediately to evaluate the conditions encountered.

8.4 Temporary Excavations and Slopes

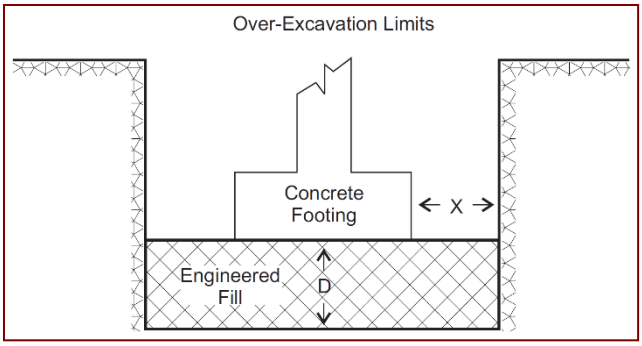
Temporary, non-surcharged construction excavations should be sloped or shored. The individual contractor should be made responsible for designing and constructing stable, temporary excavations as required to maintain stability of both the excavation sides and bottom. All excavations should be sloped or shored in the interest of safety following local and federal regulations, including current OSHA excavation and trench safety standards. OSHA recommends a maximum slope inclination of ¾:1 (horizontal:vertical) for Type A soils, 1:1 for Type B soils, and 1½:1 for Type C soils.

As a safety measure, it is recommended that all vehicles and soil piles be kept a minimum lateral distance back from the crest of the slope at least equal to the slope height. The exposed slope face should be protected against the elements.

If any excavation, including a utility trench, is extended to a depth of more than 20 feet, it will be necessary to have the side slopes designed by a professional engineer.

We recommend that the contractor retain a geotechnical engineer to observe the soils exposed in all excavations and provide engineering design for the slopes. This will provide an opportunity to classify the soil types encountered, and to modify the excavation slopes as necessary. This also allows the opportunity to analyze the stability of the excavation slopes during construction.

8.5 Building Pad Preparation

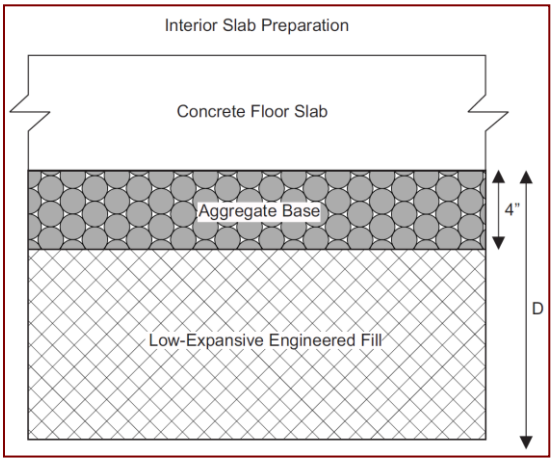


In order to limit the settlement potential in the building, pool, pool deck, and sport court areas. The existing collapsible soils should be removed and recompacted in a mass excavation in these areas. The depth of the collapsible soils is approximately 7 to 8 feet below the existing site grades. The removal and recompaction should extend to the same distance beyond the structures as the depth to suitable soils. The depth of the recompacted soils below footings should be a minimum of 3 feet and extend to native, non-collapsible soils.

8.6 Foundation Preparation

If the building pad preparation recommendations above are followed, footings should be placed directly upon the recompacted soil using the allowable bearing capacity for recompacted native soils.

If the higher bearing capacity is required, remove the native and or recompacted soils as required to a minimum depth as shown below the bottom of the footing depth D in the diagram below. Removal should extend a minimum of beyond the footing edges length X in as shown in the diagram below. Replace with imported engineered fill material.



Footing Width (feet)	Depth D (feet)	Length X (feet)
<4	3	2
>4	4	3

Footings for individual structures should be placed all upon the recompacted native soil or all upon the imported engineered fill. Partial placement on the recompacted soil and imported soil is not allowed.

8.7 Conventional Interior Slab Preparation

Slabs-on-grade should be founded on engineered fill material over the recompacted native soils. Remove existing soils to a minimum depth of 12 inches below the bottom of the slab (depth D in the diagram below). Replace with properly compacted, imported engineered fill material. The aggregate base course or clean gravel below the slab may be included as part of the engineered fill.

8.8 Exterior Slab Preparation

Exterior sidewalks, paver areas and sport courts should be placed over recompacted native soils or engineered fill extending to native undisturbed soils.

The soils on this site have the potential to expand, shrink and collapse with changes in moisture content. In addition, frost penetration in the upper soils may cause surface heaving. Therefore, relatively lightweight exterior concrete flatwork such as sidewalks, patios, and driveways, may experience movements resulting in cracking or vertical offsets. To reduce the potential for damage, we recommend:

- Use of fill with low expansion potential
- Use of fill with low to negligible frost susceptibility
- Placement of effective control joints on relatively close centers
- Moisture-density control during placement of subgrade fills
- Provision for adequate drainage in areas adjoining the slabs
- Use of designs which allow vertical movement between the exterior slabs and adjoining structural elements

It should be understood that these recommendations will help reduce the potential for soil movement and resulting distress but will not eliminate this potential.

8.9 Pool Preparation

Remove any existing fill, organic soils, and collapsible soils to native non-collapsible soils. The depth of the removal should be a minimum of 2 feet below the bottom of the pool shell or to non-collapsible soils, whichever is greater. Imported untreated base should then be placed in lifts and compacted to 98 percent of a modified Proctor (ASTM 1557).

8.10 Pavement Preparation

The subgrade should be scarified, moistened as required, and recompacted for a minimum depth of 10 inches prior to placement of fill and pavement materials.

8.11 Wet/Unstable Subgrade Soils

If site soils become excessively wet, pumping and instability should be anticipated. If wet, unstable subgrade soils are encountered during construction, there are several alternatives to mitigate them. The alternatives vary in cost and time to implement, so the alternatives should be evaluated and compared in order to decide which one is most beneficial for the project.

1. The wet, unstable subgrade may be scarified and/or partially removed in order to allow the excess moisture to evaporate. The soils should be periodically blended to allow uniform drying to occur. When the soils are near optimum moisture content, they should be compacted in accordance with project requirements.

2. The wet, unstable subgrade may be removed and replaced with drier, granular soil and/or aggregate base course. The depth of removal necessary will vary depending on the conditions in each unstable area. It may be best to remove a uniform thickness of 2 feet in each area. Although the wet, unstable soils may extend to a depth greater than 2 feet, the granular material should bridge over these deeper wet soils. Removal should be performed with an excavator or similar piece of equipment so that underlying wet soils will not be adversely affected by wheel loads and thereby become more unstable. The first foot of granular backfill should be placed at near-optimum moisture content and compacted using static (non-vibrating) equipment to at least 90 percent of the maximum dry density. The second foot of granular material may then be placed and compacted in accordance with project requirements.

3. Geogrid and aggregate base course may be used to bridge over wet subgrade soils. Wet, unstable subgrade should be removed to a depth of at least 1 foot and to a distance at least 2 feet beyond the edge of the unstable area. Removal should be performed with an excavator or similar piece of equipment so that underlying wet soils will not be adversely affected by wheel loads and thereby become unstable. Geogrid should consist of Tensar TX-5 or equivalent and should be installed in accordance with the manufacturer's installation instructions. The geogrid should extend at least 2 feet beyond the edge of the unstable area. Aggregate base course (not just granular soil) should be placed over the geogrid and compacted in accordance with project requirements.

The extent of the unstable areas to be treated may be identified by proof rolling the exposed materials with a 20-ton, tandem-axle, dual-wheel water truck or dump truck loaded to the legal limit with tires inflated to 100 psi. Areas where soil movement is observed more than 6 inches away from the truck's rear tires should be considered unstable.

8.12 Materials

Imported engineered fill may be used as fill material for the following:

- Foundation areas
- Interior slab areas and sport court areas[7]
- Pavement areas
- Backfill

Recompacted native clay and silt soils may be used to support the structures provided they are compacted to the requirements for engineered fill and the lower bearing capacity is used for design. The native clay and silt soils may also be used in non-structural areas such as landscaping or below pavement subbase materials.

Materials used as engineered fill should be reasonably free of rock and lumps having a particle diameter greater than 6 inches. Acceptance of the quantity of oversized materials shall be at the discretion of the geotechnical engineer. Any required import material should consist of well drained granular material. All imported material should be approved prior to importing.

Frozen soils should not be used as fill or backfill.

Imported soils should conform to the following:

- Gradation (ASTM C136): percent finer by weight

6"	100
4"	85-100
¾"	70-95
No. 4 Sieve	50-85
No. 200 Sieve	11 (max)

Untreated Base course should conform to the American Public Works Association (APWA) *Manual of Standard Specifications,* current edition.

8.13 Placement and Compaction

[7] On-site clay and silt soils are not recommended for use within 12 inches of the bottom of slabs-on-grade or as structural backfill behind retaining walls.

a. Place and compact fill in horizontal lifts, using equipment and procedures that will produce recommended water contents and densities throughout the lift.

b. Uncompacted lift thickness should not exceed 10 inches. Thinner lifts may be required to achieve compaction in the clay and silt soils.

c. The clay and silt soils will require tight moisture control to achieve compaction. Soil work done in cold and wet weather conditions may require imported soils if compaction of the silt and clay soils is not achievable.

d. Materials should be compacted to the following:

Material	Minimum Percent Compaction (ASTM D1557)
• On-site or imported soil, reworked and fill:	
Below footings	95*
Below slabs-on-grade	95
Below pavement	95
• Untreated base course below slabs-on-grade and foundations	95
• Untreated base course below pool shells	98
• Aggregate base below pavement (private drives, parking areas)	95
• Nonstructural backfill	90

* Fill at depths greater than 5 feet below finished grade should be compacted to at least 98 percent of the ASTM D1557 dry-density value to within 5 feet of finished grade. Fill at depths less than 5 feet below finished grade should be compacted to the minimum values provided above.

On-site clayey soils should be compacted within a water content range of 1 percent below to 3 percent above optimum. Imported granular soils should be compacted within a water content range of 2 percent below to 3 percent above optimum.

8.14 Compliance

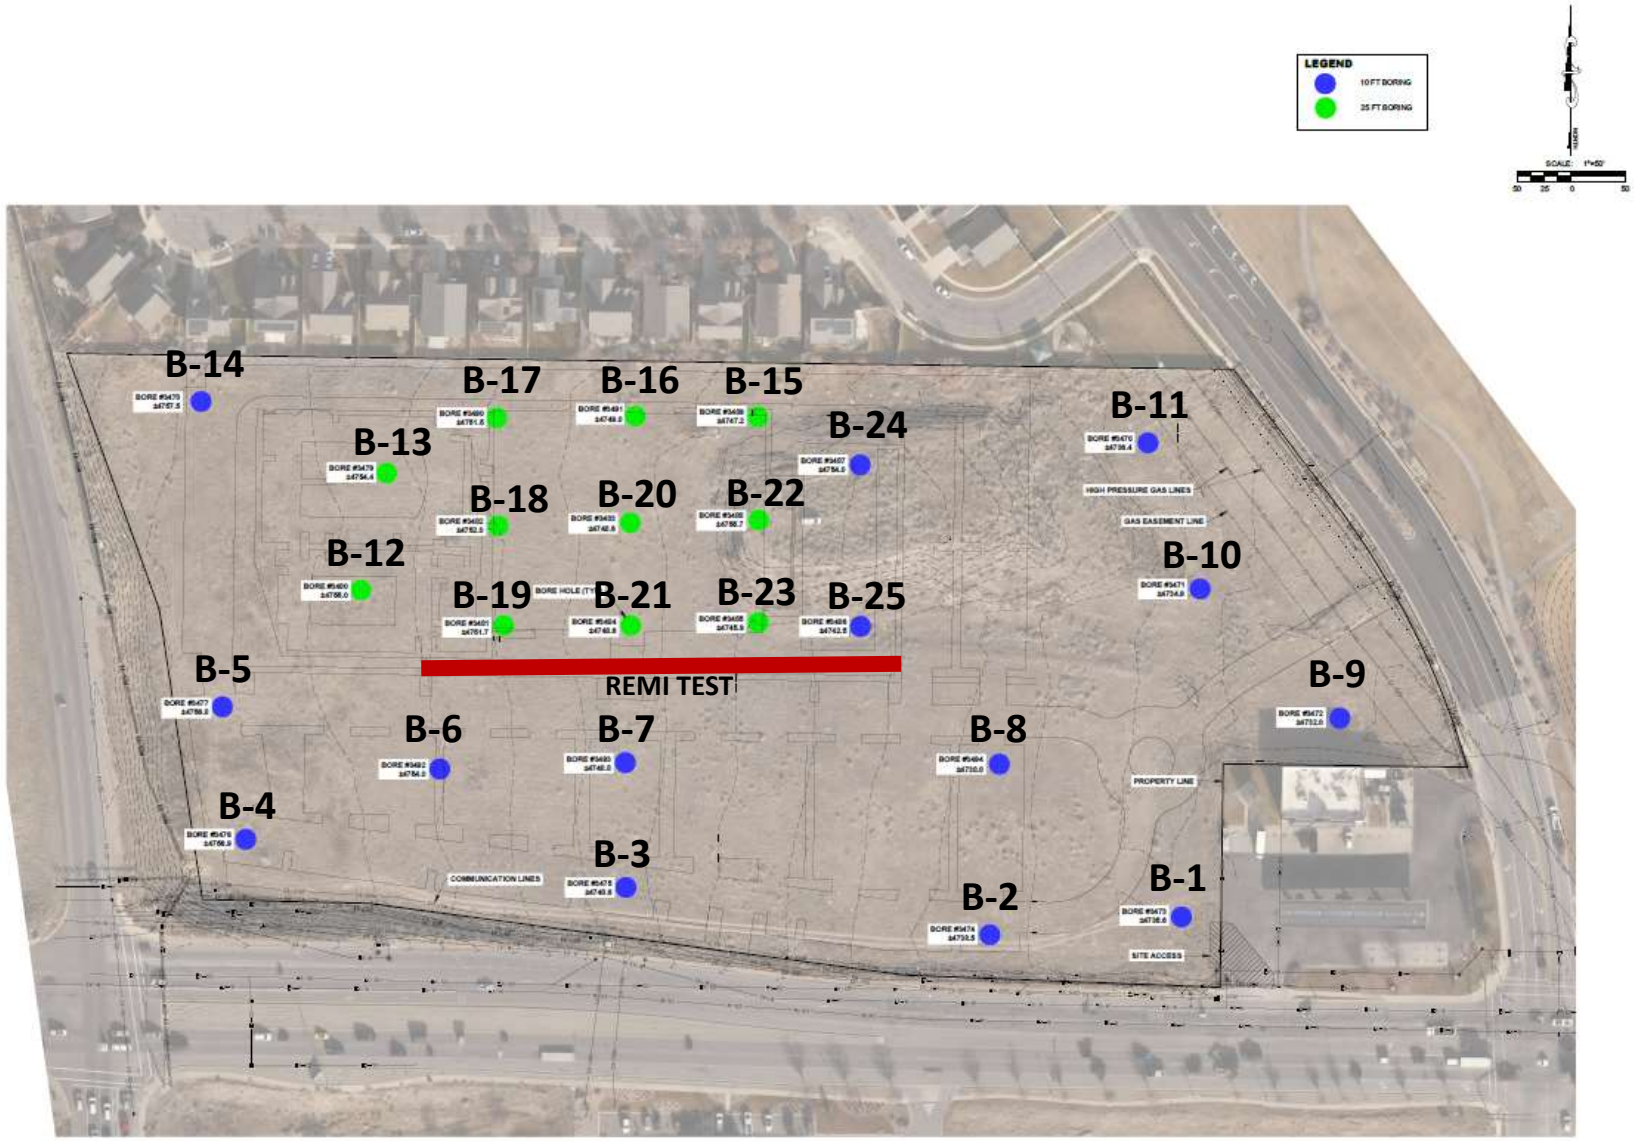
Recommendations for foundations, slabs-on-grade, and pavements supported on compacted fills or prepared subgrade depend upon compliance with the **EARTHWORK** recommendations. To assess compliance, observation and testing should be performed under the direction of a WT geotechnical engineer. Please contact us to provide these observation and testing services.

9.0 LIMITATIONS

This report has been prepared assuming the project criteria described in **2.0 PROJECT DESCRIPTION**. If changes in the project criteria occur, or if different subsurface conditions are encountered or become known, the conclusions and recommendations presented herein shall become invalid. In any such event, WT should be contacted in order to assess the effect that such variations may have on our conclusions and recommendations. If WT is not retained for the construction observation and testing services to determine compliance with this report, our professional responsibility is accordingly limited.

The recommendations presented are based entirely upon data derived from a limited number of samples obtained from widely spaced explorations. The attached logs are indicators of subsurface conditions only at the specific locations and times noted. This report assumes the uniformity of the geology and soil structure between explorations, however variations can and often do exist. Whenever any deviation, difference, or change is encountered or becomes known, WT should be contacted.

This report is for the exclusive benefit of our client alone. There are no intended third-party beneficiaries of our contract with the client or this report, and nothing contained in the contract or this report shall create any express or implied contractual or any other relationship with, or claim or cause of action for, any third party against WT.



This report is valid for the earlier of one year from the date of issuance, a change in circumstances, or discovered variations. After expiration, no person or entity shall rely on this report without the express written authorization of WT.

10.0 CLOSURE

We prepared this report as an aid to the designers of the proposed project. The comments, statements, recommendations and conclusions set forth in this report reflect the opinions of the authors. These opinions are based upon data obtained at the location of the explorations, and from laboratory tests. Work on your project was performed in accordance with generally accepted standards and practices utilized by professionals providing similar services in this locality. No other warranty, express or implied, is made.

APPENDIX A

Allowable Soil Bearing Capacity	The recommended maximum contact stress developed at the interface of the foundation element and the supporting material.
Backfill	A specified material placed and compacted in a confined area.
Base Course	A layer of specified aggregate material placed on a subgrade or subbase.
Base Course Grade	Top of base course.
Bench	A horizontal surface in a sloped deposit.
Caisson/Drilled Shaft	A concrete foundation element cast in a circular excavation which may have an enlarged base (or belled caisson).
Concrete Slabs-On-Grade	A concrete surface layer cast directly upon base course, subbase or subgrade.
Crushed Rock Base Course	A base course composed of crushed rock of a specified gradation.
Differential Settlement	Unequal settlement between or within foundation elements of a structure.
Engineered Fill	Specified soil or aggregate material placed and compacted to specified density and/or moisture conditions under observations of a representative of a soil engineer.
Existing Fill	Materials deposited through the action of man prior to exploration of the site.
Existing Grade	The ground surface at the time of field exploration.
Expansive Potential	The potential of a soil to expand (increase in volume) due to absorption of moisture.
Fill	Materials deposited by the actions of man.
Finished Grade	The final grade created as a part of the project.
Gravel Base Course	A base course composed of naturally occurring gravel with a specified gradation.
Heave	Upward movement.
Native Grade	The naturally occurring ground surface.
Native Soil	Naturally occurring on-site soil.
Rock	A natural aggregate of mineral grains connected by strong and permanent cohesive forces. Usually requires drilling, wedging, blasting or other methods of extraordinary force for excavation.
Sand and Gravel Base Course	A base course of sand and gravel of a specified gradation.
Sand Base Course	A base course composed primarily of sand of a specified gradation.
Scarify	To mechanically loosen soil or break down existing soil structure.
Settlement	Downward movement.
Soil	Any unconsolidated material composed of discrete solid particles, derived from the physical and/or chemical disintegration of vegetable or mineral matter, which can be separated by gentle mechanical means such as agitation in water.
Strip	To remove from present location.
Subbase	A layer of specified material placed to form a layer between the subgrade and base course.
Subbase Grade	Top of subbase.
Subgrade	Prepared native soil surface.

COARSE-GRAINED SOILS

LESS THAN 50% FINES

GROUP SYMBOLS	DESCRIPTION	MAJOR DIVISIONS
GW	WELL-GRADED GRAVEL OR WELL-GRADED GRAVEL WITH SAND, LESS THAN 5% FINES	GRAVELS MORE THAN HALF OF COARSE FRACTION IS LARGER THAN NO. 4 SIEVE SIZE
GP	POORLY-GRADED GRAVEL OR POORLY-GRADED GRAVEL WITH SAND, LESS THAN 5% FINES	
GM	SILTY GRAVEL OR SILTY GRAVEL WITH SAND, MORE THAN 12% FINES	
GC	CLAYEY GRAVEL OR CLAYEY GRAVEL WITH SAND, MORE THAN 12% FINES	
SW	WELL-GRADED SAND OR WELL-GRADED SAND WITH GRAVEL, LESS THAN 5% FINES	SANDS MORE THAN HALF OF COARSE FRACTION IS SMALLER THAN NO. 4 SIEVE SIZE
SP	POORLY-GRADED SAND OR POORLY-GRADED SAND WITH GRAVEL, LESS THAN 5% FINES	
SM	SILTY SAND OR SILTY SAND WITH GRAVEL, MORE THAN 12% FINES	
SC	CLAYEY SAND OR CLAYEY SAND WITH GRAVEL, MORE THAN 12% FINES	

NOTE: Coarse-grained soils receive dual symbols if they contain 5% to 12% fines (e.g., SW-SM, GP-GC).

FINE-GRAINED SOILS

MORE THAN 50% FINES

GROUP SYMBOLS	DESCRIPTION	MAJOR DIVISIONS
ML	SILT, SILT WITH SAND OR GRAVEL, SANDY SILT, OR GRAVELLY SILT	SILTS AND CLAYS LIQUID LIMIT LESS THAN 50
CL	LEAN CLAY OF LOW TO MEDIUM PLASTICITY, SANDY CLAY, OR GRAVELLY CLAY	
OL	ORGANIC SILT OR ORGANIC CLAY OF LOW TO MEDIUM PLASTICITY	
MH	ELASTIC SILT, SANDY ELASTIC SILT, OR GRAVELLY ELASTIC SILT	SILTS AND CLAYS LIQUID LIMIT MORE THAN 50
CH	FAT CLAY OF HIGH PLASTICITY, SANDY FAT CLAY, OR GRAVELLY FAT CLAY	
OH	ORGANIC SILT OR ORGANIC CLAY OF HIGH PLASTICITY	
PT	PEAT AND OTHER HIGHLY ORGANIC SOILS	HIGHLY ORGANIC SOILS

NOTE: Fine-grained soils may receive dual classification based upon plasticity characteristics (e.g. CL-ML).

SOIL SIZES

COMPONENT	SIZE RANGE
BOULDERS	Above 12 in.
COBBLES	3 in. – 12 in.
GRAVEL	No. 4 – 3 in.
Coarse	¾ in. – 3 in.
Fine	No. 4 – ¾ in.
SAND	No. 200 – No. 4
Coarse	No. 10 – No. 4
Medium	No. 40 – No. 10
Fine	No. 200 – No. 40
Fines (Silt or Clay)	Below No. 200

NOTE: Only sizes smaller than three inches are used to classify soils

CONSISTENCY

CLAYS & SILTS	BLOWS PER FOOT
VERY SOFT	0 – 2
SOFT	3 – 4
FIRM	5 – 8
STIFF	9 – 15
VERY STIFF	16 – 30
HARD	OVER 30

RELATIVE DENSITY

SANDS & GRAVELS	BLOWS PER FOOT
VERY LOOSE	0 – 4
LOOSE	5 – 10
MEDIUM DENSE	11 – 30
DENSE	31 – 50
VERY DENSE	OVER 50

NOTE: Number of blows using 140-pound hammer falling 30 inches to drive a 2-inch-OD (1⅜-inch ID) split-barrel sampler (ASTM D1586).

PLASTICITY OF FINE GRAINED SOILS

PLASTICITY INDEX	TERM
0	NON-PLASTIC
1 – 7	LOW
8 – 20	MEDIUM
Over 20	HIGH

DEFINITION OF WATER CONTENT

DRY
SLIGHTLY DAMP
DAMP
MOIST
WET
SATURATED

The number shown in **"BORING NO."** refers to the approximate location of the same number indicated on the "Boring Location Diagram" as positioned in the field by pacing or measurement from property lines and/or existing features, or through the use of Global Positioning System (GPS) devices. The accuracy of GPS devices is somewhat variable.

"DRILLING TYPE" refers to the exploratory equipment used in the boring wherein **HSA = hollow stem auger**, and the dimension presented is the outside diameter of the HSA used.

"N" in "BLOW COUNTS" refers to a 2-inch outside diameter split-barrel sampler driven into the ground with a 140 pound drop-hammer dropped 30 inches repeatedly until a penetration of 18 inches is achieved or until refusal. The number of blows, or "blow count", of the hammer is recorded for each of three 6-inch increments totaling 18 inches. The number of blows required for advancing the sampler for the last 12 inches (2nd and 3rd increments) is defined as the Standard Penetration Test (SPT) "**N**"-Value. Refusal to penetration is considered more than 50 blows per 6 inches. (Ref. ASTM D1586).

"R" in "BLOW COUNTS" refers to a 3-inch outside diameter ring-lined split barrel sampler driven into the ground with a 140 pound drop-hammer dropped 30 inches repeatedly until a penetration of 12 inch is achieved or until refusal. The number of blows required to advance the sampler 12 inches is defined as the "**R**" blow count. The "**R**" blow count requires an engineered conversion to an equivalent SPT N-Value. Refusal to penetration is considered more than 50 blows per foot. (Ref. ASTM D3550).

"CS" in "BLOWS/FT." refers to a 2½-in. outside diameter California style split-barrel sampler, lined with brass sleeves, driven into the ground with a 140-pound hammer dropped 30 inches repeatedly until a penetration of 18 inches is achieved or until refusal. The number of blows of the hammer is recorded for each of the three 6-inch increments totaling 18 inches. The number of blows required for advancing the sampler for the last 12 inches (2nd and 3rd increments) is defined as the "CS" blow count. The "CS" blow count requires an engineered conversion to an equivalent SPT N-Value. Refusal to penetration is considered more than 50 blows for a 6-inch increment. (Ref. ASTM D 3550)

"SAMPLE TYPE" refers to the form of sample recovery, in which **N** = Split-barrel sample, **R** = Ring-lined sample, **"CS"** = California style split-barrel sample, **G** = Grab sample, **B** = Bucket sample, **C** = Core sample (ex. diamond bit rock coring).

"DRY DENSITY (LBS/CU FT)" refers to the laboratory-determined dry density in pounds per cubic foot. The symbol **"NR"** indicates that no sample was recovered.

"WATER (MOISTURE) CONTENT" (% of Dry Wt.) refers to the laboratory-determined water content in percent using the standard test method ASTM D2216.

"USCS" refers to the "Unified Soil Classification System" Group Symbol for the soil type as defined by ASTM D2487 and D2488. The soils were classified visually in the field, and where appropriate, classifications were modified by visual examination of samples in the laboratory and/or by appropriate tests.

These notes and boring logs are intended for use in conjunction with the purposes of our services defined in the text. Boring log data should not be construed as part of the construction plans nor as defining construction conditions.

Boring logs depict our interpretations of subsurface conditions at the locations and on the date(s) noted. Variations in subsurface conditions and characteristics may occur between borings. Groundwater levels may fluctuate due to seasonal variations and other factors.

The stratification lines shown on the boring logs represent our interpretation of the approximate boundary between soil or rock types based upon visual field classification at the boring location. The transition between materials is approximate and may be more or less gradual than indicated.

DEPTH (FEET)	MOISTURE CONTENT	DRY DENSITY (LBS/CU FT)	SAMPLE TYPE	SAMPLE	BLOW COUNTS	USCS	GRAPHIC	SOIL DESCRIPTION	REMARKS AND OTHER TESTS
1	2	3	4	5	6	7	8	9	10

COLUMN DESCRIPTIONS

1. DEPTH (FEET): Depth in feet below the ground surface.
2. MOISTURE CONTENT (% OF DRY WT.): Water content of the soil sample, expressed as percentage of dry weight of sample.
3. DRY DENSITY (LBS/CU FT): Dry weight per unit volume of soil sample measured in laboratory, in pounds per cubic foot.
4. SAMPLE TYPE: Sample identification letter.
5. SAMPLE: Soil type symbol.
6. BLOW COUNTS: Number of blows to advance driven sampler one foot (or distance shown) beyond seating interval using the hammer identified on the boring log.
7. USCS: Type of material encountered.
8. GRAPHIC: Graphic depiction of the subsurface material encountered.
9. SOIL DESCRIPTION: Description of material encountered. May include consistency, moisture, color, and other descriptive text.
10. REMARKS AND OTHER TESTS: Comments and observations regarding drilling or sampling made by driller or field personnel.

FIELD AND LABORATORY TEST ABBREVIATIONS

CHEM: Chemical tests to assess corrosivity
COMP: Compaction test
CONS: One-dimensional consolidation test
LL: Liquid Limit, percent
PI: Plasticity Index, percent
SA: Sieve analysis (percent passing No. 200 Sieve)
UC: Unconfined compressive strength test, Qu, in ksf
WA: Wash sieve (percent passing No. 200 Sieve)

MATERIAL GRAPHIC SYMBOLS

- Fat CLAY, CLAY w/SAND, SANDY CLAY (CH)
- Lean CLAY, CLAY w/SAND, SANDY CLAY (CL)
- Clayey GRAVEL (GC)
- Silty GRAVEL (GM)
- Poorly graded GRAVEL (GP)
- Poorly graded GRAVEL with Silt (GP-GM)
- SILT, SILT w/SAND, SANDY SILT (MH)
- SILT, SILT w/SAND, SANDY SILT (ML)
- Clayey SAND (SC)
- Silty SAND (SM)
- Poorly graded SAND (SP)
- Poorly graded SAND with Clay (SP-SC)
- Poorly graded SAND with Silt (SP-SM)

TYPICAL SAMPLER GRAPHIC SYMBOLS

- Auger sampler
- Bulk Sample
- 3-inch-OD California w/ brass rings
- CME Sampler
- Grab Sample
- 2.5-inch-OD Modified California w/ brass liners
- Pitcher Sample
- 2-inch-OD unlined split spoon (SPT)
- Shelby Tube (Thin-walled, fixed head)

OTHER GRAPHIC SYMBOLS

- Water level (at time of drilling, ATD)
- Water level (after waiting, AW)
- Minor change in material properties within a stratum
- Inferred/gradational contact between strata
- Queried contact between strata

GENERAL NOTES

1: Soil classifications are based on the Unified Soil Classification System. Descriptions and stratum lines are interpretive, and actual lithologic changes may be gradual. Field descriptions may have been modified to reflect results of lab tests.
2: Descriptions on these logs apply only at the specific boring locations and at the time the borings were advanced. They are not warranted to be representative of subsurface conditions at other locations or times.

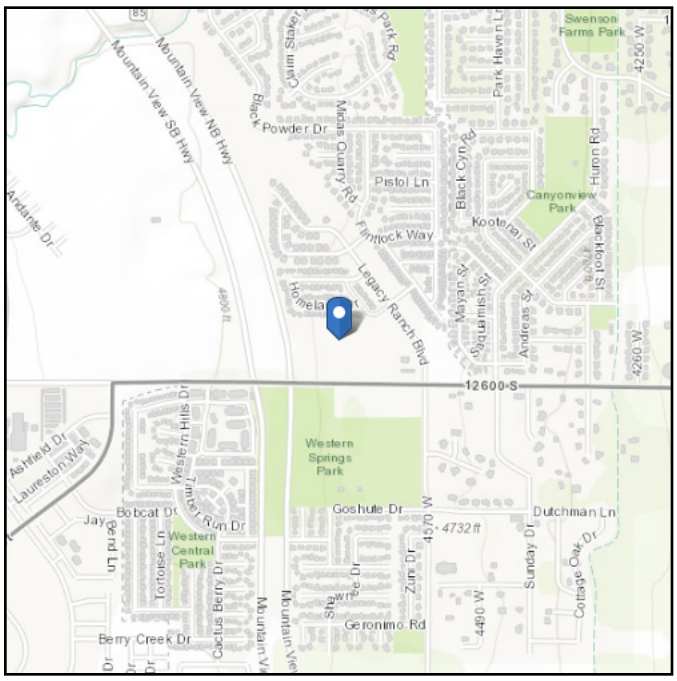
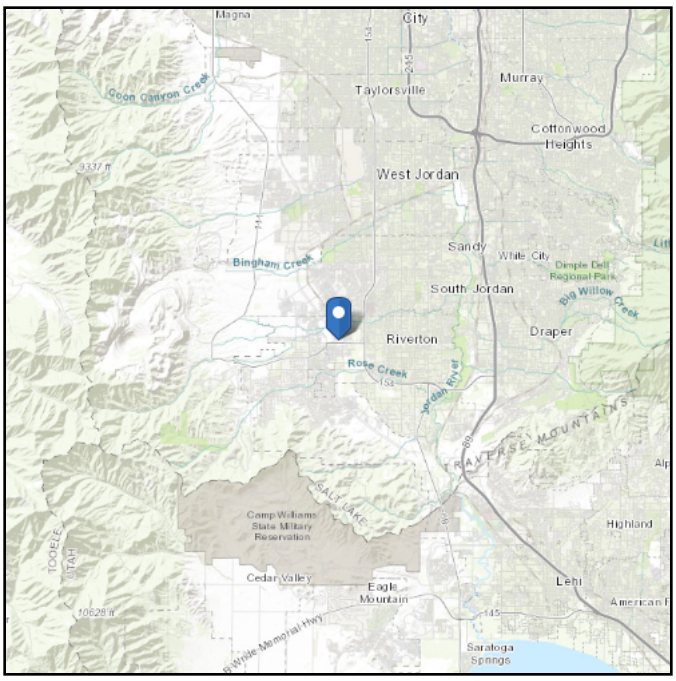
Report Footnotes



Abbreviations



ND = Not detected at the corresponding Minimum Reporting Limit (MRL).
1 mg/L = one milligram per liter or 1 mg/kg = one milligram per kilogram = 1 part per million.
1 ug/L = one microgram per liter or 1 ug/kg = one microgram per kilogram = 1 part per billion.
1 ng/L = one nanogram per liter or 1 ng/kg = one nanogram per kilogram = 1 part per trillion.
On calculated parameters, there may be a slight difference between summing the rounded values shown on the report vs the unrounded values used in the calculation.

AGREEMENT CONCERNING DRAWING FILES ON ELECTRONIC MEDIA

PART 1 - GENERAL

1.1 AGREEMENT CONCERNING DRAWING FILES ON ELECTRONIC MEDIA

A. The electronic files will be distributed from the Architect to the Construction Manager/General Contractor only once the following form has been signed. It will be the General Contractor's responsibility to control distribution.

B. Valentiner Crane Brunjes Onyon Architects, L.L.C. (the Architect) does not assume any responsibility for the accuracy of the information contained in these drawing files. Any and all users are aware that differences may exist between the electronic files delivered and the printed hard-copy construction documents. In the event of a conflict between the signed and sealed hard-copy construction documents prepared by the Architect and the electronic files, the signed or sealed hard-copy construction documents shall govern.

C. Any and all users who may obtain these drawings **from the Construction Manager/General Contractor** under this agreement, including but not limited to, subcontractors, vendors, suppliers etc., agree to indemnify and hold harmless the Architect, its officers, directors, employees and sub-consultants against all damages, liabilities or costs, including reasonable attorneys' fees and defense costs, arising from any changes made by anyone other than the Architect or from any transfer or reuse of the electronic files including data contained in the files without the prior written consent of the Architect.

D. Building Information Model (BIM) drawing files will be made available to the Construction Manager/General Contractor and its subcontractors for the purposes of preparing submittals for their portion of the work **only** after the "Agreement Concerning Drawing Files on Electronic Media" has been signed by the Construction Manager/General Contractor.

PART 2 - PRODUCTS - Not Used

PART 3 - EXECUTION – Not Used

END OF SECTION

AGREEMENT CONCERNING DRAWING FILES ON ELECTRONIC MEDIA

Valentiner Crane Brunjes Onyon Architects, L.L.C. (the Architect) does not assume any responsibility for the accuracy of the information contained in these digital models. Any and all users are aware that differences may exist between the electronic files delivered and the printed hard-copy construction documents. In the event of a conflict between the signed and sealed hard-copy construction documents prepared by the Architect and the electronic files, the signed or sealed hard-copy construction documents shall govern.

Any and all users who may obtain these digital models from the Construction Manager/General Contractor under this agreement, including but not limited to; subcontractors, vendors, suppliers etc., agree to indemnify and hold harmless the Architect, its officers, directors, employees and sub-consultants against all damages, liabilities or costs, including reasonable attorneys' fees and defense costs, arising from any changes made by anyone other than the Architect or from any transfer or reuse of the electronic files without the prior written consent of the Architect.

Under no circumstances shall delivery of the electronic digital models be deemed a sale by the Architect, and the Architect makes no warranties, either express or implied, of merchantability and fitness for any particular purpose. In no event shall the Architect be liable for any loss of profit or any consequential damages as a result of the use or reuse of the electronic files.

The digital Building Information Models provided will contain information as provided on construction documents. The user shall remove all notes, text, detail cuts and member designations from the electronic file prior to use. If used as submittal documents, submittals will be rejected as non-compliant. The drawing files provided by VCBO may not be reproduced or distributed to individuals outside the company or collective organization signing this agreement.

ALTERNATES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Administrative and procedural requirements for alternates.

B. Procedures for pricing Alternates.

1.2 RELATED REQUIREMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this section.

B. Document 00 4323 - Alternates Form: List of Alternates as supplement to Bid Form.

C. Document 00 5200 - Agreement Form: Incorporating monetary value of accepted Alternates.

1.3 DEFINITIONS

A. Alternate: An amount proposed by bidders and stated on the Bid Form for certain work defined in the Bidding Requirements that may be added to or deducted from the Base Bid amount if Owner decides to accept a corresponding change either in the amount of construction to be completed or in the products, materials, equipment, systems, or installation methods described in the Contract Documents.

B. The cost or credit for each alternate is the net addition to or deduction from the Contract Sum to Co

1.4 ACCEPTANCE OF ALTERNATES

A. Alternates quoted on Bid Forms will be reviewed and accepted or rejected at Owner's option. Accepted Alternates will be identified in the Owner-Contractor Agreement.

B. Coordinate related work and modify surrounding work to integrate the Work of each Alternate.

1.5 PROCEDURES

A. Coordination: Modify or adjust affected adjacent work as necessary to completely integrate work of the alternate into Project.

B. Include as part of each alternate, miscellaneous devices, accessory objects, and similar items incidental to or required for a complete installation whether or not indicated as part of alternate.

C. Notification: Immediately following award of the Contract, notify each party involved, in writing, of the status of each alternate. Indicate if alternates have been accepted, rejected, or deferred for later consideration. Include a complete description of negotiated modification ot alternates.

D. Execution of Work: Execute accepted alternates under the same conditions as other work of the Contract.

E. Schedule: A Schedule of Alternates is included at the end of this section. Specification sections referenced in schedule contain requriements for materials necessary to achieve the work described under each alternate.

1.6 SCHEDULE OF ALTERNATES

A. Alternate #01
   1. Base Bid Item: As listed in Section 07 13 25– Self-Adhering (Post-Applied) Sheet Waterproofing.
   2. Alternate Bid Item: As listed in Section 07 14 50 – Fluid-Applied Waterproofing Membrane.

B. Alternate #02
   1. Base Bid Item: As listed in 07 27 00 - Sheet-Applied Membrane Air Barriers
      Alternate Bid Item: As listed in 07 27 26 - Fluid-Applied Membrane Air Barrier

C. Alternate #03
   1. Base Bid Item: As listed in 07 54 23 - Thermoplastic Polyolefin (TPO) Roofing
      Alternate Bid Item: Providing roofing equivalent for same criteria for a PVC roof membrane.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION - NOT USED

END OF SECTION

SECTION 01 31 00
PROJECT MANAGEMENT AND COORDINATION

PART 1 GENERAL

1.01 SUMMARY

A. Section includes administrative provisions for coordinating construction operations on Project including, but not limited to, the following:
   1. Coordination drawings.
   2. Requests for Information (RFIs).
   3. Project Web site.
   4. Project meetings.

1.02 RELATED SECTIONS:

A. 01 31 00.05 - Project BIM Coordination for work to be coordinated by Building Information Management software.

B. 01 77 00 - "Closeout Procedures" for procedures for coordinating general installation and field-engineering services, including establishment of benchmarks and control points.

1.03 DEFINITIONS

A. RFI: Request for Information; a request for an owner, architect and contractor to request further information from each other during construction.

B. PR: Proposal Request; a request to the contractor for price and time quotations related to a proposed change in the construction contract.

C. CCD: Construction Change Directive; a directive for changes in the Work for use where the owner and contractor have not agreed on proposed changes in the contract sum or contract time. Upon receipt of a CCD, the contractor must promptly proceed with the change in the Work described therein.

D. ASI: Architect's Supplemental Instruction; a means for the Architect to provide additional instructions, interpretations, or order minor changes in the Work that do not constitute a change to the contract sum or contract time.

1.04 COORDINATION

A. Coordination: Coordinate construction operations included in different Sections of the Specifications to ensure efficient and orderly installation of each part of the Work. Coordinate construction operations, included in different Sections, that depend on each other for proper installation, connection, and operation.
   1. Schedule construction operations in sequence required to obtain the best results where installation of one part of the Work depends on installation of other components, before or after its own installation.
   2. Coordinate installation of different components to ensure maximum performance and accessibility for required maintenance, service, and repair.
   3. Make adequate provisions to accommodate items scheduled for later installation.

B. Prepare memoranda for distribution to each party involved, outlining special procedures required for coordination. Include such items as required notices, reports, and list of attendees at meetings.
   1. Prepare similar memoranda for separate Subcontractors if coordination of their Work is required.

C. Administrative Procedures: Coordinate scheduling and timing of required administrative procedures via Owner-approved and provided project management website/software with other construction activities and activities of other Subcontractors to avoid conflicts and to ensure orderly progress of the Work. Such administrative activities include, but are not limited to, the following:
   1. Preparation of contractor's construction schedule and its coordination with the Owner's milestones.
   2. Preparation of the schedule of values.
   3. Installation and removal of temporary facilities and controls.

4. Delivery and processing of submittals.
5. Special Inspections.
6. Progress meetings.
7. Pre-installation conferences.
8. Facilitate weekly project team meetings.
9. Startup and adjustment of systems.
10. Project closeout activities.

1.05 COORDINATION DRAWINGS AND BIM MODELS

A. Coordination Drawings, General: Prepare coordination drawings in accordance with requirements in individual Sections, where installation is not completely shown on Shop Drawings, where limited space availability necessitates coordination, or if coordination is required to facilitate integration of products and materials fabricated or installed by more than one entity.
   1. Content: Project-specific information, drawn accurately to a scale large enough to indicate and resolve conflicts. Do not base coordination drawings on standard printed data. Include the following information, as applicable:
      a. Indicate functional and spatial relationships of components of architectural, structural, civil, mechanical, and electrical systems.
      b. Indicate dimensions shown on the Drawings. Specifically note dimensions that appear to be in conflict with submitted equipment and minimum clearance requirements. Provide alternate sketches to Architect indicating proposed resolution of such conflicts. Minor dimension changes and difficult installations will not be considered changes to the Contract.

B. Coordination Drawing Organization: Organize coordination drawings as follows:
   1. Floor Plans and Reflected Ceiling Plans: Show architectural and structural elements, and mechanical, plumbing, fire protection, fire alarm, and electrical Work. Show locations of visible ceiling-mounted devices relative to acoustical ceiling grid.
   2. Plenum Space: Indicate sub-framing for support of ceiling and wall systems, mechanical and electrical equipment, and related Work. Locate components within ceiling plenum to accommodate layout of light fixtures indicated on Drawings.
   3. Mechanical Rooms: Provide coordination drawings for mechanical rooms showing plans and elevations of mechanical, plumbing, fire protection, fire alarm, and electrical equipment.
   4. Structural Penetrations: Indicate penetrations and openings required for all disciplines.
   5. Slab Edge and Embedded Items: Indicate slab edge locations and sizes as well as locations of embedded items for metal fabrications, sleeves, anchor bolts, bearing plates, angles, door floor closers, slab depressions for floor finishes, curbs and housekeeping pads, and similar items.
   6. Review: General Contractor (GC) and Owner's Representative (OR), or agent thereof, will review coordination drawings to confirm that the Work is being coordinated, but not for the details of the coordination, which are the Subcontractor's responsibility.

C. Coordination BIM Models: See Section 01 31 00.05 Project BIM Coordination.

1.06 REQUESTS FOR INFORMATION (RFI)

A. General: Immediately on discovery of the need for additional information or interpretation of the Contract Documents, Subcontractor shall prepare and submit an RFI in the form specified.
   1. Coordinate and submit RFIs in a prompt manner so as to avoid delays in Subcontractor's work.
   2. Submit RFIs electronically via Procore software system.
      a. General Contractor (GC) will assign each subcontractor a site username and password once contract documents have been executed. An email will be sent to the subcontractor with information and directions for the site access.

B. Content of the RFI: Include a detailed, legible description of item needing information or interpretation and the following:
   1. Project name.
   2. Project number.
   3. Name of Subcontractor.
   4. RFI number, numbered sequentially.

5. RFI subject.
6. Specification Section number and title and related paragraphs, as appropriate.
7. Drawing number and detail references, as appropriate.
8. Field dimensions and conditions, as appropriate.
9. Subcontractor's suggested resolution. If Subcontractor's solution(s) impacts the Subcontractor Time or the Subcontractor Price, Subcontractor shall state impact in the RFI.
10. Subcontractor's signature.
11. Attachments: Include sketches, descriptions, measurements, photos, Product Data, Shop Drawings, coordination drawings, and other information necessary to fully describe items needing interpretation.

C. RFI Forms: Submit electronically via Procore software system.

D. Architect's Action: Architect will review each RFI, determine action required, and respond. Allow 3-5 working days for General Contractor's response for each RFI, or up to 10 working days for RFIs requiring coordination with multiple disciplines. RFIs received by General Contractor after 1:00 p.m. will be considered as received the following working day.
   1. The following RFIs will be returned without action:
      a. Requests for approval of submittals.
      b. Requests for approval of substitutions.
      c. Requests for coordination information already indicated in the Contract Documents.
      d. Requests for adjustments in the Subcontractor Time or the Subcontractor Price.
      e. Requests for interpretation of general Contractor's actions on submittals.
      f. Incomplete RFIs or inaccurately prepared RFIs.
   2. Architect's action may include a request for additional information, in which case the time for response will date from time of receipt of additional information.
   3. Architect's action on RFIs that may result in a change to the Subcontractor Time or the Subcontractor Price may be eligible for Subcontractor to submit Change Proposal according to conditions of the contract and as otherwise specified.
      a. If Subcontractor believes the RFI response warrants change in the Subcontractor Time or the Subcontractor Price, notify the Architect and Owner's Representative in writing within 5 days of receipt of the RFI response.

1.07 PROJECT WEB SITE

A. All project coordination will be handled via email and other digital methods as advised. Provide email addresses for all appropriate project staff.

1.08 PROJECT MEETINGS

A. General: General Contractor will schedule and conduct meetings and conferences at Project site, unless otherwise indicated.

B. Preconstruction Conference: General Contractor will schedule and conduct a preconstruction conference before starting construction.
   1. Attendees: Architect, Owner's Representative, General Contractor, Subcontractor's Project Manager and its superintendent; major Subcontractors; suppliers; and other concerned parties shall attend the conference. Participants at the conference shall be familiar with Project and authorized to conclude matters relating to the Work.
   2. Agenda: Discuss items of significance that could affect progress, including the following:
      a. Tentative construction schedule.
      b. Phasing.
      c. Critical work sequencing and long-lead items.
      d. Designation of key personnel and their duties.
      e. Procedures for processing field decisions and Change Orders.
      f. Procedures for RFIs.
      g. Procedures for testing and inspecting.
      h. Procedures for processing Applications for Payment.
      i. Distribution of the Contract Documents.

j. Submittal procedures.
k. Sustainable design requirements.
l. Preparation of record documents.
m. Use of the premises.
n. Work restrictions.
o. Working hours.
p. Owner's occupancy requirements.
q. Responsibility for temporary facilities and controls.
r. Procedures for moisture and mold control.
s. Procedures for disruptions and shutdowns.
t. Construction waste management and recycling.
u. Parking availability.
v. Office, work, and storage areas.
w. Equipment deliveries and priorities.
x. First aid.
y. Security.
z. Progress cleaning.
aa. Safety
bb. Owner Requirements

3. Minutes: General Contractor will record and distribute meeting minutes.

C. Pre-installation Conferences: General Contractor shall conduct a pre-installation conference at Project site before each construction activity that requires coordination with other construction.
1. Attendees: Installer and representatives of manufacturers and fabricators involved in or affected by the installation and its coordination or integration with other materials and installations that have preceded or will follow, shall attend the meeting. Advise General Contractor, Architect, and Owner’s Representative of scheduled meeting dates.
2. Agenda: Review progress of other construction activities and preparations for the particular activity under consideration, including requirements for the following:
a. Contract Documents.
b. Options.
c. Related RFIs.
d. Related Change Orders.
e. Purchases.
f. Deliveries.
g. Submittals.
h. Review of mockups.
i. Possible conflicts.
j. Compatibility problems.
k. Time schedules.
l. Weather limitations.
m. Manufacturer's written recommendations.
n. Warranty requirements.
o. Compatibility of materials.
p. Acceptability of substrates.
q. Temporary facilities and controls.
r. Space and access limitations.
s. Regulations of authorities having jurisdiction.
t. Testing and inspecting requirements.
u. Installation procedures.
v. Coordination with other work.
w. Required performance results.
x. Protection of adjacent work.
y. Protection of construction and personnel.

z. Safety Action Plan.
aa. Site Coordination.

3. Record significant conference discussions, agreements, and disagreements, including required corrective measures and actions.
4. Reporting: Distribute minutes of the meeting to each party present and to other parties requiring information.
5. Do not proceed with installation if the conference cannot be successfully concluded. Initiate whatever actions are necessary to resolve impediments to performance of the Work and reconvene the conference at earliest feasible date.

D. Progress Meetings: General Contractor will conduct progress meetings at weekly intervals.
1. Attendees: In addition to the Architect, Owner's Representative, and General Contractor, each Subcontractor, Sub-Subcontractor, supplier, and other entity concerned with current progress or involved in planning, coordination, or performance of future activities shall be represented at these meetings. All participants at the meeting shall be familiar with Project and authorized to conclude matters relating to the Work.
2. Agenda: Review and correct or approve minutes of previous progress meeting. Review other items of significance that could affect progress. Include topics for discussion as appropriate to status of Project.
   a. Construction Schedule: Review progress since the last meeting. Determine whether each activity is on time, ahead of schedule, or behind schedule, in relation to construction schedule. Determine how construction behind schedule will be expedited; secure commitments from parties involved to do so. Discuss whether schedule revisions are required to ensure that current and subsequent activities will be completed so as not to delay the completion of the Project.
      1) Review schedule for next period.
   b. Review present and future needs of each entity present, including the following:
      1) Interface requirements.
      2) Sequence of operations.
      3) Status of submittals.
      4) Deliveries.
      5) Off-site fabrication.
      6) Access.
      7) Site utilization.
      8) Temporary facilities and controls.
      9) Progress cleaning.
      10) Quality and work standards.
      11) Status of correction of deficient items.
      12) Field observations.
      13) Status of testing and inspections.
      14) Status of RFIs.
      15) Status of proposal requests.
      16) Pending changes.
      17) Status of Change Orders.
      18) Pending claims and disputes.
      19) Documentation of information for payment requests.
      20) Safety.
      21) Site Clean Up.
3. Minutes: General Contractor will record and distribute the meeting minutes to each party present and to parties requiring information.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION (NOT USED)

END OF SECTION

This page intentionally left blank

SECTION 01 31 01
PROJECT BIM COORDINATION

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Building Information Modelling Standards and Coordination.
   1. Protocols for 3D Coordination.
   2. Model content and expected Level of Detail.
   3. Model Element Scope.

1.02 RELATED REQUIREMENTS

A. Section 01 31 00 - Project Coordination.

B. Section 01 77 00 - Closeout Procedures: Project record documents, operation and maintenance (O&M) data, warranties and bonds.

C. Division 5 - Metals: See below for scope.

D. Section 11 40 00 - Food Service Equipment

E. Division 21 - Fire Suppression: See below for scope.

F. Division 22 - Plumbing: See below for scope.

G. Division 23 - Heating, Ventilation and Air Conditioning (HVAC): See below for scope.

H. Division 26 - Electrical: See below for scope.

I. Division 32 - Exterior Improvements: See below for scope.

1.03 ADDITIONAL CONTRACTING CONDITIONS

A. BIM modelling and coordination is a condition of the contract and the cost to the subcontractor is to be included in the cost of construction.

B. This specification is written with the assumption that Life Time is serving as General Contractor. When this is not the case, the General Contractor shall take on the role of BIM Model Coordinator.

C. Failure by Subcontractors to uphold the obligations specified herein shall be considered a material breach of the Subcontract.
   1. In the event of any such breach, Life Time may, upon 48 hours' notice to Subcontractor, supplement Subcontractor's work required herein at Subcontractor's expense and exercise any and all other remedies provided under the Subcontract or applicable law.
      a. Subcontractor will be liable for lost time to Life Time or other Subcontractors.
      b. Subcontractor will be liable to correct any improperly coordinated work, whether by themselves or by other Subcontractors.

D. Submission of required models in a timely manner and their coordination serves to reserve space for each Subcontractor to install their Scope of Work components.
   1. Subcontractors who fail to completely submit their models in a timely manner shall be required to move their components, at their own expense, in the event of conflict with another Subcontractor.

1.04 DEFINITIONS

A. **Building Information Model.** A Building Information Model is a digital representation of the physical and functional characteristics of the Project which encompasses building geometry, spatial relationships, geographic information, and quantities and properties of building components. The Building Information Model is herein referred to as the "Model(s)". "Building Information Modeling" (BIM) refers to the methodology and technology used to create the Model. The following types of models will be used during the coordination effort:
   1. **Design Models.** Design Models are provided by Life Time to the subcontractors that includes both the Architectural and Structural elements of the Project. This model will be created by the

Architect and Engineer of Record. The Level of Detail of the Base Construction Model shall be established prior to the BIM Kickoff Meeting.

2. **Coordination Model.** The Coordination Model is the Model that will be reviewed by Life Time and its subcontractors on an ongoing basis until the time a "Sign-off Model" is completed. This Model will include the design models and Subcontractor Model Elements that have been provided.
3. **Sign-off Model.** The Sign-off Model is the final Coordination Model which becomes the basis for construction from which shop drawings and field drawings are to be produced. This Model may consist of the entire Project or only an area or level of the Project.
4. **As-Built Model.** A Model that reflects the As-Built condition of the Project. This Model type will be used following coordination to represent the install condition of the Model Elements. It will include the Base Construction Model and all Subcontractor Model Elements.

B. **Clash Detection.** Clash Detection tools enable effective identification, inspection, and reporting of interference clashes in a 3D project model.

C. **Level of Detail.** The Level of Detail (LOD) describes the particular level of completeness to which a Model Element or Subcontractor Scope of Work is to be developed. Further information is found in the AGC BIM Specification (2016).

D. **Model Element.** A Model Element is a portion of the Building Information Model representing a component, system or assembly within a building. For the purposes of this Specification, Model Elements are represented by the different systems included in each Subcontractor's Scope of Work.

E. **Model Element Author.** The Model Element Author (MEA) is the party responsible for developing the content of a specific Model Element to the LOD required for Subcontractor's particular scope of Work on the project. Model Element Author refers to the subcontractor responsible for an identified Scope of Work.

F. **Navisworks® Freedom.** Autodesk® Navisworks® Freedom software is the free viewer for files in the Navisworks® NWD and 3D DWF formats. Navisworks® Freedom is to be utilized by the Model Element Author to review clashes between Model Elements.

G. **Navisworks® Manage.** Autodesk® Navisworks® Manage software will be used to create a single Model of the Project from the individual Model Elements developed by the Model Element Authors to provide a real-time project view for effective 3D Coordination and 4D planning. Navisworks® Manage provides the tools to optimize interoperability between all types of models, regardless of format or file size, and perform Clash Detection for coordination review.

H. **Object Enabler.** A downloadable module that 'translates' the BIM model custom objects into a language that other software applications understand.

1.05 REFERENCE STANDARDS

A. AGC BIM Level of Specification - AGC BIM LoS; 2016.

B. NBIMS-US v3 - National BIM Standards-US; Version 3.

C. NCS v6 - National CAD Standards (NCS); Version 6.

1.06 ADMINISTRATIVE REQUIREMENTS

A. Coordination Protocol:
   1. Kick-off Meeting:
      a. After award, a 3D Coordination protocol meeting shall be held.
      b. All Subcontractors to be involved in the 3D Coordination effort are required to attend. Attendees shall include at least one Project Manager and one member of the 3D modeling team from each Subcontractor.
      c. Coordination requirements, Schedule, Standards and other related items shall be discussed.
   2. Training:
      a. Life Time may, at its discretion, provide basic coordination training for all coordination team members (if necessary).

b. Complete, accurate, and timely modeling and submission of Subcontractor's work shall remain the responsibility of Subcontractor.

3. Internal Coordination:
   a. The Subcontractor's Model Elements shall be internally coordinated prior to submitting to Life Time.
   b. Internal Coordination shall include all elements of the Subcontractor's Scopes of Work, any existing work of the same Scopes of Work as the subcontractor's, or connections to other Scopes of Work by the Subcontractor.
4. Coordination with Provided Information:
   a. The Subcontractor's Model Elements shall be coordinated with the provided information prior to submitting to Life Time.
   b. Coordination shall include all elements of the Base Construction Model, adherence to any plenum / underground hierarchy diagrams on the project, and any available Trade / Subcontractor models of other Scopes of Work in provided Coordination Models.
   c. All subcontractors shall coordinate their scopes of work with the contract documents.
5. Conflict Corrections:
   a. The Model Element Authors shall correct all assigned Model Element conflicts discovered during or after Life Time's review of submitted models or Coordination meetings prior to the following submittal deadline or coordination meeting.
6. Model Management:
   a. Life Time will facilitate the Coordination Process throughout the duration of the Project. Life Time will provide the following:
      1) Model Coordinate System (Origin, Orientation and Units)
      2) Collaboration Site (Setup and Maintenance)
      3) Process for transferring and accessing Model files.
      4) Naming Conventions for subcontractor file names
      5) Typical Plenum Hierarchy Diagram
      6) Coordination Schedule. A detailed schedule for 3D coordination will be coordinated with the overall project schedule. This schedule will be issued at the time of the Kick-off meeting.
   b. During the project, Lifetime will manage the following processes:
      1) Coordinate submission and exchange of Models
         (a) Validate that files are complete, usable and in compliance with applicable protocols
         (b) Maintain record copy of each file received
      2) Create Coordination Model
      3) Perform Clash Detection between trades
      4) Facilitate Coordination Meetings
      5) Issue Requests for Information for conflicts requiring Design Team input
      6) Publish Coordination Meeting models and reports for subcontractor review and resolution
      7) Maintain an updated coordination schedule
      8) Maintain Sign-Off Models and As-Built Models.
7. Model Ownership:
   a. All Models submitted to or by Life Time may be used as needed by the Project Team; however, only the original Model Author has the right to modify Model content.
   b. By submitting content for the Model, Life Time and/or the Subcontractor does not grant any ownership right in the content provided or in the software used to produce content.
   c. In addition to the uses defined in this Specification (design, coordination, fabrication, and construction of the Project) these Models may also be used for other purposes such as 4D scheduling and facility maintenance by either Life Time or Owner.
8. Collaboration Site:
   a. All file transfers for coordination will be via the file sharing site provided by Life Time.
   b. The standard file sharing location for Life Time is Microsoft One Drive.

9. Clash Detection:
    a. Prior to established deadlines or Coordination Meetings, Navisworks will be used to identify conflicts between trades.
    b. Additional issues and clashes may also be found while virtually walking the Project. Subcontractors are responsible for performing internal and external coordination as defined in 1.06A4 prior to submitting models to Life Time.
10. Clash Viewpoints:
    a. Clashes and issues will be documented in the model and provided to all Coordination team members as a basis for tracking progress in the coordination process. These viewpoints will be provided after Life Time's review of subcontractor submissions or after scheduled Coordination Meetings.
    b. Clashes and issues will all receive a number, and a designation of which company is responsible for the resolution.
    c. If an RFI is issued in the process of resolving a clash or issue, the RFI# will also be noted in the Clash Report. Subcontractors will resolve all documented clashes and issues in the reports prior to the following submittal deadline or Coordination meeting.
    d. The viewpoints will serve as a basis for tracking performance of the coordination process.
11. Model and Report Distribution:
    a. Life Time will provide the Coordination Model and Clash Report to each Subcontractor via the Collaboration Site for their review and use in the External Coordination process or to make the required changes to their Model Elements after Coordination Meetings and other deadlines as defined by the BIM Coordination Schedule.
12. External Coordination:
    a. As Subcontractor models are added to the Coordination Model, the Subcontractor will use the Coordination Model and Clash Reports provided to coordinate their Scope of Work with all other Subcontractors' Scopes of Work.
    b. Subcontractor shall communicate with the other trades / subcontractors to resolve clashes that do not require Life Time's involvement as a facilitator.
    c. Each subcontractor shall make the necessary changes and upload their revised models to confirm that the conflicts are resolved.
    d. Submission deadlines for these externally coordinated models shall be in accordance with the Coordination Schedule established by Life Time and as otherwise required by Life Time in the Coordination Schedule.
    e. Life Time will confirm that submitted models meet the internal and external coordination requirements prior to the scheduled Coordination Meeting.
13. Coordination Meetings:
    a. The Subcontractor shall be prepared to accommodate Coordination meetings to resolve model conflicts.
        1) The scheduled meetings will take place on the jobsite at a location and time to be determined by the Project Team and may consist of either recurring meetings or 2 or 3 day work sessions.
    b. During each meeting the current Coordination Model will be reviewed by virtually walking the Project and discussing conflicts found using Clash Detection and model viewing tools.
    c. Each conflict found will be discussed with all involved parties to determine the best solution, with Life Time acting as the facilitator for those discussions.
        1) Attendees shall include at least one Model Element Author from each Subcontractor who clearly understands the defined Scope of Work and is able to make decisions about changes to the Scope of Work in the meeting.
    d. Coordination Meetings may be conducted via Online Meeting depending on the location and accessibility of the jobsite by the Subcontractors. This will be determined by Life Time and will be based on the productivity of past online meetings.
14. Sign-Off Model:
    a. Upon completion of Coordination, Subcontractor shall provide a model of the condition of their Scope of Work.

b. Model Elements shall be updated to include changes made by 1) Requests for Information, 2) Design changes by Architect / Engineer, 3) Submittal comments and revisions on approved shop drawings, and 4) As-Built field modifications.
c. After all conflicts have been corrected and/or Life Time and the Subcontractors agree that the area defined by the Coordination Model has been sufficiently coordinated, all parties will sign-off on the defined area using the 3D Coordination Sign-Off document (Attachment A).
d. This final Coordination Model then becomes the Sign-Off Model for the defined area. Any unresolved clashes or issues in this area that require further review (due to delayed responses or expected contract document changes) should be noted on the document.
e. The Subcontractor agrees to be responsible for locating their respective systems based on the Sign-Off Model.
    1) Any variation from this Sign-Off Model must be coordinated with Life Time.
    2) Components that are installed in conflict with the Sign-Off Model layout and create obstacles or additional work for other disciplines shall require one of the following: a) removal and reinstallation per model, or b) monetary compensation to the affected party.

15. Model Revisions:
    a. If the contract documents or the Subcontractor's Scope of Work are modified after the Sign-Off Model has been completed, the Subcontractor shall include costs within their Change Order to modify and re-coordinate the affected Model Elements in the modified areas.
    b. Substantial changes involving multiple trades may require additional Coordination Meetings, a new Sign-Off Model, and another Sign Off document.
    c. All coordination costs associated with the changes must be included in the Change Order for the changed Scope of Work. Subcontractor must notify the Project Model Manager of any changes to floors which have already been signed-off.
16. Shop Drawing Submittals of affected scopes of work:
    a. All submittals for affected Scopes of Work shall conform with the approved Sign-Off Model.
    b. See "Submittals" below.
17. Field/Installation Documents
    a. Field/Installation documents are to be based on the approved Sign-Off Model and are to include any mark-ups from the approved shop drawing submittal.
    b. These drawings are to be adequately dimensioned and labeled to accurately locate components in the field according to the coordinated Sign-Off Model.
18. Installation
    a. Subcontractors shall be responsible for quality assurance that all components (materials and equipment) installed are being placed in the field in accordance with the Sign-Off Model, Approved Shop Drawings and construction tolerances.
    b. Subcontractors shall utilize established benchmarks (coordinated by field personnel) for the installation of all components.
    c. Laser scanning and/or surveying equipment may also be used as a quality control mechanism to validate installation conforms with the Sign-Off Model.

B. Subcontractor Model Requirements:
1. Subcontractor shall deliver a Model that is on-time, accurate, and representative of the actual elements that will be or are installed in the field.
2. Any elements not included in the Subcontractor Model will become the Subcontractor's responsibility to coordinate in the field at no additional cost to Life Time, the Owner, or other subcontractors affected by the inaccurate or incomplete information.
3. File Formats. Subcontractor shall provide Life Time with a Model in a format acceptable to Navisworks®. Life Time would also prefer to receive a DWG when possible, however all file types mentioned in the following table are acceptable.
    a. Additional file formats to be approved by Life Time.

Format	**Extension**
Navisworks	.nwd .nwf .nwc

AutoCAD	.dwg .dxf
Revit	.rvt (An .nwc must be accompanied by the Revit file)
IFC	.ifc
Inventor	.ipf .iam .ipi

4. Model Origin:
   a. Subcontractor shall model their scope Model Elements on the base coordinate system set by Life Time in the provided Architectural/Structural Base Construction Model.
5. Object Enablers:
   a. Subcontractor shall provide download location of all Object Enablers (OE) required for custom objects to be displayed correctly outside of the Subcontractor's authoring application software.
6. Model Extent Requirements:
   a. The Model Elements provided by the Subcontractor shall extend to five feet beyond the exterior walls of the building, unless the specific Scope of Work (i.e., Civil, Landscape, Irrigation, etc.) to be modeled is intended to be outside the building footprint.
   b. Vertically, the Model Elements shall extend from the lowest extent of the foundations up through (and including) the roof of the upper most floor. To the extent that the Scope of Work includes building systems, those systems will be included to the full horizontal and vertical extents of the model including all systems in the soffits and roof-top mounted items.
7. Level of Detail:
   a. The Subcontractor's Model Elements shall include, at a minimum: all systems and components modeled to a Level of Detail consistent with objects represented by a 1/8" plan/elevation/section drawing. See Requirements for specific scopes of work below.
8. Model Clarity:
   a. The Subcontractor's Model shall be organized so that Model Elements can be clearly identified by name and/or layer by the Project Team and Owner.
   b. Subcontractor shall provide Life Time with their standard Model Element naming conventions and layer structure at Kick-Off meeting for approval.

C. Model Element Scope:
1. Model Element Scope. The following sections define the specific Model Element Scope for each Scope of Work. The Model Elements defined below are the minimum requirements; Subcontractor shall incorporate Model Elements beyond the scope below if they deem it necessary for proper coordination.
2. HVAC Scope of work: Specific dimensional locations of HVAC/Mechanical Systems may not be included in the Construction Documents; to the extent that location can be determined from the Construction Documents, the Model Elements are to reflect that location.
   a. Duct and Associated Equipment. All ducts, including joints and hangers, smoke dampers, fire dampers, diffusers, registers, grilles, air handling equipment, etc. are to be included. Ducts shall be modeled to the outside face dimension; support mechanisms shall be modeled. Flexible systems smaller than 1" are not required to be modeled; however, it is encouraged.
   b. Mechanical Equipment. Equipment shall be modeled to its overall height, width, and depth. All support mechanisms shall be modeled.
   c. Piping. All piping, such as condensate, associated with the mechanical equipment shall be modeled and should include fittings and connections, insulation, and support mechanisms. Piping smaller than 1" that does not require gravity slope may be excluded from the model. All valves and clean-outs shall be modeled and specially identified to allow them to be readily found.
   d. Electrical Requirements. Any electrical associated with HVAC shall be modeled to the line side of disconnect.
   e. Maintenance / Clearance Access. Maintenance access areas and all other code required clearance areas associated with Model Elements shall be modeled

1) Include all access doors in walls and ceilings.
2) The access/code required clearance areas shall be modeled to the full extent of the access location (ex. VAV access zones shall be modeled to the ceiling/floor below to ensure clear and free access).
3) Access elements shall be clearly identified in the Model and assigned a unique CAD layer or object material.

f. Penetrations / Sleeves. Sleeves shall be modeled if penetrations through building systems such as cast-in-place concrete and CMU walls require a sleeve per the Specifications.

3. Plumbing Scope of Work: Specific dimensional locations of Plumbing Systems may not be included in the Construction Documents; to the extent that location can be determined from the Construction Documents, the Model Elements are to reflect that location.
   a. Piping. All plumbing piping requiring gravity slope as well as all specialty piping (i.e., medical gas) shall be modeled to the outside diameter of the pipe with any pipe insulation (on a separate CAD Layer/Model Object) clearly defined and should include fittings, connections, hangers, and slope. Piping smaller than 1” (not including insulation) that does not require gravity slope may be excluded from the model, however modeling such pipes is encouraged to reserve space. All valves and clean-outs shall be modeled and specially identified to allow them to be readily found.
   b. Plumbing Equipment. All plumbing equipment shall be modeled to its overall height, width, and depth. All support mechanisms shall be modeled.
   c. Maintenance / Clearance Access. Maintenance access areas and all other code required clearance areas associated with Model Elements shall be modeled.
      1) Include all access doors in walls and ceilings. Access elements are to be clearly identified in the Model and are to be assigned a unique CAD layer or object material.
   d. Penetrations / Sleeves. Sleeves shall be modeled if penetrations through building systems such as cast-in-place concrete and CMU walls require a sleeve per the Specifications.
   e. Gravity Slope Requirements. Plumbing systems requiring gravity sloping are to be identified with object parameters or placed on separate layers.
4. Electrical Scope of Work: Specific dimensional locations of Electrical Systems may not be included in the Construction Documents; to the extent that location can be determined from the Construction Documents, the Model Elements are to reflect that location.
   a. Equipment. All Electrical Equipment shall be modeled to its overall height, width, and depth.
      1) Include switch gears, transformers, generators, panels, etc. All support mechanisms are to be modeled. All power feeds to equipment will be modeled.
      2) All support mechanisms shall be modeled.
      3) All power feeds to equipment shall be modeled.
   b. Cable Tray and Conduit. All Cable tray and gangs of conduit shall be modeled as well as individual conduits 1” or larger.
      1) Electrician will be responsible for modeling all electrical associated with HVAC from the point the Mechanical Subcontractor stops (line side of disconnect).
      2) Flexible systems smaller than 1” are not required to be modeled.
5. Fire Protection Scope of Work:
   a. Equipment. All equipment, such as fire pumps, associated with the Fire Protection system shall be modeled.
   b. Piping. All Fire Protection piping, including fittings, connections, slopes, valves, and sprinkler heads shall be modeled.
      1) Support mechanisms shall be modeled.
      2) Include Temporary standpipe
   c. Maintenance / Clearance Access. Maintenance access areas and all other code required clearance areas associated with Model Elements shall be modeled;
      1) Include all access doors in walls and ceilings.
      2) Access elements shall be clearly identified in the Model and assigned a unique CAD layer or object material.

d. Penetrations / Sleeves. Sleeves are to be modeled if penetrations through building systems such as cast-in-place concrete and CMU walls require a sleeve per the Specifications.

6. Steel Scope of Work:
   a. The structural steel fabricator shall model their Scope of Work, including all structural and miscellaneous steel in detail.
      1) Include columns, beams, bolted connections, gusset plates, stairs, equipment supports, embeds, and other miscellaneous supports.
7. Food Service Scope of Work:
   a. The food service equipment provider shall model their Scope of Work.
      1) Include all equipment, with locations of necessary electrical/gas/ventilation hook ups.
      2) Include furniture, worktops, clear space, etc.

1.07 SUBMITTALS

A. Coordination Submissions.
   1. Subcontractor is to issue their current Model by the scheduled submission deadlines as spelled out in the 3D Coordination Kick-off Meeting and as otherwise required by the Project Schedule or Life Time.
   2. The Subcontractor's model shall conform to the established coordinate system and units.
   3. The Subcontractor shall issue their models per the defined naming convention.
   4. Life Time will combine all Subcontractor Models with the Construction Base Model to create the Coordination Model(s).

B. Shop Drawing Submittals of affected Scopes of Work.
   1. Shop Drawing submittals to the engineer/architect shall be provided as required by the specifications and are to be based on the approved Sign-Off Model.
      a. These submittals are to be issued following the completion and sign-off of the Coordination Model for the designated area. In some instances, the coordinated Subcontractor Model may also be requested by the Design team for review.

2.01 NOT USED

PART 3 EXECUTION

3.01 NOT USED

ATTACHMENTS

ATTACHMENT A: 3D COORDINATION SIGN-OFF

END OF SECTION

Attachment A

3D Coordination Sign-Off
Area(s) Being Finalized: _____

Statement of Coordination Completion:
Life Time and the Subcontractors listed below confirm that the Navisworks model dated_____for the area(s) being finalized of the Project noted above has been satisfactorily coordinated between all trades of the MEP systems and the Architectural & Structural elements. The design elements of this model are based on the current Construction Documents dated_____.

Subcontractor agrees to prepare field drawings and install their respective components per the coordinated model. Any variations and/or conflicts in the field between coordinated elements will be reviewed by Life Time to determine fault. Components that are confirmed to be installed in conflict with the coordinated model layout and create obstacles or additional work for other disciplines shall require one of the following actions: a) removal and reinstallation per model, or b) monetary compensation to the affected party.

Changes occurring to the Construction Documents following sign-off will be treated on a case-by-case basis, but typically changes will be the responsibility of Subcontractor to coordinate with the signed-off model. Any changes made by Subcontractor should be reflected in their next Model submitted to Life Time. When necessary, Life Time will request revised models in order to coordinate the changes prior to install.

SECTION 01 33 00
SUBMITTAL PROCEDURES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes requirements for the submittal schedule and administrative and procedural requirements for submitting Shop Drawings, Product Data, Samples, and other submittals.

1.02 RELATED SECTIONS:

A. Section 01 11 00 - Summary of Work for submitting schedules and reports, including Contractor's construction schedule.

B. Section 01 40 00 - Quality Requirements for informational submittals related to testing of materials.

C. Section 01 43 39 - Mockups, for requirements of mockups.

D. Section 01 60 00 - Product Requirements for product requirements for submittals.

E. Section 01 92 00 - Facility Operation and Maintenance.

F. All Divisions 2-33 for individual submittal requirements.

G. Applicable conditions of the General Contractor Subcontract.

1.03 DEFINITIONS

A. Action Submittals: Written and graphic information and physical samples that require Architect's and General Contractor's responsive action.

B. Informational Submittals: Written and graphic information and physical samples that do not require Architect's and General Contractor's responsive action. Submittals may be rejected for not complying with requirements.

1.04 ACTION SUBMITTALS

A. Submittal Schedule: Submit a schedule of submittals, arranged in chronological order by dates required by construction schedule. Include time required for review, ordering, manufacturing, fabrication, and delivery when establishing dates. Include additional time required for making corrections or modifications to submittals noted by the Architect and General Contractor and additional time for handling and reviewing submittals required by those corrections.

1.05 SUBMITTAL ADMINISTRATIVE REQUIREMENTS

A. Coordination: Coordinate preparation and processing of submittals with performance of construction activities.
   1. Coordinate each submittal with fabrication, purchasing, testing, delivery, other submittals, and related activities that require sequential activity.
   2. Coordinate transmittal of different types of submittals for related parts of the Work so processing is not delayed because of need to review submittals concurrently for coordination.
      a. Architect and General Contractor reserve the right to withhold action on a submittal requiring coordination with other submittals until related submittals are received.

B. Processing Time: Allow time for submittal review, including time for re-submittals, as follows. Time for review shall commence on Architect's receipt of submittal. No extension of the Subcontract Time will be authorized because of failure to transmit submittals enough in advance of the Work to permit processing, including re-submittals.
   1. Submittal Review: Allow 5-10 business days for initial review of each submittal. Allow additional time if coordination with subsequent submittals is required. Architect will advise General Contractor when a submittal being processed must be delayed for coordination.
   2. Intermediate Review: If intermediate submittal is necessary, process it in same manner as initial submittal.
   3. Re-submittal Review: Allow 5-10 business days for each resubmittal.

C. Identification and Information: Place a permanent label or title block on each paper copy submittal item for identification.

1. Indicate name of firm or entity that prepared each submittal on label or title block.
2. Provide a space approximately 4 by 5 inches on label or beside title block to record Subcontractor's review and approval markings and action taken by Architect.
3. Include the following information for processing and recording action taken:
    a. Project name.
    b. Name of subcontractor.
    c. Name of supplier.
    d. Name of manufacturer.
    e. Submittal number or other unique identifier, including revision identifier.
    f. Number and title of appropriate Specification Section.
    g. Drawing number and detail references, as appropriate.
    h. Location(s) where product is to be installed, as appropriate.
    i. Other necessary identification.

D. Transmittal: Assemble each submittal individually and appropriately for transmittal and handling. Transmit each submittal using a transmittal form. Architect will return submittals, without review, received from sources other than General Contractor.
1. Transmittal Form: Include Transmittal Form with Company Letterhead.
2. On an attached separate sheet, prepared on Subcontractor's letterhead, record relevant information, requests for data, revisions other than those requested by Architect on previous submittals, and deviations from requirements in the Contract Documents, including minor variations and limitations. Include same identification information as related submittal.

E. Re-submittals: Make resubmittals in same form and number of copies as initial submittal.
1. Note date and content of previous submittal.
2. Note date and content of revision in label or title block and clearly indicate extent of revision.
3. Resubmittals, if necessary, shall cloud and clearly identify revisions from previous submittals.
4. Resubmit submittals until they are marked with approval notation from General Contractor’s and Architect’s action stamp.

F. Use for Construction: Use only final submittals that are marked with approval notation from General Contractor’s and Architect’s action stamp.

G. Use **CSI Form 13.1 for “Substitution Requests”**. See Section 01 60 00 – Product Requirements for product substitution and comparable product requirements.

PART 2 PRODUCTS

2.01 SUBMITTAL PROCEDURES

A. General Submittal Procedure Requirements:
1. Submit electronically via Procore website.
    a. General Contractor will assign each subcontractor a site username and password once contract documents have been executed. An email will be sent to the subcontractor with information and directions for the site access.
    b. Physical samples must be delivered to General Contractor for any submittal showing kind, color, textures and/or patterns for the architect to approve. A picture of physical sample is to be included with electronic submittal package, for record and mark-up purposes.
2. Action Submittals: Submit electronically via Procore website. Submittals shall be returned via the same website.
3. Informational Submittals: Submit electronically via Procore website. Submittals shall be returned via the same website, if applicable.
4. Closeout Submittals and Maintenance Material Submittals: Comply with requirements specified in Division 1 Section 01 77 00 "Closeout Procedures."
5. Certificates and Certifications Submittals: Provide a statement that includes signature of entity responsible for preparing certification. Certificates and certifications shall be signed by an officer or other individual authorized to sign documents on behalf of that entity.
    a. Provide a digital signature with digital certificate on electronically-submitted certificates and certifications where indicated.
    b. Provide a notarized statement on original paper copy certificates and certifications where

indicated.

6. Test and Inspection Reports Submittals: Comply with requirements specified in Division 1 Section 01 40 00 "Quality Requirements."

B. Product Data: Collect information into a single submittal for each element of construction and type of product or equipment.
   1. If information must be specially prepared for submittal because standard published data are not suitable for use, submit as Shop Drawings, not as Product Data.
   2. Mark submittal to show which products and options are applicable.
   3. Include the following information, as applicable:
      a. Manufacturer's catalog cuts.
      b. Manufacturer's product specifications.
      c. Standard color charts.
      d. Statement of compliance with specified referenced standards.
      e. Testing by recognized testing agency.
      f. Application of testing agency labels and seals.
      g. Notation of coordination requirements.
      h. Availability and delivery time information.
   4. For equipment, include the following in addition to the above, as applicable:
      a. Wiring diagrams showing factory-installed wiring.
      b. Printed performance curves.
      c. Operational range diagrams.
      d. Clearances required to other construction, if not indicated on accompanying Shop Drawings.
   5. Submit Product Data before or concurrent with Samples.
   6. Submit Product Data via website provided by Owner’s Representative, in PDF format.

C. Shop Drawings: Prepare Project-specific information, drawn accurately to scale. Do not base Shop Drawings on reproductions of the Contract Documents or standard printed data.
   1. Preparation: Fully illustrate requirements in the Contract Documents. Include the following information, as applicable:
      a. Identification of products.
      b. Schedules.
      c. Compliance with specified standards.
      d. Notation of coordination requirements.
      e. Notation of dimensions established by field measurement.
      f. Relationship and attachment to adjoining construction clearly indicated.
      g. Seal and signature of professional engineer if specified.
   2. Format: Provide shop drawings in the following format, if applicable:
      a. Cover Sheet with ample room for approval/review stamp.
      b. Shop Drawing Index, if multiple sections or submittals are being submitted.
      c. Bind all PDF sheets into one file.
         1) PDF files shall be bookmarked and searchable.
      d. Cloud deviations from construction documents.
      e. Cloud changes on re-submittals.
   3. Sheet Size: Except for templates, patterns, and similar full-size drawings, submit Shop Drawings on sheets at least 8-1/2 by 11 inches but no larger than 24 by 36 inches.
   4. Submit Shop Drawings via website provided by Owner’s Representative, in PDF format.

D. Samples: Submit Samples for review of kind, color, pattern, and texture for a check of these characteristics with other elements and for a comparison of these characteristics between submittal and actual component as delivered and installed.
   1. **Sample Submittals may be waived for interior finishes if the specified material is supplied without variation, at the discretion of the Architect.**
   2. Transmit Samples that contain multiple, related components such as accessories together in one submittal package. Include a photo record within electronic submittal package, uploaded to

website provided by Owner’s Representative.

3. Identification: Attach label on unexposed side of Samples that includes the following:
   a. Generic description of Sample.
   b. Product name and name of manufacturer.
   c. Sample source.
   d. Number and title of applicable Specification Section.
      1) If multiple materials are specified in one Specification Section, identify each sample according to the specified material name or code.
4. Disposition: Maintain sets of approved Samples at Project site, available for quality-control comparisons throughout the course of construction activity. Sample sets may be used to determine final acceptance of construction associated with each set.
5. Samples for Initial Selection: Submit manufacturer's color charts consisting of units or sections of units showing the full range of colors, textures, and patterns available.
   a. Number of Samples: Submit 1 full set of available choices where color, pattern, texture, or similar characteristics are required to be selected from manufacturer's product line. Architect will return submittal with options selected.
6. Samples for Verification: Submit full-size units or Samples of size indicated, prepared from same material to be used for the Work, cured and finished in manner specified, and physically identical with material or product proposed for use, and that show full range of color and texture variations expected. Samples include, but are not limited to, the following: partial sections of manufactured or fabricated components; small cuts or containers of materials; complete units of repetitively used materials; swatches showing color, texture, and pattern; color range sets; and components used for independent testing and inspection.
   a. If variation in color, pattern, texture, or other characteristic is inherent in material or product represented by a Sample, submit at least 3 of paired units that show approximate limits of variations.

E. Product Schedule: As required in individual Specification Sections, prepare a written summary indicating types of products required for the Work and their intended location. Include the following information in tabular form:
   1. Submit product schedule via website provided by Owner’s Representative, in PDF format.

F. Contractor's Construction Schedule: Comply with requirements specified in Division 1 Section 01 11 00 "Summary of Work."

G. Application for Payment: Comply with requirements specified in Division 0 Section 00 52 00 – Agreement Forms and Division 0 Section 00 72 00 – General Conditions.

H. Schedule of Values: Comply with requirements specified in Division 1 Section "Payment Procedures."

I. Subcontract List: Prepare a written summary identifying individuals or firms proposed for each portion of the Work, including those who are to furnish products or equipment fabricated to a special design.
   1. Submit subcontract list via website provided by Owner’s Representative, in PDF format.

J. Coordination Drawings: Comply with requirements specified in Division 1 Section 01 31 00 "Project Management and Coordination."

K. Qualification Data: Prepare written information that demonstrates capabilities and experience of firm or person. Include lists of completed projects with project names and addresses, contact information of architects and owners, and other information specified.

L. Welding Certificates: Prepare written certification that welding procedures and personnel comply with requirements in the Contract Documents. Submit record of Welding Procedure Specification and Procedure Qualification Record on American Welding Society (AWS) forms. Include names of firms and personnel certified.

M. Installer Certificates: Submit written statements on manufacturer's letterhead certifying that Installer complies with requirements in the Contract Documents and, where required, is authorized by manufacturer for this specific Project.

N. Manufacturer Certificates: Submit written statements on manufacturer's letterhead certifying that manufacturer complies with requirements in the Contract Documents. Include evidence of manufacturing experience where required.

O. Product Certificates: Submit written statements on manufacturer's letterhead certifying that product complies with requirements in the Contract Documents.

P. Material Certificates: Submit written statements on manufacturer's letterhead certifying that material complies with requirements in the Contract Documents.

Q. Material Test Reports: Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting test results of material for compliance with requirements in the Contract Documents.

R. Product Test Reports: Submit written reports indicating current product produced by manufacturer complies with requirements in the Contract Documents. Base reports on evaluation of tests performed by manufacturer and witnessed by a qualified testing agency, or on comprehensive tests performed by a qualified testing agency.

S. Research Reports: Submit written evidence, from a model code organization acceptable to authorities having jurisdiction, that product complies with building code in effect for Project.

T. Schedule of Tests and Inspections: Comply with requirements specified in Division 1 Section 01 40 00 "Quality Requirements."

U. Preconstruction Test Reports: Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting results of tests performed before installation of product, for compliance with performance requirements in the Contract Documents.

V. Compatibility Test Reports: Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting results of compatibility tests performed before installation of product. Include written recommendations for primers and substrate preparation needed for adhesion.

W. Field Test Reports: Submit reports indicating and interpreting results of field tests performed either during installation of product or after product is installed in its final location, for compliance with requirements in the Contract Documents.

X. Maintenance Data: Comply with requirements specified in Division 1 Section 01 92 00 "Operation and Maintenance Data."

Y. Design Data: Prepare and submit written and graphic information, including, but not limited to, performance and design criteria, list of applicable codes and regulations, and calculations. Include list of assumptions and other performance and design criteria and a summary of loads. Include load diagrams if applicable. Provide name and version of software, if any, used for calculations. Include page numbers.

Z. Quantity Take-offs: Submit quantity take-offs for all indicated materials. Include area and quantity of all materials for coordination of product procurement with Owner. See Section 01 64 00.

AA. Procurement Submittals:

1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment and delivery schedule.
2. Submit inventory of materials within 5 days of receipt.
3. If material is to be stored off-site, include address, proof of lease, proof of insurance and photographs of stored material.

202 DELEGATED-DESIGN SERVICES

A. Performance and Design Criteria: Where professional design services or certifications by a design professional are specifically required of Subcontractor by the Contract Documents, provide products and systems complying with specific performance and design criteria indicated.

1. If criteria indicated are not sufficient to perform services or certification required, submit a written request for additional information to the Architect.

B. Delegated-Design Services Certification: In addition to Shop Drawings, Product Data, and other required submittals, submit digitally-signed PDF electronic file and 3 paper copies of certificate, signed and sealed by the responsible design professional, for each product and system specifically assigned to Subcontractor to be designed or certified by a design professional.
   1. Indicate that products and systems comply with performance and design criteria in the Contract Documents. Include list of codes, loads, and other factors used in performing these services.

PART 3 EXECUTION

3.01 SUBCONTRACTOR'S REVIEW

A. Action and Informational Submittals: Review each submittal and check for coordination with other Work of the Contract and for compliance with the Contract Documents. Note corrections and field dimensions. Mark with approval stamp before submitting to the Architect.

B. Project Closeout and Maintenance/Material Submittals: Refer to requirements in Division 1 Section 01 77 00 "Closeout Procedures."

C. Approval Stamp: Stamp each submittal with a uniform, approval stamp. Include Project name and location, submittal number, Specification Section title and number, name of reviewer, date of Subcontractor's approval, and statement certifying that submittal has been reviewed, checked, and approved for compliance with the Contract Documents.

3.02 ARCHITECT’S ACTION

A. General: The Architect will not review submittals that do not bear General Contractor’s and Subcontractor's approval stamp and will return them without action.

B. Action Submittals: The Architect will review each submittal, make marks to indicate corrections or modifications required, and return it. The Architect will stamp each submittal with an action stamp and will mark stamp appropriately to indicate action.

C. Informational Submittals: The Architect will review each submittal and will not return it, or will return it if it does not comply with requirements. The Architect will forward each submittal to appropriate party.

D. Incomplete submittals are not acceptable, will be considered nonresponsive, and will be returned without review.

E. Submittals not required by the Contract Documents may not be reviewed and may be discarded.

ATTACHMENTS

4.01 SAMPLE SUBMITTAL LOG

A. See attached for sample Submittal Log.

B. Contractor is responsible for preparing a Submittal Log to be used during the process of Construction.

   1. Provide Submittal log to Architect prior to submittals.
   2. Submittal Log is to include estimated dates of submittal and required review dates of submittals.

SECTION 01 40 00
QUALITY REQUIREMENTS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes administrative and procedural requirements for quality assurance and quality control.

B. Testing and inspecting services are required to verify compliance with requirements specified or indicated. These services do not relieve General Contractor of responsibility for compliance with the Contract Document requirements.
   1. Specified tests, inspections, and related actions do not limit General Contractor's other quality-assurance and -control procedures that facilitate compliance with the Contract Document requirements.
   2. Requirements for General Contractor to provide quality-assurance and quality-control services required by the Owner or authorities having jurisdiction are not limited by provisions of this Section.

1.02 RELATED SECTIONS

A. Divisions 2 through 33 Sections for specific test and inspection requirements.

1.03 DEFINITIONS

A. Quality-Assurance Services: Activities, actions, and procedures performed before and during execution of the Work to guard against defects and deficiencies and substantiate that proposed construction will comply with requirements.

B. Quality-Control Services: Tests, inspections, procedures, and related actions during and after execution of the Work to evaluate that actual products incorporated into the Work and completed construction comply with requirements. Services do not include contract enforcement activities performed by Life Time.

C. Mockups: Full size physical assemblies that are constructed on-site. Mockups are constructed to verify selections made under sample submittals; to demonstrate aesthetic effects and, where indicated, qualities of materials and execution; to review coordination, testing, or operation; to show interface between dissimilar materials; and to demonstrate compliance with specified installation tolerances. Mockups are not Samples. Unless otherwise indicated, approved mockups establish the standard by which the Work will be judged.
   1. Laboratory Mockups: Full-size, physical assemblies constructed at testing facility to verify performance characteristics.

D. Preconstruction Testing: Tests and inspections performed specifically for the Project before products and materials are incorporated into the Work to verify performance or compliance with specified criteria.

E. Product Testing: Tests and inspections that are performed by an NRTL, an NVLAP, or a testing agency qualified to conduct product testing and acceptable to authorities having jurisdiction, to establish product performance and compliance with specified requirements.

F. Source Quality-Control Testing: Tests and inspections that are performed at the source, i.e., plant, mill, factory, or shop.

G. Field Quality-Control Testing: Tests and inspections that are performed on-site for installation of the Work and for completed Work.

H. Testing Agency: An entity engaged to perform specific tests, inspections, or both. Testing laboratory shall mean the same as testing agency.

I. Installer/Applicator/Erector: General Contractor or another entity engaged by General Contractor as an employee, or subcontractor, to perform a particular construction operation, including installation, erection, application, and similar operations.

1. Use of trade-specific terminology in referring to a trade or entity does not require that certain construction activities be performed by accredited or unionized individuals, or that requirements specified apply exclusively to specific trade or trades.

J. Experienced: When used with an entity or individual, "experienced" means having successfully completed a minimum of 5 previous projects similar in nature, size, and extent to this Project, with at least one of these being within the past 5 years; being familiar with special requirements indicated; and having complied with requirements of authorities having jurisdiction.

1.04 CONFLICTING REQUIREMENTS

A. Referenced Standards: If compliance with two or more standards is specified and the standards establish different or conflicting requirements for minimum quantities or quality levels, comply with the most stringent requirement. Refer conflicting requirements that are different, but apparently equal, to Owner's Representative for a decision before proceeding.

B. Minimum Quantity or Quality Levels: The quantity or quality level shown or specified shall be the minimum provided or performed. The actual installation may comply exactly with the minimum quantity or quality specified, or it may exceed the minimum within reasonable limits. To comply with these requirements, indicated numeric values are minimum or maximum, as appropriate, for the context of requirements. Refer uncertainties to Owner's Representative for a decision before proceeding.

1.05 INFORMATIONAL SUBMITTALS

A. General Contractor's Statement of Responsibility: When required by authorities having jurisdiction, submit copy of written statement of responsibility sent to authorities having jurisdiction before starting work on the following systems.
   1. Seismic-force resisting system, designated seismic system, or component listed in the designated seismic system quality assurance plan prepared by the General Contractor.
   2. Main wind-force resisting system or a wind-resisting component listed in the wind-force-resisting system quality assurance plan prepared by the General Contractor.

B. Testing Agency Qualifications: For testing agencies specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include proof of qualifications in the form of a recent report on the inspection of the testing agency by a recognized authority.

1.06 REPORTS AND DOCUMENTS

A. Test and Inspection Reports: Prepare and submit certified written reports specified in other Sections. Include the following:
   1. Date of issue.
   2. Project title and number.
   3. Name, address, and telephone number of testing agency.
   4. Dates and locations of samples and tests or inspections.
   5. Names of individuals making tests and inspections.
   6. Description of the Work and test and inspection method.
   7. Identification of product and Specification Section.
   8. Complete test or inspection data.
   9. Test and inspection results and an interpretation of test results.
   10. Record of temperature and weather conditions at time of sample taking and testing and inspecting.
   11. Comments or professional opinion on whether tested or inspected Work complies with the Contract Document requirements.
   12. Name and signature of laboratory inspector.
   13. Recommendations on retesting and re-inspecting.

B. Manufacturer's Field Reports: Prepare written information documenting tests and inspections specified in other Sections. Include the following:
   1. Name, address, and telephone number of representative making report.
   2. Statement on condition of substrates and their acceptability for installation of product.

3. Summary of installation procedures being followed, whether they comply with requirements and, if not, what corrective action was taken.
4. Results of operational and other tests and a statement of whether observed performance complies with requirements.
5. Other required items indicated in individual Specification Sections.

C. Permits, Licenses, and Certificates: For Owner's records, submit copies of permits, licenses, certifications, inspection reports, releases, jurisdictional settlements, notices, receipts for fee payments, judgments, correspondence, records, and similar documents, established for compliance with standards and regulations bearing on performance of the Work.

1.07 QUALITY ASSURANCE

A. General: Qualifications paragraphs in this article establish the minimum qualification levels required; individual Specification Sections specify additional requirements. All parties must satisfy the most stringent qualifications specified for the work.

B. Manufacturer Qualifications: A firm experienced in manufacturing products or systems similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.

C. Fabricator Qualifications: A firm experienced in producing products similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.

D. Installer Qualifications: A firm or individual experienced in installing, erecting, or assembling work similar in material, design, and extent to that indicated for this Project, whose work has resulted in construction with a record of successful in-service performance. Work shall have occurred within five (5) years.

E. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of the system, assembly, or product that are similar to those indicated for this Project in material, design, and extent.

F. Specialists: Certain Specification Sections require that specific construction activities shall be performed by entities who are recognized experts in those operations. Specialists shall satisfy qualification requirements indicated and shall be engaged for the activities indicated.
1. Requirements of authorities having jurisdiction shall supersede requirements for specialists.

G. Testing Agency Qualifications: An NRTL, an NVLAP, or an independent agency with the experience and capability to conduct testing and inspecting indicated, as documented according to ASTM E 329 and with additional qualifications specified in individual Sections; and where required by authorities having jurisdiction, that is acceptable to authorities.
1. NRTL: A nationally recognized testing laboratory according to 29 CFR 1910.7.
2. NVLAP: A testing agency accredited according to NIST's National Voluntary Laboratory Accreditation Program.

H. Manufacturer's Representative Qualifications: An authorized representative of manufacturer who is trained and approved by manufacturer to observe and inspect installation of manufacturer's products that are similar in material, design, and extent to those indicated for this Project.

I. Preconstruction Testing: Where testing agency is indicated to perform preconstruction testing for compliance with specified requirements for performance and test methods, comply with the following:
1. General Contractor responsibilities include the following:
a. Provide test specimens representative of proposed products and construction.
b. Submit specimens in a timely manner with sufficient time for testing and analyzing results to prevent delaying the Work.
c. Build laboratory mockups at testing facility using personnel, products, and methods of construction indicated for the completed Work.
d. When testing is complete, remove test specimens, assemblies, mockups; do not reuse products on Project.

2. Testing Agency Responsibilities: Submit a certified written report of each test, inspection, and similar quality-assurance service to Architect and Owner's Representative, with copy to General Contractor and Subcontractor. Interpret tests and inspections and state in each report whether tested and inspected work complies with or deviates from the Contract Documents.

J. Mockups: Before installing portions of the Work requiring mockups, build mockups for each form of construction and finish required to comply with the following requirements, using materials indicated for the completed Work:
   1. Build mockups in location and of size indicated or, if not indicated, as directed by the Architect or Owner's Representative.
   2. Notify Owner's Representative 7 days in advance of dates and times when mockups will be constructed.
   3. Demonstrate the proposed range of aesthetic effects and workmanship.
   4. Obtain Architect's approval of mockups before starting work, fabrication, or construction.
      a. Allow 7 days for initial review and each re-review of each mockup.
   5. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
   6. Demolish and remove mockups when directed, unless otherwise indicated.

K. Laboratory Mockups: Comply with requirements of preconstruction testing and those specified in individual Specification Sections in Divisions 2 through 33.

1.08 QUALITY CONTROL

A. Owner's Responsibilities: Where quality-control services are indicated as Owner's responsibility, Owner will engage a qualified testing agency to perform these services.
   1. Owner will furnish General Contractor with names, addresses, and telephone numbers of testing agencies engaged and a description of types of testing and inspecting they are engaged to perform.
   2. Costs for retesting and re-inspecting construction that replaces or is necessitated by work that failed to comply with the Contract Documents will be charged to General Contractor, and the Contract Sum will be adjusted by Change Order.

B. General Contractor Responsibilities: Tests and inspections not explicitly assigned to Owner are General Contractor's responsibility. Perform additional quality-control activities required to verify that the Work complies with requirements, whether specified or not.
   1. Where services are indicated as contractor's/subcontractor's responsibility, engage a qualified testing agency to perform these quality-control services.
      a. Contractor shall not employ same entity engaged by Owner, unless agreed to in writing by general Owner.
   2. Notify testing agencies at least 24 hours in advance of time when Work that requires testing or inspecting will be performed.
   3. Where quality-control services are indicated as Contractor's responsibility, submit a certified written report, in duplicate, of each quality-control service.
   4. Testing and inspecting requested by Contractor and not required by the Contract Documents are Contractor's responsibility.
   5. Submit additional copies of each written report directly to authorities having jurisdiction, when they so direct.

C. Manufacturer's Field Services: Where indicated, engage a manufacturer's representative to observe and inspect the Work. Manufacturer's representative's services include examination of substrates and conditions, verification of materials, inspection of completed portions of the Work, and submittal of written reports.

D. Retesting/Re-inspecting: Regardless of whether original tests or inspections were Subcontractor's responsibility, provide quality-control services, including retesting and re-inspecting, for construction that replaced Work that failed to comply with the Contract Documents.

E. Testing Agency Responsibilities: Cooperate with Owner and General Contractor in performance of duties. Provide qualified personnel to perform required tests and inspections.

1. Notify Owner and General Contractor promptly of irregularities or deficiencies observed in the Work during performance of its services.
2. Determine the location from which test samples will be taken and in which in-situ tests are conducted.
3. Conduct and interpret tests and inspections and state in each report whether tested and inspected work complies with or deviates from requirements.
4. Submit a certified written report, in duplicate, of each test, inspection, and similar quality-control service through Subcontractor.
5. Do not release, revoke, alter, or increase the Contract Document requirements or approve or accept any portion of the Work.
6. Do not perform any duties of Subcontractor.

F. Associated Services: Cooperate with agencies performing required tests, inspections, and similar quality-control services, and provide reasonable auxiliary services as requested. Notify agency sufficiently in advance of operations to permit assignment of personnel. Provide the following:
1. Access to the Work.
2. Incidental labor and facilities necessary to facilitate tests and inspections.
3. Adequate quantities of representative samples of materials that require testing and inspecting. Assist agency in obtaining samples.
4. Facilities for storage and field curing of test samples.
5. Delivery of samples to testing agencies.
6. Preliminary design mix proposed for use for material mixes that require control by testing agency.
7. Security and protection for samples and for testing and inspecting equipment at Project site.

G. Coordination: Coordinate sequence of activities to accommodate required quality-assurance and -control services with a minimum of delay and to avoid necessity of removing and replacing construction to accommodate testing and inspecting.
1. Schedule times for tests, inspections, obtaining samples, and similar activities.

1.09 SPECIAL TESTS AND INSPECTIONS

A. Special Tests and Inspections: The Owner will engage a qualified special inspector to conduct special tests and inspections required by authorities having jurisdiction as the responsibility of the Owner, and as follows:

B. Special Tests and Inspections: Conducted by a qualified special inspector as required by authorities having jurisdiction, as indicated in individual Specification Sections, and as follows:
1. Verifying that manufacturer maintains detailed fabrication and quality-control procedures and reviewing the completeness and adequacy of those procedures to perform the Work.
2. Notifying Owner and General Contractor promptly of irregularities and deficiencies observed in the Work during performance of its services.
3. Submitting a certified written report of each test, inspection, and similar quality-control service to the Owner, with copy to Subcontractor and to authorities having jurisdiction.
4. Submitting a final report of special tests and inspections at Substantial Completion, which includes a list of unresolved deficiencies.
5. Interpreting tests and inspections and stating in each report whether tested and inspected work complies with or deviates from the Contract Documents.
6. Re-testing and re-inspecting corrected work.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION

3.01 REPAIR AND PROTECTION

A. General: On completion of testing, inspecting, sample taking, and similar services, repair damaged construction and restore substrates and finishes.
1. Provide materials and comply with installation requirements specified in other Specification Sections or matching existing substrates and finishes. Restore patched areas and extend

restoration into adjoining areas with durable seams that are as invisible as possible. Comply with the Contract Document requirements for cutting and patching in Division 1 Section 01 77 00 "Closeout Procedures."

B. Protect construction exposed by or for quality-control service activities.

C. Repair and protection are Subcontractor's responsibility, regardless of the assignment of responsibility for quality-control services.

END OF SECTION

SECTION 01 43 39
MOCKUPS

PART 1 GENERAL

1.01 SUMMARY

A. This section includes information on the construction of the required Mockups for Quality Assurance.
   1. Free standing Mockup:
      a. Required Mockup Panel consists of all exterior wall materials that are to comprise the exterior shell of the building.
      b. See Drawings for more information.
   2. First in place Mockups consist of the first complete installation in the course of construction for approval by Architect. The following materials shall be mocked up in this manner:
      a. Intumescent fireproofing.
      b. Sealant Mockup In-place, consisting of sealant color tests for transitions that might not exist on Mockup Panel.
      c. Aluminum framed entrances and storefronts.
      d. Tile and waterproofing.

1.02 RELATED SECTIONS

A. All work must conform to the requirements of the following Sections:
   1. Section 01 31 00 - Project Management and Coordination.
   2. Section 01 33 00 - Submittal Procedures.
   3. Section 01 40 00 - Quality Requirements.
   4. Section 01 60 00 - Product Requirements.

B. The Mockup is to include work of the following Sections:
   1. Section 03 20 00 - Concrete Reinforcement.
   2. Section 03 30 00 - Cast-in-Place Concrete.
   3. Section 03 41 00 - Precast Structural Concrete.
   4. Section 03 45 00 - Precast Architectural Concrete.
   5. Section 03 45 70 - Architectural Site Cast Concrete Wall Panels.
   6. Section 04 20 00 - Unit Masonry Assemblies.
   7. Section 04 72 00 - Architectural Cast Stone.
   8. Section 05 40 00 - Cold-Formed Metal Framing.
   9. Section 06 10 00 - Rough Carpentry.
   10. Section 07 21 00 - Thermal Insulation.
   11. Section 07 24 19 - Water-Drainage Exterior Insulation and Finish System (EIFS).
   12. Section 07 27 01 - High Performance Vapor Barrier.
   13. Section 07 27 26 - Fluid-Applied Membrane Air Barrier.
   14. Section 07 42 00 - Metal Wall Panels.
   15. Section 07 62 00 - Sheet Metal Flashing and Trim.
   16. Section 07 81 60 - Intumescent Fireproofing.
   17. Section 07 92 00 - Joint Sealants.
   18. Section 08 41 13 - Aluminum Framed Entrances and Storefronts.
   19. Section 08 44 13 - Glazed Aluminum Curtainwalls.
   20. Section 08 81 00 - Glazing.
   21. Section 09 21 16 - Gypsum Board Assemblies.
   22. Section 09 30 00 - Tiling.

1.03 REFERENCE STANDARDS

A. All work must conform to the standards specified in its Section.

1.04 SUBMITTALS

A. Submit Product Information and Shop Drawings as required by the relevant Section prior to construction of Mockup.

1. All work in the Mockup must have been previously approved by the submittal process as specified in Section 01 33 00.

1.05 QUALITY ASSURANCE

A. All work in the Mockup must conform to the Quality Assurance standards specified in its Section and Section 01 40 00.

B. Contractor is responsible for maintaining Mockup's structural integrity and necessary access.
   1. Provide Bracing as required.

C. Coordinate the work of all subcontractors to complete the work in a timely manner such that the Mockup can perform its function in the review process.
   1. Notify Architect in advance of completion to schedule review.

PART 2 PRODUCTS

2.01 MATERIALS

A. Provide Materials as shown on Drawing and specified in the appropriate Section.

PART 3 EXECUTION

3.01 PREPARATION

A. All Subcontractors are to prepare for their work in the manner specified in the appropriate Section.
   1. Coordinate all work to occur as it would in the building Construction.

3.02 INSTALLATION

A. All Subcontractors are to install their work in the manner specified in the appropriate Section.
   1. Coordinate all work to occur as it would in the building Construction.
   2. Underlying work is to remain exposed to view such that the work of all trades can be seen.
      a. Coordinate locations of exposed underlying work with Architect and other trades.

B. Free standing Mockup:
   1. See drawings for more information for Mock up Panel.
   2. Panel is to be oriented such that the exterior face is in full.

C. First in place Mockups:
   1. Fabricate Mockups as directed by its specification section.
   2. Mockups that are defined as In place Mockups are to be constructed within the building and may remain as part of the completed Work.
      a. Complete In place mockups first before proceeding to surrounding work.

3.03 INSPECTION AND APPROVAL

A. Contractor to notify Architect of Mockup completion to schedule inspection and approval.

B. Mock ups are to be inspected by representatives of manufacturers providing warranties to certify that the Work complies with the requirements of the warranty(ies).
   1. Representatives may require applicable tests to be performed on Mockup. See individual product section for testing requirements.

C. Work that is not approved shall be amended and re-inspected for approval.
   1. Work may not proceed until Mockup is approved by Architect, manufacturer's warranty representatives.

3.04 SEALANT MOCKUP IN PLACE

A. If all material transitions and their matching sealant color cannot be shown on Mockup Panel, Mockup In-Place of each sealant shall be installed on the Building.
   1. Coordinate installation of Mockup In-place with Architect.
   2. Each color of sealant to be included is to be 3'-0" min length.

B. Do not proceed with Sealant work until colors are approved.

3.05 POST APPROVAL

A. Completed Freestanding Mockup Panel is not to be incorporated into the Building.
   1. Approved Mockups In-place may be incorporated into the Building.

B. Freestanding Mockup Panel is to remain onsite during Construction as an example of approved materials and workmanship.

C. When Construction is completed, Freestanding Mockup Panel is to be demolished by Contractor and lawfully disposed of off site.

END OF SECTION

This page intentionally left blank

SECTION 01 45 33
CODE-REQUIRED SPECIAL INSPECTIONS AND PROCEDURES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. General Requirements for Special Inspections, Material Testing and Structural Observations.
   1. See Structural Drawings for more information on structural testing requirements.
   2. See Below for Structural Schedules.

B. Requirements for Steel Components, including:
   1. Structural Steel.
   2. Steel Roof and Floor Decks.
   3. Cold Formed Steel Construction.

C. Requirements for Concrete Construction.

D. Requirements for Masonry Construction.

E. Requirements for Soils.

F. Requirements for Foundations:

G. Requirements for Sprayed Fire-Resistant Materials.

H. Requirements for Mastic and Intumescent Fire Resistant Materials.

I. Requirements for Exterior Insulation and Finish Systems. (EIFS)

J. Requirements for Fire Resistant Penetrations and Joints.

K. Requirements for Smoke Control.

L. Requirements for Architectural Components, including:
   1. Erection and fastening of exterior cladding and interior and exterior veneers.
   2. Erection and fastening of interior and exterior non-bearing walls.
   3. Seismic Requirements for Architectural Components.

M. Requirements for Fabricators.

N. Requirements for Miscellaneous Areas, including:
   1. Suspended Acoustical Ceilings.
   2. Soil Backfill.
   3. Soils for curb and gutter.
   4. Soils for parking lots.
   5. Soils for utility trench backfill.
   6. Reinforcement for slab on grade sidewalks and drive approaches.
   7. Reinforcement for interior slab on grade.
   8. Concrete testing for slab on grade sidewalks and drive approaches.
   9. Concrete testing for interior slab on grade.
   10. Asphalt inspection.
   11. Asphalt testing.
   12. Steam and water line welding.
   13. Special Cases.

1.02 RELATED REQUIREMENTS

A. Section 01 30 00 - Administrative Requirements: Submittal procedures, project meetings, progress schedules and documentation, reports, coordination.

B. Section 01 40 00 - Quality Requirements: Procedures for testing, inspection, mock-ups, reports, certificates; use of reference standards.

C. Section 01 45 34 - Special Inspections Acknowledgements Form.

D. Section 03 20 00 - Concrete Reinforcement.

E. Section 03 30 00 - Cast-in-Place Concrete.
F. Section 03 45 70 - Architectural Site Cast Concrete Wall Panels
G. Section 04 20 00 - Unit Masonry Assemblies
H. Section 05 12 00 - Structural Steel Framing.
I. Section 05 31 00 - Steel Decking.
J. Section 05 40 00 - Cold-Formed Metal Framing.
K. Section 05 50 00 - Metal Fabrications.
L. Section 05 51 00 - Metal Stairs.
M. Section 07 24 19 - Water-Drainage Exterior Insulation and Finish System. (EIFS)
N. Section 07 81 00 - Applied Fireproofing.
O. Section 07 81 60 - Intumescent Fireproofing.
P. Section 07 84 00 - Firestopping.
Q. Section 09 21 16 - Gypsum Board Assemblies.
R. Section 09 51 13 - Acoustic Panel Ceilings.
S. Section 13 14 13 - Waterslides.
T. Section 22 01 00 - General Provisions for Plumbing.
U. Section 22 05 29 - Hangers and Supports for Plumbing.
V. Section 22 11 25 - Facility Natural-Gas Piping.
W. Section 22 13 16 - Sanitary Waste and Vent Piping.
X. Section 22 13 19 - Sanitary Waste Piping Specialties.
Y. Section 22 52 13 - Steam Room Generators.
Z. Section 23 01 00 - General Provisions for HVAC.
AA. Section 23 05 29 - Hangers and Supports for HVAC.
BB. Section 26 05 26 - Grounding and Bonding for Electrical Systems.
CC. Section 26 05 29 - Hangers and Supports for Electrical Systems.

1.03 DEFINITIONS

A. Authority Having Jurisdiction (AHJ): Agency or individual officially empowered to enforce the building, fire and life safety code requirements of the permitting jurisdiction in which the Project is located.

B. Code or Building Code: ICC (IBC), International Building Code, Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements and specifically, Chapter 17 - Special Inspections and Tests.

C. Special Inspection:
   1. Special inspections are inspections and testing of materials, installation, fabrication, erection or placement of components and connections mandated by the AHJ that also require special expertise to ensure compliance with the approved Contract Documents and the referenced standards.

1.04 REFERENCE STANDARDS

A. ICC (IBC) - International Building Code (Current edition)
B. ACI 318 - Building Code Requirements for Structural Concrete 2014, with Errata.
C. ACI 530 - Specification for Masonry Structures 2016.
D. AISC 341 - Seismic Provisions for Structural Steel Buildings 2016.
E. AISC 360 - Specification for Structural Steel Buildings 2010.
F. ASCE 7-16 - Minimum Design Loads and Associated Criteria for Buildings and Other Structures 2016.

G. ASTM C270 - Standard Specification for Mortar for Unit Masonry 2012a, with Editorial Revision.

H. ASTM C476 - Standard Specification for Grout for Masonry 2010.

I. ASTM C1019 - Standard Test Method for Sampling and Testing Grout for Masonry 2016.

J. ASTM C1611 - Standard Test Method for Slump Flow of Self-Consolidating Concrete 2014.

K. ASTM E605/E605M - Standard Test Methods for Thickness and Density of Sprayed Fire-Resistive Material (SFRM) Applied to Structural Members 2019.

L. ASTM E736/E736M - Standard Test Method for Cohesion/Adhesion of Sprayed Fire-Resistive Materials Applied to Structural Members 2019.

M. ASTM E2174 - Standard Practice for On-Site Inspection of Installed Firestop Systems 2020a.

N. ASTM E2393 - Standard Practice for On-Site Inspection of Installed Fire Resistive Joint Systems and Perimeter Fire Barriers 2020a.

O. ASTM E2570/E2570M - Standard Test Methods for Evaluating Water-Resistive Barrier (WRB) Coatings Used under Exterior Insulation and Finish Systems (EIFS) or EIFS with Drainage 2007, with Editorial Revision (2014).

P. AWCI 117 - Technical Manual 12-B; Standard Practice for the Testing and Inspection of Field Applied Thin Film Intumescent Fire-Resistive Materials; an Annotated Guide 2014.

Q. AWS D1.1/D1.1M - Structural Welding Code - Steel 2015.

R. AWS D1.4/D1.4M - Structural Welding Code - Steel Reinforcing Bars 2011.

S. IAS AC89 - Accreditation Criteria for Testing Laboratories 2021.

T. IAS AC291 - Accreditation Criteria for Special Inspection Agencies AC291 2019.

U. ICC (IBC)-2018 - International Building Code 2018.

V. SDI (QA/QC) - Standard for Quality Control and Quality Assurance for Installation of Steel Deck 2017.

W. TMS 402/602 - Building Code Requirements and Specification for Masonry Structures 2016.

1.05 ADMINISTRATIVE REQUIREMENTS

A. Owner shall retain one or more qualified agencies to perform Special Inspections.
   1. Special Inspection Agency may retain a separate qualified agency to perform laboratory testing.

B. Special Inspection Agency Qualifications:
   1. Independent firm specializing in performing testing and inspections of the type specified in this section.
   2. Accredited by IAS according to IAS AC291.
   3. Approved by AHJ prior to performing any duties.

C. Inspection Reports:
   1. Reports shall meet requirements of IBC 1704.2.4, AHJ.
   2. Inspection reports are to be submitted to Owner, Construction, Project Manager, and AHJ within 48 hours of performing inspections.
   3. Final inspection report shall be submitted following completion of the project documenting all special inspections performed and a statement indicating that the structure is in compliance with the approved construction documents and applicable codes.

1.06 SUBMITTALS

A. See Section 01 33 00 Submittal Requirements.

B. Special Inspection Agency Qualifications: Prior to the start of work, the Special Inspection Agency is required to:
   1. Submit agency name, address, and telephone number, names of full time registered Engineer and responsible officer.
   2. Submit copy of report of laboratory facilities inspection made by NIST Construction Materials Reference Laboratory during most recent inspection, with memorandum of remedies of any deficiencies reported by the inspection.

3. Submit certification that Special Inspection Agency is acceptable to AHJ.
4. Submit documentation that Special Inspection Agency is accredited by IAS according to IAS AC291.

C. Testing Agency Qualifications: Prior to the start of work, the Testing Agency is required to:
1. Submit agency name, address, and telephone number, and names of full time registered Engineer and responsible officer.
2. Submit copy of report of laboratory facilities inspection made by NIST Construction Materials Reference Laboratory during most recent inspection, with memorandum of remedies of any deficiencies reported by the inspection.
3. Submit certification that Testing Agency is acceptable to AHJ.
4. Submit documentation that Testing Agency is accredited by IAS according to IAS AC89.

D. Special Inspection Reports: After each special inspection, Special Inspector is required to promptly submit at least two copies of report; one to Architect and one to the AHJ.
1. Include:
a. Date issued.
b. Project title and number.
c. Name of Special Inspector.
d. Date and time of special inspection.
e. Identification of product and specifications section.
f. Location in the Project.
g. Type of special inspection.
h. Date of special inspection.
i. Results of special inspection.
j. Compliance with Contract Documents.
2. Final Special Inspection Report: Document special inspections and correction of discrepancies prior to the start of the work.

E. Certificates: When specified in individual special inspection requirements, Special Inspector shall submit certification by the manufacturer, fabricator, and installation subcontractor to Architect and AHJ, in quantities specified for Product Data.
1. Indicate material or product complies with or exceeds specified requirements. Submit supporting reference data, affidavits, and certifications as appropriate.
2. Certificates may be recent or previous test results on material or product, but must be acceptable to Architect and AHJ.

F. Manufacturer's Field Reports: Submit reports to Architect and AHJ.
1. Submit report in duplicate within 30 days of observation to Architect for information.
2. Submit for information for the limited purpose of assessing compliance with information given and the design concept expressed in Contract Documents.

G. Fabricator's Field Reports: Submit reports to Architect and AHJ.
1. Submit report in duplicate within 30 days of observation to Architect for information.
2. Submit for information for the limited purpose of assessing compliance with information given and the design concept expressed in Contract Documents.

PART 2 PRODUCTS

NOT USED.

PART 3 EXECUTION

3.01 GENERAL REQUIREMENTS AND SCHEDULE OF SPECIAL INSPECTIONS AND TESTING

A. Perform work as required by AHJ, according to Code and as directed by the construction documents.

B. Frequency of Special Inspections: Special Inspections are indicated as continuous or periodic, as defined below.

1. Continuous Special Inspection: (Cont) Special Inspection Agency is required to be present in the area where the work is being performed and observe the work at all times the work is in progress.
2. Periodic Special Inspection: (Per) Special Inspection Agency is required to be present in the area where work is being performed and observe the work part-time or intermittently and at the completion of the work. Coordinated period with designer and AHJ.
3. Quality Control (QC) refers to items provided by installer, fabricator, erector, or other responsible contractor as applicable. See AISC 360-16 and 341-16.
4. Quality Assurance (QA) shall be provided by parties other than those provding QC when required by the authority having jurisdiction (AHJ), applicable building code (ABC), purchaser, owner or engineer of record (EOR). Nondestructive testing (NDT) shall be performed by the agency or firm responsible for Quality Assurance, except as permitted in accordance with AISC 341, Section N6. See AISC 360-16.
5. Random daily Basis: (O) Inspection occurs during work on a random daily basis. See AISC 360-16.
6. On completion: (P) Inspection to occur prior to acceptance of item. See AISC 360-16.
7. Documentation: (D) Inspector to prepare reports that work was performed per the Contract Documents.
8. Other: (P/O) Perform or Observe.
9. If none of the above is specified, inspection is to be performed once at the time indicated.

C. See AISC 360-16 for definitions of Documents and Tasks.

D. All inspections must be documented as specified.

E. Refer to drawings and individual specification sections for more information.

3.02 REQUIREMENTS FOR SPECIAL INSPECTIONS OF STRUCTURAL STEEL

A. See IBC 1705.2.1, Structural drawings and specifications.

B. If applicable, see also special inspections and testing for seismic resistance.

3.03 STEEL ROOF AND FLOOR DECKS (IBC 1705.2.2; SECTION 6.1 AND APPENDIX 1 OF SDI QA/QC - 2017)

A. **See IBC 1705.2.2, SDI QA/QC - 2017, Section 6.1 and Appendix 1, and Structural drawings and specifications.**

3.04 COLD-FORMED STEEL CONSTRUCTION (OWNER-REQUIRED, IBC 1705.12.2 AND 1705.13.3)

A. **See IBC 1705.12.2 and 1705.13.3, Structural drawings, specifications, certified shop drawings. Some special inspections below are driven by owner preferences and are not part of the building code.**

3.05 CONCRETE CONSTRUCTION

A. **See IBC 1705.3, IBC Chapter 19, AWS D1.4, ACI 318-19, Structural Drawings and Specifications**

3.06 MASONRY CONSTRUCTION

A. See IBC 1705.4, Drawings and Specifications.

3.07 SOILS CONSTRUCTION

A. **See IBC 1705.6, Structural, Civil drawings and specifications.**

3.08 SPRAYED FIRE-RESISTANT MATERIALS

A. **See IBC 1705.15, Architectural drawings and specifications.**

Items	Freq	Instructions
Surface preparation	Per	Prior to application confirm that surface has been prepared per the approved fire-resistance design and manufacturer's instructions.
Application	Per	Substrate shall have min ambient temperature and ventilation before and

		after application per approved manufacturer instructions.
Material thickness	Per	Samples shall be taken from selected floor, roof and wall assemblies and structural members. No more than 10% of the samples shall be less than the thickness required by the fire-resistance design.
Material density	Per	Density tests shall be performed in accordance with ASTM E 605 for every 2,500 sqft of floor, roof or wall area. One sample must also be provided for each beam, girder, truss or column at each story.
Bonding Strength	Per	Bond strength tests shall be performed in accordance with ASTM E 736 for every 2,500 sqft of floor, roof or wall area. One sample must also be provided for each beam, girder, truss or column at each story. The bond strength shall not be less than 150psf.

3.09 MASTIC AND INTUMESCENT FIRE-RESISTANT COATINGS

A. **See IBC 1705.16, Architectural drawings and specifications.**

Items	Freq	Instructions
Surface preparation	Per	Prior to application confirm that surface temperature and substrate are acceptable and that a compatible primer is used in accordance with AWCI 12-B
Thickness	Per	Record thickness of primer or other existing coating on substrate prior to application of coating. Final thickness of coating must be verified in multiple locations prior to applying top coat per AWCI 12-B.

3.10 EXTERIOR INSULATION AND FINISH SYSTEMS (EIFS)

A. **See IBC 1705.17, Architectural drawings and specifications.**

Items	Freq	Instructions
Material and installation	Per	Verify that water-resistive barrier, complying with ASTM E 2570, is installed appropriately over a sheathing substrate.

3.11 FIRE-RESISTANT PENETRATIONS AND JOINTS

A. **See IBC 1705.18, Architectural drawings and specifications.**

Items	Freq	Instructions
Penetration firestops	Per	Listed systems shall be inspected in accordance with ASTM E 2174.
Fire-resistant joint systems	Per	Listed systems shall be inspected in accordance with ASTM E 2393.

3.12 SMOKE CONTROL

A. **See IBC 1705.19, Mechanical drawings and specifications.**

Items	Freq	Instructions
Verify device locations and perform leakage testing	Per	During erection of ductwork and prior to concealment.
Pressure difference testing, flow measurements and detection control verification	Per	Prior to occupancy and after sufficient completion.

3.13 SPECIAL INSPECTIONS FOR SEISMIC RESISTANCE: ARCHITECTURAL COMPONENTS

A. **See IBC 1705.12.5, Architectural drawings and specifications.**

Special Inspections for seismic resistance: For the seismic force-resisting systems of structures assigned to Seismic Design Category C, D, E or F		
Items	Freq	Instructions
Erection and fastening of exterior cladding	Per	Verify appropriate materials, fasteners and attachment at commencement of work and at completion. Applies for components 30 feet or more above grade and weighing more than 5 psf.
Erection and fastening of exterior nonbearing walls	Per	Verify appropriate materials, fasteners and attachment at commencement of work and at completion. Applies for components 30 feet or more above grade.
Erection and fastening of interior nonbearing walls	Per	Verify appropriate materials, fasteners and attachment at commencement of work and at completion. Applies for components 30 feet or more above grade and weighing more than 15 psf.
Erection and fastening of interior and exterior veneers	Per	Verify that anchorage complies with approved construction documents. Applies for components 30 feet or more above grade and weighing more than 5 psf. Inspection of post-installed anchors shall comply with approved ICC-ES report.

3.14 FABRICATORS

A. **See IBC 1704.2.5 & 1705.11, drawings and specifications of relevant discipline.**

Items	Freq	Instructions
By product listed above, designer/discipline, or AHJ	By designer or AHJ	Perform according to designer's or AHJ's requirements

3.15 MISCELLANEOUS AREAS

A. **See drawings and specifications of the appropriate discipline.**

Items	Freq	Instructions
By designer/discipline or AHJ.	By designer or AHJ	Perform according to designer's or AHJ's requirements.

SECTION 01 60 00
PRODUCT REQUIREMENTS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes administrative and procedural requirements for selection of products for use in Project; product delivery, storage, and handling; manufacturers' standard warranties on products; special warranties; and comparable products.

1.02 RELATED SECTIONS

A. Section 01 33 00 - Submittal Procedures for requests for substitutions.

B. Section 01 40 00 - Quality Requirements for testing requirements of products.

C. Divisions 2-33 - All products in all sections must comply with the standards specified herein.

1.03 DEFINITIONS

A. Products: Items obtained for incorporating into the Work, whether purchased for Project or taken from previously purchased stock. The term "product" includes the terms "material," "equipment," "system," and terms of similar intent.
   1. Named Products: Items identified by manufacturer's product name, including make or model number or other designation shown or listed in manufacturer's published product literature that is current as of date of the Contract Documents.
   2. New Products: Items that have not previously been incorporated into another project or facility. Products salvaged or recycled from other projects are not considered new products.
   3. Comparable Product: Product that is demonstrated and approved through submittal process to have the indicated qualities related to type, function, dimension, in-service performance, physical properties, appearance, and other characteristics that equal or exceed those of specified product.

B. Basis-of-Design Product Specification: A specification in which a specific manufacturer's product is named and accompanied by the words "basis-of-design product," including make or model number or other designation, to establish the significant qualities related to type, function, dimension, in-service performance, physical properties, appearance, and other characteristics for purposes of evaluating comparable products of additional manufacturers named in the specification.

1.04 SUBMITTALS

A. Comparable Product Requests: Submit request for consideration of each comparable product. Identify product, fabrication, or installation method to be replaced. Include Specification Section number and title and Drawing numbers and titles.
   1. Architect's Action: If necessary, Architect will request additional information or documentation for evaluation within one week of receipt of a comparable product request. Architect will notify General Contractor of approval or rejection of proposed comparable product request within 15 days of receipt of request, or 7 days of receipt of additional information or documentation, whichever is later.
      a. Form of Approval: As specified in Division 1 Section 01 33 00 "Submittal Procedures."
      b. Use product specified if Architect does not issue a decision on use of a comparable product request within time allocated.

B. Basis-of-Design Product Specification Submittal: Comply with requirements in Division 1 Section 00 33 00 "Submittal Procedures." Show compliance with requirements.

1.05 QUALITY ASSURANCE

A. Compatibility of Options: If Subcontractor is given option of selecting between two or more products for use on Project, select product compatible with products previously selected, even if previously selected products were also options.

1.06 PRODUCT DELIVERY, STORAGE, AND HANDLING

A. Products are to be procured no later than 30 days after return of approved submittals.

1. Submit receipts and delivery schedule for all products.

B. Deliver, store, and handle products using means and methods that will prevent damage, deterioration, and loss, including theft and vandalism. Comply with manufacturer's written instructions.
   1. Submit inventory of products to Owner within 5 days of receipt.

C. Delivery and Handling:
   1. Coordinate all material receiving, handling, trucking, and storage per site-specific conditions.
      a. Review site logistics at time of bid to determine material storage requirements of each subcontractor.
   2. Schedule delivery to minimize long-term storage at Project site and to prevent overcrowding of construction spaces.
   3. Coordinate delivery with installation time to ensure minimum holding time for items that are flammable, hazardous, easily damaged, or sensitive to deterioration, theft, and other losses.
   4. Deliver products to Project site in an undamaged condition in manufacturer's original sealed container or other packaging system, complete with labels and instructions for handling, storing, unpacking, protecting, and installing.
   5. Inspect products on delivery to determine compliance with the Contract Documents and to determine that products are undamaged and properly protected.

D. Storage, general:
   1. Store products to allow for inspection and measurement of quantity or counting of units.
   2. Store materials in a manner that will not endanger Project structure.
   3. Store products that are subject to damage by the elements, under cover in a weathertight enclosure above ground, with ventilation adequate to prevent condensation.
   4. Store foam plastic and other vulnerable products away from exposure to sunlight, except to extent necessary for period of installation and concealment.
   5. Comply with product manufacturer's written instructions for temperature, humidity, ventilation, and weather-protection requirements for storage.
   6. Protect stored products from damage and liquids from freezing.

E. Off-Site Storage:
   1. Materials procured for Life Time and stored off of the project site must comply with the following requirements:
      a. Materials must be clearly labeled and wrapped.
         1) Materials procured for Life Time may NOT be used on other projects.
      b. Materials must be insured against loss or damage.
      c. Storage facility must be available for inspection by Life Time personnel or representatives.
      d. Submit inventory of materials delivered within 5 days of delivery.

1.07 PRODUCT WARRANTIES

A. Warranties specified in other Sections shall be in addition to, and run concurrent with, other warranties required by the Contract Documents. Manufacturer's disclaimers and limitations on product warranties do not relieve Subcontractor of obligations under requirements of the Contract Documents.
   1. Manufacturer's Warranty: Written warranty furnished by individual manufacturer for a particular product and specifically endorsed by manufacturer to Owner.
   2. Special Warranty: Written warranty required by the Contract Documents to provide specific rights for Owner.

B. Special Warranties: Prepare a written document that contains appropriate terms and identification, ready for execution.
   1. Manufacturer's Standard Form: Modified to include Project-specific information and properly executed.
   2. Specified Form: When specified forms are included with the Specifications, prepare a written document using indicated form properly executed.
   3. Refer to Divisions 2 through 33. Sections for specific content requirements and particular requirements for submitting special warranties.

C. Installer's warranty.
   1. Provide standard 1 year Installer's Warranty for all products.

D. Submittal Time: Comply with requirements in Division 1 Section 01 77 00 "Closeout Procedures."

PART 2 PRODUCTS

2.01 PRODUCT SELECTION PROCEDURES

A. General Product Requirements: Provide products that comply with the Contract Documents, are undamaged and, unless otherwise indicated, are new at time of installation.
   1. Provide products complete with accessories, trim, finish, fasteners, and other items needed for a complete installation and indicated use and effect.
   2. Standard Products: If available, and unless custom products or nonstandard options are specified, provide standard products of types that have been produced and used successfully in similar situations on other projects.
   3. Architect and Owner reserve the right to limit selection to products with warranties not in conflict with requirements of the Contract Documents.
   4. Where products are accompanied by the term "as selected," Architect will make the selection.
   5. Descriptive, performance, and reference standard requirements in the Specifications establish salient characteristics of products.

B. Product Selection Procedures:
   1. Product: Where Specifications name a single manufacturer and product, provide the named product that complies with requirements. Comparable products or substitutions for Subcontractor's convenience will not be considered.
   2. Manufacturer/Source: Where Specifications name a single manufacturer or source, provide a product by the named manufacturer or source that complies with requirements. Comparable products or substitutions for Subcontractor's convenience will not be considered.
   3. Products:
      a. Restricted List: Where Specifications include a list of names of both manufacturers and products, provide one of the products listed that complies with requirements. Comparable products or substitutions for Subcontractor's convenience will be considered.
      b. Non-restricted List: Where Specifications include a list of names of both available manufacturers and products, provide one of the products listed, or an unnamed product, that complies with requirements. Comply with requirements in "Comparable Products" Article for consideration of an unnamed product.
   4. Manufacturers:
      a. Restricted List: Where Specifications include a list of manufacturers' names, provide a product by one of the manufacturers listed that complies with requirements. Comparable products or substitutions for Subcontractor's convenience will be considered.
      b. Non-restricted List: Where Specifications include a list of available manufacturers, provide a product by one of the manufacturers listed, or a product by an unnamed manufacturer, that complies with requirements. Comply with requirements in "Comparable Products" Article for consideration of an unnamed manufacturer's product.
   5. Basis-of-Design Product: Where Specifications name a product, or refer to a product indicated on Drawings, and include a list of manufacturers, provide the specified or indicated product or a comparable product by one of the other named manufacturers. Drawings and Specifications indicate sizes, profiles, dimensions, and other characteristics that are based on the product named. Comply with requirements in "Comparable Products" Article for consideration of an unnamed product by one of the other named manufacturers.

C. Visual Matching Specification: Where Specifications require "match Architect's sample", provide a product that complies with requirements and matches Owner Representative’s sample. Owner Representative’s decision will be final on whether a proposed product matches.
   1. If no product available within specified category matches and complies with other specified requirements, submit a Substitution Request Form per Section 00 43 25 for proposal of product.

D. Visual Selection Specification: Where Specifications include the phrase "as selected by the Architect from manufacturer's full range" or similar phrase, select a product that complies with requirements. The Architect will select color, gloss, pattern, density, or texture from manufacturer's product line that includes both standard and premium items.

2.02 PRODUCT SUBSTITUTIONS

A. Timing: Architect will consider requests for substitution if received within 60 days after the Notice to Proceed. Requests received after that time may be considered or rejected at discretion of Architect.

B. Conditions: Architect will consider Contractor's request for substitution when the following conditions are satisfied. If the following conditions are not satisfied, Architect will return requests without action, except to record noncompliance with these requirements:

1. Requested substitution offers Owner a substantial advantage in cost, time, energy conservation, or other considerations, after deducting additional responsibilities Owner must assume. Owner's additional responsibilities may include compensation to Architect for redesign and evaluation services, increased cost of other construction by Owner, and similar considerations.
2. Requested substitution does not require extensive revisions to the Contract Documents.
3. Requested substitution is consistent with the Contract Documents and will produce indicated results.
4. Substitution request is fully documented and properly submitted.
5. Requested substitution will not adversely affect Contractor's Construction Schedule.
6. Requested substitution has received necessary approvals of authorities having jurisdiction.
7. Requested substitution is compatible with other portions of the Work.
8. Requested substitution has been coordinated with other portions of the Work.
9. Requested substitution provides specified warranty.
10. If requested substitution involves more than one contractor, requested substitution has been coordinated with other portions of the Work, is uniform and consistent, is compatible with other products, and is acceptable to all contractors involved.

2.03 COMPARABLE PRODUCTS

A. Where products or manufacturers are specified by name, submit the following, in addition to other required submittals, to obtain approval of an unnamed product:

1. Evidence that the proposed product does not require extensive revisions to the Contract Documents, that it is consistent with the Contract Documents and will produce the indicated results, and that it is compatible with other portions of the Work.
2. Detailed comparison of significant qualities of proposed product with those named in the Specifications. Significant qualities include attributes such as performance, weight, size, durability, visual effect, and specific features and requirements indicated.
3. Evidence that proposed product provides specified warranty.
4. List of similar installations for completed projects with project names and addresses and names and addresses of architects and owners, if requested.
5. Samples, if requested.

PART 3 EXECUTION (NOT USED)

END OF SECTION

SECTION 01 64 00
OWNER-FURNISHED PRODUCTS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Procedures for Coordination and Installation of Owner Furnished Products.
   1. See Supplementary bidding materials for ennumeration of Owner Furnished Products.

1.02 RELATED REQUIREMENTS

A. Section 01 10 00 - Summary: Contract descriptions, description of alterations work, work by others, future work, occupancy conditions, use of site and premises, work sequence.

B. Section 01 77 00 - Closeout Procedures: Examination, preparation, and general installation procedures; preinstallation meetings; cutting and patching; cleaning and protection; starting of systems; demonstration and instruction; closeout procedures except payment procedures; requirements for alterations work.

1.03 REFERENCE STANDARDS

A. NFPA 70 - National Electrical Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

B. UL (DIR) - Online Certifications Directory Current Edition.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordinate delivery, storage and installation of all Owner Furnished materials indicated to be installed by Contractor.

B. Coordinate construction activities with Owner Furnished materials indicated to be installed by Owner, such that other construction activities do not interfere with the installation of these materials.

C. Coordinate installation of all items in this section with all impacted trades.

D. Coordinate installation of Owner-installed and Vendor-installed products with Owner and Vendor.

1.05 SUBMITTALS

A. Show Owner furnished items on shop drawings when they impact the work of other Sections.

1.06 QUALITY ASSURANCE

A. Installer Qualifications: Company specializing in performing work of the type specified and with at least three years of documented experience.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Coordinate delivery of Owner furnished products with Owner or Vendor.

B. Store Owner-furnished products according to manufacturer's recommendations.
   1. See Section 01 60 00 for requirements of off-site storage of materials.

C. General Contractor to receive, unload, distribute and install Owner-furnished products indicated to be installed by Contractor unless otherwise directed, in writing, from Owner’s Representative.

1.08 FIELD CONDITIONS

A. Do not install Owner-furnished products when field conditions do not meet manufacturer's requirements.

PART 2 PRODUCTS

2.01 OWNER-FURNISHED PRODUCTS

A. See Supplementary Bidding Materials.

PART 3 EXECUTION

3.01 INSTALLERS

A. All Owner-furnished Products to be installed by workers skilled in the appropriate trades.

3.02 EXAMINATION

A. Verification of Conditions: Verify that conditions at installation location are suitable for installation.
   1. Verify that electrical, plumbing, data or utility hookups are present and compatible, if applicable.

B. If conditions are not acceptable, notify Architect.

3.03 PREPARATION

A. Protection of In-Place Conditions: Protect all adjacent materials and finishes.

3.04 INSTALLATION

A. Install in accordance with manufacturer's instructions.

3.05 REPAIR

A. Repair any damage to surrounding materials and finishes that may have occurred during installation.

3.06 SYSTEM STARTUP

A. Prepare and start equipment and systems in accordance with manufacturers' instructions and recommendations.

B. Verify that all Owner-furnished items function as required after installation.

3.07 CLEANING

A. Clean Owner-furnished product and surrounding finishes as required.

3.08 PROTECTION

A. Protect installed Owner-furnished product from subsequent construction operations.

END OF SECTION

SECTION 01 77 00
CLOSEOUT PROCEDURES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes administrative and procedural requirements for contract closeout, including, but not limited to, the following:
   1. Substantial Completion procedures.
   2. Final completion procedures.
   3. Warranties.
   4. Final cleaning.

1.02 RELATED SECTIONS:

A. Divisions 2 through 33 Sections for specific closeout and special cleaning requirements for the Work in those Sections.

B. Section 00 52 00 - Agreement Forms

C. Section 00 72 00 - General Conditions

1.03 SUBSTANTIAL COMPLETION

A. Preliminary Procedures: Before requesting inspection for determining date of Substantial Completion, complete the following. List items below that are incomplete with request.
   1. Prepare a list of items to be completed and corrected (punch list), the value of items on the list, and reasons why the Work is not complete.
   2. Advise Owner's Representative of pending insurance changeover requirements.
   3. Submit specific warranties, workmanship bonds, maintenance service agreements, final certifications, and similar documents.
   4. Obtain and submit releases permitting Owner unrestricted use of the Work and access to services and utilities. Include occupancy permits, operating certificates, and similar releases.
   5. Prepare and submit Project Record Documents, As-Built Drawings, operation and maintenance manuals, final completion construction photographic documentation, damage or settlement surveys, property surveys, and similar final record information. See Section 01 78 39.
   6. Deliver tools, spare parts, extra materials, and similar items to location designated by Owner. Label with manufacturer's name and model number where applicable.
   7. Make final changeover of permanent locks and deliver keys to Owner's Representative. Advise Owner's Representative personnel of changeover in security provisions.
   8. Complete startup testing of systems.
   9. Submit test/adjust/balance records.
   10. Terminate and remove temporary facilities from Project site, along with mockups, construction tools, and similar elements only after successful completion of Functional Testing. See Section 01 91 13.
   11. Advise Owner's Representative of changeover in heat and other utilities.
   12. Submit changeover information related to Owner's occupancy, use, operation, and maintenance.
   13. Complete final cleaning requirements, including touchup painting.
   14. Touch up and otherwise repair and restore marred exposed finishes to eliminate visual defects.

B. Inspection: Submit a written request for inspection for Substantial Completion. On receipt of request, Architect will either proceed with inspection or notify the General Contractor of unfulfilled requirements. Architect will prepare the Certificate of Substantial Completion after inspection or will notify the General Contractor of items, either on the General Contractor's list or additional items identified by the Architect or Owner, that must be completed or corrected before certificate will be issued.
   1. Reinspection: Request reinspection when the Work identified in previous inspections as incomplete is completed or corrected.
   2. Results of completed inspection will form the basis of requirements for final completion.

1.04 FINAL COMPLETION

A. Preliminary Procedures: Before requesting final inspection for determining final completion, complete the following:
   1. Submit a final Application for Payment according to Division 0 Section 00 52 00 "Agreement Forms" and Division 0 Section 00 72 00 “General Conditions.”
   2. Submit certified copy of Architect’s Substantial Completion inspection list of items to be completed or corrected (punch list), endorsed and dated by the Architect. The certified copy of the list shall state that each item has been completed or otherwise resolved for acceptance.
   3. Submit evidence of final, continuing insurance coverage complying with insurance requirements.
   4. Submit pest-control final inspection report and warranty.
   5. Instruct Owner's personnel in operation, adjustment, and maintenance of products, equipment, and systems.

B. Inspection: Submit a written request for final inspection for acceptance. On receipt of request, the Architect will either proceed with inspection or notify General Contractor of unfulfilled requirements.
   1. Reinspection: Request reinspection when the Work identified in previous inspections as incomplete is completed or corrected.

1.05 WARRANTIES

A. Submittal Time: Submit written warranties on request of Owner’s Representative for designated portions of the Work where commencement of warranties other than date of Substantial Completion is indicated.

B. Organize warranty documents into an orderly sequence based on the table of contents of the Project Manual.
   1. Submit warranties via Project Website (Procore)
   2. Scan warranties and bonds and assemble complete warranty and bond submittal package into a single indexed electronic PDF file with links enabling navigation to each item. Provide table of contents at beginning of document.

C. Provide additional copies of each warranty to include in operation and maintenance manuals.

PART 2 PRODUCTS

2.01 MATERIALS

A. Cleaning Agents: Use cleaning materials and agents recommended by manufacturer or fabricator of the surface to be cleaned. Do not use cleaning agents that are potentially hazardous to health or property or that might damage finished surfaces.
   1. Use cleaning products that meet Green Seal GS-37, or if GS-37 is not applicable, use products that comply with the California Code of Regulations maximum allowable VOC levels.

PART 3 EXECUTION

3.01 FINAL CLEANING

A. General: Perform final cleaning. Conduct cleaning and waste-removal operations to comply with local laws and ordinances and Federal and local environmental and antipollution regulations.

B. Cleaning: Employ experienced workers or professional cleaners for final cleaning. Clean each surface or unit to condition expected in an average commercial building cleaning and maintenance program. Comply with manufacturer's written instructions.
   1. General Contractor to complete the following cleaning operations before requesting inspection for certification of Substantial Completion for entire Project or for a portion of Project:
      a. Clean Project site, yard, and grounds, in areas disturbed by construction activities, including landscape development areas, of rubbish, waste material, litter, and other foreign substances.
      b. Sweep paved areas broom clean. Remove petrochemical spills, stains, and other foreign deposits.
      c. Rake grounds that are neither planted nor paved to a smooth, even-textured surface.
      d. Remove tools, construction equipment, machinery, and surplus material from Project site.

e. Remove snow and ice to provide safe access to building.
f. Clean exposed exterior and interior hard-surfaced finishes to a dirt-free condition, free of stains, films, and similar foreign substances. Avoid disturbing natural weathering of exterior surfaces. Restore reflective surfaces to their original condition.
g. Remove debris and surface dust from limited access spaces, including roofs, plenums, shafts, trenches, equipment vaults, manholes, attics, and similar spaces.
h. Sweep concrete floors broom clean in unoccupied spaces.
i. Vacuum carpet and similar soft surfaces, removing debris and excess nap; shampoo if visible soil or stains remain.
j. Clean transparent materials, including mirrors and glass in doors and windows. Remove glazing compounds and other noticeable, vision-obscuring materials. Replace chipped or broken glass and other damaged transparent materials. Polish mirrors and glass, taking care not to scratch surfaces.
k. Remove labels that are not permanent.
l. Touch up and otherwise repair and restore marred, exposed finishes and surfaces. Replace finishes and surfaces that cannot be satisfactorily repaired or restored or that already show evidence of repair or restoration.
    1) Do not paint over "UL" and other required labels and identification, including mechanical and electrical nameplates.
m. Wipe surfaces of mechanical and electrical equipment, elevator equipment, and similar equipment. Remove excess lubrication, paint and mortar droppings, and other foreign substances.
n. Replace parts subject to operating conditions during construction that may impede operation or reduce longevity.
o. Clean plumbing fixtures to a sanitary condition, free of stains, including stains resulting from water exposure.
p. Replace disposable air filters and clean permanent air filters. Clean exposed surfaces of diffusers, registers, and grills.
q. Clean light fixtures, lamps, globes, and reflectors to function with full efficiency. Replace burned-out bulbs, and those noticeably dimmed by hours of use, and defective and noisy starters in fluorescent and mercury vapor fixtures to comply with requirements for new fixtures.
r. Leave Project clean and ready for occupancy.

C. Pest Control: Engage an experienced, licensed exterminator to make a final inspection and rid Project of rodents, insects, and other pests. Prepare a report.

SECTION 01 78 39
PROJECT RECORD DOCUMENTS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes administrative and procedural requirements for project record documents, including the following:
   1. Record Drawings.
   2. Record Specifications.
   3. Record Product Data.

B. Related Sections:
   1. Division 1 Section "Operation and Maintenance Data" for operation and maintenance manual requirements.
   2. Divisions 2 through 33 Sections for specific requirements for project record documents of the Work in those Sections.
   3. Section 00 40 00 Contract Packet Forms; Warranty and Standard Construction Subcontract.

1.02 CLOSEOUT SUBMITTALS

A. Record Drawings: Comply with the following:
   1. Submit electronically, via Procore.
   2. Number of Copies: Submit 1 set of marked-up record prints.
   3. Number of Copies: Submit copies of record Drawings as follows:
      a. Initial Submittal: Submit PDF electronic files of marked-up record prints. LTF Construction will indicate whether general scope of changes, additional information recorded, and quality of drafting are acceptable.
      b. Final Submittal: Submit PDF electronic files of marked-up record prints. Print each Drawing, whether or not changes and additional information were recorded.

B. PDF electronic files Record Product Data: Submit annotated PDF electronic files and directories of each submittal.

PART 2 PRODUCTS

2.01 RECORD DRAWINGS

A. Record Prints: Maintain one set of marked-up paper copies of the Contract Drawings and Shop Drawings.
   1. Preparation: Mark record prints to show the actual installation where installation varies from that shown originally. Require individual or entity who obtained record data, whether individual or entity is Installer, subcontractor, or similar entity, to provide information for preparation of corresponding marked-up record prints.
      a. Give particular attention to information on concealed elements that would be difficult to identify or measure and record later.
      b. Record data as soon as possible after obtaining it.
      c. Record and check the markup before enclosing concealed installations.
   2. Mark the Contract Drawings and Shop Drawings completely and accurately. Utilize personnel proficient at recording graphic information in production of marked-up record prints.
   3. Mark record sets with erasable, red-colored pencil. Use other colors to distinguish between changes for different categories of the Work at same location.
   4. Note Construction Change Directive numbers, alternate numbers, Change Order numbers, and similar identification, where applicable.

B. Record Digital Data Files: Immediately before inspection for Certificate of Substantial Completion, review marked-up record prints with LTF Construction. When authorized, prepare a full set of corrected digital data files of the Contract Drawings, as follows:
   1. Format: Same digital data software program, version, and operating system as the original Contract Drawings.

2. Format: DWG, operating in Microsoft Windows operating system.
3. Format: Annotated PDF electronic file with comment function enabled.
4. Incorporate changes and additional information previously marked on record prints. Delete, redraw, and add details and notations where applicable.
5. Refer instances of uncertainty to LTF Construction for resolution.

C. Format: Identify and date each record Drawing; include the designation "PROJECT RECORD DRAWING" in a prominent location.
1. Record Prints: Organize record prints and newly prepared record Drawings into manageable sets. Bind each set with durable paper cover sheets. Include identification on cover sheets.
2. Format: Annotated PDF electronic file with comment function enabled.
3. Record Digital Data Files: Organize digital data information into separate electronic files that correspond to each sheet of the Contract Drawings. Name each file with the sheet identification. Include identification in each digital data file.
4. Identification: As follows:
a. Project name.
b. Designation "PROJECT RECORD DRAWINGS."
c. Name of Subcontractor.

2.02 RECORD SPECIFICATIONS

A. Preparation: Mark Specifications to indicate the actual product installation where installation varies from that indicated in Specifications, addenda, and contract modifications.
1. Give particular attention to information on concealed products and installations that cannot be readily identified and recorded later.
2. Mark copy with the proprietary name and model number of products, materials, and equipment furnished, including substitutions and product options selected.
3. Record the name of manufacturer, supplier, Installer, and other information necessary to provide a record of selections made.
4. Note related Change Orders, record Product Data, and record Drawings where applicable.

B. Format: Submit record Specifications as annotated PDF electronic file.

2.03 RECORD PRODUCT DATA

A. Preparation: Mark Product Data to indicate the actual product installation where installation varies substantially from that indicated in Product Data submittal.
1. Give particular attention to information on concealed products and installations that cannot be readily identified and recorded later.
2. Include significant changes in the product delivered to Project site and changes in manufacturer's written instructions for installation.
3. Note related Change Orders, record Specifications, and record Drawings where applicable.

B. Format: Submit record Product Data as annotated PDF electronic file.

2.04 MISCELLANEOUS RECORD SUBMITTALS

A. Assemble miscellaneous records required by other Specification Sections for miscellaneous record keeping and submittal in connection with actual performance of the Work. Bind or file miscellaneous records and identify each, ready for continued use and reference.

B. Format: Submit miscellaneous record submittals as PDF electronic file.

PART 3 EXECUTION

3.01 RECORDING AND MAINTENANCE

A. Recording: Maintain one copy of each submittal during the construction period for project record document purposes. Post changes and modifications to project record documents as they occur; do not wait until the end of Project.

B. Maintenance of Record Documents and Samples: Store record documents and Samples in the field office apart from the Contract Documents used for construction. Do not use project record documents for construction purposes. Maintain record documents in good order and in a clean, dry, legible

condition, protected from deterioration and loss. Provide access to project record documents for LTF Construction reference during normal working hours.

END OF SECTION

SECTION 01 84 21
INTERIOR CONCRETE FLOOR FINISHING PERFORMANCE REQUIREMENTS.

PART 1 GENERAL

1.01 SUMMARY

A. Work of this Section includes requirements for developing content relating to construction of concrete slabs-on-grade and suspended slabs (concrete flatwork) for the Contractor's Quality Management Program (QMP) specified in Section 01 45 00 – Quality Control that documents the policies and organizational structure to achieve specified concrete finishing tolerances for concrete substrates associated with the following:

1. Concrete Mix Design: Prepare concrete mix design that accounts for appropriate workability (slump and flow) based on performance requirements for the Project, and that accounts for concrete trades' requirements to achieve specified concrete tolerances including adjustment for slump and consolidation on site, inclusion of shrinkage compensating admixtures and applied floorcovering manufacturers' requirements.
2. Concrete Formwork: Prepare formwork erection drawings for suspended slabs in accordance with CSA A23.1, Item 6.5.2 and verify that perimeter (FL) of horizontal concrete slabs and blocked-out openings through slabs are at the same level [; including service and crane block-outs in suspended slab construction, accounting for formwork camber]; and verify that construction schedule accounts for specified strength gain before removal and relocation.
3. Concrete Reinforcement: Schedule installation of concrete reinforcement to allow sufficient time for Construction Manager's review and acceptance before scheduling delivery of concrete to project site.
4. Concrete Delivery: Control delivery of concrete to maintain concrete mix design properties accepted by the Consultant at time of discharge, without use of unscheduled additives and water by the transit mix operator and onsite personnel.
5. Concrete Finishing: Coordinate with Section 03 30 for specified FF:FL tolerances and locations of different FF:FL outcomes (the footprint), that account for admixtures required to attain optimal concrete workability for placers and finishers, and that are compatible with adhesives used for applied finishes and floorcoverings.
6. Concrete Protection: Describe methods to protect newly placed and finished concrete from rain and snow, freezing conditions, wind, heat and differential shading until concrete is cured sufficiently to prevent damage to surface finish, and confirm methods to limit loads on new concrete slabs until sufficient strength is attained to support construction loads.
7. Concrete Curing: Describe methods for managing application and removal of Products used to aid the concrete curing process, with the goal to minimize the use of surface applied curing compounds, sealer/hardeners and moisture retarders that may be detrimental to surface adhesion for floorcoverings and underlayments.
8. Concrete Surface Preparation: Describe methods for managing removal of incompatible curing compounds and providing concrete surface profiles acceptable for bonding of floorcovering adhesives.

1.02 RELATED REQUIREMENTS

A. Section 03 20 00 - Concrete Reinforcement: Requirements for steel reinforcing bars for slabs-on-grade.

B. Section 03 30 00 - Cast in Place Concrete: Establish requirements for maximum surface density of placed concrete when using supplementary cementing materials [and shrinkage compensating admixtures] to achieve floorcovering manufacturer's requirements for effective adhesive bond.

C. Section 05 31 00 - Steel Decking: Management of loading and spreading of concrete associated with composite concrete and steel decking to minimize deflection of steel decking between joists and achieve Concrete Quantitative Tolerance (FF:FL).

D. Section 07 18 00 - Traffic Coatings: Minimum Concrete Quantitative Tolerance (FF:FL) required for installation of resinous traffic toppings.

E. Section 09 05 61 - Common Work Results for Flooring Preparation: Preparation of concrete slab surfaces using cementitious repair and filling materials, moisture mitigation compounds and surface grinding required to achieve Floorcovering Qualitative Tolerances (Straightedge) ready for installation of floorcoverings.

F. Section 09 30 00 - Tiling: Minimum surface tolerances required for installation of tiling products.

G. Section 09 64 66 - Wood Athletic Flooring: Minimum surface tolerances required for installation of athletic wood assemblies.

H. Section 09 65 19 - Resilient Flooring: Minimum surface tolerances required for installation of resilient floorcoverings.

I. Section 09 67 23 - Resinous Flooring: Minimum surface tolerances required for installation of Resinous Flooring.

J. Section 09 68 13 - Tile Carpeting: Minimum surface tolerances required for installation of tile carpeting.

K. Section 22 13 19 - Sanitary Waste Piping Specialties: For coordination with floor drains.

1.03 DEFINTIONS

A. Floorcoverings: Surface finishes that are directly adhered to concrete substrates such as resilient flooring, carpeting, wood flooring, laminate flooring, and other similar flexible premanufactured finishes.

B. Applied Finishes: Surface finishes that are applied to concrete such as exposed architectural concrete finishing (polished, burnished or densified), tile flooring, masonry flooring, terrazzo flooring and similar rigid finish materials, supported wood flooring, fluid applied flooring, and other flooring treatments that are not otherwise defined as floorcoverings.

C. Concrete Surface Profile (CSP): Topographical contour, surface texture of exposed concrete surfaces or substrates as defined by the International Concrete Repair Institute (ICRI), and are required to establish acceptable mechanical bond between floorcoverings, applied finishes, mortar setting materials, fluid applied flooring, or cementitious coatings with individual material CSP requirements specified in RELATED REQUIREMENTS.

D. Concrete Finishing Tolerances: The relative flatness and levelness of horizontal concrete surfaces identified to receive floorcoverings or other applied finishes, and that have different measurement standards and tolerances based on the component of the work and time of installation:
   1. Concrete Quantitative Tolerance (FF:FL): Concrete flatness (FF) and levelness (FL), based on quantitative results using ASTM E1155 measurements and surface tolerances described in CSA A23.1, Table 21: and that are measured within 3 days of placement before to removal of concrete forms.
   2. Floorcovering Qualitative Tolerance (Straightedge): Concrete flatness based on qualitative evaluation of observed gap measured along a 3 m unlevelled straightedge placed randomly.

E. Concrete Floor Finishing Tolerances: Concrete finishing tolerances generally apply to entire slab areas; materials and methods associated with achieving tolerances vary based on when they are measured, and which Subcontractor is directed by the General Contractor to perform work to achieve the specified tolerance as follows:
   1. Conventional Tolerance Concrete Floor Finishing: Concrete slabs having finishing tolerances for concrete substrates ranging between FF 20:FL 15 and FF 35:FL 25 specified in Section 03 30 00.

1.04 REFERENCE STANDARDS

A. American Concrete Institute (ACI):
   1. ACI 117.1R-14, Guide for Tolerance Compatibility in Concrete Construction

B. ASTM International (ASTM):
   1. ASTM E1155-20, Standard Test Method for Determining FF Floor Flatness and FL Floor Levelness Numbers

2. ASTM F710-19e1, Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring

C. Canadian Standards Association (CSA):
   1. CSA A23.1:19/A23.2:19, Concrete Materials and Methods of Concrete Construction/Test Methods and Standard Practices for Concrete

D. National Floor Covering Association of Canada (NFCA):
   1. NFCA Floor Covering Reference Manual

1.05 ADMINISTRATIVE REQUIREMENTS

A. Contractor's Quality Management Program (QMP): Submit QMP indicating standardized approach to managing quality of materials and workmanship during execution of the work associated with achieving concrete finishing tolerances identified in the Specifications including the following:
   1. Preconstruction Quality Planning: Develop preconstruction activities forming a part of the QMP in accordance with CSA A23.1, Article 7.1 and requirements of this Section.
   2. Quality Assurance: Activities, actions, corrective remedies and procedures performed before and during execution of the Work by the Contractor to protect against defects and deficiencies, and confirming that construction is consistent with specified performance requirements listed within the Specification.
   3. Quality Control: Observations, procedures, and related actions performed by the Contractor during and after execution of the Work to verify that completed construction complies with specified performance requirements, standards and technical requirements listed within the Specifications

B. Subcontractor Contribution: Subcontractors will coordinate requirements described in this section with the Contractor to identify installation conditions affecting concrete placing and finishing, and that affect compatibility of floorcoverings discussed during the pre-construction meetings described below, Contractor will incorporate comments as a part of the QMP.

C. Pre-Construction Tolerance Coordination Meetings: Conduct pre-construction tolerance coordination meetings in accordance with Section 01 31 00 – Project Management and Coordination, attended by Owner, Architect, Construction Manager, General Contractor and Subcontractors whose work is affected by work of this Section to discuss the following before starting any concrete related construction:
   1. Calculated changes to floor flatness profiles arising from natural changes to concrete such as shrinkage, curling, creep or plastic deformation that will occur between performing measurements for Concrete Quantitative Tolerances and measurements for Floorcovering Qualitative Tolerances;
   2. Methods for aligning measurement tolerances for individual trade contributions to the work, to those required by other parts of the work;
   3. Confirming concrete density, absorption and surface profile required for installation of applied finishes and floorcoverings;
   4. Identify any conflicts between adjacent components of the work that have potential to affect achieving the measurement tolerances required for individual contributions to the work;
   5. Resolve issues and implement management controls associated with meeting specified tolerances;
   6. Management of unit price allowances described by this Section associated with meeting specified tolerances;
   7. Management of temporary heating to maintain optimal concrete curing, and management of temperature and humidity required for installation of applied finishes and floorcoverings; and
   8. Other topics affecting the work described in this Section.

D. Pre-Construction Meetings: Conduct pre-construction meetings starting approximately 1 month before starting concrete work, and throughout the construction phase as necessary to achieve specified performance requirements in accordance with Section 01 31 00 – Project Management and Coordination, attended by Owner, Architect, Construction Manager, General Contractor and Subcontractors whose work is affected by work of this Section to discuss the following:

1. Best Practices Meetings: Confirm best practices relating to workmanship required to achieve specified floor finishing performance including the following:
    a. Sequence of work and confirmation of compatibility of installed materials and substrates;
    b. Using forming methods that limit potential deviation from specified performance requirements;
    c. Using placing and finishing methods that limit potential deviation from specified performance requirements;
    d. Responsibility for completion of substrate preparation and ambient weather measurements performed by Subcontractor.
    e. Responsibility for measurements and testing performed by Testing Agency described in this Section;
    f. Installation follow-up procedures to reduce or eliminate substrate and installation deficiencies;
    g. Using experienced, trained or certified Subcontractors for components critical to achieving specified performance requirements;
    h. Other procedures identified during best practices meetings that affect work results described in this Section.
2. Flatness/Levelness Surveying: Confirm access and survey frequency for collection of finishing tolerances for concrete substrates specified in Section 03 30 00. Confirm floor slopes in areas indicated to be sloped on drawings.
3. Concrete Quantitative Tolerance (FF:FL): Confirm that Concrete Quantitative Tolerance meets requirements specified in Section 03 30 00 prepared at time of concrete placement;
4. Floorcovering Qualitative Tolerance (Straightedge): Confirm that Floorcovering Qualitative Tolerance meets requirements for floorcoverings listed in RELATED REQUIRMENTS, accounting for natural changes to flatness profile arising from shrinkage, curling or plastic deflection of concrete slabs, and installation of self-levelling compounds and surface preparation products;
5. Condition of Substrates: Confirm that concrete substrate conditions are acceptable to floorcovering manufacturer requirements for relative humidity, mechanical bond and porosity, smoothness and other conditions affecting quality of floorcovering installation;
6. Measurement and Testing Frequency: Determine frequency and timing of site testing and observation reporting of floorcoverings substrates to confirm acceptability for manufacturers installation requirements; and
7. Other topics affecting work described in this Section.

E. Coordination: Coordinate qualification requirements and contributions from Division 03 and requirements from Division 09 associated with interior concrete floor finishing performance as follows:
1. Coordinate concrete mix design and confirm workability of mix to achieve finishing tolerances for concrete substrates specified in Section 03 30 00, and confirm compatibility with bonding performance required by products specified in RELATED REQUIREMENTS.
2. Coordinate with concrete floor finishing Subcontractors and confirm they employ sufficient numbers of qualified and experienced personnel during concrete placement operations to achieve finishing tolerances for concrete substrates specified in Section 03 30 00
3. Coordinate concrete curing methods proposed for use on the Project as specified in Section 03 30 00 with RELATED REQUIREMENTS and confirm that curing methods and materials, and substrate remediation methods are compatible with installation of floorcoverings and other applied finishes.
4. Coordinate requirements for measurements, testing and preparation of concrete substrates as specified in Section 03 30 00 and Section 09 05 61.
5. Coordinate with Subcontractors responsible for cementitious topping and underlayments Subcontractors and confirm methods for unit price allowance management, contributions to floor finishing mock-up specified in this Section and confirm products proposed for use.
6. Coordinate Subcontractors contributing to floor finishing mock-up described in this Section.

F. Scheduling: Schedule concrete placing and finishing to account for floor finishing performance requirements described in this Section and required by RELATED REQUIREMENTS, and as follows:
   1. Schedule delivery of concrete to prevent use of unscheduled water and additives being added to the mix during transport or as a consequence of delays at time of discharge without prior approval from Construction Manager.
   2. Schedule concrete formwork removal in accordance with Section 03 30 00, early removal of formwork will not be permitted unless specifically directed by the Construction Manager.
   3. Schedule concrete placing and finishing operations to minimize exposure to adverse weather conditions in accordance with CSA A23.1, Article 7.6.
   4. Schedule measurements and testing performed by Subcontractors responsible for work results specified in RELATED REQUIREMENTS.

1.06 SUBMITTALS

A. Provide required information in accordance with Section 01 33 00 Submittal Procedures.

B. Information Submittals: Provide the following submittals during the course of work of this Section:
   1. Concrete Placing and Finishing Records: Submit written records for each concrete placement including the following:
      a. Volume, location and date of concrete placement relating to gridlines indicated on Drawings;
      b. Weather conditions on date of concrete placement;
      c. Building enclosure conditions on date of concrete placement;
      d. Temperature of granular base for slabs-on-grade, or ambient temperature of formwork substrate; and
      e. Any unusual observations or conditions affecting concrete placement.
   2. Substrate Condition and Compatibility Report: Submit confirmation that substrate conditions and applied curing agents are acceptable for specified floorcoverings.
   3. Survey Data: Submit floor flatness/floor levelness reports in format described in 01 33 00 at intervals specified in this Section.

1.07 QUALIFICATIONS

A. Concrete Finisher Qualifications: Engage Subcontractors that can coordinate supply and installation of concrete formwork and reinforcing steel, concrete placing and finishing, curing and jointing in a coordinated-source arrangement, and as specified in Section 03 30 00.

B. Floorcovering Installer Qualifications: Engage floorcovering Subcontractors that have at least 5 years experience in installations similar to this project and approved by the product manufacturers to install their products.
   1. Subcontractor’s Responsibility: Perform work of this section in accordance with specified requirements.

1.08 WARRANTY

A. Special Warranty – Concrete Floor Finishing: Submit warranty covering surface deterioration, dusting and cracking for a 2 year period, starting from the date of Substantial Completion of the Work.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. Concrete Floor Finishing: Refer to Section 03 30 00 for concrete slab finishing requirements.

B. Applied Finishes Installation: Refer to RELATED REQUIREMENTS associated with applied finishes work.

C. Floorcovering Installation: Install floor preparation materials and floorcoverings products in accordance manufacturer’s written instructions and requirements described in RELATED REQUIREMENTS associated with floorcovering work.

D. Self-Levelling Underlayment Installation: Account for sufficient self-levelling underlayment compounds for improved surface tolerance floors as follows:

1.0 Calculated Effect of Deflection on Floor Flatness (FF)

2.0 Deflection Span Ratio		3.0 Deflection of a 9 metre span		4.0 Final FF Number							
5.0	Initial (FF) – No Deflection			6.0	50	7.0	40	8.0	30	9.0	25
10.0	L/960	11.0	10 mm	12.0	39	13.0	34	14.0	28	15.0	24
16.0	L/480	17.0	19 mm	18.0	25	19.0	23	20.0	21	21.0	19
22.0	L/360	23.0	25 mm	24.0	20	25.0	19	26.0	19	27.0	16
28.0	Calculated Percent Decrease from Optimal Flatness										
29.0	L/960	30.0	10 mm	31.0	24%	32.0	15%	33.0	7%	34.0	4%
35.0	L/480	36.0	19 mm	37.0	51%	38.0	43%	39.0	30%	40.0	24%
41.0	L/360	42.0	25 mm	43.0	61%	44.0	53%	45.0	37%	46.0	36%

1. Calculated Floor Elevation Profile Deviation: Concrete Quantitative Tolerance specified in Section 03 30 00 will change between the time it was first measured (preliminary) and when measurements are taken before floorcoverings and applied finishes are installed (final) as follows:
   a. Slabs-on-Grade: Account for a maximum 20% deviation from measured Concrete Quantitative Tolerance of slabs-on-grade, and include for specified floor levelling products to re-establish Floorcovering Qualitative Tolerance (Straightedge) required by floorcovering manufacturers as a part of Bid Price.
   b. Suspended Slabs: Account for a maximum 25% deviation from measured Concrete Quantitative Tolerance of suspended slabs, and include specified floor levelling products to re-establish Floorcovering Qualitative Tolerance (Straightedge) required by floorcovering manufacturers as a part of Bid Price.
2. Observed Floor Elevation Profile Deviation: Confirm calculations for expected deviation from specified concrete finishing tolerances before application of specified floor levelling products and adjust quantity using unit price allowances submitted with Bid to establish final surface profile required for specified floorcoverings:
   a. Unit price allowance will be used to adjust cost for specified floor levelling products based on the differential between calculated and observed concrete finishing tolerances.
   b. Unit price allowance will be applied as an addition or deduction to floor levelling products included as a part of the Bid Price.

PART 3 EXECUTION

2.01 EXAMINATION

A. Concrete Testing: Refer to Section 03 30 00 for testing associated with concrete quality.

B. Substrate Testing: Refer to Section 09 05 61 for testing associated with moisture emissions, surface porosity and alkalinity, and adhesive compatibility of concrete substrates before installation of floorcovering materials.

C. Concrete Finishing Tolerances Survey: Survey concrete slabs based on concrete finishing tolerances tolerance standards applicable to the work described in individual RELATED REQUIREMENTS:
   1. Concrete Quantitative Tolerance (FF:FL) Measurements: Measure concrete substrate and confirm they meet project requirements specified in Section 03 30 00.
   2. Floorcovering Qualitative Tolerance (Straightedge) Measurements: Measure concrete substrate and confirm they meet project requirements specified in Section 09 05 61.

2.02 PROTECTION

A. Temperature and Humidity Controls during Construction: Contractor will install indirect temporary heating sources for building interior spaces in accordance with the flooring materials Manufacturer's requirements, capable of maintaining consistent and controllable temperature, and maintaining temperature of substrates at a minimum of 3°C above air dew point.

B. Protection of Concrete Substrates: Contractor will protect concrete substrate surfaces during construction to minimize surface contamination and provide a surface that is compatible with floorcovering manufacturers installation tolerances, and correct differential between Concrete Quantitative Tolerance (FF:FL) and Floorcovering Qualitative Tolerance (Straightedge) in accordance with Section 09 05 61, free from alkali, dust and dirt, adhesives, paints and coatings, solvents and oils, grease, wax, form release agents, film forming sealers and curing aids, and film forming hardening compounds that are incompatible with flooring adhesives.

2.03 ALIGNING DIFFERENTIAL TOLERANCES

A. Contractor is responsible for managing coordinated-source concrete placing, finishing and curing of concrete described in this Section in accordance with CSA A23.1, Part 7 and the following:
   1. Contractor will establish control points for floor measurements [and arrange for point cloud surveying] as a component of their QMP provisions to quantify amount of materials required to meet Floorcovering Qualitative Tolerance (Straightedge).
   2. Contractor will manage Subcontractors contributions for site measurements of concrete slabs to establish Concrete Quantitative Tolerance and Floorcovering Qualitative Tolerance (Straightedge).
   3. Contractor will notify Owner, Construction Manager and Architect of differential between calculated concrete finishing tolerances to observed concrete finishing tolerances; Consultant will provide written direction for adjustment to unit price allowance.
   4. Contractor prepares or adds content to their QMP that describes their approach for identifying and correcting deficient work.

B. Subcontractor's Contributions: Subcontractors are responsible for managing surface tolerance requirements contained within their RELATED REQUIREMENTS as follows:
   1. Subcontractor will perform measurement and testing specified in RELATED REQUIREMENTS associated with their work result.
   2. Subcontractor will confirm the Contractor's QMP modifications following pre-construction meetings specified above that they require to achieve specified tolerances.

C. Manufacturers' Contributions: Manufacturers will provide written instructions to Subcontractors identifying product installation requirements including modifications to standard procedures, measurements and testing necessary to achieve specified concrete floor finishing performance requirements.

2.04 SITE QUALITY CONTROL

A. Measurement and Testing: Site quality control requirements are specified in RELATED REQUIREMENTS, and describes measurement and testing responsibilities of Owner, Contractor and Subcontractors.

B. Contractor's Quality Management: QMP will list measurements and testing, and identify Subcontractors responsible for site quality control requirements required to achieve floor finishing performance requirements identified in this Section.

C. Owner's Quality Audit: Owner may engage services of a third-party observation and testing agency to perform quality auditing services necessary to validate Contractor's quality assurance and quality control procedures described in the QMP; scope of service provided by the Owner's quality auditor will be limited to the following:
   1. Quality auditor will notify Owner, Construction Manager and Architect of non-conforming work, irregularities or deficiencies observed during the performance of its services.
   2. Construction Manager and Contractor will discuss options for correction to non-conforming work with Subcontractor responsible for the work to determine appropriate recommendations for correction.
   3. Construction Manager will prepare written communication describing acceptable correction for non-conforming work and issue to the Owner, Contractor and Subcontractors responsible for the work.

4. Quality auditor is not authorized to release, revoke, alter or enlarge requirements of the Contract Documents, make changes to manufacturer's written instructions, nor approve or accept any portion of the Work.
5. Owner's quality auditor will not be permitted to perform any duties of the Construction Manager or Contractor.

2.05 CLOSEOUT ACTIVITIES

A. Cleaning: Keep installed work clean as installation progresses and perform final cleaning as required by Section 01 77 00 Closeout Procedures, coordinated cleaning activities described in RELATED REQUIREMENTS.

B. Demonstration: Provide demonstration and training for Owner's personnel associated with specified floor finishes in accordance with Section 01 92 00 Facility Operation and Maintenance, coordinated with maintenance activities described in RELATED REQUIREMENTS.

END OF SECTION

SECTION 01 91 13
GENERAL COMMISSIONING REQUIREMENTS

PART 1 GENERAL

1.01 SUMMARY

A. This section includes general requirements that apply to the implementation of the Commissioning Process and the contractors' participation in this process. Commissioning is systematic process to provide documented confirmation that the facility's systems are installed in accordance with construction documents, manufacturer's recommendations, perform according to the criteria set forth in the design documents and satisfy the Owner's Project Requirements.

B. This goal is achieved with the process starting during preliminary design phase by documenting the Owner's Project Requirements, the Basis of Design; and continues throughout the construction phase. The process culminates with turnover and Owner Acceptance, achieved through verification of system functional and performance testing.

C. Commissioning during the construction phase is intended to achieve the following specific objectives according to the Contract Documents:
   1. Verify that applicable equipment and systems are installed according to the manufacturer's recommendations and to industry accepted minimum standards and that they receive adequate operational checkout by installing contractors.
   2. Verify and document proper performance of equipment and systems.
   3. Verify that O&M documentation left on site is complete.
   4. Verify that the Owner's operating personnel are adequately trained.

D. The Commissioning Process does not take away from or reduce the responsibility of the system designers or installing contractors to provide a finished and fully functioning facility.

1.02 REFERENCED DOCUMENTS

A. The Owner's Project Requirements (OPR) document.

B. The Basis of Design (BoD) document.

C. The Commissioning Plan – To be provided by IMEG.

D. ASHRAE Standard 202-2013 - Commissioning Process for Buildings and Systems.

1.03 RELATED SECTIONS

A. SECTION 07 08 00 - COMMISSIONING OF THERMAL AND MOISTURE PROTECTION

B. SECTION 08 08 00 - COMMISSIONING OF OPENINGS

C. SECTION 11 08 00 - COMMISSIONING OF EQUIPMENT

D. SECTION 13 08 00 - COMMISSIONING OF SPECIAL CONSTRUCTION

E. SECTION 14 08 00 - COMMISSIONING OF CONVEYING SYSTEMS

F. SECTION 21 08 00 - COMMISSIONING OF FIRE SUPPRESSION SYSTEMS

G. SECTION 22 08 00 - COMMISSIONING OF PLUMBING SYSTEMS

H. SECTION 23 08 00 - COMMISSIONING OF MECHANICAL SYSTEMS

I. SECTION 25 08 00 - COMMISSIONING OF INTEGRATED AUTOMATION SYSTEMS

J. SECTION 26 08 00 - COMMISSIONING OF ELECTRICAL SYSTEMS

K. SECTION 27 08 00 - COMMISSIONING OF COMMUNICATIONS SYSTEMS

L. SECTION 28 08 00 - COMMISSIONING OF SAFETY AND SECURITY SYSTEMS

M. SECTION 33 08 00 - COMMISSIONING OF UTILITIES

1.04 DEFINITIONS

A. Acceptance: A contractually defined action that permits an activity to commence or continue.

B. Basis of Design (BoD): A document that records the concepts, calculations, decisions, and product selections used to meet the Owner's Project Requirements and to satisfy applicable regulatory requirements, standards, and guidelines. The document includes both narrative descriptions and lists of individual items that support the design process.

C. Commissioning Activity: A component of the Commissioning Process.

D. Commissioning Provider (CxP): A person employed by Life Time, or contracted to, who plans, schedules, and coordinates the Commissioning Team to implement the Commissioning Process.

E. Commissioning Technician (CxT): A person employed by, or contracted to, Life Time who executes specific Commissioning Activities, under the direction of the CxP.

F. Commissioning Field Report: A document that records the activities and results of the Commissioning Process.

G. Commissioning Plan (Cx Plan): A document that outlines the organization, schedule, allocation of resources, and documentation requirements of the Commissioning Process.

H. Commissioning Process (Cx): A quality assurance process for enhancing the delivery of a project. The process focuses on verifying and documenting that the facility and all its systems and assemblies are planned, designed, installed, tested, operated, and maintained to meet the Owner's Project Requirements.

I. Commissioning Team: The individuals, who through coordinated actions, are responsible for implementing the Commissioning Process.

J. Construction Documents: This includes a wide range of documents, which will vary from project to project, owner's needs, regulations, codes, and countries. Construction documents usually include the project manual (specifications), plans (drawings) and General terms of the contract, especially those required by subcontractors and vendors, suppliers and manufacturers of equipment, assemblies, and systems.

K. Coordination Drawings: Drawings showing the work of all trades to illustrate that equipment can be installed in the space allocated without compromising equipment function or access for maintenance and replacement. These drawings graphically illustrate and dimension manufacturers' recommended maintenance clearances.

L. Functional Performance Test (FPT): The process of testing system integration using written test procedures. The functional test is performed during the last phase of the project. This is often referred to as a final quality control test, which is done to ensure that design specifications have been incorporated. During testing, how a system responds to changes in setpoints or changes to controlled variables is tested. Functional testing is dynamic testing of the entire system not only its components.

M. Issues Log: A formal and ongoing record of problems or concerns, and their resolution, which have been raised by members of the Commissioning Team during the Commissioning Process.

N. Nominal Group Technique: A formal, structured brainstorming process used to obtain the maximum possible ranked input from a variety of viewpoints in a short period of time. The typical approach is a workshop session where a question is presented, the attendees record their responses individually on a piece of paper, the individual responses are recorded on a flip chart without discussion in a round-robin fashion, all the responses are discussed, and then the individuals rank their top five responses.

O. Owner's Project Requirements (OPR): A written document that details the functional requirements of a project and the expectations of how it will be used and operated. This can include project and design goals, measurable performance criteria, budgets, schedules, success criteria, and supporting information.

P. Pre-Functional Checklist (PFC): A form used by the contractor to verify that appropriate components are on-site, ready for installation, correctly installed, and functional. Pre-functional testing is static testing of components of a system to verify installation and the readiness for Functional testing.

Q. Probabilistic Tools: Tools and methods based upon an estimated, uniform or known probability/statistical distribution of outcome that can be predicted or an underlying outcome

distribution that can be expected or estimated. The distribution of outcome should be within a reasonably close range to the mean expected outcome or measured value, be it known or estimated.

R. Systems Manual: A system-focused composite document that includes the Commissioning Record, operation manual, maintenance manual, and additional information of use to the owner during the Occupancy and Operations Phase.

S. Test Procedure: A written protocol that defines methods, personnel, and expectations for tests conducted on components, equipment, assemblies, systems, and interfaces among systems.

T. Training Plan: A written document that details the expectations, schedule, budget, and deliverables of Commissioning Process activities related to training of project operating and maintenance personnel, users, and occupants.

U. Verification: The process by which specific documents, components, equipment, assemblies, systems, and interfaces among systems are confirmed to comply with the criteria described in the Owner's Project Requirements.

V. Web-based Commissioning Software (WCxS): Cloud-based software that the CxP utilizes to manage the Cx process and the Cx Team.

1.05 COORDINATION

A. Commissioning Team. The members of the commissioning team consist of the Commissioning Provider (CxP), the Owner's Representative (OR), the General Contractor (GC or Contractor), the architect and design engineers (particularly the mechanical engineer), the Mechanical Contractor (MC), the Electrical Contractor (EC), the TAB representative, the Automation Contractor (AC), any other installing subcontractors or suppliers of equipment. If known, the Owner's building or plant operator/engineer is also a member of the commissioning team.

B. Management. The CxP is hired by the Owner directly. The CxP directs and coordinates the commissioning activities. All members work together to fulfill their contracted responsibilities and meet the objectives of the OPR.

C. Scheduling. The CxP will work with the GC according to established protocols to schedule the commissioning activities. The CxP will provide sufficient notice to the GC for scheduling of commissioning related activities. The GC will integrate all commissioning activities into the master schedule. All parties will address scheduling problems and make necessary notifications in a timely manner in order to expedite the commissioning process.

D. The CxP will provide the initial schedule of primary commissioning events at the commissioning scoping meeting. The Commissioning Plan - Construction Phase provides a format for this schedule. As construction progresses more detailed schedules are developed by the CxP. The Commissioning Plan also provides a format for detailed schedules.

1.06 COMMISSIONING PROCESS

A. Commissioning Process. The following narrative provides a brief overview of the typical commissioning tasks during construction and the general order in which they occur.

1. Commissioning during construction begins with a scoping meeting conducted by the CxP where the commissioning process is reviewed with the commissioning team members.
2. Additional meetings will be required throughout construction, scheduled by the CxP with necessary parties attending, to plan, scope, coordinate, schedule future activities and resolve problems.
3. Equipment documentation is submitted to the CxP during normal submittals, including detailed start-up procedures.
4. The CxP reviews startup plans and startup documentation formats provided by the vendors.
5. The CxP provides the Subs with Pre-Functional Checklists to be completed, during the startup process.
6. In general, the checkout and performance verification proceeds from simple to complex; from component level to equipment to systems and inter-system levels with Pre-Functional Checklists being completed before functional testing.

7. The Subs, under the General Contractors direction, execute and document the Pre-Functional Checklists and perform startup and initial checkout. The CxP documents that the checklists and startup were completed according to the approved plans. This may include the CxP witnessing startup of selected equipment.
8. The CxP develops specific equipment and system Functional Performance Test procedures. The Team reviews the procedures.
9. The test procedures are executed by the CxP, with assistance of pertinent Team members.
10. Items of non-compliance in material, installation or setup are corrected and the system is retested.
11. The CxP reviews the O&M documentation for clarity and completeness.
12. Functional Performance Testing is successfully completed before Owner Acceptance is granted.
13. The CxP reviews, approves, and documents the training provided by the Vendors/ Contractors.
14. Deferred testing is scheduled and/or conducted, as required.

1.07 COMMISSIONING TEAM

A. Members Appointed by Contractors: Individuals, each having the authority to act on behalf of the entity they represent, explicitly organized to implement the commissioning process through coordinated action. The commissioning team members shall consist of, but not be limited to, contractors, subcontractors, installers, suppliers, and specialists deemed appropriate by the CxP.

B. Members Appointed by Owner:
1. CxP: The designated person or entity that plans, schedules, and coordinates the commissioning team to implement the commissioning process.
2. Representatives of the facility user and operation and maintenance personnel.
3. The Owners Representative.
4. Architect and engineering design professionals.

1.08 RESPONSIBILITIES

A. Owner: Responsibilities of the Owner include, but are not limited to the following:
1. Provide the OPR documentation to the CxP and General Contractor for information and use.
2. Assign operation and maintenance personnel and schedule them to participate in commissioning team activities.
3. Provide the BoD documentation, prepared by Architect and approved by Owner, to the CxP and Contractor for use in developing the commissioning plan, systems manual, and operation and maintenance training plan.
4. Arrange for facility operating and maintenance personnel to attend various field commissioning activities and field training sessions according to the Commissioning Plan - Construction Phase.
5. Follow the Commissioning Plan.
6. Attend commissioning scoping meetings and additional meetings as necessary.

B. The Owner's Representative OR shall represent the Owner during the commissioning process as follows:
1. Manage the contract of the A/E, and Contractors.
2. Provide final approval for the completion of the commissioning work.
3. Ensure that any seasonal or deferred testing and any deficiency issues are addressed.
4. Follow the Commissioning Plan.
5. Attend commissioning scoping meetings and additional meetings as necessary.

C. Commissioning Provider: Responsibilities of the CxP include, but are not limited to the following:
1. Coordinate and direct each step of the Commissioning Process for systems being commissioned for this project. Coordinate commissioning work schedule with construction Project Manager and/or Contractors.
2. Attend planning and job-site meetings as required to obtain information relating to Commissioning Process.
3. Plan and conduct commissioning scoping and coordination meetings. Provide notice to all Team members to attend scheduled commissioning meetings.

4. Ensure all information required for Commissioning Process from manufacturers, Contractors, and A/E design team is available.
5. Review A/E design documents to gain clear understanding of design intent.
6. Review Contractor submittals for compliance with commissioning needs.
7. Review Contractor process for as-built documentation.
8. Verify that systems and equipment have been installed and started in accordance with manufacturer's recommendations and with generally recognized construction standards and that documentation of such has been provided.
9. Prepare and provide Pre-Functional Checklists to ensure systems have been installed according to project specifications. Verify that Pre-Functional Checklists have been completed by Contractors and are accurate.
10. Prepare and provide Functional Performance Test procedures to demonstrate performance of systems according to project specifications. Observe and document performance of systems, as per process detailed in Functional Test procedures.
11. Review Testing and Balancing (TAB) reports.
12. Decide acceptance or non-acceptance of systems.
13. Arrange for facility operating and maintenance personnel to attend various field commissioning activities and field training sessions.
14. Ensure that seasonal or deferred testing and deficiency issues are addressed.
15. Verify that Operations and Maintenance (O&M) documentation is complete. Operations and Maintenance manuals shall be submitted simultaneously to CxP and to Design Team for review.
16. Verify that Owner training is completed for all systems.
17. Compile and maintain Commissioning Issues Log.
18. Provide Final Commissioning Report.

D. General Contractor: Responsibilities of the GC as relate to the Commissioning Process include, but are not limited to the following:
1. Facilitate the coordination of the commissioning work and incorporate commissioning activities (the Cx Plan) into the overall project schedule.
2. All costs associated with the participation of Contractor, Sub-Contractors, and Equipment Vendors in the Commissioning Process shall be included in the scope of this contract.
3. Attend Commissioning meetings or other meetings called by CxP to facilitate the Commissioning Process.
4. Provide all documentation relating to manufacturer's recommended performance of equipment and systems.
5. Provide Operations and Maintenance Data to CxP for preparation of checklists and test procedures.
6. Review commissioning progress and deficiency reports.
7. Provide Testing and Balancing Report.
8. Assure and facilitate participation and cooperation of subcontractors (electrical, mechanical, automation, fire alarm, etc.) and equipment suppliers as required for the Commissioning Process.
9. Certify to CxP that installation work listed in Pre-Functional Checklists has been completed.
10. Install systems and equipment in strict conformance with project specifications, manufacturer's recommended installation procedures, and Pre-Functional Checklists.
11. Provide copy of vendor completed start-up forms for equipment and systems.
12. Ensure systems have been started and fully checked for proper operation prior to scheduling Functional Performance Testing with CxP.
13. Contractors shall carry out manufacturer's recommended start-up and testing procedures, regardless of whether they are specifically listed in Functional Test procedures.
14. Contractor is not relieved of obligation for systems/equipment demonstration of performance, where a Functional Performance Test is not specifically designated by CxP.
15. Coordinate with CxP to determine mutually acceptable date of Functional Performance Tests.

16. Provide test instruments and communications devices, as prescribed by CxP, required for carrying out Functional Performance Testing of systems.
17. Evaluate and ensure deficiencies shown in the Commissioning Issues Log are corrected within the time allowed for the project.
18. Provide CxP with all submittals, start-up instructions manuals, operating parameters, and other pertinent information related to Commissioning Process.
19. Prepare and submit to CxP Training Program outline for each system.
20. Coordinate and provide training of Owner's personnel.
21. Execute and ensure subcontractors aid with seasonal or deferred Functional Performance Testing witnessed by the CxP.
22. Prepare Operation and Maintenance manuals and As-Built drawings in accordance with specifications; submit copy to CxP in addition to other contractually required submissions.

E. Subcontractors:
1. Prepare and submit to CxP proposed Installation and Startup procedures, to demonstrate performance of systems according to these specifications.
2. Execute Pre-Functional Checklists for appropriate equipment and systems.
3. Provide assistance in equipment testing at the request of the CxP.
4. Attend commissioning meetings as requested by the CxP.
5. Respond to (in writing) and address items documented in the Contractor Commissioning Issues Log.
6. Notify the GC a minimum of two weeks in advance of system start-up and testing, so CxP may be on site to witness.
7. Notify the GC a minimum of two weeks in advance, of the time for start of the TAB work. Attend the initial TAB meeting for review of the TAB procedures.

F. Architect: Responsibilities of the Architect as related to the Commissioning Process shall include, but are not limited to the following:
1. Attend commissioning scoping meeting and other commissioning team meetings as requested by CxP.
2. Perform normal submittal review, construction observation, record drawing preparation, and operations and maintenance data preparation.
3. Provide design narrative documentation requested by CxP.
4. Coordinate resolution of system deficiencies identified during commissioning.
5. Prepare and submit final as-built design intent documentation for inclusion in Operation and Maintenance Manual, and review and approve Operation and Maintenance Manual.
6. Warranty Period: Coordinate resolution of design non-conformance and design deficiencies identified during warranty period commissioning.

G. Mechanical, Electrical, Plumbing, Automation, and Specialty Engineers: Responsibilities of the Engineers as related to the Commissioning Process shall include, but are not limited to the following:
1. Perform detailed submittal review, construction observations, and record drawing preparation.
2. Perform site observation immediately preceding system startup.
3. Provide design narrative and sequence documentation requested by CxP. Assist in clarifying operation and control of commissioned equipment in areas where specifications, control drawings, or equipment documentation are not sufficient for writing detailed testing procedures.
4. Attend commissioning scoping meetings and other commissioning team meetings as requested by CxP.
5. Participate in resolution of system deficiencies identified during commissioning.
6. Prepare and submit final as-built design intent and operating parameters documentation for inclusion in Operation and Maintenance Manual, and review and approve Operation and Maintenance Manual.

1.09 COMMISSIONING DOCUMENTATION

A. General:

1. Timely and accurate documentation of commissioning activities is essential for the commissioning process to be effective. To this end, all commissioning activities conducted by the contractors shall be documented as outlined below and in Part 3 Execution of this specification.
2. Contractor commissioning responsibilities on Web-based Commissioning Software (WCxS) (Such as CxAlloy) include the following items:
    a. Construction Issues.
    b. Pre-Functional Checklists.
    c. Functional Performance Tests.
3. The GC is responsible to review all Construction Commissioning Issues on WCxS with their subcontractors and provide feedback on WCxS in a timely manner.
4. The pre-functional checklists shall be completed by each respective trade contractor involved with the installation of any commissioned systems and equipment.
5. The functional performance tests will be completed by the CxP as they witness the test conducted by the contractors.
6. All Contractor Commissioning Documents prepared by the contractors will be fully completed in a neat and workmanlike manner so as to be fully legible. Documentation which, at the CxP's discretion, is incomplete or less than fully legible shall be deemed unacceptable.
7. Commissioning procedures and tests, which are rejected by the CxP due to incomplete, or illegible contractor documentation shall be repeated by the contractor and new Contractor Commissioning Documents shall be prepared to the Commissioning Team's satisfaction at no additional cost to the Owner.
8. Procedures deemed unacceptable by the Commissioning Team after being repeated due to inadequate documentation may be subject to completion by the CxP, at a cost to the contactor as outlined in item Section 3.10 "Cost of Re-Evaluation" below.
9. All Contractor Commissioning Documents shall be completed on the job-site concurrent with the activities being documented. Remedial documentation of commissioning activities either off-site or after the procedures have been completed is unacceptable.
10. All Contractor Commissioning Documents will be submitted to the CxP for review and acceptance upon completion.

B. Contractor Commissioning Process Status Tracking.
1. Contractors shall be responsible for monitoring the progress of their commissioning activities. The contractor will update the status of issues, checklists and tests on WCxS.
2. The CxP will assist the contractor in using WCxS.
3. The contractors shall regularly update WCxS and upload drawings or pictures as commissioning activities are completed so as to provide a readily available report to CxP regarding current status of the contractors commissioning activities.

C. Record Drawings.
1. Contractors shall regularly update a 'redlined' set of record drawings showing commissioned systems as work is being installed so that the drawings remain current with the field work, and as required in Division 21, 22, 23, 25 and 26 of the project specifications.
2. Redlining record drawings at the end of construction shall not be acceptable.
3. The Contractors up-to-date, in-progress redlines shall be kept on-site in the Contractor's field office and available for review by the Cx Team.

D. Access to Contractor Documentation.
1. Contractors shall provide the CxP with access to shop drawings, coordination drawings, equipment cut-sheets, schematics, in-progress record drawings, manufacturers installation-operation-maintenance manuals, startup reports, etc. to assist the CxP in execution of the Cx process.

PART 2 PRODUCTS

2.01 TEST EQUIPMENT

A. All industry standard test equipment required for performing the specified tests shall be provided by the applicable contractor (as specified) and shall be approved by the CxP. Any proprietary vendor specific test equipment shall be provided by that vendor or manufacturer.

B. Any portable or hand-held setup / calibration devices required to initialize the control system shall be made available by the control vendor (at no cost) to the CxP.

C. The instrumentation used in the commissioning process shall meet the following standards:
   1. Be of sufficient quality and accuracy to test and/or measure system performance within the tolerances required.
   2. Be calibrated at the manufacturer's recommended intervals with calibration tags permanently affixed to the instrument.
   3. Be maintained in good repair and operating condition throughout the duration of use on this project.
   4. Be immediately re-calibrated or repaired if dropped and/or damaged in any way during use on this project.

2.02 BAS HARDWARE AND SOFTWARE

A. Field Panel Software and Hardware:
   1. The BAS Contractor shall furnish the CxP with all hardware and software needed to connect to, communicate with and command the BAS field panels and controllers at no additional charge to the CxP. This hardware and software will be used by the CxP for execution of the commissioning process. Software and hardware provided to the CxP for this purpose, does not include any provisions for use by the Test & Balance Contractor.
   2. Hardware and software covered under this requirement includes, but is not limited to:
      a. Latest versions of proprietary software needed to communicate with BAS field panels and controllers.
      b. Communication modules, software keys, and similar hardware needed for communication from a laptop computer, PDA or similar device to field panels or controllers.
      c. Proprietary cables required for communication between laptop computers or PDAs to field panels or controllers.
      d. Passwords, access levels and similar software permissions necessary for execution of the Cx Process.
      e. Software and hardware manuals for all control system hardware and software provided to the CxP.
   3. This requirement is not meant to include provision of standard hardware such as laptop computers and PDAs nor provision of standard software such as Windows or MS Explorer.
   4. At the conclusion of the Commissioning Process, this hardware and software will be turned over back to the contractor.

B. Operator Workstation Access:
   1. The BAS Contractor shall provide the CxP with software and hardware needed for accessing the BAS' front-end operator workstation(s). At a minimum, this shall include appropriate level user identification names and passwords. Access level shall allow the CxP to fully execute all commissioning procedures and will include the ability to:
      a. View system operation.
      b. Override setpoints.
      c. Command digital and analog output points.
      d. View BAS programming source code (read-only).
      e. View and print graphics.
      f. Create, view, modify, print and download trend logs, histories and reports.

C. Technical Support:

1. The BAS Contractor shall assign representatives with expertise and authority to act on its behalf and shall schedule them to participate in and perform commissioning activities and demonstrate system operation to assist with completing Functional Performance Test procedures, and seasonal testing as required.

D. Duration of Support:
   1. The BAS Contractor shall provide the CxP with technical support for the duration of the project and through the post occupancy phase commissioning activities and warranty period of the project to support the Cx process. The duration of this support is typically one year after turn over to the owner, to provide time to complete deferred and seasonal testing and the warranty phase activities.

PART 3 EXECUTION

3.01 GENERAL

A. Contractor shall coordinate with subcontractors and equipment vendors to set aside adequate time to address Pre-Functional Checklist execution, Functional Performance Testing, Operations and Maintenance Training, and associated coordination meetings.

B. CxP may also conduct site inspections at critical times and issue Cx Field Reports with observations on installation deficiencies so that they may be addressed by appropriate contractor.

3.02 COMMISSIONING PLAN AND SCHEDULE

A. The CxP shall generate a commissioning plan which identifies Cx tasks, roles and responsibilities for the Cx process. The CxP will submit a Cx schedule for the commissioning process which shall be integrated into the construction schedule by the GC.

3.03 CONSTRUCTION OBSERVATION

A. This is an additional and separate activity from that provided by the design team. Construction observation is required as part of the commissioning and coordination process to be provided by the CxP. Field Observation reports will be distributed through the WCxS.

3.04 COMMISSIONING ISSUES LOGS

A. As part of the commissioning process, all issues will be recorded on the WCxS. The WCxS will divide the issues as follows:
   1. Design Commissioning Issues:
      a. This log is part of the Web-Based Commissioning Software. This log is a formal and ongoing record of issues pertaining to the project construction documents which identifies areas of concern with the design regarding to coordination between divisions, constructability, maintenance clearances, operability or other commissioning concerns. This log specifically separates design issues from contractor issues. The contractor has no responsibility to track or comment on the design team Cx log.
   2. Construction Commissioning Issues:
      a. This log is also a part of the Web-Based Commissioning Software. It is a formal and ongoing record of problems or concerns pertaining to the installation of the commissioned systems and equipment which identifies where the contractors have deviated from the OPR, contract documents, applicable codes or normal industry construction practices. It is the GC's responsibility to regularly login and retrieve this log from the Web-Based Commissioning Software, follow up and review each item on the list with the appropriate trades, and respond to the CxP with feedback within 5 business days from the issuance of the log from the CxP.
      b. Team members will be given access through the WCxS to comment on issues. This is where the GC should provide feedback which includes the following sections:
         1) Response/Action: This is the contractor’s response to the issue identified by the CxP.
         2) Trade: This identifies the specific contractor responsible for the correction of the issue. The issue will be assigned to that contractor or subcontractor.

3) Expected Completion Date: This is the date which the GC and subcontractor agree the issue will be resolved by. This provides information back to the CxP as to when items should be corrected by for spot checking the correction of issues.

c. The GC shall provide feedback and updates to the construction Cx issues log to the CxP within 5 business days from its issuance from the CxP.

d. The CxP will back check a construction issue one (1) time after being told it's complete. If the item is not complete after being told it's complete, the CxP reserves the right to require the GC and associated sub-contractor to accompany the CxP on all future back checks on the project.

e. The CxP will maintain the master Cx log on the WCxS.

3.05 MEETINGS

A. A commissioning team scoping meeting shall be held at a time and place agreed upon shortly after the beginning of the construction phase of the project. Owner, CxP, General Contractor, Architect, Mechanical Contractor, Automation Contractor, and Electrical Contractor shall be present at this meeting. The purpose of the meeting is to familiarize all parties with the requirements of the commissioning process, and to ensure that the responsibilities of each party are clearly understood.

B. Separate meetings including individual equipment suppliers and subcontractors shall be held prior to commissioning of their systems at the discretion of CxP.

C. The CxP shall plan and conduct other meetings as required as construction progresses. Meetings will cover coordination, deficiency resolution, and planning issues with subcontractors. CxP will plan meetings to minimize unnecessary time being spent by subcontractors.

3.06 SYSTEM START-UP

A. Contractors will arrange for start-up of operating equipment and systems prior to scheduling Functional Performance Testing.

B. Start-up of equipment and systems shall be performed only by a manufacturer's representative, or persons who are specifically manufacturer approved. All start-up personnel shall be trained and authorized, experienced and knowledgeable in the operations of such equipment and systems.

C. Coordinate schedule for start-up of various equipment and systems so that sub-systems required for major systems operation are tested first.

D. Manufacturer's start-up reports must be submitted to CxP prior to scheduling Functional Performance Testing.

3.07 PRE-FUNCTIONAL CHECKLISTS (PFC)

A. Pre-Functional Checklists are important to ensure that equipment and systems are properly connected and installed in accordance with specifications, drawings, manufacturer's requirements, and all applicable codes.

B. Checklists shall reside on the WCxS and shall be created by the CxP, for the Contractors to execute.

C. Checklists ensure that functional performance testing may proceed without unnecessary delays.

D. Completion of PFCs shall be executed by the contractors. Only individuals that have direct knowledge and who witnessed that line item task on PFC was performed shall initial item.

E. Each piece of equipment or system a receives PFC form. No sampling strategies are used.

F. PFC for a given system must be successfully completed prior to commencement of Functional Performance Testing of equipment or sub-systems.

G. PFC tasks shall be documented in a checklist format, as prepared and provided by CxP, for each piece of equipment. Each checklist shall be signed by the contractors.

H. CxP provided PFCs shall not preclude Contractor from applying their own construction inspection checklists and quality control.

I. All system elements shall be checked to verify that they have been installed, adjusted, and calibrated properly, that all connections have been made correctly, and that it is ready to function as specified.

J. Verify that each piece of equipment or system has been checked for proper lubrication, drive rotation, control sequence, and other conditions which may cause damage.

K. Verify that tests, meter readings and specific electrical characteristics agree with those required by equipment or system manufacturer.

L. All discrete elements and sub-systems shall be adjusted and shall be checked for proper operation. Verify wiring and support components for equipment are complete and tested.

M. Conduct start-up procedure recommended by equipment/system manufacturer. Attach a copy of the start-up procedure report as a File to the PFC form on the WCxS.

N. Contractors shall clearly list outstanding items of initial start-up and Pre-Functional Checklists that were not completed successfully at bottom of procedures form or on separate sheet attached to form.

O. Completed forms shall be provided to CxP within 5 days of completion. Installing subcontractor shall correct deficient or incomplete areas in timely manner and shall submit startup reports with statement of correction on original non-compliance report.

3.08 TESTING AND BALANCING

A. Testing, Adjusting, and Balance Contractor (TAB) Requirements:
   1. Air and water balance shall be accomplished by an independent test and balance firm. The test and balance firm shall come back after the final balancing report is approved to work with the CxP and spot check this work to verify accuracy of results. Refer to Division 23 for acceptance criteria.
   2. Test and balance contractor to provide final balancing report to CxP.
   3. The TAB contractor shall be responsible for successful completion and documentation of all TAB activities specified in the Division 23.
   4. Prior to the start of TAB activities, the TAB contractor shall submit a proposed TAB plan, procedures and documentation to the CxP and A/E for review. TAB procedures shall be submitted to allow sufficient time for CxP review and approval prior to the start of TAB activities.
   5. After this review, and prior to start of field work, the TAB contractor will attend one or more planning meetings as required with the Commissioning Team to review and discuss outstanding issues relating to TAB procedures and forms, discuss resolution of issues identified during the TAB contractor's plan review and field inspections, and to coordinate field work.
   6. Prior to the start of fieldwork, the TAB contractor shall issue a final set of TAB procedures and TAB forms which incorporate any comments received during the Commissioning Team review.
   7. The TAB contractor shall have at least one certified field technician on site whenever TAB work is being performed.
   8. The TAB contractor is responsible to notify the GC who in turn shall notify the Commissioning Team a minimum of two (2) weeks in advance of the time for start of TAB work to allow the CxP and A/E time to assess system readiness.
   9. The TAB contractor will work cooperatively with the CxP.
   10. The TAB contractor shall coordinate with the controls contractor to ensure that changes made to the control system during TAB (flow coefficients, duct areas, etc.) are archived and become the default or initial values for these parameters.
   11. The TAB contractor shall provide daily lists of issues and/or problems identified during TAB work to the GC, CxP and A/E for follow-up & resolution with the appropriate contractors.
   12. Participate in verification of the TAB report, which may consist of repeating any selected measurement contained in the TAB report where required by the CxP for verification or diagnostic purposes.
   13. The TAB contractor will provide technicians and instrumentation to support the field verification.
   14. Instruments used for the field verification shall be the same instruments (by model and serial number) that were used for the original TAB work.
   15. Failure of an item during the TAB field verification is defined as:
      a. For all readings other than sound, a deviation of more than 10%.
      b. For sound pressure readings, a deviation of 3 decibels. (Note: variations in background noise will be considered).

16. A failure of more than 10% or 10 (whichever is greater) of the readings tested during the field verification shall result in the rejection of the final TAB report and require re-balancing of the system(s) in question.

3.09 CONTROLS AND INSTRUMENTATION TESTING

A. Testing, Adjusting, and Balance Contractor (TAB) Requirements:
   1. Air and water balance shall be accomplished by an independent test and balance firm. The test and balance firm shall come back after the final balancing report is approved to work with the CxP and spot check this work to verify accuracy of results. Refer to Division 23 for acceptance criteria.
   2. Test and balance contractor to provide final balancing report to CxP.
   3. The TAB contractor shall be responsible for successful completion and documentation of all TAB activities specified in the Division 23.
   4. Prior to the start of TAB activities, the TAB contractor shall submit a proposed TAB plan, procedures and documentation to the CxP and A/E for review. TAB procedures shall be submitted to allow sufficient time for CxP review and approval prior to the start of TAB activities.
   5. After this review, and prior to start of field work, the TAB contractor will attend one or more planning meetings as required with the Commissioning Team to review and discuss outstanding issues relating to TAB procedures and forms, discuss resolution of issues identified during the TAB contractor's plan review and field inspections, and to coordinate field work.
   6. Prior to the start of fieldwork, the TAB contractor shall issue a final set of TAB procedures and TAB forms which incorporate any comments received during the Commissioning Team review.
   7. The TAB contractor shall have at least one certified field technician on site whenever TAB work is being performed.
   8. The TAB contractor is responsible to notify the GC who in turn shall notify the Commissioning Team a minimum of two (2) weeks in advance of the time for start of TAB work to allow the CxP and A/E time to assess system readiness.
   9. The TAB contractor will work cooperatively with the CxP.
   10. The TAB contractor shall coordinate with the controls contractor to ensure that changes made to the control system during TAB (flow coefficients, duct areas, etc.) are archived and become the default or initial values for these parameters.
   11. The TAB contractor shall provide daily lists of issues and/or problems identified during TAB work to the GC, CxP and A/E for follow-up & resolution with the appropriate contractors.
   12. Participate in verification of the TAB report, which may consist of repeating any selected measurement contained in the TAB report where required by the CxP for verification or diagnostic purposes.
   13. The TAB contractor will provide technicians and instrumentation to support the field verification.
   14. Instruments used for the field verification shall be the same instruments (by model and serial number) that were used for the original TAB work.
   15. Failure of an item during the TAB field verification is defined as:
       a. For all readings other than sound, a deviation of more than 10%.
   16. A failure of more than 10% or 10 (whichever is greater) of the readings tested during the field verification shall result in the rejection of the final TAB report and require re-balancing of the system(s) in question.

3.10 FUNCTIONAL PERFORMANCE TESTS (FPT)

A. The objective of testing is to demonstrate that each system is operating according to documented design intent and Contract Documents, through all possible modes of operation.

B. Test forms shall reside on WCxS and shall be created by the CxP, for the CxP to execute, with assistance from the Contractors.

C. Contractor shall bear all costs associated with participation in the execution of testing procedures for all items listed in Part 3 of the related specifications.

D. Testing is intended to begin upon completion of each system. Testing may proceed prior to completion of systems or sub-systems at the discretion of CxP. Initiation of system testing, before

completion, does not relieve Contractor from fully completing system, including Pre-Functional Checklist execution, as early as possible.

E. Testing shall be conducted under specified operating conditions as recommended or approved by CxP.

F. A separate test shall be performed on each complete system. Each function shall be demonstrated to the satisfaction of CxP in accordance with proposed test procedures developed to demonstrate compliance with specifications.

G. Each test shall be witnessed and signed off by CxP upon satisfactory completion.

H. All elements of system shall be tested to demonstrate that total systems satisfy all requirements of these specifications. Testing shall be accomplished on hierarchical basis. Test each piece of equipment for proper operation, followed by each subsystem, followed by the entire system, followed by any inter-ties to other major systems.

I. All major testing materials and equipment shall be provided by contractor.
   1. Notify CxP, in writing, of request for scheduling Functional Performance Testing. Submit request no fewer than five (5) business days prior to desired day of testing.
   2. Contractor must certify that systems and equipment are functioning satisfactorily, according to specifications and design intent, prior to requesting testing. Upon receipt of such certification, CxP will schedule with Contractor a time for the particular system test.
   3. CxP will attempt to schedule testing when convenient for Contractor and its vendors, and to minimize lost time to Contractor.
   4. Contractor will resolve all deficiencies identified during initial test prior to submitting request, in writing, for re-testing. Such request for re-testing shall certify that Contractor has resolved all deficiencies, or list reason why any deficiencies remain which cannot be resolved.
   5. CxP will re-test to ensure that all deficiencies have been resolved.
   6. Deficiencies that were not detected in first Test, but are discovered in subsequent re-testing, are to be resolved by Contractor as if they had been discovered in initial testing.

J. Functional Performance Testing Requirements and Procedures:
   1. To facilitate Testing, Contractors shall provide personnel to accompany CxP as requested for Testing, including any follow-up testing. Such personnel must be experienced, qualified, and intimately familiar with the system being tested.
      a. Participation by representatives of the Automation contractor is of particular importance in Testing. All systems which are controlled and / or monitored by the IAS are to be thoroughly tested, point by point, through all modes of operation, with the assistance of the Contractor's representative. Graphics, setpoints, and programming are to be included as a part of Functional Testing as well.
      b. Contractors must provide personnel to accompany CxP for equipment and systems which may pose health and safety concerns, such as steam boilers.
      c. Should they fail to provide a representative to accompany CxP as requested during Testing, Contractor continues to bear full responsibility for equipment warranty.
   2. Each system shall be operated through all modes of operation including, but not limited to seasonal, occupied, unoccupied, warm-up, cool-down, part-load, and full-load, where system response is specified.
      a. For multiple units, sampling strategy established by CxP may be used.
      b. Verification of each sequence in Sequence of Operations is required.
      c. Proper responses to such modes and conditions as power failure, freeze condition, low oil pressure, no flow, equipment failure, and the like, shall also be tested.
   3. Testing is to be dedicated solely to testing of equipment and systems, and not to resolution of deficiencies. Deficiencies identified during testing process must be corrected by Contractor at a time other than during Testing.
   4. CxP shall issue test reports with readings and checklists and a listing of any deficiencies that must be addressed by Contractor or Subcontractors.

5. CxP shall submit a Final Report recommending acceptance or non-acceptance of individual system components as well as the systems as a whole.

K. Re-Testing and Failure to Remedy Deficiencies:
   1. It is expected that some deficiencies will be found during initial inspection and during Testing; such deficiencies are expected to be minimal.
   2. It is the Contractor's responsibility to remedy identified deficiencies, both in Pre-Functional and in Functional Testing phases of work, in a timely and thorough manner.
   3. It is the Contractor's responsibility to ensure that all deficiencies are corrected prior to requesting a re-inspection or re-test of systems and equipment. Do not request re-inspection or re-test until deficiencies are corrected.
   4. CxP may agree to re-testing systems or equipment where deficiencies remain, which are beyond Contractor's control to resolve expeditiously.
   5. CxP will carry out a second re-inspection or re-test of systems and equipment subsequent to receiving Contractor's request.

3.11 COST OF RE-EVALUATION

A. The cost for Contractors to re-evaluate any Commissioning Procedure due to open issues shall be borne by the contractors.

B. The CxP will be available for two attempts of the Functional Performance Tests (one initial and one re-try) with minimal follow-up where necessary (due to deficiencies, systems not ready, incomplete work, etc.) to try to accomplish each test as part of the contract. When additional work is required because systems are not ready or because they do not successfully pass the FPT after they have been indicated as ready, the contractor will be charged for the CxP's additional ++retesting costs. Additional fees will be paid to the CxP by the Owner and shall be reimbursed by the Contractor.

C. Any required re-testing by any contractor shall not be allowed as a justified reason for a claim of delay or for a time extension by the contractor.

3.12 OPERATION AND MAINTENANCE (O&M) MANUALS

A. The CxP shall review the draft form of the O&M manuals provided by the trade contractors with commissioning scope. The review process shall verify that O&M instructions meet specifications and are included for all equipment furnished by the contractor, and that the instructions and wiring diagrams are project specific (edited where necessary) to the actual equipment provided for this project.

B. Published literature shall be specifically oriented to the provided equipment indicating required operation and maintenance procedures, parts lists, assembly/disassembly diagrams, and related information.

C. The contractor shall incorporate the standard technical literature into system specific formats for this facility as designed and as actually installed. The resulting O&M information shall be project and system specific, concise, to the point, and tailored specifically to this facility.

D. The O&M manual review, and coordination efforts MUST be completed prior to Owner training sessions, as these documents are to be utilized in the training sessions.

E. In addition to the O&M manual requirements within other specification sections the O&M manuals shall include at a minimum the following:
   1. An equipment data sheet with the equipment name tag, model#, serial # and any other relevant information for the equipment for entry into the Owner's central maintenance management system (CMMS).
      a. The format of the data entry sheets will be provided by the owner and/or CxP.
      b. Data entry of the equipment information into the CMMS will be the responsibility of the owner.
   2. A copy of the approved submittal, indicating the exact make and model of the equipment installed.
   3. A copy of the manufacturer's IOM manual.
   4. A copy of all warranties.

3.13 TRAINING

A. Scheduling:
   1. Provide a proposed schedule and outline of training of Owner's personnel for CxP review approximately 30 days before project completion.
   2. Submit revised outline and fully developed training materials for review by CxP, 10 business days prior to scheduled training sessions.
   3. Organize training to fit Owner's schedule and to optimize the learning experience. Limit continuous sessions to no more than three hours at a time.
   4. All training eents shall be video recorded and provided to the GC for closeout turnover.

B. Training Materials:
   1. Develop Training Manuals to meet requirements of individual equipment specification sections.
   2. Operating and Maintenance Manuals alone are NOT considered training manuals. O&M Manuals may be used as reference but shall not be considered to meet requirements for training materials.
   3. Develop a detailed outline showing how training program will be organized, including classroom and hands-on training as required by individual specifications sections.
   4. Provide with training materials, a quick reference "how-to" index which will allow operators to easily access information included in Training Manuals and/or O&M Manuals. This reference will include, as a minimum, routine normal operating instructions and sequences. Include regulation, control, stopping, shutdown, and emergency instructions.
   5. Refer to individual equipment or system specifications for minimum material to be covered as part of the training program.

3.14 SYSTEMS TO BE COMMISSIONED

A. GENERAL:
   1. The following outline of commissioning requirements by Division is provided as a guideline for Contractor, sub-contractors, and CxP to understand the nature and extent of commissioning work, so that resources may be properly allocated.
   2. Commissioning specifications supplement requirements of individual specifications sections but shall not be interpreted to replace or diminish the specified scope of any individual section.
   3. For all sections listed below, Contractor and Subcontractors shall comply with all commissioning requirements specified.
   4. Although listed separately, systems listed below shall be commissioned as a part of another system, as determined by the CxP.

B. APPLICABLE SYSTEMS
   1. Division 07 - Thermal and Moisture Protection:
      a. For a list of Commissioned Systems, refer to Section 07 08 00.
   2. Division 08 - Openings:
      a. For a list of Commissioned Systems, refer to Section 08 08 00.
   3. Division 11 - Equipment:
      a. For a list of Commissioned Systems, refer to Section 11 08 00.
   4. Division 13 - Special Construction:
      a. For a list of Commissioned Systems, refer to Section 13 08 00.
   5. Division 14 - Conveying Systems:
      a. For a list of Commissioned Systems, refer to Section 14 08 00.
   6. Division 21 - Fire Suppression Systems:
      a. For a list of Commissioned Systems, refer to Section 21 08 00.
   7. Division 22 - Plumbing Systems:
      a. For a list of Commissioned Systems, refer to Section 22 08 00.
   8. Division 23 - Mechanical Systems:
      a. For a list of Commissioned Systems, refer to Section 23 08 00.
   9. Division 25 - Integrated Automation:
      a. For a list of Commissioned Systems, refer to Section 25 08 00.

10. Division 26 - Electrical Systems:
    a. For a list of Commissioned Systems, refer to Section 26 08 00.
11. Division 27 - Communications Systems:
    a. For a list of Commissioned Systems, refer to Section 27 08 00.
12. Division 28 - Safety and Security Systems:
    a. For a list of Commissioned Systems, refer to Section 28 08 00.
13. Division 33 - Utilities:
    a. For a list of Commissioned Systems, refer to Section 33 08 00.

3.15 EXCLUSIONS

A. Responsibility for construction means and methods: The CxP is not responsible for construction means, methods, job safety, or any construction management functions on the job site.

B. Hands-on work by the CxP: The contractors shall provide all services requiring tools or the use of tools to start-up, test, adjust, or otherwise bring equipment and systems into a fully operational state. The CxP shall coordinate and observe these procedures (and may make minor adjustments), but shall not perform construction or technician services other than verification of testing, adjusting, balancing, and control functions.

3.16 COMMISSIONING PLAN

PROVIDED BY IMEG

END OF SECTION

SECTION 01 92 00

FACILITY OPERATION AND MAINTENANCE

PART 1 GENERAL

1.01 SUBMITTAL REQUIREMENTS

A. Submittal of Operation and Maintenance Data shall follow the procedures specified in Section 01 33 00 Submittal Procedures.
   1. Operation and Maintenance Data shall be reviewed by the owner and will be returned for revision if incomplete or incorrectly formatted.

B. Operations and Maintenance Manual:
   1. The Contractor shall compile O&M manuals for every piece of equipment/system with the following format:
      a. Format: All documents shall be submitted in their native digital format.
         1) Drawings shall be VISIO or AutoCAD format.
         2) All other documents shall be in the Portable Document Format (PDF). PDFs shall be native, no scans, and OCR searchable.
         3) The O&M in its entirety shall be turned over to Operations on a portable memory device.
      b. There shall be separate files for each document, with a hyperlink from the Table of Contents.
      c. There shall be a title page and a table of contents in the front of each “binder”. In each binder, there shall be a main tab for each specification section. Behind the section number tab there shall be the equipment ID tag sub-tab for each piece of equipment. These sub-tabs shall match the specification numbers. Behind each equipment name tab shall be the following sections, in the given order, labeled with the title of the section.
         1) Contractor. The first page behind the equipment tab shall contain the name, address and telephone number of the manufacturer and installing contractor and the 24-hour number for emergency service for all equipment in this section, identified by equipment.
         2) Submittal and Product Data. This section shall include all approved submittal data, cut sheets and appropriate shop drawings. If submittal was not required for approval, descriptive product data shall be included.
         3) Model/Serial number. All items installed shall be identified by model and serial number, if applicable.
         4) Operation and Maintenance Instructions. These shall be the written manufacturer’s data with the model and features of this installation clearly marked and edited to omit reference to products or data not applicable to this installation. This section shall include data on the following:
            (a) Installation, startup and break-in instructions.
            (b) All starting, normal shutdown, emergency shutdown, manual operation, seasonal changeover and normal operating procedures and data, including any special limitations.
            (c) O&M and installation instructions that were shipped with the unit.
            (d) Preventative maintenance and service procedures and schedules.
            (e) Troubleshooting procedures.
            (f) A parts list, edited to omit reference to items which do not apply to this installation.
            (g) A list of any special tools required to service or maintain the equipment.
            (h) Performance data, ratings and curves.
            (i) Warranty, which clearly lists conditions to be maintained to keep warranty in effect and conditions that would affect the validity of the warranty.
            (j) Any service contracts issued.

5) Supplemental Data. Prepare text and/or special drawings to provide necessary information, where manufacturer's standard printed data is not available and information is necessary for a proper understanding and operation and maintenance of equipment or systems, or where it is necessary to provide additional information to supplement data included in the manual or project documents.
6) Automation Drawings. Include the diagrams for all equipment and its components, including the sequence of operations. This section will be provided by the Division 25 contractor.

d. Test and Balance (TAB) Report: The TAB Contractor has specific TAB Report requirements, detailed in Section 23 05 93, that shall be included in this section.
e. Design Architect and Engineers' Calculations: The Architects and Engineers have project specific design data that shall be included in this manual.

2. Commissioning Manual.
a. Refer to O&M documentation requirements identified in this section, in Section 01 91 13 and other Commissioning specific sections.
b. Commissioning Report and Testing Data. Compile a separate manual dedicated to documenting the Commissioning Process which will include all verification and testing data.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION (NOT USED)

END OF SECTION

SECTION 03 2000
CONCRETE REINFORCEMENT

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Reinforcing bars, welded wire reinforcement and supplementary or miscellaneous items, and devices incidental to general use of reinforcing steel for concrete.

B. Testing of reinforcing steel welding shall be performed by Owner's testing agency at Owner's expense.

1.02 RELATED SECTIONS

A. Section 01 33 00 - Submittal Procedures.

B. Section 01 40 00 - Quality Requirements.

C. Section 01 45 33 - Code-Required Special Inspections and Procedures.

D. Section 01 60 00 - Product Requirements.

E. Section 03 30 00 - Cast-in-Place Concrete.

F. Section 03 38 00 - Post-Tensioned Concrete.

G. Section 03 45 70 - Architectural Site Cast Concrete Wall Panels.

1.03 REFERENCE STANDARDS

A. CRSI (DA4) Concrete Reinforcing Steel Institute; Manual of Standard Practice.

B. ACI 301 American Concrete Institute; Specifications for Structural Concrete.

C. ACI SP-66 American Concrete Institute; Detailing Manual.

D. ASTM A36/A36M Standard Specification for Carbon Structural Steel.

E. ASTM A615/A615M Standard Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement.

F. ASTM A663A/A663M Standard Specification for Steel Bars, Carbon, Merchant Quality, Mechanical Properties.

G. ASTM A706/A706M Standard Specification for Deformed and Plain Low-Alloy Steel Bars for Concrete Reinforcement.

H. ASTM A1064/A1064M Standard Specification for Carbon-Steel Wire and Welded Wire.

I. ASTM C1116/C1116M Standard Specification for Fiber-Reinforced Concrete.

J. AWS D1.4/D1.4M American Welding Society. Structural Welding Code - Reinforcing Steel

1.04 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Perform concrete reinforcement work in accordance with CRSI Manual of Standard Practice, and CRSI Documents 63 and 65.

C. Conform to ACI 301 and ACI SP- 66.

1.05 SUBMITTALS

A. Material and Equipment Submittals: Submit the following under provisions of Section 01 33 00 - Submittals:

1. Shop Drawings: Provide a placing plan indicating applicable details. Indicate sizes, spacing, location and quantities of reinforcing steel, bending and cutting schedules, splicing locations and lap lengths, stirrup spacing, supporting and spacing devices and placing tolerances.
    a. Shop drawings shall contain sufficient information to properly place all reinforcement.

b. Any changes or deviations from the contract documents shall be clouded and clearly identified on the shop drawings.
c. Clearly indicate if the shop drawings are being performed in phases and identify any items not included.
d. Slab-on-grade and slab-on-metal deck reinforcing shop drawings shall be submitted concurrently with related control/construction joint plans. See specification section 03 30 00 Cast-in-Place Concrete for additional information.

2. Procurement:
a. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
b. Submit inventory to Owner within 5 days of delivery of materials.
c. See Sections 01 33 00 and 01 60 00.

B. Perform and submit reports of Code Required Special Inspections as required in Section 01 45 33.

PART 2 PRODUCTS

2.01 MATERIALS

A. Reinforcing Steel: ASTM A615/A615M, 60 ksi yield grade billet-steel and deformed bars, uncoated finish.

B. Smooth Bar Dowels: ASTM A663/A663M, grade 60, round.

C. Slab on Ground Plate Dowels: Plate material shall be ASTM A36 steel and shall be Diamond Dowel System, by PNA Construction Technologies, size 1/4” x 4½ ” dowels. Locate plate dowels at construction joints. Do not shear plates. Remove burrs at edges of plates.

D. Contraction Joint Protection: Load plate shall be smooth steel plate bars, ASTM A36, and shall be Load Plate Basket or PD3 Basket by PNA Construction Technologies. Locate Load Plate Baskets at contraction joints so noted on the plans. Do not shear. Remove burrs.

E. Welded Steel Wire Fabric: ASTM A1064/A1064M plain type.

F. Steel Wire: ASTM A1064/A1064M, plain, cold drawn steel.

G. Welded Reinforcing: ASTM A706/A706M.

H. Monofilament, self-fibrillating, structural fibers meeting ASTM C1116/C1116M. See Specification Section 03 30 00 Cast-In-Place Concrete for more information.

2.02 ACCESSORY MATERIALS

A. Tie Wire: Conform to CRSI recommendations.

B. Chairs, Bolsters, Bar Supports, and Spacers: Sized and spaced for strength and support of reinforcement during installation and placement of concrete; including load bearing pad on bottom to prevent vapor barrier puncture.

C. Chairs, Bolsters, Bar Supports, Spacers Adjacent to Architectural Concrete Surfaces: Plastic coated or stainless steel type; sized and shaped as required.

2.03 FABRICATION

A. Fabricate in accordance with ACI SP-66, providing concrete cover specified in Section 03 30 00 - Cast-in-Place Concrete.

B. Locate reinforcing splices not indicated on Drawings at points of minimum stress. Indicate location of splices on Shop Drawings.

C. Weld reinforcing bars per AWS D1.4/D1.4M.

PART 3 EXECUTION

3.01 INSTALLATION

A. Before placing concrete, clean reinforcement of foreign particles or coatings.

B. Place, support, and secure reinforcement against displacement. Do not deviate from alignment or measurement.

C. Do not displace or damage vapor barrier required by Section 03 30 00 - Cast-in-Place Concrete.

D. Place reinforcement to obtain minimum coverages for concrete protection as specified in Section 03 30 00 - Cast-in-Place Concrete.

E. Install welded steel wire fabric in as long lengths as practicable. Lap adjoining pieces at least two full square and lace splices with wire. Offset end laps in adjacent widths to prevent continuous laps in either direction. Mesh shall be chaired in place prior to pour.

3.02 FIELD QUALITY CONTROL

A. Field inspection and testing will be performed.

B. Special Structural Testing and Inspection Services: Structural Testing and Inspection shall be performed by qualified parties as specified herein. Include items required by the Currently adopted IBC Section 1705.3 and per Section 01 45 33, and other items which in professional judgment of Structural Engineer of Record, are critical to integrity of building structure.

C. Reinforcing Placement: A special inspector shall inspect placement of reinforcing for all concrete work scheduled for reinforcing prior to concrete placement.

C. Do not displace or damage vapor barrier required by Section 03 30 00 - Cast-in-Place Concrete.

D. Place reinforcement to obtain minimum coverages for concrete protection as specified in Section 03 30 00 - Cast-in-Place Concrete.

E. Install welded steel wire fabric in as long lengths as practicable. Lap adjoining pieces at least two full square and lace splices with wire. Offset end laps in adjacent widths to prevent continuous laps in either direction. Mesh shall be chaired in place prior to pour.

3.02 FIELD QUALITY CONTROL

A. Field inspection and testing will be performed.

B. Special Structural Testing and Inspection Services: Structural Testing and Inspection shall be performed by qualified parties as specified herein. Include items required by the Currently adopted IBC Section 1705.3 and per Section 01 45 33, and other items which in professional judgment of Structural Engineer of Record, are critical to integrity of building structure.

C. Reinforcing Placement: A special inspector shall inspect placement of reinforcing for all concrete work scheduled for reinforcing prior to concrete placement.

SECTION 03 3000
CAST-IN-PLACE CONCRETE

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Formwork, shoring, bracing, anchorage, inserts, embedded items, and openings.
   2. Form accessories.
   3. Drain tile.
   4. Perimeter Foundation Insulation.
   5. Cast-in-place concrete.
   6. Stripping forms.
   7. Concrete curing materials and methods.
   8. Concrete sealer and slip-resistant finish coatings.
   9. Accessories.

1.02 SYSTEM DESCRIPTION

A. Formwork: Design, engineer and construct formwork, shoring and bracing to meet design and code requirements, so that resultant concrete conforms to required shapes, lines, and dimensions; and that formwork is able to support vertical and lateral loads until such loads can be supported by concrete structure.

1.03 RELATED SECTIONS

A. Section 01 33 00 - Submittal Procedures.
B. Section 01 40 00 - Quality Requirements.
C. Section 01 45 33 - Code-Required Special Inspections and Procedures.
D. Section 01 60 00 - Product Requirements.
E. Section 01 84 21 - Interior Concrete Floor Finishing Performance Requirements.
F. Section 03 20 00 - Concrete Reinforcement.
G. Section 03 38 00 - Post Tensioned Concrete.
H. Section 03 45 70 - Architectural Site Cast Concrete Wall Panels.
I. Section 05 31 00 - Steel Decking.
J. Section 05 51 00 - Metal Stairs.
K. Section 07 14 50 - Fluid Applied Waterproofing Membrane.
L. Section 07 27 26 - Fluid Applied Membrane Air Barriers.
M. Section 07 27 27 - Fluid Applied Vapor-Impermeable Air Barriers.
N. Section 07 53 23 - Ethylene-Propylene-Diene-Monomer (EPDM) Roofing.
O. Section 07 54 23 - Thermoplastic Polyolefin (TPO) Roofing.
P. Section 09 05 61 - Common Work Results for Flooring Preparation.
Q. Section 13 48 13 - Manufactured Sound and Vibration Control Components.
R. Section 32 13 13 - Concrete Paving.

1.04 REFERENCE STANDARDS

A. AASHTO M182 Standard Specification for burlap.
B. AASHTO T318 Standard Method of Test for Water Content of Freshly Mixed Concrete.
C. ACI 117 - Standard Specifications for Tolerances for Concrete Construction and Materials.

Y. ASTM C309 - Standard Specification for Liquid Membrane-Forming Compounds for Curing Concrete.

Z. ASTM C330 - Standard Specification for Lightweight Aggregates for Structural Concrete.

AA. ASTM C494/C494M Standard Specification for Chemical Admixtures for Concrete.

BB. ASTM C595/595M Standard Specification for Blended Hydraulic Cements

CC. ASTM C618 Standard Specification for Coal Fly Ash and Raw or Calcined Natural Pozzolan for Use in Concrete.

DD. ASTM C685/C685M - Standard Specification for Concrete Made By Volumetric Batching and Continuous Mixing.

EE. ASTM C881/C881M Standard Specification for Epoxy-Resin-Base Bonding Systems for Concrete.

FF. ASTM C989/C989M Standard Specification for Slag Cement for Use in Concrete and Mortars.

GG. ASTM C1064/C1064M - Standard Test Method for Temperature of Freshly Mixed Hydraulic-Cement Concrete.

HH. ASTM C1107/C1107M Standard Specification for Packaged Dry, Hydraulic-Cement Grout.

II. ASTM C1116/C1116M Standard Specification for Fiber-Reinforced Concrete.

JJ. ASTM C1157 - Standard Performance Specification for Hydraulic Cement.

KK. ASTM C1218/C1218M - Standard Test Method for Water-Soluble Chloride in Mortar and Concrete.

LL. ASTM C1240 - Standard Specification for Silica Fume Used in Cementitious Mixtures.

MM. ASTM D994 - Standard Specification for Preformed Expansion Joint Filler for Concrete (Bituminous Type).

NN. ASTM D1751 Standard Specification for Preformed Expansion Joint Filler for Concrete Paving and Structural Construction (Nonextruding and Resilient Bituminous Types).

OO. ASTM D2047 Standard Test Method for Determining the Static Coefficient of Friction of Ceramic Tile and Other Like Surfaces by the Horizontal Dynamometer Pull-Meter Method.

PP. ASTM D2103 - Standard Specification for Polyethylene Film and Sheeting.

QQ. ASTM E96/E96M - Standard Test Methods for Water Vapor Transmission of Materials.

RR. ASTM E1155 Standard Test Method for Determining F(F) Floor Flatness and F(L).

SS. ASTM E1643 Standard Practice for Selection, Design, Installation and Inspection of Water Vapor Retarders Used in Contact with Earth or Granular Fill Under Concrete Slabs.

TT. ASTM E1745 Standard Specification for Plastic Water Vapor Retarders Used in Contact with Soil or Granular Fill under Concrete Slabs.

1.05 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. See Section 01 84 21 for additional quality requirements for concrete floors and floor substrates.

C. Maintain copy of ACI 301 on site.

D. Employ an independent testing laboratory to test proposed aggregate and design concrete mixes for each type of concrete required.

E. Design concrete mix proportions on basis of field experience and/or trial mix design in accordance with ACI 301. If historical data is used, accompany mix designs with complete standard deviation analysis.

F. Cast-In-Place Concrete: Obtain materials from the same source throughout the Work.

G. Formwork: Design, engineer and construct formwork, shoring and bracing to meet design and code requirements, so that resultant concrete conforms to required shapes, lines, and dimensions; and that formwork is able to support vertical and lateral loads until such loads can be supported by concrete structure.

H. Pre-Concrete Conference:
   1. This Pre-Concrete Conference is mandatory and no concrete work on building structure may commence until all conference criteria have been met to the satisfaction of the Design Team.
   2. At least 35 days prior to the start of the concrete construction schedule, the contractor shall conduct a meeting to review the proposed mix designs and to discuss the required methods and procedures to achieve the required concrete construction. The contractor shall send a pre-concrete conference agenda to all attendees 20 days prior to the scheduled date of the conference. The following shall be in attendance:
      a. Concrete supplier.
      b. Concrete Sub Contractor.
      c. Independent Testing Laboratory.
      d. Admixture supplier.
      e. Architect.
      f. Construction Manager.
   3. Minutes of the meeting shall be recorded, typed and printed by the contractor and distributed by the contractor to all parties concerned within 5 days of the meeting. One copy of the minutes shall also be transmitted to the following for information purposes: Owner's representative, Consultant engineer.
   4. The minutes shall include a statement by the concrete contractor indicating that the proposed mix design, and placing, finishing and curing procedures can produce the concrete quality required by these specifications.

5. A minimum of a 4 cubic yard trial mixture containing all required admixtures shall be placed at the job site using the accepted methods of placing, finishing and curing. This shall occur at least one week before actual concreting operations with the particular admixtures begin.
6. Architectural Concrete: Using same personnel, materials, equipment and construction techniques as will be used for final work, construct mock-up at least 8 feet wide and full height of the member, showing each surface treatment and joint construction methods proposed for use in the project. Mock-up drawings shall be submitted and approved prior to construction of mock up. Self-consolidating concrete shall be used and the proposed mix design shall be verified by a successful test placement onsite verifying proper workability, pumpability, setting time, and finish.
7. The Architect and Structural Engineer of Record shall have the option to be present at the conference.
8. The Contractor shall notify the Design Team at least 10 working days prior to the scheduled date of the conference.

I. Penetrating Hardener/Densifier Installer Qualifications:
1. Minimum of 15 concrete finish applications within last 3 years similar in type and size to Work of this Contract.
2. Assign experienced mechanics from previous applications including lead mechanic.
3. Provide letter of certification from the penetrating hardener/densifier manufacturer stating that installer is a certified applicator of the specified concrete finish material and is familiar with proper procedures and installation requirements required by manufacturer.

J. Concrete Floor Finish Applicator: Company specializing in concrete floor surface finishing with three years experience.

K. Concrete Floor Finishing: Furnish finishing materials in manufacturer's packaging with application instructions.
1. Interior concrete slab-on-grade: A minimum of one (1) finisher or finishing supervisor shall be a certified ACI Flatwork Finisher/Technical and shall be present during all interior slab-on-grade placement operations.

L. Waterstops: Samples of material, splicing details, and manufacturer’s literature indicating conformance with these Specifications for each type indicated.

M. ACI Publications: Comply with the following unless modified by requirements in the Contract Documents:
1. ACI 117, "Specifications for Tolerances for Concrete Construction and Materials.”
2. ACI 301, "Specification for Structural Concrete,"
3. ACI 302 “Guide for Concrete Floor and Slab Construction”.
4. ACI 304 “Recommended Practice for Measuring, Mixing, Transporting and Placing Concrete”.
5. ACI 308 “Standard practice for Curing Concrete”.
6. ACI 309 “Standard Practice for Consolidation of Concrete”.
7. ACI 311 “Recommended Practice for Concrete Inspection”.
8. ACI 318, “Building Code Requirements for Structural Concrete.”

N. Conform to ACI 305 when concreting during hot weather.

O. Conform to ACI 306.1 when concreting during cold weather.

1.06 SUBMITTALS

A. Material and Equipment Submittals: Submit the following under provisions of Section 01 33 00:
1. Mix Design: Indicate proposed mix design of each class of concrete to Architect/Engineer review 21 days prior to commencement of work. Do not begin concrete production until mixes have been reviewed and accepted by Architect/Engineer.
a. Include mix design types indicating location and placement of each mix class.
b. Submit proportions of ingredients for each mix class.
c. Submit aggregate gradation analysis showing compliance with ASTM C33.

d. Submit cement and supplemental cementitious material brand and type, slump, water/cement ratio, and strength test reports for 7 and 28 day strengths.
    1) Submit product certifications for cement and/or blended hydraulic cements showing compliance with ASTM C150 and/or ASTM C595.
    2) Submit product certifications indicating compliance with ASTM C618 for fly ash and ASTM C989/C989M for Ground Granulated Blast Furnace Slag if used.
e. Submittal shall show aggregate compliance with applicable fire rating UL assembly as indicated on architectural drawings.
f. Submit signed certifications stating compliance with ACI 318 requirements for each mix design.
g. The proposed mix designs shall be accompanied by complete standard deviation analysis or trial mixture test data indicating compliance with ACI 301. Submitted data shall be within the last 24-month period.

2. The proposed mix designs shall be accompanied by complete standard deviation analysis or trial mixture test data indicating compliance with ACI 301.
3. Certification of compliance for each material furnished stating that material conforms to acceptable ASTM standards.
4. Proprietary materials and items including forming accessories, admixtures, patching compounds, joint systems, curing compounds, and dry-shake finish materials. Indicate product conformation to applicable specifications. Submit manufacturer's literature.
5. If Contractor proposes to use curing compound(s) in lieu of the preferred specified wet cure process, then Contractor shall submit concrete curing compound product data sheets (for approval) and a concrete finishing schedule (for information only) including the following:
    a. Curing compound manufacturer certifications that their proposed products are approved for use with the applicable project waterproofing manufacturers (for information only).
    b. Curing compound manufacturer certifications that their proposed products are approved for use with the applicable project floor finishes (for information only).
    c. Floor finish manufacturer approvals of the curing compounds proposed for use under their floor finish (for information only).
    d. Show on floor plan where curing compounds are proposed for use, and what floor finishes are to be applied at those locations (for information only).
    e. If Contractor chooses to use curing compounds that are not compatible with the associated floor finishes, submit proposed methods of removal of curing compounds and approval(s) by associated floor finish manufacturer(s) (for information only).
    f. Manufacturer coverage requirements (square feet per gallon) for each application (horizontal, vertical) and final finish type (troweled, broom, float, rough).
6. Contractor shall submit slab on grade and slab on insulation control and construction joint layout plan, as applicable, for review three weeks minimum prior to slab pour.
    a. The plan shall be coordinated by the Contractor with the architectural floor plan, structural floor plan and related structural details to locate joints beneath walls and fixtures, when possible.
7. Contractor shall submit composite slab construction joint layout plan for review three weeks minimum prior to slab pour.
    a. See structural drawings for guidelines on suggested construction joint locations.
8. Submit waterstop product information with corresponding joint locations identified.

B. Procurement:
1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
2. Submit inventory to Owner within 5 days of delivery of materials.
3. See Sections 01 33 00 and 01 60 00.

C. Quality Control Submittals: Submit the following under provisions of Section 01 40 00:
1. Concrete Delivery Tickets: Indicate quantity, mix identification, admixtures, design strength, aggregate size, design air content, design slump and time of batching for each load delivered.

2. Test Reports: Indicate project identification name and number, concrete placement date, testing service name, concrete type and class, location of concrete batch in structure, design compressive strength at 28 days, concrete mix proportions and materials; compressive breaking strength and type of break for both 7-day tests and 28-day tests.

D. Perform and submit reports of Code Required Special Inspections as required in Section 01 45 33.

PART 2 PRODUCTS

2.01 GENERAL

A. Comply with recommendations of ADAAG for slip resistance using ASTM D2047 as follows:
   1. Accessible Routes (as defined by ADAAG): 0.6 static coefficient of friction.
   2. Ramps (as defined by ADAAG): 0.8 static coefficient of friction.

2.02 FORM MATERIALS

A. Conform to ACI 301.

B. Void Forms: Moisture resistant treated paper faces; biodegradable; structurally sufficient to support weight of wet concrete until initial set; Thickness to exceed expected potential movement of soil and/or concrete.
   1. Acceptable suppliers
      a. SureVoid by VoidForm
      b. Approved substitution

C. Compressible Material: Closed-cell Polyethylene Foam meeting the requirements of ASTM D3575-20 Standard Test Methods for Flexible Cellular Materials Made from Olefin Polymers
   1. Maximum compressive strength of 7 psi at 25% deformation
   2. Acceptable suppliers
      a. Ethafoam
      b. Approved substitution

2.03 FORMWORK ACCESSORIES

A. Form Ties: Removable or snap-off metal of adjustable length; 1-1/2" break back dimension; free of defects that will leave holes no larger than 1" diameter in concrete surface.

B. Form Release Agent: Proprietary mix, colorless material which will not stain concrete, absorb moisture, or impair natural bonding or color characteristics of coating intended for use on concrete.
   1. Products;
      a. FormShield Pure or Formshield WB by The Euclid Chemical Co
      b. Or approved substitution.

C. Fillets for Chamfered Corners: 3/4" x 3/4", wood, rigid plastic, metal or rubber type; maximum possible lengths; fabricated to produce uniform smooth lines and tight edge joints.

D. Nails, Spikes, Lag Bolts, Through Bolts and Anchorages: Sized as required; of strength and character to maintain formwork in place while placing concrete.

E. Below Grade Pipe Sleeves: ASTM A53, schedule 40, galvanized.

2.04 CONCRETE MATERIALS

A. Portland cement:
   1. ASTM C150, Type I or II & Type V as indicated ASTM C 1157, Type GU or LH Single brand and type of cement.
   2. High early strength option for footings and site cast concrete wall panels:
      a. ASTM C150, Type III High Early Strength, ASTM C1157, Type HE. Type III Portland cement may be used to produce high early strength concrete.
      b. Adding additional amounts of Type I Portland cement to produce high early strength concrete will not be permitted.
   3. ASTM C595. Type IL Blended Hydraulic Cement (Type IS and IT are excluded).

B. Supplementary Cementitious Materials:

1. Fly Ash ASTM C618, Type C or F
2. Ground Granulated Blast-Furnace Slag: ASTM C989, Grade 100 or 120
3. The exact percentages of supplementary cementitious materials used shall be based on a successful test placement on-site.

C. Fine and Coarse Aggregates: ASTM C33, Class 3S.
1. Provide aggregates from a single source for exposed aggregates.
2. Local aggregates not complying with ASTM C33, but which have shown by special test or actual service to produce concrete of adequate strength and durability may be used when acceptable to Architect.
3. Lightweight Concrete: Expanded Shale, Clay, or Slate (ESCS) lightweight aggregate produced by the rotary kiln method shall meet ASTM C330/C330M. Obtain from source with uniform density.
4. Minimum total coarse aggregate content of 12 cubic feet for 1 ½" or larger top size aggregate; 11.5 cubic feet for top size aggregate 1 ¼" or larger but less than 1 ½"; 11 cubic feet for topsize aggregate 1" or larger but less than 1 ¼"; or 10.5 cubic feet for topsize aggregate less than 1".

D. Water: Potable.

2.05 CONCRETE MIXING

A. Ready-Mix Concrete: Comply with requirements of ASTM C94, and as herein specified.

B. Provide batch ticket for each batch discharged and used in work, indicating project identification name and number, date, mix type, mix time, quantity, and amount of water introduced.

C. During hot weather, or under conditions contributing to rapid setting of concrete, a shorter mixing time than specified in ASTM C94 may be required. When air temperature is between 85 deg F (30 deg C) and 90 deg F (32 deg C), reduce maximum mixing and delivery time from 1-1/2 hours to 75 minutes, and when air temperature is above 90 deg F (32 deg C), reduce maximum mixing and delivery time to 60 minutes.

D. No water shall be added after mixing to concrete containing HRWR (Superplasticizer). If loss of slump occurs, HRWR may be redosed at the site as long as a "flash set" has not occurred. Redosage procedures must be discussed and approved by the Engineer and the manufacturer at the Pre-Concrete Conference.

E. No water is to be added on-site unless:
1. Total water does not exceed maximum w/cm specified
2. Water is added at direction of ready-mix supplier
3. Water addition is documented on delivery ticket.

2.06 PROPORTIONING AND DESIGN OF MIXES

A. Preparation of Design Mixes:
1. All mix designs shall be proportioned in accordance with Section 5.3, "Proportioning on the Basis of Field Experience and/or Trial Mixtures" of ACI 318. Submit mix designs on each class of concrete for review.
2. If field experience based mixes are submitted, all materials shall be from the same sources and with the same brand names as the previously utilized mix.
3. If trial batches are used, the mix design shall be prepared by an independent testing laboratory and shall achieve an average compressive strength 1200 psi higher than the specified strength. This over-design shall be increased to 1400 psi when concrete strengths of 5000 or more are used.
4. The proposed mix designs shall be accompanied by complete standard deviation analysis or trial mixture test data.
5. The testing facility shall not be the same as used for field quality control testing.
6. Supplemental Cementitious Materials
   a. Limit use of fly ash to not exceed 25 percent of cementitious content by weight.
   b. Limit use of slag to not exceed 40 percent of cementitious content by weight.

c. Combined fly ash and slag shall not exceed 50 percent by weight with fly ash not exceeding 25 percent by weight.
d. In mass concrete, more than 3 feet thick, the usage rate may be 50% for fly ash and 80% for slag.
e. The exact percentages used shall be based on a successful test placement on-site.

7. Proportion concrete mix designs appropriately to reach the required design strength and other properties noted and to be appropriate for their intended use. Use concrete admixtures in accordance with ASTM C494. Use air-entraining admixtures in accordance with ASTM C260

B. Concrete Mixes:
1. Design mixes to provide normal weight concrete with the following properties, as indicated on drawings and schedules below:

C. **Class A**: Interior Slab-on-Grade: Proportion normal-weight concrete mixture as follows:
1. Design Compressive Strength: 3000 psi minimum at 28 days.
2. Exposure Class in accordance with ACI 318: F0, S0, W1, C1
3. Cement Type: ASTM C150 Type I, Type II, or ASTM C595 TYPE IL
4. Concrete Density: Normal weight 150 pcf max
5. Maximum Water-Cementitious Materials Ratio: 0.50
6. Macro Fiber at a minimum dosage of 3.0 pounds per cubic yard (see related section below).
7. Maximum Aggregate Size: 1 1/2".

D. **Class B**: Exterior Slabs and Stoops: Proportion normal-weight concrete mixture as follows:
1. Minimum Compressive Strength: 4500 psi at 28 days.
2. Exposure Class in accordance with ACI 318: F2, S0, W1, C1
3. Cement Type: ASTM C150 Type I, Type II, or ASTM C595 TYPE IL
4. Concrete Density: Normal weight 150 pcf max
5. Maximum Water-Cementitious Materials Ratio: 0.45
6. Air Content: 6% +/- 1.5%.
7. Maximum Aggregate Size: 1 ½"

E. **Class C**: Footings, Piers, Foundation Walls, Elevator pits: Proportion normal-weight concrete mixture as follows:
1. Minimum Compressive Strength:
a. 4000 psi at 28 days for F0 exposure
b. 4500 psi at 28 days for F2 exposure
2. Exposure Class in accordance with ACI 318: S0, W1, C1
a. F0 if element not exposed to freezing and/or is permanently buried in soil
b. F2 if element exposed to freezing and/or is not permanently buried in soil.
3. Cement Type: ASTM C150 Type I, Type II, Type III, or ASTM C595 TYPE IL
4. Concrete Density: Normal weight 150 pcf max
5. Maximum Water-Cementitious Materials Ratio: 0.45
6. Air Content:
a. None required at F0 exposure.
b. 6% +/- 1.5% at F2 exposure.
7. Maximum Aggregate Size: 1 ½".

F. **Class D**: Composite Floor Slabs on Deck, Isolation Slabs: Proportion normal-weight concrete mixture as follows:
1. Minimum Compressive Strength: 4000 psi at 28 days.
2. Exposure Class in accordance with ACI 318: F0, S0, W0, C0
3. Cement Type: ASTM C150 Type I, Type II, or ASTM C595 TYPE IL
4. Concrete Density: Normal weight 150 pcf max
5. Maximum Water-Cementitious Materials Ratio: 0.50
6. Macro Fiber at a minimum dosage of 4.0 pounds per cubic yard (see related section below)
7. Slump Limit: 3-5 inches
8. Air Content: None required.

9. Maximum Aggregate Size: ¾”.
10. Aggregate type shall comply with applicable fire rating UL assembly as indicated on Architectural drawings.

G. **Class E**: Water retaining vessels, Backwash pits, Surge tanks and Collector tanks: Proportion normal-weight concrete mixture as follows:
1. Minimum Compressive Strength: 5000 psi at 28 days.
2. Exposure Class in accordance with ACI 318: F2, S0, W2, C1
3. Cement Type: ASTM C150 Type I, Type II, or ASTM C595 TYPE IL
4. Concrete Density: Normal weight 150 pcf max
5. Maximum Water-Cementitious Materials Ratio: 0.40
6. Air Content: None required.
7. Maximum Aggregate Size: ¾”.

H. **Class F**: PT Tennis/Pickleball Court Slabs: Proportion normal-weight concrete mixture as follows:
1. Minimum Compressive Strength: 5000 psi at 28 days.
2. High-Early Compressive Strength: 3000 psi at 24 hours.
3. Exposure Class in accordance with ACI 318: F2, S0, W2, C1
4. Cement Type: ASTM C150 Type I, Type II, or ASTM C595 TYPE IL
5. Concrete Density: Normal weight 150 pcf max.
6. Surface Profile: Coordinate with Surfacing manufacturer. (CSP 3 typ)
7. Maximum Water-Cementitious Materials Ratio: 0.45
8. Air Content:
   a. Exterior: 6% +/- 1.5%
   b. Interior: None required.
9. Maximum aggregate size: 1 ½”.

I. **Class J**: Interior Concrete 2" or less in thickness including Stair Pans: Proportion normal-weight concrete mixture as follows:
1. Minimum Compressive Strength: 3000 psi at 28 days.
2. Exposure Class in accordance with ACI 318: F0, S0, W0, C0
3. Cement Type: ASTM C150 Type I, Type II, or ASTM C595 TYPE IL
4. Concrete Density: Normal weight 150 pcf max.
5. Maximum Water-Cementitious Materials Ratio: 0.50
6. Slump Limit: 3-5 inches.
7. Air Content: None required.
8. Maximum Aggregate Size: 3/8”.

J. Macro Fiber for Class A: Slab-on-grade and Class D: Interior Composite Slabs, Topping Slabs:
1. Concrete slabs where indicated shall contain specified Structural Synthetic Macro Fiber at a dosage rate as indicated on drawings. Fibers may be added at plant location or job-site and shall be mixed in concrete for a minimum of 4 minutes.

K. Synthetic Macro-Fiber: Polyolefin macro-fibers engineered and designed for use in concrete, complying with ASTM C1116/C1116M, Type III, minimum 1-1/2 inches (51 mm) long, average minimum equivalent residual strength (f_{e3}) of 150 psi when tested at a dosage rate of 4.0 pounds per cubic yard in accordance with ASTM C1609..
1. Synthetic macrofiber shall be tested in concrete to meet the requirements of ICC-AC383.
2. Fiber must provide minimum plastic shrinkage crack reduction of 86 percent when tested in accordance with ASTM C1579.
3. Synthetic macrofiber in fire rated assemblies to be UL-certified for 2-hour minimum fire-resistance-rated construction when used in lieu of welded wire fabric in UL Design Series D700, D800, and D900 Floor-Ceiling Assemblies.
4. Products: Subject to compliance with requirements, provide one of the following:
   a. Euclid Chemical Company (The), an RPM company: Tuf-Strand SF.
   b. FORTA Corporation: FORTA FERRO.
   c. Grace Construction Products, W. R. Grace & Co.: Strux 90/40.

d. Nycon, Inc.: XL.
e. Sika Corporation: SikaFiber Force-650, Fibermesh-650.
f. BASF: MasterFiber MAC100

L. Adjustment to Concrete Mixes: Mix design adjustments may be requested by Contractor when characteristics of materials, job conditions, weather, test results, or other circumstances warrant; at no additional cost to Owner and as accepted by Architect. Laboratory test data for revised mix design and strength results must be submitted to and accepted by Architect before using in work.

2.07 ADMIXTURES

A. Admixtures:
1. Use water-reducing admixture or high range water-reducing admixture (Superplasticizer) in all concrete as required for placement and workability.
2. Accelerating: Use the specified non-corrosive, non-chloride containing accelerator in all concrete, less than 8 inches in thickness, placed at air temperature below 50 degrees F.
3. Use high-range water-reducing admixture in pumped concrete, architectural concrete, concrete required to be watertight, self-consolidating concrete, concrete with ultimate strength of 5,000 psi or more, and concrete with water/cement ratios below 0.50.
4. All concrete exposed to freezing and thawing and/or required to be watertight shall have an air content of 4.5% to 7.5%.
5. Integral finishing admixture may be used to reduce concrete bleeding, segregation and rapid moisture loss from surface. Do not use in concrete to receive dry shake hardeners.
6. Use shrinkage-reducing and/or shrinkage-compensating admixtures in concrete mixtures as required to achieve maximum allowable shrinkage when specified.
7. Use permeability-reducing admixture in concrete mixtures where indicated.

B. Shrinkage Compensating Admixture:
1. Conex by The Euclid Chemical Company.

C. Prohibited Admixtures: Calcium chloride thiocyanates or admixtures containing more than 0.05 percent chloride ions are not permitted.

D. Air Entraining Admixture: Comply with ASTM C260, and be certified by the manufacturer to be compatible with other admixtures to be used.
1. Acceptable Manufacturers/Products:
a. Euclid Chemical Company – Air Mix, Air Max or AEA Series.
b. Chryso - Darex or Daravair series.
c. Master Builders - MB-VR or MB-AE

E. Water-Reducing Admixture: Conform to ASTM C494, Type A, and compatible with other admixtures in the same mix design.
1. Acceptable Manufacturers/Products:
a. Euclid Chemical Company, Eucon MR Series, Eucon X Series or Plastol Series.
b. BASF, Pozzolith Series.
c. WR Grace, WRDA Hycol.

F. Water-Reducing, Retarding Admixture: Conform to ASTM C494, Type D and not more than 0.05 percent chloride ions.
1. Acceptable Manufacturers/Products:
a. Euclid Chemical Company, Eucon Retarder-75 or Eucon DS.
b. BASF, Pozzolith 100XR.
c. Sika Corporation, Plastocrete 10N
d. WR Grace, DaratardSeries.
2. Compatible with other admixtures in the same mix design.

G. High-Range Water-Reducing Admixture: Conform to ASM C494, Type F or Type G and containing not more than 0.05 percent chloride ions.
1. Acceptable Manufacturers/Products:
a. Euclid Chemical Company, Eucon 37, 537 or Plastol Series

b. BASF, Rheobuild 1000 or Glenium Series.
c. WR Grace, Daracem or Adva series.

2. Compatible with other admixtures in the same mix design.

H. Non-Corrosive, Non-Chloride Accelerator: The admixture shall conform to ASTM C494, Type C or E, and not contain more chloride ions than are present in municipal drinking water. The admixture manufacturer must have long-term non-corrosive test data from an independent testing laboratory (of at least a year's duration) using an acceptable accelerated corrosion test method such as that using electrical potential measures.

1. Acceptable Manufacturers/Products:
   a. Euclid Chemical Company, Accelguard 80/90 or NCA.
   b. Conform to ASTM C494, Type C or E.
2. Compatible with other admixtures in the same mix design.

I. Crystalline Waterproofing Admixture: Integral crystalline admixture specifically formulated to interact with capillary pore structures to provide a waterproofing system that is a permanent part of the concrete matrix. Admixture shall provide the following properties:

1. Water Penetration per DIN 1048 — 40% Reduction at 72 psi.
2. Water Permeability per CRD C48-92 — >70% Reduction at 200 psi
3. Capillary Absorption per ASTM C-1585 — >40% Reduction
4. Compressive Strength per ASTM C-39 — Equal to and up to 8% increase
5. Resistance to Chloride Penetration per ASTM C-1202 — 10% improvement
6. Basis of Design Product:
   a. Euclid Chemical Company (The); Vandex AM-10 or Vandex AM10L,

2.08 CURING MATERIALS

A. Water: Clean and not detrimental to concrete or steel. Potable or complying with ASTM C1602/C1602M.

B. Evaporation Retarder:

1. Manufacturers/Products: Subject to compliance with requirements, provide by one of the following:
   a. "Eucobar", Euclid Chemical Co.
   b. "MasterKure ER 50", BASF

C. Moisture Cover Type:

1. Absorbent Covers: AASHTO M 182, Class 2, burlap cloth made from jute or kenaf, weighing approximately 9 oz./sq. yd. (305 g/sq. m) when dry. These materials must be free of harmful substances, such as sugar or fertilizer, or substances that may discolor the concrete. To remove soluble substances, burlap should be thoroughly rinsed in water before placing it on the concrete.
2. Moisture Retaining Covers:
   a. Plastic Film: ASTM C171, 10 mil minimum thickness polyethylene film
   b. White burlap-polyethylene sheet meeting ASTM C171
   c. Reinforced Curing Paper: Complying with ASTM C171
   d. Moisture Retaining Fabric: Conforming to ASTM C171: A naturally colored, non-woven polypropylene fabric with a 4-mil non-perforated reflective (white) polyethylene coating containing stabilizers to resist degradation from ultraviolet light. Fabric shall exhibit low permeability and high moisture retention.
   e. Acceptable Manufactures/Products;
      1) PNA Construction Technologies, Inc.; HydracureS16.
      2) Reef Industries Incorporated; Transguard 4000.

D. Curing Compounds:

1. See submittals sections for additional submittal requirements if the Contractor proposes the use of curing compounds.
2. Clear, Waterborne, Membrane-Forming, Dissipating Curing Compound: ASTM C309, Type 1, Class B.

a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1) Anti-Hydro International, Inc.; AH Curing Compound #2 DR WB
   2) ChemMasters, Inc.; Safe-Cure Clear
   3) Dayton Superior Corporation; Clear Resin Cure J11W
   4) Euclid Chemical Company (The); an RPM company; Kurez DR VOX or Kurez DR 100
   5) Kaufman Products, Inc.; Thinfilm 420
   6) Lambert Corporation; Aqua Kure-Clear
   7) Nox-Crete Products Group; Res-Cure DH 100
   8) Vexcon Chemicals Inc.; Certi-Vex Envio Cure 100
   9) W.R. Meadows, Inc.; 1150 Clear
   10) L&M: L&M Cure R
   11) SpecChem: SpecRez

2.09 SEALANTS

A. Sealant and Primer: Specified in Section 07 92 00.

2.10 FINISHING MATERIALS

A. Liquid Sealer Densifier: The liquid densifier compound shall be a siliconate based sealer which penetrates concrete surfaces, and provides a "low-sheen" surface that is easy to clean and eases the problem of tire mark removal. The compound must contain a minimum solids content of 20% of which 50% is siliconate.
   1. Manufacturers/Products: Subject to compliance with requirements, provide one of the following:
      a. "Euco Diamond Hard", The Euclid Chemical Co.
      b. Or approved substitution.

2.11 INTEGRAL JOINT MATERIALS

A. Formed Construction Joints: Tongue groove type profile; knockout holes at 6" o.c. to receive doweling; with anchors.

B. Control Joint Insert: T-shaped plastic strip, 1/16" thick with 3/4" wide removable top and barbed bottom. Depth not less than 1/4 slab thickness. Similar to Greenstreak Plastic Products, "Zipcap Control Joint Former".

C. Joint Filler (bond breaker): ASTM D1751, 1/2" thick, pre-formed, resilient, non-extruding, asphalt impregnated, vegetable fiber and finely divided mineral filler.

D. Column Isolation Joint Filler: Plastic circular type, designed to lock shut around columns, full slab thickness.

E. Waterstops:
   1. PVC waterstop.
      a. Provide flexible 100 percent virgin specification grade Polyvinyl Chloride (PVC) Waterstop, Sika Greenstreak, or equal.
      b. Resistance to hydrostatic head – 65 feet of water (moving or non-moving joints).
      c. Profile: Provide profile of type suitable for application and as follows.
         1) Moving joints, expansion, or contraction joints:
            (a) Rib with center bulb.
            (b) Provide in widths indicated in Drawings.
         2) The PVC waterstop shall be extruded from an elastomeric plastic material, of which the basic resin is prime, virgin polyvinyl chloride. The PVC compound shall not contain any scrapped or reclaimed material or pigments.
      d. Accessories.
         1) Provide factory fabricated waterstop connections for all changes of direction, intersections, and transitions leaving only butt joint splicing for the field.
         2) Provide hog rings, grommets or holes spaced at 12 inches on center along the length of the waterstop.

3) Provide thermostatically controlled, Teflon covered waterstop splicing irons for field splicing.

2. Strip waterstop.
   a. Resistance to hydrostatic head – 65 feet of water (non-moving joints).
   b. Henry SF302 Synko-Flex waterstop as manufactured by Henry Company, or equal.
      1) Non-swelling preformed joint sealant.
      2) Applicable for both fresh and cured concrete surfaces.
      3) Single component.
      4) Self-sealing adhesive compound.

2.12 ACCESSORIES

A. Vapor Barrier: Provide vapor barrier which conforms to ASTM E1745, Class A. The membrane shall have a water-vapor transmission rate no greater than 0.008 gr./ft2/hr when tested in accordance with ASTM E96. The vapor barrier shall be placed over prepared base material where indicated below slabs on grade. Vapor barrier shall be no less than 15 mil thick. Use only materials which are resistant to decay when tested in accordance with ASTM E154.
   1. Products Subject to compliance with requirements, provide one of the following:
      a. "Stego Wrap (15 mil) Vapor Barrier": Stego Industries LLC
      b. "Pre-moulded Membrane with PLASMATIC CORE", W.R. Meadows.
      c. "Griffolyn Vaporguard" Reef Industries

B. Non-shrink Grout: Conforming to ASTM C1107 "Standard Specification for Packaged Dry, Hydraulic-Cement Grout (Non-Shrink). Premixed compound consisting of non-metallic aggregate, cement, water reducing and plasticizing agents; capable of developing minimum compressive strength of 8,000 psi in 28 days;
   1. Manufacturers/Products: Subject to compliance with requirements, provide one of the following:
      a. "Masterflow 713", Sika
      b. "Euco-NS', Euclid Chemical Co;
      c. "Five Star Grout," U.S. Grout Co;

C. Underlayment Compound: Free flowing, self-leveling, pumpable cementitious base compound.
   1. Manufacturers/Products: Subject to compliance with requirements, provide the following:
      a. "EucoFloor SL160", The Euclid Chemical Co
      b. "Ardex K-40", Ardex Co.

D. Bonding Compound: Polyvinyl acetate, re-wettable type;
   1. Manufacturers/Products: Subject to compliance with requirements, provide the following:
      a. "Eucoweld 2.0", Euclid Chemical Co;
      b. "Daraweld C", Chryso;
      c. "Master Emaco", Sika

E. Epoxy Adhesive: ASTM C881, two (2) components, 100% solids, 100% reactive compound suitable for use on dry or damp surfaces.
   1. Manufacturers/Products: Subject to compliance with requirements, provide one of the following products, or acceptable product by listed Manufacturer:
      a. "Sikadur Hi-Mod", Sika Corp.
      b. "Dural 452":, The Euclid Chemical Co.

F. High Strength Flowing Topping and Repair Mortar: For forming and pouring structural member repairs, or large horizontal repairs, provide the flowable one-part, high strength microsilica modified repair mortar with 3/8" aggregate. The product shall achieve 9,000 psi at 28-days at a 9-inch slump.
   1. Manufacturers/Products: Subject to compliance with requirements, provide one of the following:
      a. "Eucocrete": Euclid Chemical Co.

G. Polymer Patching Mortar: Polymer and microsilica modified cementitious based compounds.
   1. Manufacturers/Products: Subject to compliance with requirements, provide one of the following:
      a. Horizontal:
         1) "Thin Top Supreme": Euclid Chemical Co.

2) "Concrete Top Supreme", Euclid Chemical Co.
3) "VersaSpeed LS100", Euclid Chemical Co.
4) "Tammspatch II": Euclid Chemical Co.
5) "Emaco R300 CI": Sika
6) "Emaco R310 CI": Sika

b. Vertical/Overhead:
1) "EucoRepair V100", Euclid Chemical Co.
2) "Emaco N420 CI": Sika

H. Anchors in concrete: See Specification Section 05 12 00 and Structural Drawings for information.

I. Cast-In – Place Detectable/Tactile Warning Surfaces:
1. Products: Subject to compliance with requirements, provide one of the following:
a. "The Vitrified Polymer Composite (VPC) Cast In Place Detectable/Tactile Warning Surface Tile specified is based on Armor-Tile manufactured by Engineered Plastics Inc. (800-682-2525). Existing engineered and field tested products, which have been in successful service for a period of three (3) years are subject to compliance with requirements, may be incorporated in the work and shall meet or exceed the specified test criteria and characteristics.
b. Color: Yellow conforming to Federal Color No. 33538. Color shall be homogeneous throughout the tile. Tiles are also available in Light Grey (Federal Color No. 26280), Dark Grey (Federal Color No. 36118), Onyx Black (Federal Color No. 17038), Pearl White (Federal Color No. 37875), Brick Red (Federal Color No. 22144).

PART 3 EXECUTION

3.01 COORDINATION

A. Ensure all work required to be in place, and furnished by other sections, is coordinated and correctly placed prior to concrete placement.

3.02 SCHEDULES

A. Formwork Schedule:
1. Location: Form Finish Material
2. Exposed: Smooth plywood, steel, gfr plastic.
3. Unexposed Semi-smooth Lumber, plywood, steel, gfr plastic.

B. Curing Schedule:
1. Moisture Retaining: Slabs on grade and structural slabs.
2. Water Cure, Absorptive Mat, or Moisture Retaining: Other areas
3. If Curing Compound used: All areas per manufacturer recommendations and following

C. Floor Slab Finish Schedule:
1. Trowel: Exposed to view, thin-set tilework.
2. Broom or Belt: Exterior platforms, sidewalks, steps, and ramps.
3. Float: Full-bed-set tilework.
4. Penetrating Sealer Hardener: Exposed interior, unfinished floor areas.
5. Non-Slip

3.03 FORMWORK INSTALLATION

A. Formwork Inspection:
1. Verify lines, elevations and measurements before proceeding with formwork.

B. Formwork Preparation:
1. Earth forms not permitted, unless written approval given by Architect.
2. Minimize form joints. Symmetrically align joints and make water tight to prevent leakage of mortar.
3. Arrange and assemble formwork to permit stripping, so that concrete is not damaged during its removal.

4. Arrange forms to allow stripping without removal of principal shores, where required to remain in place.

C. Formwork Erection:
   1. Construct formwork and camber beams and slabs to maintain tolerances in accordance with ACI 301.
   2. Provide bracing to ensure stability of formwork. Strengthen formwork liable to be over stressed by construction loads.
   3. Provide temporary ports in formwork to facilitate cleaning and inspection. Locate openings at bottom of forms to allow flushing water to drain. Close ports with tight fitting panels, flush with inside face of forms, neatly fitted so that joints will not be apparent in exposed concrete surfaces.
   4. Provide chamfer strips on all exposed external corners.
   5. Build-in sleeves, anchors, inserts, bolts and other devices indicated or required. Provide sleeves 1/2" larger in diameter than piping to be sleeved, unless otherwise indicated. Install sleeves flush with finished surfaces. Coordinate and build in sleeves, thimbles, and other items furnished or set in place by other sections.
   6. Do not displace or damage vapor barrier.

D. Preparation of Form Surfaces:
   1. Apply form release agent on formwork in accordance with manufacturer's instructions. Apply prior to placing reinforcing steel, anchoring devices, and embedded items.
   2. Coat steel forms with a non-staining, rust-preventative form oil or otherwise protect against rusting. Rust stained steel formwork is not acceptable.
   3. Do not apply form release agent where concrete surfaces are scheduled to receive rough wood texture or special finishes which may be affected by agent. Soak contact surfaces of untreated forms with clean water. Keep surfaces wet prior to placing concrete.

E. Formwork Inserts, Embedded Parts, and Openings:
   1. Provide formed openings where required for work embedded in or passing through concrete.
   2. Coordinate work of other Sections in forming and setting openings, slots, recesses, chases, sleeves, bolts, anchors, and other inserts.
   3. Install accessories in accordance with manufacturer's instructions, level and plumb. Ensure items are not disturbed during concrete placement.
   4. Verify lines, elevations and measurement before proceeding with formwork.

F. Formwork Cleaning:
   1. Clean forms to remove foreign matter as erection proceeds.
   2. Ensure that water and debris drain to exterior through clean-out ports.
   3. During cold weather, remove ice and snow from forms. Do not use de-icing salts, calcium chloride or other materials containing antifreeze agents or chemical accelerators, unless otherwise accepted in mix designs. Do not use water to clean out completed forms, unless formwork and construction proceed within heated enclosure. Use compressed air to remove foreign matter.

G. Form Removal:
   1. Do not remove forms, shoring and bracing until concrete has sufficient strength to support its own weight, and construction and design loads which may be imposed upon it.
   2. Remove formwork progressively so no unbalanced loads are imposed on structure.
   3. Do not damage concrete surfaces during form removal.
   4. Store reusable forms for exposed architectural concrete to prevent damage to contact surfaces.
   5. Exposed Concrete Surfaces:
      a. Remove formwork in same sequence as concrete placement to achieve similar concrete surface coloration.
      b. Clean surfaces of forms to be reused in Work.
      c. Split, frayed, delaminated, patched or damaged form facing material will not be acceptable for exposed surfaces.
      d. Apply new form coating compound as specified for new formwork.

3.04 VAPOR BARRIER INSTALLATION

A. Install vapor barrier above the sand base under interior slabs on grade. Lap joints minimum 6” and tape. Do not disturb or damage vapor barrier while placing concrete. Repair damaged vapor barrier. Vapor barrier installation must comply with the requirements of ASTM E1643-98.

3.05 CONCRETE MIXES

A. Submit proposed mix design of each class of concrete to testing laboratory for review prior to commencement of Work.

B. Mix concrete in accordance with ASTM C94 (Option C).

C. High Early Strength: Type III Portland cement may be used to produce high early strength concrete. Adding additional amounts of Type I Portland cement to produce high early strength concrete will not be permitted

3.06 CONCRETE PLACEMENT

A. Inspection:
   1. Verify formwork, anchors, seats, plates, reinforcement, and other items to be cast into concrete are accurately placed, held securely, and will not cause hardship in placing concrete.
   2. Verify all required inspections have been performed.
   3. The use of the LTF Construction POUR CARD is a requirement before pouring, and before payment is to be issued. This subcontractor must get this approval before pouring, without approval this subcontractor will bear all responsibility (of his work) for repair, demolition, delays and etc. This is a protection device initiated to eliminate mistakes by all parties involved prior to concrete placement.

B. Preparation:
   1. Thoroughly clean forms before placing concrete. Dampen masonry and porous earth in contact with concrete. Do not place concrete on water or frozen ground.
   2. Prepare previously placed concrete by cleaning with steel brush and thoroughly wet and slush with neat cement grout immediately before placing new concrete.

C. Placing Concrete:
   1. Place concrete as close as possible to final position. Prevent segregation. Place with maximum free drop of 5 feet. Compact during placing with internal vibrators (8000 vpm minimum). Work around reinforcement, embedded items and into form corners. Do not use vibrators to transport concrete within forms. Vibrators shall be used for slab-on-grade placements with focus on slab edge consolidation. Use and type of vibrators shall conform to ACI 309 "Recommended Practice for Consolidation of Concrete".
   2. Place concrete within one hour after mix water has been added.
   3. Place concrete in accordance with ACI 301, and as follows:
   4. Cold Weather Placement:
      a. Conform with requirements of ACI 306R.
      b. Protect work from physical damage or reduced strength caused by frost, freezing, or low temperatures.
      c. If at 40 deg F or expected, uniformly heat aggregates and water before mixing, to obtain 50-80 deg F mixture temperature at point of placement.
      d. Do not use frozen materials or materials containing snow or ice, or place on frozen subgrade or subgrade containing frozen materials.
      e. Do not use calcium chloride, salt and other materials containing antifreeze agents or chemical accelerators, unless otherwise accepted in mix designs.
   5. Hot Weather Placement:
      a. Conform with requirements of ACI 305R.
      b. Cool ingredients to maintain 90 deg F concrete temperatures at time of placement.
      c. Mixing water may be chilled, or chopped ice may be used to control temperature, provided water equivalent of ice is calculated to total amount of mixing.

d. Cover reinforcing steel with water-soaked burlap, to ensure steel temperature will not exceed ambient air temperature immediately before embedment in concrete.
e. Wet forms thoroughly before placing concrete.
f. Use water-reducing retarding admixture (Type D) when required by high temperatures.

6. Ensure reinforcement, inserts, embedded parts and formed joints are not disturbed during concrete placement.
7. Excessive honeycomb or embedded debris in concrete is not acceptable. Notify Architect upon discovery.
8. Maintain concrete cover around reinforcing as noted in ACI 318, Chapter 20 and as shown in the drawings/details.
9. Placing Composite Topping: Remove all Laitance and saturate surface with water. Remove all standing water.

D. Additional Composite Deck Requirements
1. The contractor shall be cognizant of allowable construction live loads (including personnel and equipment) and plan concrete placing operations accordingly so as to not overstress or damage the deck. The contractor shall verify with the deck manufacturer that the proposed concrete placing operation is compatible with the type, gauge, span, and length of the composite deck as furnished,
2. When placing concrete on metal deck, use of a ride-on laser screed is prohibited. Floors to be screeded from beams to a constant thickness, not to level within a bay. Deck is designed to handle wet weight of concrete plus 150 lb concentrated load per flute in one span of deck or non-concurrent 20 psf construction live load.See ANSI/SDI-C-1.0 for more information.
3. Confirm presence of qualified on-site inspection and concrete placement observation immediately prior to and during concrete placement.

3.07 TOLERANCES / MONOLITHIC SLAB FINISHES

A. Determining Floor Flatness and Levelness Using the "F Number" System (Inch-Pound Units). All slabs shall achieve the specified overall tolerance. The minimum local tolerance (1/2 bay or as designated by the architect) shall be 2/3 of the specified tolerances. All elevated slabs shall achieve the specified FL tolerance after the removal of the forms.
1. FF defines the maximum floor curvature allowed over 24 in. Computed on the basis of successive 12 in. (300 mm) elevation differentials, FF is commonly referred to as the "Flatness F-Number".
2. FL defines the relative conformity of the floor surface to a horizontal plane as measured over a 10 ft. (3.05 m) distance commonly referred to as the "Levelness F-Number".
3. All floors shall be measured in accordance with ASTM E1155 "Standard Test Method for levelness.

B. Screed exposed concrete floors and floors to receive resilient flooring, carpet, or thin-set ceramic and quarry tile to an even, level plane. Float and provide troweled finish in accordance with procedures in ACI 301, Chapter 11 and as recommended by ACI to achieve floor flatness and levelness specified. Uniformly slope to elevations shown on the Drawings to floor drains. The final troweling operation shall be free of trowel marks, uniform in texture and appearance. Grind smooth, surface defects, which would telegraph through applied floor system. Finished surfaces, other than rooms with floor drains, shall have floor flatness and levelness as determined in accordance with ASTM E1155 as indicated in the tables below.

C. Corrective measures, acceptable to the Architect, may be made to floor slabs scheduled to receive finish materials.

D. Corrective measures such as grinding, planning, surface repair or retopping will not be permitted for floor slabs scheduled for clear sealer/hardener finish.

E. In areas with floor drains, maintain floor level at walls. Slope surface uniformly to drains allowing a 1/2" recess at drain from approximately 4' x 4' around drain.

SLAB-ON-GRADE TOLERANCES TABLE

Occupancy	F_F (Flatness)	F_L (Levelness)	Gap
Non-critical areas such as mechanical rooms and surfaces to have thick set tile.	20	15	5/16"
Carpeted areas:	25	20	1/4"
Thin-set flooring:	35	25	1/8"
Resilient Tile flooring:	36	20	3/16"
Large format tile (as identified by TCNA), Tennis and Pickleball Surfaces.	50	25	1/8"

SUPPORTED FLOOR TOLERANCES TABLE

Occupancy:	F_F (Flatness)	F_L (Levelness)	Gap
Non-critical areas such as mechanical rooms and surfaces to have thick set tile:	20	-	5/16"
Carpeted areas:	25	-	1/4"
Thin-set flooring:	35	-	1/8"
Resilient Tile flooring	36		3/16"
Wood floors:	35	-	1/8"
Large format tile (as identified by TCNA):	50	-	1/8"

3.08 JOINT INSTALLATION

A. Locate and form expansion control and contraction joints to pattern as shown on Drawings.

B. Place formed construction joints in floor slab pattern placement sequence. Set top screed to required elevations. Secure to resist movement of wet concrete.

C. Install joint fillers and sealants in accordance with manufacturer's instructions. Use primers of type recommended by joint filler and sealant manufacturer.

D. Place concrete continuously between predetermined construction and control joints. Do not break or interrupt successive pours such that cold joints occur.

E. Construction Joints:
   1. Joints not shown on Drawings to be located so as not to impair strength or appearance of structure, as determined by Architect/Engineer.
   2. Provide key ways at least 1-1/2" deep in wall, and wall to footing construction joints.
   3. Place construction joints perpendicular to main reinforcement. Continue reinforcement across construction joints. Provide diamond dowels where directed.
   4. Roughen and thoroughly clean surface of concrete, remove laitance, and wet surface before placing new concrete against joint. Slush vertical joints with neat cement grout immediately before placing new concrete.
   5. Place construction joints in reinforced concrete only as indicated on reinforcing steel shop drawings.
   6. Contractor to submit composite slab construction joint layout plan for review and approval a minimum of three weeks prior to pour.

F. Control Joints:
   1. Locate control joints for interior slab-on-grade based on criteria shown on structural drawings.
      a. Contractor to submit control joint layout plan for review and approval a minimum of three weeks prior to pour.
   2. Slabs on Grade: Use joint inserts or saw cut.
      a. See plan for joint depth.

b. Cut using a 1/16 to 1/8 inch (max.) thick blade. Cut a minimum 1/3 Depth of Concrete (d/3). Chalk lines and concrete dust shall be removed completely and immediately after cutting operation
c. Early entry saw may be used immediately after concrete finishing when cutting action will not tear, ravel, abrade, or otherwise damage surface and before concrete develops random contraction cracks, to cut control joints to depth of D/3. Saw cutting shall proceed no more than 12-hours after concrete placement.
d. Place joint inserts in groove formed in concrete with metal straight edge.

3. Sidewalks: Score with finishing tool to 1/4 slab depth; 8 ft o.c. each way maximum, unless shown otherwise on Drawings.

G. Isolation Joints:
1. Provide isolation joints at interior slabs-retaining walls and columns, exterior slabs on fill to vertical surfaces.
2. Form joint with joint filler from bottom of slab to within 1/2" of finished slab surface.

H. Expansion Joints:
1. Locate where indicated on Drawings and where exterior slabs abut restraining walls. Do not run reinforcing through joints. Form joints with joint filler extending full depth of slab, unless otherwise indicated. Hold joint filler 3/8" below concrete surface.

3.09 FIELD QUALITY CONTROL

A. Testing and Inspecting: Owner will engage special inspector and qualified testing and inspecting agency to perform field tests and inspections and prepare test reports.

B. Special Structural Testing and Inspection Services: Perform Structural Testing and Inspection by qualified parties as specified herein and per Section 01 45 33. Include items required by the Currently adopted IBC Section 1705.3, the Drawings, and other items which in the professional judgment of the Structural Engineer of Record, are critical to the integrity of the building structure.

C. Provide free access to Work for appointed testing and inspecting agencies.

D. Maintain records of placed concrete items. Record date, location of pour, quantity, air temperature, and test samples taken.

E. Cure cylinders in same proximity to and protected and cured in same manner as in-place concrete from which sample was taken.

F. On a periodic basis, inspect formwork for shape, location and dimensions of concrete members being formed. Verify in-situ concrete strength prior to removal of shores and forms from beams and slabs.
1. Contractor’s formwork design engineer to inspect erected formwork, shoring, and bracing to ensure that work is in accordance with formwork design, applicable code requirements and that supports, fastenings, wedges, ties, embedded items and all other items are secure.
2. Schedule concrete placement to permit formwork inspection before placing concrete.

G. Notify Architect/Engineer with sufficient time to allow Architect/Engineer to schedule a site visit after placement of reinforcing steel in forms, but prior to placing concrete.

H. Submit proposed mix design of each class of concrete to inspection and testing firm for review prior to commencement of Work.

I. Concrete Inspections:
1. Continuous Placement Inspection: Inspect for proper installation procedures and the following:
a. Batch tickets conform to approved mix designs.
b. Total water added to mix on site does not exceed that allowed by the mix design.
c. Concrete quality is indicative of adequate mixing time, consistency and relevant time limits.
d. Acceptable general condition of concrete base prior to placement.
e. Concrete conveyance and depositing avoids segregation and contamination.
f. Concrete is properly consolidated.
g. Reinforcement remains in proper location during concrete placement.

2. For all embedments installed in concrete, verify specified size, type, spacing, configuration, embedment, quantity, concrete placement and consolidation.
    a. Post-installed anchors including conformance with manufacturer's installation procedures and the requirements of the ICC ESR report(s).
3. Periodic Curing Inspection: Inspect for specified curing temperature and procedures. Verify hot and/or cold weather procedures are followed.

J. Strength Test Samples:
1. Sampling Procedures: ASTM C172.
2. Cylinder Molding and Curing Procedures: ASTM C31/C31M, cylinder specimens, standard cured.
3. Sample concrete and make one set of five 4x8 or four 6x12 cylinders for each day's pour between one and 25 cubic yards. If a day's pour exceeds 25 cubic yards, make five 4x8 or four 6x12 cylinders for each additional 50 cubic yards.
4. When volume of concrete for any class of concrete would provide less than 5 sets of cylinders, take samples from five randomly selected batches, or from every batch when less than 5 batches are used.
5. Make one additional cylinder during cold weather concreting, and field cure.

K. Field Testing:
1. Slump Test Method: ASTM C143/C143M.
2. Air Content Test Method: ASTM C173/C173M or ASTM C231.
3. Temperature Test Method: ASTM C1064/C1064M.
4. Measure slump and temperature for each compressive strength concrete sample.
5. Measure air content in air entrained concrete for each compressive strength concrete sample.

L. Cylinder Compressive Strength Testing:
1. Test Method: ASTM C39/C39M.
2. Test Acceptance: In accordance with ACI 318.
3. Test one cylinder at 7 days.
4. Test three 4x8 or two 6x12 cylinders at 28 days.
5. Retain one cylinder for 56 days for testing when earlier tests show low strength.
6. Dispose remaining cylinders when testing is not required.

M. Core Compressive Strength Testing:
1. Sampling and Testing Procedures: ASTM C42/C42M.
2. Test Acceptance: In accordance with ACI 318.
3. Drill three cores for each failed strength test from concrete represented by failed strength test.

N. Maintain records of concrete placement. Record date, location, quantity, air temperature and test samples taken.

O. Reinforcement Inspection:
1. Placement Acceptance: Specified material requirements and specified placement tolerances.
2. Welding:
    a. Inspect reinforcement welds in accordance with AWS D1.1 and D1.4. and confirm weldability of reinforcing with ASTM A706.
    b. Embedded welded connections. Coordinate continuous and periodic inspections with requirements in Section 05 12 00.
3. Placement Inspection Prior to Each Pour:
    a. Inspect for correct materials, fabrication, sizes, locations, spacing, concrete cover splicing, lap lengths and coatings.
    b. Verify bars are free of dirt, oil, excessive rust and damage.
    c. Verify bars are adequately tied, chaired and supported to prevent displacement during concrete placement.

P. Test Results:
1. Submit test reports with information requested in Submittals portion of this Section.

2. Report in writing on same day tests made.
3. Non-Compliant Test Reports: All test reports indicating non-compliance should be e-mailed or faxed immediately to all parties on the test report distribution list. Copies shall be on different colored paper.

Q. Additional Tests:
1. Testing service shall make additional tests of in-place concrete when test results indicate specified concrete strengths and other characteristics have not been attained in the structure, as directed by Structural Engineer or Architect.
2. Testing service may conduct tests to determine adequacy of concrete by cored cylinders complying with ASTM C42, or by other methods as directed.

3.10 CONCRETE PROTECTING AND CURING

A. Protect finished work under provisions of Section 01 60 00.

B. Immediately after placement, protect concrete from premature drying, excessively hot or cold temperatures, and mechanical injury.

C. General: Protect freshly placed concrete from premature drying and excessive cold or hot temperatures. Comply with ACI 306.1 for cold-weather protection and ACI 301 for hot-weather protection during placement.

D. Maintain concrete with minimal moisture loss at relatively constant temperature for period necessary for hydration of cement and hardening of concrete.

E. Cure concrete for a duration and with means and methods adequate to ensure that 100% of the specified value for concrete properties are developed at 28 days

F. Changes in temperature of concrete shall not exceed 5 deg F in any one hour or 50 deg F in any 24 hour period.

G. Evaporation Retarder: Apply evaporation retarder to unformed concrete surfaces if hot, dry, or windy conditions cause moisture loss approaching 0.1 lb/sq. ft. x h before and during finishing operations. Apply according to manufacturer's written instructions one or more times after placing, screeding, and bull floating or darbying concrete, but before float finishing.

H. Formed Surfaces: Cure formed concrete surfaces utilizing final curing methods per ACI 308.1, including underside of beams, supported slabs, and other similar surfaces. If forms remain during curing period, moist cure, after loosening forms. If removing forms before end of curing period, continue curing for the remainder of the curing period, as follows.
1. Continuous Fogging: Maintain standing water on concrete surface until final setting of concrete.
2. Continuous Sprinkling: Maintain concrete surface continuously wet.
3. Absorptive Cover: Pre-dampen absorptive material before application; apply additional water to absorptive material to maintain concrete surface continuously wet.
4. Water-Retention Sheeting Materials: Cover exposed concrete surfaces with sheeting material, taping, or lapping seams.
5. Membrane-Forming Curing Compound: Apply uniformly in continuous operation by power spray or roller in accordance with manufacturer's written instructions.
   a. Recoat areas subject to heavy rainfall within three hours after initial application.
   b. Maintain continuity of coating and repair damage during curing period.

I. Unformed Surfaces: Begin curing immediately after finishing concrete. Cure unformed surfaces, including floors and slabs, concrete floor toppings, and other surfaces utilizing final curing methods per ACI 308.1,.
1. Immediately after conclusion of concrete finishing operations, cure newly placed concrete slabs to receive exterior concrete penetrating sealer, interior concrete penetrating sealer/hardener, ceramic tile, or quarry tile or other subsequent flooring finishes or treatments in accordance with ACI 308.1 utilizing one or a combination of the following methods.
   a. Water Cure: Cure continuously for seven days utilizing sprinklers, soaker hoses, ponding, or fog spray. Take care to prevent erosion damage to the surface of the concrete.

b. Absorbent Cover: water saturated, and kept continuously wet. Cover concrete surfaces and edges with 12-inch (300-mm) lap over adjacent absorptive covers when placing. Provide continuous supply of moisture such as sprinklers or soaker hoses when high temperature, low humidity, or windy conditions prevail. Do not allow Absorbent Cover materials to dry out during specified curing period.

c. Moisture Retaining Cover with Fabric Curing: Cover concrete surfaces with moisture-retaining cover meeting ASTM C171 as soon as possible after final finishing without marring the surface. Place in widest practicable width, with sides and ends lapped at least 12 inches (300 mm), and sealed by waterproof tape or adhesive. On flat surfaces such as pavements, the cover shall extend beyond the edges of the slab at least twice the thickness of the slab. The cover shall be placed flat on the concrete surface, avoiding wrinkles, to minimize mottling immediately after wetting the slab to rejection. It shall be placed and weighted so that it remains in contact with the concrete during the specified duration of curing. Windrows of sand or earth, or pieces of lumber shall be placed along all edges and joints in the film to retain moisture and prevent wind from getting under the film and displacing it. Immediately repair any holes or tears during curing period using cover material and waterproof tape.
    1) Moisture Retaining Fabric shall be installed in accordance with manufacture’s written recommendations, in largest practical widths. Wet the slab to rejection then thoroughly wet fabric side of cover and install with poly side up. Lap over adjacent covers a minimum 18”. Weight all laps and outside edges to prevent displacement and to ensure intimate contact with concrete and adjacent covers. Rewet as necessary and protect covers from damage during curing process.

d. Floors to Receive Curing Compound:
    1) Apply uniformly in continuous operation by power spray or roller in accordance with manufacturer's written instructions. Ensure complete and even coverage on surface of concrete, which may require multiple coats at right angles to one another.
    2) Follow manufacturers recommendations on timing of application to the concrete surface in relation to presence of bleed water and water sheen on surface.
    3) Recoat areas subjected to heavy rainfall within three hours after initial application.
    4) Maintain continuity of coating, protect surfaces from other trades, and repair damage during curing period.
    5) Removal: After curing period has elapsed, remove curing compound without damaging concrete surfaces by method recommended by curing compound manufacturer unless manufacturer certifies curing compound does not interfere with bonding of floor covering used on Project.

3.11 FLOOR TREATMENT

A. Liquid Sealer Densifier Finish: Apply this compound on exposed interior floors as indicated on the drawings. Application shall be made in strict accordance with the directions of the manufacturer and just prior to completion of construction. Spray, squeegee or roll on liquid densifier to clean, dry concrete surface. The liquid should be scrubbed into the surface with a mechanical scrubber. Keep the surface wet with the densifier during the application process. When the product thickens, but not more than 60 minutes after initial application, the surface shall then be squeegeed or vacuumed to remove all excess liquid.

B. Concrete must be a minimum 28 days old, dry, clean, and free of loose dust, dirt, oil, and traces of curing compounds or any other surface contaminations that could interfere with bond of coating.
    1. Close spaces in which sealer is being applied to traffic, and keep closed 48 hours minimum after last application is completed.
    2. Prepare substrate in accordance with manufacturer’s instructions.
    3. Apply a final finish coat within the recommended recoat time. Apply at approximately 700 to 800 sq. ft. per gallon and buff into surface with a high-speed burnisher

3.12 EXISTING WORK

A. Where new concrete is dowelled to existing work, drill holes in existing concrete, insert steel dowels and pack with non-shrinking grout.

3.13 PATCHING AND CLEANING FORMED SURFACES

A. Patch tie holes and defective areas immediately after form removal.

B. Clean exposed concrete to remove laitance, efflorescence and stains.

C. Rough Form Finish: Patch holes and defects; otherwise leave surfaces with texture imparted by forms.

D. Smooth Form Finish: Patch holes and defects; completely remove fins by rubbing with wood blocks.

3.14 DEFECTIVE CONCRETE

A. Modify or replace concrete not conforming to required lines, details, and elevations.

B. Repair or replace concrete not properly placed or of the specified type.

C. Patch imperfections to match in place concrete.

1.04 SYSTEM DESCRIPTION

A. Post-tensioned Concrete: Design, engineer and construct post-tensioned concrete to meet design and code requirements, so that resultant concrete conforms to required shapes, lines, and dimensions.

B. Fully encapsulated system.

1.05 SLOPE AND ELEVATION REQUIREMENTS

A. All excavating, filling and grading requirements and compacting work of the sub-base should be performed so that the finished sub-grade is 5” (or as specified in geotechnical report) below the surrounding ground.

1.06 SUBMITTALS

A. Material and Equipment Submittals: Submit the following under provisions of Section 01 33 00:
   1. Mix Design: Per section 03 30 00.

2. Certification of compliance for each material furnished stating that material conforms to acceptable ASTM standards.
3. Shop Drawings showing tendon sizes, grouping, spacing, placing sequence, supports and locations, (tendon supports, accessories, supplemental reinforcement, clearances required for jack, and pressure plate stresses calculations of friction and anchorage stresses
    a. Shop Drawings shall include comprehensive engineering analysis, signed and sealed by a qualified professional engineer, registered in the State of the project, responsible for their preparation.
    b. Comprehensive engineering analysis shall be submitted concurrently with related shop drawings.
    c. The supplier's structural engineer shall review field reports and stressing records for compliance with the calculated effective post· tensioning forces, and acknowledge in writing. If it appears that less force has been provided, they shall supply the Engineer/Architect with the actual effective force and optional remedial steps.
4. Describe tensioning sequence, type of jack, pressure monitoring devices, anchorage set, tendon elongation, and tendon cutoff procedures. Indicate formwork methods, materials, arrangement of joints, ties, and shores, location of bracing and temporary supports, and schedule of erection and stripping. Tendon manufacturer's certificate that tendon strength meet or exceed specified requirements. Prepare stressing records during the tensioning, operation, with the following data recorded as a minimum.
    a. Tendon mark or identification.
    b. Calculated elongation.
    c. Gauge pressure to achieve calculated elongation.
    d. Actual elongation achieved.
    e. Actual gauge pressure.
    f. Date of stressing operation.
    g. Signature of the stressing operator or inspector.
    h. Serial or identification number of jacking equipment.
5. Submit certified mill test reports for each coil or pack of strand for review before beginning construction
6. Turn over stressing records to submitted to General Contractor for review by architect and structural engineer.
7. Procurement:
    a. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
    b. Submit inventory to Owner within 5 days of delivery of materials.
    c. See Sections 01 33 00 and 01 60 00.
8. Perform and submit reports of Code Required Special Inspections as required in Section 01 45 33.

1.07 QUALITY ASSURANCE

A. Perform work in accordance with ACI 301, ACI 318, ACI MNL-66, ACI PRC-347, PTI M10.2 and CRSI (DA4) except where more stringent requirements are shown on Drawings.

B. Maintain a copy of ACI 301 on site.

C. Cast-in-place Concrete: Obtain materials from the same source throughout the Work.

D. Fabricator qualifications: Not less than 5 years experience in the actual production of specified products.

E. Installer: Company specializing in post tensioning work with 5 years experience. Ironworker foreman shall have 5 years previous experience with slab and beam projects.

F. Pre-PT Review meeting:
1. This Pre-PT Pour Review is mandatory and no concrete shall be poured for post-tensioned slabs until all conference criteria have been met to the satisfaction of the Design Team.

2. At least 7 days prior to the start of the PT concrete slab prep, the contractor shall conduct a virtual meeting to review and discuss the required methods and procedures to achieve the required concrete construction. A pre-concrete conference agenda shall be distributed to all attendees 3 days prior to the scheduled date of the conference. The following shall be in attendance:
    a. Concrete supplier.
    b. Concrete Sub Contractor.
    c. Independent Testing Laboratory.
    d. LifeTime Structural Engineer.
    e. LifeTime Architect.
    f. Construction Manager.
3. Minutes of the meeting shall be recorded, typed and printed by the contractor and distributed by the contractor to all parties concerned within 5 days of the meeting. One copy of the minutes shall also be transmitted to the following for information purposes: Owner's representative - Resident engineer - Consultant engineer.
4. The minutes shall include a statement by the concrete contractor indicating that the proposed mix design, and pad prep, placing, finishing and curing procedures can produce the concrete quality required by these specifications.
5. The Project Architect, Structural Engineer of Record and Associate Structural Engineer/Field Engineer shall have the option to be present at the conference.
6. The Contractor shall notify the Design Team at least 7 days prior to the scheduled date of the conference.

G. Post-tensioning tendon, anchors, and accessories: Installed and tensioned under the direct full-time supervision of a qualified technical representative of the supplier.

H. Placement of post-tensioning tendons, anchors, and accessories: Coordinated with the placement of non-prestressed reinforcement.

I. Inspection agency to submit written reports as required in Section 01 45 33, the Drawings and the 2015 IBC, within 72 hours.

PART 2 PRODUCTS

2.01 FORM MATERIALS

A. Formwork: In accordance with Section 03 30 00.

2.02 SHEATHING

A. Sheathing material for unbounded single strand tendons:
    1. Sufficient strength to prevent damage during fabrication, transport, installation, concrete placement, and tensioning.
    2. Watertight over entire length.
    3. Chemically stable, without embrittlement or softening over expected exposure temperature range and service life of the structure.
    4. Non-reactive with concrete, steel and tendon corrosion preventative coating.
    5. Colored to contrast with grease and steel so tears are readily visible. Black, brown, or clear sheathing are not acceptable.

B. Thickness: 0.050 inch minimum for medium or high density polyethylene or polypropylene.

C. Inside diameter: 0.010 inch greater than maximum strand diameter.

D. Connect the sheathing for all slab tendons to all stressing, intermediate and fixed anchorages in a watertight fashion, thus providing a complete encapsulation of the pre stressing steel. The encapsulating device must overlap the sheathing a minimum of 1 inch.

2.03 INTEGRAL JOINT MATERIALS

A. Joint Materials: In accordance with Section 03 30 00.

2.04 SEALANTS

A. Sealant and Primer: Specified in Section 07 92 00.

2.05 CONCRETE MATERIALS

A. Concrete Materials: In accordance with Section 03 30 00.

2.06 CONCRETE MIX

A. Concrete Mix: In accordance with Section 03 30 00.

2.07 ACCESSORIES

A. Vapor Retarder: Provide flexible, preformed polyethylene sheet membrane having a water vapor permeance rate no greater than .012 perms when tested in accordance with ASTM E154/E154M, Section 7 and otherwise conforming to the requirements of ASTM E1745, Class A.
   1. Barrier-Bac, Inc., VB-250 (11 mil).
   2. Substitutions: Under provisions of Section 01 60 00.

2.08 CURING MATERIALS

A. Curing: In accordance with Section 03 30 00.

2.09 POST-TENSIONING

A. Post-tensioning material should consist of seven wire stress-relieved strands, conforming to ASTM A416/A416M, with an ultimate strength of 270 KSI. Strands should be coated with a permanent rust preventative lubricant and wrapped with plastic sheathing. If strand sheathing is damaged or removed, it is to be repaired by taping. A maximum of 6” exposed strand is permitted at the anchor. End anchorage devices will conform to Post-tensioning Institute (PTI) specifications. All dead end anchorages must be power seated. All strands are to be supported on chairs and tied at all intersections or securely supported to prevent vertical and horizontal movement during concrete placement. Cables should be laid out in grids no greater than 4 ft on center. Concrete must be well consolidated, especially in the vicinity of strand anchorages. Do not tension tendons above 85% of the tensile strength of the strand. A 9” diameter centered on the strand axis by a 36” length should be allowed for stressing equipment clearance. The stressing process generates tremendous pressures and extreme care should be taken to prevent injury from operator error or failure of equipment or materials.

B. Slabs should be designed using acceptable engineering practices in accordance with the American Concrete Institute Building Code requirements for reinforced concrete and the Post-Tensioning Institute’s tentative specifications for post-tensioning materials. The soil condition and plasticity index of the court site shall be considered in determining strand spacing.

PART 3 EXECUTION

3.01 COORDINATION

A. Ensure all work required to be in place, and furnished by other sections, is coordinated and correctly placed prior to concrete placement.

3.02 FORMWORK INSTALLATION

A. Formwork: In accordance with Section 03 30 00, ASTM C94/C94M, ASTM C33/C33M.

3.03 TENDON PLACEMENT

A. Locate and position tension tendons. Protect from displacement. Protect sheathing from damage; replace if damaged. Verify pre-stressing tendons are firmly supported at intervals not exceeding 3 feet to prevent displacement during concrete placement.

B. Location tolerance from indicated position: 1/4 inch vertically.

C. Horizontal plane deviations necessary to avoid openings, ducts, chases, inserts. Etc. shall have radius of curvature of 21 feet minimum.

D. Secure jack pressure plates in position perpendicular to line of stressing force.

3.04 STRESSING ANCHORAGES

A. Install stressing anchorages perpendicular to tendon axis. Provide tendons free from curvature in the tendon profile 3 feet minimum from stressing anchorage.

B. Attach stressing anchorages to bulkhead forms by bolts, nails, or threaded pocket former fittings. Provide sufficiently rigid connections to avoid accidental loosening due to construction traffic, or during concrete placement. Provide minimum concrete cover for the anchorage of 1 inch at bottom, 1-1/2 inches at top and sides.

C. Provide pocket formers used to provide a void form at stressing and intermediate stressing anchorages that positively preclude intrusion of concrete or cement paste into the wedge cavity during concrete placement. Depth of the pocket former from the edge of the concrete to the face of the anchorage: Not be less than 2 inches at beam tendons and intermediate stressing ends. Pocket former: Not be less than 2 inches deep at the stressing ends.

3.05 INTERMEDIATE ANCHORAGES

A. Intermediate anchorages, if used, shall be installed embedded in concrete.

B. Minimum Cover requirements of stressing anchorages apply to intermediate anchorages.

3.06 FIXED ANCHORAGES

A. Install fixed end anchorages on the tendon at the suppliers plant prior to shipment to the job site.

B. Wedge type anchorages: Seated fixed end wedges, with a load of not more than 80 percent of the minimum ultimate tensile strength of the tendon. Provide sufficient seating load to ensure adequate capacity of non- stressing anchorages.

C. Fixed end anchorages: Place in the formwork at the locations shown on the placing drawings, and securely fasten to the reinforcing steel. Minimum cover requirements of stressing anchorages apply to fixed end anchorages.

3.07 SHEATHING INSPECTION

A. After installing the tendons in the form and prior to concrete casting, inspect sheathing for possible damage.

B. Tendons damaged by inadequate packaging, shipping shall be rejected.

C. Repair any cuts or abrasions which expose the tendon by restoring the corrosion preventive coating in the damaged area, and repairing the sheathing. Verify repairs of sheathing are watertight.

D. Tape used to repair sheathing: Adhesive moisture proof tape, spirally wrapped around the tendon to provide at least 2 layers of tape.

3.08 PLACING CONCRETE

A. Place concrete in accordance with Section 03 30 00.

3.09 POST TENSIONING

A. Begin post tensioning operations after concrete strength has reached 3000 psi compressive strength, but no more than 48 hours after pouring. If the concrete strength has not reached 3000 psi within 48 hours, stress tendons to 1/2 the required force within that time limit. Perform final stressing to full amount specified within 1 week after pour.

B. Confirm concrete strength with test cylinders or in place test prior to stressing.

C. Measure pre-stressing force. Maintain jacking and tensioning records as work progresses.

D. Jack against tendon pressure plate, not against concrete.

E. Cut excess tendon length as soon as possible after tendon tensioning and satisfactory check and approval of stressing records. Tendon length protruding beyond the wedges after cutting: Between 3/4 inch and 1-1/4 inch.

F. Cut tendon by means of oxyacetylene cutting, abrasive wheel, or hydraulic shears. In case of oxyacetylene cutting of the tendon, avoid directing the flame toward the wedges.

G. Fill stressing pockets with Portland cement grout as soon as practical after tendon stressing and cutting. Under no circumstances will the grout or mortar used for pocket filling contain chlorides or other chemical know to be deleterious to the pre-stressing steel.

H. Tendons in the slab; Coat the exposed strand and wedge areas with tendon coating material comparable to that used over the length of the tendon. Apply a watertight cap over the coated area. Prior to installing the pocket mortar, coat the inside concrete surface of the pocket by spraying with a resin bonding agent.

3.10 JOINT INSTALLATION

A. Locate and form expansion control and contraction joints to pattern as shown on Drawings.

B. Place formed construction joints in floor slab pattern placement sequence. Set top screed to required elevations. Secure to resist movement of wet concrete.

C. Install joint fillers and sealants in accordance with manufacturer's instructions. Use primers of type recommended by joint filler and sealant manufacturer.

D. Place concrete continuously between predetermined construction. Do not break or interrupt successive pours such that cold joints occur.

E. Construction Joints:
   1. Joints not shown on Drawings to be located so as not to impair strength or appearance of structure, as determined by Architect/Engineer.
   2. Place construction joints perpendicular to main reinforcement. Continue reinforcement across construction joints. Provide dowels where directed.
   3. Roughen and thoroughly clean surface of concrete, remove laitance, and wet surface before placing new concrete against joint. Slush vertical joints with neat cement grout immediately before placing new concrete.

3.11 CONCRETE PLACEMENT

A. Inspection:
   1. Verify formwork, anchors, seats, plates, reinforcement, and other items to be cast into concrete are accurately placed, held securely, and will not cause hardship in placing concrete.
   2. Verify required inspections have been performed.
   3. The use of the LTF CONSTRUCTION POUR CARD is a requirement before pouring, and before payment is to be issued. This subcontractor must get this approval before pouring, without approval this subcontractor will bear all responsibility (of their work) for repair, demolition, delays and etc. This is a protection device initiated to eliminate mistakes by all parties involved prior to concrete placement.

B. Preparation:
   1. Thoroughly clean forms before placing concrete. Dampen masonry and porous earth in contact with concrete. Do not place concrete on water or frozen ground.
   2. Prepare previously placed concrete by cleaning with steel brush and thoroughly wet and slush with neat cement grout immediately before placing new concrete.

C. Placing Concrete:
   1. Place Concrete in accordance with Section 03 30 00.

3.12 DEFECTIVE CONCRETE

A. Modify or replace concrete not conforming to required lines, details, and elevations In accordance with Section 03 30 00.

3.13 FIELD QUALITY CONTROL

A. Field inspection and testing will be performed under provisions of Section 01 40 00.
   1. See section 03 30 00 for testing and inspection requirements.

3.14 CURING

A. Curing: In accordance with section 03 30 00.

3.15 PROTECTION

A. Protect finished work under provisions of Section 01 60 00.

1. Immediately after placement, protect concrete from premature drying, excessively hot or cold temperatures, and mechanical injury.

B. Fully encapsulated system.

1.05 SLOPE AND ELEVATION REQUIREMENTS

A. All excavating, filling and grading requirements and compacting work of the sub-base should be performed so that the finished sub-grade is 5” (or as specified in geotechnical report) below the surrounding ground.

1.06 SUBMITTALS

A. Material and Equipment Submittals: Submit the following under provisions of Section 01 33 00:
   1. Mix Design: Per section 03 30 00.

2. Certification of compliance for each material furnished stating that material conforms to acceptable ASTM standards.
3. Shop Drawings showing tendon sizes, grouping, spacing, placing sequence, supports and locations, (tendon supports, accessories, supplemental reinforcement, clearances required for jack, and pressure plate stresses calculations of friction and anchorage stresses
    a. Shop Drawings shall include comprehensive engineering analysis, signed and sealed by a qualified professional engineer, registered in the State of the project, responsible for their preparation.
    b. Comprehensive engineering analysis shall be submitted concurrently with related shop drawings.
    c. The supplier's structural engineer shall review field reports and stressing records for compliance with the calculated effective post· tensioning forces, and acknowledge in writing. If it appears that less force has been provided, they shall supply the Engineer/Architect with the actual effective force and optional remedial steps.
4. Describe tensioning sequence, type of jack, pressure monitoring devices, anchorage set, tendon elongation, and tendon cutoff procedures. Indicate formwork methods, materials, arrangement of joints, ties, and shores, location of bracing and temporary supports, and schedule of erection and stripping. Tendon manufacturer's certificate that tendon strength meet or exceed specified requirements. Prepare stressing records during the tensioning, operation, with the following data recorded as a minimum.
    a. Tendon mark or identification.
    b. Calculated elongation.
    c. Gauge pressure to achieve calculated elongation.
    d. Actual elongation achieved.
    e. Actual gauge pressure.
    f. Date of stressing operation.
    g. Signature of the stressing operator or inspector.
    h. Serial or identification number of jacking equipment.
5. Submit certified mill test reports for each coil or pack of strand for review before beginning construction
6. Turn over stressing records to submitted to General Contractor for review by architect and structural engineer.
7. Procurement:
    a. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
    b. Submit inventory to Owner within 5 days of delivery of materials.
    c. See Sections 01 33 00 and 01 60 00.
8. Perform and submit reports of Code Required Special Inspections as required in Section 01 45 33.

1.07 QUALITY ASSURANCE

A. Perform work in accordance with ACI 301, ACI 318, ACI MNL-66, ACI PRC-347, PTI M10.2 and CRSI (DA4) except where more stringent requirements are shown on Drawings.

B. Maintain a copy of ACI 301 on site.

C. Cast-in-place Concrete: Obtain materials from the same source throughout the Work.

D. Fabricator qualifications: Not less than 5 years experience in the actual production of specified products.

E. Installer: Company specializing in post tensioning work with 5 years experience. Ironworker foreman shall have 5 years previous experience with slab and beam projects.

F. Pre-PT Review meeting:
1. This Pre-PT Pour Review is mandatory and no concrete shall be poured for post-tensioned slabs until all conference criteria have been met to the satisfaction of the Design Team.

2. At least 7 days prior to the start of the PT concrete slab prep, the contractor shall conduct a virtual meeting to review and discuss the required methods and procedures to achieve the required concrete construction. A pre-concrete conference agenda shall be distributed to all attendees 3 days prior to the scheduled date of the conference. The following shall be in attendance:
    a. Concrete supplier.
    b. Concrete Sub Contractor.
    c. Independent Testing Laboratory.
    d. LifeTime Structural Engineer.
    e. LifeTime Architect.
    f. Construction Manager.
3. Minutes of the meeting shall be recorded, typed and printed by the contractor and distributed by the contractor to all parties concerned within 5 days of the meeting. One copy of the minutes shall also be transmitted to the following for information purposes: Owner's representative - Resident engineer - Consultant engineer.
4. The minutes shall include a statement by the concrete contractor indicating that the proposed mix design, and pad prep, placing, finishing and curing procedures can produce the concrete quality required by these specifications.
5. The Project Architect, Structural Engineer of Record and Associate Structural Engineer/Field Engineer shall have the option to be present at the conference.
6. The Contractor shall notify the Design Team at least 7 days prior to the scheduled date of the conference.

G. Post-tensioning tendon, anchors, and accessories: Installed and tensioned under the direct full-time supervision of a qualified technical representative of the supplier.

H. Placement of post-tensioning tendons, anchors, and accessories: Coordinated with the placement of non-prestressed reinforcement.

I. Inspection agency to submit written reports as required in Section 01 45 33, the Drawings and the 2015 IBC, within 72 hours.

PART 2 PRODUCTS

2.01 FORM MATERIALS

A. Formwork: In accordance with Section 03 30 00.

2.02 SHEATHING

A. Sheathing material for unbounded single strand tendons:
    1. Sufficient strength to prevent damage during fabrication, transport, installation, concrete placement, and tensioning.
    2. Watertight over entire length.
    3. Chemically stable, without embrittlement or softening over expected exposure temperature range and service life of the structure.
    4. Non-reactive with concrete, steel and tendon corrosion preventative coating.
    5. Colored to contrast with grease and steel so tears are readily visible. Black, brown, or clear sheathing are not acceptable.

B. Thickness: 0.050 inch minimum for medium or high density polyethylene or polypropylene.

C. Inside diameter: 0.010 inch greater than maximum strand diameter.

D. Connect the sheathing for all slab tendons to all stressing, intermediate and fixed anchorages in a watertight fashion, thus providing a complete encapsulation of the pre stressing steel. The encapsulating device must overlap the sheathing a minimum of 1 inch.

2.03 INTEGRAL JOINT MATERIALS

A. Joint Materials: In accordance with Section 03 30 00.

2.04 SEALANTS

A. Sealant and Primer: Specified in Section 07 92 00.

2.05 CONCRETE MATERIALS

A. Concrete Materials: In accordance with Section 03 30 00.

2.06 CONCRETE MIX

A. Concrete Mix: In accordance with Section 03 30 00.

2.07 ACCESSORIES

A. Vapor Retarder: Provide flexible, preformed polyethylene sheet membrane having a water vapor permeance rate no greater than .012 perms when tested in accordance with ASTM E154/E154M, Section 7 and otherwise conforming to the requirements of ASTM E1745, Class A.
   1. Barrier-Bac, Inc., VB-250 (11 mil).
   2. Substitutions: Under provisions of Section 01 60 00.

2.08 CURING MATERIALS

A. Curing: In accordance with Section 03 30 00.

2.09 POST-TENSIONING

A. Post-tensioning material should consist of seven wire stress-relieved strands, conforming to ASTM A416/A416M, with an ultimate strength of 270 KSI. Strands should be coated with a permanent rust preventative lubricant and wrapped with plastic sheathing. If strand sheathing is damaged or removed, it is to be repaired by taping. A maximum of 6" exposed strand is permitted at the anchor. End anchorage devices will conform to Post-tensioning Institute (PTI) specifications. All dead end anchorages must be power seated. All strands are to be supported on chairs and tied at all intersections or securely supported to prevent vertical and horizontal movement during concrete placement. Cables should be laid out in grids no greater than 4 ft on center. Concrete must be well consolidated, especially in the vicinity of strand anchorages. Do not tension tendons above 85% of the tensile strength of the strand. A 9" diameter centered on the strand axis by a 36" length should be allowed for stressing equipment clearance. The stressing process generates tremendous pressures and extreme care should be taken to prevent injury from operator error or failure of equipment or materials.

B. Slabs should be designed using acceptable engineering practices in accordance with the American Concrete Institute Building Code requirements for reinforced concrete and the Post-Tensioning Institute's tentative specifications for post-tensioning materials. The soil condition and plasticity index of the court site shall be considered in determining strand spacing.

PART 3 EXECUTION

3.01 COORDINATION

A. Ensure all work required to be in place, and furnished by other sections, is coordinated and correctly placed prior to concrete placement.

3.02 FORMWORK INSTALLATION

A. Formwork: In accordance with Section 03 30 00, ASTM C94/C94M, ASTM C33/C33M.

3.03 TENDON PLACEMENT

A. Locate and position tension tendons. Protect from displacement. Protect sheathing from damage; replace if damaged. Verify pre-stressing tendons are firmly supported at intervals not exceeding 3 feet to prevent displacement during concrete placement.

B. Location tolerance from indicated position: 1/4 inch vertically.

C. Horizontal plane deviations necessary to avoid openings, ducts, chases, inserts. Etc. shall have radius of curvature of 21 feet minimum.

D. Secure jack pressure plates in position perpendicular to line of stressing force.

3.04 STRESSING ANCHORAGES

A. Install stressing anchorages perpendicular to tendon axis. Provide tendons free from curvature in the tendon profile 3 feet minimum from stressing anchorage.

B. Attach stressing anchorages to bulkhead forms by bolts, nails, or threaded pocket former fittings. Provide sufficiently rigid connections to avoid accidental loosening due to construction traffic, or during concrete placement. Provide minimum concrete cover for the anchorage of 1 inch at bottom, 1-1/2 inches at top and sides.

C. Provide pocket formers used to provide a void form at stressing and intermediate stressing anchorages that positively preclude intrusion of concrete or cement paste into the wedge cavity during concrete placement. Depth of the pocket former from the edge of the concrete to the face of the anchorage: Not be less than 2 inches at beam tendons and intermediate stressing ends. Pocket former: Not be less than 2 inches deep at the stressing ends.

3.05 INTERMEDIATE ANCHORAGES

A. Intermediate anchorages, if used, shall be installed embedded in concrete.

B. Minimum Cover requirements of stressing anchorages apply to intermediate anchorages.

3.06 FIXED ANCHORAGES

A. Install fixed end anchorages on the tendon at the suppliers plant prior to shipment to the job site.

B. Wedge type anchorages: Seated fixed end wedges, with a load of not more than 80 percent of the minimum ultimate tensile strength of the tendon. Provide sufficient seating load to ensure adequate capacity of non- stressing anchorages.

C. Fixed end anchorages: Place in the formwork at the locations shown on the placing drawings, and securely fasten to the reinforcing steel. Minimum cover requirements of stressing anchorages apply to fixed end anchorages.

3.07 SHEATHING INSPECTION

A. After installing the tendons in the form and prior to concrete casting, inspect sheathing for possible damage.

B. Tendons damaged by inadequate packaging, shipping shall be rejected.

C. Repair any cuts or abrasions which expose the tendon by restoring the corrosion preventive coating in the damaged area, and repairing the sheathing. Verify repairs of sheathing are watertight.

D. Tape used to repair sheathing: Adhesive moisture proof tape, spirally wrapped around the tendon to provide at least 2 layers of tape.

3.08 PLACING CONCRETE

A. Place concrete in accordance with Section 03 30 00.

3.09 POST TENSIONING

A. Begin post tensioning operations after concrete strength has reached 3000 psi compressive strength, but no more than 48 hours after pouring. If the concrete strength has not reached 3000 psi within 48 hours, stress tendons to 1/2 the required force within that time limit. Perform final stressing to full amount specified within 1 week after pour.

B. Confirm concrete strength with test cylinders or in place test prior to stressing.

C. Measure pre-stressing force. Maintain jacking and tensioning records as work progresses.

D. Jack against tendon pressure plate, not against concrete.

E. Cut excess tendon length as soon as possible after tendon tensioning and satisfactory check and approval of stressing records. Tendon length protruding beyond the wedges after cutting: Between 3/4 inch and 1-1/4 inch.

F. Cut tendon by means of oxyacetylene cutting, abrasive wheel, or hydraulic shears. In case of oxyacetylene cutting of the tendon, avoid directing the flame toward the wedges.

G. Fill stressing pockets with Portland cement grout as soon as practical after tendon stressing and cutting. Under no circumstances will the grout or mortar used for pocket filling contain chlorides or other chemical know to be deleterious to the pre-stressing steel.

H. Tendons in the slab; Coat the exposed strand and wedge areas with tendon coating material comparable to that used over the length of the tendon. Apply a watertight cap over the coated area. Prior to installing the pocket mortar, coat the inside concrete surface of the pocket by spraying with a resin bonding agent.

3.10 JOINT INSTALLATION

A. Locate and form expansion control and contraction joints to pattern as shown on Drawings.

B. Place formed construction joints in floor slab pattern placement sequence. Set top screed to required elevations. Secure to resist movement of wet concrete.

C. Install joint fillers and sealants in accordance with manufacturer's instructions. Use primers of type recommended by joint filler and sealant manufacturer.

D. Place concrete continuously between predetermined construction. Do not break or interrupt successive pours such that cold joints occur.

E. Construction Joints:
   1. Joints not shown on Drawings to be located so as not to impair strength or appearance of structure, as determined by Architect/Engineer.
   2. Place construction joints perpendicular to main reinforcement. Continue reinforcement across construction joints. Provide dowels where directed.
   3. Roughen and thoroughly clean surface of concrete, remove laitance, and wet surface before placing new concrete against joint. Slush vertical joints with neat cement grout immediately before placing new concrete.

3.11 CONCRETE PLACEMENT

A. Inspection:
   1. Verify formwork, anchors, seats, plates, reinforcement, and other items to be cast into concrete are accurately placed, held securely, and will not cause hardship in placing concrete.
   2. Verify required inspections have been performed.
   3. The use of the LTF CONSTRUCTION POUR CARD is a requirement before pouring, and before payment is to be issued. This subcontractor must get this approval before pouring, without approval this subcontractor will bear all responsibility (of their work) for repair, demolition, delays and etc. This is a protection device initiated to eliminate mistakes by all parties involved prior to concrete placement.

B. Preparation:
   1. Thoroughly clean forms before placing concrete. Dampen masonry and porous earth in contact with concrete. Do not place concrete on water or frozen ground.
   2. Prepare previously placed concrete by cleaning with steel brush and thoroughly wet and slush with neat cement grout immediately before placing new concrete.

C. Placing Concrete:
   1. Place Concrete in accordance with Section 03 30 00.

3.12 DEFECTIVE CONCRETE

A. Modify or replace concrete not conforming to required lines, details, and elevations In accordance with Section 03 30 00.

3.13 FIELD QUALITY CONTROL

A. Field inspection and testing will be performed under provisions of Section 01 40 00.
   1. See section 03 30 00 for testing and inspection requirements.

3.14 CURING

A. Curing: In accordance with section 03 30 00.

3.15 PROTECTION

A. Protect finished work under provisions of Section 01 60 00.

1. Immediately after placement, protect concrete from premature drying, excessively hot or cold temperatures, and mechanical injury.

END OF SECTION

SECTION 03 4100
PRECAST STRUCTURAL CONCRETE

PART 1 GENERAL

1.01 SUMMARY

A. This Section includes the performance criteria, materials, design, production, and erection of structural precast and precast, pre-stressed concrete with a commercial architectural (CA) finish for the entire project. The work performed under this Section includes all labor, material, equipment, related services, and supervision required for the manufacture and erection of the structural precast and precast, pre-stressed concrete work shown on the Contract Drawings.

B. This Section includes the following:
   1. Insulated precast wall panels.
   2. Non-insulated precast wall panels.
   3. Solid slab units.
   4. Precast Stairs.

C. This Section includes the following with a commercial architectural (CA) finish:
   1. Spandrels.
   2. Walls.
   3. Insulated Walls.

1.02 RELATED SECTIONS:

A. Section 01 31 00 - Project Management and Coordination.

B. Section 01 33 00 - Submittal Procedures

C. Section 01 40 00 - Quality Requirements

D. Section 01 45 33 - Code-Required Special Inspections and Procedures.

E. Section 01 60 00 - Product Requirements.

F. Section 03 30 00 - Cast-in-Place Concrete for installing connection anchors and reinforcing steel in concrete and structural topping.

G. Section 03 45 00 - Architectural Precast Concrete.

H. Section 04 20 00 - Unit Masonry Assemblies for inserts or anchorages required.

I. Section 05 12 00 - Structural Steel Framing for furnishing and installing connections attached to structural-steel framing.

J. Section 05 50 00 - Metal Fabrications for furnishing and installing loose hardware items.

K. Section 07 21 00 - Thermal Insulation for insulation to meet energy code.

L. Section 07 62 00 - Sheet Metal Flashing and Trim for flashing receivers and reglets.

M. Section 07 84 00 - Firestop for joint filler materials for fire-resistance-rated construction.

N. Section 07 92 00 - Joint Sealants for elastomeric joint sealants and sealant backings between slab edges at exposed underside of floor and roof members and/or perimeter of members.

O. Section 07 95 00 - “Preformed Traffic Durable Sealant Systems.” [for parking decks only]

1.03 REFERENCE STANDARDS

A. AASHTO LRFD - Bridge Design Specifications; 2024.

B. AASHTO M251 - Standard Specification for Plain and Laminated Elastomeric Bridge Bearings; Current Edition.

C. ACI 318 - Building Code Requirements for Structural Concrete (ACI 318-19) Commentary on Building Code Requirements for Structural Concrete (ACI 318R-19); Current Edition.

D. ASTM A36/A36M - Standard Specification for Carbon Structural Steel; 2019.

E. ASTM A108 - Standard Specification for Steel Bar, Carbon and Alloy, Cold-Finished; 2018.

F. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products; 2017.

G. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware; 2023.

H. ASTM A184/A184M - Standard Specification for Welded Deformed Steel Bar Mats for Concrete Reinforcement; 2019.

I. ASTM A193/A193M - Standard Specification for Alloy-Steel and Stainless Steel Bolting for High Temperature or High Pressure Service and Other Special Purpose Applications; 2024a.

J. ASTM A283/A283M - Standard Specification for Low and Intermediate Tensile Strength Carbon Steel Plates; 2018.

HHH. SSPC-Paint 20 - Zinc-Rich Coating (Type I - Inorganic, and Type II - Organic); 2019.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination: Coordinate opening sizes and locations, attachment of related items, and other work related to the fabrication and installation of precast concrete units, including the following:
   1. Cast-in Electrical Devices: Cast-in Electrical Devices: Coordinate the location of cast-in electrical conduit and junction boxes. Provide panel layout drawings and elevations to Electrical Contractor a minimum of one week prior to casting. Notify Electrical Contractor a minimum of 48 hours prior to casting so they can travel to site and provide and install electrical items in casting forms.
   2. Mechanical and Plumbing Penetrations.

B. Sequencing: Furnish loose connection hardware and anchorage items to be embedded in or attached to other construction without delaying the work. Provide setting diagrams, templates, instructions, and directions, as required, for installation.

C. Preinstallation Meeting: Conduct a preinstallation meeting a minimum of two weeks prior to installation of precast concrete. Require attendance of related trades, the Architect and Contractor. Review the following items:
   1. Review approved shop drawings and installation details.
   2. Anchor and weld plate locations.
   3. Opening locations including those cut in the field.
   4. Limitations on field cutting and core drilling.
   5. Site access requirements and obstructions including but not limited:
      a. Access roads and maintenance thereof.
      b. Protection and repair of existing paving.
      c. Dewatering of footing trenches.
      d. Job site snow removal.
      e. Job site debris removal.
      f. Overhead obstructions including power lines.

D. Cold weather grouting requirements and expectations.

E. Cleaning responsibilities and expectation

1.05 PERFORMANCE REQUIREMENTS

A. Structural Performance: Provide structural precast concrete members and connections capable of withstanding design loads indicated within limits and under conditions indicated on Drawings.

B. Design structural precast concrete framing system and connections to maintain clearances at openings, to allow for fabrication and construction tolerances, to accommodate live-load deflection, shrinkage and creep of primary building structure, and other building movements. Maintain structural precast concrete deflections within limits of ACI 318 (ACI 318M).Fire Resistance Rating: Provide components to meet the following fire ratings:
   1. Building:
      a. Roof: 1 hr
      b. Exterior Walls: 2 hr
      c. Plank and solid slabs: 2 hr
   2. Thermal Movements: Provide for thermal movements noted.
      a. The precast system design shall consider the maximum seasonal climatic temperature change.
      b. In plane thermal movements of individual members directly exposed to the sun shall consider a temperature range of 50 degrees Fahrenheit.
      c. Member connection design shall consider through thickness thermal gradients as appropriate.
      d. Precaster shall consider the effects of wall panel bow during engineering, fabrication, storage and erection. Precaster shall target means and methods to produce panels with in-

service conditions that are plumb and bow-free. Maximum out-of-plumb tolerance at in-service condition over the height of the overall window frame shall be 3/8”.

1.06 ACTION SUBMITTALS

A. Product Data: For each type of product indicated. Retain quality control records and certificates of compliance for 5 years after completion of structure.

B. Design Mixtures: For each precast concrete mixture, include compressive strength.

C. Shop (Erection) Drawings:
   1. Provide signed and sealed drawings by a qualified professional engineer responsible for its preparation licensed in the state of the project.
   2. Detail fabrication and installation of structural precast concrete units including connections at member ends and to each adjoining member.
   3. Indicate locations, plan views, elevations, dimensions, shapes, and cross sections of each unit, openings, support conditions and types of reinforcement, including special reinforcement.
   4. Indicate aesthetic intent including joints, rustications or reveals, and extent and location of each surface finish.
   5. Indicate welded connections by AWS standard symbols. Show size, length, and type of each weld.
   6. Detail loose and cast-in hardware, lifting and erection inserts, connections, and joints.
   7. Indicate locations and details of anchorage devices to be embedded in or attached to structure or other construction.
   8. Include and locate openings larger than 8 in. Where additional structural support is required for openings include header design.
   9. Coordinate and indicate openings and inserts required by other trades.
   10. Indicate locations of and detail lifting and handling devices. Use side or edge devices at all locations to minimize unsightly patching at exposed faces. Any face locations must be preapproved by the Architect.
   11. Indicate sections and details showing quantities and position of reinforcing steel and related items including special reinforcement.
   12. Indicate locations of and detail solid concrete and reduced insulation zones. These types of zones are unacceptable unless absolutely necessary and must be preapproved by Contractor and Architect prior to fabrication.
   13. Indicate location of each structural precast concrete member by same identification mark placed on unit.
   14. Indicate relationship of structural precast concrete members to adjacent materials.
   15. Indicate locations and details of joint treatment.
   16. Indicate areas receiving toppings and magnitude of topping thickness.
   17. Indicate estimated cambers for floor slabs receiving cast-in-place topping.
   18. Indicate multiple wythe connection devices.
   19. Indicate shim sizes and grouting sequence.
   20. Design Modifications:
      a. If design modifications are proposed to meet performance requirements and field conditions, notify the Architect and submit design calculations and Shop Drawings.
      b. Do not affect the appearance, durability or strength of members when modifying details or materials. Maintain the general design concept when altering size of members and alignment.

D. Engineering Analysis:
   1. Provide comprehensive structural analysis design data signed and sealed by qualified professional engineer, registered in the state of the project, responsible for their preparation.
   2. Calculations shall be submitted concurrently with shop/erection drawings and shall be signed and sealed at time of submission.

E. Erection Plan: The plan shall include temporary connection such as shoring, guying, bracing, and specific erection sequence requirements. At a minimum the temporary structural system shall be

capable of resisting a 10 psf (working load) lateral load in any direction applied to the projected area of such members/system under consideration. The erection plan shall be signed and sealed a registered engineer in the state of the project.

F. Samples: Design reference samples for initial verification of design intent, approximately 12 by 12 by 2 inches (300 by 300 by 50 mm), representative of finishes, colors, and textures of exposed surfaces of structural precast concrete members.
   1. When back face of precast concrete member is to be exposed, include Samples illustrating workmanship, color, and texture of the concrete.

G. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Contractor within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

1.07 INFORMATIONAL SUBMITTALS

A. Provide the following with bid materials:
   1. Qualification Data: For installer, fabricator and testing agency and persons specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include list of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.

B. Welding Certificates: Copies of certificates for welding procedure specifications (WPS) and personnel certification.

C. Material Test Reports for aggregates: From an accredited testing agency, indicating and interpreting test results for compliance with requirements indicated.

D. Material Certificates: Signed by manufacturers certifying that each of the following items complies with requirements.
   1. Cementitious materials.
   2. Reinforcing materials and pre-stressing tendons.
   3. Admixtures.
   4. Bearing pads.
   5. Structural-steel shapes and hollow structural sections.
   6. Insulation.
   7. Other components specified in Contract Documents with applicable standards.

E. Field quality-control test and special inspections reports.

1.08 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Single Source Requirement: Provide all precast concrete of this section by one manufacturer.

C. Erector Qualifications: A precast concrete erector with a minimum of 5 years experience in erection of precast concrete similar to the project AND Qualified by the Precast/Pre-stressed Concrete Institute (PCI) prior to beginning work at the jobsite. Submit a current Certificate of Compliance furnished by PCI designating qualification in Category S2 (Complex Structural Systems) for load-bearing members.

D. Erector Certification: A precast concrete erector with erecting organization and all erecting crews Certified and designated, prior to beginning work at project site, by PCI's Certificate of Compliance to erect (Category S2) [Complex Structural Systems] for load-bearing members).

E. Professional Engineer Qualifications: A professional engineer licensed in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of structural precast concrete that are similar to those indicated for this Project in material, design, and extent.

F. Participates in PCI's Plant Certification program and is designated a PCI (CERT) plant for Category AA or AB AND Category C3A – Pre-stressed Straight-Strand Structural Members.

G. Fabricator has sufficient production capacity to produce required members without delaying the Work.

H. Certification shall be maintained throughout the production of the precast concrete units. Production shall immediately stop if at any time the fabricator's certification is revoked, regardless of the status of completion of contracted work. Production will not be allowed to re-start until the necessary corrections are made and certification has been re-established. In the event certification(s) can not be re-established in a timely manner, causing project delays, the fabricator, at no additional cost, will contract out the remainder of the units to be manufactured at a PCI certified plant.

I. Fabricator is registered with and approved by authorities having jurisdiction.

J. Design Standards: Comply with ACI 318 (ACI 318M) and the design recommendations of PCI MNL-120, "PCI Design Handbook – Precast and Pre-stressed Concrete," applicable to types of structural precast concrete members indicated.

K. Quality-Control Standard: For manufacturing procedures and testing requirements and quality control recommendations for types of members required, comply with PCI MNL-116, "Manual for Quality Control for Plants and Production of Structural Concrete Products."

L. Comply with camber and dimensional tolerances of PCI MNL-135, "Tolerance Manual for Precast and Pre-stressed Concrete Construction."

M. Product Options: Drawings indicate size, profiles and dimensional requirements of precast concrete members and are based on the specific types of members indicated. Other fabricators' precast concrete members complying with requirements may be considered prior to bidding. Refer to Division 1 Section "Substitutions."

N. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code – Steel"; AWS D1.4/D1.4M, "Structural Welding Code – Reinforcing Steel"; and AWS D1.6/D1.6M, "Structural Welding Code-Stainless".

O. Fire Resistance: Where indicated, provide structural precast concrete members whose fire resistance satisfy the fire resistance ratings of the Contract Documents and meets the prescriptive requirements of the governing code or has been calculated according to PCI MNL-124, "Design for Fire Resistance of Precast Pre-stressed Concrete," and is acceptable to authorities having jurisdiction.

P. Mockup Control Sample Unit: Provide a mock up panel at the plant, 4 feet by 4 feet in size, for quality comparison of finished unit to an approved appearance sample for color and texture.

Q. Initial Mock Up: After sample approval and before fabricating CA precast concrete members, with architectural finish, thin-brick facing. Produce sample units to establish the approved range of selections made under sample Submittals. Produce a minimum of 2 sample units approximately 4'x8' (1.22m x 2.44m) in area. Incorporate full scale details of architectural features, finishes, textures and transitions in sample units.
   1. Locate units where indicated in Contract Documents or, if not indicated, as directed by Architect.
   2. Damage part of an exposed-face surface for each finish, color, and texture, and demonstrate adequacy of repair techniques proposed for repairs of surface blemishes. Patch an exposed lift loop location.
   3. After acceptance of repair technique, maintain one sample unit at the fabricator's plant and one at the Project site in an undisturbed condition as a standard for judging the completed Work.
   4. Hard trowel and broom finish.
   5. Demolish and remove sample units when directed.

R. Full Size Mockup: After sample panel approval but before production of structural precast concrete units, with architectural finish and thin-brick facing construct full-sized mockup to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution. Mockups to be representative of the finished work in all respects including fabrication tolerances, interior finish, demonstration of patching lifters, thin brick, and precast concrete as accepted on the final Shop Drawings. Build mockups to comply with the following requirements, using materials indicated for the completed work:
   1. Build mockup as indicated in Contract Documents or, if location is not indicated, as directed by Architect.

2. Notify Architect in advance of dates and times when mockups will be constructed.
3. Obtain Architect's approval of mockup before starting fabrication of precast concrete members.
4. Approved mockup may become part of the completed Work if undamaged at the time of Substantial Completion.
5. Approval of mockup does not constitute approval of deviations from the Contract Documents unless such deviations are specifically approved by Architect in writing.

S. Pre-installation Conference: Conduct conference at Project site to comply with requirements in Section 01 31 00 "Project Management and Coordination."

1.09 DELIVERY, STORAGE, AND HANDLING

A. General Requirement: All lifting and handling, transportation and delivery, storage and support, and erection of precast panels to be performed by qualified personnel using methods and equipment approved by manufacturer.

B. Deliver all structural precast concrete members in such quantities and at such times to assure compliance with the agreed upon project schedule and setting sequence to ensure continuity of installation.

C. Handle and transport members in a manner to avoid excessive stresses that could cause cracking or other damage.

D. Store units with adequate dunnage and bracing, and protect units to prevent contact with soil, staining, and to control cracking, distortion, warping or other physical damage.

E. Unless otherwise specified or shown on Shop Drawings, store members with dunnage across full width of each bearing point.

F. Place stored members so identification marks are clearly visible, and units can be inspected.

G. Place dunnage of even thickness between each member.

H. Lift and support members only at designated points indicated on the Shop Drawings.
1. Lift only with methods and equipment approved by Manufacturer.
2. Lifting devices to have a minimum safety factor of 5 to 1.

1.10 FIELD CONDITIONS

A. General Contractor shall prepare and maintain site free of obstructions as required by precast erector for the work of this section.

B. Cold Weather Grouting: Provide written procedures to address cold weather grouting to Contractor/Architect prior to the erection process.

1.11 SEQUENCING

A. Furnish loose connection hardware and anchorage items to be embedded in or attached to other construction without delaying the Work. Provide locations, setting diagrams, templates, instructions, and directions, as required, for installation.

1.12 WARRANTY

A. Provide twelve-month guarantee for workmanship, materials, and satisfactory performance from date of Substantial Completion.

PART 2 PRODUCTS

2.01 PRECAST CONCRETE WALL PANELS

A. Manufacturer: Shall possess qualifications listed above and have been approved by Architect prior to submitting bid.

B. Insulated Wall Panels:
1. Size/Shape/Profile: As indicated on the drawings.
2. Overall Thickness: 12 inch thick unless noted otherwise; 3 inch exterior wythe, 3 inch insulation, and 6 inch Interior Wythe unless noted otherwise. Thickness may change per design requirements.
3. Form Side Architectural Finish: As indicated/scheduled on the drawings, refer to finish

4. Form Side Architectural Color: As indicated/scheduled on the drawings. See below.
5. Screed Side Finish: See Below
6. Screed Side Color: Gray

C. Uninsulated Wall Panels:
1. Size/Shape/Profile: As indicated on the drawings.
2. Overall Thickness:
a. Exterior walls: 8" thick unless noted otherwise.
b. Interior shaft walls: 8" thick unless noted otherwise.
3. Form Side Architectural Finish: As indicated/scheduled on the drawings, refer to finish description types below.
4. Screed Side Finish: See Below
5. Screed Side Color: Gray

2.02 FORM MATERIALS

A. Forms: Rigid, dimensionally stable, non-absorptive material, warp and buckle free, that will provide precast concrete surfaces within fabrication tolerances indicated; nonreactive with concrete and suitable for producing required surface finishes.
1. Form-Release Agent: Commercially produced form-release agent that will not bond with, stain or affect hardening of precast concrete surfaces and will not impair subsequent surface or joint treatments of precast concrete.

2.03 REINFORCING MATERIALS

A. Recycled Content of Steel Products: Provide products with an average recycled content of steel products so postconsumer recycled content plus one-half of pre-consumer recycled content is not less than 25 percent.

B. Reinforcing Bars: ASTM A615/A615M, Grade 60, deformed.

C. Low-Alloy-Steel Reinforcing Bars: ASTM A706/A706M, deformed.

D. Galvanized Reinforcing Bars: ASTM A767/A767M, Class II zinc coated, hot-dip galvanized and chromate wash treated after fabrication and bending.

E. Steel Bar Mats: ASTM A184/A184M, fabricated from , deformed bars, assembled with clips.

F. Plain-Steel Welded Wire Reinforcement: ASTM A1064/A1064M, fabricated from as-drawn steel wire into flat sheets.

G. Deformed-Steel Welded Wire Reinforcement: ASTM A1064/A1064M, flat sheet.

H. Supports: Use bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars and welded wire reinforcement in place according to PCI MNL 116.

2.04 PRESTRESSING TENDONS

A. Pre-stressing Strand: ASTM A416/A416M, Grade 270, uncoated, 7-wire, low-relaxation strand or ASTM A886/886M, Grade 270 (Grade 1860), indented, 7-wire, low-relaxation strand (including supplement).

2.05 CONCRETE MATERIALS

A. Portland Cement: ASTM C150/C150M, Type I or III u.n.o.
1. For surfaces exposed to view in finished structure, use same type, brand, and mill source throughout the precast concrete production.

B. White Cement. Required for all Architectural Colored concrete.

C. Grey Cement. For all egress stairs, beams, T’s, columns and structural wythes of concrete.

D. Supplementary Cementitious Materials
1. Fly Ash: ASTM C618, Class C or F with maximum loss on ignition of 3%.
2. Metakaolin: ASTM C618, Class N.
3. Silica Fume: ASTM C1240 with optional chemical and physical requirements.
4. Ground Granulated Blast-Furnace Slag: ASTM C989/C989M, Grade 100 or 120.

E. Normal weight Aggregates: Except as modified by PCI MNL 116, ASTM C33/C33M, with coarse, non-reactive aggregates. Stockpile fine and coarse aggregates for each type of exposed finish from a single source (pit or quarry) for Project.
   1. Face-Mixture Coarse Aggregates: Selected, hard, and durable; free of material that reacts with cement or causes staining; to match selected finish sample.
      a. Gradation: To match approved mock up.
   2. Face-Mixture Fine Aggregates: Selected, natural or manufactured sand of a material compatible with coarse aggregate to match selected Sample finish.

F. Backup Concrete Aggregates: ASTM C33/C33M or ASTM C330/C330M.

G. Lightweight Aggregates: Except as modified by PCI MNL 116, ASTM C330 with absorption less than 11 percent.

H. Coloring Admixture: ASTM C979/C979M, synthetic or natural mineral-oxide pigments or liquid coloring admixtures, temperature stable and non-fading.

I. Water: Potable; free from deleterious material that may affect color stability, setting, or strength of concrete and complying with chemical limits of PCI MNL 116.

J. Air Entraining Admixture: ASTM C260/C260M, certified by manufacturer to be compatible with other required admixtures.

K. Chemical Admixtures: Certified by manufacturer to be compatible with other admixtures and to not contain calcium chloride, or more than 0.15 percent chloride ions or other salts by weight of admixture.
   1. Water-Reducing Admixture: ASTM C494/C494M, Type A.
   2. Retarding Admixture: ASTM C494/C494M, Type B.
   3. Water-Reducing and Retarding Admixture: ASTM C494/C494M, Type D.
   4. Water-Reducing and Accelerating Admixture ASTM C494/C494M, Type E.
   5. High Range, Water-Reducing Admixture: ASTM C494/C494M, Type F.
   6. High-Range, Water-Reducing and Retarding Admixture: ASTM C494/C494M, Type G.
   7. Plasticizing Admixture for Flowable Concrete: ASTM C1017/C1017M.
   8. Corrosion Inhibiting Admixture: ASTM C1582/C1582M

2.06 STEEL CONNECTION MATERIALS

A. Carbon-Steel Shapes and Plates: ASTM A36/A36M

B. Carbon-Steel Headed Studs: ASTM A108, Grades 1010 through 1020, cold finished, AWS D1.1/D1.1M, Type A or B, with arc shields and with the minimum mechanical properties of PCI MNL 116, Table 3.2.3.

C. Carbon-Steel Plate: ASTM A283/A283M, Grade C.

D. Malleable Iron Castings: ASTM A47/A47M. Grade 32510 or 35028.

E. Carbon-Steel Castings: ASTM A27/A27M, Grade 60-30 (Grade 415-205).

F. High-Strength, Low-Alloy Structural Steel: ASTM A572/A572M.

G. Carbon-Steel Structural Tubing: ASTM A500/A500M, Grade B or C.

H. Wrought Carbon-Steel Bars: ASTM A675/A675M, Grade 65 (Grade 450).

I. Deformed-Steel Wire or Bar Anchors: ASTM A706/A706M.

J. Carbon-Steel Bolts and Studs: ASTM A307, Grade A or C (ASTM F568M, Property Class 4.6) carbon-steel, hex-head bolts and studs; carbon-steel nuts (ASTM A563/A563M, Grade A); and flat, unhardened steel washers (ASTM F436/F436M).

K. High-Strength Bolts and Nuts: ASTM A193/A193M, Grade B5 or B7, ASTM F3125/F3125M, Type 1, heavy hex steel structural bolts, heavy hex carbon-steel nuts, (ASTM A563/A563M) and hardened carbon-steel washers (ASTM F436/F436M).

L. Zinc-Coated Finish: For exterior steel items and items indicated for galvanizing, apply zinc coating by hot-dip process according to ASTM A123/A123M, after fabrication, ASTM A153/A153M, or ASTM F2329/F2329M as applicable.
   1. For steel shapes, plates, and tubing to be galvanized, limit silicon content of steel to less than 0.03 percent or to between 0.15 and 0.25 percent or limit sum of silicon content and 2.5 times phosphorous content to 0.09 percent.
   2. Galvanizing Repair Paint: Zinc paint with dry film containing not less than 94 percent zinc dust by weight, and complying with DOD-P-21035B or SSPC-Paint 20.
   3. Bituminous coating: Carboline “Bitumatic No. 50”

2.07 BEARING PADS AND OTHER ACCESSORIES

A. Provide one of the following bearing pads for structural precast concrete members:
   1. Elastomeric Pads: AASHTO M251, plain, vulcanized, 100 percent polychloroprene (neoprene) elastomer, molded to size or cut from a molded sheet, 50 to 70 Shore A durometer according to ASTM D2240, minimum tensile strength 2250 psi (15.5 MPa) per ASTM D412.
   2. Random-Oriented, Fiber-Reinforced Elastomeric Pads: Preformed, randomly oriented synthetic fibers set in elastomer. Surface hardness of 70 to 90 Shore A durometer according to ASTM D2240. Capable of supporting a compressive stress of 3000 psi (20.7 Mpa) with no cracking, splitting or delaminating in the internal portions of the pad.
   3. Cotton-Duck-Fabric-Reinforced Elastomeric Pads: Preformed, horizontally layered cotton-duck fabric bonded to an elastomer. Surface hardness of 80 to 100 Shore A durometer according to ASTM D2240. Conforming to Division II, Section 18.10.2 of AASHTO LRFD Bridge Design Specifications or Military Specification, MIL-C-882E.
   4. Frictionless Pads: Polytetrafluoroethylene (PTFE), glass-fiber reinforced, bonded to stainless or mild-steel plates, or random-oriented, fiber-reinforced elastomeric pads, of type required for in-service stress.

B. Reglets: Stainless steel, Type 304.

C. Erection Accessories: Provide clips, hangers, high density plastic or steel shims, and other accessories required to install structural precast concrete members.

D. Welding Electrodes: Comply with AWS standards for steel type and/or alloy being welded.

E. Stair Tread Nosing: Wooster, Type 231BF, Black Stair Nosing.

F. Dove Tail Anchors.

G. Double Tee Stem Blockouts - Radius. High Concrete Accessories or equal.

2.08 GROUT MATERIALS

A. Sand-Cement Grout: Portland cement, ASTM C150/C150M, Type I, and clean, natural sand, ASTM C144, or ASTM C404. Mix at ratio of 1 part cement to 2 ½ to 3 parts sand, by volume, with minimum water required for placement and hydration. Water-soluble chloride ion content of grout less than 0.06 percent chloride ion by weight of cement when tested in accordance with ASTM C1218/C1218M.

B. Non-shrink Grout: Premixed, prepackaged ferrous and non-ferrous aggregate shrink-resistant grout containing selected silica sands, portland cement, shrinkage-compensating agents, plasticizing and water-reducing agents, complying with ASTM C1107/C1107M, Grade A for dry-pack and Grades B and C for flowable grout and of consistency suitable for application with a 30-minute working time. Water-soluble chloride ion content of grout less than 0.06 percent chloride ion by weight of cement when tested in accordance with ASTM C1218/C1218M.

C. Epoxy-resin grout: Two-component mineral-filled epoxy-resin: ASTM C881/C881M of type, grade, and class to suit requirements.

2.09 CONCRETE MIXTURES

A. Prepare design mixtures for each type of precast concrete required.
   1. Limit use of fly ash to 35 percent replacement of portland cement by weight; granulated blast-furnace slag to 50 percent of portland cement by weight; and metakaolin and silica fume to 10 percent of portland cement by weight.

B. Design mixtures may be prepared by a qualified independent testing agency or by qualified precast plant personnel at structural precast concrete fabricator's option.

C. Limit water-soluble chloride ions to maximum percentage by weight of cement permitted by ACI 318 (ACI 318M) or PCI MNL 116 when tested in accordance with ASTM C1218/C1218M.

D. Normal Weight Concrete Mixtures: Proportion mixtures by either laboratory trial batch or field test data methods according to ACI 211.1, with materials to be used on Project, to provide normal weight concrete with the following properties:
   1. Compressive Strength (28 Days): 6,000 psi minimum, as required by design.
   2. Release Strength: as required by design.
   3. Maximum Water-Cementitious Materials Ratio: 0.36.

E. Add air-entraining admixture at manufacturer's prescribed rate to result in concrete at point of placement having an air content complying with PCI MNL-116.

F. When included in design mixtures, add other admixtures to concrete mixtures according to manufacturer's written instructions.

G. Concrete Mixture Adjustments: Concrete mixture design adjustments may be proposed if characteristics of materials, Project conditions, weather, test results, or other circumstances warrant.

2.10 FORM FABRICATION

A. Form: Accurately construct forms, mortar tight, of sufficient strength to withstand pressures due to concrete placement and vibration operations and temperature changes, and for prestressing and de-tensioning operations. Coat contact surfaces of forms with release agent before reinforcement is placed. Avoid contamination of reinforcement and pre-stressing tendons by release agent.

B. Maintain forms to provide completed structural precast concrete members of shapes, lines, and dimensions indicated in Contract Documents, within fabrication tolerances specified.
   1. Edge and Corner Treatment: Uniformly chamfered or as built-in on standard forms.

2.11 FABRICATION

A. Cast all wall panels with architectural finish face down.

B. Cast-in Anchors, Inserts, Plates, Angles, and Other Anchorage Hardware: Fabricate anchorage hardware with sufficient anchorage and embedment to comply with design requirements. Accurately position for attachment of loose hardware and secure in place during pre-casting operations. Locate anchorage hardware where it does not affect position of main reinforcement or concrete placement. Do not relocate bearing plates in members unless approved by Architect.
   1. Weld headed studs and deformed bar anchors used for anchorage according to AWS D1.1/D1.1M and AWS C5.4, "Recommended Practices for Stud Welding."

C. Furnish loose hardware items including steel plates, clip angles, seat angles, anchors, dowels, hangers, and other hardware shapes for securing precast concrete members to supporting and adjacent construction.

D. Cast-in reglets, slots, and other accessories in structural precast concrete members as indicated on Contract Drawings.

E. Cast-in openings larger than 8 inches in any dimension. Do not drill or cut openings or pre-stressing strand without Engineer's approval.

F. Reinforcement: Comply with recommendations in PCI MNL 116 for fabricating, placing, and supporting reinforcement.
   1. Clean reinforcement of loose rust and mill scale, earth, and other materials that reduce or destroy the bond with concrete. When damage to epoxy coated reinforcing exceeds limits specified in ASTM A775/A775M, repair with patching material compatible with coating material and epoxy coat bar ends after cutting.
   2. Accurately position, support, and secure reinforcement against displacement during concrete-placement and consolidation operations. Locate and support reinforcement by plastic tipped or corrosion resistant metal or plastic chairs, runners, bolsters, spacers, hangers, and other devices

for spacing, supporting, and fastening reinforcing bars and welded wire reinforcement in place according to PCI MNL 116.

3. Place reinforcing steel and pre-stressing tendons to maintain at least ¾ in. (19 mm) minimum concrete cover. Provide cover requirements in accordance with ACI 318 (ACI 318M) when units are exposed to corrosive environment or severe exposure conditions. Arrange, space, and securely tie bars and bar supports to hold reinforcement in position while placing concrete. Direct wire tie ends away from finished, exposed concrete surfaces.
4. Install welded wire reinforcement in lengths as long as practicable. Lap adjoining pieces in accordance with ACI 318 (ACI 318M) and wire tie laps, where required by design. Offset laps of adjoining widths to prevent continuous laps in either direction.

G. Reinforce structural precast concrete members to resist handling, transportation, and erection stresses, and specified in-place loads, whichever governs.

H. Pre-stress tendons for structural precast concrete members by either pre-tensioning or post-tensioning methods. Comply with PCI MNL 116.
1. De-tension pre-tensioned tendons either by gradually releasing tensioning jacks or by heat-cutting tendons, using a sequence and pattern to prevent shock or unbalanced loading.
2. If concrete has been heat cured, de-tension while concrete is still warm and moist to avoid dimensional changes that may cause cracking or undesirable stresses.
3. Recess strand ends and anchorages exposed to view a minimum of 1 inch (25 mm), fill with non-metallic, non-shrink mortar and sack rub surface. Coat or spray the inside pocket surfaces with a bonding agent before installing mortar.
4. Protect strand ends and anchorage not exposed to view with bitumastic, zinc-rich or epoxy paint.

I. Comply with requirements in PCI MNL 116 and in this Section for measuring, mixing, transporting, and placing concrete. After concrete batching, no additional water may be added.

J. Place concrete in a continuous operation to prevent cold joints or planes of weakness from forming in precast concrete members.
1. Place backup concrete to ensure bond with face-mixture concrete.

K. Place face mixture to a minimum thickness after consolidation of the greater of 1 inch (25 mm) or 1.5 times the nominal maximum aggregate size, but not less than the minimum reinforcing cover as indicated on Contract Drawings.
1. Use a single design mixture for those members in which more than one major face (edge) is exposed.
2. Where only one face of unit is exposed and at the fabricator's option either of the following mixture design/casting techniques may be used:
    a. A single design mixture throughout the entire thickness of member.
    b. Design mixtures for facing and backup; using cement and aggregates for each type as appropriate, for consecutive placement in the form. Use cement and aggregate specified for facing mixture. Use cement and aggregate for backup mixture complying with specified criteria or as selected by the fabricator.

L. Thoroughly consolidate placed concrete by vibration without dislocating or damaging reinforcement and built-in items, and minimize pour lines, honeycombing or entrapped air voids on surfaces. Use equipment and procedures complying with PCI MNL 116.
1. Place self-consolidating concrete without vibration in accordance with PCI TR-6 "Interim Guidelines for the Use of Self-Consolidating Concrete." If face and backup concrete is used, ensure adequate bond between concrete mixtures.

M. Comply with PCI MNL 116 procedures for hot and cold-weather concrete placement.

N. Identify pickup points of precast concrete members and orientation in structure with permanent markings, complying with markings indicated on Shop Drawings. Imprint or permanently mark casting date on each precast concrete member on a surface that will not show in finished structure.

O. Cure concrete, according to requirements in PCI MNL 116, by moisture retention without heat or by accelerated heat curing using live steam or radiant heat and moisture. Cure members until

compressive strength is high enough to ensure that stripping does not have an effect on the performance or appearance of final product.

2.12 FABRICATION TOLERANCES

A. Fabricate structural precast concrete members of shapes, lines and dimensions indicated, so each finished member complies with PCI MNL-135 product tolerances as well as position tolerances for cast-in items. Structural components to comply with PCI Tolerance Manual for Precast and Prestressed Concrete Construction PCI MNL-135.

B. Solid or insulated flat, structural wall panels with Architectural finishes to comply with PCI Tolerance Manual for Precast and Prestressed Concrete Construction PCI MNL-116 with the following exceptions:
   1. Length [a]
      a. Walls under 10' = (+/-) 1/8"
      b. Walls over 10' = (+/-) 1/4"
   2. Width [b] overall (+/-) 1/8"
   3. Local smoothness of any surface [h] = (+/-) 1/8" in 10'
   4. Differential bowing between adjacent panels of the same design [i1] = (+/-) 1/4"

2.13 FINISHES

A. Commercial (Structural) Finishes
   1. Commercial Grade: For precast not exposed to view. Remove fins and protrusions larger than 1/8 inch (3 mm) and fill holes with a diameter larger than ½ inch (13 mm). Rub or grind ragged edges. Faces shall be true, well-defined surfaces. Air holes, water marks, and color variations are acceptable. Allowable form joint offsets are limited to 3/16 in. (5mm).
   2. Grade B Finish: For beams, columns and tees. Fill air pockets and holes larger than 1/4 inch (6 mm) in diameter with sand-cement paste matching color of adjacent surfaces. Fill air holes greater than 1/8 inch (3 mm) in width that occur in high concentration (more than one per 2 in.^{2} [1300 mm^2]). Grind smooth form offsets or fins larger than 1/8 inch (3 mm). Repair surface blemishes due to dents in forms. Discoloration is permitted at form joints.

B. Smooth steel-trowel finish to all precast surfaces exposed to view in the exposed stairs, mechanical rooms, electrical rooms, laundry room and pool equipment room walls. Consolidate concrete, bring to proper level with straightedge, float and trowel to a smooth, uniform finish to mimic a smooth form finish.

C. Light broom finish to all precast surfaces exposed to view in the tennis facility.

D. Apply roughened surface finish in accordance with ACI 318 (ACI 318M) to precast concrete members that will receive concrete topping after installation.

E. Thin Brick Units: Thickness, not less than ½ in. (12.7 mm), nor more than 1 in. (25.4 mm) thick, with an overall tolerance of plus 0 in, minus 1/16 in. (+0 mm, -1.59 mm) for any unit dimension 8 in. (203.2 mm) or less and an overall tolerance of plus 0 in., minus 3/32 in. (+0 mm, -2.38 mm) for any unit dimension greater than 8 in. (203.2 mm) measured according to ASTM C67/C67M. Must comply with PCI Specifications for Embedded Clay Thin Brick.
   1. Face Size Utility, 3 5/8 in. (92.08 mm) high by 11 5/8 in. (295.28 mm) long.
      a. Metro Brick Company:
         1) TBR-1: Parkway – 107, Utility size, 1/3 running bond
         2) TBR-2: Brownstone – 108, Utility size, 1/3 running bond
   2. Special Shapes: Include corners, edge corners, and end edge corners.

F. Sand-blast architectural finish
   1. CC-3 with light sandblast as approved by architect after review of samples provided by precaster.

G. Colored Concrete:
   1. CC-1: To match TBR-1. Provide samples for Architect's approval
      a. White cement, colored admixture to achieve color match with approved samples provided by Architect. To be used at locations of TBR-1 and TBR-2.

2. CC-2: To match TBR-2. Provide samples for Architect's approval
    a. White cement, colored ad mixture to achieve color match with approved samples provided by Architect. To be used at locations of TBR-3.
3. CC-3: To match Senergy #361 Champagne Sahara/Medium Base. Provide samples for Architect's approval
    a. White cement, colored admixture to achieve color match with approved samples provided by Architect.

2.14 INSULATED FLAT WALL PANEL ACCESSORIES

A. Extruded-Polystyrene Board Insulation: ASTM C578, Type VI, 1.80 lb/cu. ft. (29 kg/cu. m); square edges; with R-value of 15 and thickness of 3". Stagger and tape all joints.

B. Wythe Connectors: Steel Wythe connectors manufactured to connect wythes of insulated precast concrete panels.
1. P-37 "M" Anchor shear connector by Dayton Superior.
2. Or approved equal.

2.15 FORM FABRICATION

A. Form: Accurately construct forms, mortar tight, of sufficient strength to withstand pressures due to concrete placement and vibration operations and temperature changes, and for pre-stressing and de-tensioning operations. Coat contact surfaces of forms with release agent before reinforcement is placed. Avoid contamination of reinforcement and pre-stressing tendons by release agent.

B. Maintain forms to provide completed structural precast concrete members of shapes, lines, and dimensions indicated in Contract Documents, within fabrication tolerances specified.
1. Edge and Corner Treatment of all exposed interior panel surfaces: Uniformly chamfered or as built-in on standard forms.
    a. Location: All walls with exposed concrete finishes. ie. stair shafts, mechanical / electrical rooms, pool equipment rooms, etc..

2.16 SOURCE QUALITY CONTROL

A. Quality-Control Testing: Test and inspect precast concrete according to PCI MNL 116 requirements. If using self-consolidating concrete also test and inspect according to PCI TR-6 "Interim Guidelines for the Use of Self-Consolidating Concrete" and ASTM C1611, ASTM C1712, ASTM C1610/C1610M, and ASTM C1621/C1621M.

B. Strength of precast concrete members will be considered deficient if units fail to comply with ACI 318 (ACI 318M) concrete strength requirements.

C. Testing: If there is evidence that strength of precast concrete members may be deficient or may not comply with ACI 318 (ACI 318M) requirements, fabricator shall employ an independent testing agency to obtain, prepare, and test cores drilled from hardened concrete to determine compressive strength according to ASTM C42/C42M and ACI 318/ACI 318M.
1. Test results shall be reported in writing on the same day that tests are performed, with copies to Architect, Contractor, and precast concrete fabricator. Test reports shall include the following:
    a. Project identification name and number.
    b. Date when tests were performed.
    c. Name of precast concrete fabricator.
    d. Name of concrete testing agency.
    e. Identification letter, name, and type of precast concrete member(s) represented by core tests; design compressive strength; type of failure; actual compressive strength at breaks, corrected for length-diameter ratio; and direction of applied load to core in relation to horizontal plane of concrete as placed.

D. Patching: If core test results are satisfactory and precast concrete members comply with requirements, clean and dampen core holes and solidly fill with precast concrete mixture that has no coarse aggregate, and finish to match adjacent precast concrete surfaces.

E. Acceptability. Structural precast concrete members that do not comply with acceptability requirements in PCI MNL 116, including concrete strength, and manufacturing tolerances, are unacceptable.

Chipped, spalled or cracked members may be repaired. Replace unacceptable units with precast concrete members that comply with requirements.

2.17 PRECAST CONCRETE STAIRS

A. Design stairs and components, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

B. Structural Performance of Stairs: Stairs shall withstand the effects of gravity loads including finishes and the following loads and stresses within limits and under conditions indicated.
   1. Uniform Live Load: 100 lbf/sq. ft. (4.79 kN/sq. m).
   2. Concentrated Live Load: 300 lbf (1.33 kN) applied on an area of 4 sq. in. (2580 sq. mm).
   3. Uniform and concentrated loads need not be assumed to act concurrently.
   4. Stair Reinforcement: Capable of withstanding stresses resulting from railing loads in addition to loads specified above.
   5. Limit deflection of treads, platforms, and framing members to L/240 or 1/4 inch (6.4 mm), whichever is less.

C. Dimensions of Stairs:
   1. See drawings for dimensions of stairs. Fabrication of stairs must comply with the tolerances required by code.

D. Cast-in Accessories:
   1. See Section 05 51 00 for railing.
      a. Provide steel sleeves for handrails.
      b. Sleeves shall be embedded and reinforced such that the structural requirements listed in section 05 51 00 are met.
   2. Provide Abrasive Aluminum Stair nosings:
      a. American Safety Tread, 801
      b. Or Equal.
   3. See details for more information.

E. Finishes of Precast stairs:
   1. See finish schedule. If no finish is specified, provide architectural finish as specified in this section.

PART 3 EXECUTION

3.01 PREPARATION

A. Furnish loose connection hardware and anchorage devices for precast concrete members to be embedded in or attached to the building structural frame or foundation before starting that Work. Provide locations, setting diagrams, templates and instructions for the proper installation of each anchorage device.

3.02 EXAMINATION

A. Verify site is free of obstructions and ready to receive the work.

B. Examine supporting structural frame or foundation and conditions for compliance with requirements for installation tolerances, bearing surface tolerances, and other conditions affecting precast concrete performance.

C. Proceed with precast concrete installation only after unsatisfactory conditions have been corrected.

D. Contractor shall notify precast concrete erector that supporting cast-in-place concrete foundation and building structural framing has attained minimum allowable design compressive strength or supporting steel or other structure is structurally ready to receive loads from precast concrete members prior to proceeding with installation.

E. Beginning the work of this section indicates acceptance of existing conditions.

3.03 THIN AND HALF BRICK FACINGS

A. Place form liner templates accurately to provide grid for brick facings. Provide solid backing and supports to maintain stability of liners while placing bricks and during concrete placement

B. Securely place brick units face down into form liner pockets and place concrete backing mixture.

C. Match appearance of sample units.

D. After stripping units, clean faces and joints of brick facing.

3.04 ERECTION

A. Install loose clips, hangers, bearing pads, and other accessories required for connecting structural precast concrete members to supporting members and backup materials.

B. Erect structural precast concrete level, plumb and square within the specified allowable erection tolerances. Provide temporary structural framing, shoring and bracing as required to maintain position, stability, and alignment of members until permanent connections are completed.
   1. Install temporary steel or plastic spacing shims or bearing pads as precast concrete members are being erected. Surface weld steel shims to each other to prevent shims from separating.
   2. Maintain horizontal and vertical joint alignment and uniform joint width as erection progresses.
   3. Remove projecting lifting devices and patch with sand-cement grout to fill voids within recessed lifting devices. Patch is to blend with color, texture, and uniformity of adjacent exposed surfaces and show no apparent line of demarcation between original and patch, when viewed in typical daylight illumination from a distance of 20 feet.
   4. Unless otherwise indicated provide uniform joint widths of ½ in. (12.7 mm).

C. Connect structural precast concrete members in position by bolting, welding, grouting, or as otherwise indicated on approved Shop (Erection) Drawings. Remove temporary shims, wedges, and spacers as soon as practical after connecting and/or grouting are completed.
   1. Disruption of roof flashing continuity by connections is not permitted; concealment within roof insulation is acceptable.

D. Welding: Comply with applicable AWS D1.1/D1.1M, AWS D1.4/D1.4M and AWS D1.6/D1.6M requirements for welding, welding electrodes, appearance of welds, quality of welds, and methods used in correcting welding work.
   1. Protect structural precast concrete members and bearing pads from damage during field welding or cutting operations and provide noncombustible shields as required.
   2. Welds not specified shall be continuous fillet welds, using not less than the minimum fillet as specified by AWS D1.1/D1.1M, D1.4/D1.4M or D1.6/D1.6M.
   3. For galvanized metal, clean weld affected metal surfaces with chipping hammer followed by brushing or power tool cleaning, and apply a minimum 0.004 inch (4 mil) thick coat of galvanized repair paint to galvanized surfaces in conformance with ASTM A780/A780M.
   4. Visually inspect all welds critical to precast concrete connections. Visually check all welds for completion and remove re-weld or repair all defective welds.

E. At bolted connections, use upset threads, thread locking compound or other approved means to prevent loosening of nuts after final adjustment.
   1. Where slotted connections are used, verify bolt position and tightness at installation. For sliding connections, properly secure bolt but allow bolt to move within connection slot.
   2. For slip critical connections, one of the following methods shall be used to assure proper bolt pretension:
      a. Turn-of-Nut – in accordance with AISC.
      b. Calibrated Wrench – in accordance with AISC.
      c. Twist-off Tension Control Bolt – meeting ASTM F3125/F3125M.
      d. Direct-Tension Control Bolt – meeting ASTM F3125/F3125M.
   3. For slip critical connections, the method to be used and the inspection procedure to be used shall be approved by the Architect and coordinated with the inspection agency.

F. Grouting or Dry-Packing Connections and Joints: Indicate joints to be grouted and any critical grouting sequences on Shop (Erection) Drawings. Grout open spaces at keyways, connections and joints where required or indicated. Provide reinforcing steel where indicated. Retain flowable grout in place until it gains sufficient strength to support itself. Fill joints completely without seepage to other surfaces. Alternatively, pack spaces with stiff dry pack grout material, tamping until voids are completely filled. Place grout and finish smooth, level, and plumb with adjacent concrete surfaces.

Promptly remove grout material from exposed surfaces before it affects finishes or hardens. Keep grouted joints damp for at least 24 hours after initial set.

1. Trowel top of grout joints on roofs smooth to prevent any unevenness that might interfere with placing of, or cause damage, to insulation and roofing. Finish transitions due to different surface levels not steeper than 1 to 12.

G. Field cutting of precast, pre-stressed concrete members is not permitted without approval of the Engineer.

H. Fasteners: Do not use drilled or power-actuated fasteners for attaching accessory items to precast, pre-stressed concrete members unless approved by Precast Engineer and Engineer of Record.

I. It is the sole responsibility of the precast erector to ensure erection stability / safety at all times until the building is in its final condition. The precast erector shall create and submit to the General Contractor for record an erection plan addressing the erection sequence and the stability of the structure during construction. The plan shall include temporary connection such as shoring, guying, bracing, and specific erection sequence requirements. At a minimum the temporary structural system shall be capable of resisting a 10 psf (working load) lateral load in any direction applied to the projected area of such members/system under consideration. The erection plan shall be signed sealed and a registered engineer in the state of the project.

3.05 ERECTION TOLERANCES

A. Erect structural precast concrete members level, plumb, square, and in alignment without exceeding the noncumulative erection tolerances of PCI MNL 135. Level out variations between adjacent members by jacking, loading, or any other feasible method as recommended by the fabricator, UNO.

B. Solid or insulated flat structural wall panels with architectural finishes to comply with PCI Tolerance Manual for Precast and Prestressed Concrete Construction MNL 135-00, section 12.5 Architectural Walls / Spandrel erection Tolerances.

3.06 SEALANT INSTALLATION

A. General Contractor shall coordinate with the precast erector as required to seal precast joints.

B. Install backer rod and sealant according to product manufacturer's instructions.

C. See section 07 92 00.

3.07 FIELD QUALITY CONTROL

A. Special Inspections: Contractor will engage a qualified special inspector to perform the following special inspections and prepare reports:

1. Erection of load bearing precast concrete members.
2. Welding: size, configuration, detailing per approved drawings.
3. Bolted connections prior to grouting procedures.
4. Bearing pad placement
5. Grouting of specialty connection e.g. Lenton grout sleeves
6. Grouting procedures.

B. Testing: Contractor will engage accredited independent testing and inspecting agency to perform field tests and inspections and prepare reports.

1. Field welds will be subject to visual inspections and dye penetrate or magnetic particle testing in accordance with ASTM E165/E165M or ASTM E1444. Testing agency shall be qualified in accordance with ASTM E543.
2. Testing agency will report test results promptly and in writing to Contractor and Architect.

C. Repair or remove and replace work where tests and inspections indicate that it does not comply with specified requirements.

D. Additional testing and inspecting, at Erector’s expense, will be performed to determine compliance of corrected work with specified requirements.

3.08 REPAIRS

A. Repairs will be permitted provided structural adequacy, serviceability and durability of members and appearance are not impaired.

B. Mix patching materials and repair units so cured patches blend with color, texture, and uniformity of adjacent exposed surfaces and show no apparent line of demarcation between original and repaired work, when viewed in typical daylight illumination from a distance of 20 feet (6 m).Prepare and repair damaged galvanized coatings with galvanizing repair paint according to ASTM A780/A780M.

C. Wire brush, clean, and paint damaged prime-painted components with same type of shop primer.

D. Remove and replace damaged structural precast concrete members when repairs do not comply with specified requirements.

3.09 CLEANING

A. Clean mortar, plaster, fireproofing, weld slag, and any other deleterious material from concrete surfaces and adjacent materials immediately.

B. Clean exposed surfaces of precast concrete members after erection and completion of joint treatment to remove weld marks, other markings, dirt, and stains.

C. Perform cleaning procedures, if necessary, according to precast concrete fabricator's recommendations. Protect adjacent work from staining or damage due to cleaning operations.

D. Do not use cleaning materials or processes that could change the appearance of exposed concrete finishes or damage adjacent materials.

END OF SECTION

SECTION 03 45 00
PRECAST ARCHITECTURAL CONCRETE

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Architectural precast concrete such as wall panels, sills, wall caps, column features, light sconce backing etc.

B. Supports, anchors, and attachments.

1.02 RELATED SECTIONS

A. Section 01 33 00 - Submittal Procedures.

B. Section 01 40 00 - Quality Requirements.

C. Section 01 45 33 - Code-Required Special Inspections and Procedures.

D. Section 01 60 00 - Product Requirements.

E. Section 03 20 00 - Concrete Reinforcement.

F. Section 03 30 00 - Cast in Place Concrete.

G. Section 03 45 70 - Architectural Site Cast Concrete Wall Panels.

H. Section 04 20 00 - Unit Masonry Assemblies.

I. Section 07 92 00 - Joint Sealants.

1.03 REFERENCE STANDARDS

A. ACI 301 American Concrete Institute; Specifications for Structural Concrete.

B. ACI 318 - Building Code Requirements for Structural Concrete; 2019 (Reapproved 2022).

C. ASTM A36/A36M - Standard Specification for Carbon Structural Steel; 2019.

D. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products; 2017.

E. ASTM A370 - Standard Test Methods and Definitions for Mechanical Testing of Steel Products; 2021.

F. ASTM A615/A615M - Standard Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement; 2022.

G. ASTM C33/C33M - Standard Specification for Concrete Aggregates; 2023.

H. ASTM C150/C150M - Standard Specification for Portland Cement; 2022.

I. ASTM C191 - Standard Test Methods for Time of Setting of Hydraulic Cement by Vicat Needle; 2021.

J. ASTM C260/C260M - Standard Specification for Air-Entraining Admixtures for Concrete; 2010a (Reapproved 2016).

K. ASTM C330/C330M - Standard Specification for Lightweight Aggregates for Structural Concrete; 2023.

L. ASTM C494/C494M - Standard Specification for Chemical Admixtures for Concrete; 2019, with Editorial Revision (2022).

M. ASTM C618 - Standard Specification for Coal Ash and Raw or Calcined Natural Pozzolan for Use in Concrete; 2023, with Editorial Revision.

N. ASTM C881/C881M - Standard Specification for Epoxy-Resin-Base Bonding Systems for Concrete; 2020a.

O. ASTM C939/C939M - Standard Test Method for Flow of Grout for Preplaced-Aggregate Concrete (Flow Cone Method); 2016.

P. ASTM C979/C979M - Standard Specification for Pigments for Integrally Colored Concrete; 2016.

Q. ASTM C989/C989M - Standard Specification for Slag Cement for Use in Concrete and Mortars; 2024.

R. ASTM C1059/C1059M - Standard Specification for Latex Agents for Bonding Fresh to Hardened Concrete; 2021.

S. ASTM C1107/C1107M - Standard Specification for Packaged Dry, Hydraulic-Cement Grout (Nonshrink); 2020.

T. ASTM C1293 - Standard Test Method for Determination of Length Change of Concrete Due to Alkali-Silica Reaction; 2018.

U. AWS D1.1/D1.1M - Structural Welding Code - Steel; 2020, with Errata (2023).

V. COE CRD-C 621 - Specification for Non-Shrink Grout; 1988.

W. PCI MNL-117 - Manual for Quality Control for Plants and Production of Architectural Precast Concrete Products; 2013.

X. PCI MNL-120 - PCI Design Handbook; 2017, with Errata (2021).

1.04 FIELD SAMPLES

A. Provide architectural precast concrete for field sample construction as designed by Architect. Field sample to indicate proposed range of color, texture and workmanship expected in completed work.

1.05 MOCK-UPS

A. Provide architectural precast concrete for mock-up construction as designed by Architect.
   1. Mock-up to indicate proposed range of color, texture and workmanship expected in completed work.

B. Coordinate mock-up with Section 04 20 00 - Unit Masonry.

C. Obtain acceptance of visual qualities of mock-up prior to proceeding with work.

1.06 SYSTEM DESCRIPTION

A. Members to withstand own weight, design loads due to pressure and suction of wind, erection forces, and live and dead loads.

B. Component connections to accommodate building movement. Provide adjustment to accommodate misalignment of structure without permanent distortion, damage to components, wracking of joint connection, breakage of seals, or moisture penetration.

1.07 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Design members under direct supervision of Professional Engineer experienced in design of precast concrete units.

C. Conform to requirements of PCI MNL-120 Manual for Structural Design of Architectural Precast Concrete and to ACI 318.

D. Precast Manufacturer and Erectors: Qualified in accordance with PCI MNL-117.

E. Welding: AWS D1.1/D1.1M.

F. Manufacture, Transportation, and Installation: Company specializing in providing architectural precast products and services normally associated with precast concrete construction with high quality architectural finishes.

1.08 SUBMITTALS

A. Material and Equipment Submittals: Submit the following under provisions of Section 01 33 00-Submittals:
   1. Shop Drawings: Including the following:
      a. Unit dimensions.
      b. Finishes.
      c. Reinforcement and connection details.
      d. Unit installation locations and identification marks.

e. Fabrication details.
f. Relationship to adjacent materials.
g. Erection drawings.

2. Manufacturer's Installation Instructions: Include surface cleaning instructions.
3. Samples: Submit two (2) 12" x 12" samples for approval of workmanship, finish and color. Each sample to show joint between pieces.
4. Mix Design: Indicate proposed mix design of each class of concrete to Architect/Engineer review 15 days prior to commencement of work. Do not begin concrete production until mixes have been reviewed and accepted by Architect/Engineer.
   a. Submit proposed mix design for each class of concrete specified, at least 14 days prior to placing the concrete. Include proportions of ingredients, aggregate analysis, cement brand and type, slump, water/cement ratio, and strength test reports for 7 and 28 day strengths.

B. Procurement:
1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
2. Submit inventory to Owner within 5 days of delivery of materials.
3. See Sections 01 33 00 and 01 60 00.

C. Perform and submit reports of Code Required Special Inspections as required in Section 01 45 33.

1.09 PRE-INSTALLATION CONFERENCE

A. Convene a pre-installation conference under provisions of Section 01 31 00 Project Management and Coordination one week prior to commencing work of this Section.
1. Require attendance of Contractor, precast installer, and parties' directly affecting work of this Section.
2. Review conditions of installation, installation procedures and coordination required with Related Work.

1.10 DELIVERY, STORAGE, AND HANDLING

A. Transport, handle, store, and protect under provisions of Section 01 60 00 - Materials and Equipment.

B. Handle precast members to position, consistent with their shape and design. Lift and support only from support points.

C. Lifting or Handling Equipment: Capable of maintaining units during manufacture, storage, transportation, erection, and in position for fastening.

D. Blocking and Lateral Support during Transport and Storage: Clean, non-staining, without causing harm to exposed surfaces. Provide temporary lateral support to prevent bowing and warping.

E. Protect edges of members to prevent staining, chipping, or spalling of concrete.

F. Mark units with date of production and final position in structure, in location not visible to exterior view.

PART 2 PRODUCTS

2.01 ACCEPTABLE MANUFACTURERS

A. Prior Approved Manufacturer, Certified by the Cast Stone Institute.

2.02 CONCRETE MATERIALS

A. Cement: ASTM C150/C150M, Portland Type I or Type III - normal white. All cement shall be from the same source throughout out project.

B. Cementitious Material: Use the following cementitious materials, of the same type, brand, and source, throughout Project:
1. Portland Cement: ASTM C150.
2. Fly Ash: ASTM C618, Class C or F.
3. Ground Granulated Blast-Furnace Slag: ASTM C989/C989M, Grade 100 or 120.

C. Fine and Coarse Aggregate: ASTM C33/C33M and ASTM C330/C330M.

D. Water: Drinkable.

E. Reinforcing Steel: ASTM A615/A615M deformed steel bars, galvanized finish; strength and size commensurate with precast unit design.

2.03 ADMIXTURES

A. Prohibited Admixtures: Calcium chloride thiocyanates or admixtures containing more than 0.05 percent chloride ions are not permitted.

B. Air Entraining Admixture:
   1. Air entraining admixture shall comply with ASTM C260/C260M, and be certified by the manufacturer to be compatible with other admixtures to be used. Acceptable manufacturers and products:
      a. Euclid Chemical Company - Air Mix or AEA-92 Series.
      b. Grace Construction Products - Darex or Daravair series.
      c. BASF - MB-VR or MB-AE.

C. Water-Reducing Admixture:
   1. Manufacturers:
      a. Euclid Chemical Company, Eucon Series.
      b. BASF, Pozzolith Series.
      c. WR Grace, WRDA Hycol.
   2. Conform to ASTM C494/C494M, Type A.
   3. Compatible with other admixtures in the same mix design.

D. Water-Reducing, Retarding Admixture:
   1. Manufacturers:
      a. Euclid Chemical Company, Eucon Retarder - 75 or Eucon DS.
      b. BASF, Pozzolith 100XR.
      c. WR Grace, Daratard Series.
   2. Conform to ASTM C494/C494M, Type D and not more than 0.05 percent chloride ions.
   3. Compatible with other admixtures in the same mix design.

E. High-Range Water-Reducing Admixture:
   1. Manufacturers:
      a. Euclid Chemical Company, Eucon 37, 537 or Plastol Series.
      b. BASF, Rheobuild 1000 or Glenium Series.
      c. WR Grace, Daracem or Adva series.
   2. Conform to ASTM C494/C494M, Type F or Type G and containing not more than 0.05 percent chloride ions.
   3. Compatible with other admixtures in the same mix design.

F. Viscosity Modifying Admixture (VMA): Liquid admixture used to optimize viscosity of Self-Consolidating Concrete (SCC). Products: Subject to compliance with requirements, provide the following at dosage rates per manufacturer's recommendation:
   1. "Visctrol", The Euclid Chemical Company.
   2. "Boral SL", Boral Material Technologies.
   3. "Rheomac VMA Series", Master Builders.

G. Non-corrosive, Non-chloride Accelerator: The admixture shall conform to ASTM C494/C494M, Type C or E, and not contain more chloride ions than are present in municipal drinking water. The admixture manufacturer must have long-term non-corrosive test data from an independent testing laboratory (of at least a year's duration) using an acceptable accelerated corrosion test method such as that using electrical potential measures.
   1. Manufacturers:
      a. Euclid Chemical Company, Accelguard 80/90 or NCA.
      b. Conform to ASTM C494/C494M, Type C or E.
      c. Compatible with other admixtures in the same mix design.

H. Alkali-Silica Reactivity Inhibitor: A specially formulated lithium nitrate admixture for the prevention of alkali-silica reactivity (ASR) in concrete. The admixture must have test data indicating conformance to ASTM C1293, “Standard Test Method for Concrete Aggregates by Determination of Length Change of Concrete Due to Alkali-Silica Reaction”.
   1. Manufacturers:
      a. “Eucon Integral ARC” by Euclid Chemical Co.

I. Color Pigment: ASTM C979/C979M, synthetic mineral-oxide pigments or colored water-reducing admixtures; color stable, free of carbon black, non-fading, and resistant to lime and other alkalis.
   1. Manufacturers:
      a. Davis Colors.
      b. Solomon Colors.
      c. Increte/Euclid Chemical.
   2. Color: As selected by Architect from manufacturer's full range.

J. Certification: Written conformance to the above-mentioned requirements and the chloride ion content of admixtures will be required from the admixture manufacturer prior to mix design review by the Engineer.

2.04 GROUT MATERIALS

A. Non-shrink Grout: Conforming to ASTM C1107/C1107M "Standard Specification for Packaged Dry, Hydraulic-Cement Grout (Non-Shrink). Premixed compound consisting of non-metallic aggregate, cement, water reducing and plasticizing agents; capable of developing minimum compressive strength of 7000 psi in 28 days;
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. "Masterflow 713", BASF
      b. "Euco-NS', Euclid Chemical Co;
      c. "Five Star Grout," U.S. Grout Co;

B. Non-Shrink Grout for Pre-Cast: Non-shrink, non-staining, high strength grout, conforming to ASTM C1107/C1107M “Standard Specification for Packaged Dry Hydraulic-Cement Grout, and providing extended working time for setting pre-cast concrete members; providing an initial setting time of 50 minutes per ASTM C191, providing positive expansion of .06% at 28 days, and capable of developing minimum compressive strengths of 5000 psi at 1 day and 12,000 psi at 28 days.
   1. Products: Subject to compliance with requirements, provide the following or approved equal:
      a. Euco Pre-cast Grout.

C. Cable Grout: Extremely flowable, pumpable, non-shrink, high-strength grout providing corrosion protection for steel cables, anchorages, and rods; providing a minimum flow rate of 15 to 25 seconds per ASTM C939/C939M and COE CRD-C 621; capable of developing minimum compressive strengths of 3000 psi at 1 day and 10000 psi at 28 days.
   1. Products: Subject to compliance with requirements, provide the following:
      a. Euco Cable Grout.

2.05 REPAIR MATERIALS

A. Epoxy Adhesive: ASTM C881/C881M, 2-component, 100% solids, epoxy resin, of type, grade and class to suit requirements.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Dural Series by The Euclid Chemical Co
      b. Sikadur Series by Sika Corp.

B. Bonding Agent: ASTM C1059/C1059M, Type II, non-re-dispersible, acrylic emulsion or styrene butadiene.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. “Flexcon” or “Akkro 7T”; Euclid Chemical Company.
      b. “Daraweld”; WR Grace.
      c. “Sika Latex”; Sika Corp.

C. Pre-Packaged Repair Mortar: Fast-setting, Portland cement based, repair mortar, capable of achieving a minimum 6,100 psi compressive strength in 28 days.
   1. Products: Subject to compliance with requirements, provide one of the following or approved equal:
      a. Speedcrete Redline by The Euclid Chemical Co.

2.06 SUPPORT DEVICES

A. Connecting and Support Devices: ASTM A36/A36M weldable steel.

B. Bolts, Nuts, and Washers: ASTM A370; high strength steel.

C. Anchors and Dowels:
   1. All anchors, dowels and other anchoring devices and shims shall be standard building stone anchors commercially available in a non-corrosive material such as zinc plated, galvanized steel, brass, epoxy or stainless steel Type 302 or 304.

2.07 PROPORTIONING AND DESIGN OF CONCRETE MIXES

A. Prepare design mixes for each type of concrete required. All mix designs shall be proportioned in accordance with Section 5.3, "Proportioning on the Basis of Field Experience and/or Trial Mixtures" of ACI 318-05. Submit mix designs on each class of concrete for. If field experience based mixes are submitted, all materials shall be from the same sources and with the same brand names as the previously utilized mix. If trial batches are used, the mix design shall be prepared by an independent testing laboratory and shall achieve an average compressive strength 1,200 psi higher than the specified strength. This over-design shall be increased to 1,400 psi when concrete strengths of 5,000 or more are used. The proposed mix designs shall be accompanied by complete standard deviation analysis or trial mixture test data. The testing facility shall not be the same as used for field quality control testing.
   1. Limit use of fly ash to not exceed 25 percent of cementitious content by weight.
   2. Limit use of slag to not exceed 40 percent of cementitious content by weight.
   3. The exact percentages used shall be based on a successful test placement on-site.

B. Design mixes may be prepared by a qualified independent testing agency or by qualified precast plant personnel at precast structural concrete fabricator's option.

C. Limit water-soluble chloride ions to .05%

D. Normal-Weight Concrete: materials to be used on Project, to provide normal-weight concrete with the following properties:
   1. Compressive Strength: 5000 psi at 28 days.

E. Self-consolidating concrete may be used for all architectural concrete and heavily reinforced members where noted on the plans, when approved by the architect/engineer. The concrete shall contain the specified high range water reducing admixture and viscosity modifying admixture as required. Slump flow shall be 20” to 30”. A successful placement onsite is required to verify proper workability, pumpability, setting time, and finish.

F. Admixtures:
   1. Use water-reducing admixture or high range water-reducing admixture (superplasticizer) in all concrete as required for placement and workability.
   2. Accelerating: Use the specified non-corrosive accelerator in all concrete, less than 8 inches in thickness, placed at air temperature below 50 degrees Fahrenheit.
   3. Use high-range water-reducing admixture in pumped concrete, concrete for industrial slabs, architectural concrete, parking structure slabs, concrete required to be watertight, self-consolidating concrete, concrete with ultimate strength of 5,000 psi or more, and concrete with water/cement ratios below 0.50.
   4. All concrete exposed to freezing and thawing and/or required to be watertight shall have an air content of 4.5% to 7.5%. All interior, slabs subject to vehicular abrasion, shall have a maximum air content of 3%.

G. Concrete Mix Adjustments: Concrete mix design adjustments may be proposed if characteristics of materials, Project conditions, weather, test results or other circumstances warrant, at no additional cost to Owner and as accepted by Architect. Laboratory test data for revised mix design and strength results must be submitted to and accepted by Architect before using in work.

2.08 JOINT SEALING

A. Provide non-sag, non-staining, urethane joint sealant (SLNT-1) at perimeter and intermediate joints in accordance with Section 07 92 00 - Joint Sealants.

2.09 FABRICATION

A. Maintain plant records and quality control program during production of precast units. Make records and access to plant available to Architect upon request.

B. Use rigid molds, constructed to maintain precast unit uniform in shape, size, and finish.

C. Maintain consistent quality during manufacture.

D. Embed reinforcing steel, anchors, inserts, plates, angles, and other cast-in items as indicated on shop drawings.

E. Fabricate connecting devices, plates, angles, inserts, bolts, and accessories. Fabricate to permit initial placement and final attachment.

F. Locate hoisting devices to permit removal after erection.

G. Cure units to develop concrete quality, and to minimize appearance blemishes such as non-uniformity, staining, or surface cracking.

H. Minor patching in plant acceptable, providing structural performance and appearance of units is not impaired.

I. Identify each precast unit with corresponding code on erection drawings, in location not visible in finish work.

2.10 FINISH - PRECAST UNITS

A. Ensure exposed-to-view finish surfaces of precast units are uniform in color and appearance.

B. Architectural Concrete Finish: Provide smooth, uniform finish upon form removal with no patching, stoning, or other form of repair, except washing, permitted unless otherwise noted, for walls, columns, and other surfaces visible to view when the work is complete. Use Self Consolidating Concrete. The surface shall match the approved jobsite mockup panel.

C. Color: Submit samples from manufacturer’s full range of colors for architect’s approval.

D. Texture: Light acid etch.

2.11 FINISH - SUPPORT DEVICES

A. Clean surfaces of rust, scale, grease and foreign matter.

B. Prime paint non-exposed connectors in two coats, except surfaces in direct contact with concrete or requiring field welding.

C. Galvanize exposed connectors after fabrication to 2.0 oz/sq ft in accordance with ASTM A123/A123M.

PART 3 EXECUTION

3.01 INSPECTION

A. Verify building structure, anchors, devices, and openings are ready to receive work of this Section.

B. Beginning of installation means acceptance of existing condition.

3.02 PREPARATION

A. Provide for erection procedures and induced loads during erection. Maintain temporary bracing in place until final support is provided.

B. Provide necessary hoisting equipment.

3.03 ERECTION

A. Erect units without damage to shape or finish. Replace or repair damaged panels.

B. Erect members level and plumb within allowable tolerances.

C. Align and maintain uniform horizontal and vertical joints as erection progresses.

D. When members require adjustment beyond design or tolerance criteria, discontinue affected work; advise Architect.

E. Fasten units in place. Perform welding, including tack welds, in accordance with AWS D1.1/D1.1M.

F. Touch-up field welds and scratched or damaged galvanized surfaces with cold process galvanizing coating in accordance with manufacturer's instructions.

G. Set vertical units dry, without grout, attaining joint dimension with lead or plastic spacers. Grout pack base of unit.

H. Seal perimeter and intermediate joints in accordance with Section 07 92 00 - Joint Sealants with SLNT-1.

I. Provide cotton rope weeps at each panel joint 6" above grade.

3.04 TOLERANCES

A. Offset from True Alignment Between Two Connecting Members: 1/8" maximum.

B. Out of Square: 1/8" in 10 feet maximum, non-cumulative.

C. Variation in Dimensions Indicated on Shop Drawings: Plus or minus 1/8".

D. Misalignment of Anchors, Inserts, Openings: 1/8" maximum.

E. Exposed Joint Dimension: 3/8" plus or minus 1/8".

3.05 PROTECTION

A. Protect members from damage.

B. Provide non-combustible shields during welding operations.

3.06 CLEANING

A. Clean all exposed surfaces after installation, in accordance with manufacturer's instructions. Use non-harmful, non-discoloring, and non-staining agents and devices. Protect adjacent areas from rundown.

B. Do not use metal cleaning tools and brushes or abrasive powders.

END OF SECTION

SECTION 04 2000
UNIT MASONRY

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Concrete masonry units (CMU's).
   2. Quarried Stone.
   3. Face brick.
   4. Joint reinforcement, anchorage and accessories.
   5. Installation of reinforcing bars in unit masonry.
   6. Installation of anchor bolts and other embedments in unit masonry.

1.02 RELATED SECTIONS

A. Section 01 31 00 - Project Management and Coordination.

B. Section 01 33 00 - Submittal Procedures.

C. Section 01 40 00 - Quality Requirements.

D. Section 01 45 33 - Code-Required Special Inspections and Procedures.

E. Section 01 60 00 - Product Requirements.

F. Section 03 20 00 - Concrete Reinforcement.

G. Section 03 30 00 - Cast in Place Concrete.

H. Section 03 45 00 - Precast Architectural Concrete.

I. Section 03 45 70 - Architectural Site Cast Concrete Wall Panels.

J. Section 07 27 26 - Fluid Applied Membrane Air Barriers.

K. Section 07 21 00 - Thermal Insulation.

L. Section 07 92 00 - Joint Sealants.

1.03 REFERENCE STANDARDS

A. ANSI A118.4 - American National Standard Specifications for Modified Dry-Set Cement Mortar; 2023.

B. ASTM A36/A36M - Standard Specification for Carbon Structural Steel; 2019.

C. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware; 2023.

D. ASTM A615/A615M - Standard Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement; 2022.

E. ASTM A951/A951M - Standard Specification for Steel Wire for Masonry Joint Reinforcement; 2022.

F. ASTM A996/A996M - Standard Specification for Rail-Steel and Axle-Steel Deformed Bars for Concrete Reinforcement; 2016.

G. ASTM A1008/A1008M - Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, Required Hardness, Solution Hardened, and Bake Hardenable; 2023, with Editorial Revision.

H. ASTM C55 - Standard Specification for Concrete Building Brick; 2023.

I. ASTM C67/C67M - Standard Test Methods for Sampling and Testing Brick and Structural Clay Tile; 2023.

J. ASTM C90 - Standard Specification for Loadbearing Concrete Masonry Units; 2023.

K. ASTM C91/C91M - Standard Specification for Masonry Cement; 2023.

L. ASTM C109/C109M - Standard Test Method for Compressive Strength of Hydraulic Cement Mortars (Using 50 mm [2 in.] Cube Specimens); 2023.

M. ASTM C140/C140M - Standard Test Methods for Sampling and Testing Concrete Masonry Units and Related Units; 2023a.

N. ASTM C144 - Standard Specification for Aggregate for Masonry Mortar; 2018.

O. ASTM C150/C150M - Standard Specification for Portland Cement; 2022.

P. ASTM C207 - Standard Specification for Hydrated Lime for Masonry Purposes; 2018.

Q. ASTM C216 - Standard Specification for Facing Brick (Solid Masonry Units Made from Clay or Shale); 2023.

R. ASTM C270 - Standard Specification for Mortar for Unit Masonry; 2019a, with Editorial Revision.

S. ASTM C404 - Standard Specification for Aggregates for Masonry Grout; 2024.

T. ASTM C476 - Standard Specification for Grout for Masonry; 2023.

U. ASTM C482 - Standard Test Method for Bond Strength of Ceramic Tile to Portland Cement Paste; 2020.

V. ASTM C494/C494M - Standard Specification for Chemical Admixtures for Concrete; 2019, with Editorial Revision (2022).

W. ASTM C618 - Standard Specification for Coal Ash and Raw or Calcined Natural Pozzolan for Use in Concrete; 2023, with Editorial Revision.

X. ASTM C652 - Standard Specification for Hollow Brick (Hollow Masonry Units Made from Clay or Shale); 2022.

Y. ASTM C780 - Standard Test Methods for Preconstruction and Construction Evaluation of Mortars for Plain and Reinforced Unit Masonry; 2023.

Z. ASTM C1019 - Standard Test Method for Sampling and Testing Grout for Masonry; 2020.

AA. ASTM C1242 - Standard Guide for Selection, Design, and Installation of Dimension Stone Attachment Systems; 2022a.

BB. ASTM C1506 - Standard Test Method for Water Retention of Hydraulic Cement-Based Mortars and Plasters; Current Edition.

CC. ASTM D226/D226M - Standard Specification for Asphalt-Saturated Organic Felt Used in Roofing and Waterproofing; 2017 (Reapproved 2023).

DD. ASTM D2287 - Standard Classification System and Basis for Specification for Nonrigid Vinyl Chloride Polymer and Copolymer Molding and Extrusion Compounds; 2019.

EE. ASTM E119 - Standard Test Methods for Fire Tests of Building Construction and Materials; 2022.

FF. NCMA TEK 8-2A - REMOVAL OF STAINS FROM CONCRETE MASONRY; Current Edition.

GG. NCMA TEK 10-2D - CONTROL JOINTS FOR CONCRETE MASONRY WALLS—EMPIRICAL METHOD; Current Edition.

HH. TMS 402/602 - Building Code Requirements and Specification for Masonry Structures; 2022, with Errata (2024).

II. Brick Industry Association (BIA) Technical Notes on Brick Construction 2006.

1.04 SUBMITTALS

A. Reinforcement shop drawings (structural walls):
   1. Show all wall reinforcing on elevations. Show placement of reinforcing, bar sizes, splice lengths, cover and bending detail. Include wall control joint locations.

B. Coursing shop drawings (stone walls):
   1. Submit proposed coursing pattern for approval.

C. Concrete Masonry Units:
   1. Submit certification of type, density, shrinkage and shape of concrete masonry units for each size/shape used.

2. Submit material certificates for each size and type of product, including ASTM C90 certification and ASTM C140/C140M test data.
3. Show conformance to shape requirements.

D. Grout:
1. Mix Design for each type of grout used (proportions of ingredients).
2. Material certificates: Portland Cement (ASTM C150/C150M), Fly Ash (ASTM C618), Hydrated Lime (ASTM C207).
3. Gradation of aggregates (ASTM C404).
4. Test breaks or historical data.

E. Mortar:
1. Mix Designs for each type of Mortar used.
2. Material certificates: Portland Cement (ASTM C150/C150M), Hydrated Lime (ASTM C207).
3. Gradation of sand (ASTM C144).
4. Range of colors for Architect's selection.

F. Submit product data and certification of masonry products to include:
1. Rebar positioners.
2. Horizontal joint reinforcement.
3. Veneer anchors.
4. Adjustable wall ties.
5. Rigid anchors.
6. Dovetail ties.

G. Samples for Verification: For each type and color of exposed masonry unit and mortar.

H. Mix Designs: For each type of mortar and grout. Include description of type and proportions of ingredients.
1. Include test reports for mortar mixes required to comply with property specification. Test according to ASTM C109/C109M for compressive strength, ASTM C1506 for water retention, and ASTM C91/C91M for air content.
2. Include test reports, according to ASTM C1019, for grout mixes required to comply with compressive strength requirement.

I. Mock-up:
1. See requirements for Mock-up panel in drawings and in Quality Assurance below.

J. Procurement:
1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
2. Submit inventory to Owner within 5 days of delivery of materials.
3. See Sections 01 33 00 and 01 60 00.

K. Perform and submit reports of Code Required Special Inspections as required in Section 01 45 33.

1.05 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Submit documentation indicating compliance with requirements for specified compressive strength of masonry f'm in accordance with the following. Testing to be arranged by Contractor and performed by testing agency contracted by Owner:
1. Unit Strength Method:
a. Determine compressive strength of masonry, based on strength of unit and type of mortar and masonry grout specified using TMS 402/602, Table 2. The following articles must be met:
1) Units conform to ASTM C55 or ASTM C90 and are sampled and tested in accordance with ASTM C140/C140M.
2) Masonry grout to meet specified requirements.

3) Mortar strength test in accord with ASTM C270.

C. Masonry Standard: Comply with TMS 402/602 unless modified by requirements in the Contract Documents.

D. Masonry Installer shall be certified by the Mason Contractors Association of America (MCAA).

E. Mock-up Panels: Build sample panels to verify selections made under sample submittals and to demonstrate aesthetic effects. Comply with requirements in Division 1 Section 01 40 00 "Quality Requirements" for mockups.
   1. Refer to drawings for more information on mock-up panel.
   2. Build sample panels to include each type of exposed unit masonry construction: See drawings for panel size.
   3. Construct sample panel such that all portions of the assembly are exposed. Include back up wall, vapor barrier, insulation, brick ties, mortar, drainage material, vents, weeps, and opening (if any).
   4. Sample panel shall not be incorporated into completed work.

1.06 PROJECT CONDITIONS

A. Cold-Weather Requirements: Do not work in temperatures below 35 degrees F and between 35 degrees F and 45 degrees F only when proper provision are made to protect the work from freezing for at least 48 hours after laying. Use enclosures as required. Remove any work exposed to freezing. Remove any frost from masonry setting beds and dry surface before laying brick. Obtain Owner's approval for all heating ingredients. The contractor shall provide artificial heat to enclosures in work areas when temperatures fall below 45 degrees F approved by Owner in advance.

B. Hot-Weather Requirements (above 80 degrees F): Protect the masonry and mortar from direct sunlight and exposure to wind to avoid rapid evaporation of water in the mortar before during and after masonry construction.

C. Mix mortar using sufficient quantities of water to ensure good workability in accordance with BIA recommendations. Control batching procedures to ensure proper and consistent proportions by measuring materials by volume. Use calibrating containers for each of the constituents for all batches throughout the project. Do not use shovel measurements of sand. Use volumetric dispenser for color admixtures where used. Mix with mechanical mortar mixer only for at least 3 minutes, but not more than 15 minutes. Use only workable mortar. Limit retempering to the extent practical and only retemper mortar on the board or in the tub one time. Completely clean remaining mortar off boards or tubs before adding fresh mortar. Use mortar within 2 hours of initial mixing at temperatures over 80 degrees F and 2 ½ hours at temperatures between 50 degrees F and 74 degrees F.

PART 2 PRODUCTS

2.01 MASONRY UNITS, GENERAL

A. Defective Units: Referenced masonry unit standards may allow a certain percentage of units to contain chips, cracks, or other defects exceeding limits stated in the standard. Do not use units where such defects will be exposed in the completed Work.

B. Fire-Resistance Ratings: Where indicated, provide units that comply with requirements for fire-resistance ratings indicated as determined by testing according to ASTM E119, by equivalent masonry thickness, or by other means, as acceptable to authorities having jurisdiction.

2.02 CONCRETE MASONRY UNITS

A. Shapes: Provide shapes indicated and for lintels, corners, jambs, sashes, movement joints, headers, bonding, and other special conditions.
   1. Structural walls shall be comprised of double corner units, open end (‘A’ Shaped) units, or double open end (‘H’ shaped) units. Use of stretcher block in structural walls may be subject to rejection.
      a. Stretcher units shall not be used in structural walls.

B. Finish:
   1. Typical: Standard.
   2. Where indicated on Drawings: Split faced.

a. Color: to be selected by Architect.

C. CMUs: ASTM C90.
1. Interior, non-load bearing walls: Unit Compressive Strength: Provide units with minimum average net-area compressive strength of 1,900 psi.
2. Structural walls: Unit Compressive Strength: Provide units with minimum average net-area compressive strength of 2,800 psi.
3. Density Classification: Normal weight.

D. Integral Water Repellent: At all exterior walls, provide units made with liquid polymeric, integral water repellent admixture that does not reduce flexural bond strength where indicated.
1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
a. ACM Chemistries; RainBloc.
b. BASF Aktiengesellschaft; Rheopel Plus.
c. Grace Construction Products, W. R. Grace & Co. - Conn.; Dry-Block.
d. Or approved equal.

E. Integral water repellant admixture for CMU shall only be used in conjunction with integral water repellant admixture for mortar.

2.03 QUARRIED STONE

A. Quarried Stone:
1. Hedberg Brick and Stone: Landmark Castle.
a. Coursed Ashlar Pattern:
1) Joints: Standard 3/8" joint treatment.
2) Lengths: 8" - 48"
3) Height: 2 1/4", 5" and 7 3/4" standard heights, patterned coursing.
(a) See Drawings for coursing pattern.
b. Depth:
1) Full Veneer, depth from 3" to 5". See details.
2) Thin Veneer, 3/4" to 1 1/2". See details.
(a) Comply with ASTM C1242 requirements for adhered stone system without mechanical anchors for maximum stone weight and maximum individual stone panel size.
(b) Comply with TMS 402/602 size requirements for adhered stone veneer units for maximum thickness, maximum face dimension, maximum face area and maximum weight per square foot.
2. Mortar Color:
a. See below.

2.04 BRICK

A. General: Provide shapes indicated and as follows:
1. For ends of sills and caps and for similar applications that would otherwise expose unfinished brick surfaces, provide units without cores or frogs and with exposed surfaces finished.
2. Provide special shapes for applications where shapes produced by sawing would result in sawed surfaces being exposed to view.

B. Face Brick: Facing brick complying with ASTM C652.
1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
a. Approved Manufactures:
1) Belden Brick Company:
(a) FBR-1 (Field Brick): No. 8530.
(b) FBR-2 (Accent Brick): Field Gray Velour.
b. Face Brick: ASTM C216:
1) Size: Utility, 3-5/8” by 3-5/8” x 11-5/8”.

2) Brick Pattern: Running Bond typ; Window Header Soldier course only. See elevations.
3) Concave joints.

c. Grade: SW.
d. Type: FBX.
e. Unit Compressive Strength: Provide units with minimum average net-area compressive strength of 3350 psi (23.10 MPa).
f. Initial Rate of Absorption: Less than 30 g/30 sq. in. (30 g/194 sq. cm) per minute when tested per ASTM C67/C67M.
g. Efflorescence: Provide brick that has been tested according to ASTM C67/C67M and is rated "not effloresced."
h. Surface Coating: Brick with colors or textures produced by application of coatings shall withstand 50 cycles of freezing and thawing per ASTM C67/C67M with no observable difference in the applied finish when viewed from 10 feet (3 m).
i. Size (Actual Dimensions): 3-5/8 inches (92 mm) wide by 3-5/8 inches (92 mm) high by 11-5/8 inches (295 mm) long.

2.05 MORTAR AND GROUT MATERIALS

A. Portland Cement: ASTM C150/C150M, Type I, except Type III may be used for cold-weather construction. Provide natural color or white cement as required to produce mortar color indicated.

B. Hydrated Lime: ASTM C207, Type S.

C. Masonry Cements are NOT acceptable.

D. Colored Cement Product: Packaged blend made from portland cement and hydrated lime and mortar pigments, all complying with specified requirements, and containing no other ingredients.
1. Products: Subject to compliance with requirements, provide the following:
a. Colored Portland Cement-Lime Mix:
1) Holcim; Rainbow Mortamix.
2) Lehigh Cement Company; Lehigh Custom Color Portland/Lime Cement.
3) Or approved equal.
b. Color: Submit full range of colors for Architect's Selection.

E. Aggregate for Mortar: ASTM C144.
1. For joints less than 1/4 inch (6 mm) thick, use aggregate graded with 100 percent passing the No. 16 (1.18-mm) sieve.
2. White-Mortar Aggregates: Natural white sand or crushed white stone.
3. Colored-Mortar Aggregates: Natural sand or crushed stone of color necessary to produce required mortar color.

F. Cold-Weather Admixture: Nonchloride, noncorrosive, accelerating admixture complying with ASTM C494/C494M, Type C, and recommended by manufacturer for use in masonry mortar of composition indicated.
1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
a. Euclid Chemical Company (The); Accelguard 80.
b. Grace Construction Products, W. R. Grace & Co. - Conn.; Morset.
c. Sonneborn Products, BASF; MasterSet FP 20.

G. Water: Potable.

2.06 REINFORCEMENT

A. Uncoated Steel Reinforcing Bars: ASTM A615/A615M or ASTM A996/A996M, Grade 60 (Grade 420).

B. Masonry Joint Reinforcement, General: ASTM A951/A951M.
1. Interior Walls: Hot-dip galvanized, carbon steel.
2. Exterior Walls: Hot-dip galvanized, carbon steel.
3. Wire Size for Side Rods: 9 gage.
4. Wire Size for Cross Rods: 9 gage.

5. Wire Size for Veneer Ties: 9 gage.
6. Spacing of Cross Rods, Tabs, and Cross Ties: Not more than 16 inches (407 mm) o.c.
7. Provide in lengths of not less than 10 feet (3 m), with prefabricated corner and tee units.
8. Masonry Joint Reinforcement for Single-Wythe Masonry: Either ladder or truss type with single pair of side rods.

C. Masonry Joint Reinforcement for Single-Wythe Masonry: truss type with single pair of side rods.
1. Products: Subject to compliance with requirements. Provide one of the following: Single Wythe Joint Reinforcement: Truss type; hot dipped galvanized to comply with ASTM A153/A153M, Class B2 coating; 9 gage side rods and cross ties. Provide preformed corners and tees.
   a. Hohman and Barnard, Inc., Lox-All No. 125 Truss-Mesh.
   b. Dur O Wal, Inc., Dur O Wal Truss.
   c. Wire Products, Blok Trus AA600.
   d. Masonry Reinforcing Corporation of America, Series 300, Single Wythe Truss Type.
   e. Or approved equal.

D. Masonry Joint Reinforcement for Veneers Anchored with Seismic Masonry-Veneer Anchors: Single 9 gage, hot-dip galvanized, carbon-steel continuous wire.

2.07 TIES AND ANCHORS

A. Materials: Provide ties and anchors specified in this article that are made from materials that comply with the following unless otherwise indicated.
1. Steel Sheet, Galvanized after Fabrication: ASTM A1008/A1008M, Commercial Steel, with ASTM A153/A153M, Class B coating.
2. Steel Plates, Shapes, and Bars: ASTM A36/A36M.

B. Wire Ties, General: Unless otherwise indicated, size wire ties to extend at least halfway through veneer but with at least 5/8 inch (16-mm) cover on outside face. Outer ends of wires are bent 90 degrees and extend parallel to face of veneer.

C. Adjustable “Mechanical” Anchors for Connecting to CMU: Provide anchors that allow vertical adjustment but resist tension and compression forces perpendicular to plane of wall.
1. Connector Section: Backplate fastened to CMU and extending through rigid insulation with hole for pintle attachment; formed from 12-gauge thick, galvanized after fabrication.
   a. Fastener: powder-actuated knurled shank 0.157” dia., 1” embedment, Hilti X-U or approved equal.
2. Pintles: 1/4" diameter 2 wire brite galvanized steel anchors hot dipped galvanized to comply with ASTM A153/A153M, Class B2 coating; size for 4” quarried stone and variable air space up to 6”.
   a. Hohman and Barnard, Inc.
   b. Wire Products.
   c. Dur O Wall, Inc.
   d. Masonry Reinforcing Corporation of America.
   e. Or approved equal.

D. Adjustable “Mechanical” Anchors for Connecting to Cold-Formed Steel Framing: Provide anchors that allow vertical adjustment but resist tension and compression forces perpendicular to plane of wall.
1. Connector Section: Backplate fastened through sheathing to cold-formed steel framing and extending through rigid insulation with hole for pintle attachment; formed from 12-gauge thick, galvanized after fabrication.
   a. Fastener: No. 10 self-drilling screw.
2. Pintles: 1/4" diameter 2 wire brite galvanized steel anchors hot dipped galvanized to comply with ASTM A153/A153M, Class B2 coating; size for 4” quarried stone and variable air space up to 6”.
   a. Hohman and Barnard, Inc.
   b. Wire Products.
   c. Dur O Wall, Inc.
   d. Masonry Reinforcing Corporation of America.
   e. Or approved equal.

2.08 EMBEDDED FLASHING MATERIALS

A. Flexible Flashing: Rubberized-Asphalt Flashing: Composite flashing product consisting of a pliable, adhesive rubberized-asphalt compound, bonded to a high-density, cross-laminated polyethylene film to produce an overall thickness of not less than 0.040 inch (1.02 mm).
   1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
      a. Carlisle Coatings & Waterproofing; CCW-705-TWF XLT Thru-Wall Flashing.
      b. Grace Construction Products, W. R. Grace & Co. - Conn.; Perm-A-Barrier Wall Flashing.
      c. Hohmann & Barnard, Inc.; Textroflash.
      d. Dayton Superior Corporation, Dur-O-Wal Division; Dur-O-Barrier Thru-Wall Flashing.
      e. Or approved equal.

B. Stainless Steel Base Flashings and Drip Edges: See section 07 62 00.

C. Solder and Sealants for Sheet Metal Flashings: As specified in Section 07 62 00 - Sheet Metal Flashing and Trim. Solder all flashing joints / end dams water tight see sheet metal section 07 62 00 for additional information.

D. Adhesives, Primers, and Seam Tapes for Flashings: Flashing manufacturer's standard products or products recommended by flashing manufacturer for bonding flashing sheets to each other and to substrates.

2.09 MISCELLANEOUS MASONRY ACCESSORIES

A. Preformed Control-Joint Gaskets: Made from PVC, complying with ASTM D2287, Type PVC-65406 and designed to fit standard sash block and to maintain lateral stability in masonry wall; size and configuration as indicated.
   1. Control Joint Resilient Keys: Shall be a poly vinyl chloride section with a minimum Shore Durometer hardness of 80. Shear section is 5/8” thick with 5/16” thick flanges. Total width shall be not less than 2 3/8”.
      a. Hohmann & Barnard Inc.; VS series (PVC joint)
      b. Wire-Bond; PVC joint.
      c. Dur-O-Wal - Rapid Poly Joint (PVC) regular.
      d. AA Wire Products - Blok-tite.
      e. Or approved equal.

B. Bond-Breaker Strips: Asphalt-saturated, organic roofing felt complying with ASTM D226/D226M, Type I (No. 15 asphalt felt).

C. Cellular Plastic Vent: One-piece, flexible extrusion made from UV-resistant polypropylene copolymer, full height and width of head joint and depth 1/8 inch (3 mm) less than depth of outer wythe, in color selected from manufacturer's standard.
   1. Vent Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
      a. Heckmann Building Products Inc.; No. 85 Cell Vent.
      b. Hohmann & Barnard, Inc.; Quadro-Vent.
      c. Or approved equal.

D. Rope Weeps: 3/8” diameter 100% cotton rope wicks, including core.

E. Cavity Drainage Material: Free-draining mesh, made from polymer strands that will not degrade within the wall cavity.
   1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
      a. Mortar Net USA, Ltd.; Mortar Net.
      b. Advanced Building Products Inc. MortarBreak.
      c. Or approved equal.
   2. Installation: Install products according to the sizes, vertical spacing, and locations as recommended by manufacturer.

3. Color to be selected by architect.

2.10 MORTAR AND GROUT MIXES

A. General: Do not use admixtures, including pigments, air-entraining agents, accelerators, retarders, water-repellent agents, antifreeze compounds, or other admixtures, unless otherwise indicated.
   1. Do not use calcium chloride in mortar or grout.
   2. Use portland cement-lime mortar unless otherwise indicated.
   3. For exterior masonry, use portland cement-lime mortar.
   4. For reinforced masonry, use portland cement-lime mortar.
   5. Add cold-weather admixture (if used) at same rate for all mortar that will be exposed to view, regardless of weather conditions, to ensure that mortar color is consistent.
   6. Water-reducing admixture is allowed only when approved by the Architect and Structural Engineer of Record, and only when the following conditions are continuously met when grouting cores:
      a. Fog or wet block cores to saturated surface dry (SSD) condition prior to and during grouting.
      b. Wet Faceshells of grouted block during grout cure.

B. Preblended, Dry Mortar Mix: Furnish dry mortar ingredients in form of a preblended mix. Measure quantities by weight to ensure accurate proportions, and thoroughly blend ingredients before delivering to Project site.

C. Polymer-Modified Mortar:
   1. One-component, polymer fiber reinforced veneer mortar, to meet or exceed ASTM C270 compressive strength requirements and IBC ASTM C482 Shear bond strength requirements, and ANSI A118.4 for adhered stone and tile.
   2. For use to adhere exterior thin masonry units as shown on drawings.
      a. Exposed joints shall use Cementitious Mortar above.
   3. Manufacturers and Products:
      a. Basis of Design: Laticrete MVIS Veneer Mortar.
      b. Or approved equal.
   4. Water: Potable.

D. Mortar for Unit Masonry: Comply with ASTM C270, Specification. Provide the following types of mortar for applications stated unless another type is indicated.
   1. For masonry below grade or in contact with earth, use Type M.
   2. For reinforced masonry, use Type M or S.
   3. For exterior, unreinforced, above-grade, use Type N.
   4. For interior non-load-bearing partitions, Type O may be used instead of Type N.
   5. For applications where another type is not indicated, use Type N.

E. Colored-Aggregate Mortar: Produce required mortar color by using colored aggregates and natural color or white cement as necessary to produce required mortar color.
   1. Mix to match adjacent masonry unit, provide color chart for architect approval. Match Architect's sample.
   2. Application: Use colored aggregate mortar for exposed mortar joints with the following units:
      a. Quarried Stone: Color, Ivory Buff to match Architect's sample.
      b. Face Brick: Assume (2) different colors. Architect to select colors from manufacturer's full range.

F. Grout for Unit Masonry: Comply with ASTM C476.
   1. Use grout of type indicated or, if not otherwise indicated, of type (fine or coarse) that will comply with Table 1.15.1 in TMS 402/602 for dimensions of grout spaces and pour height.

2.11 MASONRY SEALER

A. Penetrating, breathable Siloxane Sealer/Densifier. Comply with EPA's AIM VOC requirement
   1. Manufacturers and Products:
      a. Prosoco, SureKlean.

b. W.R. Meadows, Intraguard.
c. Or approved equal.

2. Application:
   a. Apply at exposed limestone and cast stone surfaces at base of building, between grade and base flashing.

PART 3 EXECUTION

3.01 INSTALLATION, GENERAL

A. Use full-size units without cutting if possible. If cutting is required to provide a continuous pattern or to fit adjoining construction, cut units with motor-driven saws; provide clean, sharp, unchipped edges. Allow units to dry before laying unless wetting of units is specified. Install cut units with cut surfaces and, where possible, cut edges concealed. Select and arrange units for exposed unit masonry to produce a uniform blend of colors and textures.

B. Do not use over burned or oil or grease marked bricks. Do not use bricks with cracks or splits in any face or with chips extending more than 1/8” from edges or ¼” from corners. Do not lay bricks until they are at least 60 days old.

C. When installing masonry under hot or cold conditions, follow guidelines found in BIA technical notes #1.

3.02 TOLERANCES

A. Dimensions and Locations of Elements:
   1. For dimensions in cross section or elevation do not vary by more than plus 1/2 inch (12 mm) or minus 1/4 inch (6 mm).
   2. For location of elements in plan do not vary from that indicated by more than plus or minus 1/2 inch (12 mm).
   3. For location of elements in elevation do not vary from that indicated by more than plus or minus 1/4 inch (6 mm) in a story height or 1/2 inch (12 mm) total.

B. Lines and Levels:
   1. For bed joints and top surfaces of bearing walls do not vary from level by more than 1/4 inch in 10 feet (6 mm in 3 m), or 1/2 inch (12 mm) maximum.
   2. For conspicuous horizontal lines, such as lintels, sills, parapets, and reveals, do not vary from level by more than 1/8 inch in 10 feet (3 mm in 3 m), 1/4 inch in 20 feet (6 mm in 6 m), or 1/2 inch (12 mm) maximum.
   3. For vertical lines and surfaces do not vary from plumb by more than 1/4 inch in 10 feet (6 mm in 3 m), 3/8 inch in 20 feet (9 mm in 6 m), or 1/2 inch (12 mm) maximum.
   4. For conspicuous vertical lines, such as external corners, door jambs, reveals, and expansion and control joints, do not vary from plumb by more than 1/8 inch in 10 feet (3 mm in 3 m), 1/4 inch in 20 feet (6 mm in 6 m), or 1/2 inch (12 mm) maximum.
   5. For lines and surfaces do not vary from straight by more than 1/4 inch in 10 feet (6 mm in 3 m), 3/8 inch in 20 feet (9 mm in 6 m), or 1/2 inch (12 mm) maximum.

C. Joints:
   1. For bed joints, do not vary from thickness indicated by more than plus or minus 1/8 inch (3 mm), with a maximum thickness limited to 1/2 inch (12 mm).
   2. For head and collar joints, do not vary from thickness indicated by more than plus 3/8 inch (9 mm) or minus 1/4 inch (6 mm).
   3. For exposed head joints, do not vary from thickness indicated by more than plus or minus 1/8 inch (3 mm).

3.03 LAYING MASONRY WALLS

A. Lay out walls in advance for accurate spacing of surface bond patterns with uniform joint thicknesses and for accurate location of openings, movement-type joints, returns, and offsets. Avoid using less-than-half-size units, particularly at corners, jambs, and, where possible, at other locations.

B. Bond Pattern for Exposed Masonry: Unless otherwise indicated, lay exposed masonry in running bond; do not use units with less than nominal 4-inch (100-mm) horizontal face dimensions at corners or jambs.

C. Bond Pattern for Quarried Stone: Lay stone in random pattern with continuous horizontal bed joints not to exceed 18” o.c. vertically. Bed joint to be continuous for a minimum of 6’-0” lengths.

D. Built-in Work: As construction progresses, build in items specified in this and other Sections. Fill in solidly with masonry around built-in items.

E. Fill space between steel frames and masonry solidly with mortar unless otherwise indicated.

F. Fill cores in hollow CMUs with grout 24 inches (600 mm) under bearing plates, beams, lintels, posts, and similar items unless otherwise indicated.

G. Protect incomplete masonry wall whenever work is not being performed by installing well fastened water proof coverings. Protect flashing against penetration or damage.

3.04 MORTAR BEDDING AND JOINTING

A. Lay hollow CMUs as follows:
   1. With entire units, including areas under cells, fully bedded in mortar at starting course on footings where cells are not grouted.

B. Lay solid masonry units with completely filled bed and head joints; butter ends with sufficient mortar to fill head joints and shove into place. Do not deeply furrow bed joints or slush head joints.

C. Tool exposed joints slightly concave when thumbprint hard, using a jointer larger than joint thickness unless otherwise indicated.

D. Cut joints flush for masonry walls to receive plaster or other direct-applied finishes (other than paint) unless otherwise indicated.

E. Collar Joints: Solidly fill collar joints by parging face of first wythe that is laid and shoving units of other wythe into place.

F. Corners: Provide interlocking masonry unit bond in each wythe and course at corners unless otherwise indicated.

G. Intersecting and Abutting Walls: Unless vertical expansion or control joints are shown at juncture, bond walls together as follows:
   1. Provide continuity with masonry joint reinforcement by using prefabricated T-shaped units.

3.05 CAVITY WALLS

A. Bond wythes of cavity walls together using one of the following methods:
   1. Individual Metal Ties: Provide ties as shown installed in horizontal joints, but not less than one metal tie for 2.0 sq. ft. (0.19 sq. m) of wall area spaced not to exceed 16 inches (406 mm) o.c. horizontally and 16 inches (406 mm) o.c. vertically. Stagger ties in alternate courses. Provide additional ties within 12 inches (305 mm) of openings and space not more than 36 inches (915 mm) apart around perimeter of openings. At intersecting and abutting walls, provide ties at no more than 24 inches (610 mm) o.c. vertically.
   2. Masonry Joint Reinforcement: Installed in horizontal mortar joints.
      a. Where bed joints of both wythes align, use ladder-type reinforcement extending across both wythes.
      b. Where bed joints of wythes do not align, use adjustable (two-piece) type reinforcement.

B. Keep cavities clean of mortar droppings and other materials during construction. Bevel beds away from cavity, to minimize mortar protrusions into cavity. Do not attempt to trowel or remove mortar fins protruding into cavity.

C. Apply air barrier to face of backup wythe to comply with Section 07 27 26.

D. Installing Cavity-Wall Insulation (where shown on drawings): Place small dabs of adhesive, spaced approximately 12 inches (300 mm) o.c. both ways, on inside face of insulation boards, or attach with plastic fasteners designed for this purpose. Fit courses of insulation between wall ties and other

confining obstructions in cavity, with edges butted tightly both ways. Press units firmly against inside wythe of masonry or other construction as shown.

3.06 MASONRY JOINT REINFORCEMENT

A. General: Install entire length of longitudinal side rods in mortar with a minimum cover of 5/8 inch (16 mm) on exterior side of walls, 1/2 inch (13 mm) elsewhere. Lap reinforcement a minimum of 6 inches (150 mm).
   1. Space reinforcement not more than 16 inches (406 mm) o.c.
   2. Space reinforcement not more than 8 inches (203 mm) o.c. in foundation walls and parapet walls.
   3. Provide reinforcement not more than 8 inches (203 mm) above and below wall openings and extending 12 inches (305 mm) beyond openings.

B. Interrupt joint reinforcement at control and expansion joints unless otherwise indicated.

C. Provide continuity at wall intersections by using prefabricated T-shaped units.

D. Provide continuity at corners by using prefabricated L-shaped units.

3.07 ANCHORING MASONRY VENEERS

A. Anchor masonry veneers to backup with masonry-veneer anchors to comply with the following requirements:
   1. Fasten screw-attached anchors through sheathing to wall framing and to concrete and masonry backup with metal fasteners of type indicated. Use two fasteners unless anchor design only uses one fastener.
   2. Embed tie sections in masonry joints. Provide not less than 2 inches (50 mm) of air space between back of masonry veneer and face of sheathing.
   3. Locate anchor sections to allow maximum vertical differential movement of ties up and down.
   4. Space anchors as indicated, but not more than 18 inches (406 mm) o.c. vertically and 16 inches (610 mm) o.c. horizontally with not less than 1 anchor for each 2.0 sq. ft. (0.33 sq. m) of wall area. Install additional anchors within 12 inches (305 mm) of openings and at intervals, not exceeding 36 inches (914 mm), around perimeter.

3.08 MASONRY CONTROL AND EXPANSION JOINTS

A. Install control joints where indicated on drawings.
   1. Where no joints are indicated, place joints every 20' OC on exterior walls, and every 25' OC in interior walls. Place joints according to NCMA TEK 10-2D.
      a. In areas exposed to view, coordinate joint location with Architect.

B. Joints to be 3/4" wide, unless detailed otherwise.

C. Install expansion joint material as specified above and as detailed on drawings.

D. Reinforce joints as recommended by NCMA standards.

3.09 FLASHING, WEEP HOLES, AND CAVITY DRAINAGE

A. General: Install embedded flashing and weep holes/vents in masonry at shelf angles, lintels, ledges, other obstructions to downward flow of water in wall, and where indicated.

B. Install flashing as follows unless otherwise indicated:
   1. Prepare masonry surfaces so they are smooth and free from projections that could puncture flashing. Slope flashing to exterior to promote prompt drainage. May slope 1/8” across brick width. Integrate flashing with backup wall waterproofing/ air barrier. Lap back up wall water proofing over unturned legs of through wall flashing 4”. Where flashing is within mortar joint, place through-wall flashing on sloping bed of mortar and cover with mortar. Before covering with mortar, seal penetrations in flashing with adhesive, sealant, or tape as recommended by flashing manufacturer.
   2. At lintels and shelf angles, extend flashing a minimum of 6 inches (150 mm) into masonry at each end. At heads and sills, extend flashing 6 inches (150 mm) at ends and turn up not less than 2 inches (50 mm) to form end dams. Solder all joints / end dams water tight.

3. Install metal drip edges beneath flexible flashing at exterior face of wall. Stop flexible flashing 1/2 inch (13 mm) back from outside face of wall and adhere flexible flashing to top of metal drip edge.
4. Install metal flashing termination beneath flexible flashing at exterior face of wall. Stop flexible flashing 1/2 inch (13 mm) back from outside face of wall and adhere flexible flashing to top of metal flashing termination.
5. Install flashing or drip edge in bed of sealant. See detail.

C. Install weep holes in head joints in exterior wythes of first course of masonry immediately above embedded flashing and at last head joint at top of cavity as follows:
1. Use specified weep/vent products to form weep holes.
2. Locate Cavity vents at top and bottom of masonry wall sections as shown on drawings.
3. Space weep holes 24 inches (600 mm) o.c. unless otherwise indicated.

D. Place cavity drainage material in cavities to comply with configuration requirements for cavity drainage material in "Miscellaneous Masonry Accessories" Article.

3.10 FIELD QUALITY CONTROL

A. Testing and Inspecting: Owner will engage special inspectors to perform tests and inspections and prepare reports. Allow inspectors access to scaffolding and work areas, as needed to perform tests and inspections. Retesting of materials that fail to comply with specified requirements shall be done at Contractor's expense.

B. Testing Prior to Construction: One set of tests.

C. Testing Frequency: One set of tests for each 5000 sq. ft. (464 sq. m) of wall area or portion thereof.

D. Concrete Masonry Unit Test: For each type of unit provided, according to ASTM C140/C140M for compressive strength.

E. Mortar Aggregate Ratio Test (Proportion Specification): For each mix provided, according to ASTM C780, 2500 psi.

F. Mortar Test (Property Specification): For each mix provided, according to ASTM C780. Test mortar for mortar air content and compressive strength.

G. Grout Test (Compressive Strength): For each mix provided, according to ASTM C1019, 3,000 psi.

3.11 REPAIRING, POINTING, AND CLEANING

A. In-Progress Cleaning: Clean unit masonry as work progresses by dry brushing to remove mortar fins and smears before tooling joints.

B. Final Cleaning: After mortar is thoroughly set and cured, clean exposed masonry as follows:
1. Test cleaning methods on sample wall panel; leave one-half of panel uncleaned for comparison purposes.
2. Protect surfaces from contact with cleaner.
3. Wet wall surfaces with water before applying cleaners; remove cleaners promptly by rinsing surfaces thoroughly with clear water.
4. Clean brick by bucket-and-brush hand-cleaning method described in BIA Technical Notes 20.
5. Clean concrete masonry by cleaning method indicated in NCMA TEK 8-2A applicable to type of stain on exposed surfaces.
6. Clean from top to bottom in small sections.

3.12 MASONRY WASTE DISPOSAL

A. Waste Disposal as Fill Material: Dispose of clean masonry waste, including excess or soil-contaminated sand, waste mortar, and broken masonry units, by crushing and mixing with fill material as fill is placed.
1. Do not dispose of masonry waste as fill within 18 inches of finished grade.

B. Excess Masonry Waste: Remove excess clean masonry waste as described above, and other masonry waste, and legally dispose of off Owner's property.

SECTION 05 1200
STRUCTURAL STEEL FRAMING

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Structural steel.
   2. Non-Shrink Grout.

1.02 RELATED SECTIONS

A. Section 01 31 00 - Project Management and Coordination.

B. Section 01 33 00 - Submittal Procedures.

C. Section 01 40 00 - Quality Requirements.

D. Section 01 45 33 - Code-Required Special Inspections and Procedures.

E. Section 01 60 00 - Product Requirements.

F. Section 03 20 00 - Concrete Reinforcement.

G. Section 03 30 00 - Cast in Place Concrete.

H. Section 03 40 70 - Architectural Site-Cast Concrete Wall Panels.

I. Section 04 20 00 - Unit Masonry Assemblies.

J. Section 05 12 19 - Buckling-Restrained Braces

K. Section 05 31 00 - Steel Decking.

L. Section 05 40 00 - Cold Formed Metal Framing.

M. Section 06 20 00 - Rough Carpentry.

N. Section 09 91 00 - Painting.

1.03 REFERENCE STANDARDS

A. AISC 303 - Code of Standard Practice for Steel Buildings and Bridges; 2022.

B. AISC 360 - Specification for Structural Steel Buildings; 2022, with Errata (2023).

C. ASTM A6/A6M - Standard Specification for General Requirements for Rolled Structural Steel Bars, Plates, Shapes, and Sheet Piling; 2023.

D. ASTM A36/A36M - Standard Specification for Carbon Structural Steel; 2019.

E. ASTM A53/A53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless; 2022.

F. ASTM A108 - Standard Specification for Steel Bar, Carbon and Alloy, Cold-Finished; 2018.

G. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products; 2017.

H. ASTM A216/A216M - Standard Specification for Steel Castings, Carbon, Suitable for Fusion Welding, for High-Temperature Service; 2021.

I. ASTM A500/A500M - Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes; 2023.

J. ASTM A563/A563M - Standard Specification for Carbon and Alloy Steel Nuts (Inch and Metric); 2021a.

K. ASTM A572/A572M - Standard Specification for High-Strength Low-Alloy Columbium-Vanadium Structural Steel; 2021, with Editorial Revision.

L. ASTM A668/A668M - Standard Specification for Steel Forgings, Carbon and Alloy, for General Industrial Use; Current Edition.

M. ASTM A780/A780M - Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings; 2020.

N. ASTM A992/A992M - Standard Specification for Structural Steel Shapes; 2022.

O. ASTM C1107/C1107M - Standard Specification for Packaged Dry, Hydraulic-Cement Grout (Nonshrink); 2020.

P. ASTM E94/E94M - Standard Guide for Radiographic Examination Using Industrial Radiographic Film; 2017.

Q. ASTM E164 - Standard Practice for Contact Ultrasonic Testing of Weldments; 2019.

R. ASTM E165/E165M - Standard Practice for Liquid Penetrant Testing for General Industry; 2023.

S. ASTM E709 - Standard Guide for Magnetic Particle Testing; 2021.

T. ASTM F436/F436M - Standard Specification for Hardened Steel Washers Inch and Metric Dimensions; Current edition.

U. ASTM F1554 - Standard Specification for Anchor Bolts, Steel, 36, 55, and 105-ksi Yield Strength; 2020.

V. ASTM F3125/F3125M - Standard Specification for High Strength Structural Bolts and Assemblies, Steel and Alloy Steel, Heat Treated, Inch Dimensions 120 ksi and 150 ksi Minimum Tensile Strength, and Metric Dimensions 830 MPa and 1040 MPa Minimum Tensile Strength; 2023.

W. AWS D1.1/D1.1M - Structural Welding Code - Steel; 2020, with Errata (2023).

AA. SSPC-SP 2 - Hand Tool Cleaning; 2024.

BB. SSPC-SP 3 - Power Tool Cleaning; 2024.

CC. SSPC-SP 6 - Commercial Blast Cleaning; 2007.

DD. SSPC-SP 10 - Near-White Metal Wet Abrasive Blast Cleaning; 2015.

1.04 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawing submittals must conform with coordinated BIM models. See Section 01 31 00.05.

C. Shop Drawings: Show fabrication of structural-steel components.
   1. Include details of cuts, connections, splices, headed studs, counts, camber, holes, and other pertinent data.
   2. Include embedment drawings.
   3. Indicate welds by standard AWS symbols, distinguishing between shop and field welds, and show size, length, and type of each weld. Show backing bars that are to be removed and supplemental fillet welds where backing bars are to remain.
   4. Indicate type, size, and length of bolts, distinguishing between shop and field bolts. Identify pre-tensioned and slip-critical high-strength bolted connections.
   5. Shop drawings indicating number of studs and placement along beams. Actual stud layout to be provided in deck shop drawings.
   6. For structural steel connections that are not explicitly detailed in the Drawings, the fabricator shall design the connections in accordance with AISC 360 using LRFD methods.
      a. Include structural design data (calculations) signed and sealed by qualified professional engineer, registered in the state of the project, responsible for their preparation.
      b. Calculation shall be organized, clear and concise and shall include table of contents and page numbers.

c. Calculations shall be submitted concurrently with shop/erection drawings and shall be signed and sealed at time of submission. Shop drawings submitted without corresponding calculations will not be reviewed by the engineer.
d. Shop Drawings received without corresponding calculations will not be reviewed by the Engineer.

7. Phasing diagram indicating scope of work for each phase of work.
8. Changes from Construction documents:
   a. Cloud and clearly identify all changes or deviations from the construction documents.

D. Qualification Data: For qualified installer, fabricator (including AISC Certification), professional engineer, testing agency.

E. Welding certificates.

F. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats.

G. Mill test reports for structural steel, including chemical and physical properties.

H. Product Test Reports: For the following:
1. Bolts, nuts, and washers including mechanical properties and chemical analysis.
2. Direct-tension indicators.
3. Tension-control, high-strength bolt-nut-washer assemblies.
4. Shop primers.
5. Non-shrink grout.

I. Procurement:
1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
2. Submit inventory to Owner within 5 days of delivery of materials.
3. See Sections 01 33 00 and 01 60 00.

J. Perform and submit reports of Code Required Special Inspections as required in Section 01 45 33.

1.05 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Fabricator Qualifications: A qualified fabricator that participates in the AISC Quality Certification Program and is designated an AISC-Certified Plant, Category BU or is accredited by the IAS Fabricator Inspection Program for Structural Steel (Acceptance Criteria 172).

C. Installer Qualifications: Qualified installer who participates in AISC Quality Certification Program and is designated an AISC-Certified Erector, Category ACSE.

D. Welding Qualifications: Qualify procedures and personnel per AWS D1.1/D1.1M, "Structural Welding Code - Steel."
1. Welders and welding operators performing Work on bottom-flange, demand-critical welds shall pass supplemental welder qualification testing, as required by AWS D1.8. FCAW-S and FCAW-G shall be considered separate processes for welding personnel qualification.

E. Comply with applicable provisions of the following specifications and documents:
1. AISC 303.
2. AISC 360.
3. RCSC (HSBOLT) "Specification for Structural Joints Using High Strength Bolts."

1.06 DELIVERY, STORAGE, AND HANDLING

A. Store materials to permit easy access for inspection and identification. Keep steel members off ground and spaced by using pallets, dunnage, or other supports and spacers. Protect steel members and packaged materials from corrosion and deterioration.

1. Do not store materials on structure in a manner that might cause distortion, damage, or overload to members or supporting structures. Repair or replace damaged materials or structures as directed.

B. Store fasteners in a protected place in sealed containers with manufacturer's labels intact.
   1. Fasteners may be repackaged provided Owner's testing and inspecting agency observes repackaging and seals containers.
   2. Clean and relubricate bolts and nuts that become dry or rusty before use.
   3. Comply with manufacturers' written recommendations for cleaning and lubricating ASTM F3125/F3125M fasteners and for retesting fasteners after lubrication.

1.07 COORDINATION

A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' recommendations to ensure shop primers and topcoats are compatible with one another.

B. Coordinate installation of anchorage items to be embedded in or attached to other construction without delaying Work. Provide setting diagrams, sheet metal templates, instructions, and directions for installation.

PART 2 PRODUCTS

2.01 MATERIALS

A. W-Shapes: ASTM A992/A992M or ASTM A572/A572M, Grade 50 (345).

B. Channels, Angles, S, M HP, C and, MS Shapes: ASTM A36/A36M or ASTM A572/A572M, Grade 50 (345).

C. Plate and Bar: ASTM A36/A36M or ASTM A572, Grade 50.

D. Cold-Formed Hollow Structural Sections: ASTM A500/A500M, Grade C, structural tubing.

E. Steel Pipe: ASTM A53/A53M, Type E, Grade B.

F. Steel Castings: ASTM A216/A216M, Grade WCB with supplementary requirement S11.

G. Steel Forgings: ASTM A668/A668M.

H. Welding Electrodes: Comply with AWS requirements. Provide E70 electrodes unless indicated otherwise.

I. Headed Anchors and Threaded Studs:
   1. As manufactured by Nelson Division of TRW, or equal conforming to ASTM A108 and AWS D1.1/D1.1M.
   2. Minimum Fu = 65 ksi.

2.02 BOLTS, CONNECTORS, AND ANCHORS

A. High-Strength Bolts, Nuts, and Washers: ASTM F3125/F3125M, Type 1, heavy-hex steel structural bolts; ASTM A563/A563M, Grade C, Class 8S heavy-hex carbon-steel nuts; and ASTM F436/F436M, Type 1, hardened carbon-steel washers; all with plain finish.
   1. Minimum Diameter: 3/4 inch (76 mm).

B. Zinc-Coated High-Strength Bolts, Nuts, and Washers: ASTM F3125/F3125M, Type 1, heavy-hex steel structural bolts; ASTM A563/A563M, Grade DH, Class 10S heavy-hex carbon-steel nuts; and ASTM F436/F436M, Type 1, hardened carbon-steel washers.
   1. Finish: Hot-dip zinc coating.

C. Headed Anchor Rods: ASTM F1554, Grade 36, or Grade 105 (As indicated on the drawings) straight.
   1. Nuts: ASTM A563/A563M hex carbon steel.
   2. Plate Washers: ASTM A36/A36M carbon steel.
   3. Washers: ASTM F436/F436M, Type 1, hardened carbon steel.
   4. Finish: Plain.

2.03 NON-SHRINK GROUT

A. Nonmetallic, Shrinkage-Resistant Grout: ASTM C1107/C1107M, factory-packaged, nonmetallic aggregate grout, non-corrosive and non-staining, mixed with water to consistency suitable for application and a 30-minute working time.
   1. Acceptable Products:
      1) Masterflow 713 Plus by BASF Building Systems.
      2) Crystex by L&M Construction Chemicals, Inc.
      3) 1107 Advantage Grout by Dayton Superior.
      4) NS Grout by Euclid.

2.04 WATER PROTECTIVE COATING

A. Basis of Design.
   1. Carboline - “Bitumastic No. 50” or "Bitumastic 300M"

B. Other acceptable products:
   1. Rustoleum - "Coal Tar Epoxy C9578"
   2. Carboline - "Carboguard 635"
   3. Carboline - "Carbomastic 615"
   4. Or approved equal.

2.05 PRIMER

A. Primer: SSPC-Paint 15, or manufacturer's standard shop primer complying with performance requirements in SSPC-Paint 15, lead- and chromate-free, nonasphaltic, rust-inhibiting, complying with MPI (APSM) #79 and compatible with topcoat.

2.06 ANCHORS

A. Adhesive Anchors: Size and embedment indicated on Drawings:
   1. Provide product indicated on drawings. (No Substitutions)

B. Expansion Anchors: Size and embedment indicated on Drawings.
   1. Provide product indicated on drawings. (No Substitutions)

C. Screw Anchors: Size and embedment indicated on Drawings.
   1. Provide product indicated on drawings. (No Substitutions)

2.07 FABRICATION

A. Structural Steel: Fabricate and assemble in shop to greatest extent possible. Fabricate per AISC's "Code of Standard Practice for Steel Buildings and Bridges" and AISC 360.
   1. Camber structural-steel members where indicated.
   2. Fabricate beams with rolling camber up.
   3. Identify high-strength structural steel per ASTM A6/A6M and maintain markings until structural steel has been erected.
   4. Mark and match-mark materials for field assembly.
   5. Complete structural-steel assemblies, including welding of units, before starting shop-priming operations.

B. Holes: Provide holes required for securing other Work to structural steel and for other Work to pass through steel framing members.
   1. Cut, drill, or punch holes perpendicular to steel surfaces. Do not thermally cut bolt holes or enlarge holes by burning.
   2. Baseplate Holes: Cut, drill, mechanically thermal cut, or punch holes perpendicular to steel surfaces.
   3. Weld threaded nuts to framing and other specialty items indicated to receive other Work.

2.08 SHOP CONNECTIONS

A. High-Strength Bolts: Shop install high-strength bolts per RCSC (HSBOLT) "Specification for Structural Joints Using High Strength Bolts" for type of bolt and type of joint specified.

1. Joint Type: Snug tightened.

B. Weld Connections: Comply with AWS D1.1/D1.1M for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding Work.
   1. Assemble and weld built-up sections by methods that will maintain true alignment of axes without exceeding tolerances in AISC 303 for mill material.

2.09 SHOP PRIMING

A. Shop prime steel surfaces except the following:
   1. Surfaces embedded in concrete or mortar. Extend priming of partially embedded members to a depth of 2 inches (50.8 mm).
   2. Surfaces to be field welded.
   3. Galvanized surfaces.

B. Primer: Fabricator's standard lead- and chromate-free, nonasphaltic, rust-inhibiting primer complying with MPI#79, VOC requirements in 09 91 00 Painting and compatible with topcoat.

C. Surface Preparation: Clean surfaces to be painted. Remove loose rust and mill scale and spatter, slag, or flux deposits. Prepare surfaces per the following specifications and standards:
   1. SSPC-SP 2, "Hand Tool Cleaning."
   2. SSPC-SP 3, "Power Tool Cleaning."
   3. SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
   4. SSPC-SP 10/NACE No. 2, "Near-White Blast Cleaning."

D. Priming: Immediately after surface preparation, apply primer per manufacturer's written instructions and at rate recommended by SSPC to provide a minimum dry film thickness of 1.5 mils (0.038 mm). Use priming methods that result in full coverage of joints, corners, edges, and exposed surfaces.
   1. Stripe paint corners, crevices, bolts, welds, and sharp edges.
   2. Apply 2 coats of shop paint to surfaces that are inaccessible after assembly or erection. Change color of second coat to distinguish it from first.

E. Painting: Prepare steel and apply a 1-coat, non-asphaltic primer complying with SSPC-PS Guide 7.00, "Painting System Guide 7.00: Guide for Selecting One-Coat Shop Painting Systems," to provide a dry film thickness of not less than 1.5 mils (0.038 mm).

2.10 GALVANIZING

A. Hot-Dip Galvanized Finish: Apply zinc coating by hot-dip process to structural steel per ASTM A123/A123M.
   1. Fill vent and drain holes that will be exposed in finished Work unless they will function as weep holes, by plugging with zinc solder and filing off smooth.
   2. Galvanize lintels and shelf angles attached to structural-steel frame and located in exterior walls.

B. Galvanizing Repair Paint: ASTM A780/A780M.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify, with certified steel erector present, elevations of concrete- and masonry-bearing surfaces and locations of anchor rods, bearing plates, and other embedments for compliance with requirements.
   1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Provide temporary shores, guys, braces, and other supports during erection to keep structural steel secure, plumb, and in alignment against temporary construction loads and loads equal in intensity to design loads. Remove temporary supports when permanent structural steel, connections, and bracing are in place unless otherwise indicated.
   1. Do not remove temporary shoring supporting composite deck construction until cast-in-place concrete has attained its design compressive strength.

3.03 ERECTION

A. Set structural steel accurately in locations and to elevations indicated and per AISC 303 and AISC 360.

B. Base Bearing and Leveling Plates: Clean concrete- and masonry-bearing surfaces of bond-reducing materials, and roughen surfaces prior to setting plates. Clean bottom surface of plates.
   1. Set plates for structural members on wedges, shims, or setting nuts as required.
   2. Weld plate washers to top of baseplate when indicated on drawings.
   3. Snug-tighten anchor rods after supported members have been positioned and plumbed. Do not remove wedges or shims but, if protruding, cut off flush with edge of plate before packing with grout.
   4. Promptly pack grout solidly between bearing surfaces and plates so no voids remain. Neatly finish exposed surfaces; protect grout and allow to cure.

C. Maintain erection tolerances of structural steel within AISC's "Code of Standard Practice for Steel Buildings and Bridges."

D. Align and adjust various members that form part of complete frame or structure before permanently fastening. Before assembly, clean bearing surfaces and other surfaces that will be in permanent contact with members. Perform necessary adjustments to compensate for discrepancies in elevations and alignment.
   1. Level and plumb individual members of structure.
   2. Make allowances for difference between temperature at time of erection and mean temperature when structure is completed and in service.

E. Splice members only where indicated.

F. Do not use thermal cutting during erection.

G. Do not enlarge unfair holes in members by burning or using drift pins. Ream holes that must be enlarged to admit bolts.

H. Shear Connectors: Prepare steel surfaces as recommended by manufacturer of shear connectors. Use automatic end welding of headed-stud shear connectors per AWS D1.1/D1.1M and manufacturer's written instructions.

3.04 FIELD CONNECTIONS

A. High-Strength Bolts: Install high-strength bolts per RCSC's "Specification for Structural Joints Using High Strength Bolts" for type of bolt and type of joint specified.
   1. Joint Type: Snug tightened.

B. Weld Connections: Comply with AWS D1.1/D1.1M for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding Work.
   1. Comply with AISC 303 and AISC 360 for bearing, alignment, adequacy of temporary connections, and removal of paint on surfaces adjacent to field welds.
   2. Assemble and weld built-up sections by methods that will maintain true alignment of axes without exceeding tolerances in AISC's "Code of Standard Practice for Steel Buildings and Bridges" for mill material.

3.05 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified independent testing and inspecting agency to inspect items listed in drawings and in section 01 45 33.

B. Bolted Connections: Bolted connections will be tested and inspected per RCSC's "Specification for Structural Joints Using High Strength Bolts."

C. Welded Connections: Field welds will be visually inspected per AWS D1.1/D1.1M. In addition to visual inspection, test and inspect field welds in accordance with AWS D1.1/D1.1M and the following inspection procedures, at testing agency's option:
   1. Liquid Penetrant Inspection: ASTM E165/E165M.

2. Magnetic Particle Inspection: ASTM E709; performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration are not accepted.
3. Ultrasonic Inspection: ASTM E164.
4. Radiographic Inspection: ASTM E94/E94M.

D. Shear Stud Connectors: In addition to visual inspection, test and inspect field-welded shear connectors according to requirements in AWS D1.1/D1.1M for stud welding and as follows:
1. Perform bend tests if visual inspections reveal either a less-than-continuous 360-degree flash or welding repairs to headed studs and shear connectors.
2. Conduct tests on additional shear connectors if weld fracture occurs on headed studs and shear connectors already tested, per requirements in AWS D1.1/D1.1M.

E. Expansion Bolting and Adhesive Anchoring in concrete members: Per IBC Table 1705.3, verify bolt type and dimensions, concrete type and compressive strength, pre-drilled hole dimensions, embedment, spacing, edge distances, slab thickness, and tightening torque. Whether inspections are required to be continuous or periodic.

F. Correct deficiencies in Work that test reports and inspections indicate does not comply with Contract Documents.

END OF SECTION

SECTION 05 1219
BUCKLING-RESTRAINED BRACES

PART 1 GENERAL

1.01 SUMMARY

A. Provide all parts, materials, and labor required for the design, delivery, testing and erection of buckling-restrained braces, which are designed by the manufacturer to meet stiffness, yield strength, and elongation requirements as indicated on the Drawings and other requirements specified Herein.

B. Related Sections

1.04 DEFINITIONS

A. Buckling-Restrained Brace (BRB): A steel brace consisting of an outer steel casing, an inner steel core, and a concrete matrix between the core and the outer steel casing. The inner steel core resists against tensile and compressive axial loads and is restrained from buckling by the concrete contained in the outer steel casing.

1.05 SUBMITTALS

A. The following submittals shall be made.

B. Proposed Design of Buckling-Restrained Braces:
1. Design Drawings shall clearly display size, thickness and length of exterior brace casing as well as configuration and size of the full length of the core plates.
2. Calculations shall be provided to display the ability of the proposed “BRB’s” to meet the Performance Criteria described herein.
3. The Design Drawings and Calculations shall be sealed and stamped by a Structural/Professional Engineer (S.E.) licensed in the State of Utah.
4. Preliminary design: At contractor’s option, make an initial submittal of the above items without sealed S.E. stamp for review by project Structural Engineer of Record, Architect and Jurisdictional Authority and coordination with structural steel contractor. Once all reviews are complete and incorporated, resubmit with sealed S.E. stamps for record.

C. Shop Drawings:
1. Shop drawings shall clearly display all geometries necessary to manufacture BRB’s including plate thickness, lengths, plate dimensions inside and outside of the casing, and casing dimensions.
2. Shop drawings shall clearly display all connection information including location of bolts, bolt types, bolt diameters, hole size, and faying surface types.

D. Material Test Reports:
1. Tensile tests and chemical analysis for all steel.
2. Independent coupon tests used to verify core plate initial yield stress, tensile stress, and ultimate elongation.
   a. Where core plates are fabricated from plate material, coupon tests shall be performed on each plate.
   b. Where core plates are fabricated from bar stock, coupons shall be made at intervals of each 5 tons of material of same heat and thickness.
   c. Coupon tests to be taken at point of manufacture. Mill test reports (MTR) may not be used.
3. Plates 2 inches (50mm) and thicker shall be supplied with Charpy V-Notch testing in accordance with ASTM A673, Frequency P, or approved equal. The impact test shall meet a minimum average value of 20 ft-lbs absorbed energy at +70 degrees Fahrenheit and shall be conducted in accordance with AISC Specification, or approved equal.

E. Technical Report:
1. The Manufacturer shall submit a BRB testing report. The testing configurations used, and the results obtained shall meet the criteria found in the AISC 2010 Seismic Provisions (341-10).

F. Welding Certificates:
1. Welder Performance Qualification Records (WPQR’s)
2. Welding Procedure Specification (WPS) written in conformance with AWS D1.1 for each proposed type of welded joint, whether pre-qualified or qualified by testing.

G. Manufacturer’s Quality Assurance Plan.

H. Manufacturer's in-house Quality Assurance Inspection Report for each brace upon completion of fabrication.

I. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

J. Outside Testing Agency Quality Control Report where applicable.

1.06 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. The Manufacturer shall have a detailed Quality Assurance Plan.
   1. The Quality Assurance Plan shall contain the procedures for manufacturing buckling-restrained braces including:
      a. Welding procedures.
      b. Methodology for verifying and documenting material properties.
      c. Indication of how the product is to be identified, such that it can be traced back to production quality assurance records.
      d. A flow chart of the process by which the product is manufactured, including description of production methods.
      e. Identified manufacturing tolerances for each production process.
      f. In-process quality control including all points of internal inspection for control and monitoring of the fabrication and assembly process.
   2. Design Engineer Requirements: The Structural Engineer designing the BRBs shall be registered in the State of California, have experience with designing buckling-restrained braced frame systems, and have a thorough knowledge of the submitted BRB test report.
   3. Qualification testing shall conform to Article 2.5.

C. The Manufacturer shall notify Owner of fabrication schedule at least 30 days prior to fabrication in order to allow Owner or Owner's Representative to observe fabrication process.

PART 2 PRODUCTS

2.01 ACCEPTABLE MANUFACTURERS

A. Plants fabricating buckling-restrained braces shall comply with the following:
   1. Obtain and maintain accreditation from The American Institute of Steel Construction (AISC Certified Fabricator) in conjunction with any additional certifications required by the local jurisdiction.
   2. Have a minimum of 5 years of documented continuous experience in the fabrication of buckling-restrained braces with a minimum of 30 completed projects over this same period.
   3. Buckling-restrained braces for this project shall be manufactured in the same facility (following the same quality assurance procedures) as the braces manufactured and tested to fulfill the AISC 341 testing requirements.

B. Buckling-Restrained Braces shall be manufactured and supplied by the following vendor or Engineer of Record approved equal.
   1. CoreBrace, LLC
      5789 West Wells Park Road
      West Jordan, UT 84081
      801.280.0701

C. Documentation showing evidence of valid accreditation and experience shall be submitted to the Engineer of Record during the bidding phase for any proposed manufacturer not listed above.

2.02 MATERIALS

A. Core Plate:
   1. ASTM A36 with Fy as noted on the drawings.
      a. Fy of all core plate material shall be verified via coupon test per Article 1.4.D.2.
      b. Core plates 2 inches (50mm) and thicker shall be supplied with Charpy V-Notch testing per Article 1.4.D.3.
      c. If not noted on the drawings, use 38ksi ≤ Fy ≤ 46ksi

B. Casing:
   1. ASTM A500, Gr. B or similar for square or rectangular sections.
   2. ASTM A500, Gr. B or A53, Gr. B or similar for round sections.

C. Primer:
   1. Standard shop primer.

D. Bolts, Nuts, and Washers:
   1. ASTM A325 or A490 for conventional high-strength bolts, ASTM A563 nuts.
   2. ASTM 1852 or F2280 for twist-off type Tension Control Bolt/Nut/Washer Assemblies.

E. Welding Materials:
   1. Shielded metal arc welding electrodes conform to AWS A5.1, flux-cored arc welding electrodes conform to AWS A5.20, and electrodes used for gas metal arc or submerged arc conform to the requirements of AWS A5.18.
   2. The minimum tensile strength of the E70 class electrodes used in production is 70,000 psi (470 MPa).
   3. Materials shall provide production welds with minimum Charpy V Notch properties of 20 ft-lbs (27 J) at -20°F (-30 C).

F. Infill Grout:
   1. Manufacturer's standard infill that has been demonstrated suitable by sub-assemblage testing per the Recommended Provisions.

2.03 DESIGN REQUIREMENTS

A. A Structural Engineer shall design the buckling-restrained braces to meet the Performance Requirements. The Structural Engineer shall have a thorough knowledge of the qualifying cyclical tests and competently apply the test results to the Project conditions.

B. Interpolation or extrapolation of test results for different member sizes shall be justified by rational analysis that demonstrates stress distributions and magnitudes of internal strains that are consistent with or less severe than the tested assemblies and that considers the adverse effects of larger material and variations in material properties.

C. Stability calculations shall include beams, columns and gussets adjoining the BRB's.

D. End rotation effects corresponding to the larger of 2.0 times Design Story Drift or .025 radians minimum shall be considered.

E. Where bracing connections are designed by manufacturer they shall be designed to a minimum of 1.1 times the adjusted brace strength as defined in Article 2.4.F.

2.04 PERFORMANCE REQUIREMENTS

A. Core plate material shall have a yield range of 42 ksi within ±4 ksi unless indicated otherwise in the structural BRB drawings. Coupon tests taken from plates at point of manufacture of BRBs shall be used to verify conformance. Additional coupon tests may be performed to replace coupon tests that fall out of acceptable range.

B. Increasing amplitude cyclic displacement tests per the AISC Seismic Provisions shall provide stable performance up to a displacement corresponding to 2.0 x Design Story Drift.
   1. Hysteretic behavior shall display no post-yield loss of strength, degradation, or pinching.
   2. Fracture of any portion of the BRB shall not occur during the qualifying tests.

3. The cumulative ductility factor requirement specified in AISC 341 shall be increased from 200 to 300.

C. The steel core shall resist compression and tension forces. The steel core area shall be as per the project drawings and based on the yield stress range specified.

D. The steel and concrete casing shall prevent the steel core from buckling globally and locally during compressive loading without binding due to longitudinal shortening and transverse expansion. Demand for local and global stability of casing checks shall be based on the adjusted brace strength at the maximum yield stress (Fysc,max) of the specified yield stress range of the core plate material.

E. Steel core projections beyond the steel casing and brace connections shall develop the adjusted brace strength without instigation of fracture or instability. For core plate checks use the minimum (Fysc,min) of the specified yield stress range for determining demand. For all other materials use Fysc,max to determine demand.

F. The overstrength factors (w, b) shall be determined at a brace strain level associated with the greater of a 2% interstory drift or twice the design story drift, the latter of which is taken as (2fCdFysc,min)/(ρIeE). Where Pd is provided, twice the design story drift is taken as (2CdPd)/(AscρIeE). Cd is the design drift deflection amplification factor, E is the nominal modulus of elasticity of the core plate material, Ie is the Importance Factor, is the Redundancy Factor, and Pd is the demand in the BRBs at the controlling drift design load case with gravity loads excluded.

2.05 QUALIFICATION TESTS

A. Buckling-restrained brace design shall be based on two qualifying cyclic tests conforming to the AISC Seismic Provisions for Buckling Restrained Braced Frames. As stated in the Provisions, at least one of the two qualifying tests needs to be a subassemblage test to demonstrate the ability of the BRB to withstand rotational demands. The other test may be performed uniaxially or may also be a subassemblage test.

B. The requirements of the AISC 341 Seismic Provisions shall be met along with the modification in Article 2.4.B.3.

C. The strain level during testing shall be equivalent to, or greater than, the strains that the project braces will be expected to withstand.

D. Qualifying cyclical tests can be based on full-scale cyclical tests previously reported for projects, or research that are deemed similar to project conditions by the Manufacturer and Project Engineer.

PART 3 EXECUTION

3.01 FABRICATION

A. Braces shall be fabricated in accordance with AISC Code of Standard Practice and in an AISC Certified Shop that participates in the AISC Quality Certification Program.

B. Core plates shall be cut to profile shown on Design Drawings.
   1. The general roughness cannot exceed 1000 micro-inches in the yielding length.
   2. Notches in yield length region up to 1/8–inch may be repaired by grinding to a smooth transition. The length of the transition shall not be less than 10 times the notch depth.
   3. Notches in the yielding length region greater than 1/8–inch and less than or equal to 3/8–inch may be repaired using procedures outlined in the Company Quality Assurance Manual. The repairs shall be examined using Ultrasonic Testing (UT) procedures in conformance with AWS D1.1.
   4. Notches in the yielding length region greater than 3/8–inch in the yield length shall be rejected.

C. No splices are allowed in the yielding region of the steel core plate.

D. Minimum casing dimensions shall be as required by manufacturer or as specified on the project documents.

E. Holes for bolted connections may be drilled, cut or punched in conformance with AISC standards and burs removed.

F. Finish shall be manufacturer's standard shop primer. Do not paint connection faying surfaces if connection are designated slip critical unless paint used provides same slip resistance

G. Assembly of the different components of the brace shall be done in accordance with the manufacturer's Quality Assurance Manual in a manner that ensures proper performance of the brace.

H. Pin-connection hole tolerance shall be +1/32", -0".

3.02 SHIPPING

A. Manufacturer to package BRB's for protection against shipping damage.

B. Manufacturer shall coordinate delivery dates and quantities with Contractor/Owner. Contractor/Owner shall provide adequate storage space and proper lay-down areas.

C. Braces shall be stored on dunnage not touching the ground.

D. Coordinate erection aid requirements with contractor/Owner.

3.03 ERECTION

A. Braces are to be erected under the Structural Steel Specification Section and according to referenced AISC Specifications.

B. Prior to erection, clean faying surfaces of BRB to be in contact with bolted connections to remove temporary coatings applied for transport and surface contaminants.

C. Manufacturer shall coordinate with Owner's Representative to verify proper BRB dimensions.

D. Allow for erection loads and for sufficient temporary bracing to maintain structure safe, plumb, and in true alignment until completion of erection and installation of buckling-restrained braces.

E. No field welding to BRB's is allowed, including non-structural pieces unless approved by manufacturer and Engineer of Record (EOR).

F. No field cutting or altering is permitted without the approval of the manufacturer and EOR.

F. Section 01 60 00 - Product Requirements.

G. Section 03 20 00 - Concrete Reinforcement.

H. Section 03 30 00 - Cast in Place Concrete.

I. Section 05 12 00 - Structural Steel Framing.

J. Section 05 12 19 - Buckling Restrained Braces.

K. Section 05 40 00 - Cold Formed Metal Framing.

L. Section 05 50 00 - Metal Fabrications.

M. Section 05 51 00 - Metal Stairs.

N. Section 07 54 23 - Thermoplastic Polyolefin (TPO) Roofing.

O. Section 07 81 00 - Applied Fireproofing.

P. Section 07 81 60 - Intumescent Fireproofing.

Q. Section 09 91 00 - Painting.

1.03 REFERENCE STANDARDS

A. AISC 303 Code of Standard Practice for Steel Buildings and Bridges.

B. AISC 360 Specification for Structural Steel Buildings.

C. ASTM A53/A53M Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless.

D. ASTM A216/A216M Standard Specification for Steel Castings, Carbon, Suitable for Fusion Welding, for High-Temperature Service.

E. ASTM A500/A500M Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes.

F. ASTM A572/A572M Standard Specification for High-Strength Low-Alloy Columbium-Vanadium Structural Steel.

G. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process; 2023.

H. ASTM A780/A780M - Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings; 2020.

I. ASTM A1008/A1008M - Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, Required Hardness, Solution Hardened, and Bake Hardenable; 2023, with Editorial Revision.

J. ASTM E119 - Standard Test Methods for Fire Tests of Building Construction and Materials; 2022.

K. ASTM E329 - Standard Specification for Agencies Engaged in Construction Inspection, Testing, or Special Inspection; 2023.

L. AWS D1.1/D1.1M - Structural Welding Code - Steel; 2020, with Errata (2023).

M. AWS D1.3/D1.3M - Structural Welding Code - Sheet Steel; 2018, with Errata (2022).

N. SDI (DM) Steel Decking Institute; Publication No.30, Design Manual for Composite Decks, Form Decks, and Roof Decks.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Work Completed under this section must be coordinated with other work using BIM modelling. See Section 01 31 00.05 for requirements.

1.05 SUBMITTALS

A. Product Data: For each type of deck, accessory, and product indicated.

B. Submit BIM models as required by Section 01 31 00.05.

C. Shop Drawings:
   1. Show layout and types of deck panels, anchorage details, reinforcing channels, pans, cut deck openings, special jointing, accessories, and attachments to other construction, including field fastening pattern and sidelap fastener type and pattern.
   2. Shop Drawing submittals must conform with coordinated BIM models. See Section 01 31 00.05.
   3. Show compliance with specified deck section and material properties as indicated on construction documents. Decking shall meet or exceed all specified properties.
   4. Shear stud layouts showing the number, pattern, spacing and configuration of the shear studs for each beam and girder.
   5. At composite deck, provide max unshored clear span tables for each deck gauge and concrete thickness shown.
      a. Deck to be designed per ANSI/SDI-C-1.0.
   6. Phasing diagram, if applicable, indicating scope of work for each phase of work.
   7. Changes from construction documents:
      a. Cloud and clearly identify all changes or deviations from the construction documents.

D. Product Certificates: For each type of steel deck, signed by product manufacturer.

E. Welding certificates.

F. Perform and submit reports of Code Required Special Inspections as required in Section 01 45 33.

G. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, indicating that each of the following complies with requirements:
   1. Power-actuated mechanical fasteners.
   2. Acoustical roof deck.

H. Research/Evaluation Reports: For steel deck.

I. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

1.06 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Testing Agency Qualifications: An independent agency qualified according to ASTM E329 for testing indicated.

C. Welding: Qualify procedures and personnel according to AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."

D. Mechanical Fasteners: Qualify mechanical fastening systems, procedures, and personnel in accordance with the "Standard for Quality Control and Quality Assurance for Installation of Steel Deck" from ANSI / SDI and with Manufacturer's qualification standards.

E. Fire-Test-Response Characteristics: Where indicated, provide steel deck units identical to those tested for fire resistance per ASTM E119 by a testing and inspecting agency acceptable to authorities having jurisdiction.
   1. Fire-Resistance Ratings: Indicated by design designations of applicable testing and inspecting agency.
   2. Steel deck units shall be identified with appropriate markings of applicable testing and inspecting agency.

F. AISI Specifications: Comply with calculated structural characteristics of steel deck according to AISI's "North American Specification for the Design of Cold-Formed Steel Structural Members."

G. FMG Listing: Provide steel roof deck evaluated by FMG and listed in its "Approval Guide, Building Materials" for Class 1 fire rating and Class 1-90 windstorm ratings.

H. Recycled Content of Steel Products: Provide products with an average recycled content of steel products so postconsumer recycled content plus one-half of pre-consumer recycled content is not less than 25 percent.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Protect steel deck from corrosion, deformation, and other damage during delivery, storage, and handling.

B. Stack steel deck on platforms or pallets and slope to provide drainage. Protect with a waterproof covering and ventilate to avoid condensation.
   1. Protect and ventilate acoustical cellular roof deck with factory-installed insulation to maintain insulation free of moisture.

1.08 COORDINATION

A. Coordinate installation of sound-absorbing insulation strips in topside ribs of acoustical deck with roofing installation.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Steel Deck:
      a. ASC Profiles, LLC.
      b. Canam Steel Corporation.
      c. Consolidated Systems, Inc., Metal Dek Group.
      d. DACS, Inc.
      e. D-Mac Industries Inc.
      f. Epic Metals Corporation.
      g. Marlyn Steel Decks, Inc.
      h. New Millennium Building Systems, LLC.
      i. Nucor Corp.; Vulcraft Division.
      j. Roof Deck, Inc.
      k. United Steel Deck, Inc.
      l. Valley Joist , Inc., Division of EBSCO Industries, Inc.
      m. Verco Decking, Inc.v a NUCOR company.

2.02 NON-COMPOSITE ROOF DECK

A. Steel Roof Deck: Fabricate panels, without top-flange stiffening grooves, to comply with "SDI Specifications and Commentary for Steel Roof Deck," in SDI Publication No. 30, and with the following:
   1. Prime-Painted Steel Sheet: ASTM A1008/A1008M, Structural Steel (SS), Grade 540 minimum, shop primed with manufacturer's standard baked-on, rust-inhibitive primer.

a. Color: Manufacturer's standard.
2. Galvanized Steel Sheet: ASTM A653/A653M, Structural Steel (SS), Grade 540 or higher.
a. Color: Manufacturer's standard.
3. Deck Profile: As indicated on drawings.
4. Profile Depth: As indicated on drawings.
5. Design Uncoated-Steel Thickness: As indicated on drawings.
6. Span Condition: 3-span minimum.
7. Side Laps: Overlapped.

2.03 COMPOSITE METAL DECK

A. Composite Metal Decking: ASTM A653/A653M or ASTM A1008/A1008M Grade 50 or higher, cold rolled steel sheet, 24” or 36" wide sheets.
1. Deck profile: As indicated on drawings.
2. Profile depth: As indicated on drawings.
3. Design thickness: As indicated on drawings.
4. Span condition: 3-span minimum.
a. Where 3-span conditions cannot be met, or framing configuration does not permit for 3-span condition, increase deck gauge as necessary to enable unshored construction.
5. Finish: Galvanized G60 or phosphatized and painted, or as indicated in architectural drawings.

2.04 DECK FASTENING AT SUPPORTS

A. Mechanical fasteners, screwed, pneumatic driven or powder driven, as manufactured by ITW Buildex, Hilti, or Pneutek, may be substituted for welds with the following requirements:
1. Exception: Exposed structure shall have welded sidelap fasteners per the drawings.
2. Design the fastener layout to provide a roof diaphragm of equivalent strength and stiffness to that shown on the Drawings.

B. Provide certified structural calculations and ICC Evaluation report for all fastener types indicating diaphragm values for metal deck gauge and substrate thickness.
1. Coordinate fastener requirements for the different substrate thickness with the structural steel and joist suppliers.
2. Submit certified roof fastener layout shop drawings clearly showing fastener types, layout, and installation requirements.
3. Provide training as required by the installing contractor and Owner’s testing laboratory to assure proper installation.
4. Owner’s testing laboratory will inspect the work in accordance with Field Quality Control requirements specified in this Section in addition to field verifying substrate thickness of beam flanges and joist top chords, and fastener type.

2.05 ACCESSORIES

A. General: Provide manufacturer's standard accessory materials for deck that comply with requirements indicated.

B. Mechanical Fasteners: Corrosion-resistant, low-velocity, power-actuated or pneumatically driven carbon-steel fasteners; or self-drilling, self-threading screws.

C. Side-Lap Fasteners: Corrosion-resistant, hexagonal washer head; self-drilling, carbon-steel screws, No. 10 (4.8-mm) minimum diameter.

D. Flexible Closure Strips: Vulcanized, closed-cell, synthetic rubber.

E. Miscellaneous Sheet Metal Deck Accessories: Steel sheet, minimum yield strength of 33,000 psi (230 MPa), not less than 0.0359-inch (0.91-mm) design uncoated thickness, of same material and finish as deck; of profile indicated or required for application.

F. Recessed Sump Pans: Single-piece steel sheet, 0.0747 inch (1.90 mm) thick, of same material and finish as deck, with 3-inch- (76-mm-) wide flanges and level recessed pans of 1-1/2-inch (38-mm) minimum depth. For drains, cut holes in the field.

G. Flat Sump Plate: Single-piece steel sheet, 0.0747 inch (1.90 mm) thick, of same material and finish as deck. For drains, cut holes in the field.

H. Galvanizing Repair Paint: ASTM A780/A780M, SSPC-Paint 20 or DOD-P-21035, with dry film containing a minimum of 94 percent zinc dust by weight.

I. See Specification Section 05 12 00 for steel headed studs.

J. Repair Paint: Manufacturer's standard rust-inhibitive primer of same color as primer.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine supporting frame and field conditions for compliance with requirements for installation tolerances and other conditions affecting performance.

3.02 INSTALLATION, GENERAL

A. Install deck panels and accessories according to applicable specifications and commentary in SDI Publication No. 30, manufacturer's written instructions, and requirements in this Section.

B. Install decking and accessories as noted in deck shop drawings, including shortened deck widths arranged to minimize cutting deck and using fillers at structural steel girders.

C. Install temporary shoring before placing deck panels, if required to meet deflection or strength limitations.

D. Locate deck bundles to prevent overloading of supporting members.

E. Place deck panels on supporting frame and adjust to final position with ends accurately aligned and bearing on supporting frame before being permanently fastened. Do not stretch or contract side-lap interlocks.
   1. Align cellular deck panels over full length of cell runs and align cells at ends of abutting panels.

F. Place deck panels flat and square and fasten to supporting frame without warp or deflection.

G. Cut and neatly fit deck panels and accessories around openings and other work projecting through or adjacent to deck.

H. Provide additional reinforcement and closure pieces at openings as required for strength, continuity of deck, and support of other work.

I. Comply with AWS D1.1/D1.1M requirements and procedures for manual shielded metal arc welding, appearance and quality of welds, and methods used for correcting welding work.

J. Immediately after welding deck in place, touch-up welds, burned areas, and surface coating damage with prime paint.

K. Additional Composite deck requirements:
   1. Install side lap fasteners 12”oc maximum, or as indicated in Drawings, whichever is more stringent.
   2. Confirm that all plies are in contact upon fastening.
   3. Openings in bare deck shall be reinforced.
   4. Coring of deck to occur only after concrete is placed and has reached 75% of design strength.
   5. Deck installer to follow reviewed shop drawings with respect to layout, fillers, and fastening, including the strategy of starting bays with special sized deck width so low flute lands on an interior girder.
   6. Ensure sufficient deck end bearing length (SDI minimum or greater) and side bearing width (for fasteners).
   7. Do not scorch top flute of deck when installing headed studs. Damaged deck shall be replaced.
   8. Do not use a hammer to stretch side margins of deck to reach supports. Where deck does not reach supports, the contractor shall submit proposed solution for review to the Engineer for approval.
   9. Provide 3-span, minimum. Where 3-span conditions cannot be met, or framing configuration does not permit 3-span condition, increase deck gauge as necessary to enable unshored construction.

10. Contractor may shore deck at their discretion. Shoring shall be beam-to-beam and may not be supported from floor(s) below.

3.03 DECK INSTALLATION

A. Fasten roof-deck panels to steel supporting members by arc spot (puddle) welds of the surface diameter indicated or arc seam welds with an equal perimeter that is not less than 1-1/2 inches (38 mm) long, and as follows:
   1. Weld Diameter: 5/8 inch (16 mm)
   2. Weld Spacing: Weld edge and interior ribs of deck units with a minimum of one welds per deck unit at each support, unless noted otherwise on drawings.

B. Shear Studs:
   1. A welded headed stud may take the place of a puddle weld at composite deck.
   2. Weld studs through a singly ply of deck, placing studs directly over beam web.
   3. Use ferrules developed for weld-through technique. Remove after welding.

C. Side-Lap and Perimeter Edge Fastening: Fasten side laps and perimeter edges of panels between supports as indicated.
   1. Roof Deck - Mechanically fasten with self-drilling, No. 10 (4.8-mm-) diameter or larger, carbon-steel TEK screws.
   2. Composite and Form Deck - Mechanically fasten by button punching at 12” oc ,or with self-drilling No. 10 diameter or larger, carbon-steel TEK screws at 12” oc, unless noted otherwise on structural drawings.

D. Install deck ends over supports with bearing lengths as follows:
   1. Roof Deck (B, N):
      a. End bearing: 2"
      b. Interior bearing: 3"
   2. Floor Deck (Composite):
      a. End bearing on steel: 2"
      b. Interior bearing on steel: 4"
      c. End or interior on bare concrete or masonry supports: 4"

E. Roof Sump Pans and Sump Plates: Install over openings provided in roof deck and mechanically fasten flanges to top of deck. Space mechanical fasteners not more than 12 inches (305 mm) apart with at least one fastener at each corner.
   1. Fasten metal roof deck at 6” oc at deck opening framing.
   2. Install reinforcing channels or zees in ribs to span between supports and mechanically fasten.

F. Miscellaneous Roof-Deck Accessories: Install ridge and valley plates, finish strips, end closures, and reinforcing channels according to deck manufacturer's written instructions. Weld or mechanically fasten to substrate to provide a complete deck installation.
   1. Fasten cover plates at changes in direction of roof-deck panels, unless otherwise indicated.

G. Flexible Closure Strips: Install flexible closure strips over partitions, walls, and where indicated. Install with adhesive according to manufacturer's written instructions to ensure complete closure.

H. Sound-Absorbing Insulation: Installation into topside ribs of deck per manufacturer’s recommendations.

3.04 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified independent testing and inspecting agency to perform field tests and inspections and prepare test reports.

B. Field welds will be subject to inspection.

C. Testing agency will report inspection results promptly and in writing to Contractor and Architect.

D. Remove and replace work that does not comply with specified requirements.

E. Additional inspecting, at Contractor's expense, will be performed to determine compliance of corrected work with specified requirements.

3.05 REPAIRS AND PROTECTION

A. Galvanizing Repairs: Prepare and repair damaged galvanized coatings on both surfaces of deck with galvanized repair paint according to ASTM A780/A780M and manufacturer's written instructions.

B. Repair Painting: Wire brush and clean rust spots, welds, and abraded areas on both surfaces of prime-painted deck immediately after installation, and apply repair paint.
   1. Apply repair paint, of same color as adjacent shop-primed deck, to bottom surfaces of deck exposed to view.
   2. Wire brushing, cleaning, and repair painting of bottom deck surfaces are included in Division 9 Section 09 91 00 - Painting.

C. Repair Painting: Wire brushing, cleaning, and repair painting of rust spots, welds, and abraded areas of both deck surfaces are included in Division 9 Section 09 91 00 - Painting.

D. Provide final protection and maintain conditions to ensure that steel deck is without damage or deterioration at time of Substantial Completion.

END OF SECTION

This page intentionally left blank

SECTION 05 31 00
STEEL DECKING

PART 1 GENERAL

1.01 SUMMARY

A. This Section includes the following:
   1. Roof deck.
   2. Form Deck.
   3. Composite Deck.

1.02 RELATED SECTIONS

A. Section 01 31 00 - Project Management and Coordination.

B. Section 01 31 00.05 - Project BIM Coordination.

C. Section 01 33 00 - Submittal Procedures.

D. Section 01 40 00 - Quality Requirements.

E. Section 01 45 33 - Code-Required Special Inspections and Procedures.

F. Section 01 60 00 - Product Requirements.

G. Section 03 20 00 - Concrete Reinforcement.

H. Section 03 30 00 - Cast in Place Concrete.

I. Section 05 12 00 - Structural Steel Framing.

J. Section 05 12 19 - Buckling Restrained Braces.

K. Section 05 40 00 - Cold Formed Metal Framing.

L. Section 05 50 00 - Metal Fabrications.

M. Section 05 51 00 - Metal Stairs.

N. Section 07 54 23 - Thermoplastic Polyolefin (TPO) Roofing.

O. Section 07 81 00 - Applied Fireproofing.

P. Section 07 81 60 - Intumescent Fireproofing.

Q. Section 09 91 00 - Painting.

1.03 REFERENCE STANDARDS

A. AISC 303 Code of Standard Practice for Steel Buildings and Bridges.

B. AISC 360 Specification for Structural Steel Buildings.

C. ASTM A53/A53M Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless.

D. ASTM A216/A216M Standard Specification for Steel Castings, Carbon, Suitable for Fusion Welding, for High-Temperature Service.

E. ASTM A500/A500M Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes.

F. ASTM A572/A572M Standard Specification for High-Strength Low-Alloy Columbium-Vanadium Structural Steel.

G. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process; 2023.

H. ASTM A780/A780M - Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings; 2020.

I. ASTM A1008/A1008M - Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, Required Hardness, Solution Hardened, and Bake Hardenable; 2023, with Editorial Revision.

J. ASTM E119 - Standard Test Methods for Fire Tests of Building Construction and Materials; 2022.

K. ASTM E329 - Standard Specification for Agencies Engaged in Construction Inspection, Testing, or Special Inspection; 2023.

L. AWS D1.1/D1.1M - Structural Welding Code - Steel; 2020, with Errata (2023).

M. AWS D1.3/D1.3M - Structural Welding Code - Sheet Steel; 2018, with Errata (2022).

N. SDI (DM) Steel Decking Institute; Publication No.30, Design Manual for Composite Decks, Form Decks, and Roof Decks.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Work Completed under this section must be coordinated with other work using BIM modelling. See Section 01 31 00.05 for requirements.

1.05 SUBMITTALS

A. Product Data: For each type of deck, accessory, and product indicated.

B. Submit BIM models as required by Section 01 31 00.05.

C. Shop Drawings:
   1. Show layout and types of deck panels, anchorage details, reinforcing channels, pans, cut deck openings, special jointing, accessories, and attachments to other construction, including field fastening pattern and sidelap fastener type and pattern.
   2. Shop Drawing submittals must conform with coordinated BIM models. See Section 01 31 00.05.
   3. Show compliance with specified deck section and material properties as indicated on construction documents. Decking shall meet or exceed all specified properties.
   4. Shear stud layouts showing the number, pattern, spacing and configuration of the shear studs for each beam and girder.
   5. At composite deck, provide max unshored clear span tables for each deck gauge and concrete thickness shown.
      a. Deck to be designed per ANSI/SDI-C-1.0.
   6. Phasing diagram, if applicable, indicating scope of work for each phase of work.
   7. Changes from construction documents:
      a. Cloud and clearly identify all changes or deviations from the construction documents.

D. Product Certificates: For each type of steel deck, signed by product manufacturer.

E. Welding certificates.

F. Perform and submit reports of Code Required Special Inspections as required in Section 01 45 33.

G. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, indicating that each of the following complies with requirements:
   1. Power-actuated mechanical fasteners.
   2. Acoustical roof deck.

H. Research/Evaluation Reports: For steel deck.

I. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

1.06 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Testing Agency Qualifications: An independent agency qualified according to ASTM E329 for testing indicated.

C. Welding: Qualify procedures and personnel according to AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."

D. Mechanical Fasteners: Qualify mechanical fastening systems, procedures, and personnel in accordance with the "Standard for Quality Control and Quality Assurance for Installation of Steel Deck" from ANSI / SDI and with Manufacturer's qualification standards.

E. Fire-Test-Response Characteristics: Where indicated, provide steel deck units identical to those tested for fire resistance per ASTM E119 by a testing and inspecting agency acceptable to authorities having jurisdiction.
   1. Fire-Resistance Ratings: Indicated by design designations of applicable testing and inspecting agency.
   2. Steel deck units shall be identified with appropriate markings of applicable testing and inspecting agency.

F. AISI Specifications: Comply with calculated structural characteristics of steel deck according to AISI's "North American Specification for the Design of Cold-Formed Steel Structural Members."

G. FMG Listing: Provide steel roof deck evaluated by FMG and listed in its "Approval Guide, Building Materials" for Class 1 fire rating and Class 1-90 windstorm ratings.

H. Recycled Content of Steel Products: Provide products with an average recycled content of steel products so postconsumer recycled content plus one-half of pre-consumer recycled content is not less than 25 percent.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Protect steel deck from corrosion, deformation, and other damage during delivery, storage, and handling.

B. Stack steel deck on platforms or pallets and slope to provide drainage. Protect with a waterproof covering and ventilate to avoid condensation.
   1. Protect and ventilate acoustical cellular roof deck with factory-installed insulation to maintain insulation free of moisture.

1.08 COORDINATION

A. Coordinate installation of sound-absorbing insulation strips in topside ribs of acoustical deck with roofing installation.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Steel Deck:
      a. ASC Profiles, LLC.
      b. Canam Steel Corporation.
      c. Consolidated Systems, Inc., Metal Dek Group.
      d. DACS, Inc.
      e. D-Mac Industries Inc.
      f. Epic Metals Corporation.
      g. Marlyn Steel Decks, Inc.
      h. New Millennium Building Systems, LLC.
      i. Nucor Corp.; Vulcraft Division.
      j. Roof Deck, Inc.
      k. United Steel Deck, Inc.
      l. Valley Joist , Inc., Division of EBSCO Industries, Inc.
      m. Verco Decking, Inc.v a NUCOR company.

2.02 NON-COMPOSITE ROOF DECK

A. Steel Roof Deck: Fabricate panels, without top-flange stiffening grooves, to comply with "SDI Specifications and Commentary for Steel Roof Deck," in SDI Publication No. 30, and with the following:
   1. Prime-Painted Steel Sheet: ASTM A1008/A1008M, Structural Steel (SS), Grade 540 minimum, shop primed with manufacturer's standard baked-on, rust-inhibitive primer.

a. Color: Manufacturer's standard.

2. Galvanized Steel Sheet: ASTM A653/A653M, Structural Steel (SS), Grade 540 or higher.
   a. Color: Manufacturer's standard.
3. Deck Profile: As indicated on drawings.
4. Profile Depth: As indicated on drawings.
5. Design Uncoated-Steel Thickness: As indicated on drawings.
6. Span Condition: 3-span minimum.
7. Side Laps: Overlapped.

2.03 COMPOSITE METAL DECK

A. Composite Metal Decking: ASTM A653/A653M or ASTM A1008/A1008M Grade 50 or higher, cold rolled steel sheet, 24” or 36" wide sheets.
   1. Deck profile: As indicated on drawings.
   2. Profile depth: As indicated on drawings.
   3. Design thickness: As indicated on drawings.
   4. Span condition: 3-span minimum.
      a. Where 3-span conditions cannot be met, or framing configuration does not permit for 3-span condition, increase deck gauge as necessary to enable unshored construction.
   5. Finish: Galvanized G60 or phosphatized and painted, or as indicated in architectural drawings.

2.04 DECK FASTENING AT SUPPORTS

A. Mechanical fasteners, screwed, pneumatic driven or powder driven, as manufactured by ITW Buildex, Hilti, or Pneutek, may be substituted for welds with the following requirements:
   1. Exception: Exposed structure shall have welded sidelap fasteners per the drawings.
   2. Design the fastener layout to provide a roof diaphragm of equivalent strength and stiffness to that shown on the Drawings.

B. Provide certified structural calculations and ICC Evaluation report for all fastener types indicating diaphragm values for metal deck gauge and substrate thickness.
   1. Coordinate fastener requirements for the different substrate thickness with the structural steel and joist suppliers.
   2. Submit certified roof fastener layout shop drawings clearly showing fastener types, layout, and installation requirements.
   3. Provide training as required by the installing contractor and Owner’s testing laboratory to assure proper installation.
   4. Owner’s testing laboratory will inspect the work in accordance with Field Quality Control requirements specified in this Section in addition to field verifying substrate thickness of beam flanges and joist top chords, and fastener type.

2.05 ACCESSORIES

A. General: Provide manufacturer's standard accessory materials for deck that comply with requirements indicated.

B. Mechanical Fasteners: Corrosion-resistant, low-velocity, power-actuated or pneumatically driven carbon-steel fasteners; or self-drilling, self-threading screws.

C. Side-Lap Fasteners: Corrosion-resistant, hexagonal washer head; self-drilling, carbon-steel screws, No. 10 (4.8-mm) minimum diameter.

D. Flexible Closure Strips: Vulcanized, closed-cell, synthetic rubber.

E. Miscellaneous Sheet Metal Deck Accessories: Steel sheet, minimum yield strength of 33,000 psi (230 MPa), not less than 0.0359-inch (0.91-mm) design uncoated thickness, of same material and finish as deck; of profile indicated or required for application.

F. Recessed Sump Pans: Single-piece steel sheet, 0.0747 inch (1.90 mm) thick, of same material and finish as deck, with 3-inch- (76-mm-) wide flanges and level recessed pans of 1-1/2-inch (38-mm) minimum depth. For drains, cut holes in the field.

G. Flat Sump Plate: Single-piece steel sheet, 0.0747 inch (1.90 mm) thick, of same material and finish as deck. For drains, cut holes in the field.

H. Galvanizing Repair Paint: ASTM A780/A780M, SSPC-Paint 20 or DOD-P-21035, with dry film containing a minimum of 94 percent zinc dust by weight.

I. See Specification Section 05 12 00 for steel headed studs.

J. Repair Paint: Manufacturer's standard rust-inhibitive primer of same color as primer.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine supporting frame and field conditions for compliance with requirements for installation tolerances and other conditions affecting performance.

3.02 INSTALLATION, GENERAL

A. Install deck panels and accessories according to applicable specifications and commentary in SDI Publication No. 30, manufacturer's written instructions, and requirements in this Section.

B. Install decking and accessories as noted in deck shop drawings, including shortened deck widths arranged to minimize cutting deck and using fillers at structural steel girders.

C. Install temporary shoring before placing deck panels, if required to meet deflection or strength limitations.

D. Locate deck bundles to prevent overloading of supporting members.

E. Place deck panels on supporting frame and adjust to final position with ends accurately aligned and bearing on supporting frame before being permanently fastened. Do not stretch or contract side-lap interlocks.
   1. Align cellular deck panels over full length of cell runs and align cells at ends of abutting panels.

F. Place deck panels flat and square and fasten to supporting frame without warp or deflection.

G. Cut and neatly fit deck panels and accessories around openings and other work projecting through or adjacent to deck.

H. Provide additional reinforcement and closure pieces at openings as required for strength, continuity of deck, and support of other work.

I. Comply with AWS D1.1/D1.1M requirements and procedures for manual shielded metal arc welding, appearance and quality of welds, and methods used for correcting welding work.

J. Immediately after welding deck in place, touch-up welds, burned areas, and surface coating damage with prime paint.

K. Additional Composite deck requirements:
   1. Install side lap fasteners 12”oc maximum, or as indicated in Drawings, whichever is more stringent.
   2. Confirm that all plies are in contact upon fastening.
   3. Openings in bare deck shall be reinforced.
   4. Coring of deck to occur only after concrete is placed and has reached 75% of design strength.
   5. Deck installer to follow reviewed shop drawings with respect to layout, fillers, and fastening, including the strategy of starting bays with special sized deck width so low flute lands on an interior girder.
   6. Ensure sufficient deck end bearing length (SDI minimum or greater) and side bearing width (for fasteners).
   7. Do not scorch top flute of deck when installing headed studs. Damaged deck shall be replaced.
   8. Do not use a hammer to stretch side margins of deck to reach supports. Where deck does not reach supports, the contractor shall submit proposed solution for review to the Engineer for approval.
   9. Provide 3-span, minimum. Where 3-span conditions cannot be met, or framing configuration does not permit 3-span condition, increase deck gauge as necessary to enable unshored construction.

10. Contractor may shore deck at their discretion. Shoring shall be beam-to-beam and may not be supported from floor(s) below.

3.03 DECK INSTALLATION

A. Fasten roof-deck panels to steel supporting members by arc spot (puddle) welds of the surface diameter indicated or arc seam welds with an equal perimeter that is not less than 1-1/2 inches (38 mm) long, and as follows:
   1. Weld Diameter: 5/8 inch (16 mm)
   2. Weld Spacing: Weld edge and interior ribs of deck units with a minimum of one welds per deck unit at each support, unless noted otherwise on drawings.

B. Shear Studs:
   1. A welded headed stud may take the place of a puddle weld at composite deck.
   2. Weld studs through a singly ply of deck, placing studs directly over beam web.
   3. Use ferrules developed for weld-through technique. Remove after welding.

C. Side-Lap and Perimeter Edge Fastening: Fasten side laps and perimeter edges of panels between supports as indicated.
   1. Roof Deck - Mechanically fasten with self-drilling, No. 10 (4.8-mm-) diameter or larger, carbon-steel TEK screws.
   2. Composite and Form Deck - Mechanically fasten by button punching at 12” oc ,or with self-drilling No. 10 diameter or larger, carbon-steel TEK screws at 12” oc, unless noted otherwise on structural drawings.

D. Install deck ends over supports with bearing lengths as follows:
   1. Roof Deck (B, N):
      a. End bearing: 2"
      b. Interior bearing: 3"
   2. Floor Deck (Composite):
      a. End bearing on steel: 2"
      b. Interior bearing on steel: 4"
      c. End or interior on bare concrete or masonry supports: 4"

E. Roof Sump Pans and Sump Plates: Install over openings provided in roof deck and mechanically fasten flanges to top of deck. Space mechanical fasteners not more than 12 inches (305 mm) apart with at least one fastener at each corner.
   1. Fasten metal roof deck at 6” oc at deck opening framing.
   2. Install reinforcing channels or zees in ribs to span between supports and mechanically fasten.

F. Miscellaneous Roof-Deck Accessories: Install ridge and valley plates, finish strips, end closures, and reinforcing channels according to deck manufacturer's written instructions. Weld or mechanically fasten to substrate to provide a complete deck installation.
   1. Fasten cover plates at changes in direction of roof-deck panels, unless otherwise indicated.

G. Flexible Closure Strips: Install flexible closure strips over partitions, walls, and where indicated. Install with adhesive according to manufacturer's written instructions to ensure complete closure.

H. Sound-Absorbing Insulation: Installation into topside ribs of deck per manufacturer’s recommendations.

3.04 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified independent testing and inspecting agency to perform field tests and inspections and prepare test reports.

B. Field welds will be subject to inspection.

C. Testing agency will report inspection results promptly and in writing to Contractor and Architect.

D. Remove and replace work that does not comply with specified requirements.

E. Additional inspecting, at Contractor's expense, will be performed to determine compliance of corrected work with specified requirements.

3.05 REPAIRS AND PROTECTION

A. Galvanizing Repairs: Prepare and repair damaged galvanized coatings on both surfaces of deck with galvanized repair paint according to ASTM A780/A780M and manufacturer's written instructions.

B. Repair Painting: Wire brush and clean rust spots, welds, and abraded areas on both surfaces of prime-painted deck immediately after installation, and apply repair paint.
   1. Apply repair paint, of same color as adjacent shop-primed deck, to bottom surfaces of deck exposed to view.
   2. Wire brushing, cleaning, and repair painting of bottom deck surfaces are included in Division 9 Section 09 91 00 - Painting.

C. Repair Painting: Wire brushing, cleaning, and repair painting of rust spots, welds, and abraded areas of both deck surfaces are included in Division 9 Section 09 91 00 - Painting.

D. Provide final protection and maintain conditions to ensure that steel deck is without damage or deterioration at time of Substantial Completion.

SECTION 05 4000
COLD-FORMED METAL FRAMING

PART 1 GENERAL

1.01 SUMMARY

A. This Section includes the following:
   1. Exterior Cold-Formed Metal framing.

1.02 RELATED SECTIONS

A. Section 01 31 00 - Project Management and Coordination.

B. Section 01 33 00 - Submittal Procedures.

C. Section 01 40 00 - Quality Requirements.

D. Section 01 45 33 - Code-Required Special Inspections and Procedures.

E. Section 01 60 00 - Product Requirements.

F. Section 05 12 00 - Structural Steel Framing.

G. Section 05 50 00 - Metal Fabrications.

H. Section 09 91 00 - Painting.

1.03 REFERENCE STANDARDS

A. AISI S100 “North American Specification for the Design of Cold-Formed Steel Structural Members”.

B. AISI S200 “North American Standard for Cold-Formed Steel Framing - General Provisions”.

C. AISI S201 “North American Standard for Cold-Formed Steel Framing - Product Standard”.

D. AISI S211 “North American Standard for Cold-Formed Steel Framing - Wall Stud Design”.

E. AISI S212 “North American Standard for Cold-Formed Steel Framing - Header Design”.

F. AISI S213 “North American Standard for Cold-Formed Steel Framing - Lateral Design”.

G. AISI “Code of Standard Practice for Cold-Formed Steel Structural Framing”.

H. ASTM A36/A36M - Standard Specification for Carbon Structural Steel; 2019.

I. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products; 2017.

J. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process; 2023.

K. ASTM A780/A780M - Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings; 2020.

L. ASTM A1003/A1003M - Standard Specification for Steel Sheet, Carbon, Metallic- and Nonmetallic-Coated for Cold-Formed Framing Members; 2015.

M. ASTM C1513 - Standard Specification for Steel Tapping Screws for Cold-Formed Steel Framing Connections; Current Edition.

N. ASTM E329 - Standard Specification for Agencies Engaged in Construction Inspection, Testing, or Special Inspection; 2023.

O. ASTM E488/E488M - Standard Test Methods for Strength of Anchors in Concrete Elements; 2022.

P. ASTM E1190 - Standard Test Methods for Strength of Power-Actuated Fasteners Installed in Structural Members; Current edition.

Q. Other ASTM standards as specified below.

R. AWS D1.1/D1.1M Structural Welding Code - Steel

1.04 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in 01 40 00 “Quality Requirements“ to design cold-formed steel framing.

B. Structural Performance: Provide cold-formed metal framing capable of withstanding design loads within limits and under conditions indicated.
   1. Design Loads: as indicated on Structural Drawings.
   2. Deflection Limits: Design framing systems to withstand design loads without deflections greater than the following:
      a. Exterior Wall Framing: Design wall framing to meet the following horizontal deflection conditions:
         1) Typical Conditions: 1/240 of wall height.
         2) EIFS Finishes: 1/360 of wall height.
         3) Brick Veneer: 1/360 of wall height.
         4) Stone Cladding: 1/360 of wall height.
      b. Interior Wall Framing: Horizontal deflection of 1/240 of wall height under a horizontal load of 5 pound-force per square foot.
   3. Design framing systems to provide for movement of framing members without damage or overstressing, sheathing failure, connection failure, undue strain on fasteners and anchors, or other detrimental effects when subject to a maximum ambient temperature change of 120 deg F.
   4. Design framing system to maintain clearances at openings, to allow for construction tolerances, and to accommodate live load deflection of primary building structure as follows:
      a. Upward and downward movement as indicated on drawings.
      b. Design exterior non-load bearing framing to accommodate horizontal deflection without regard for contribution of sheathing materials.

C. Cold-Formed Steel Framing, General: Design according to AISI's "Standard for Cold-Formed Steel Framing - General Provisions."
   1. Floor and Roof systems: AISI S210.
   2. Headers: AISI S212.
   3. Wall Studs: AISI S211.
   4. Lateral Design: AISI S213.
   5. Design exterior non-load-bearing wall framing to accommodate horizontal deflection without regard for contribution of sheathing materials.

1.05 SUBMITTALS

A. Product Data: For each type of cold-formed metal framing product and accessory indicated.

B. Shop Drawings: Provide shop drawings prepared by cold-formed metal framing manufacturer.
   1. Show layout, spacing, sizes, thicknesses, and types of cold-formed metal framing; fabrication; and fastening and anchorage details, including mechanical fasteners.
   2. Show reinforcing channels, opening framing, supplemental framing, strapping, bracing, bridging, splices, accessories, connection details, and attachment to adjoining work.
   3. For cold-formed metal framing indicated to comply with design loads, include comprehensive structural analysis and detailed shop drawings, signed and sealed by the qualified professional engineer, registered in the state of the project, responsible for their preparation.
      a. Comprehensive structural analysis shall be submitted concurrently with related shop drawings.
      b. Calculation shall be organized, clear and concise and shall include table of contents and page numbers.
      c. Shop Drawings received without corresponding calculations will not be reviewed by the Engineer.
   4. Resubmittals, if necessary, shall Cloud and clearly identify revisions from previous submittals.

C. Welding certificates.

D. Qualification Data: For professional engineer.

E. Product Test Reports: From a qualified testing agency, unless otherwise stated, indicating that each of the following complies with requirements, based on evaluation of comprehensive tests for current products:

F. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

G. Perform and submit reports of Code Required Special Inspections as required in Section 01 45 33.

H. Research/Evaluation Reports: For cold-formed metal framing.

1.06 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Engineering Responsibility: Preparation of Shop Drawings, design calculations, and other structural data by a qualified professional engineer, registered in the state of the project, responsible for their preparation.

C. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of cold-formed metal framing that are similar to those indicated for this Project in material, design, and extent.

D. Testing Agency Qualifications: An independent testing agency, acceptable to authorities having jurisdiction, qualified according to ASTM E329 to conduct the testing indicated.

E. Product Tests: Mill certificates or data from a qualified independent testing agency, or in-house testing with calibrated test equipment indicating steel sheet complies with requirements, including base-metal thickness, yield strength, tensile strength, total elongation, chemical requirements, ductility, and metallic-coating thickness.

F. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel," and AWS D1.3, "Structural Welding Code - Sheet Steel."

G. Comply with AISI Specifications and Standards.
   1. AISI S100 “North American Specification for the Design of Cold-Formed Steel Structural Members”.
   2. AISI S200 “North American Standard for Cold-Formed Steel Framing - General Provisions”.
   3. AISI S201 “North American Standard for Cold-Formed Steel Framing - Product Standard”.
   4. AISI S211 “North American Standard for Cold-Formed Steel Framing - Wall Stud Design”.
   5. AISI S212 “North American Standard for Cold-Formed Steel Framing - Header Design”.
   6. AISI S213 “North American Standard for Cold-Formed Steel Framing - Lateral Design”.
   7. AISI “Code of Standard Practice for Cold-Formed Steel Structural Framing”.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Protect cold-formed metal framing from corrosion, deformation, and other damage during delivery, storage, and handling.

B. Store cold-formed metal framing, protect with a waterproof covering, and ventilate to avoid condensation.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide cold-formed metal framing by one of the following:
   1. ClarkDietrich Building Systems.
   2. The Steel Network.

3. Approved company specializing in manufacturing products specified in this section with minimum three years documented experience; current member of Steel Stud Manufacturers Association.

2.02 MATERIALS

A. Recycled Content of Steel Products: Provide products with an average recycled content of steel products so postconsumer recycled content plus one-half of preconsumer recycled content is not less than 25 percent.

B. Steel Sheet: ASTM A1003/A1003M, Structural Grade, Type H, metallic coated, of grade and coating weight as follows:
   1. Grade: As required by structural performance.
   2. Coating: G60 (Z180).

C. Steel Sheet for Vertical Deflection Clips: ASTM A653/A653M, structural steel, zinc coated, of grade and coating as follows:
   1. Grade: As required by structural performance.
   2. Coating: G90 (Z275).

2.03 LOAD-BEARING WALL FRAMING

A. Steel Studs: Manufacturer's standard C-shaped steel studs, of web depths indicated, punched, with stiffened flanges.

B. Steel Track: Manufacturer's standard U-shaped steel track, of web depths indicated, unpunched, with straight flanges.

C. Headers and Jambs - Heavy-Duty Stud: Manufacturer's proprietary shape used to form header beams and jambs, columns or posts, of web depths indicated, unpunched, with stiffened flanges.

D. Steel Box or Back-to-Back Headers: Manufacturer's standard C-shapes used to form header beams, of web depths and flange widths indicated, punched, with stiffened flanges.

E. Steel Double-L Headers: Manufacturer's standard L-shapes used to form header beams, of web depths and flange widths indicated.

2.04 EXTERIOR NON-LOAD-BEARING WALL FRAMING

A. Steel Studs: Manufacturer's standard C-shaped steel studs, of web depths and flange widths indicated, punched, with stiffened flanges.

B. Minimum gauge: 18 ga.

C. Steel Track: Manufacturer's standard U-shaped steel track, of web depths indicated, unpunched, with straight flanges.

D. Headers and Jambs - Heavy-Duty Stud: Manufacturer's proprietary shape used to form header beams and jambs, columns or posts, of web depths and flange widths indicated, unpunched, with stiffened flanges.

E. Steel Box or Back-to-Back Headers: Manufacturer's standard C-shapes used to form header beams, of web depths and flange widths indicated, punched, with stiffened flanges.

F. Steel Double-L Headers: Manufacturer's standard L-shapes used to form header beams, of web depths and flange widths indicated.

2.05 FRAMING ACCESSORIES

A. Fabricate steel-framing accessories from steel sheet, ASTM A1003/A1003M, Structural Grade, Type H, metallic coated, of same grade and coating weight used for framing members.

B. Provide accessories of manufacturer's standard thickness and configuration, unless otherwise indicated, as follows:
   1. Supplementary framing.
   2. Bracing, bridging, and solid blocking.
   3. Anchor clips.
   4. Stud kickers, knee braces, and girts.

C. Deflection Track and Firestop Track: Steel sheet top runner manufactured to prevent cracking of finishes applied to interior partition framing resulting from deflection of structure above; in thicknesses not less than indicated for studs and in width to accommodate depth of studs.

D. Slotted Deflection Track: Manufacturer's single, deep-leg, U-shaped steel track; punched with vertical slots in both legs. Studs should be positively attached to deep-leg track using vertical slots while allowing free vertical movement. Legs designed to support horizontal and lateral loads and transfer them to the primary structure. Accommodate vertical movements as indicated in drawings.

E. Single Deflection Track: Manufacturer's single, deep-leg, U-shaped steel track; unpunched, with unstiffened flanges, of web depth to contain studs while allowing free vertical movement, with flanges designed to support horizontal and lateral loads and transfer them to the primary structure. Install a continuous row of bridging, composed of 1-1/2 inch (38 mm) cold-formed channel secured to each stud with clip angle or Spazzer 5400, at upper-most knockout, not more than 12 inches (305 mm) from top of wall.

2.06 ANCHORS, CLIPS, AND FASTENERS

A. Steel Shapes and Clips: ASTM A36/A36M, zinc coated by hot-dip process according to ASTM A123/A123M.

B. Torsion anchor clips: Provide where indicated on drawings:
   1. ASTM A1003/A1003M Structural Grade 50 (340) Type H, ST50H (ST340H): 50ksi (340MPa) minimum yield strength, 65ksi (450MPa) minimum tensile strength. Size as indicated on drawings.
   2. Manufacturer/Product:
      a. The Steel Network/Stiffclip.
      b. ClarkDietrich/Easyclip.

C. Vertical Deflection Clips: Manufacturer's standard clips, capable of accommodating upward and downward vertical displacement of primary structure through positive mechanical attachment to stud web and capable of resisting forces imposed by the wall system.

D. Expansion Anchors: Fabricated from corrosion-resistant materials, with capability to sustain, without failure, a load equal to 5 times design load, as determined by testing per ASTM E488/E488M conducted by a qualified independent testing agency.

E. Power-Actuated Anchors: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with capability to sustain, without failure, a load equal to 10 times design load, as determined by testing per ASTM E1190 conducted by a qualified independent testing agency.

F. Mechanical Fasteners: ASTM C1513, corrosion-resistant-coated, self-drilling, self-tapping steel drill screws.

G. Welding Electrodes: Comply with AWS standards.

2.07 MISCELLANEOUS MATERIALS

A. Shims: Load bearing, high-density multi-monomer plastic, non-leaching.

B. Sealer Gaskets: Closed-cell neoprene foam, 1/4 inch (6.4 mm) thick, selected from manufacturer's standard widths to match width of bottom track or rim track members.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine supporting substrates and abutting structural framing for compliance with requirements for installation tolerances and other conditions affecting performance.
   1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Install sealer gaskets to isolate the underside of wall bottom track or rim track and the top of foundation wall or slab at stud or joist locations.

3.03 INSTALLATION, GENERAL

A. Cold-formed metal framing may be shop or field fabricated for installation, or it may be field assembled.

B. Install cold-formed metal framing according to AISI's "Standard for Cold-Formed Steel Framing - General Provisions" and to manufacturer's written instructions unless more stringent requirements are indicated.

C. Install cold-formed metal framing and accessories plumb, square, and true to line, and with connections securely fastened.
   1. Cut framing members by sawing or shearing; do not torch cut.
   2. Fasten cold-formed metal framing members by welding, screw fastening, clinch fastening, or riveting. Wire tying of framing members is not permitted.
      a. Comply with AWS D1.3 requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.
      b. Locate mechanical fasteners and install according to Shop Drawings, and complying with requirements for spacing, edge distances, and screw penetration.

D. Install framing members in one-piece lengths unless splice connections are indicated.

E. Install temporary bracing and supports to secure framing and support loads comparable in intensity to those for which structure was designed. Maintain braces and supports in place, undisturbed, until entire integrated supporting structure has been completed and permanent connections to framing are secured.

F. Do not bridge building expansion and control joints with cold-formed metal framing. Independently frame both sides of joints.

G. Fasten hole reinforcing plate over web penetrations that exceed size of manufacturer's standard punched openings.

H. Erection Tolerances: Install cold-formed metal framing level, plumb, and true to line to a maximum allowable tolerance variation of (1:960) and as follows:
   1. Space individual framing members no more than plus or minus 1/8 inch (3 mm) from plan location. Cumulative error shall not exceed minimum fastening requirements of sheathing or other finishing materials.

3.04 LOAD-BEARING WALL INSTALLATION

A. Install continuous top and bottom tracks sized to match studs. Align tracks accurately and securely anchor at corners and ends, and at spacing to match stud spacing.

B. Squarely seat studs against top and bottom tracks with gap not exceeding of 1/8 inch (3 mm) between the end of wall framing member and the web of track. Fasten both flanges of studs to top and bottom tracks. Space studs at 24 inches (610 mm).

C. Set studs plumb, except as needed for diagonal bracing or required for non-plumb walls or warped surfaces and similar configurations.

D. Align studs vertically where floor framing interrupts wall-framing continuity. Where studs cannot be aligned, continuously reinforce track to transfer loads.

E. Align floor and roof framing over studs. Where framing cannot be aligned, continuously reinforce track to transfer loads.

F. Anchor studs abutting structural columns or walls, including masonry walls, to supporting structure as indicated.

G. Install headers over wall openings wider than stud spacing. Locate headers above openings as indicated. Fabricate headers of compound shapes indicated or required to transfer load to supporting studs, complete with clip-angle connectors, web stiffeners, or gusset plates.
   1. Frame wall openings with not less than a double stud at each jamb of frame as indicated on Shop Drawings. Fasten jamb members together to uniformly distribute loads.

2. Install runner tracks and jack studs above and below wall openings. Anchor tracks to jamb studs with clip angles or by welding, and space jack studs same as full-height wall studs.

H. Install supplementary framing, blocking, and bracing in stud framing indicated to support fixtures, equipment, services, casework, heavy trim, furnishings, and similar work requiring attachment to framing.
   1. If type of supplementary support is not indicated, comply with stud manufacturer's written recommendations and industry standards in each case, considering weight or load resulting from item supported.

I. Install horizontal bridging in stud system, spaced as indicated on Shop Drawings. Fasten at each stud intersection.

J. Install miscellaneous framing and connections, including supplementary framing, web stiffeners, clip angles, continuous angles, anchors, and fasteners, to provide a complete and stable wall-framing system.

3.05 EXTERIOR NON-LOAD-BEARING WALL INSTALLATION

A. Install continuous tracks sized to match studs. Align tracks accurately and securely anchor to supporting structure as indicated.

B. Fasten both flanges of studs to top and bottom track unless otherwise indicated. Spacing of studs not to exceed that indicated in drawings.

C. Set studs plumb, except as needed for diagonal bracing or required for non-plumb walls or warped surfaces and similar requirements.

D. Isolate non-load-bearing steel framing from building structure to prevent transfer of vertical loads while providing lateral support.
   1. Install deflection tracks and anchor to building structure.
   2. Install double deep-leg deflection tracks and anchor outer track to building structure.
   3. Connect vertical deflection clips to studs and anchor to building structure.

E. Install horizontal bridging in wall studs, spaced vertically in rows indicated on Shop Drawings but not more than 48 inches (1220 mm) apart. Fasten at each stud intersection.
   1. Top Bridging for Single Deflection Track: Install row of horizontal bridging within 12 inches (305 mm) of single deflection track. Install a combination of bridging and stud or stud-track solid blocking of width and thickness matching studs, secured to stud webs or flanges.
   2. Bridging: Steel channel, welded or mechanically fastened to webs of punched studs.
   3. Bridging: Combination of flat, taut, steel sheet straps of width and thickness indicated and stud-track solid blocking of width and thickness to match studs. Fasten flat straps to stud flanges and secure solid blocking to stud webs or flanges.
   4. Bridging: Proprietary bridging bars installed according to manufacturer's written instructions.

F. Install miscellaneous framing and connections, including stud kickers, web stiffeners, clip angles, continuous angles, anchors, and fasteners, to provide a complete and stable wall-framing system.

3.06 FIELD QUALITY CONTROL

A. Testing: Owner will engage a qualified independent testing and inspecting agency to perform field tests and inspections and prepare test reports.

B. Field and shop welds will be subject to testing and inspecting.

C. Testing agency will report test results promptly and in writing to Contractor and Architect.

D. Remove and replace work where test results indicate that it does not comply with specified requirements.

E. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.07 REPAIRS AND PROTECTION

A. Galvanizing Repairs: Prepare and repair damaged galvanized coatings on fabricated and installed cold-formed metal framing with galvanized repair paint according to ASTM A780/A780M and manufacturer's written instructions.

B. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and installer, to ensure that cold-formed metal framing is without damage or deterioration at time of Substantial Completion.

O. ASTM E488/E488M - Standard Test Methods for Strength of Anchors in Concrete Elements; 2022.

P. ASTM E1190 - Standard Test Methods for Strength of Power-Actuated Fasteners Installed in Structural Members; Current edition.

Q. Other ASTM standards as specified below.

R. AWS D1.1/D1.1M Structural Welding Code - Steel

1.04 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in 01 40 00 “Quality Requirements“ to design cold-formed steel framing.

B. Structural Performance: Provide cold-formed metal framing capable of withstanding design loads within limits and under conditions indicated.
   1. Design Loads: as indicated on Structural Drawings.
   2. Deflection Limits: Design framing systems to withstand design loads without deflections greater than the following:
      a. Exterior Wall Framing: Design wall framing to meet the following horizontal deflection conditions:
         1) Typical Conditions: 1/240 of wall height.
         2) EIFS Finishes: 1/360 of wall height.
         3) Brick Veneer: 1/360 of wall height.
         4) Stone Cladding: 1/360 of wall height.
      b. Interior Wall Framing: Horizontal deflection of 1/240 of wall height under a horizontal load of 5 pound-force per square foot.
   3. Design framing systems to provide for movement of framing members without damage or overstressing, sheathing failure, connection failure, undue strain on fasteners and anchors, or other detrimental effects when subject to a maximum ambient temperature change of 120 deg F.
   4. Design framing system to maintain clearances at openings, to allow for construction tolerances, and to accommodate live load deflection of primary building structure as follows:
      a. Upward and downward movement as indicated on drawings.
      b. Design exterior non-load bearing framing to accommodate horizontal deflection without regard for contribution of sheathing materials.

C. Cold-Formed Steel Framing, General: Design according to AISI's "Standard for Cold-Formed Steel Framing - General Provisions."
   1. Floor and Roof systems: AISI S210.
   2. Headers: AISI S212.
   3. Wall Studs: AISI S211.
   4. Lateral Design: AISI S213.
   5. Design exterior non-load-bearing wall framing to accommodate horizontal deflection without regard for contribution of sheathing materials.

1.05 SUBMITTALS

A. Product Data: For each type of cold-formed metal framing product and accessory indicated.

B. Shop Drawings: Provide shop drawings prepared by cold-formed metal framing manufacturer.
   1. Show layout, spacing, sizes, thicknesses, and types of cold-formed metal framing; fabrication; and fastening and anchorage details, including mechanical fasteners.
   2. Show reinforcing channels, opening framing, supplemental framing, strapping, bracing, bridging, splices, accessories, connection details, and attachment to adjoining work.
   3. For cold-formed metal framing indicated to comply with design loads, include comprehensive structural analysis and detailed shop drawings, signed and sealed by the qualified professional engineer, registered in the state of the project, responsible for their preparation.
      a. Comprehensive structural analysis shall be submitted concurrently with related shop drawings.
      b. Calculation shall be organized, clear and concise and shall include table of contents and page numbers.
      c. Shop Drawings received without corresponding calculations will not be reviewed by the Engineer.
   4. Resubmittals, if necessary, shall Cloud and clearly identify revisions from previous submittals.

C. Welding certificates.

D. Qualification Data: For professional engineer.

E. Product Test Reports: From a qualified testing agency, unless otherwise stated, indicating that each of the following complies with requirements, based on evaluation of comprehensive tests for current products:

F. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

G. Perform and submit reports of Code Required Special Inspections as required in Section 01 45 33.

H. Research/Evaluation Reports: For cold-formed metal framing.

1.06 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Engineering Responsibility: Preparation of Shop Drawings, design calculations, and other structural data by a qualified professional engineer, registered in the state of the project, responsible for their preparation.

C. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of cold-formed metal framing that are similar to those indicated for this Project in material, design, and extent.

D. Testing Agency Qualifications: An independent testing agency, acceptable to authorities having jurisdiction, qualified according to ASTM E329 to conduct the testing indicated.

E. Product Tests: Mill certificates or data from a qualified independent testing agency, or in-house testing with calibrated test equipment indicating steel sheet complies with requirements, including base-metal thickness, yield strength, tensile strength, total elongation, chemical requirements, ductility, and metallic-coating thickness.

F. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel," and AWS D1.3, "Structural Welding Code - Sheet Steel."

G. Comply with AISI Specifications and Standards.
   1. AISI S100 “North American Specification for the Design of Cold-Formed Steel Structural Members”.
   2. AISI S200 “North American Standard for Cold-Formed Steel Framing - General Provisions”.
   3. AISI S201 “North American Standard for Cold-Formed Steel Framing - Product Standard”.
   4. AISI S211 “North American Standard for Cold-Formed Steel Framing - Wall Stud Design”.
   5. AISI S212 “North American Standard for Cold-Formed Steel Framing - Header Design”.
   6. AISI S213 “North American Standard for Cold-Formed Steel Framing - Lateral Design”.
   7. AISI “Code of Standard Practice for Cold-Formed Steel Structural Framing”.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Protect cold-formed metal framing from corrosion, deformation, and other damage during delivery, storage, and handling.

B. Store cold-formed metal framing, protect with a waterproof covering, and ventilate to avoid condensation.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide cold-formed metal framing by one of the following:
   1. ClarkDietrich Building Systems.
   2. The Steel Network.

3. Approved company specializing in manufacturing products specified in this section with minimum three years documented experience; current member of Steel Stud Manufacturers Association.

2.02 MATERIALS

A. Recycled Content of Steel Products: Provide products with an average recycled content of steel products so postconsumer recycled content plus one-half of preconsumer recycled content is not less than 25 percent.

B. Steel Sheet: ASTM A1003/A1003M, Structural Grade, Type H, metallic coated, of grade and coating weight as follows:
   1. Grade: As required by structural performance.
   2. Coating: G60 (Z180).

C. Steel Sheet for Vertical Deflection Clips: ASTM A653/A653M, structural steel, zinc coated, of grade and coating as follows:
   1. Grade: As required by structural performance.
   2. Coating: G90 (Z275).

2.03 LOAD-BEARING WALL FRAMING

A. Steel Studs: Manufacturer's standard C-shaped steel studs, of web depths indicated, punched, with stiffened flanges.

B. Steel Track: Manufacturer's standard U-shaped steel track, of web depths indicated, unpunched, with straight flanges.

C. Headers and Jambs - Heavy-Duty Stud: Manufacturer's proprietary shape used to form header beams and jambs, columns or posts, of web depths indicated, unpunched, with stiffened flanges.

D. Steel Box or Back-to-Back Headers: Manufacturer's standard C-shapes used to form header beams, of web depths and flange widths indicated, punched, with stiffened flanges.

E. Steel Double-L Headers: Manufacturer's standard L-shapes used to form header beams, of web depths and flange widths indicated.

2.04 EXTERIOR NON-LOAD-BEARING WALL FRAMING

A. Steel Studs: Manufacturer's standard C-shaped steel studs, of web depths and flange widths indicated, punched, with stiffened flanges.

B. Minimum gauge: 18 ga.

C. Steel Track: Manufacturer's standard U-shaped steel track, of web depths indicated, unpunched, with straight flanges.

D. Headers and Jambs - Heavy-Duty Stud: Manufacturer's proprietary shape used to form header beams and jambs, columns or posts, of web depths and flange widths indicated, unpunched, with stiffened flanges.

E. Steel Box or Back-to-Back Headers: Manufacturer's standard C-shapes used to form header beams, of web depths and flange widths indicated, punched, with stiffened flanges.

F. Steel Double-L Headers: Manufacturer's standard L-shapes used to form header beams, of web depths and flange widths indicated.

2.05 FRAMING ACCESSORIES

A. Fabricate steel-framing accessories from steel sheet, ASTM A1003/A1003M, Structural Grade, Type H, metallic coated, of same grade and coating weight used for framing members.

B. Provide accessories of manufacturer's standard thickness and configuration, unless otherwise indicated, as follows:
   1. Supplementary framing.
   2. Bracing, bridging, and solid blocking.
   3. Anchor clips.
   4. Stud kickers, knee braces, and girts.

C. Deflection Track and Firestop Track: Steel sheet top runner manufactured to prevent cracking of finishes applied to interior partition framing resulting from deflection of structure above; in thicknesses not less than indicated for studs and in width to accommodate depth of studs.

D. Slotted Deflection Track: Manufacturer's single, deep-leg, U-shaped steel track; punched with vertical slots in both legs. Studs should be positively attached to deep-leg track using vertical slots while allowing free vertical movement. Legs designed to support horizontal and lateral loads and transfer them to the primary structure. Accommodate vertical movements as indicated in drawings.

E. Single Deflection Track: Manufacturer's single, deep-leg, U-shaped steel track; unpunched, with unstiffened flanges, of web depth to contain studs while allowing free vertical movement, with flanges designed to support horizontal and lateral loads and transfer them to the primary structure. Install a continuous row of bridging, composed of 1-1/2 inch (38 mm) cold-formed channel secured to each stud with clip angle or Spazzer 5400, at upper-most knockout, not more than 12 inches (305 mm) from top of wall.

2.06 ANCHORS, CLIPS, AND FASTENERS

A. Steel Shapes and Clips: ASTM A36/A36M, zinc coated by hot-dip process according to ASTM A123/A123M.

B. Torsion anchor clips: Provide where indicated on drawings:
   1. ASTM A1003/A1003M Structural Grade 50 (340) Type H, ST50H (ST340H): 50ksi (340MPa) minimum yield strength, 65ksi (450MPa) minimum tensile strength. Size as indicated on drawings.
   2. Manufacturer/Product:
      a. The Steel Network/Stiffclip.
      b. ClarkDietrich/Easyclip.

C. Vertical Deflection Clips: Manufacturer's standard clips, capable of accommodating upward and downward vertical displacement of primary structure through positive mechanical attachment to stud web and capable of resisting forces imposed by the wall system.

D. Expansion Anchors: Fabricated from corrosion-resistant materials, with capability to sustain, without failure, a load equal to 5 times design load, as determined by testing per ASTM E488/E488M conducted by a qualified independent testing agency.

E. Power-Actuated Anchors: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with capability to sustain, without failure, a load equal to 10 times design load, as determined by testing per ASTM E1190 conducted by a qualified independent testing agency.

F. Mechanical Fasteners: ASTM C1513, corrosion-resistant-coated, self-drilling, self-tapping steel drill screws.

G. Welding Electrodes: Comply with AWS standards.

2.07 MISCELLANEOUS MATERIALS

A. Shims: Load bearing, high-density multi-monomer plastic, non-leaching.

B. Sealer Gaskets: Closed-cell neoprene foam, 1/4 inch (6.4 mm) thick, selected from manufacturer's standard widths to match width of bottom track or rim track members.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine supporting substrates and abutting structural framing for compliance with requirements for installation tolerances and other conditions affecting performance.
   1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Install sealer gaskets to isolate the underside of wall bottom track or rim track and the top of foundation wall or slab at stud or joist locations.

3.03 INSTALLATION, GENERAL

A. Cold-formed metal framing may be shop or field fabricated for installation, or it may be field assembled.

B. Install cold-formed metal framing according to AISI's "Standard for Cold-Formed Steel Framing - General Provisions" and to manufacturer's written instructions unless more stringent requirements are indicated.

C. Install cold-formed metal framing and accessories plumb, square, and true to line, and with connections securely fastened.
   1. Cut framing members by sawing or shearing; do not torch cut.
   2. Fasten cold-formed metal framing members by welding, screw fastening, clinch fastening, or riveting. Wire tying of framing members is not permitted.
      a. Comply with AWS D1.3 requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.
      b. Locate mechanical fasteners and install according to Shop Drawings, and complying with requirements for spacing, edge distances, and screw penetration.

D. Install framing members in one-piece lengths unless splice connections are indicated.

E. Install temporary bracing and supports to secure framing and support loads comparable in intensity to those for which structure was designed. Maintain braces and supports in place, undisturbed, until entire integrated supporting structure has been completed and permanent connections to framing are secured.

F. Do not bridge building expansion and control joints with cold-formed metal framing. Independently frame both sides of joints.

G. Fasten hole reinforcing plate over web penetrations that exceed size of manufacturer's standard punched openings.

H. Erection Tolerances: Install cold-formed metal framing level, plumb, and true to line to a maximum allowable tolerance variation of (1:960) and as follows:
   1. Space individual framing members no more than plus or minus 1/8 inch (3 mm) from plan location. Cumulative error shall not exceed minimum fastening requirements of sheathing or other finishing materials.

3.04 LOAD-BEARING WALL INSTALLATION

A. Install continuous top and bottom tracks sized to match studs. Align tracks accurately and securely anchor at corners and ends, and at spacing to match stud spacing.

B. Squarely seat studs against top and bottom tracks with gap not exceeding of 1/8 inch (3 mm) between the end of wall framing member and the web of track. Fasten both flanges of studs to top and bottom tracks. Space studs at 24 inches (610 mm).

C. Set studs plumb, except as needed for diagonal bracing or required for non-plumb walls or warped surfaces and similar configurations.

D. Align studs vertically where floor framing interrupts wall-framing continuity. Where studs cannot be aligned, continuously reinforce track to transfer loads.

E. Align floor and roof framing over studs. Where framing cannot be aligned, continuously reinforce track to transfer loads.

F. Anchor studs abutting structural columns or walls, including masonry walls, to supporting structure as indicated.

G. Install headers over wall openings wider than stud spacing. Locate headers above openings as indicated. Fabricate headers of compound shapes indicated or required to transfer load to supporting studs, complete with clip-angle connectors, web stiffeners, or gusset plates.
   1. Frame wall openings with not less than a double stud at each jamb of frame as indicated on Shop Drawings. Fasten jamb members together to uniformly distribute loads.

2. Install runner tracks and jack studs above and below wall openings. Anchor tracks to jamb studs with clip angles or by welding, and space jack studs same as full-height wall studs.

H. Install supplementary framing, blocking, and bracing in stud framing indicated to support fixtures, equipment, services, casework, heavy trim, furnishings, and similar work requiring attachment to framing.
   1. If type of supplementary support is not indicated, comply with stud manufacturer's written recommendations and industry standards in each case, considering weight or load resulting from item supported.

I. Install horizontal bridging in stud system, spaced as indicated on Shop Drawings. Fasten at each stud intersection.

J. Install miscellaneous framing and connections, including supplementary framing, web stiffeners, clip angles, continuous angles, anchors, and fasteners, to provide a complete and stable wall-framing system.

3.05 EXTERIOR NON-LOAD-BEARING WALL INSTALLATION

A. Install continuous tracks sized to match studs. Align tracks accurately and securely anchor to supporting structure as indicated.

B. Fasten both flanges of studs to top and bottom track unless otherwise indicated. Spacing of studs not to exceed that indicated in drawings.

C. Set studs plumb, except as needed for diagonal bracing or required for non-plumb walls or warped surfaces and similar requirements.

D. Isolate non-load-bearing steel framing from building structure to prevent transfer of vertical loads while providing lateral support.
   1. Install deflection tracks and anchor to building structure.
   2. Install double deep-leg deflection tracks and anchor outer track to building structure.
   3. Connect vertical deflection clips to studs and anchor to building structure.

E. Install horizontal bridging in wall studs, spaced vertically in rows indicated on Shop Drawings but not more than 48 inches (1220 mm) apart. Fasten at each stud intersection.
   1. Top Bridging for Single Deflection Track: Install row of horizontal bridging within 12 inches (305 mm) of single deflection track. Install a combination of bridging and stud or stud-track solid blocking of width and thickness matching studs, secured to stud webs or flanges.
   2. Bridging: Steel channel, welded or mechanically fastened to webs of punched studs.
   3. Bridging: Combination of flat, taut, steel sheet straps of width and thickness indicated and stud-track solid blocking of width and thickness to match studs. Fasten flat straps to stud flanges and secure solid blocking to stud webs or flanges.
   4. Bridging: Proprietary bridging bars installed according to manufacturer's written instructions.

F. Install miscellaneous framing and connections, including stud kickers, web stiffeners, clip angles, continuous angles, anchors, and fasteners, to provide a complete and stable wall-framing system.

3.06 FIELD QUALITY CONTROL

A. Testing: Owner will engage a qualified independent testing and inspecting agency to perform field tests and inspections and prepare test reports.

B. Field and shop welds will be subject to testing and inspecting.

C. Testing agency will report test results promptly and in writing to Contractor and Architect.

D. Remove and replace work where test results indicate that it does not comply with specified requirements.

E. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.07 REPAIRS AND PROTECTION

A. Galvanizing Repairs: Prepare and repair damaged galvanized coatings on fabricated and installed cold-formed metal framing with galvanized repair paint according to ASTM A780/A780M and manufacturer's written instructions.

B. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and installer, to ensure that cold-formed metal framing is without damage or deterioration at time of Substantial Completion.

END OF SECTION

SECTION 05 5000
METAL FABRICATIONS

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.02 SUMMARY

A. Section Includes:
   1. Ferrous Metals.
   2. Non-Ferrous Metals.
   3. Fasteners.
   4. Miscellaneous Materials.
   5. Miscellaneous Framing and supports:
      a. Steel framing and supports for overhead divider nets.
      b. Steel framing and supports for countertops.
      c. Steel framing and supports for mechanical and electrical equipment.
      d. Steel framing for equipment platforms.
      e. Steel framing and supports for trellises.
      f. Steel framing and supports for Bistro.
      g. Elevator machine beams and hoist beams.
      h. Steel shapes for supporting elevator door sills.
   6. Metal ladders.
   7. Metal guardrail.
   8. Metal ships' ladders.
   9. Metal bollards.
   10. Fixed and loose steel lintels.

B. Products furnished, but not installed, under this Section:
   1. Loose steel lintels.
   2. Anchor bolts, steel pipe sleeves, slotted-channel inserts, and wedge-type inserts indicated to be cast into concrete or built into unit masonry.
   3. Steel weld plates and angles for casting into concrete for applications where they are not specified in other Sections.

1.03 RELATED SECTIONS:

A. Section 01 31 00 - Project Management and Coordination.

B. Section 01 31 00.05 - Project BIM Coordination.

C. Section 01 33 00 - Submittal Procedures.

1.05 ADMINISTRATIVE REQUIREMENTS

A. Work Completed under this section must be coordinated with other work using BIM modelling. See Section 01 31 00.05 for requirements.

1.06 SUBMITTALS

A. Submit BIM models as required by Section 01 31 00.05.

B. Shop Drawings: Show fabrication and installation details for metal fabrications.
   1. Include plans, elevations, sections, and details of metal fabrications and their connections. Show anchorage and accessory items.
   2. Shop Drawing submittals must conform with coordinated BIM models. See Section 01 31 00.05.

C. Samples for Verification: For each type and finish of extruded nosing and tread.

D. Delegated-Design Submittal: For installed products indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
   1. Calculation shall be organized, clear and concise and shall include table of contents and page numbers.
   2. Calculations shall be submitted concurrently with shop/erection drawings and shall be signed and sealed at time of submission.
   3. Changes from Construction documents:
      a. Cloud and clearly identify all changes or deviations from the construction documents.

E. Qualification Data: For qualified professional engineer.

F. Welding certificates.

G. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers certifying that shop primers are compatible with topcoats.

H. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

1.07 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

C. Welding Qualifications: Qualify procedures and personnel according to the following:
   1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
   2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
   3. AWS D1.6/D1.6M, "Structural Welding Code - Stainless Steel."

1.08 PROJECT CONDITIONS

A. Field Measurements: Verify actual locations of walls and other construction contiguous with metal fabrications by field measurements before fabrication.

1.09 COORDINATION

A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.

B. Coordinate installation of anchorages and steel weld plates and angles for casting into concrete. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

PART 2 PRODUCTS

2.01 METALS, GENERAL

A. Metal Surfaces, General: Provide materials with smooth, flat surfaces unless otherwise indicated. For metal fabrications exposed to view in the completed Work, provide materials without seam marks, roller marks, rolled trade names, or blemishes.

2.02 FERROUS METALS

A. Recycled Content of Steel Products: Provide products with average recycled content of steel products so post-consumer recycled content plus one-half of pre-consumer recycled content is not less than 25 percent.

B. WIDE FLANGE SHAPES, CHANNELS, AND WT SHAPES: ASTM A992 (Fy = 50 ksi).

C. OTHER SHAPES, PLATES, ANGLES, AND BARS: ASTM A572 (Fy = 50 ksi) (UNO)

D. HOLLOW STRUCTURAL SECTIONS (HSS): ASTM A500/A500M, GRADE C (Fy = 50 ksi)

E. Steel Pipe: ASTM A53/A53M, standard weight (Schedule 40) unless otherwise indicated.

F. STAINLESS STEEL SHAPES AND PLATES: ASTM 304

G. Slotted Channel Framing: Cold-formed metal box channels (struts) complying with MFMA-4.
   1. Size of Channels: 1-5/8 by 1-5/8 inches (41 by 41 mm).
   2. Material: Galvanized steel, ASTM A653/A653M, commercial steel, Type B, with G90 (Z275) coating; 0.108-inch (2.8-mm) nominal thickness.
   3. Material: Cold-rolled steel, ASTM A1008/A1008M, commercial steel, Type B; 0.0966-inch (2.5-mm) minimum thickness; unfinished.

2.03 NONFERROUS METALS

A. Aluminum Plate and Sheet: ASTM B209/B209M, Alloy 6061-T6.

B. Aluminum Extrusions: ASTM B221 (ASTM B221M), Alloy 6063-T6.

C. Aluminum-Alloy Rolled Tread Plate: ASTM B632/B632M, Alloy 6061-T6.

D. Aluminum Castings: ASTM B26/B26M, Alloy 443.0-F.

2.04 FASTENERS

A. General: Unless otherwise indicated, provide Type 304 stainless-steel fasteners for exterior use and zinc-plated fasteners with coating complying with ASTM B633 or ASTM F3125/F3125M, Class Fe/Zn 5, at exterior. Select fasteners for type, grade, and class required.

B. Anchor Bolts: ASTM F1554, Grade 36, of dimensions indicated; with nuts, ASTM A563/A563M; and, where indicated, flat washers.

C. Anchors, General: Anchors capable of sustaining, without failure, a load equal to six times the load imposed when installed in unit masonry and four times the load imposed when installed in concrete, as determined by testing according to ASTM E488/E488M, conducted by a qualified independent testing agency.

2.05 MISCELLANEOUS MATERIALS

A. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.

B. Universal Shop Primer: Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with MPI#79 and compatible with topcoat.
   1. Use primer containing pigments that make it easily distinguishable from zinc-rich primer.

C. Galvanizing Repair Paint: High-zinc-dust-content paint complying with SSPC-Paint 20 and compatible with paints specified to be used over it.

D. Non-shrink, Metallic Grout: Factory-packaged, ferrous-aggregate grout complying with ASTM C1107/C1107M, specifically recommended by manufacturer for heavy-duty loading applications.

E. Concrete: Comply with requirements in Division 3 Section "Cast-in-Place Concrete" for normal-weight, air-entrained, concrete with a minimum 28-day compressive strength of 3000 psi (20 MPa).

2.06 MISCELLANEOUS FRAMING AND SUPPORTS

A. General: Provide steel framing and supports not specified in other Sections as needed to complete the Work.

B. Fabricate units from steel shapes, plates, and bars of welded construction unless otherwise indicated. Fabricate to sizes, shapes, and profiles indicated and as necessary to receive adjacent construction.
   1. Fabricate units from slotted channel framing where indicated.
   2. Furnish inserts for units installed after concrete is placed.

C. Prime miscellaneous framing and supports with universal shop primer unless noted otherwise.

D. Galvanize and prime miscellaneous framing and supports with universal shop primer where indicated on drawings.

E. Counter/Bench Mounting brackets: See drawings for locations.
   1. Custom Steel tube or angle brackets:
      a. See drawings for size and location.
   2. Prefabricated Steel Brackets: Low profile, concealed counter brackets
      a. Manufacturer and Product:
         1) FastCap; Stealth SpeedBrace.
         2) Or approved equal.
      b. Pair of brackets must support min 300 lbs.
      c. Size as indicated on drawings and as recommended by Manufacturer for the application.
   3. Sauna Bench hardware: See detail.
      a. 6x6 12 ga galv bracket.
         1) Simpson A66
         2) or Equal.
      b. 2 1/2 x 1 1/2" 18 ga clip
         1) Simpson A23
         2) or Equal.

2.07 METAL SHIPS' LADDERS

A. Provide metal ships' ladders where indicated. Contractor's option: Provide Steel ladder or Prefabricated Aluminum ladder.
   1. Steel Ladder:
      a. Fabricate of open-type construction with channel or plate stringers and pipe and tube railings unless otherwise indicated. Provide brackets and fittings for installation.
         1) Fabricate ships' ladders, including railings from steel.
         2) Treads and platforms: Contractor's option:
            (a) Fabricate treads and platforms from welded or pressure-locked steel bar grating. Limit openings in gratings to no more than 1/2 inch (12 mm) in least dimension.
            (b) Fabricate treads and platforms from rolled-steel floor plate.
         3) Comply with applicable railing requirements in Section 05 51 00 - Metal Stairs.
      b. Prime steel ships' ladders, including treads, railings, brackets, and fasteners, with universal shop primer.
   2. Prefabricated Aluminum Ladder:
      a. Provide Prefabricated, open type aluminum ladders with channel stringers and pipe and tube railings unless otherwise indicated. Provide brackets and fittings for installation.
         1) Prefabricated Ladder shall include all components necessary for installation.
            (a) Provide galvanic protection between aluminum and incompatible metals as necessary.
         2) Treads and Platforms: Treads and platforms shall consist of serrated aluminum channels for maximum traction.
         3) Handrails shall comply with applicable requirements of Section 05 51 00 - Metal Stairs.
            (a) Railings shall be min 1 1/4" Sch 40 Aluminum pipe.

2.08 METAL BOLLARDS

A. Fabricate metal bollards from Schedule 40 steel pipe 1/4-inch (6.4-mm) wall-thickness rectangular steel tubing steel shapes, as indicated.

B. Fabricate sleeves for bollard anchorage from steel pipe with 1/4-inch- (6.4-mm-) thick steel plate welded to bottom of sleeve. Make sleeves not less than 8 inches (200 mm) deep and 3/4 inch (19 mm) larger than OD of bollard.

C. Fabricate internal sleeves for removable bollards from Schedule 40 steel pipe or 1/4-inch (6.4-mm) wall-thickness steel tubing with an OD approximately 1/16 inch (1.5 mm) less than ID of bollards. Match drill sleeve and bollard for 3/4 inch (19 mm) steel machine bolt.

D. See drawings for height and diameter.

E. Prime bollards with universal shop primer.

2.09 FIXED AND LOOSE STEEL LINTELS

A. Fabricate fixed and loose steel lintels from steel angles and shapes of size indicated for openings and recesses in masonry walls and partitions at locations indicated. Fabricate in single lengths for each opening unless otherwise indicated. Weld adjoining members together to form a single unit where indicated.

B. Loose lintels shall be sized to provide sufficient bearing length as noted in Drawings

C. Galvanize and prime with universal shop primer fixed and loose steel lintels located in exterior walls and where indicated on drawings.

D. Prime fixed and loose steel lintels with universal shop primer unless noted otherwise.

2.10 FABRICATION, GENERAL

A. Shop Assembly: Preassemble items in the shop to greatest extent possible. Disassemble units only as necessary for shipping and handling limitations. Use connections that maintain structural value of joined pieces. Clearly mark units for reassembly and coordinated installation.

B. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch (1 mm) unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.

C. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.

D. Form exposed work with accurate angles and surfaces and straight edges.

E. Weld corners and seams continuously to comply with the following:
   1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
   2. Obtain fusion without undercut or overlap.
   3. Remove welding flux immediately.
   4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing.

F. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners or welds where possible. Where exposed fasteners are required, use Phillips flat-head (countersunk) fasteners unless otherwise indicated. Locate joints where least conspicuous.

G. Fabricate seams and other connections that will be exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate.

H. Cut, reinforce, drill, and tap metal fabrications as indicated to receive finish hardware, screws, and similar items.

2.11 FINISHES, GENERAL

A. Comply with NAAMM AMP 500-06 "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Finish metal fabrications after assembly.

C. Finish exposed surfaces to remove tool and die marks and stretch lines, and to blend into surrounding surface.

2.12 STEEL AND IRON FINISHES

A. Galvanizing: Hot-dip galvanize items as indicated to comply with ASTM A153/A153M for steel and iron hardware and with ASTM A123/A123M for other steel and iron products.
   1. Do not quench or apply post galvanizing treatments that might interfere with paint adhesion.

B. Shop prime iron and steel items not indicated to be galvanized unless they are to be embedded in concrete, sprayed-on fireproofing, or masonry, or unless otherwise indicated.

C. Preparation for Shop Priming: Prepare surfaces to comply with requirements indicated below:
   1. Exterior Items: SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
   2. Other Items: SSPC-SP 3, "Power Tool Cleaning."

D. Shop Priming: Apply shop primer to comply with SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.

2.13 ALUMINUM FINISHES

A. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.

B. As-Fabricated Finish: AA-M10 (Mechanical Finish: as fabricated, unspecified).

PART 3 EXECUTION

3.01 INSTALLATION, GENERAL

A. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal fabrications. Set metal fabrications accurately in location, alignment, and elevation; with edges and surfaces level, plumb, true, and free of rack; and measured from established lines and levels.

B. Fit exposed connections accurately together to form hairline joints. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations. Do not weld, cut, or abrade surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.

C. Field Welding: Comply with the following requirements:
   1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
   2. Obtain fusion without undercut or overlap.
   3. Remove welding flux immediately.
   4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.

D. Fastening to In-Place Construction: Provide anchorage devices and fasteners where metal fabrications are required to be fastened to in-place construction. Provide threaded fasteners for use with concrete and masonry inserts, toggle bolts, through bolts, lag screws, wood screws, and other connectors.

E. Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry, or similar construction.

F. Corrosion Protection: Coat concealed surfaces of aluminum that will come into contact with grout, concrete, masonry, wood, or dissimilar metals with the following:
   1. Cast Aluminum: Heavy coat of bituminous paint.
   2. Extruded Aluminum: Two coats of clear lacquer.

3.02 INSTALLING MISCELLANEOUS FRAMING AND SUPPORTS

A. General: Install framing and supports to comply with requirements of items being supported, including manufacturers' written instructions and requirements indicated on Shop Drawings.

B. Anchor supports for operable partitions securely to and rigidly brace from building structure.

C. Support steel girders on solid grouted masonry, concrete, or steel pipe columns. Secure girders with anchor bolts embedded in grouted masonry or concrete or with bolts through top plates of pipe columns.
   1. Where grout space under bearing plates is indicated for girders supported on concrete or masonry, install as specified in "Installing Bearing and Leveling Plates" Article.

D. Install pipe columns on concrete footings with grouted baseplates. Position and grout column baseplates as specified in "Installing Bearing and Leveling Plates" Article.
   1. Grout baseplates of columns supporting steel girders after girders are installed and leveled.

3.03 INSTALLING METAL BOLLARDS

A. Anchor bollards in concrete. Fill annular space around bollard solidly with nonshrink, nonmetallic grout; mixed and placed to comply with grout manufacturer's written instructions. Slope grout up approximately 1/8 inch (3 mm) toward bollard.

B. Fill bollards solidly with concrete, mounding top surface to shed water.

3.04 INSTALLING BEARING AND LEVELING PLATES

A. Clean concrete and masonry bearing surfaces of bond-reducing materials, and roughen to improve bond to surfaces. Clean bottom surface of plates.

B. Set bearing and leveling plates on wedges, shims, or leveling nuts. After bearing members have been positioned and plumbed, tighten anchor bolts. Do not remove wedges or shims but, if protruding, cut off flush with edge of bearing plate before packing with grout.
   1. Use non-shrink grout, either metallic or non-metallic, in concealed locations where not exposed to moisture; use non-shrink, non-metallic grout in exposed locations unless otherwise indicated.
   2. Pack grout solidly between bearing surfaces and plates to ensure that no voids remain.

3.05 ADJUSTING AND CLEANING

A. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas. Paint uncoated and abraded areas with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.

B. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A780/A780M.

END OF SECTION

SECTION 05 5100
METAL STAIRS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Industrial-type stairs with steel floor plate treads.
   2. Industrial-type stairs with steel bar grate treads.
   3. Ornamental steel-framed stairs.
   4. Steel tube railings attached to stairs or ramps.
   5. Steel tube handrails attached to walls adjacent to stairs or ramps.

1.02 RELATED SECTIONS

A. Section 01 31 00 - Project Management and Coordination.

B. Section 01 31 00.05 - Project BIM Coordination.

C. Section 01 33 00 - Submittal Procedures.

D. Section 01 40 00 - Quality Requirements.

E. Section 01 60 00 - Product Requirements.

X. SSPC-SP 3 - Power Tool Cleaning; 2024.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Work Completed under this section must be coordinated with other work using BIM modelling. See Section 01 31 00.05 for requirements.

1.05 PERFORMANCE REQUIREMENTS

A. Design stairs and components, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

B. Structural Performance of Stairs: Metal stairs shall withstand the effects of gravity loads including finishes and the following loads and stresses within limits and under conditions indicated.
   1. Uniform Live Load: 100 lbf/sq. ft. (4.79 kN/sq. m).
   2. Concentrated Live Load: 300 lbf (1.33 kN) applied on an area of 4 sq. in. (2580 sq. mm).
   3. Uniform and concentrated loads need not be assumed to act concurrently.
   4. Stair Framing: Capable of withstanding stresses resulting from railing loads in addition to loads specified above.
   5. Limit deflection of treads, platforms, and framing members to L/240 or 1/4 inch (6.4 mm), whichever is less.

C. Structural Performance of Railings: Railings shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated.
   1. Handrails and Top Rails of Guards:
      a. Uniform load of 50 lbf/ ft. (0.73 kN/m) applied in any direction.
      b. Concentrated load of 200 lbf (0.89 kN) applied in any direction.
      c. Uniform and concentrated loads need not be assumed to act concurrently.
   2. Infill of Guards:
      a. Concentrated load of 50 lbf (0.22 kN) applied horizontally on an area of 1 sq. ft. (0.093 sq. m).
      b. Infill load and other loads need not be assumed to act concurrently.

D. Seismic Performance: Metal stairs shall withstand the effects of earthquake motions determined according to ASCE 7/SEI 7.

1. Component Importance Factor is 1.25.

1.06 SUBMITTALS

A. Product Data: For metal stairs.

B. Submit BIM models as required by Section 01 31 00.05.

C. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
   1. Include details of cuts, connections, splices, camber, holes, and other pertinent data.
   2. Shop Drawing submittals must conform with coordinated BIM models. See Section 01 31 00.05.
   3. Fabricator is responsible for designing and detailing all connections to supporting structures, including embedded items. All applied loads from the stairs to the support structure shall be clearly defined within the shop drawings.
   4. Include embedment drawings.
   5. Indicate welds by standard AWS symbols, distinguishing between shop and field welds, and show size, length, and type of each weld. Show backing bars that are to be removed and supplemental fillet welds where backing bars are to remain.
   6. Indicate type, size, and length of bolts, distinguishing between shop and field bolts. Identify pretensioned and slip-critical high-strength bolted connections.
   7. For stairs and components indicated to comply with design loads, include comprehensive structural analysis design data signed and sealed by qualified professional engineer, registered in the state of the project, responsible for their preparation.
      a. Calculation shall be organized, clear and concise and shall include table of contents and page numbers.
      b. Calculations shall be submitted concurrently with shop/erection drawings and shall be signed and sealed at time of submission.
      c. Shop Drawings received without corresponding calculations will not be reviewed by the Engineer.
   8. Resubmittals, if necessary, shall cloud and clearly identify revisions from previous submittals.

D. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

1.07 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Installer Qualifications: Fabricator of products.

C. NAAMM Stair Standard: Comply with "Recommended Voluntary Minimum Standards for Fixed Metal Stairs" in NAAMM AMP 510, "Metal Stairs Manual," for class of stair designated, unless more stringent requirements are indicated.
   1. Industrial-Type Stairs: Industrial class.
   2. Ornamental Stairs: Architectural class.

D. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

1.08 COORDINATION

A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.

B. Coordinate installation of anchorages for metal stairs. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

C. Coordinate locations of hanger rods and struts with other work so that they will not encroach on required stair width and will be within the fire-resistance-rated stair enclosure.

PART 2 PRODUCTS

2.01 METALS, GENERAL

A. Metal Surfaces, General: Provide materials with smooth, flat surfaces unless otherwise indicated. For components exposed to view in the completed Work, provide materials without seam marks, roller marks, rolled trade names, or blemishes.

2.02 FERROUS METALS

A. Recycled Content of Steel Products: Provide products with average recycled content of steel products so postconsumer recycled content plus one-half of preconsumer recycled content is not less than 25 percent.

B. General: Comply with the following: ASTM A572/A572M, ASTM A992/A992M.

C. Steel Plates, Shapes, and Bars: ASTM A36/A36M, ASTM A53/A53M.

D. Steel Tubing: ASTM A500/A500M (cold formed) or ASTM A513/A513M.

E. Rolled-Steel Floor Plate: SDI (DM), ASTM A786/A786M, rolled from plate complying with ASTM A36/A36M or ASTM A283/A283M, Grade C or D.

F. Steel Bars for Grating Treads: ASTM A36/A36M or steel strip, ASTM A1011/A1011M or ASTM A1018A/A1018M.

G. Wire Rod for Grating Crossbars: ASTM A510/A510M.

H. Uncoated, Hot-Rolled Steel Sheet: ASTM A1011/A1011M, either commercial steel, Type B, or structural steel, Grade 30 (Grade 205), unless another grade is required by design loads.

I. Expanded-Metal, Carbon Steel: ASTM F1267, Type I (expanded), Class 1 (uncoated).

J. Woven-Wire Mesh: Intermediate-crimp, diamond pattern, 2-inch (50-mm) woven-wire mesh, made from 0.135-inch (3.5-mm) nominal diameter wire complying with ASTM A510/A510M.

2.03 FASTENERS

A. General: Provide zinc-plated fasteners with coating complying with ASTM B633 or ASTM F1941/F1941M, Class Fe/Zn 12 for exterior use, and Class Fe/Zn 5 where built into exterior walls. Select fasteners for type, grade, and class required.

2.04 MISCELLANEOUS MATERIALS

A. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.

B. Shop Primers: Provide primers that comply with Division 9 painting Sections.

C. Universal Shop Primer: Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with MPI#79 and compatible with topcoat.
   1. Use primer containing pigments that make it easily distinguishable from zinc-rich primer.

D. Concrete Materials and Properties: Comply with requirements in Division 3 Section "Cast-in-Place Concrete" for normal-weight, air-entrained, ready-mix concrete with a minimum 28-day compressive strength of 3,000 psi (20 MPa) unless otherwise indicated.

2.05 FABRICATION, GENERAL

A. Provide complete stair assemblies, including metal framing, hangers, struts, railings, clips, brackets, bearing plates, and other components necessary to support and anchor stairs and platforms on supporting structure. All components to comply with NAAMM AMP 510.
   1. Join components by welding unless otherwise indicated.
   2. Use connections that maintain structural value of joined pieces.
   3. Fabricate treads and platforms of exterior stairs so finished walking surfaces slope to drain.

B. Preassembled Stairs: Assemble stairs in shop to greatest extent possible. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.

C. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch (1 mm) unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.

D. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.

E. Form exposed work with accurate angles and surfaces and straight edges.

F. Weld connections to comply with the following:
   1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
   2. Obtain fusion without undercut or overlap.
   3. Remove welding flux immediately.
   4. Weld exposed corners and seams continuously unless otherwise indicated.
   5. At exposed connections, finish exposed welds to comply with NOMMA's "Voluntary Joint Finish Standards" for Type 3 welds: partially dressed weld with spatter removed.

G. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners where possible. Where exposed fasteners are required, use Phillips flat-head (countersunk) screws or bolts unless otherwise indicated. Locate joints where least conspicuous.

H. Fabricate joints that will be exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate.

2.06 STEEL-FRAMED STAIRS

A. Stair Framing:
   1. Fabricate stringers of steel channels or tubes as indicated in Drawings.
      a. Provide closures for exposed ends of tube stringers.
   2. Construct platforms of steel channel or tube headers and miscellaneous framing members as indicated.
   3. Weld or bolt stringers to headers; weld or bolt framing members to stringers and headers. If using bolts, fabricate and join so bolts are not exposed on finished surfaces.
   4. Where stairs are enclosed by gypsum board assemblies, provide hanger rods or struts to support landings above or below. Locate hanger rods and struts where they will not encroach on required stair width and will be within the fire-resistance-rated stair enclosure.
      a. Hangers from construction above permitted only as indicated in Drawings. Coordinate all support conditions with Architect and Engineer.
   5. Where masonry walls support metal stairs, provide temporary supporting struts designed for erecting steel stair components before installing masonry.

B. Metal-Pan Stairs: Form risers, subtread pans, and subplatforms to configurations shown from steel sheet of thickness indicated.
   1. Steel Sheet: Uncoated hot-rolled steel sheet.
   2. Steel Sheet: Galvanized-steel sheet, where indicated.
   3. Directly weld metal pans to stringers; locate welds on top of subtreads where they will be concealed by concrete fill. Do not weld risers to stringers.
   4. Attach risers and subtreads to stringers with brackets made of steel angles or bars. Weld brackets to stringers and attach metal pans to brackets by welding, riveting, or bolting.

C. Metal Floor Plate Stairs: Form treads and platforms to configurations shown from checkered rolled-steel floor plate of thickness needed to comply with performance requirements, but not less than 1/8 inch (3.2 mm).
   1. Form treads with integral nosing and back edge stiffener. Form risers of same material as treads.
   2. Weld steel supporting brackets to stringers and weld treads to brackets.
   3. Fabricate platforms with integral nosings matching treads and weld to platform framing.

D. Metal Bar-Grating Stairs: Form treads and platforms to configurations shown from metal bar grating; fabricate to comply with NAAMM MBG 531, "Metal Bar Grating Manual."

1. Fabricate treads and platforms from welded or pressure-locked steel grating with 1-by-1/8-inch (25-by-3-mm) bearing bars at 7/16 inch (11 mm) o.c. and crossbars at 4 inches (100 mm) o.c.
2. Fabricate treads and platforms from welded or pressure-locked steel grating with openings in gratings no more than 5/16 inch (8 mm) in least dimension.
3. Surface: Serrated.
4. Finish: Shop primed.
5. Fabricate grating treads with rolled-steel floor plate nosing and with steel angle or steel plate carrier at each end for stringer connections. Secure treads to stringers with bolts.
6. Fabricate grating platforms with nosing matching that on grating treads. Provide toeplates at open-sided edges of grating platforms. Weld grating to platform framing.

2.07 RAILINGS

A. Comply with applicable requirements in Section 05 73 13 - Glazed Decorative Metal Railings.
   1. Rails may be bent at corners, rail returns, and wall returns, instead of using prefabricated fittings.
   2. Connect posts to stair framing by direct welding unless otherwise indicated.

B. Steel Tube Railings: Fabricate railings to comply with requirements indicated for design, dimensions, details, finish, and member sizes, including wall thickness of tube, post spacings, and anchorage, but not less than that needed to withstand indicated loads.
   1. Rails and Posts: 1-5/8-inch- (41-mm-) diameter top and bottom rails.
   2. Picket Infill: Minimum of 1/2-inch- (13-mm-) pickets spaced less than 4 inches (100 mm) clear.
   3. Mesh Infill: Woven wire mesh crimped into 1-by-1/2-by-1/8-inch (25-by-13-by-3-mm) steel channel frames. Orient wire mesh with diamonds vertical.
   4. Gates: Form gates from steel tube of same size and shape as top rails, with infill to match guards. Provide with cam-type, self-closing hinges for fastening to wall and overlapping stop with rubber bumper to prevent gate from opening in direction opposite egress.

C. Welded Connections: Fabricate railings with welded connections. Cope components at connections to provide close fit, or use fittings designed for this purpose. Weld all around at connections, including at fittings.
   1. Finish welds to comply with NOMMA's "Voluntary Joint Finish Standards" for Type 3 welds: partially dressed weld with spatter removed.

D. Form changes in direction of railings as follows:
   1. As detailed.
   2. By bending or by inserting prefabricated elbow fittings.

E. Close exposed ends of railing members with prefabricated end fittings.

F. Provide wall returns at ends of wall-mounted handrails unless otherwise indicated. Close ends of returns unless clearance between end of rail and wall is 1/4 inch (6 mm) or less.

G. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, end closures, flanges, miscellaneous fittings, and anchors for interconnecting components and for attaching to other work. Furnish inserts and other anchorage devices for connecting to concrete or masonry work.
   1. Connect posts to stair framing by direct welding unless otherwise indicated.
   2. For galvanized railings, provide galvanized fittings, brackets, fasteners, sleeves, and other ferrous-metal components.
   3. For nongalvanized railings, provide nongalvanized ferrous-metal fittings, brackets, fasteners, and sleeves, except galvanize anchors embedded in exterior masonry and concrete construction.

H. Fillers: Provide fillers made from steel plate, or other suitably crush-resistant material, where needed to transfer wall bracket loads through wall finishes to structural supports. Size fillers to suit wall finish thicknesses and to produce adequate bearing area to prevent bracket rotation and overstressing of substrate.

2.08 FINISHES

A. Comply with NAAMM AMP 500-06 "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Finish metal stairs after assembly.

C. Preparation for Shop Priming: Prepare uncoated ferrous-metal surfaces to comply with minimum requirements indicated below for SSPC surface preparation specifications and environmental exposure conditions of installed products:
   1. Interior Stairs: SSPC-SP 3, "Power Tool Cleaning."

D. Apply shop primer to uncoated surfaces of metal stair components, except those with galvanized finishes and those to be embedded in concrete or masonry unless otherwise indicated. Comply with SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.
   1. Stripe paint corners, crevices, bolts, welds, and sharp edges.

E. See Spec Section 09 91 00 for final paint finish.

PART 3 EXECUTION

3.01 INSTALLATION, GENERAL

A. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing metal stairs to in-place construction. Include threaded fasteners for concrete and masonry inserts, through-bolts, lag bolts, and other connectors.
   1. Coordinate all required anchorage / fastening conditions with General Contractor prior to construction.

B. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal stairs. Set units accurately in location, alignment, and elevation, measured from established lines and levels and free of rack.

C. Install metal stairs by welding stair framing to steel structure or to weld plates cast into concrete unless otherwise indicated.

D. Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry, or similar construction.

E. Fit exposed connections accurately together to form hairline joints. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations. Do not weld, cut, or abrade surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.

F. Field Welding: Comply with requirements for welding in "Fabrication, General" Article.

G. Place and finish concrete fill for treads and platforms to comply with Section 03 30 00 - Cast-in-Place Concrete.

3.02 INSTALLING METAL STAIRS WITH GROUTED BASEPLATES

A. Clean concrete and masonry bearing surfaces of bond-reducing materials, and roughen to improve bond to surfaces. Clean bottom surface of baseplates.

B. Set steel stair baseplates on wedges, shims, or leveling nuts. After stairs have been positioned and aligned, tighten anchor bolts. Do not remove wedges or shims but, if protruding, cut off flush with edge of bearing plate before packing with grout.
   1. Use nonmetallic, nonshrink grout unless otherwise indicated.
   2. Pack grout solidly between bearing surfaces and plates to ensure that no voids remain.

3.03 INSTALLING RAILINGS

A. Adjust railing systems before anchoring to ensure matching alignment at abutting joints. Space posts at spacing indicated or, if not indicated, as required by design loads. Plumb posts in each direction. Secure posts and rail ends to building construction as follows:
   1. Anchor posts to steel by welding directly to steel supporting members.
   2. Anchor handrail ends to concrete and masonry with steel round flanges welded to rail ends and anchored with postinstalled anchors and bolts.

B. Attach handrails to wall with wall brackets. Use type of bracket with predrilled hole for exposed bolt anchorage. Provide bracket with 1-1/2-inch (38-mm) clearance from inside face of handrail and

finished wall surface. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads. Secure wall brackets to building construction as follows:

1. For concrete and solid masonry anchorage, use drilled-in expansion shields and hanger or lag bolts.
2. For hollow masonry anchorage, use toggle bolts.
3. For steel-framed partitions, use hanger or lag bolts set into fire-retardant-treated wood backing between studs. Coordinate with stud installation to locate backing members.

3.04 ADJUSTING AND CLEANING

A. Touchup Painting: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint are specified in Division 9 painting Sections.

END OF SECTION

SECTION 05 51 00
METAL STAIRS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Industrial-type stairs with steel floor plate treads.
   2. Industrial-type stairs with steel bar grate treads.
   3. Ornamental steel-framed stairs.
   4. Steel tube railings attached to stairs or ramps.
   5. Steel tube handrails attached to walls adjacent to stairs or ramps.

1.02 RELATED SECTIONS

A. Section 01 31 00 - Project Management and Coordination.

B. Section 01 31 00.05 - Project BIM Coordination.

C. Section 01 33 00 - Submittal Procedures.

D. Section 01 40 00 - Quality Requirements.

E. Section 01 60 00 - Product Requirements.

F. Section 03 20 00 - Concrete Reinforcement.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Work Completed under this section must be coordinated with other work using BIM modelling. See Section 01 31 00.05 for requirements.

1.05 PERFORMANCE REQUIREMENTS

A. Design stairs and components, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

B. Structural Performance of Stairs: Metal stairs shall withstand the effects of gravity loads including finishes and the following loads and stresses within limits and under conditions indicated.
   1. Uniform Live Load: 100 lbf/sq. ft. (4.79 kN/sq. m).
   2. Concentrated Live Load: 300 lbf (1.33 kN) applied on an area of 4 sq. in. (2580 sq. mm).
   3. Uniform and concentrated loads need not be assumed to act concurrently.
   4. Stair Framing: Capable of withstanding stresses resulting from railing loads in addition to loads specified above.
   5. Limit deflection of treads, platforms, and framing members to L/240 or 1/4 inch (6.4 mm), whichever is less.

C. Structural Performance of Railings: Railings shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated.
   1. Handrails and Top Rails of Guards:
      a. Uniform load of 50 lbf/ ft. (0.73 kN/m) applied in any direction.
      b. Concentrated load of 200 lbf (0.89 kN) applied in any direction.
      c. Uniform and concentrated loads need not be assumed to act concurrently.
   2. Infill of Guards:
      a. Concentrated load of 50 lbf (0.22 kN) applied horizontally on an area of 1 sq. ft. (0.093 sq. m).
      b. Infill load and other loads need not be assumed to act concurrently.

D. Seismic Performance: Metal stairs shall withstand the effects of earthquake motions determined according to ASCE 7/SEI 7.

1. Component Importance Factor is 1.25.

1.06 SUBMITTALS

A. Product Data: For metal stairs.

B. Submit BIM models as required by Section 01 31 00.05.

C. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
   1. Include details of cuts, connections, splices, camber, holes, and other pertinent data.
   2. Shop Drawing submittals must conform with coordinated BIM models. See Section 01 31 00.05.
   3. Fabricator is responsible for designing and detailing all connections to supporting structures, including embedded items. All applied loads from the stairs to the support structure shall be clearly defined within the shop drawings.
   4. Include embedment drawings.
   5. Indicate welds by standard AWS symbols, distinguishing between shop and field welds, and show size, length, and type of each weld. Show backing bars that are to be removed and supplemental fillet welds where backing bars are to remain.
   6. Indicate type, size, and length of bolts, distinguishing between shop and field bolts. Identify pretensioned and slip-critical high-strength bolted connections.
   7. For stairs and components indicated to comply with design loads, include comprehensive structural analysis design data signed and sealed by qualified professional engineer, registered in the state of the project, responsible for their preparation.
      a. Calculation shall be organized, clear and concise and shall include table of contents and page numbers.
      b. Calculations shall be submitted concurrently with shop/erection drawings and shall be signed and sealed at time of submission.
      c. Shop Drawings received without corresponding calculations will not be reviewed by the Engineer.
   8. Resubmittals, if necessary, shall cloud and clearly identify revisions from previous submittals.

D. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

1.07 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Installer Qualifications: Fabricator of products.

C. NAAMM Stair Standard: Comply with "Recommended Voluntary Minimum Standards for Fixed Metal Stairs" in NAAMM AMP 510, "Metal Stairs Manual," for class of stair designated, unless more stringent requirements are indicated.
   1. Industrial-Type Stairs: Industrial class.
   2. Ornamental Stairs: Architectural class.

D. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

1.08 COORDINATION

A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.

B. Coordinate installation of anchorages for metal stairs. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

C. Coordinate locations of hanger rods and struts with other work so that they will not encroach on required stair width and will be within the fire-resistance-rated stair enclosure.

PART 2 PRODUCTS

2.01 METALS, GENERAL

A. Metal Surfaces, General: Provide materials with smooth, flat surfaces unless otherwise indicated. For components exposed to view in the completed Work, provide materials without seam marks, roller marks, rolled trade names, or blemishes.

2.02 FERROUS METALS

A. Recycled Content of Steel Products: Provide products with average recycled content of steel products so postconsumer recycled content plus one-half of preconsumer recycled content is not less than 25 percent.

B. General: Comply with the following: ASTM A572/A572M, ASTM A992/A992M.

C. Steel Plates, Shapes, and Bars: ASTM A36/A36M, ASTM A53/A53M.

D. Steel Tubing: ASTM A500/A500M (cold formed) or ASTM A513/A513M.

E. Rolled-Steel Floor Plate: SDI (DM), ASTM A786/A786M, rolled from plate complying with ASTM A36/A36M or ASTM A283/A283M, Grade C or D.

F. Steel Bars for Grating Treads: ASTM A36/A36M or steel strip, ASTM A1011/A1011M or ASTM A1018A/A1018M.

G. Wire Rod for Grating Crossbars: ASTM A510/A510M.

H. Uncoated, Hot-Rolled Steel Sheet: ASTM A1011/A1011M, either commercial steel, Type B, or structural steel, Grade 30 (Grade 205), unless another grade is required by design loads.

I. Expanded-Metal, Carbon Steel: ASTM F1267, Type I (expanded), Class 1 (uncoated).

J. Woven-Wire Mesh: Intermediate-crimp, diamond pattern, 2-inch (50-mm) woven-wire mesh, made from 0.135-inch (3.5-mm) nominal diameter wire complying with ASTM A510/A510M.

2.03 FASTENERS

A. General: Provide zinc-plated fasteners with coating complying with ASTM B633 or ASTM F1941/F1941M, Class Fe/Zn 12 for exterior use, and Class Fe/Zn 5 where built into exterior walls. Select fasteners for type, grade, and class required.

2.04 MISCELLANEOUS MATERIALS

A. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.

B. Shop Primers: Provide primers that comply with Division 9 painting Sections.

C. Universal Shop Primer: Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with MPI#79 and compatible with topcoat.
   1. Use primer containing pigments that make it easily distinguishable from zinc-rich primer.

D. Concrete Materials and Properties: Comply with requirements in Division 3 Section "Cast-in-Place Concrete" for normal-weight, air-entrained, ready-mix concrete with a minimum 28-day compressive strength of 3,000 psi (20 MPa) unless otherwise indicated.

2.05 FABRICATION, GENERAL

A. Provide complete stair assemblies, including metal framing, hangers, struts, railings, clips, brackets, bearing plates, and other components necessary to support and anchor stairs and platforms on supporting structure. All components to comply with NAAMM AMP 510.
   1. Join components by welding unless otherwise indicated.
   2. Use connections that maintain structural value of joined pieces.
   3. Fabricate treads and platforms of exterior stairs so finished walking surfaces slope to drain.

B. Preassembled Stairs: Assemble stairs in shop to greatest extent possible. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.

C. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch (1 mm) unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.

D. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.

E. Form exposed work with accurate angles and surfaces and straight edges.

F. Weld connections to comply with the following:
   1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
   2. Obtain fusion without undercut or overlap.
   3. Remove welding flux immediately.
   4. Weld exposed corners and seams continuously unless otherwise indicated.
   5. At exposed connections, finish exposed welds to comply with NOMMA's "Voluntary Joint Finish Standards" for Type 3 welds: partially dressed weld with spatter removed.

G. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners where possible. Where exposed fasteners are required, use Phillips flat-head (countersunk) screws or bolts unless otherwise indicated. Locate joints where least conspicuous.

H. Fabricate joints that will be exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate.

2.06 STEEL-FRAMED STAIRS

A. Stair Framing:
   1. Fabricate stringers of steel channels or tubes as indicated in Drawings.
      a. Provide closures for exposed ends of tube stringers.
   2. Construct platforms of steel channel or tube headers and miscellaneous framing members as indicated.
   3. Weld or bolt stringers to headers; weld or bolt framing members to stringers and headers. If using bolts, fabricate and join so bolts are not exposed on finished surfaces.
   4. Where stairs are enclosed by gypsum board assemblies, provide hanger rods or struts to support landings above or below. Locate hanger rods and struts where they will not encroach on required stair width and will be within the fire-resistance-rated stair enclosure.
      a. Hangers from construction above permitted only as indicated in Drawings. Coordinate all support conditions with Architect and Engineer.
   5. Where masonry walls support metal stairs, provide temporary supporting struts designed for erecting steel stair components before installing masonry.

B. Metal-Pan Stairs: Form risers, subtread pans, and subplatforms to configurations shown from steel sheet of thickness indicated.
   1. Steel Sheet: Uncoated hot-rolled steel sheet.
   2. Steel Sheet: Galvanized-steel sheet, where indicated.
   3. Directly weld metal pans to stringers; locate welds on top of subtreads where they will be concealed by concrete fill. Do not weld risers to stringers.
   4. Attach risers and subtreads to stringers with brackets made of steel angles or bars. Weld brackets to stringers and attach metal pans to brackets by welding, riveting, or bolting.

C. Metal Floor Plate Stairs: Form treads and platforms to configurations shown from checkered rolled-steel floor plate of thickness needed to comply with performance requirements, but not less than 1/8 inch (3.2 mm).
   1. Form treads with integral nosing and back edge stiffener. Form risers of same material as treads.
   2. Weld steel supporting brackets to stringers and weld treads to brackets.
   3. Fabricate platforms with integral nosings matching treads and weld to platform framing.

D. Metal Bar-Grating Stairs: Form treads and platforms to configurations shown from metal bar grating; fabricate to comply with NAAMM MBG 531, "Metal Bar Grating Manual."

1. Fabricate treads and platforms from welded or pressure-locked steel grating with 1-by-1/8-inch (25-by-3-mm) bearing bars at 7/16 inch (11 mm) o.c. and crossbars at 4 inches (100 mm) o.c.
2. Fabricate treads and platforms from welded or pressure-locked steel grating with openings in gratings no more than 5/16 inch (8 mm) in least dimension.
3. Surface: Serrated.
4. Finish: Shop primed.
5. Fabricate grating treads with rolled-steel floor plate nosing and with steel angle or steel plate carrier at each end for stringer connections. Secure treads to stringers with bolts.
6. Fabricate grating platforms with nosing matching that on grating treads. Provide toeplates at open-sided edges of grating platforms. Weld grating to platform framing.

2.07 RAILINGS

A. Comply with applicable requirements in Section 05 73 13 - Glazed Decorative Metal Railings.
   1. Rails may be bent at corners, rail returns, and wall returns, instead of using prefabricated fittings.
   2. Connect posts to stair framing by direct welding unless otherwise indicated.

B. Steel Tube Railings: Fabricate railings to comply with requirements indicated for design, dimensions, details, finish, and member sizes, including wall thickness of tube, post spacings, and anchorage, but not less than that needed to withstand indicated loads.
   1. Rails and Posts: 1-5/8-inch- (41-mm-) diameter top and bottom rails.
   2. Picket Infill: Minimum of 1/2-inch- (13-mm-) pickets spaced less than 4 inches (100 mm) clear.
   3. Mesh Infill: Woven wire mesh crimped into 1-by-1/2-by-1/8-inch (25-by-13-by-3-mm) steel channel frames. Orient wire mesh with diamonds vertical.
   4. Gates: Form gates from steel tube of same size and shape as top rails, with infill to match guards. Provide with cam-type, self-closing hinges for fastening to wall and overlapping stop with rubber bumper to prevent gate from opening in direction opposite egress.

C. Welded Connections: Fabricate railings with welded connections. Cope components at connections to provide close fit, or use fittings designed for this purpose. Weld all around at connections, including at fittings.
   1. Finish welds to comply with NOMMA's "Voluntary Joint Finish Standards" for Type 3 welds: partially dressed weld with spatter removed.

D. Form changes in direction of railings as follows:
   1. As detailed.
   2. By bending or by inserting prefabricated elbow fittings.

E. Close exposed ends of railing members with prefabricated end fittings.

F. Provide wall returns at ends of wall-mounted handrails unless otherwise indicated. Close ends of returns unless clearance between end of rail and wall is 1/4 inch (6 mm) or less.

G. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, end closures, flanges, miscellaneous fittings, and anchors for interconnecting components and for attaching to other work. Furnish inserts and other anchorage devices for connecting to concrete or masonry work.
   1. Connect posts to stair framing by direct welding unless otherwise indicated.
   2. For galvanized railings, provide galvanized fittings, brackets, fasteners, sleeves, and other ferrous-metal components.
   3. For nongalvanized railings, provide nongalvanized ferrous-metal fittings, brackets, fasteners, and sleeves, except galvanize anchors embedded in exterior masonry and concrete construction.

H. Fillers: Provide fillers made from steel plate, or other suitably crush-resistant material, where needed to transfer wall bracket loads through wall finishes to structural supports. Size fillers to suit wall finish thicknesses and to produce adequate bearing area to prevent bracket rotation and overstressing of substrate.

2.08 FINISHES

A. Comply with NAAMM AMP 500-06 "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Finish metal stairs after assembly.

C. Preparation for Shop Priming: Prepare uncoated ferrous-metal surfaces to comply with minimum requirements indicated below for SSPC surface preparation specifications and environmental exposure conditions of installed products:
   1. Interior Stairs: SSPC-SP 3, "Power Tool Cleaning."

D. Apply shop primer to uncoated surfaces of metal stair components, except those with galvanized finishes and those to be embedded in concrete or masonry unless otherwise indicated. Comply with SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.
   1. Stripe paint corners, crevices, bolts, welds, and sharp edges.

E. See Spec Section 09 91 00 for final paint finish.

PART 3 EXECUTION

3.01 INSTALLATION, GENERAL

A. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing metal stairs to in-place construction. Include threaded fasteners for concrete and masonry inserts, through-bolts, lag bolts, and other connectors.
   1. Coordinate all required anchorage / fastening conditions with General Contractor prior to construction.

B. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal stairs. Set units accurately in location, alignment, and elevation, measured from established lines and levels and free of rack.

C. Install metal stairs by welding stair framing to steel structure or to weld plates cast into concrete unless otherwise indicated.

D. Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry, or similar construction.

E. Fit exposed connections accurately together to form hairline joints. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations. Do not weld, cut, or abrade surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.

F. Field Welding: Comply with requirements for welding in "Fabrication, General" Article.

G. Place and finish concrete fill for treads and platforms to comply with Section 03 30 00 - Cast-in-Place Concrete.

3.02 INSTALLING METAL STAIRS WITH GROUTED BASEPLATES

A. Clean concrete and masonry bearing surfaces of bond-reducing materials, and roughen to improve bond to surfaces. Clean bottom surface of baseplates.

B. Set steel stair baseplates on wedges, shims, or leveling nuts. After stairs have been positioned and aligned, tighten anchor bolts. Do not remove wedges or shims but, if protruding, cut off flush with edge of bearing plate before packing with grout.
   1. Use nonmetallic, nonshrink grout unless otherwise indicated.
   2. Pack grout solidly between bearing surfaces and plates to ensure that no voids remain.

3.03 INSTALLING RAILINGS

A. Adjust railing systems before anchoring to ensure matching alignment at abutting joints. Space posts at spacing indicated or, if not indicated, as required by design loads. Plumb posts in each direction. Secure posts and rail ends to building construction as follows:
   1. Anchor posts to steel by welding directly to steel supporting members.
   2. Anchor handrail ends to concrete and masonry with steel round flanges welded to rail ends and anchored with postinstalled anchors and bolts.

B. Attach handrails to wall with wall brackets. Use type of bracket with predrilled hole for exposed bolt anchorage. Provide bracket with 1-1/2-inch (38-mm) clearance from inside face of handrail and

finished wall surface. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads. Secure wall brackets to building construction as follows:

1. For concrete and solid masonry anchorage, use drilled-in expansion shields and hanger or lag bolts.
2. For hollow masonry anchorage, use toggle bolts.
3. For steel-framed partitions, use hanger or lag bolts set into fire-retardant-treated wood backing between studs. Coordinate with stud installation to locate backing members.

3.04 ADJUSTING AND CLEANING

A. Touchup Painting: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint are specified in Division 9 painting Sections.

END OF SECTION

SECTION 05 70 00
DECORATIVE METAL

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Interior metal trim and reveals at tile and wood.

B. Interior metal wall guards.

C. Wire Mesh Partitions.

D. Decorative metal shelving.

1.02 RELATED SECTIONS

A. Section 01 31 00 - Project Management and Coordination.

B. Section 01 33 00 - Submittal Procedures.

C. Section 01 40 00 - Quality Requirements.

D. Section 01 60 00 - Product Requirements.

E. Section 05 50 00 - Metal Fabrications.

F. Section 08 81 00 - Glazing.

G. Section 09 21 16 - Gypsum Board Assemblies.

H. Section 09 75 00 - Interior Stone.

1.03 REFERENCE STANDARDS

A. ASTM B36/B36M - Standard Specification for Brass Plate, Sheet, Strip, and Rolled Bar; 2023.

B. ASTM B43 - Standard Specification for Seamless Red Brass Pipe, Standard Sizes; 2020.

C. ASTM B135/B135M - Standard Specification for Seamless Brass Tube; 2017.

D. ASTM B455/B455M - Standard Specification for Copper-Zinc-Lead Alloy (Leaded-Brass) Extruded Shapes; 2020.

E. ASTM B633 - Standard Specification for Electrodeposited Coatings of Zinc on Iron and Steel; 2023.

F. ASTM F1941/F1941M - Standard Specification for Electrodeposited Coatings on Mechanical Fasteners, Inch and Metric; 2016.

G. AWS D1.1/D1.1M - Structural Welding Code - Steel; 2020, with Errata (2023).

H. AWS D1.2/D1.2M - Structural Welding Code - Aluminum; 2014, with Errata (2020).

I. AWS D1.3/D1.3M - Structural Welding Code - Sheet Steel; 2018, with Errata (2022).

J. AWS D1.6/D1.6M - Structural Welding Code - Stainless Steel; 2017, with Amendment (2021).

K. ICC-ES AC193 - Acceptance Criteria for Mechanical Anchors in Concrete Elements; 2017, with Editorial Revision (2020).

L. ICC-ES AC308 - Acceptance Criteria for Post-Installed Adhesive Anchors in Concrete Elements; 2023.

1.04 SUBMITTALS

A. Submit under provisions of Section 01 33 00.

B. Product Data: Manufacturer's data sheets on each product to be used, including:
   1. Preparation instructions and recommendations.
   2. Storage and handling requirements and recommendations.
   3. Installation methods.

C. Shop Drawings: Submit the following:
   1. Full size templates for products requiring templates for fabrication.
   2. Drawings indicating locations of products of this section in project.

3. Drawings and details indicating sizes, materials and thicknesses, fabrication and installation techniques, provisions for reinforcement and anchoring, joinery, finishes, fasteners and accessory items.

D. Samples for Initial Selection: For products involving selection of color, texture, or design.

E. Samples for Verification: For each type of exposed finish.
   1. Sections of linear shapes.
   2. Full-size Samples of castings and forgings.
   3. Samples of welded and brazed joints showing quality of workmanship and color matching of materials.

F. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

1.05 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Fabricator Qualifications: A firm experienced in producing decorative metal similar to that indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.

C. Installer Qualifications: A firm approved by Fabricator of products to perform installation, with at least (5) years demonstrated experience in installing products of this type.

D. Finisher Qualifications: A firm experienced in successfully applying the specified finishes or coating indicated and employing competent control personnel to conduct continuing, effective quality-control to ensure compliance with requirements.

E. Welding Qualifications: Qualify procedures and personnel according to the following:
   1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
   2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
   3. AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."
   4. AWS D1.6/D1.6M, "Structural Welding Code - Stainless Steel."

F. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.
   1. Build mockups for the following types of decorative metal:
      a. To be determined by owner.
   2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Packing, Shipping, Handling and Unloading: Pack products of this section to prevent damage to products and finishes.

B. Storage and Protection:
   1. Store products in manufacturer's unopened packaging until installation.
   2. Maintain dry, heated storage area for products until installation.

1.07 SEQUENCING

A. Ensure that locating templates and other information required for installation of products of this section are furnished to affected trades in time to prevent interruption of construction progress.

B. Ensure that products of this section are supplied to affected trades in time to prevent interruption of construction progress.

1.08 SCHEDULING

A. Supply full size templates for products requiring templates for fabrication to manufacturer of products of this section in time for scheduled fabrication.

PART 2 PRODUCTS

2.01 DECORATIVE METAL FABRICATORS

A. Metal fabricator by Contractor, Fabricators: Subject to compliance with requirements.

2.02 METALS, GENERAL

A. Metal Surfaces, General: Use materials with smooth, flat surfaces unless otherwise indicated. Use materials without seam marks, roller marks, rolled trade names, stains, discolorations, or blemishes.
   1. Extruded Shapes: ASTM B455/B455M, Alloy UNS C38500 (architectural bronze).
   2. Pipe: ASTM B43, Alloy UNS C23000 (red brass, 85 percent copper).
   3. Tube: ASTM B135/B135M, Alloy UNS C23000 (red brass, 85 percent copper).
   4. Retain one or all three options in "Castings" Paragraph below.
   5. Plate, Sheet, Strip, and Bars: ASTM B36/B36M, Alloy UNS C28000 (muntz metal, 60 percent copper).

2.03 PRODUCTS

A. Interior metal trim and reveals:
   1. MTL-1
      a. Manufacturer: Stylmark.
      b. Product Number: 110665
      c. Size: ½"w x ¼"d Bar.
      d. Color: Brushed Brite Aged Brass 21BRS80003.
      e. Location: TL-5 Elevator Walls – See Elevations and details.
   2. MTL-2
      a. Manufacturer: Stylmark.
      b. Product Number: 110419
      c. Size:3" w x 1/8"d Bar.
      d. Color:
         1) Brushed Brite Brown 216.
         2) Brushed Brite Aged Brass 21BRS80003.
      e. Location: Light Coves T-5 Elevator Wall Opening – See Elevations and details.
   3. MTL-3
      a. Manufacturer: Stylmark.
      b. Product Number: 110099
      c. Size: ¾” x 1/16” Bar.
      d. Color: Brushed Brite Aged Brass 21BRS80003.
      e. Location: Coffee Bar service, POS and Ceiling, Columns, Club Hub Millwork – see drawings.
   4. MTL-4
      a. Manufacturer: Stylmark.
      b. Product Number: 110994
      c. Size: ½” x 1” x 1/8” Angle.
      d. Color: Brushed Brite Aged Brass 21BRS80003.
      e. Location: Reception Desk, Residential Check-In Millwork – See drawings.
   5. MTL-5
      a. Manufacturer: Stylmark.
      b. Product Number: 110993.
      c. Size: Outside Corner.
      d. Color: Brushed Brite Aged Brass 21BRS80003.
      e. Location: Club Hub Millwork – see drawings.

6. MTL-6
    a. Manufacturer: Stylmark.
    b. Product Number: 110167
    c. Size: 2" x 2" Angle.
    d. Brushed Brite Aged Brass 21BRS80003.
    e. Location: Outside Corners, see drawings.
7. MTL-7
    a. Manufacturer: Stylmark.
    b. Product Number: 110080
    c. Size: ¾” x 1” x 1/16” U Channel.
    d. Color: Brushed Brite Aged Brass 21BRS80003.
    e. Location: Coffee Bar Service Line.
8. MTL-8
    a. Manufacturer: FR.
    b. Product Number: MWR7550
    c. Size: ¾” x 1” x 1/16” U Channel.
    d. Finish: Anodized Brushed Brite Light Bronze 212.
    e. Location: See Drawings.
9. MTL-10
    a. Fry Reglet.
    b. Product Number: #MWROSC75
    c. Size: 3/4" x 3/4" x 1 1/2"
    d. Finish: Anodized Brushed Brite Lite Bronze 212.
    e. Location: See Drawings.
10. MTL-11
    a. Fry Reglet.
    b. Millwork corner key.
    c. Product Number: #MWCK75
    d. Size: See Drawings.
    e. Finish: Anodized Brushed Brite Lite Bronze 212.
    f. Location: See Drawings.
11. MTL-12
    a. Manufacturer: Stylmark.
    b. Product Number: 110987
    c. Size: 7" x .070" Bar.
    d. Color:
        1) Brushed Brite Brown 216
        2) Brushed Brite Aged Brass 21BRS80003
    e. Location: Light Coves - See Drawings.
12. MTL-13
    a. Manufacturer: Stylmark.
    b. Product Number: 110307
    c. Size: 2" x 5/8"
    d. Color:
        1) Deep Brown 12BRN80013
    e. Base: Aluminum, 410466.
    f. Location: See Drawings.
13. MTL-14
    a. Manufacturer: Stylmark.
    b. Product Number: 150014
    c. Size: 1 1/2" x 3/4" x 3/32"
    d. Color:

1) Brushed Brite Brown 216
e. Location: Café Entry, Indoor Liquor Bar base trim.

14. MTL-15
a. Manufacturer: Stylmark.
b. Product Number: Stylmark Angle 110180
c. Color:
1) 22BRN80049
d. Location: Furred out LED walls at Group Fitness, Barre and Cycle.

B. Interior metal wall guards.
1. Stainless steel tread plate pattern sheet, Type 304, 16 ga (.063") with #4 satin finish.
a. Pre-drilled for mechanical fasteners.
b. Panel sizes: As shown on drawings.
c. Panel trim:
1) Trim to be provided by Millwork provider. See Section 06 40 00.
d. Manufacturers and products:
1) Wallguard, Protector Series 2449.
2) Or Approved equal.

C. Wire Mesh Partitions:
1. WMP-1
a. Manufacturer: Banker Wire.
b. Product: M31Z-6 Crimp Style
c. Finish: Powder Coated - PCC-14 - See Section 09 91 00
d. Size: 240" H x 96" W
e. Location: Cafe
f. URL: https://www.bankerwire.com/products/m31z-6-architectural-woven-wire-mesh/
g. See 05 50 00 for framing.

D. Decorative Metal Shelves:
1. Prefabricated steel shelves with artificial patina:
a. Manufacturer: Delform Metal Fabrication.
b. Product: Custom shelving
c. Material: Cold rolled steel
d. Finish: Midnight
e. Laquer: Satin/Matte.
f. Location: Locker room vanities as indicated on drawings.

2.04 FASTENERS

A. Fastener Materials: Unless otherwise indicated, provide the following:
1. Aluminum Items: Type 304 stainless-steel fasteners.
2. Stainless-Steel Items: Type 304 stainless-steel fasteners.
3. Uncoated-Steel Items: Plated steel fasteners complying with ASTM B633, Class Fe/Zn 25 for electrodeposited zinc coating where concealed, Type 304 stainless-steel fasteners where exposed.
4. Galvanized-Steel Items: Plated steel fasteners complying with ASTM B633, Class Fe/Zn 25 for electrodeposited zinc coating.
5. Dissimilar Metals: Type 304 stainless-steel fasteners.

B. Fasteners for Anchoring to Other Construction: Unless otherwise indicated, select fasteners of type, grade, and class required to produce connections suitable for anchoring indicated items to other types of construction indicated.

C. Provide concealed fasteners for interconnecting components and for attaching decorative metal items to other work unless otherwise indicated.
1. Provide square or hex socket machine screws for exposed fasteners unless otherwise indicated.

D. Post-Installed Anchors: Fastener systems with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC193 or ICC-ES AC308.
   1. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B633 or ASTM F1941/F1941M, Class Fe/Zn 5 unless otherwise indicated.

PART 3 EXECUTION

3.01 EXAMINATION

A. Do not begin installation until substrates have been properly prepared.

B. Verify openings and substrates are prepared to receive products of this section.

C. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.02 PREPARATION

A. Clean surfaces thoroughly prior to installation.

B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

3.03 INSTALLATION

A. Install in accordance with the manufacturers recommendations and the approved shop drawings.

B. Install plumb, level, square, and securely and in accordance with manufacturer’s instructions.

C. Factory-Painted Surfaces: Do not cut, drill, or weld unless required by approved shop drawings.

D. Protect against contact between dissimilar metals.

E. Where appropriate, supply products of this section for installation by installers of products of other sections.

3.04 PROTECTION

A. Protect installed products until completion of project.

B. Replace damaged products before Substantial Completion.

END OF SECTION

SECTION 05 73 13
GLAZED DECORATIVE METAL RAILINGS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Decorative railings with glass guard infill.
   2. Stainless steel guardrail cap.
   3. Stainless steel handrails.
   4. Aluminum base shoe.
   5. Stainless steel cladding over guardrail base shoe.
   6. Stainless steel wall mounted tubular handrails at pool circulation areas.

1.02 RELATED REQUIREMENTS

A. Section 01 31 00 - Project Management and Coordination.

B. Section 01 33 00 - Submittal Procedures.

C. Section 01 40 00 - Quality Requirements.

D. Section 01 60 00 - Product Requirements.

E. Section 05 50 00 - Metal Fabrications.

F. Section 05 51 00 - Metal Stairs.

G. Section 08 81 00 - Glazing.

1.03 DEFINITIONS

A. Railings: Guards, handrails, and similar devices used for protection of occupants at open-sided floor areas, pedestrian guidance and support, visual separation, or wall protection.

1.04 REFERENCE STANDARDS

A. AAMA CW 12 - Structural Properties of Glass; 1984.

B. ASTM A276/A276M - Standard Specification for Stainless Steel Bars and Shapes; 2024.

C. ASTM A312/A312M - Standard Specification for Seamless, Welded, and Heavily Cold Worked Austenitic Stainless Steel Pipes; 2022a.

D. ASTM A666 - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar; 2023.

E. ASTM A743/A743M - Standard Specification for Castings, Iron-Chromium, Iron-Chromium-Nickel, Corrosion Resistant, for General Application; 2021.

F. ASTM B26/B26M - Standard Specification for Aluminum-Alloy Sand Castings; 2018, with Editorial Revision.

G. ASTM B209/B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate; 2021a.

H. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes; 2021.

I. ASTM B247 - Standard Specification for Aluminum and Aluminum-Alloy Die Forgings, Hand Forgings, and Rolled Ring Forgings; 2020.

J. ASTM C1107/C1107M - Standard Specification for Packaged Dry, Hydraulic-Cement Grout (Nonshrink); 2020.

K. ASTM E488/E488M - Standard Test Methods for Strength of Anchors in Concrete Elements; 2022.

L. ASTM E894 - Standard Test Method for Anchorage of Permanent Metal Railing Systems and Rails for Buildings; 2018.

M. ASTM E935 - Standard Test Methods for Performance of Permanent Metal Railing Systems and Rails for Buildings; 2021.

N. NAAMM AMP 500-06 - Metal Finishes Manual; 2006.

1.05 PERFORMANCE REQUIREMENTS

A. General: In engineering railings to withstand structural loads indicated, determine allowable design working stresses of railing materials based on the following:
   1. Aluminum: The lesser of minimum yield strength divided by 1.65 or minimum ultimate tensile strength divided by 1.95.
   2. Stainless Steel: 60 percent of minimum yield strength.
   3. Glass: 25 percent of mean modulus of rupture (50 percent probability of breakage), as listed in "Mechanical Properties" in AAMA CW 12, "Structural Properties of Glass."

B. Design railing system, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

C. Structural Performance:
   1. Handrails and Top Rails of Guards:
      a. Uniform load of 50 pounds per linear foot. (0.73 kN/m) applied in any direction.
      b. Concentrated load of 200 lbs applied in any direction.
      c. Uniform and concentrated loads need not be assumed to act concurrently.
   2. Infill of Guards:
      a. Concentrated load of 50 lbf (0.22 kN) applied horizontally on an area of 1 sq. ft. (0.093 sq. m).
      b. Infill load and other loads need not be assumed to act concurrently.
   3. Glass-Supported Railings: Support each section of top rail by a minimum of three glass panels or by other means so top rail will remain in place if any one panel fails.

D. Control of Corrosion: Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.

1.06 SUBMITTALS

A. Product Data: For the following:
   1. Manufacturer's product lines of railings assembled from standard components.
   2. Grout, anchoring cement, and paint products.

B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.

C. Delegated-Design Submittal: For railing system indicated to comply with performance requirements and design criteria, including calculations signed and sealed by the qualified professional engineer responsible for their preparation.

D. Samples for Verification: For each type of exposed finish required.
   1. Sections of each distinctly different linear railing member, including handrails, top rails, posts, and balusters.
   2. Each type of glass required.
   3. Fittings and brackets.

E. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

F. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, according to ASTM E894 and ASTM E935.

1.07 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Source Limitations: Obtain each type of railing from single source from single manufacturer.

C. Product Options: Information on Drawings and in Specifications establishes requirements for system's aesthetic effects and performance characteristics. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction. Performance characteristics are indicated by criteria subject to verification by one or more methods including structural analysis, preconstruction testing, field testing, and in-service performance.

D. Safety Glazing Labeling: Permanently mark glass with certification label of the SGCC or another certification agency acceptable to authorities having jurisdiction or manufacturer. Label shall indicate manufacturer's name, type of glass, thickness, and safety glazing standard with which glass complies.

1.08 PROJECT CONDITIONS

A. Field Measurements: Verify actual locations of walls and other construction contiguous with railings by field measurements before fabrication and indicate measurements on Shop Drawings.

1.09 COORDINATION AND SCHEDULING

A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.

B. Coordinate installation of anchorages for railings. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

C. Schedule installation so wall attachments are made only to completed walls. Do not support railings temporarily by any means that do not suit structural performance requirements.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. Decorative Railings:
      a. Global Glass Railings.
      b. Julius Blum & Co., Inc.
      c. Blumcraft, a division of C.R. Laurence Co., Inc.
      d. Hollaender Manufacturing Co.
      e. Or approved equal.

2.02 METALS, GENERAL

A. Metal Surfaces, General: Provide materials with smooth surfaces, without seam marks, roller marks, rolled trade names, stains, discolorations, or blemishes.

B. Brackets, Flanges, and Anchors: Same metal and finish as supported rails unless otherwise indicated.
   1. Provide extruded-aluminum brackets with interlocking pieces that conceal anchorage. Locate set screws on bottom of bracket.

2.03 ALUMINUM

A. Aluminum, General: Provide alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated, and with strength and durability properties for each aluminum form required not less than that of alloy and temper designated below.

B. Extruded Bars and Shapes: ASTM B221 (ASTM B221M), Alloy 6063-T5/T52.

C. Plate and Sheet: ASTM B209/B209M, Alloy 6061-T6.

D. Die and Hand Forgings: ASTM B247, Alloy 6061-T6.

E. Castings: ASTM B26/B26M, Alloy A356.0-T6.

2.04 STAINLESS STEEL

A. Pipe: ASTM A312/A312M, Grade TP 304.

B. Castings: ASTM A743/A743M, Grade CF 8 or CF 20.

C. Sheet, Strip, Plate, and Flat Bar: ASTM A666, Type 304.

D. Bars and Shapes: ASTM A276/A276M, Type 304.

2.05 GLASS AND GLAZING MATERIALS

A. See Section 08 81 00.

B. Glazing Gaskets for Glass Infill Panels: Glazing gaskets and related accessories recommended or supplied by railing manufacturer for installing glass infill panels in post-supported railings.

2.06 FASTENERS

A. Fastener Materials: Unless otherwise indicated, provide the following:
   1. Aluminum Components: Type 304 stainless-steel fasteners.
   2. Stainless-Steel Components: Type 304 stainless-steel fasteners.
   3. Dissimilar Metals: Type 304 stainless-steel fasteners.

B. Fasteners for Anchoring to Other Construction: Select fasteners of type, grade, and class required to produce connections suitable for anchoring railings to other types of construction indicated and capable of withstanding design loads.

C. Provide concealed fasteners for interconnecting railing components and for attaching railings to other work unless otherwise indicated.
   1. Provide tamper-resistant flat-head machine screws for exposed fasteners unless otherwise indicated.

D. Anchors, General: Anchors capable of sustaining, without failure, a load equal to six times the load imposed when installed in unit masonry and four times the load imposed when installed in concrete, as determined by testing according to ASTM E488/E488M, conducted by a qualified independent testing agency.

2.07 MISCELLANEOUS MATERIALS

A. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C1107/C1107M. Provide grout specifically recommended by manufacturer for interior and exterior applications.

B. Anchoring Cement: Factory-packaged, nonshrink, nonstaining, hydraulic-controlled expansion cement formulation for mixing with water at Project site to create pourable anchoring, patching, and grouting compound.

2.08 FABRICATION

A. General: Fabricate railings to comply with requirements indicated for design, dimensions, member sizes and spacing, details, finish, and anchorage, but not less than that required to support structural loads.

B. Assemble railings in the shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation. Use connections that maintain structural value of joined pieces.

C. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch (1 mm) unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.

D. Form work true to line and level with accurate angles and surfaces.

E. Fabricate connections that will be exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate. Locate weep holes in inconspicuous locations.

F. Cut, reinforce, drill, and tap as indicated to receive finish hardware, screws, and similar items.

G. Connections: Fabricate railings with welded connections at curved stairs and nonwelded connections at straight stairs unless otherwise indicated.

H. Mechanical Connections: Connect members with concealed mechanical fasteners and fittings. Fabricate members and fittings to produce flush, smooth, rigid, hairline joints.
   1. Fabricate splice joints for field connection using an epoxy structural adhesive if this is manufacturer's standard splicing method.

I. Form changes in direction as follows:
   1. Miter corners, welded and finished to # 4 satin.
   2. By bending or by inserting prefabricated elbow fittings.
   3. By radius bends of radius indicated.

J. Bend members in jigs to produce uniform curvature for each configuration required; maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of components.

K. Close exposed ends of hollow railing members with prefabricated end fittings. End caps provided shall have smooth edges and fit the exact profile of the handrail pipe.

L. Provide wall returns at ends of wall-mounted handrails unless otherwise indicated. Close ends of returns, unless clearance between end of rail and wall is 1/4 inch (6 mm) or less.

M. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, flanges, miscellaneous fittings, and anchors to interconnect railing members to other work unless otherwise indicated.
   1. At brackets and fittings fastened to plaster or gypsum board partitions, provide crush-resistant fillers, or other means to transfer loads through wall finishes to structural supports and prevent bracket or fitting rotation and crushing of substrate.

N. Provide inserts and other anchorage devices for connecting railings to concrete or masonry work. Fabricate anchorage devices capable of withstanding loads imposed by railings. Coordinate anchorage devices with supporting structure.

O. For railing posts set in concrete, provide stainless-steel sleeves not less than 6 inches (150 mm) long with inside dimensions not less than 1/2 inch (13 mm) greater than outside dimensions of post, with metal plate forming bottom closure.

2.09 GLAZING PANEL FABRICATION

A. General: Fabricate to sizes and shapes required; provide for proper edge clearance and bite on glazing panels.
   1. Clean-cut or flat-grind edges at butt-glazed sealant joints to produce square edges with slight chamfers at junctions of edges and faces.
   2. Grind smooth exposed edges, including those at open joints, to produce square edges with slight chamfers at junctions of edges and faces.

B. Structural Balusters: Provide tempered glass panels.

2.10 GENERAL FINISH REQUIREMENTS

A. Comply with NAAMM AMP 500-06 "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipment.

C. Provide exposed fasteners with finish matching appearance, including color and texture, of railings.

2.11 STAINLESS-STEEL FINISHES

A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.

B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.

C. Directional Satin Finish: No. 4.

D. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

2.12 METAL CLADDING

A. Material: Stainless Steel.

B. Finish: Powder Coated to match handrail.

C. Attachment: Construction adhesive and VHB tape.

D. Location: Grand Stair, see drawings.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine plaster and gypsum board assemblies, where reinforced to receive anchors, to verify that locations of concealed reinforcements have been clearly marked for Installer. Locate reinforcements and mark locations if not already done.

3.02 INSTALLATION, GENERAL

A. Fit exposed connections together to form tight, hairline joints.

B. Perform cutting, drilling, and fitting required for installing railings. Set railings accurately in location, alignment, and elevation; measured from established lines and levels and free of rack.

1. Do not weld, cut, or abrade surfaces of railing components that have been coated or finished after fabrication and that are intended for field connection by mechanical or other means without further cutting or fitting. Provide field finishing for railing components that are required to be welded or cut in the field.
2. Set posts plumb within a tolerance of 1/16 inch in 3 feet (2 mm in 1 m).
3. Align rails so variations from level for horizontal members and variations from parallel with rake of steps and ramps for sloping members do not exceed 1/4 inch in 12 feet (5 mm in 3 m).

C. Adjust railings before anchoring to ensure matching alignment at abutting joints.

D. Fastening to In-Place Construction: Use anchorage devices and fasteners where necessary for securing railings and for properly transferring loads to in-place construction.

3.03 RAILING CONNECTIONS

A. Nonwelded Connections: Use mechanical or adhesive joints for permanently connecting railing components. Use wood blocks and padding to prevent damage to railing members and fittings. Seal recessed holes of exposed locking screws using stainless steel cement filler colored to match finish of railings.

B. Welded Connections: Use fully welded joints for permanently connecting railing components. Comply with requirements for welded connections in "Fabrication" Article whether welding is performed in the shop or in the field.

3.04 ANCHORING POSTS

A. Use steel pipe sleeves preset and anchored into concrete for installing posts. After posts have been inserted into sleeves, fill annular space between post and sleeve with nonshrink, nonmetallic grout, mixed and placed to comply with anchoring material manufacturer's written instructions.

B. Form or core-drill holes not less than 5 inches (125 mm) deep and 3/4 inch (20 mm) larger than OD of post for installing posts in concrete. Clean holes of loose material, insert posts, and fill annular space between post and concrete with nonshrink, nonmetallic grout, mixed and placed to comply with anchoring material manufacturer's written instructions.

C. Cover anchorage joint with flange of same metal as post, attached to post with set screws.

D. Leave anchorage joint exposed with anchoring material flush with adjacent surface.

E. Anchor posts to metal surfaces with flanges, angle type, or floor type as required by conditions, connected to posts and to metal supporting members as follows:

1. For stainless-steel railings, weld flanges to posts and bolt to metal-supporting surfaces.

3.05 ATTACHING RAILINGS

A. Anchor railing ends to concrete and masonry with sleeves concealed within railing ends and anchored to wall construction with anchors and bolts.

B. Anchor railing ends to metal surfaces with flanges bolted to metal surfaces and connected to railing ends using nonwelded connections.

C. Attach handrails to walls with wall brackets except where end flanges are used. Provide brackets with 1-1/2-inch (38-mm) clearance from inside face of handrail and finished wall surface. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads.
   1. Use type of bracket with flange tapped for concealed anchorage to threaded hanger bolt.
   2. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads.

D. Secure wall brackets to building construction as follows:
   1. For concrete and solid masonry anchorage, use drilled-in expansion shields and hanger or lag bolts.
   2. For hollow masonry anchorage, use toggle bolts.
   3. For steel-framed partitions, use hanger or lag bolts set into fire-retardant-treated wood backing between studs. Coordinate with stud installation to locate backing members.
   4. For steel-framed partitions, fasten brackets directly to steel framing or concealed steel reinforcements using self-tapping screws of size and type required to support structural loads.
   5. For steel-framed partitions, fasten brackets with toggle bolts installed through flanges of steel framing or through concealed steel reinforcements.

3.06 INSTALLING GLASS PANELS

A. Glass-Supported Railings: Install assembly to comply with railing manufacturer's written instructions.
   1. Attach base channel to building structure, then insert and connect factory-fabricated and assembled glass panels.
   2. Attach base channel to building structure, then insert glass into base channel and bond with glazing cement.
      a. Support glass panels in base channel at quarter points with channel-shaped setting blocks that also act as shims to maintain uniform space for glazing cement. Fill remaining space in base channel with glazing cement for uniform support of glass.
   3. Adjust spacing of glass panels so gaps between panels are equal before securing in position.

3.07 INSTALLING GUARDRAIL CAPS

A. Apply stainless steel guardrail caps, where indicated, complying with manufacturer's written instructions for cutting, mounting, forming, welding, cleaning, applying end caps, and finishing.

B. Minimize number of joints in stainless steel caps by installing in lengths as long as possible. Allow for shortening of stainless steel cap caused by welding and splicing process; butt ends together to produce hairline joint.

3.08 CLEANING

A. Clean stainless steel by washing thoroughly with clean water and soap, rinsing with clean water, and wiping dry.

B. Clean and polish glass as recommended in writing by manufacturer. Wash both exposed surfaces in each area of Project not more than four days before date scheduled for inspections that establish date of Substantial Completion.
   1. Apply by brush or spray to provide a minimum 2.0-mil (0.05-mm) dry film thickness.

3.09 PROTECTION

A. Protect finishes of railings from damage during construction period with temporary protective coverings approved by railing manufacturer. Remove protective coverings at time of Substantial Completion.

B. Restore finishes damaged during installation and construction period so no evidence remains of correction work. Return items that cannot be refinished in the field to the shop; make required alterations and refinish entire unit, or provide new units.

END OF SECTION

SECTION 05 77 30
SMOKE BAFFLE SYSTEM

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Pre-engineered, component-based, draft curtain system.

1.02 RELATED SECTIONS

A. Section 01 33 00 - Submittal Procedures.

B. Section 01 40 00 - Quality Requirements.

C. Section 01 60 00 - Product Requirements.

D. Section 01 92 00 - Facility Operation and Maintenance.

E. Section 05 72 00 - Ornamental Handrails and Railings.

F. Section 08 81 00 - Glazing.

1.03 REFERENCES

A. ANSI Z97.1 - American National Standard for Safety Glazing Materials Used in Buildings - Safety Performance Specifications and Methods of Test; 2015 (Reaffirmed 2020).

B. ASTM E985 - Standard Specification for Permanent Metal Railing Systems and Rails for Buildings; Current Edition.

1.04 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

1.05 SUBMITTALS

A. Comply with Section 01 33 00 - Submittal Procedures.

B. Product Data: Submit manufacturer's product data, including description of materials, components, fabrication, finishes and installation instructions. Installation instructions include all structural computations and test reports provided by the manufacturer evidencing compliance with the specifications.

C. Shop Drawings: Submit manufacturer's shop drawings, including plans, elevations, sections, and details, indicating materials, components, sizes, dimensions, tolerances, hardware, fasteners, finishes, options, accessories, and installation. Show details of attaching draft curtain system to supports.

D. Submit manufacturer's samples of standard materials, finishes, colors, and textures.

E. Test Reports: Submit test reports from qualified independent testing agency indicating compliance with ASTM E985.

F. Manufacturer's Quality Assurance: Submit manufacturer's certification that materials comply with specified requirements and are suitable for intended application. Submit certification that the manufacturer has not less than 5 years experience producing the product specified in this section. Installation of this product will be done by the manufacturer or an approved installer.

G. Operation and Maintenance Data: Submit O&M manuals according to the requirements of Section 01 92 00 - Facility Operation and Maintenance.

H. Warranty: Submit manufacturer's standard warranty.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Delivery: Deliver materials to site in manufacturer's original, unopened containers and packaging, with labels clearly identifying product name and manufacturer.

B. Storage: Store materials in clean, dry area indoors in accordance with manufacturer's instructions.

C. Handling: Protect materials and finish from damage during handling and installation.

PART 2 PRODUCTS

2.01 MANUFACTURER

A. C.R. Laurence.
   1. P.O. Box 208952
   2. Dallas, TX 75320-8952
   3. Phone (800) 421-6144
   4. Web Site: https:crlaurence.com

B. Approved equal.

2.02 SMOKE BAFFLE SYSTEM (DRAFT CURTAIN)

A. Pre-Engineered, Component-Based, Draft Curtain System:
   1. Base 1 1/2” x 3” extruded aluminum.
   2. Glass: 3/8-inch thick clear tempered plate glass.
      a. Glazing Material: ANSI Z97.1 .
      b. Field glaze glass panels.
   3. Finish: Clear Anodized Aluminum.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine areas to receive draft curtain system. Notify Architect if areas are not acceptable. Do not begin installation until unacceptable conditions have been corrected.

3.02 INSTALLATION

A. Install draft curtain system in accordance with manufacturer's instructions using manufacturer’s trained installers or an installer acceptable to the specified manufacturer.

B. Install draft curtain system plumb, level, square, true to line, and rigid.

C. Attach draft curtain system securely in place using fasteners supplied or approved by manufacturer. All embedded anchor plates and supporting steel shall be provided by another trade and coordinated with the draft curtain supplier.

D. Attach draft curtain system to supports as indicated on the drawings and as approved by manufacturer.

E. Field weld components as approved by manufacturer.

F. Use manufacturer's supplied hardware.

G. Repair minor damages to finish in accordance with manufacturer's instructions and as approved by Architect.

H. Remove and replace defective or damaged components that cannot be successfully repaired as determined by Architect.

3.03 CLEANING

A. Clean draft curtain system promptly after installation in accordance with manufacturer's instructions.

B. Do not use harsh cleaning materials or methods that would damage glass or finish.

C. Do not use abrasive cleaners.

3.04 PROTECTION

A. Protect installed draft curtain system and finish from damage during other construction.

END OF SECTION

SECTION 06 10 00
ROUGH CARPENTRY

PART 1 GENERAL

1.01 SUMMARY

A. This Section includes the following:
   1. Framing with dimension lumber.
   2. Rooftop equipment bases and support curbs.
   3. Wood blocking, cants, and nailers.
   4. Wood furring and grounds.
   5. Wood sleepers.
   6. Plywood backing panels.

1.02 RELATED SECTIONS

A. Section 01 33 00 - Submittal Procedures.

J. ASTM B633 - Standard Specification for Electrodeposited Coatings of Zinc on Iron and Steel; 2023.

K. ASTM C954 - Standard Specification for Steel Drill Screws for the Application of Gypsum Panel Products or Metal Plaster Bases to Steel Studs from 0.033 in. (0.84 mm) to 0.112 in. (2.84 mm) in Thickness; 2022.

L. ASTM D3498 - Standard Specification for Adhesives for Field-Gluing Wood Structural Panels (Plywood or Oriented Strand Board) to Wood Based Floor System Framing; 2019a.

M. ASTM E488/E488M - Standard Test Methods for Strength of Anchors in Concrete Elements; 2022.

N. ASTM F1667/F1667M - Standard Specification for Driven Fasteners: Nails, Spikes, and Staples; 2021a.

O. AWPA M4 - Standard for the Handling, Storage, Field Fabrication and Field Treatment of Preservative-Treated Wood Products; 2023.

P. AWPA U1 - Use Category System: User Specification for Treated Wood; 2024.

Q. ESR 1539 - Power Driven Staples and Nails; 2019.

R. PS 1 - Structural Plywood; 2023.

S. PS 20 - American Softwood Lumber Standard; 2025.

T. AWI/AWMAC/WI (AWS) American Woodworking Institute; Woodworking Standards.

1.04 DEFINITIONS

A. Dimension Lumber: Lumber of 2 inches nominal (38 mm actual) or greater but less than 5 inches nominal (114 mm actual) in least dimension.

1.05 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00.

1.06 SUBMITTALS

A. Product Data: For each type of process and factory-fabricated product. Indicate component materials and dimensions and include construction and application details.
   1. Include data for wood-preservative treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements. Indicate type of preservative used and net amount of preservative retained.
   2. Include data for fire-retardant treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements. Include physical properties of treated materials based on testing by a qualified independent testing agency.
   3. For products receiving a waterborne treatment, include statement that moisture content of treated materials was reduced to levels specified before shipment to Project site.
   4. Include copies of warranties from chemical treatment manufacturers for each type of treatment.

B. Perform and submit reports of Code Required Special Inspections as required in Section 01 45 33.

C. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

D. Research/Evaluation Reports: For the following, showing compliance with building code in effect for Project.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Stack lumber flat with spacers between each bundle to provide air circulation. Provide for air circulation around stacks and under coverings.

B. Deliver interior wood materials that are to be exposed to view only after building is enclosed and weatherproof, wet work other than painting is dry, and HVAC system is operating and maintaining temperature and humidity at occupancy levels.

PART 2 PRODUCTS

2.01 WOOD PRODUCTS, GENERAL

A. Lumber: DOC PS 20 and applicable rules of grading agencies indicated. If no grading agency is indicated, provide lumber that complies with the applicable rules of any rules-writing agency certified by the ALSC Board of Review. Provide lumber graded by an agency certified by the ALSC Board of Review to inspect and grade lumber under the rules indicated.
   1. Factory mark each piece of lumber with grade stamp of grading agency.
   2. Where nominal sizes are indicated, provide actual sizes required by DOC PS 20 for moisture content specified. Where actual sizes are indicated, they are minimum dressed sizes for dry lumber.
   3. Provide dressed lumber, S4S, unless otherwise indicated.

2.02 WOOD-PRESERVATIVE-TREATED MATERIALS

A. Preservative Treatment by Pressure Process: AWPA U1; Use Category UC2 for interior construction not in contact with ground, Use Category UC3b for exterior construction not in contact with ground, and Use Category UC4a for items in contact with ground.
   1. Preservative Chemicals: Acceptable to authorities having jurisdiction and containing no arsenic or chromium. Do not use inorganic boron (SBX) for sill plates.
   2. For exposed items indicated to receive a stained or natural finish, chemical formulations shall not require incising, contain colorants, bleed through, or otherwise adversely affect finishes.

B. Kiln-dry lumber after treatment to a maximum moisture content of 19 percent. Do not use material that is warped or does not comply with requirements for untreated material.

C. Mark lumber with treatment quality mark of an inspection agency approved by the ALSC Board of Review.

D. Application: Treat all miscellaneous carpentry, unless otherwise indicated.

1. Wood sills, sleepers, blocking, furring, and similar concealed members in contact with masonry or concrete.
2. Wood framing and furring attached directly to the interior of below-grade exterior masonry or concrete walls.
3. Wood framing members that are less than 18 inches (460 mm) above the ground in crawl spaces or unexcavated areas.
4. Wood floor plates that are installed over concrete slabs-on-grade.

2.03 FIRE-RETARDANT-TREATED MATERIALS (FRT)

A. General: Comply with performance requirements in AWPA U1.
   1. Use treatment that does not promote corrosion of metal fasteners.
   2. Use Interior Type A for interior locations, unless otherwise indicated.
   3. Use Exterior Grade Fire X for exterior conditions, unless otherwise indicated.

B. Identify fire-retardant-treated wood with appropriate classification marking of testing and inspecting agency acceptable to authorities having jurisdiction.

C. Application: Treat all miscellaneous carpentry, unless otherwise indicated.

2.04 MISCELLANEOUS LUMBER

A. General: Provide miscellaneous lumber indicated and lumber for support or attachment of other construction, including the following:
   1. Blocking.
   2. Nailers.
   3. Rooftop equipment bases and support curbs.
   4. Furring.

B. For items of dimension lumber size, provide Standard, Stud, or No. 3 grade lumber with 19 percent maximum moisture content of any species.

C. For blocking not used for attachment of other construction Utility, Stud, or No. 3 grade lumber of any species may be used provided that it is cut and selected to eliminate defects that will interfere with its attachment and purpose.

D. For blocking and nailers used for attachment of other construction, select and cut lumber to eliminate knots and other defects that will interfere with attachment of other work.

E. For furring strips for installing plywood or hardboard paneling, select boards with no knots capable of producing bent-over nails and damage to paneling.

2.05 PLYWOOD BACKING PANELS

A. Telephone and Electrical Equipment Backing Panels: DOC PS 1, fire-retardant treated, in thickness indicated or, if not indicated, not less than 3/4-inch (19-mm) nominal thickness.

B. Other Applications:
   1. Plywood Concealed From View But Located Within Exterior Enclosure: PS 1, C-C Plugged or better, Exterior grade.
   2. Plywood Exposed to View But Not Exposed to Weather: PS 1, A-D, or better.
   3. Other Locations: PS 1, C-D Plugged or better.

2.06 FASTENERS

A. General: Provide fasteners of size and type indicated that comply with requirements specified in this Article for material and manufacture.
   1. Where carpentry is exposed to weather, in ground contact, pressure-preservative treated, or in area of high relative humidity, provide fasteners with hot-dip zinc coating complying with ASTM A153/A153M.

B. Nails, Brads, and Staples: ASTM F1667/F1667M.

C. Power-Driven Fasteners: ESR 1539 or NES NER-272.

D. Wood Screws: ASME B18.6.1.

E. Screws for Fastening to Cold-Formed Metal Framing: ASTM C954, except with wafer heads and reamer wings, length as recommended by screw manufacturer for material being fastened.

F. Lag Bolts: ASME B18.2.1 (ASME B18.2.3.8M).

G. Bolts: Steel bolts complying with ASTM A307, Grade A (ASTM F568M, Property Class 4.6); with ASTM A563/A563M hex nuts and, where indicated, flat washers.

H. Expansion Anchors: Anchor bolt and sleeve assembly of material indicated below with capability to sustain, without failure, a load equal to 6 times the load imposed when installed in unit masonry assemblies and equal to 4 times the load imposed when installed in concrete as determined by testing per ASTM E488/E488M conducted by a qualified independent testing and inspecting agency.
   1. Material: Carbon-steel components, zinc plated to comply with ASTM B633, Class Fe/Zn 5.

2.07 METAL FRAMING ANCHORS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Simpson Strong-Tie Co., Inc.
   2. USP Structural Connectors.

C. Galvanized Steel Sheet: Hot-dip, zinc-coated steel sheet complying with ASTM A653/A653M, G60 (Z180) coating designation.

2.08 MISCELLANEOUS MATERIALS

A. Adhesives for Gluing Furring and Sleepers to Concrete or Masonry: Formulation complying with ASTM D3498 that is approved for use indicated by adhesive manufacturer.
   1. Use adhesives that have a VOC content of 70 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

PART 3 EXECUTION

3.01 INSTALLATION, GENERAL

A. Set carpentry to required levels and lines, with members plumb, true to line, cut, and fitted. Fit carpentry to other construction; scribe and cope as needed for accurate fit. Locate furring, nailers, blocking, grounds, and similar supports to comply with requirements for attaching other construction.

B. Where wood-preservative-treated lumber is installed adjacent to metal decking, install continuous flexible flashing separator between wood and metal decking.

C. Framing Standard: Comply with AFPA (NDS) "Details for Conventional Wood Frame Construction," unless otherwise indicated.

D. Metal Framing Anchors: Install metal framing to comply with manufacturer's written instructions.

E. Do not splice structural members between supports, unless otherwise indicated.

F. Provide blocking and framing as indicated and as required to support facing materials, fixtures, specialty items, and trim.
   1. Provide metal clips for fastening gypsum board or lath at corners and intersections where framing or blocking does not provide a surface for fastening edges of panels. Space clips not more than 16 inches (406 mm) o.c.

G. Provide fire blocking in furred spaces, stud spaces, and other concealed cavities as indicated and as follows:
   1. Fire block furred spaces of walls, at each floor level, at ceiling, and at not more than 96 inches (2438 mm) o.c. with solid wood blocking or noncombustible materials accurately fitted to close furred spaces.
   2. Fire block concealed spaces of wood-framed walls and partitions at each floor level, at ceiling line of top story, and at not more than 96 inches (2438 mm) o.c. Where fire blocking is not inherent in framing system used, provide closely fitted solid wood blocks of same width as framing members and 2-inch nominal- (38-mm actual-) thickness.

3. Fire block concealed spaces between floor sleepers with same material as sleepers to limit concealed spaces to not more than 100 sq. ft. (9.3 sq. m) and to solidly fill space below partitions.

H. Sort and select lumber so that natural characteristics will not interfere with installation or with fastening other materials to lumber. Do not use materials with defects that interfere with function of member or pieces that are too small to use with minimum number of joints or optimum joint arrangement.

I. Comply with AWPA M4 for applying field treatment to cut surfaces of preservative-treated lumber.
   1. Use inorganic boron for items that are continuously protected from liquid water.
   2. Use copper naphthenate for items not continuously protected from liquid water.

J. Use common wire nails, unless otherwise indicated. Select fasteners of size that will not fully penetrate members where opposite side will be exposed to view or will receive finish materials. Make tight connections between members. Install fasteners without splitting wood; do not countersink nail heads, unless otherwise indicated.

3.02 WOOD GROUND, SLEEPER, BLOCKING, AND NAILER INSTALLATION

A. Install where indicated and where required for screeding or attaching other work. Form to shapes indicated and cut as required for true line and level of attached work. Coordinate locations with other work involved.

B. Attach items to substrates to support applied loading. Recess bolts and nuts flush with surfaces, unless otherwise indicated.

3.03 WOOD FURRING INSTALLATION

A. Install level and plumb with closure strips at edges and openings. Shim with wood as required for tolerance of finish work.

B. Furring to Receive Plywood or Hardboard Paneling: Install 1-by-3-inch nominal- (19-by-63-mm actual-) size furring horizontally and vertically at 24 inches (610 mm) o.c.

C. Furring to Receive Gypsum Board: Install 1-by-2-inch nominal- (19-by-38-mm actual-) size furring vertically at 16 inches (406 mm) o.c.

3.04 WOOD TRIM INSTALLATION

A. Install with minimum number of joints practical, using full-length pieces from maximum lengths of lumber available. Do not use pieces less than 24 inches (610 mm) long except where necessary. Stagger joints in adjacent and related standing and running trim. Cope at returns and miter at corners to produce tight-fitting joints with full-surface contact throughout length of joint. Use scarf joints for end-to-end joints.
   1. Match color and grain pattern across joints.
   2. Install trim after gypsum board joint-finishing operations are completed.
   3. Drill pilot holes in hardwood before fastening to prevent splitting. Fasten to prevent movement or warping. Countersink fastener heads and fill holes.
   4. Install to tolerance of 1/8 inch in 96 inches (3 mm in 2438 mm) for level and plumb. Install adjoining finish carpentry with 1/32-inch (0.8-mm) maximum offset for flush installation and 1/16-inch (1.6-mm) maximum offset for reveal installation.

END OF SECTION

SECTION 06 1613
STRUCTURAL INSULATING SHEATHING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Structural Insulated Sheathing panels, to be used as a substrate for cladding materials while providing continuous insulation.

1.02 RELATED REQUIREMENTS

A. Section 01 33 00 - Submittal Procedures.

B. Section 01 40 00 - Quality Requirements.

C. Section 01 60 00 - Product Requirements.

D. Section 05 40 00 - Cold-Formed Metal Framing.

E. Section 06 10 00 - Rough Carpentry.

F. Section 07 21 00 - Thermal Insulation.

G. Section 07 27 26 - Fluid Applied Membrane Air Barriers.

H. Section 07 62 00 - Sheet Metal Flashing and Trim.

I. Section 07 92 00 - Joint Sealants.

J. Section 09 21 16 - Gypsum Board Assemblies.

1.03 REFERENCE STANDARDS

A. ASTM E84, “Standard Test Method for Surface Burning Characteristics of Building Materials”.

B. ASTM D137-12, “Standard Test Method for Evaluating Properties of Wood based Fiber and Particle Panel Materials”, Section 15: Nail Head Pull Through.

C. ASTM E2357, “Air Leakage of Building Assemblies”.

D. ASHRAE 90.1-2013, “Energy Standard for Buildings Except Low-Rise Residential Buildings”.

E. ASTM E283-04 (2012), “Standard Test Method for Determining Rate of Air Leakage Through Exterior Windows, Curtain Walls, and Doors under Specified Pressure Differences across the Specimen”.

F. ASTM E331-00 (2016), “Standard Test Method for Water Penetration of Exterior Windows, Skylights, Doors, and Curtain Walls by Uniform Static Air Pressure Difference”.

G. Testing Application Standard (TAS) 202-94, “Impact & Nonimpact Resistance Building Envelope Components using Uniform Static Air Pressure”.

H. Testing Application Standard (TAS) 203-94, “Criteria for Testing Products Subject to Cyclic Wind Pressure Loading”.

I. ASTM E72-05, “Standard Test Method of Conducting Strength Tests of Panels for Building Construction”.

J. ASTM C518-17, “Standard Test Method for Steady-State Thermal Transmission Properties by Means of the Heat Flow Meter”.

K. ASTM D1929-12, “Standard Test Method for Determining Ignition Temperature of Plastics.

L. ASTM E96-13, “Test Method for Water Vapor Transmission of Materials”.

M. ASTM C1304-08 (2013), “Standard Test Method for Assessing the Odor Emission of Thermal Insulation Materials”.

N. ASTM C1338-14, “Standard Test Method for Determining Fungi Resistance of Insulation Materials and Facings”.

O. ASTM D1761, “Standard Test Methods for Mechanical Fasteners in Wood” modified for Shear.

P. NFPA 285 (2012), “Standard Fire Test Method for Evaluation of Fire Propagation Characteristics of Exterior Non-Load-Bearing Wall Assemblies Containing Combustible Components”.

1.04 SUBMITTALS

A. See Section 01 33 00 - Submittal Procedures, for submittal procedures.

B. Manufacturer’s Product Data: Submit data for structural insulating sheathing and accessories. Include instructions for handling, storage, installation, and protection.

C. Shop Drawings: Submit drawings: Indicate material profile, jointing pattern, jointing details, fastening methods, flashings, terminations, and installation details.

D. Manufacturer's Installation Instructions: Indicate special handling criteria, installation sequence, cleaning procedures, and maintenance procedures.

E. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

F. Sample product warranty.

1.05 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Field Quality Control Plan:
   1. Visually inspect fasteners, flashings, and waterproofing.
   2. Photo document observations and maintain record of observations.

C. Installer Qualifications: Company specializing in performing the work of this Section with minimum 3 years’ experience.

D. Mock-up:
   1. Construct mock-up, 4 feet long by 4 feet wide, minimum, including panels, attachments to building frame, sealants and seals, and any other material in the assembly.
   2. Demonstrate component assembly including panel materials, corners (inside and outside), window openings, weep drainage system, attachments, anchors, and perimeter sealant.
   3. Locate where directed by Architect.
   4. Approved Mock-up may remain as part of the Work.

1.06 PROJECT CONDITIONS

A. Sheathing panels may be installed at any temperature.

B. Special consideration shall be followed for accessory sealants. Follow manufacturer’s instructions for temperature limitations on seam sealant requirements.

1.07 DELIVERY, STORAGE AND HANDLING

A. Transport and handle items in accordance with manufacturer’s instructions.

B. Coordinate deliveries in order to avoid delay in, or impediment of, progress of the Work.

C. Store packaged materials in original containers with seals unbroken and labels, including grade seal, intact until time of use, in accordance with manufacturer’s instructions. Do not stack.

D. Store installation system materials in a dry location and handle in a manner to prevent chipping, breakage, and contamination.

E. Store structural insulating sheathing boards off ground, under cover, and keep dry. Pallets shall sit on even gravel or concrete surface when able.

F. Maximum panel stack height 30 panels. Do not double stack pallets.

G. Long term panel storage shall be kept in a warehouse condition.

H. Protect latex additives, organic adhesives, epoxy adhesives and sealants from freezing or overheating in accordance with manufacturer's instructions; store at room temperature when possible.

1.08 WARRANTY

A. See Section 01 78 00 - Closeout Submittals, for additional warranty requirements.

B. Provide manufacturer's Limited Ten Year Warranty.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Dupont, Armorwall. ArmorWall Manufacturing Plant, 1335 Litton Drive, Salisbury, North Carolina 28147

B. Basis of Design: Armorwall FR SIS.
   1. Magnesium Oxide Board (MgO) Facer; 1/2" thickness
   2. Polyurethane Rigid Foam Insulation:
      a. Class 1 Rated Polyurethane R-Value 6.5/inch.
      b. 1 1/2" Thickness R10.
   3. Air and Weather Resistant Barrier: As approved by Manufacturer and applied after installation of sheathing.
   4. Sheathing Panel System Maximum Deflection on 18ga Steel Stud. L/360: +113/-75 psf (+5400/-2600 Pa). L/240: +113/-95 psf (+5400/-4560 Pa).
   5. NFPA 285 approved test assembly demonstrating passing of sheathing directly to exterior of stud facing allowing any exterior non-combustible veneer application.

2.02 ACCESSORIES

A. Fasteners: Supplied by structural insulating sheathing manufacturer.
   1. For attachment to Cold Formed Steel Studs:
      a. Type: #14-13, self-drilling, pancake head fastener.
      b. Min embedment: Depth of steel stud plus three (3) threads.
   2. Joint and Fastener Head Treatment:
      a. See Below.
   3. Flashing: See Section 07 62 00 - Sheet Metal Flashing and Trim.

B. Rough Openings:
   1. ArmorWall Return to be applied to all rough openings prior to waterproofing application.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that surfaces and conditions are ready to accept the work of this section.

B. Verify built-in items, penetrations and rough openings are correct and properly located.

3.02 PREPARATION

A. Protect surrounding area from possible damage during installation of structural insulating sheathing.

B. Remove projections, protruding fasteners, and loose or foreign matter that might interfere with proper installation.

C. If deficiencies exist, consult Architect. Correct deficiencies in accordance with manufacturer's recommendations.

D. Beginning installation constitutes Contractor's acceptance of existing conditions.

3.03 SEQUENCING

A. Material may be cut to using standard power hand tools prior to final installation.

B. Coordinate installation of the structural insulating sheathing with related work.

C. Proceed with the Work only when substrate construction and framing of openings have been completed.

3.04 GENERAL

A. Structural insulating sheathing to be applied directly to exterior face of steel or wood studs with the rigid structural facing out and the insulation placed directly against the studs.

B. Structural insulating sheathing may be attached to concrete and masonry foundation walls. Rigid structural exterior surface is designed to receive direct application of siding, synthetic stone, thin brick, or other exterior finish systems with mechanical attachment directly to sheathing up to 13 psf. Consult with manufacturer's technical services for assemblies of heavier weights prior to installation.

C. Do not install structural sheathing on to slopes less than a forty-five degree (12 inches of rise per 12 inches of run).

3.05 INSTALLATION

A. Install materials in accordance with manufacturer's instructions. No insulation shall be exposed after installation.

B. Sheathing panels shall be installed in butt joint fashion with no gaps greater than 1/8". Gaps greater than 1/8" require installation of low rise foam to maintain continuous insulation requirements of wall assembly.

C. Installation at Steel Studs:
   1. Install panels vertically or horizontally to stud with butt joints at all locations.
   2. Layout shall permit panel joints to occur on the face of a stud of butt joints that are parallel to panel edge.
   3. Panel Perimeter Fasteners at 12 inches O.C. on the panel edge.
   4. Fasten panels according to manufacturer's written instructions.

D. Corner Condition; coordinate inside and outside corner installation for interlocking panel seam layout.
   1. Outside Corners - Miter both panels with power saw prior to installation so that outer structural face meets on each panel leaving no exposed insulation. Seal joints, seams, and all fastener penetrations.
   2. Inside Corner - Weave one corner behind and then butt joint following panel and seal.

E. Fluid Applied Coating:
   1. See Section 07 27 26 - Fluid Applied Membrane Air Barriers.
   2. Coat entire surface with Air Barrier per panel manufacturer's written instructions.
   3. Sealants and/or coatings shall be applied in smoothest way possible to buck as little water as possible shedding down vertical facing of sheathing.

F. Rough Opening and Large Penetration Conditions:
   1. ArmorWall Return to surround all rough openings through the entire face of exposed structural member with no insulation left exposed.
   2. Form butt joint with new structural insulated sheathing to return rigid face around the entire rough opening.
   3. Mechanically attach return to structural face of rough opening in offset fastening for entire run of opening face at eight (8) inches on center.
   4. Treat outer face seam with sealant on return and outer structural insulating sheathing with a minimum of one (1) inch of sealant on to each face.
   5. No insulation shall be left exposed and returns shall be installed at all rough openings or any openings that can't be immediately flashed with liquid flashing materials.

G. Small Penetration Condition:
   1. Small Penetration (6" dia. or less): Liquid flashing with sealant in a cove joint sealing penetration to surface face of structural insulating sheathing.

H. At Grade and Below Grade:
   1. Use only manufacturer approved below grade materials capable of withstanding constant hydrostatic water pressure. Materials must be specifically labeled for Below Grade use.

3.06 ADJUSTING

A. Cutting and Fitting: Cut and fit for chases, pipes, conduit, sleeves and grounds. Coordinate with other sections of work to provide correct size, shape and location. Maximum 1/8" gap. Seal gap with appropriate sealant per location requirements.

3.07 FIELD QUALITY CONTROL/ TOLERANCES

A. See Section 01 40 00 - Quality Requirements, for additional requirements.

B. Perform field quality control inspection as specified in Part 1, Quality Assurance.

3.08 TOLERANCE

A. Joint thickness: No gaps greater than ¼ inch allowed without installation of supplemental low rise field applied foam insulation and backer rod for sealants.

3.09 PROTECTION

A. During erection, cover top of walls with waterproof sheeting at end of each work day. Cover partially completed walls when work is not in progress.

B. Do not leave factory coated air and water resistive barrier surfaces exposed to weather longer than one hundred eighty (180) days without approval from manufacturer.

C. Structural Insulating Sheathing boards without a factory applied air and water barrier shall be covered within sixty (60) days after installation.

D. Do not permit installed materials to be damaged prior to concealment.

END OF SECTION

This page intentionally left blank

SECTION 06 20 00
FINISH CARPENTRY

PART 1 GENERAL

1.01 SUMMARY

A. This Section includes the following:
   1. Interior standing and running trim.
   2. Hardwood Veneer Plywood paneling.
   3. Exterior Wood Siding.

1.02 RELATED SECTIONS

A. Section 01 33 00 - Submittal Procedures.

B. Section 01 40 00 - Quality Requirements.

C. Section 01 60 00 - Product Requirements.

D. Section 06 10 00 - Rough Carpentry.

E. Section 06 15 00 - Wood Decking.

F. Section 06 20 01 - Finish Carpentry Schedule.

G. Section 06 40 00 - Architectural Woodwork.

H. Section 09 74 16 - Wood Veneer Wall Covering.

1.03 REFERENCE STANDARDS

A. 40 CFR 59, Subpart D - National Volatile Organic Compound Emission Standards for Architectural Coatings; U.S. Environmental Protection Agency; Current Edition.

B. ANSI A135.4 - Basic Hardboard; 2012 (Reaffirmed 2020).

C. ANSI A208.1 - American National Standard for Particleboard; 2022.

D. ANSI A208.2 - Medium Density Fiberboard (MDF) for Interior Applications; 2022.

E. ASTM D3498 - Standard Specification for Adhesives for Field-Gluing Wood Structural Panels (Plywood or Oriented Strand Board) to Wood Based Floor System Framing; 2019a.

F. HPVA HP-1 - American National Standard for Hardwood and Decorative Plywood; 2020.

G. PS 1 - Structural Plywood; 2023.

H. PS 20 - American Softwood Lumber Standard; 2025.

I. SCAQMD 1168 - Adhesive and Sealant Applications; 1989, with Amendment (2022).

1.04 DEFINITIONS

A. Lumber grading agencies, and the abbreviations used to reference them, include the following:
   1. NHLA: National Hardwood Lumber Association.
   2. NLGA: National Lumber Grades Authority.

B. MDF: Medium-density fiberboard.

C. MDO Plywood: Plywood with a medium-density overlay on the face.

1.05 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00.

1.06 SUBMITTALS

A. Product Data: For each type of process and factory-fabricated product. Indicate component materials, dimensions, profiles, textures, and colors and include construction and application details.

B. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.

2. Submit inventory to Owner within 5 days of delivery of materials.
3. See Sections 01 33 00 and 01 60 00.

C. Research/Evaluation Reports: Showing that fire-retardant-treated wood complies with building code in effect for Project.

D. Warranty: Special warranty specified in this Section.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Protect materials against weather and contact with damp or wet surfaces. Stack lumber, plywood, and other panels flat with spacers between each bundle to provide air circulation. Provide for air circulation within and around stacks and under temporary coverings.

B. Deliver interior finish carpentry materials only when environmental conditions meet requirements specified for installation areas. If interior finish carpentry materials must be stored in other than installation areas, store only where environmental conditions meet requirements specified for installation areas.

1.08 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install interior finish carpentry materials until building is enclosed and weatherproof, wet work in space is completed and nominally dry, and HVAC system is operating and maintaining temperature and relative humidity at occupancy levels during the remainder of the construction period.

B. Do not install finish carpentry materials that are wet, moisture damaged, or mold damaged.
1. Indications that materials are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
2. Indications that materials are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

PART 2 PRODUCTS

2.01 MATERIALS, GENERAL

A. Lumber: DOC PS 20 and applicable grading rules of inspection agencies certified by ALSC's Board of Review.

B. Softwood Plywood: DOC PS 1.

C. Hardboard: AHA/ANSI A135.4.

D. MDF: ANSI A208.2, Grade 130.

E. Particleboard: ANSI A208.1, Grade M-2.

F. VOC Limits for Installation Adhesives and Glues: Use installation adhesives that comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):
1. Wood Glues: 30 g/L.
2. Contact Adhesive: 250 g/L.F.

G. Low-Emitting Materials:
1. Provide composite wood products containing no added urea formaldehyde.
2. Adhesives applied on site shall comply with South Coast Air Quality Management District SCAQMD 1168.

2.02 STANDING AND RUNNING TRIM

A. Hardwood Lumber Moldings and Trim for Transparent Finish (Stain or Clear Finish):
1. Species and Grade: White maple; Clear; NHLA.
2. Maximum Moisture Content: 6 percent.
3. Finger Jointing: Not allowed.
4. Gluing for Width: Use for lumber trim wider than 6 inches (150 mm).
5. Veneered Material: Allowed.
6. Face Surface: Surfaced (smooth).

7. Matching: Selected for compatible grain and color.

2.03 PANELING

A. Hardwood Veneer Plywood Paneling: Manufacturer's stock hardwood plywood panels complying with HPVA HP-1, made without urea-formaldehyde adhesive.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Dooge Veneers Inc.
      b. Georgia-Pacific Corp.
      c. RS Bacon Veneer Company.
   2. Face Veneer Species and Cut: White Maple plain cut.
   3. Veneer Matching: Selected for similar color and grain.
   4. Backing Veneer Species: Any hardwood compatible with face species.
   5. Construction: Veneer core.
   6. Thickness: 1/16 inch (1.6 mm).
   7. Panel Size: 48 by 96 inches (1219 by 2438 mm).
   8. Glue Bond: Type II (interior).
   9. Face Pattern: Manufacturer's standard-grooved pattern, with grooves at edges, center, and third points of panels, and at other locations to provide pattern resembling random width boards.
   10. Finish: Manufacturer's standard, transparent, UV-resistant, protective finish.

B. See attached Finish Carpentry Schedule.

2.04 EXTERIOR WOOD SIDING

A. Basis of Design: Mataverde Premium Hardwood Siding, email sales@mataverdecking.com; web www.mataverdecking.com.
   1. Hardwood Siding:
      a. Species: Ipe
      b. Face: 4 7/8"
      c. Gap: 1/8"

2.05 MISCELLANEOUS MATERIALS

A. Fasteners for Interior Finish Carpentry: Nails, screws, and other anchoring devices of type, size, material, and finish required for application indicated to provide secure attachment, concealed where possible.

B. Paneling Adhesive: Comply with paneling manufacturer's written recommendations for adhesives.
   1. Use adhesive that has a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

C. Multipurpose Construction Adhesive: Formulation complying with ASTM D3498 that is recommended for indicated use by adhesive manufacturer.
   1. Use adhesive that has a VOC content of 70 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

D. Plywood backing: Behind all wood panels in lieu of gypsum board. See Section 06 10 00.

E. VOC Limits for Installation Adhesives and Glues: Use installation adhesives that comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):
   1. Wood Glues: 30 g/L.
   2. Contact Adhesive: 250 g/L.

2.06 FABRICATION

A. Fabricators: Subject to compliance with requirements, provide finish carpentry by the following:
   1. LTF Millwork, 4200 Norex Drive, Chaska, MN 55318. Phone: (952) 229-7647, Fax: (952) 477-5972.

B. Back out or kerf backs of the following members except those with ends exposed in finished work:

1. Interior standing and running trim except shoe and crown molds.
2. Wood board paneling.

C. Ease edges of lumber less than 1 inch (25 mm) in nominal thickness to 1/16-inch (1.5-mm) radius and edges of lumber 1 inch (25 mm) or more in nominal thickness to 1/8-inch (3-mm) radius.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine substrates, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance.

B. Examine finish carpentry materials before installation. Reject materials that are wet, moisture damaged, and mold damaged.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Clean substrates of projections and substances detrimental to application.

B. Before installing interior finish carpentry, condition materials to average prevailing humidity in installation areas for a minimum of 24 hours.

3.03 INSTALLATION, GENERAL

A. Do not use materials that are unsound, warped, improperly treated or finished, inadequately seasoned, or too small to fabricate with proper jointing arrangements.

B. Install interior finish carpentry level, plumb, true, and aligned with adjacent materials. Use concealed shims where necessary for alignment.
1. Scribe and cut interior finish carpentry to fit adjoining work. Refinish and seal cuts as recommended by manufacturer.
2. Countersink fasteners, fill surface flush, and sand where face fastening is unavoidable.
3. Install to tolerance of 1/8 inch in 96 inches (3 mm in 2438 mm) for level and plumb. Install adjoining interior finish carpentry with 1/32-inch (0.8-mm) maximum offset for flush installation and 1/16-inch (1.5-mm) maximum offset for reveal installation.

3.04 STANDING AND RUNNING TRIM INSTALLATION

A. Install with minimum number of joints practical, using full-length pieces from maximum lengths of lumber available. Do not use pieces less than 24 inches (610 mm) long, except where necessary. Stagger joints in adjacent and related standing and running trim. Cope at returns and miter at corners to produce tight-fitting joints with full-surface contact throughout length of joint. Use scarf joints for end-to-end joints. Plane backs of casings to provide uniform thickness across joints where necessary for alignment.
1. Install trim after gypsum board joint finishing operations are completed.
2. Drill pilot holes in hardwood before fastening to prevent splitting. Fasten to prevent movement or warping. Countersink fastener heads on exposed carpentry work and fill holes.

3.05 PANELING INSTALLATION

A. Plywood Paneling: Select and arrange panels on each wall to minimize noticeable variations in grain character and color between adjacent panels. Leave 1/4-inch (6-mm) gap to be covered with trim at top, bottom, and openings. Install with uniform tight joints between panels.
1. Attach panels to supports with manufacturer's recommended panel adhesive and fasteners. Space fasteners as recommended by panel manufacturer.
2. Conceal fasteners to greatest practical extent.

3.06 ADJUSTING

A. Replace interior finish carpentry that is damaged or does not comply with requirements. Interior finish carpentry may be repaired or refinished if work complies with requirements and shows no evidence of repair or refinishing. Adjust joinery for uniform appearance.

3.07 CLEANING

A. Clean interior finish carpentry on exposed and semiexposed surfaces. Touch up factory-applied finishes to restore damaged or soiled areas.

3.08 PROTECTION

A. Protect installed products from damage from weather and other causes during remainder of the construction period.

B. Remove and replace finish carpentry materials that are wet, moisture damaged, and mold damaged.
   1. Indications that materials are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
   2. Indications that materials are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

SECTION 06 40 00
ARCHITECTURAL WOODWORK

PART 1 GENERAL

1.01 SUMMARY

A. This Section includes the following:
   1. Wood cabinets.
   2. Hardware.
   3. Plastic-laminate countertops.
   4. Shop finishing of interior woodwork.
   5. Millwork Trim.

1.02 RELATED SECTIONS

A. Section 01 33 00 - Submittal Procedures.

B. Section 01 40 00 - Quality Requirements.

C. Section 01 60 00 - Product Requirements.

D. Section 06 10 00 - Rough Carpentry.

E. Section 06 15 00 - Wood Decking.

F. Section 06 20 00 - Finish Carpentry.

G. Section 06 40 01 - Architectural Woodwork Schedules.

H. Section 09 74 16 - Flexible Wood Veneer Wall Covering.

I. Section 09 91 00 - Painting.

1.03 REFERENCE STANDARDS

A. AHA A135.4 American Hardboard Association; Basic Hardboard.

B. ANSI A208.2 - Medium Density Fiberboard (MDF) for Interior Applications; 2022.

C. ASTM C1048 - Standard Specification for Heat-Strengthened and Fully Tempered Flat Glass; 2018.

D. ASTM D523 - Standard Test Method for Specular Gloss; 2014 (Reapproved 2018).

H. BHMA A156.11 - American National Standard for Cabinet Locks; 2019.

I. BHMA A156.18 - Standard for Materials and Finishes; 2020.

J. HPVA HP-1 - American National Standard for Hardwood and Decorative Plywood; 2020.

K. ASLS DOC PS 20 American Softwood Lumber Standard.

L. AWPA U1 User Specification for Treated Wood.

M. NEMA LD 3 ANSI/NEMA Standard for High Pressure Laminates.

1.04 DEFINITIONS

A. Architectural woodwork includes wood furring, blocking, shims, and hanging strips for installing woodwork items unless concealed within other construction before woodwork installation.

1.05 SUBMITTALS

A. Product Data: For each type of product indicated, including cabinet hardware and accessories and finishing materials and processes.

B. Product Data: For high-pressure decorative laminate and adhesive for bonding plastic laminate.

C. Shop Drawings: Show location of each item, dimensioned plans and elevations, large-scale details, attachment devices, and other components.

1. Show locations and sizes of furring, blocking, and hanging strips, including concealed blocking and reinforcement specified in other Sections.
2. Show locations and sizes of cutouts and holes for plumbing fixtures and other items installed in architectural woodwork.

D. Samples for Verification:
1. Lumber with or for transparent finish, not less than 50 sq. in. (300 sq. cm), for each species and cut, finished on 1 side and 1 edge.
2. Veneer-faced panel products with or for transparent finish, 8 by 10 inches (200 by 250 mm), for each species and cut. Include at least one face-veneer seam and finish as specified.
3. Plastic laminates, 8 by 10 inches (200 by 250 mm), for each type, color, pattern, and surface finish, with 1 sample applied to core material and specified edge material applied to 1 edge.

E. Procurement:
1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
2. Submit inventory to Owner within 5 days of delivery of materials.
3. See Sections 01 33 00 and 01 60 00.

F. Product Certificates: For each type of product, signed by product manufacturer.

G. Woodwork Quality Standard Compliance Certificates: AWI (QCP) Quality Certification Program certificates.

1.06 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Fabricator Qualifications: Shop that employs skilled workers who custom-fabricate products similar to those required for this Project and whose products have a record of successful in-service performance. Shop is a certified participant in AWI (QCP) Quality Certification Program.

C. Source Limitations: Engage a qualified woodworking firm to assume undivided responsibility for production of architectural woodwork with sequence-matched wood veneers.

D. Quality Standard: Unless otherwise indicated, comply with AWI/AWMAC/WI "Architectural Woodwork Quality Standards" for grades of architectural woodwork indicated for construction, finishes, installation, and other requirements.

E. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

F. Pre-installation Conference: Conduct conference at Project site to comply with requirements in Division 1 Section "Project Management and Coordination."

1.07 DELIVERY, STORAGE, AND HANDLING

A. Do not deliver woodwork until painting and similar operations that could damage woodwork have been completed in installation areas. If woodwork must be stored in other than installation areas, store only in areas where environmental conditions comply with requirements specified in "Project Conditions" Article.

1.08 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install woodwork until building is enclosed, wet work is complete, and HVAC system is operating and maintaining temperature and relative humidity at occupancy levels during the remainder of the construction period.

B. Environmental Limitations: Do not deliver or install woodwork until building is enclosed, wet work is complete, and HVAC system is operating and maintaining temperature between 60 and 90 deg F (16 and 32 deg C) and relative humidity at occupancy levels during the remainder of the construction period.

C. Field Measurements: Where woodwork is indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication, and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.
   1. Locate concealed framing, blocking, and reinforcements that support woodwork by field measurements before being enclosed, and indicate measurements on Shop Drawings.
   2. Established Dimensions: Where field measurements cannot be made without delaying the Work, establish dimensions and proceed with fabricating woodwork without field measurements. Provide allowance for trimming at site, and coordinate construction to ensure that actual dimensions correspond to established dimensions.

1.09 COORDINATION

A. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of Work specified in other Sections to ensure that architectural woodwork can be supported and installed as indicated.

PART 2 PRODUCTS

2.01 WOODWORK FABRICATORS

A. Cabinet Fabricators: Subject to compliance with requirements, provide architectural woodwork by the following:
   1. LTF Millwork, 4200 Norex Drive, Chaska, MN 55318. Phone: (952) 229-7647, Fax: (952) 477-5972.
   2. Approved Equal.

2.02 MATERIALS

A. General: Provide materials that comply with requirements of AWI's quality standard for each type of woodwork and quality grade specified, unless otherwise indicated.

B. Wood Species and Cut for Transparent Finish: Maple, Select White, plain cut.

C. Wood Products: Comply with the following:
   1. Hardboard: AHA A135.4.
   2. Medium-Density Fiberboard: ANSI A208.2, Grade MD, made with binder containing no urea formaldehyde.
   3. Softwood Plywood: DOC PS 1.
   4. Veneer-Faced Panel Products (Hardwood Plywood): HPVA HP-1, made with adhesive containing no urea formaldehyde.
      a. Manufacturer: Subject to compliance with requirements, provide veneer-faced panel by one of the following:
         1) Dooge Veneers, 485 Airwest, SE, Grand Rapids, MI 49512. Telephone: 616.698.6540.
         2) RS Bacon Veneer Company, 100 South Mannheim Road, Hillside, IL 60162. Telephone: 708.547.6673

D. Wood Veneers & Stains:
   1. See attached Schedule.

E. High-Pressure Decorative Laminate:
   1. See attached Schedule.

F. Tempered Float Glass for Cabinet Doors: ASTM C1048, Kind FT, Condition A, Type I, Class 1 (clear), Quality-Q3, 6 mm thick, unless otherwise indicated.

G. Permalam, Almond Melamine at Cabinet Interior.

2.03 CABINET HARDWARE AND ACCESSORIES

A. General: Provide cabinet hardware and accessory materials associated with architectural cabinets, except for items specified in Division 8 Section "Door Hardware (Scheduled by Describing Products)."
   1. Refer to Millwork for casework hardware materials.

2.04 MISCELLANEOUS MATERIALS

A. Furring, Blocking, Shims, and Hanging Strips: Softwood or hardwood lumber, kiln dried to less than 15 percent moisture content.

B. Anchors: Select material, type, size, and finish required for each substrate for secure anchorage. Provide nonferrous-metal or hot-dip galvanized anchors and inserts on inside face of exterior walls and elsewhere as required for corrosion resistance. Provide toothed-steel or lead expansion sleeves for drilled-in-place anchors.

C. Adhesives, General: Do not use adhesives that contain urea formaldehyde.

D. Adhesive for Bonding Plastic Laminate: Contact cement.

2.05 FABRICATION, GENERAL

A. Interior Woodwork Grade: Unless otherwise indicated, provide Premium-grade interior woodwork complying with referenced quality standard.

B. Wood Moisture Content: Comply with requirements of referenced quality standard for wood moisture content in relation to ambient relative humidity during fabrication and in installation areas.

C. Fabricate woodwork to dimensions, profiles, and details indicated.

D. Complete fabrication, including assembly, finishing, and hardware application, to maximum extent possible before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.

E. Shop-cut openings to maximum extent possible to receive hardware, appliances, plumbing fixtures, electrical work, and similar items. Locate openings accurately and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.
   1. Seal edges of openings in countertops with a coat of varnish.

F. Install glass to comply with applicable requirements in Division 8 Section "Glazing" and in GANA's "Glazing Manual." For glass in wood frames, secure glass with removable stops.

2.06 WOOD CABINETS FOR TRANSPARENT FINISH

A. Grade: Premium.

B. AWI Type of Cabinet Construction: Flush overlay.

C. Wood Species and Cut for Exposed Surfaces: Maple, plain sliced.
   1. Grain Direction: Horizontally for drawer fronts, doors, and fixed panels.
   2. Matching of Veneer Leaves: Slip match.
   3. Vertical Matching of Veneer Leaves: End match.
   4. Veneer Matching within Panel Face: Running match.
   5. Comply with veneer and other matching requirements indicated for blueprint-matched paneling.

2.07 PLASTIC-LAMINATE COUNTERTOPS

A. Grade: Premium.

B. High-Pressure Decorative Laminate Grade: HGP.

C. Colors, Patterns, and Finishes: Provide materials and products that result in colors and textures of exposed laminate surfaces complying with the following requirements:
   1. Solid colors, matte finish.
   2. Solid colors with core same color as surface, matte finish.
   3. Wood grains, matte finish.
   4. Patterns, matte finish.

D. Edge Treatment: Same as laminate cladding on horizontal surfaces.

E. Core Material: Particleboard or medium-density fiberboard.

F. Core Material at Sinks: Particleboard made with exterior glue.

G. Paper Backing: Provide paper backing on underside of countertop substrate.

2.08 SHOP FINISHING

A. Grade: Provide finishes of same grades as items to be finished.

B. General: Finish architectural woodwork at fabrication shop as specified in this Section. Defer only final touchup, cleaning, and polishing until after installation.

C. Transparent Finished Millwork:
   1. Shop apply the prime coat including back-priming, if any, for transparent-finished items specified to be field finished. Refer to Division 9 painting Sections for material and application requirements.
   2. Preparation for Finishing: Comply with referenced quality standard for sanding, filling countersunk fasteners, sealing concealed surfaces, and similar preparations for finishing architectural woodwork, as applicable to each unit of work.
      a. Back-priming: Apply one coat of sealer or primer, compatible with finish coats, to concealed surfaces of woodwork. Apply two coats to back of paneling and to end-grain surfaces. Concealed surfaces of plastic-laminate-clad woodwork do not require back-priming when surfaced with plastic laminate, backing paper, or thermoset decorative panels.
   3. Transparent Finish:
      a. Grade: Premium.
      b. AWI Finish System: TR-6, Catalyzed polyester.
      c. Staining: Match approved sample for color.
      d. Wash Coat for Stained Finish: Apply wash-coat sealer to woodwork made from closed-grain wood before staining and finishing.
         1) Apply wash-coat sealer after staining and before filling.
      e. Sheen: Satin, 31-45 gloss units measured on 60-degree gloss meter per ASTM D523.

D. Painted Millwork:
   1. Prime coat and first paint coat shall be shop applied.
   2. Final coats to be field applied by painter.
   3. See Section 09 91 00 - Painting.

PART 3 EXECUTION

3.01 PREPARATION

A. Before installation, condition woodwork to average prevailing humidity conditions in installation areas.

B. Before installing architectural woodwork, examine shop-fabricated work for completion and complete work as required, including removal of packing and back-priming.

3.02 INSTALLATION

A. Grade: Install woodwork to comply with requirements for the same grade specified in Part 2 for fabrication of type of woodwork involved.

B. Assemble woodwork and complete fabrication at Project site to comply with requirements for fabrication in Part 2, to extent that it was not completed in the shop.

C. Install woodwork level, plumb, true, and straight. Shim as required with concealed shims. Install level and plumb (including tops) to a tolerance of 1/8 inch in 96 inches (3 mm in 2400 mm).

D. Scribe and cut woodwork to fit adjoining work, refinish cut surfaces, and repair damaged finish at cuts.

E. Anchor woodwork to anchors or blocking built in or directly attached to substrates. Secure with countersunk, concealed fasteners and blind nailing as required for complete installation. Use fine finishing nails or finishing screws for exposed fastening, countersunk and filled flush with woodwork and matching final finish if transparent finish is indicated.

F. Cabinets: Install without distortion so doors and drawers fit openings properly and are accurately aligned. Adjust hardware to center doors and drawers in openings and to provide unencumbered operation. Complete installation of hardware and accessory items as indicated.

1. Install cabinets with no more than 1/8 inch in 96-inch (3 mm in 2400-mm) sag, bow, or other variation from a straight line.
2. Maintain veneer sequence matching of cabinets with transparent finish.

G. Countertops: Anchor securely by screwing through corner blocks of base cabinets or other supports into underside of countertop.
1. Install countertops with no more than 1/8 inch in 96-inch (3 mm in 2400-mm) sag, bow, or other variation from a straight line.
2. Secure backsplashes to walls with adhesive.
3. Caulk space between backsplash and wall with sealant specified in Division 7 Section "Joint Sealants."

H. Touch up finishing work specified in this Section after installation of woodwork. Fill nail holes with matching filler where exposed.

3.03 ADJUSTING AND CLEANING

A. Repair damaged and defective woodwork, where possible, to eliminate functional and visual defects; where not possible to repair, replace woodwork. Adjust joinery for uniform appearance.

B. Clean, lubricate, and adjust hardware.

C. Clean woodwork on exposed and semi-exposed surfaces. Touch up shop-applied finishes to restore damaged or soiled areas.

SECTION 06 40 01
ARCHITECTURAL WOODWORK SCHEDULES

PART 1 GENERAL

PART 2 PRODUCTS

2.01 MATERIALS

A. Wood Veneers & Stains:
   1. VN-3:
      a. Manufacturer: By owner's millwork vendor
      b. Species: Walnut
      c. Stain: Custom stain to match PLAM-35.
      d. Location: As required.
   2. VN-13
      a. Manufacturer: By owner's millwork vendor
      b. Species: Walnut
      c. Stain: Custom stain to match PLAM-34.
      d. Location: Flush Wood Doors, Locker room benches

B. High-Pressure Decorative Laminate: NEMA LD 3, grades as indicated or, if not indicated, as required by woodwork quality standard.
   1. Manufacturer: Subject to compliance with requirements, provide high-pressure decorative laminates by one of the following:
      a. PLAM-19:
         1) Manufacturer: Wilsonart
         2) Collection: Fine Velvet Texture Finish
         3) Color: Neowalnut 7991-38
         4) Location: Toilet Partitions
         5) URL: https://www.wilsonart.com/neowalnut-7991-8994c244f80553bd89a07a29115f812d
      b. PLAM-33:
         1) Manufacturer: Wilsonart
         2) Collection: Contract Collection
         3) Color: Natural Almond
         4) Location: Interior finish of select LTKA casework
         5) URL: https://www.wilsonart.com/natural-almond-d30
      c. PLAM-34:
         1) Manufacturer: Egger
         2) Color: #H3710-ST22 Natural Carini Walnut
         3) Finish: ST22-Textured Finish
         4) Location: Millwork Throughout, UNO
         5) URL: https://www.egger.com/shop/en_US/interior/decor-detail/H3710_12
      d. PLAM-35:
         1) Manufacturer: Egger
         2) Color: #H3794-ST12 Chocolate Carini Walnut
         3) Finish: H3794 ST12
         4) Location: As indicated in Spa Area
         5) https://www.egger.com/shop/en_US/interior/decor-detail/H3794_12

SECTION 06 64 00
PLASTIC PANELING

PART 1 GENERAL

1.01 SUMMARY

A. Section includes glass-fiber reinforced plastic wall paneling and trim accessories and Thermoplastic Resin Panels.

1.02 RELATED SECTIONS

A. Section 01 33 00 - Submittal Procedures.

B. Section 01 40 00 - Quality Requirements.

C. Section 01 60 00 - Product Requirements.

D. Section 06 20 00 - Finish Carpentry.

E. Section 06 40 00 - Architectural Woodwork.

F. Section 06 64 01 - Plastic Panelling - Schedules.

G. Section 09 21 16 - Gypsum Board Assemblies.

1.03 REFERENCE STANDARDS

A. 40 CFR 59, Subpart D - National Volatile Organic Compound Emission Standards for Architectural Coatings; U.S. Environmental Protection Agency; Current Edition.

B. ASTM D5319 - Standard Specification for Glass-Fiber Reinforced Polyester Wall and Ceiling Panels; 2022.

C. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2023d.

1.04 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

1.05 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Source Limitations: Obtain plastic paneling and trim accessories from single manufacturer.

C. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
   1. Flame-Spread Index: 25 or less.
   2. Smoke-Developed Index: 450 or less.
   3. Testing Agency: UL.

1.06 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install plastic paneling until spaces are enclosed and weathertight and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

PART 2 PRODUCTS

2.01 PLASTIC SHEET PANELING

A. Surface Burning Requirements, Interior Use: Flame spread index of 25 or less and smoke-development index of 450 or less; Class A classification when tested in accordance with ASTM E84.

B. Applicable panels must comply with the requirements of ASTM D5319.

C. See attached Schedule.

2.02 ACCESSORIES

A. Trim Accessories: Manufacturer's standard one-piece vinyl extrusions designed to retain and cover edges of panels. Provide division bars, inside corners, outside corners, and caps as needed to conceal edges.
   1. Color: Match panels.

B. Concealed Mounting Splines: Continuous, H-shaped aluminum extrusions designed to fit into grooves routed in edges of factory-laminated panels and to be fastened to substrate.

C. Adhesive: As recommended by plastic paneling manufacturer.
   1. VOC Content: 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

D. Sealant: Single-component, mildew-resistant, neutral-curing silicone sealant recommended by plastic paneling manufacturer and complying with requirements in Division 7 Section "Joint Sealants."
   1. VOC Content: 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Prepare substrate by sanding high spots and filling low spots as needed to provide flat, even surface for panel installation.

B. Clean substrates of substances that could impair bond of adhesive, including oil, grease, dirt, and dust.

C. Condition panels by unpacking and placing in installation space before installation according to manufacturer's written recommendations.

D. Lay out paneling before installing. Locate panel joints to provide equal panels at ends of walls not less than half the width of full panels.
   1. Mark plumb lines on substrate at panel joint locations for accurate installation.
   2. Locate panel joints to allow clearance at panel edges according to manufacturer's written instructions.

3.03 INSTALLATION

A. Install plastic paneling according to manufacturer's written instructions.

B. Install panels in a full spread of adhesive.

C. Install trim accessories with adhesive. Do not fasten through panels.

D. Fill grooves in trim accessories with sealant before installing panels and bed inside corner trim in a bead of sealant.

E. Maintain uniform space between panels and wall fixtures. Fill space with sealant.

F. Remove excess sealant and smears as paneling is installed. Clean with solvent recommended by sealant manufacturer and then wipe with clean dry cloths until no residue remains.

G. Resin panels may be set in the storefront frame by excluding the glazing gasket and securing with sealant.

END OF SECTION

SECTION 06 64 01
PLASTIC PANELING SCHEDULE

PART 1 GENERAL

PART 2 PRODUCTS

2.01 PLASTIC SHEET PANELING

A. FRP-1: Gelcoat-finished, glass-fiber reinforced plastic panels complying with ASTM D 5319.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Glasbord by Crane Composites.
      b. Marlite
      c. Nudo Products, Inc
   2. Nominal Thickness: Not less than 0.09 inch (2.3 mm)
   3. Fire resistance: Provide Class C panels in sprinklered areas, Class A where there are no fire sprinklers.
   4. Height: Ten foot panels
   5. Surface Finish: Molded pebble texture
   6. Color: White

PART 3 EXECUTION

END OF SECTION

SECTION 07 08 00
COMMISSIONING OF THERMAL AND MOISTURE PROTECTION

PART 1 GENERAL

1.01 SUMMARY

A. This section includes specific requirements that apply to the implementation of the Commissioning Process and this Division Contractors' participation in this process. This section details the project specific equipment and systems that are included in the Commissioning Process. For general descriptions and responsibilities, refer to SECTION 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

1.02 RELATED DOCUMENTS

A. The Owner's Project Requirements (OPR) document.

B. The Basis of Design (BoD) document.

C. The Project Commissioning Plan (CxP) document.

D. ASHRAE Standard 202-2013 - Commissioning Process for Buildings and Systems.

1.03 RELATED SECTIONS

A. SECTION 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS

B. SECTION 08 08 00 - COMMISSIONING OF OPENINGS

C. SECTION 11 08 00 - COMMISSIONING OF EQUIPMENT

D. SECTION 13 08 00 - COMMISSIONING OF SPECIAL CONSTRUCTION

E. SECTION 14 08 00 - COMMISSIONING OF CONVEYING SYSTEMS

F. SECTION 21 08 00 - COMMISSIONING OF FIRE SUPPRESSION SYSTEMS

G. SECTION 22 08 00 - COMMISSIONING OF PLUMBING SYSTEMS

H. SECTION 23 08 00 - COMMISSIONING OF MECHANICAL SYSTEMS

I. SECTION 25 08 00 - COMMISSIONING OF INTEGRATED AUTOMATION SYSTEMS

J. SECTION 26 08 00 - COMMISSIONING OF ELECTRICAL SYSTEMS

K. SECTION 27 08 00 - COMMISSIONING OF COMMUNICATIONS SYSTEMS

L. SECTION 28 08 00 - COMMISSIONING OF SAFETY AND SECURITY SYSTEMS

M. SECTION 33 08 00 - COMMISSIONING OF UTILITIES

1.04 DEFINITIONS

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

1.05 RESPONSIBILITIES

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

PART 2 PRODUCTS

2.01 NO PRODUCTS SUPPLIED

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

B. Contractors and/or Vendors shall provide the specialty testing equipment necessary to fulfill the functional testing requirements, for the duration of the testing period.

PART 3 EXECUTION

3.01 GENERAL

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.02 MEETINGS

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.03 SYSTEM START-UP

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.04 PRE-FUNCTIONAL CHECKLISTS

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.05 FUNCTIONAL PERFORMANCE TESTING

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.06 TRAINING

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.07 SYSTEMS TO BE COMMISSIONED

A. GENERAL
   1. Commissioning specifications supplement the requirements of individual specifications sections but shall not be interpreted to replace or diminish the specified scope of any individual section.
   2. For all systems listed below, Division Contractor shall comply with all commissioning requirements specified.

B. APPLICABLE SYSTEMS
   1. Fluid Applied Waterproofing Membrane
   2. Thermal Insulation
   3. Exterior Insulation and Finish System
   4. Fluid-Applied Membrane Air Barrier
   5. Metal Wall Panels
   6. Thermoplastic Polyolefin Roofing
   7. Sheet Metal Flashing and Trim
   8. Applied Fireproofing
   9. Intumescent Fireproofing
   10. Board Fireproofing
   11. Fire Stopping
   12. Joint Sealants
   13. Expansion Joint Systems

END OF SECTION

SECTION 07 13 25
SELF-ADHERING (POST-APPLIED) SHEET WATERPROOFING

PART 1 — GENERAL

1.01 SUMMARY

A. The work of this section includes, but is not limited to, the following:
   1. Rubberized asphalt sheet membrane waterproofing – Two types.
   2. Prefabricated drainage composite
   3. Protection board

B. Related Sections: Other specification sections which directly relate to the work of this section include, but are not limited to, the following:
   1. Section 033000 – Cast-In-Place Concrete
   2. Section 042000 – Unit Masonry
   3. Section 071100 – Dampproofing
   4. Section 076000 – Flashing and Sheet Metal
   5. Section 079200 – Joint Sealants
   6. Section 079500 – Expansion Control
   7. Section 334600 – Subdrainage

1.02 SUBMITTALS

A. Product Data: Submit manufacturer's product data, installation instructions, use limitations and recommendations. Include certification of data indicating VOC (Volatile Organic Compound) content of all components of waterproofing system.

B. Samples: Submit representative samples of the following for approval:
   1. Sheet membrane
   2. Protection board
   3. Prefabricated drainage composite

1.03 REFERENCE STANDARDS

A. The following standards and publications are applicable to the extent referenced in the text.

B. American Society for Testing and Materials (ASTM)
   C 836 Standard Specification for High Solids, Cold Liquid-Applied Elastomeric Waterproofing Membrane for Use with Separate Wearing Course
   D 412 Standard Test Methods for Rubber Properties in Tension
   D 570 Standard Test Method for Water Absorption of Plastics
   D 882 Standard Test Methods for Tensile Properties of Thin Plastic Sheeting
   D 903 Standard Test Method for Peel or Stripping Strength of Adhesive Bonds
   D 1876 Standard Test Method for Peel Release of Adhesives (T-Peel)
   D 1970 Standard Specification for Self-Adhering Polymer Modified Bituminous Sheet Materials Used as Steep Roofing Underlayment for Ice Dam Protection
   D 3767 Standard Practice for Rubber - Measurements of Dimensions
   D 5385 Standard Test Method for Hydrostatic Pressure Resistance of Waterproofing Membranes
   E 96 Standard Test Methods for Water Vapor Transmission of Materials
   E 154 Standard Test Methods for Water Vapor Retarders Used in Contact with Earth Under Concrete Slabs, on Walls, or as Ground Cover

1.04 QUALITY ASSURANCE

A. Manufacturer: Sheet membrane waterproofing shall be manufactured and marketed by a firm with a minimum of 20 years experience in the production and sales of self-adhesive sheet membrane waterproofing. Manufacturers proposed for use but not named in these specifications shall submit evidence of ability to meet all requirements specified, and include a list of projects of similar design and complexity completed within the past 5 years.

B. Installer: A firm which has at least 3 years experience in work of the type required by this section.

C. Materials: For each type of material required for the work of this section, provide primary materials which are the products of one manufacturer.

D. Pre-Installation Conference: A pre-installation conference shall be held prior to commencement of field operations to establish procedures to maintain optimum working conditions and to coordinate this work with related and adjacent work. Agenda for meeting shall include review of special details and flashing.

1.05 DELIVERY, STORAGE AND HANDLING

A. Deliver materials and products in labeled packages. Store and handle in strict compliance with manufacturer's instructions, recommendations and material safety data sheets. Protect from damage from sunlight, weather, excessive temperatures and construction operations. Remove damaged material from the site and dispose of in accordance with applicable regulations.

1. Do not double-stack pallets of membrane on the job site. Provide cover on top and all sides, allowing for adequate ventilation.

B. Sequence deliveries to avoid delays, but minimize on-site storage.

C. Safety and Handling

Users must read and understand the product label and Safety Data Sheets (SDS's) for each system component before use. All users must acquaint themselves with this information prior to working with the material. Carefully read detailed precaution statements on the product labels and SDS's before use.

1.06 PROJECT CONDITIONS

A. Perform work only when existing and forecasted weather conditions are within the limits established by the manufacturer of the materials and products used.

B. Proceed with installation only when substrate construction and preparation work is complete and in condition to receive sheet membrane waterproofing.

1.07 WARRANTY

A. Sheet Membrane Waterproofing: Provide written 5 year material warranty issued by the membrane manufacturer upon completion of the work.

PART 2 — PRODUCTS

2.01 MATERIALS

A. Sheet Membrane Waterproofing: BITUTHENE® 3000 Membrane/Low Temperature Membrane (BITUTHENE® System 4000 Membrane as required) as manufactured by GCP Applied Technologies; a self-adhesive, cold-applied composite sheet consisting of a thickness of 1.4 mm (0.056 in.) of rubberized asphalt and 0.1 mm (0.004 in.) of cross-laminated, high density polyethylene film. Provide rubberized asphalt membrane covered with a release sheet, which is removed during installation and no special adhesive or heat shall be required to form laps. Provide membrane with the following physical properties:

PHYSICAL PROPERTIES: BITUTHENE® 3000 Membrane & BITUTHENE® LOW TEMPERATURE Membrane

Property	Test Method	Typical Value
Color		Dark gray-black
Thickness	ASTM D 3767 Method A	1.5 mm (0.060 in.) nominal
Flexibility, 180° bend over 25 mm (1 in.) mandrel at -32°C (-25°F)	ASTM D 1970	Unaffected

Tensile Strength, Membrane Die C	ASTM D 412[1]	2240 kPa (325 psi) minimum
Tensile Strength, Film	ASTM D 882[1]	34.5 MPa (5,000 psi) minimum
Elongation, Ultimate Failure of Rubberized Asphalt	ASTM D 412[1]	300% minimum
Crack Cycling at -32°C (-25°F), 100 Cycles	ASTM C 836	Unaffected
Lap Shear	ASTM D 1002[2]	89 N (20 lbs) minimum
Peel Strength	ASTM D 903	1576 N/m (9 lbs/in.) minimum
Puncture Resistance, Membrane	ASTM E 154	222 N (50 lbs) minimum
Resistance to Hydrostatic Head	ASTM D 5385	>70 m (>230 ft) of water
Permeance	ASTM E 96, Section 12 – Water Method	<0.1 perms
Water Absorption	ASTM D 570	0.1% maximum

PHYSICAL PROPERTIES FOR BITUTHENE® SYSTEM 4000 MEMBRANE:

Property	Test Method	Typical Value
Color		Dark gray-black
Thickness	ASTM D 3767 Method A	60 mils (1.5 mm) nominal
Flexibility, 180° bend over 25 mm (1 in.) mandrel at -32°C (-25°F)	ASTM D 1970	Unaffected
Tensile Strength, Membrane Die C	ASTM D 412[1]	2240 kPa (325 psi) minimum
Tensile Strength, Film	ASTM D 882[1]	34.5 MPa (5,000 psi) minimum
Elongation, Ultimate Failure of Rubberized Asphalt	ASTM D 412[1]	300% minimum
Crack Cycling at -32°C (-25°F), 100 Cycles	ASTM C 836	Unaffected
Lap Shear	ASTM D 1002[2]	89 N (20 lbs.) minimum
Peel Strength	ASTM D 903	1926 N/m (11 lbs/in.) minimum
Puncture Resistance, Membrane	ASTM E 154	222 N (50 lbs.) minimum
Resistance to Hydrostatic Head	ASTM D 5385	>70 m (>230 ft) of water
Permeance	ASTM E 96, Section 12 – Water Method	<0.1 perms
Water Absorption	ASTM D 570	0.1% (maximum)

2.02 Ancillary Products

A. Prefabricated Drainage Composite: HYDRODUCT® 220 and/or HYDRODUCT® 660 Drainage Composite as manufactured by GCP Applied Technologies to promote positive drainage while serving as a protection course.

B. Protection Board:
   1. Expanded Polystyrene Protection Board: 25 mm (1 in.) thick for vertical applications with the following characteristics. Adhere to waterproofing membrane with BITUTHENE®Protection Board Adhesive.
      i. Normal Density: 16 kg/m^3 (1.0 lb/ft^3)
      ii. Thermal Conductivity, K factor: 0.24 at 5°C (40°F), 0.26 at 24°C (75°F)
      iii. Thermal Resistance, R-Value: 4 per 25 mm (1 in.) of thickness.
      iv. PSI: 25

2. Asphalt Hardboard: A premolded semi-rigid protection board consisting of bitumen, mineral core and reinforcement. Provide 3 mm (0.125 in.) thick hardboard on horizontal surfaces not receiving steel reinforced slab. Where steel reinforcing bars are to be used, apply two layers of 3 mm (0.125 in.) thick hardboard or one layer of 6 mm (0.25 in.) thick hardboard.

C. Waterstop: Adcor™ hydrophilic waterstop as manufactured by GCP Applied Technologies for non-moving concrete construction joints.

D. Miscellaneous Materials: Surface conditioner, mastic, liquid membrane, tape and accessories specified or acceptable to manufacturer of sheet membrane waterproofing.

PART 3 — EXECUTION

3.01 EXAMINATION

A. The installer shall examine conditions of substrates and other conditions under which this work is to be performed and notify the contractor, in writing, of circumstances detrimental to the proper completion of the work. Do not proceed with work until unsatisfactory conditions are corrected.

3.02 SUBSTRATE PREPARATION

A. Refer to manufacturer's literature for requirements for preparation of substrates. Surfaces shall be structurally sound and free of voids, spalled areas, loose aggregate and sharp protrusions. Remove contaminants such as grease, oil and wax from exposed surfaces. Remove dust, dirt, loose stone and debris. Use repair materials and methods which are acceptable to manufacturer of sheet membrane waterproofing.

B. Cast-In-Place Concrete Substrates:

1. Do not proceed with installation until concrete has properly cured and dried (minimum 7 days for normal structural concrete and minimum 14 days for lightweight structural concrete).
2. Fill form tie rod holes with concrete and finish flush with surrounding surface.
3. Repair bugholes over 13 mm (0.5 in.) in length and 6 mm (0.25 in.) deep and finish flush with surrounding surface.
4. Remove scaling to sound, unaffected concrete and repair exposed area.
5. Grind irregular construction joints to suitable flush surface.

C. Masonry Substrates: Apply waterproofing over concrete block and brick with smooth trowel-cut mortar joints or parge coat.

D. Wood Substrates: Apply waterproofing membrane over securely fastened sound surface. All joints and fasteners shall be flush to create a smooth surface.

E. Related Materials: Treat joints and install flashing as recommended by waterproofing manufacturer.

3.03 INSTALLATION

A. Refer to manufacturer's literature for recommendations on installation, including but not limited to, the following:

1. Apply primer at rate recommended by manufacturer. Recoat areas not waterproofed if contaminated by dust. Mask and protect adjoining exposed finish surfaces to protect those surfaces from excessive application of primer.
2. Delay application of membrane until primer is completely dry. Dry time will vary with weather conditions.
3. Seal daily terminations with troweled bead of mastic.
4. Apply protection board and related materials in accordance with manufacturer's recommendations.

3.04 CLEANING AND PROTECTION

A. Protect completed membrane waterproofing from subsequent construction activities as recommended by manufacturer.
B. Inspect for damage just prior to installation of subsequent construction activities and make repairs in accordance with manufacturer's recommendation.

END OF SECTION

SECTION 07 14 50
FLUID-APPLIED WATERPROOFING MEMBRANE

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. **Section included as an alternate to Section 07 13 25 – Self-Adhering (Post-Applied) Sheet Waterproofing.**
   2. Surface preparation of concrete surfaces, sealing of form ties, cracks, and joints for installation of fluid-applied waterproofing membrane.
   3. Provide fluid-applied waterproofing membrane, applicable sealants, drainage, and elastomeric flashings needed to prevent water penetration at locations indicated.
   4. Provide insulation board for protection of waterproofing membrane from damage during backfill.

1.02 RELATED SECTIONS

A. Section 01 33 00 - Submittal Procedures.

B. Section 01 40 00 - Quality Requirements.

C. Section 01 60 00 - Product Requirements.

D. Section 03 30 00 - Cast-In-Place Concrete.

E. Section 04 20 00 - Unit Masonry.

F. Section 06 10 00 - Rough Carpentry.

G. Section 07 21 00 - Thermal Insulation.

H. Section 07 54 23 - Thermoplastic Polyolefin (TPO) Roofing.

I. Section 07 62 00 - Sheet Metal Flashing and Trim.

J. Section 07 92 00 - Joint Sealers.

K. Section 09 21 16 - Gypsum Board Assemblies.

1.03 REFERENCE STANDARDS

A. ASTM C836/C836M Standard Specification for High Solids Content, Cold Liquid-Applied Elastomeric Waterproofing Membrane for Use with Separate Wearing Course

B. ASTM C920 Standard Specification for Elastomeric Joint Sealants.

C. ASTM D903 Standard Test Method for Peel or Stripping Strength of Adhesive Bonds.

D. ASTM E96/E96M Standard Test Methods for Water Vapor Transmission of Materials.

E. ASTM E1966 Standard Test Method for Fire-Resistive Joint Systems.

1.04 LOCATIONS

A. Along Perimeter of building foundation walls, See Details.

B. Along backside of foundation walls, below elevation 100’- 0”, of Elevator Pit. Extend onto horizontal footing as shown on the drawings.

C. Along backside of foundation walls, below elevation 100”- 0”, of pool pump pits. Extend onto horizontal footing as shown on the drawings.

1.05 SUBMITTALS

A. Material and Equipment Submittals:
   1. Product Data: Submit fluid-applied waterproofing membrane and insulation board manufacturer's technical data.
      a. Include compatibility test reports for adjacent systems/ membranes that are in contact with each other.
   2. Samples: Submit samples of sealant colors for color selection.

3. Submit the results of the on-site adhesion testing. (Perform project specific adhesion testing of the water proofing membrane for all surfaces to receive membrane)
4. Site visit report from the waterproofing manufacture stating that they visited the site and inspected the substrates to receive new waterproofing and they found they are acceptable substrates.

B. Compatibility Letters:
1. Submit letters from the Manufacturer ensuring compatibility with adjacent materials, including Air Barrier, sealants, etc.

C. Procurement:
1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
2. Submit inventory to Owner within 5 days of delivery of materials.
3. See Sections 01 33 00 and 01 60 00.

D. Closeout Submittals:
1. Warranty. See below.

1.06 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Installers: Submit written statement from manufacturer that installer is certified to install the product.

C. Source limitations: All materials installed as part of waterproofing system shall be obtained from a single manufacturer, or consist of products certified by manufacturer as compatible.

D. Pre-Construction Conferences. The manufacturer will meet with the necessary parties at the jobsite to review and discuss project conditions as it relates to the integrity of the waterproofing assembly.

1.07 DELIVERY, STORAGE AND HANDLING

A. Deliver materials to job site in manufacturer’s unopened containers with all labels intact and legible at time of use.

B. Maintain the products in accord with manufacturer’s recommendations with proper precautions to ensure fitness of materials when installed.

C. Protect waterproofing materials from freezing prior to application. Store material above 50 degrees.

D. Store rigid drainage, protection and insulation board flat and off the ground. Provide cover on top and on all sides.

1.08 SUBSTRATE CONDITIONS

A. General:
1. Provide surfaces that are broom clean, dry, sound and free of voids, bug holes, rock pockets, honeycombs, protrusions, excessive roughness, foreign matter, frost, ice and other contaminants which may inhibit application or performance of the waterproof membrane system.
2. Using suitable abrasive methods, remove residue of form release, curing compound, chemical retarders and other surface treatments, laitance, mortar smear, saw cutting residue, mill scale, rust, loose material and other contaminants from concrete, masonry and ferrous metal surfaces to receive the work of this Section.

B. Concrete: Where work of this Section will be applied to concrete, provide surfaces that are smooth finish equal to one that is light steel troweled followed by a fine hair broom.

1.09 WARRANTY

A. Deliver to the Architect signed copies of the following written warranties against defective materials and workmanship for a period of two years following date of completion. Warrant that installed waterproofing membrane system shall be free of defects including adhesive failure, cohesive failure, and waterproofing failure resulting from substrate cracking up to 1/16 inch.
1. Manufacturer’s standard warranty covering materials.

2. Applicator's standard warranty covering workmanship.

PART 2 PRODUCTS

2.01 MATERIALS

A. Single Source and compatibility requirements:
   1. Provide all components of the waterproofing system from a single source, with all components recommended by the Manufacturer for the application.
   2. Provide products that are certified by their Manufacturers to be compatible with adjacent materials.

B. Fluid-Applied Waterproofing Membrane, single component, Water based, polymer-modified asphalt emulsion. Acceptable Manufacturers and Products:
   1. Tremco: TREMproof 260 or 250GC.
   2. W.R. Meadows: MEL-ROLL LM
   3. Mar-Flex: ArmorMembrane 363
   4. Or approved equal.

2.02 ACCESSORIES

A. Joint Backing: Closed-cell, polyethylene rod as recommended by membrane manufacturer.

B. Joint Treatment: Provide a multi-component, chemically curing polyurethane sealant that is compatible with the provided membrane and recommended by its Manufacturer as being suitable for the application.
   1. Primer for sealant: Prime surface as recommended by the sealant manufacture.

C. Rigid Drainage, Protection, and Insulation Board:
   1. Dow Protection Board III.
   2. Or approved equal.

PART 3 EXECUTION

3.01 SURFACE CONDITIONS

A. Coordinate as required with other trades to assure proper and adequate provision in the work of those trades for interface with the work of this Section.

B. Applicator shall examine areas and conditions under which Work of this Section will be performed:
   1. Verify conformance with manufacturer's requirements. Manufacture representative to visit site and approve prepared substrate. Letter from manufacture to be provided stating such.
   2. Report unsatisfactory conditions in writing to the Architect.
   3. Do not proceed until unsatisfactory conditions are corrected.

3.02 PREPARATION

A. Surface preparation and detailing procedures to be in accordance with waterproofing membrane system manufacturer's instructions and recommendations except where more stringent requirements are indicated.

B. On poured concrete walls, remove wall ties on outside and inside of wall. On poured concrete walls, tie holes and other voids, rock pockets, etc. shall be patched with a non-shrinking grout.

C. Clean surfaces to receive membrane system in accordance with manufacturer's instructions; vacuum clean or blow clean with oil-free compressed air all surfaces to receive sealants, detailing materials or membranes immediately prior to installation.

D. Rout, clean, prepare and detail surface cracks in accordance with manufacturer's instructions; install backer rod where required.

E. Install detail coats, joint and crack treatments, and liquid flashings in accordance with manufacturer's instructions.

F. Allow detail applications to cure in accordance manufacturer's instructions prior to general application of membrane.

3.03 APPLICATION

A. General: Install waterproofing system in accordance with manufacturer's recommendations and instructions as applies to the Work except where more stringent requirements are indicated.
   1. Waterproofing membrane shall have a 60 mil wet film thickness for vertical surfaces and 90 mil wet film thickness for horizontal surfaces.

B. Verify proper dry condition of substrate using method recommended by membrane system manufacturer; perform adhesion checks prior to general application of membrane system using field adhesion test method recommended by the manufacturer. Submit adhesion test results as called out in section 1.3 Part 3 of this specification section.

C. Mask off adjoining surfaces not to receive membrane system.

D. Clean all detail coats of Waterproof system from previous days' work with mineral spirit wipe. Wipe clean all other detail coats with Xylene solvent wipe; do not saturate detail coats. Overlap existing work by 6" with new work.

E. Apply membrane uniformly and allow cure in accord with manufacturer's instructions.

F. Tool joints to form smooth, uniform beads, with slightly concave surfaces. Do not use tooling agents, unless specifically recommended by sealant manufacturer.

G. Install protection course (drainage) over cured membrane in accordance with manufacturer's instructions.

3.04 PROTECTION AND CLEAN-UP

A. Promptly remove material of membrane system material from adjacent surfaces which will be exposed in the completed work. Leave work area in broom clean condition.

B. Prohibit traffic over completed work and against work overhead until protection course is installed; protect from damage until protected beneath overlaying work.

END OF SECTION

SECTION 07 18 00
TRAFFIC COATINGS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Waterproof coatings for traffic surfaces.
   1. TC-1: Epoxy Coating system.
   2. TC-2: Polyurethane Coating system.

1.02 RELATED REQUIREMENTS

A. Section 01 33 00 - Submittal Procedures.

B. Section 01 40 00 - Quality Requirements.

C. Section 01 60 00 - Product Requirements.

D. Section 03 30 00 - Cast-in-Place Concrete.

E. Section 09 05 61 - Common Work Results for Flooring Preparation.

F. Section 09 67 23 - Resinous Flooring

1.03 REFERENCE STANDARDS

A. ASTM D412 - Standard Test Methods for Vulcanized Rubber and Thermoplastic Elastomers--Tension; 2016 (Reapproved 2021).

B. ASTM D903 - Standard Test Method for Peel or Stripping Strength of Adhesive Bonds; 1998 (Reapproved 2017).

C. ASTM D4060 - Standard Test Method for Abrasion Resistance of Organic Coatings by the Taber Abraser; 2019.

D. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2023d.

E. ASTM E96/E96M - Standard Test Methods for Gravimetric Determination of Water Vapor Transmission Rate of Materials; 2023.

F. ASTM F710 - Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring; 2022.

G. ICC-ES AC39 - Acceptance Criteria for Walking Decks; 2017, with Editorial Revision (2020).

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordinate work with Mechanical, Electrical and Aquatics.
   1. Sequence Traffic coating installation such that it is installed after the pouring of housekeeping pads and before floor mounted equipment in all areas to receive the coating.

1.05 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements for submittal procedures.

B. Product Data: Include product characteristics and limitations. Identify dissolving solvents, fuels, and potential destructive compounds.

C. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

D. Manufacturer's Installation Instructions: Include special field conditions required to install traffic membrane and potential incompatibilities with adjacent materials.

E. Maintenance Data: Include procedures for stain removal, repairing surface, and cleaning.

F. Warranty: Submit manufacturer warranty and ensure that forms have been completed in Owner's name and registered with manufacturer.

1.06 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Manufacturer Qualifications: Company specializing in manufacturing products of the type specified in this section, with not less than three years of documented experience.

C. Applicator Qualifications: Company specializing in performing installation of traffic membrane, with minimum 3 years documented experience and approved by manufacturer.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Maintain storage area at minimum ambient temperature of 55 degrees F (13 degrees C).

B. Keep away from fire or open flame.

1.08 FIELD CONDITIONS

A. Do not install materials when temperature is below 50 degrees F (10 degrees C) or above 90 degrees F (32 degrees C).

B. Maintain this temperature range, 24 hours before, during and 72 hours after application.

C. Restrict traffic from area where materials are being installed or are curing.

1.09 WARRANTY

A. See Section 01 77 00 - Closeout Submittals, for additional warranty requirements.

PART 2 PRODUCTS

2.01 TRAFFIC COATINGS

A. **[TC-1]** Epoxy Coating System: 2-component, water based, epoxy-polyamide coating for concrete floors. VOC content, 121 g/L. Total Solids Content: 56 percent. Dry Film Thickness: 3-4 mils (76-102 microns) per coat. Apply 2 coats.
   1. Manufacturer/Product:
      a. The Euclid Chemical Co., "Eucopoxy Tufcoat VOX".
      b. Or approved equal.
   2. Non-Slip Aggregate Finish:
      a. Washed, dry, 70-90 mesh silica sand evenly into first coat.
   3. Finish: Smooth, semi-gloss.
   4. Color: As selected by Architect.

B. **[TC-2]** Pedestrian Polyurethane Waterproof Coating System: Fluid applied 2-part polyurethane system with base and top coat.
   1. Manufacturers/Product:
      a. Tremco Commercial Sealants & Waterproofing; Vulkem 350NF/351: www.tremcosealants.com/#sle.
      b. Or approved equal.
   2. Finished Coating Thickness: 48 mil, 0.048 inch (1.21 mm), minimum.
   3. Finish: Manufacturer's standard aggregate finish; particle sizes, shape, and minimum hardness recommended in writing by traffic-coating manufacturer.
   4. Color: As selected by Architect.

2.02 ACCESSORIES

A. Surfacing: Clean sand.

B. Filler and Primer: As recommended by membrane manufacturer.

C. Cant Strips: 1 inch by 1 inch (25.4 mm by 25.4 mm) by 45 degrees, of dense sponge rubber compatible with adjacent materials.

D. Sealant: As recommended by membrane manufacturer, and compatible with system and adjacent materials.

2.03 LIQUID SEALER / DENSIFIER

A. Silicone based sealer what penetrates concrete surfaces, and provides a "low-sheen" surface that is easy to clean and eases the problem of tire mark removal. Minimum solids content of 20%, with 50% siliconate.

B. Manufacturer/Product:
   1. Euclid Chemical Co., "Euco Diamond Hard".
   2. Substitutions: In accordance with Division 1 requirements.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that substrate is ready to receive work, surface is clean, dry and free of substances that could adversely effect bond.

B. Do not begin work until concrete substrate has cured at least 28 days and moisture content is 16 percent or less.

C. Test concrete surfaces according to ASTM F710 for acceptable level of alkalinity.

3.02 PREPARATION

A. Clean substrate surface free of foreign matter.

B. Patch wood substrate with latex filler to produce surface conducive to bond.

C. Patch concrete substrate with filler to produce surface conducive to bond.

D. Install cant strips securely at intersecting surfaces.

E. Protect adjacent surfaces.

3.03 INSTALLATION

A. Apply system materials in accordance with manufacturer's instructions.

B. Transitions to other floor finishes, where no other transition is indicated:
   1. Where traffic coating terminates at sealed concrete floor: feather coating to level of concrete.
   2. Where traffic coating terminates at finishes of greater thickness (i.e. Tile): Slope coating to level of finish by adding sand to mixture.
      a. Max slope 1/4" per foot.
      b. See manufacturer's instructions for proportion of sand to mix.

C. Finish to smooth surface sloped to drains.

D. Cove and omit aggregate at vertical surfaces.
   1. Where base is indicated, provide coved, 6" high base. See Finish Plans.

E. Apply surfacing to top coat before set.

F. Apply sealant to junction of horizontal and intersecting surfaces to achieve watertight seal.

3.04 PROTECTION

A. Do not permit traffic over unprotected surfaces.

END OF SECTION

SECTION 07 21 00
THERMAL INSULATION

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Extruded Polystyrene Board insulation. (XPS) (INSUL-1)
      a. High strength Extruded Polystyrene Board. (INSUL-1A)
   2. Unfaced blanket/batt insulation. (INSUL-2)
   3. Sound attenuation Insulation. (INSUL-3)
   4. Faced/Unfaced Board insulation. (INSUL-4)
   5. Foil-Faced/ Fiber-Faced, Polyisocyanurate Board Insulation. (INSUL-5)
   6. Spray polyurethane foam insulation. (INSUL-6)
   7. High-Temp spray polyurethane foam insulation. (INSUL-7)
   8. Semi-Rigid mineral wool fiber batt insulation. (INSUL-8)
   9. Laminated Nailbase Insulation. (INSUL-9)
   10. Expanded Polystyrene Insulation (EPS or Geofoam). (INSUL-10)

B. See Section 06 16 13 - for Structural Insulating Sheathing.

C. See Section 07 24 19 - for EIFS insulation.

D. See Section 07 54 23 - for Roofing insulation.

E. See Section 22 07 00 - for Plumbing insulation.

F. See Section 23 07 00 - for HVAC insulation.

1.02 RELATED SECTIONS

A. Section 01 33 00 - Submittal Procedures.

B. Section 01 40 00 - Quality Requirements.

C. Section 01 60 00 - Product Requirements.

D. Section 03 30 00 - Cast in Place Concrete.

E. Section 03 45 70 - Architectural Site Cast Concrete Wall Panels.

N. Section 07 81 00 - Applied Fireproofing.

O. Section 22 07 00 - Plumbing Insulation.

P. Section 23 07 00 - HVAC Insulation.

1.03 REFERENCE STANDARDS

A. ASTM C411 - Standard Test Method for Hot-Surface Performance of High-Temperature Thermal Insulation; Current Edition.

B. ASTM C518 - Standard Test Method for Steady-State Thermal Transmission Properties by Means of the Heat Flow Meter Apparatus; 2021.

C. ASTM C578 - Standard Specification for Rigid, Cellular Polystyrene Thermal Insulation; 2023.

D. ASTM C612 - Standard Specification for Mineral Fiber Block and Board Thermal Insulation; 2014 (Reapproved 2019).

E. ASTM C665 - Standard Specification for Mineral-Fiber Blanket Thermal Insulation for Light Frame Construction and Manufactured Housing; 2023.

F. ASTM C1029 - Standard Specification for Spray-Applied Rigid Cellular Polyurethane Thermal Insulation; 2020.

G. ASTM C1289 - Standard Specification for Faced Rigid Cellular Polyisocyanurate Thermal Insulation Board; 2023a.

H. ASTM D1621 - Standard Test Method for Compressive Properties of Rigid Cellular Plastics; 2016 (Reapproved 2023).

I. ASTM D1622 - Standard Test Method for Apparent Density of Rigid Cellular Plastics; 2020.

J. ASTM D6817/D6817M - Standard Specification for Rigid Cellular Polystyrene Geofoam; 2017 (Reapproved 2021).

K. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2023d.

L. D7180/D7180M - Standard Guide for Use of Expanded Polystyrene (EPS) Geofoam in Geotechnical Projects; 2013.

M. ICC (IECC) - International Energy Conservation Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

N. UL 723 - Standard for Test for Surface Burning Characteristics of Building Materials; Current Edition, Including All Revisions.

1.04 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00.

1.05 SUBMITTALS

A. Material and Equipment Submittals: Submit the following under provisions of Section 01 30 00:
   1. Manufacturer's installation instructions.
   2. Product Data: Submit product data for each type of insulation required.
      a. Clearly identify each location product is being used on each product data sheet.
      b. Provide all accessory materials, including their intended attachment method.
   3. Provide compatibility testing (pull test) for adhesives and their substrates.

B. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

1.06 REGULATORY REQUIREMENTS

A. Surface Burning Characteristics:
   1. Comply with applicable codes for Class I (Class A) flame/smoke ratings of 25 or less/450 or less for insulation types and accessories other than foamed plastic; when tested according to ASTM E84 (UL 723).
   2. Comply with applicable codes for Class II (Class B) flame/smoke ratings of 75 or less/450 or less for foamed plastic insulation types; when tested according to ASTM E84 (UL 723).
   3. Provide minimum of 2 year workmanship warranty for all work included in Section 07 21 00.

PART 2 PRODUCTS

2.01 INSULATION MATERIALS

A. INSUL-1: Extruded Polystyrene Board Insulation: ASTM C578, Type VI, extruded cellular polystyrene; 1.6 pcf density minimum; 40 psi minimum compressive strength; 0.3 percent maximum water

absorption by volume; "k" factor of 0.20 at 75 deg. F; square edges, manufacturer's standard board sizes.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. DiversiFoam Products, Certifoam 25 SE.
   b. Dupont, Square Edge.
   c. Owens Corning, Foamular 250.
   d. Ox Engineered Products: Ox ISO Red Max Polyisocyanurate
2. R-Value 5/inch.
3. Thickness: Unless thickness is specifically noted on drawings, provide minimum R-value as defined by local energy code.

B. INSUL-1A **(NOT USED)**: High Load Extruded Polystyrene Board Insulation: ASTM C578, Type VII, extruded cellular polystyrene; 1.6 pcf density minimum; 60 psi minimum compressive strength; 0.1 percent maximum water absorption by volume; "k" factor of 0.20 at 75 deg. F; square edges, manufacturer's standard board sizes.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. DiversiFoam Products, Certifoam 60.
   b. Dupont, Styrofoam Highload 60.
   c. Owens Corning, Foamular 600..
   d. Or approved equal.
2. R-Value 5/inch.
3. Thickness: Unless thickness is specifically noted on drawings, provide minimum R-value as defined by local energy code.

C. INSUL-2 **(NOT USED)**: Glass Fiber Blanket/Batt Insulation (Unfaced): ASTM C665, Type I, preformed glass fiber blanket without facers.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. CertainTeed Corporation, Unfaced Building Insulation.
   b. Johns Manville, Cavity-Shield Unfaced Insulation Blankets.
   c. Owens-Corning Fiberglass Corp., Unfaced Glass Fiber Insulation.
   d. Or approved equal.
2. R-value: 3.2/inch.
3. Thickness: Provide minimum R-value of 13 where insulation is used in metal stud framed portions of the exterior wall.

D. INSUL-3: Sound Attenuation Insulation: ASTM C665, Type I, semi-rigid glass fiber blanket, thickness to fill cavity space.

1. Johns-Manville, JM unfaced Batts.
2. Owens-Corning Corp, EcoTouch Sonobatts.
3. Certainteed, Noise Reducer.
4. Or approved equal.

E. INSUL-4: Glass Fiber Board Insulation: ASTM C612, Form A, Class 1, semi-rigid glass fiber type; density of 2.25 pcf, faced one side with mesh reinforced aluminum foil; square edges. Surface burning characteristics of a Flame Spread rating of 25 or less and a Smoke Developed rating of 50 or less when the foil side is exposed. Thickness as indicated on Drawings.

1. Johns Manville Wall Insulation, FSK 25.
2. Knauf, Insulation Board, FSK Facing.
3. Owens-Corning, Flame Spread 25 nsulation.
4. Or approved equal.

F. INSUL-5: Foil-Faced/Fiber-Faced, Polyisocyanurate Board Insulation: ASTM C1289, Type I, Class 1, with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, per ASTM E84.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
    a. Atlas Roofing Corporation, EnergyShield.
    b. Johns-Manville, AP Foilfaced.
    c. Rmax, Inc, Thermasheath-3.
    d. Or approved equal.
2. R-value: 6.5/inch.
3. Thickness: Unless thickness is specifically noted on drawings, provide minimum R-value as follows:
    a. Where insulation is applied directly to the primary concrete structure of the exterior wall: 9.5
    b. Where insulation is applied to metal stud framed portions of the exterior wall: 13.

G. INSUL-6: Spray Polyurethane Foam Insulation: Closed-Cell Polyurethane Foam Insulation: ASTM C1029, Type II, with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, per ASTM E84.
1. Manufacturers: Subject to compliance with requirements available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
    a. BASF Corporation, WALLTITE – Basis of Design.
    b. Dow Chemical Company (The).
    c. Henry Company.
    d. NCFI; Division of Barnhardt Mfg. Co.
    e. SWD Urethane Company.
    f. Volatile Free, Inc.
2. Minimum density of 1.5 lb/cu. ft. (24 kg/cu. m), thermal resistivity of 6.2 deg F x h x sq. ft./Btu x in. at 75 deg F (43 K x m/W at 24 deg C).
3. Closed-Cell Spray-Foam product to achieve an aged R-value of 6.0 per inch.

H. INSUL-7: High Temperature Spray Polyurethane Foam Insulation: Rigid Closed-Cell Polyurethane Foam Insulation: ASTM C518, ASTM D1621 and ASTM D1622, Type II, with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, per ASTM E84. Passes High Temperature Surface performance per ASTM C411..
1. Manufacturers: Subject to compliance with requirements available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
    a. Basis of Design: Huntsman, "Heatlok High Temp".
    b. Dow Chemical Company.
    c. Henry Company.
    d. Or approved equal.
2. Compressive Strength: Minimum 38 psi.
3. Thermal Resistivity: Minimum 7 deg F x h x sq. ft./Btu x in. at 75 deg F (43 K x m/W at 24 deg C).
4. Density: Minimum 2.5 lb/cft.

I. INSUL-8: Mineral Wool Fiber Blanket/Batt Insulation: Non-Combustible, lightweight, foil faced semi-rigid mineral wool batt insulation; ASTM C612, Type IVB; Surface burning characteristics in accordance with ASTM E84, Class A; thermal requirements as indicated on drawings.
1. Basis of Design: Rockwool “CavityRock".
2. Acceptable Alternate Manufacturers: Subject to compliance with requirements specified, acceptable manufacturers are as follows:
    a. Johns Manville.
    b. Owens Corning/Thermafiber.
    c. Or approved equal.
3. Color: Black or Dark Gray.
4. R-value: 4.3/inch.

J. INSUL-9 **(NOT USED)**: Laminated Plywood Insulation: Closed-cell EPS, XPS or polyiso insulation board bonded to APA/TECO rated Oriented strand board (OSB) or plywood, ASTM C578. Thickness as shown on drawings.
   1. Acceptable Manufacturers and products.
      a. Atlas, EnergyShield Ply Pro.
      b. Insulfoam, InsulLam.
      c. Huber Engineered Wood, Zip Wall Sheathing.
      d. Or approved equal.

K. INSUL-10: Geofoam. Expanded Polystyrene (EPS).
   1. To comply with ASTM D6817/D6817M and D7180/D7180M, compressive resistance type indicated below and with flame spread index less than 25 and smoke developed index less than 450 per ASTM E84/ UL 723 .
   2. To be used as landscape/pool fill as shown on drawings.
   3. Compressive resistance:
      a. 60 psi min.

2.02 ACCESSORIES

A. Foil Tape: Flame retardant pressure-sensitive type recommended by insulation manufacturer for application, 2" wide minimum.

B. Adhesive: Type recommended by insulation manufacturer for application.

C. Impaling Pins: Impaling pins and locking washers as recommended by insulation manufacturer.

D. Smoke Seal Compound:
   1. Owen's Corning, Thermafiber Smoke Seal Compound.
   2. Or approved equal, see Section 07 84 00.

E. Thermal Barrier as noted in 07 81 00 for exposed spray polyurethane foam insulation.

PART 3 EXECUTION

3.01 PREPARATION

A. Verify substrate and adjacent materials and insulation boards are dry and ready to receive insulation.

3.02 INSTALLATION - FOUNDATIONS

A. Install XPS insulation (INSUL-1) at foundation walls where indicated on drawings.

B. See below for required R-value.

3.03 INSTALLATION - EXTERIOR WALLS

A. Install polyiscyanurate (INSUL-5) boards with adhesive applied according to manufacturer's instructions where rigid insulation is called for.
   1. Tape all board transitions.

B. Install mineral wool (INSUL-8) at the following locations and where indicated on drawings.
   1. Spandrel Glass.

C. Total Exterior Opaque Envelope R-value: 13 (ICC (IECC) Table C402.1.3)

D. See Section 07 24 19 for EIFS.

3.04 INSTALLATION - BLANKET/BATT INSULATION

A. Install thermal batt insulation (INSUL-2) as shown on drawings, in accordance with manufacturer's instructions.

B. Install batt insulation in walls without gaps or voids.

C. Trim insulation neatly to fit spaces. Use batts free of damage.

D. Fit insulation tight in spaces and tight to exterior side of mechanical and electrical services within the plane of insulation. Leave no gaps or voids.

E. Fill cracks and voids around framing and blocking, other voids in exterior walls, and voids around wood cants, curbs, and blocking in and about the roof. Wedge in place, completely filling voids.

3.05 INSTALLATION - SOUND ATTENUATION INSULATION

A. Install sound attenuation insulation (INSUL-3) in partitions and ceilings according to manufacturer's instructions as indicated on the Drawings.

B. Where a room having ACT is indicated to receive Sound Attenuation Insulation above the ceiling, extend insulation at same depth,12" into adjacent rooms with ACT as well.

C. Do not install Sound Attenuation Insulation over light fixtures.

3.06 INSTALLATION - FIBERGLASS BOARD INSULATION (FACED AND UNFACED)

A. Install Fiberglass Board (INSUL-4) as indicated on Drawings and in accordance with manufacturer's instructions.

B. Install around hot/humid interiors. See details.

3.07 INSTALLATION - SPRAY-APPLIED INSULATION

A. Install standard Spray Applied Insulation (INSUL-6) and High Temperature Spray Applied Insulation (INSUL-7) as indicated on Drawings.

B. Clean and prime all substrates per manufactures recommendations prior to installation of spray polyurethane foam insulation. Apply spray-applied insulation according to manufacturer's written instructions. Do not apply insulation until installation of pipes, ducts, conduits, wiring, and electrical outlets in walls is completed and windows, electrical boxes, and other items not indicated to receive insulation are masked. After insulation is applied, make flush with face of studs by using method recommended by insulation manufacturer.

C. Miscellaneous Voids: Install insulation in miscellaneous voids and cavity spaces where required to prevent gaps in insulation using the following materials:
   1. Spray Polyurethane Foam Insulation: Closed-Cell Polyurethane Foam Insulation.

D. Apply according to manufacturer's written instructions.
   1. High Temp Spray: Install within bench cavities and wherever else indicated on Drawings in manner to completely eliminate voids.

3.08 INSTALLATION - LAMINATED NAILBASE INSULATION

A. Install Laminated Nailbase Insulation (INSUL-9) as indicated on drawings and in accordance with manufacturer's instructions.

END OF SECTION

SECTION 07 24 19
WATER-DRAINAGE EXTERIOR INSULATION AND FINISH SYSTEM (EIFS)

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. Section Includes:
   1. EIFS-clad drainage-wall assemblies that are field applied over substrate.
   2. Exterior tile using EIFS as a tile backer board with drainage plane, Limited scope.
   3. Water-resistive coatings.
   4. Accessory materials.

1.03 RELATED REQUIREMENTS:

A. Section 01 31 00 - Project Management and Coordination
B. Section 01 33 00 - Submittal Procedures
C. Section 01 40 00 - Quality Requirements
D. Section 01 45 33 - Code-Required Special Inspections and Procedures
E. Section 01 60 00 - Product Requirements
F. Section 01 77 00 - Closeout Procedures
G. Section 01 92 00 - Facility Operation and Maintenance.
H. Section 03 45 70 - Architectural Site Cast Concrete Wall Panels
I. Section 04 20 00 - Unit Masonry Assemblies
J. Section 05 40 00 - Cold-Formed Metal Framing
K. Section 07 08 00 - Commissioning of Thermal and Moisture Protection
L. Section 07 21 00 - Thermal Insulation
M. Section 07 27 26 - Fluid-Applied Membrane Air Barrier
N. Section 07 62 00 - Sheet Metal Flashing and Trim
O. Section 07 92 00 - Joint Sealants
P. Section 09 30 00 - Tiling

1.04 DEFINITIONS

A. Definitions in ASTM E2110 apply to Work of this Section.
B. EIFS: Exterior insulation and finish system(s).
C. ICC (IBC): International Building Code.

1.05 REFERENCE STANDARDS

A. ASTM B117 Standard Practice for Operating Salt Spray (Fog) Apparatus
B. ASTM C150/C150M - Standard Specification for Portland Cement; 2022.
C. ASTM C578 - Standard Specification for Rigid, Cellular Polystyrene Thermal Insulation; 2023.
D. ASTM C1063 - Standard Specification for Installation of Lathing and Furring to Receive Interior and Exterior Portland Cement-Based Plaster; 2023.
E. ASTM C1397 - Standard Practice for Application of Class PB Exterior Insulation and Finish Systems (EIFS) and EIFS with Drainage; 2013 (Reapproved 2019).

F. ASTM C1397 - Standard Practice for Application of Class PB Exterior Insulation and Finish Systems (EIFS) and EIFS with Drainage; Current Edition.

G. ASTM D968 - Standard Test Methods for Abrasion Resistance of Organic Coatings by Falling Abrasive; 2022.

H. ASTM D1784 - Standard Classification System and Basis for Specification for Rigid Poly(Vinyl Chloride) (PVC) Compounds and Chlorinated Poly(Vinyl Chloride) (CPVC) Compounds; 2020.

I. ASTM D3274 - Standard Test Method for Evaluating Degree of Surface Disfigurement of Paint Films by Fungal or Algal Growth, or Soil and Dirt Accumulation; Current Edition, Including All Revisions.

J. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2023d.

K. ASTM E2098 - Standard Test Method for Determining Tensile Breaking Strength of Glass Fiber Reinforcing Mesh for Use in Class PB Exterior Insulation and Finish Systems (EIFS), after Exposure to a Sodium Hydroxide Solution; Current Edition.

L. ASTM E2110 - Standard Terminology for Exterior Insulation and Finish Systems (EIFS); Current Edition.

M. ASTM E2359 - Standard Test Method for Field Pull Testing of an In-Place Exterior Insulation and Finish System Clad Wall Assembly; Current Edition.

N. ASTM E2511 - Standard Guide for Detailing of EIFS-Clad Barrier and Drainage Wall Assemblies; Current Edition.

O. ASTM E2568 - Standard Specification for PB Exterior Insulation and Finish Systems; Current Edition.

P. ASTM E2570/E2570M - Standard Test Methods for Evaluating Water-Resistive Barrier (WRB) Coatings Used Under Exterior Insulation and Finish Systems (EIFS) or EIFS with Drainage; 2007 (Reapproved 2019).

Q. ICC (IBC) - International Building Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

R. ICC-ES AC219 - Acceptance Criteria for Exterior Insulation and Finish Systems; 2009, with Editorial Revision (2022).

S. ISO 9001 - Quality Management Systems — Requirements; 2015, with Amendment (2024).

T. ISO 14001 - Environmental Management Systems — Requirements with Guidance for Use; 2015.

U. NFPA 268 Standard Test Method for Determining Ignitability of Exterior Wall Assemblies Using a Radiant Heat Source.

V. NFPA 285 Standard Fire Test Method for Evaluation of Fire Propagation Characteristics of Exterior Non-Load Bearing Wall Assemblies Containing Combustible Components.

W. AATCC 127-08 Water Resistance: Hydrostatic Pressure Test.

X. TT-S-001543A Sealing Compound: Silicone Rubber Base (for Calking, Sealing, and Glazing in Buildings and Other Structures)

Y. TT-S-00230 Sealing Compound: Elastomeric Type, Single Component (for Calking, Sealing, and Glazing in Buildings and Other Structures.

1.06 PERFORMANCE REQUIREMENTS

A. EIFS Performance: Comply with ASTM E2568 and with the following:
   1. Weathertightness: Resistant to uncontrolled water penetration from exterior, with a means to drain water entering EIFS to the exterior.
   2. Structural Performance: EIFS assembly and components shall comply with ICC-ES AC219 when tested according to ASTM E2568.
      a. Wind Loads: Design wind pressures shall be based on Basic Wind Speed, Risk Category, Exposure Category, and Internal Pressure Coefficient indicated on Structural Drawings.
   3. Impact Performance: ASTM E2568, Standard impact resistance unless otherwise indicated.

4. Abrasion Resistance of Finish Coat: Sample consisting of 1-inch- (25.4-mm-) thick EIFS mounted on 1/2-inch- (12.7-mm-) thick gypsum board; cured for a minimum of 28 days and shows no cracking, checking, or loss of film integrity after exposure to 528 quarts (500 L) of sand when tested according to ASTM D968, Method A.
5. Mildew Resistance of Finish Coat: Sample applied to 2-by-2-inch (50.8-by-50.8-mm) clean glass substrate; cured for 28 days and shows no growth when tested according to ASTM D3274.

B. Air and Water-resistive Barrier
1. Assembly air leakage less than 0.04 cfm/ft2 (0.2 L/s·m2) after conditioning protocol when measured in accordance with ASTM E2357
2. Vapor Permeable, Water vapor permeance greater than 10 perms when measured in accordance with ASTM E96, Method B
3. Vapor Impermeable, Water vapor permeance less than 0.1 perms when measured in accordance with ASTM E96, Method B
4. No water penetration when subjected to sequential water spray of 2.86 psf (137 Pa), then 6.24 psf (299 Pa), for 15 minutes at each pressure interval, when measured in accordance with ASTM E331
5. Meets or exceeds maximum allowable material air leakage requirements of the 2021 and 2018 IECC based on independent laboratory testing in accordance with ASTM E2178
6. Meets VOC standard of South Coast AQMD Rule 1113 for Building Envelope Coatings

1.07 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.
1. Include representatives of the Manufacturer, the Applicator, substrate installers, the Owner and Construction Manager.

1.08 SUBMITTALS

A. Action Submittals:
1. Product Data: For each EIFS component, trim, and accessory, including water-resistive coatings.
2. Samples: (2 ea) For each exposed product and for each color and texture specified, 8 inches (200 mm) square in size.
3. Samples for verification: 24-inch - (600-mm-) square panels for each type of finish-coat color and texture indicated, prepared using same tools and techniques intended for actual work including custom trim, each profile.
4. Shop Drawings: Show colors, profiles and details of each condition.

B. Informational Submittals:
1. Qualification Data: For Installer.
2. Manufacturer Certificates: Signed by EIFS manufacturer certifying the following:
   a. EIFS complies with requirements.
   b. Substrates to which EIFS is indicated to be attached are acceptable to EIFS manufacturer.
   c. Accessory products installed with EIFS, including joint sealants, flashing, water-resistive coatings, trim, whether or not furnished by EIFS manufacturer and whether or not specified in this Section, are acceptable to EIFS manufacturer.
3. Product Certificates: For cementitious materials and aggregates and for insulation and joint sealant, from manufacturer.
4. Product Test Reports: For each EIFS assembly and component, and for water-resistive coatings, for tests performed by a qualified testing agency.
5. Perform and submit reports of Code Required Special Inspections as required in Section 01 45 33.
6. Field quality-control reports and special inspection reports.
7. Sample Warranty: For manufacturer's special warranty.

C. Mock-up:
1. See 1.09 Quality Assurance and drawings for requirements of Mock Up.

D. Procurement:

1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
2. Submit inventory to Owner within 5 days of delivery of materials.
3. See Sections 01 33 00 and 01 60 00.

E. Closeout Submittals:
1. Operation and Maintenance Data: Submit O&M manuals according to the requirements of Section 01 92 00 - Facility Operation and Maintenance.
2. Submit an executed copy of the Exterior Insulation and Finish System with Moisture Drainage manufacturer's comprehensive single source limited warranty.

1.09 QUALITY ASSURANCE

A. Manufacturer qualifications:
1. Facility Certified by ANSI-RAB according to current ISO 9001 and ISO 14001.

B. Installer Qualifications: An installer who is certified in writing by EIFS manufacturer as qualified to install manufacturer's system using trained workers.

C. Accessory materials manufacturer: Certified by EIFS manufacturer as producing materials compatible with EIFS.

D. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, to set quality standards for materials and execution, to test for compliance with specified requirements and to set quality standards for fabrication and installation.
1. Mockups will be tested for compliance to the requirements of 1.06 Performance Requirements and according to the Commissioning Plan. See Section 01 92 00.

1.10 REGULATORY REQUIREMENTS

A. Separate the EPS insulation board from the interior of the building by a minimum 15-minute thermal barrier.

B. Comply with local building codes for the use and maximum thickness of EPS insulation board.

C. Cooperate with independent, third-party inspectors when required by code or contract documents.

1.11 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in original, unopened packages with manufacturers' labels intact and clearly identifying products.

B. Inspect all Exterior Insulation and Finish System with Moisture Drainage components and materials upon arrival for physical damage, freezing or overheating. Do not use questionable materials.

C. Store materials inside and under cover; keep them dry and protected from weather, direct sunlight, surface contamination, aging, corrosion, damaging temperatures, construction traffic, and other causes.
1. Stack insulation board flat and off the ground.
2. Protect plastic insulation against ignition at all times. Do not deliver plastic insulating materials to Project site before installation time.
3. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.
4. Minimize exposure of materials to temperatures over 90 °F (32 °C). Finishes exposed to temperatures over the published maximum storage temperature for even short periods may exhibit skinning and increased viscosity and shall be inspected prior to use.

1.12 FIELD CONDITIONS

A. Weather Limitations:
1. Maintain ambient temperatures above 40 deg F (4.4 deg C) for a minimum of 24 hours before, during, and after adhesives or coatings are applied.
2. Maintain ambient and surface temperatures between 45 and 85 degrees F (7 and 29 degrees C) during application and drying period of AMV adhesive – not less than 24 hours
3. Do not apply EIFS adhesives or coatings during rainfall.

4. Proceed with installation only when existing and forecasted weather conditions and ambient outdoor air, humidity, and substrate temperatures permit EIFS to be applied, dried, and cured according to manufacturers' written instructions and warranty requirements.

1.13 WARRANTY

A. Manufacturer's Special Warranty: Manufacturer agrees to repair or replace components of EIFS-clad drainage-wall assemblies that fail in materials or workmanship within specified warranty period.
   1. Failures include, but are not limited to, the following:
      a. Bond integrity and weathertightness.
      b. Deterioration of EIFS finishes and other EIFS materials beyond normal weathering.
   2. Warranty coverage includes the following components of EIFS-clad drainage-wall assemblies:
      a. EIFS finish, including base coats, finish coats, and reinforcing mesh.
      b. Insulation installed as part of EIFS including foam build-outs.
      c. Insulation adhesive and mechanical fasteners.
      d. EIFS accessories, including trim components, joint sealant backing and flashing.
      e. Water-resistive coatings.
      f. EIFS drainage components.
   3. Warranty Period: 12 (min) years from date of Substantial Completion.
      a. Obtain longer warranty period where qualified.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Basis of Design: Subject to compliance with requirements, provide products by the following:
   1. Dryvit Systems, Inc.
      a. Dryvit Outsulation and Dryvit Outsulation Masonry Veneer System (OMVS).
         1) Manufacturer’s recommended EPS Insulation Board.

B. Alternative manufacturers: Subject to compliance with requirements, provide products by the following:
   1. Sto Corp; www.stocorp.com
   2. Or approved substitution.

C. Source Limitations: Obtain EIFS from single source from single EIFS manufacturer and from sources approved by EIFS manufacturer as compatible with EIFS components.

2.02 SYSTEM DESCRIPTION

A. System to include the following components. All components are subject to the source limitations specified above.
   1. Air and Water Resistive Membrane Barrier. Vapor Permeable and Impermeable.
   2. Accessory Materials.
   3. Adhesive - installed in vertical ribbons to facilitate egress of incidental moisture.
   4. Expanded Polystyrene (EPS) Insulation Board.
   5. Base Coat.
   6. Reinforcing Mesh.
   7. Finish Coat.
   8. Joint Sealants.

2.03 EIFS MATERIALS

A. Primer/Sealer: EIFS manufacturer's standard substrate conditioner designed to protect substrates from moisture penetration and to improve the bond between substrate and insulation adhesive; with VOC content of 250 g/L or less.

B. Water-Resistive Coatings: Manufacturer's compatible barrier and accessories for use as water-resistive barriers; compatible with substrate and complying with physical and performance criteria of ASTM E2570/E2570M.
   1. Vapor Impermeable – Dryvit,Backstop NT-VB.

2. Vapor Permeable – Backstop NTX.

C. Flexible-Membrane Flashing: Cold-applied, self-adhering, self-healing, rubberized-asphalt and polyethylene-film composite sheet or tape and primer; EIFS manufacturer's standard or product recommended in writing by EIFS manufacturer.

D. Insulation Adhesive: EIFS manufacturer's standard formulation designed for indicated use; specifically formulated to be applied to back side of insulation in a manner that creates open vertical channels designed to serve as an integral part of the water-drainage system of the EIFS-clad drainage-wall assembly; compatible with substrate; and complying with one of the following:
   1. Factory-blended dry formulation of portland cement, dry polymer admixture, and fillers specified for base coat.
   2. Factory-mixed non-cementitious formulation designed for adhesive attachment of insulation to substrates of type indicated, as recommended by EIFS manufacturer.

E. Molded, Rigid Cellular Polystyrene Board Insulation: Comply with ASTM C578, Type I; and EIFS manufacturer's requirements for most stringent requirements for material performance and qualities of insulation, including dimensions and permissible variations, and the following:
   1. Aging: Before cutting and shipping, age insulation in block form by air drying for not less than six weeks.
   2. Flame-Spread and Smoke-Developed Indexes: 25 and 450 or less, respectively, according to ASTM E84.
   3. Dimensions: Provide insulation boards of not more than 24 by 48 inches (610 by 1219 mm) thick or in other thickness indicated, but not more than 4 inches (102 mm) thick or less than the thickness allowed by ASTM C1397.
   4. Channeled Board Insulation: EIFS manufacturer's standard factory-fabricated profile with linear, vertical-drainage channels, slots, or waves on the back side of board.
   5. Foam Build-Outs: Provide with profiles and dimensions indicated on Drawings.
   6. Reveals: As indicated on drawings. Profile to be "V" shaped, and 3/4" wide.

F. Reinforcing Mesh: Balanced, alkali-resistant, open-weave, glass-fiber mesh treated for compatibility with other EIFS materials, made from continuous multiend strands with retained mesh tensile strength of not less than 120 lbf/in. (21 dN/cm) according to ASTM E2098 and the following:
   1. Reinforcing Mesh for EIFS, General: Not less than weight required to meet impact-performance level specified in "Performance Requirements" Article.
   2. Strip Reinforcing Mesh: Not less than as recommended by EIFS manufacturer.
   3. Detail Reinforcing Mesh: Not less than as recommended by EIFS manufacturer.
   4. Corner Reinforcing Mesh: Not less than as recommended by EIFS manufacturer.

G. Base-Coat Materials: EIFS manufacturer's standard mixture complying with one of the following:
   1. Factory-blended dry formulation of portland cement, dry polymer admixture, and inert fillers to which only water is added at Project site.
   2. Factory-mixed noncementitious formulation of polymer-emulsion adhesive and inert fillers that is ready to use without adding other materials.

H. Waterproof Adhesive/Base-Coat Materials: EIFS manufacturer's standard waterproof formulation with VOC content of 50 g/L or less complying with one of the following:
   1. Job-mixed formulation of portland cement complying with ASTM C150/C150M, Type I, white or natural color; and manufacturer's standard polymer-emulsion adhesive designed for use with portland cement.
   2. Job-combined formulation of manufacturer's standard polymer-emulsion adhesive and manufacturer's standard dry mix containing portland cement.

I. Primer: EIFS manufacturer's standard factory-mixed, elastomeric-polymer primer for preparing base-coat surface for application of finish coat.

J. Finish-Coat Materials: EIFS manufacturer's complying with the following:

1. Factory-mixed formulation of polymer-emulsion binder, colorfast mineral pigments, and fillers used with stone particles for embedding in finish coat to produce an applied-aggregate finish.
    a. Aggregate: Marble chips of size and color to match Architect's sample.
2. Colors: As specified herein and matching Architect's sample.
3. Textures: As specified herein and matching Architect's sample.

K. Water: Potable.

L. Trim Accessories: Type as designated or required to suit conditions indicated and to comply with EIFS manufacturer's written instructions; manufactured from UV-stabilized PVC; and complying with ASTM D1784, manufacturer's standard cell class for use intended, and ASTM C1063.
1. Casing Bead: Prefabricated, one-piece type for attachment behind insulation, of depth required to suit thickness of coating and insulation, with face leg perforated for bonding to coating and back leg.
2. Drip Screed/Track: Prefabricated, one-piece type for attachment behind insulation with face leg extended to form a drip, of depth required to suit thickness of coating and insulation, with face leg perforated for bonding to coating and back leg.
3. Weep Screed/Track: Prefabricated, one-piece type for attachment behind insulation with perforated face leg extended to form a drip and weep holes in track bottom, of depth required to suit thickness of coating and insulation, with face leg perforated for bonding to coating and back leg; designed to drain incidental moisture that gets into wall construction to the exterior at terminations of EIFS with drainage.
4. Expansion Joint: Prefabricated, one-piece V profile; designed to relieve stress of movement.
5. Windowsill Flashing: Prefabricated type for both flashing and sloping sill over framing beneath windows; with end and back dams; designed to direct water to exterior.
6. Parapet Cap Flashing: Type for both flashing and covering parapet top with design complying with ASTM C1397.
7. Joint Sealant Backing
    a. Outer weather seal: cylindrical non-absorbent bi-cellular polyethylene foam backer rod with outer skin in conformance with ASTM C1330, Type B

M. Sealants: Provide Sealants as recommended by manufacturer. See Section 07 92 00.
1. Tremco Spectrem 1: An ultra low modulus, high-performance, one-part, moisture-curing silicone joint sealant with physical properties making it an ideal sealant for sealing dynamic joints.
    a. Tremco Spectrem 1.
    b. Dowsil 756 SMS.

2.04 MIXING

A. Comply with EIFS manufacturer's requirements for combining and mixing materials. Do not introduce admixtures, water, or other materials except as recommended by EIFS manufacturer. Mix materials in clean containers. Use materials within time period specified by EIFS manufacturer or discard.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
1. Refer to manufacturer's instructions for installation tolerances.

B. Examine roof edges, wall framing, flashings, openings, substrates, and junctures at other construction for suitable conditions where EIFS will be installed.
1. Refer to SMACNA standards, EIFS manufacturer's details for requirements for flashing installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.
1. Begin coating application only after surfaces are dry.
2. Application of coating indicates acceptance of surfaces and conditions.

3.02 PREPARATION

A. Protect contiguous work from moisture deterioration and soiling caused by application of EIFS. Provide temporary covering and other protection needed to prevent spattering of exterior finish coats on other work.

B. Protect EIFS, substrates, and wall construction behind them from inclement weather during installation. Prevent penetration of moisture behind drainage plane of EIFS and deterioration of substrates.

C. Prepare and clean substrates to comply with EIFS manufacturer's written instructions to obtain optimum bond between substrate and adhesive for insulation.
   1. Concrete Substrates: Provide clean, dry, neutral-pH substrate for insulation installation. Verify suitability of substrate by performing bond and moisture tests recommended by EIFS manufacturer.

3.03 EIFS INSTALLATION, GENERAL

A. Comply with ASTM C1397, ASTM E2511, and EIFS manufacturer's written instructions for installation of EIFS as applicable to each type of substrate indicated.

B. Install high impact reinforcing mesh as specified at ground level, high traffic areas, play areas, sport areas and other areas exposed to impact damage as designated on contract documents.
   1. Install to 6' height at typical ground level areas.
   2. Install to 12' height where play or outdoor sport areas are adjacent.

3.04 SUBSTRATE PROTECTION APPLICATION

A. Primer/Sealer: Apply over substrates and where required by EIFS manufacturer for improving adhesion of insulation to substrate.

B. Water-Resistive Coating: Apply over EIFS to provide a water-resistive barrier.
   1. Tape and seal joints, exposed edges, terminations, and inside and outside corners of sheathing unless otherwise indicated by EIFS manufacturer's written instructions.

C. Flexible-Membrane Flashing: Install over weather-resistive barrier, applied and lapped to shed water; seal at openings, penetrations, terminations, and where required by EIFS manufacturer. Prime substrates if required and install flashing to comply with EIFS manufacturer's written instructions and details.

3.05 TRIM INSTALLATION

A. Trim: Apply trim accessories at perimeter of EIFS, at expansion joints, at windowsills, and elsewhere as indicated. Coordinate with installation of insulation.
   1. Weep Screed/Track: Use at bottom termination edges, at window and door heads, and at floor line expansion joints of water-drainage EIFS unless otherwise indicated.
   2. Windowsill Flashing: Use at windows unless otherwise indicated.
   3. Expansion Joint: Use where indicated on Drawings.
   4. Casing Bead: Use at other locations.
   5. Parapet Cap Flashing: Use where indicated on Drawings.

3.06 INSULATION INSTALLATION

A. Board Insulation: Attach insulation to substrate in compliance with ASTM C1397 and the following:
   1. Apply adhesive to insulation by notched-trowel method in a manner that results in coating the entire surface of drainage mat with adhesive once insulation is adhered to drainage mat.
   2. Apply Insulation in vertical orientation to allow for drainage.
   3. Press and slide insulation into place. Apply pressure over the entire surface of insulation to accomplish uniform contact, high initial grab, and overall level surface.
   4. Allow adhered insulation to remain undisturbed for not less than 24 hours, before beginning rasping and sanding insulation or applying base coat and reinforcing mesh.
   5. Apply insulation over substrates in courses with long edges of boards oriented horizontally.

6. Begin first course of insulation from screed/track and work upward. Work from perimeter casing beads toward interior of panels if possible.
7. Stagger vertical joints of insulation boards in successive courses to produce running bond pattern. Locate joints so no piece of insulation is less than 12 inches (300 mm) wide or 6 inches (150 mm) high. Offset joints not less than 6 inches (150 mm) from corners of window and door openings and not less than 4 inches (100 mm) from aesthetic reveals.
    a. Adhesive Attachment: Offset joints of insulation not less than 6 inches (150 mm) from horizontal and 4 inches (100 mm) from vertical joints in sheathing.
    b. Mechanical Attachment: Offset joints of insulation from horizontal joints in sheathing.
8. Interlock ends at internal and external corners.
9. Abut insulation tightly at joints within and between each course to produce flush, continuously even surfaces without gaps or raised edges between boards. If gaps greater than 1/16 inch (1.6 mm) occur, fill with insulation cut to fit gaps exactly; insert insulation without using adhesive or other material.
10. Cut insulation to fit openings, corners, and projections precisely and to produce edges and shapes complying with details indicated.
11. Rasp or sand flush entire surface of insulation to remove irregularities projecting more than 1/32 inch (0.8 mm) from surface of insulation and to remove yellowed areas due to sun exposure; do not create depressions deeper than 1/16 inch (1.6 mm). Prevent airborne dispersal and immediately collect insulation raspings or sandings.
12. Cut aesthetic reveals in outside face of insulation with high-speed router and bit configured to produce grooves, rabbets, and other features that comply with profiles and locations indicated. Do not reduce insulation thickness at aesthetic reveals to less than 3/4 inch (19 mm).
13. Install foam build-outs and attach to structure.
14. Interrupt insulation for expansion joints where indicated.
15. Form joints for sealant application by leaving gaps between adjoining insulation edges and between insulation edges and dissimilar adjoining surfaces. Make gaps wide enough to produce joint widths indicated after encapsulating joint substrates with base coat and reinforcing mesh.
16. Form joints for sealant application with back-to-back casing beads for joints within EIFS and with perimeter casing beads at dissimilar adjoining surfaces. Make gaps between casing beads and between perimeter casing beads and adjoining surfaces of width indicated.
17. After installing insulation and before applying field-applied reinforcing mesh, fully wrap board edges. Cover edges of board and extend encapsulating mesh not less than 2-1/2 inches (64 mm) over front and back face unless otherwise indicated on Drawings.
18. Treat exposed edges of insulation as follows:
    a. Except for edges forming substrates of sealant joints, encapsulate with base coat, reinforcing mesh, and finish coat.
    b. Encapsulate edges forming substrates of sealant joints within EIFS or between EIFS and other work with base coat and reinforcing mesh.
    c. At edges trimmed by accessories, extend base coat, reinforcing mesh, and finish coat over face leg of accessories.
19. Coordinate installation of flashing and insulation to produce wall assembly that does not allow water to penetrate behind flashing and water-resistive barrier.

B. Expansion Joints: Install at locations indicated, where required by EIFS manufacturer, and as follows:
1. At expansion joints in substrates behind EIFS.
2. Where EIFS adjoin dissimilar substrates, materials, and construction, including other EIFS.
3. At floor lines in multilevel wood-framed construction.
4. Where wall height or building shape changes.
5. Where EIFS manufacturer requires joints in long continuous elevations.

3.07 BASE-COAT INSTALLATION

A. Waterproof Adhesive/Base Coat: To exposed surfaces of insulation, apply in minimum thickness recommended in writing by EIFS manufacturer where indicated on Drawings.

B. Base Coat: Apply to exposed surfaces of insulation and foam build-outs in minimum thickness recommended in writing by EIFS manufacturer, but not less than 1/16-inch (1.6-mm) dry-coat thickness.

C. Reinforcing Mesh: Embed reinforcing mesh in wet base coat to produce wrinkle-free installation with mesh continuous at corners, overlapped not less than 2-1/2 inches (64 mm) or otherwise treated at joints to comply with ASTM C1397 and EIFS manufacturer's written instructions. Do not lap reinforcing mesh within 8 inches (204 mm) of corners. Completely embed mesh, applying additional base-coat material if necessary, so reinforcing-mesh color and pattern are invisible.

D. Double-Layer Reinforcing-Mesh Application: Where indicated or required, apply second base coat and second layer of reinforcing mesh, overlapped not less than 2-1/2 inches (64 mm) or otherwise treated at joints to comply with ASTM C1397 and EIFS manufacturer's written instructions in same manner as first application. Do not apply until first base coat has cured.

E. Additional Reinforcing Mesh: Apply strip reinforcing mesh around openings, extending 4 inches (100 mm) beyond perimeter. Apply additional 9-by-12-inch (230-by-300-mm) strip reinforcing mesh diagonally at corners of openings (re-entrant corners). Apply 8-inch- (200-mm-) wide, strip reinforcing mesh at both inside and outside corners unless base layer of mesh is lapped not less than 4 inches (100 mm) on each side of corners.
   1. Install high impact mesh at any first floor locations and wherever EIFS is adjacent to occupied areas.
   2. At aesthetic reveals, apply strip reinforcing mesh not less than 8 inches (200 mm) wide.
   3. Embed strip reinforcing mesh in base coat before applying first layer of reinforcing mesh.

F. Foam Build-Outs: Fully embed reinforcing mesh in base coat.

G. Double Base-Coat Application: Where indicated, apply second base coat in same manner and thickness as first application, except without reinforcing mesh. Do not apply until first base coat has cured.

3.08 FINISH-COAT INSTALLATION

A. Primer: Apply over dry base coat according to EIFS manufacturer's written instructions.

B. Finish Coat: Apply over dry primed base coat, maintaining a wet edge at all times for uniform appearance, in thickness required by EIFS manufacturer to produce a uniform finish of color and texture matching approved sample and free of cold joints, shadow lines, and texture variations.

C. Sealer Coat: Apply over dry finish coat, in number of coats and thickness required by EIFS manufacturer.

3.09 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage a qualified special inspector to perform the following special inspections:
   1. As stipulated in Ch. 17 of the ICC (IBC).

B. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

C. EIFS Tests and Inspections: According to ASTM E2359.

D. EIFS will be considered defective if it does not pass tests and inspections.

E. Prepare test and inspection reports.

3.10 CLEANING AND PROTECTION

A. Remove temporary covering and protection of other work. Promptly remove coating materials from window and door frames and other surfaces outside areas indicated to receive EIFS coatings.

3.11 EIFS SCHEDULE

A. Color and Texture:
   1. EIFS-4: Match Stratotone "Buckskin #449ST"
      a. Texture: Senergy “Sahara,” or Dryvit “Sand Pebble” Texture, UNO.
   2. EIFS-5:

a. Color: Match color of aluminum storefront Dark Bronze, UNO.
b. Texture: Sandpebble Fine

3. EIFS-6:
   a. Color: Dryvit #522ST Lite Gray, UNO
   b. Texture: Sandpebble Fine.
4. EIFS – 7
   a. Color/ Texture: N/A, behind tile.

END OF SECTION

SECTION 07 24 20
POLYMER-BASED INTERIOR FINISH SYSTEM (IFS)

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Polymer-based Interior finish system (IFS) applied over concrete, masonry, and gypsum sheathing where indicated on Drawings.

1.02 RELATED SECTIONS

A. Section 01 31 00 - Project Management and Coordination
B. Section 01 33 00 - Submittal Procedures
C. Section 01 40 00 - Quality Requirements
D. Section 01 45 33 - Code-Required Special Inspections and Procedures
E. Section 01 60 00 - Product Requirements
F. Section 01 77 00 - Closeout Procedures
G. Section 01 92 00 - Facility Operation and Maintenance
H. Section 04 20 00 - Unit Masonry
I. Section 06 10 00 - Rough Carpentry
J. Section 07 62 00 - Sheet Metal Flashing and Trim
K. Section 07 92 00 - Joint Sealants
L. Section 09 21 16 - Gypsum Board Assemblies

1.03 SYSTEM DESCRIPTION

A. Class PB IFS: An interior wall finish system that consists of an integrally reinforced base coat; and a textured protective finish coat.

1.04 REFERENCE STANDARDS

A. ASTM C150/C150M - Standard Specification for Portland Cement; 2022.
B. ASTM C1063 - Standard Specification for Installation of Lathing and Furring to Receive Interior and Exterior Portland Cement-Based Plaster; 2023.
C. ASTM C1397 - Standard Practice for Application of Class PB Exterior Insulation and Finish Systems (EIFS) and EIFS with Drainage; 2013 (Reapproved 2019).
D. ASTM D578/D578M - Standard Specification for Glass Fiber Strands; 2018.
E. ASTM D968 - Standard Test Methods for Abrasion Resistance of Organic Coatings by Falling Abrasive; 2022.
F. ASTM D1784 - Standard Classification System and Basis for Specification for Rigid Poly(Vinyl Chloride) (PVC) Compounds and Chlorinated Poly(Vinyl Chloride) (CPVC) Compounds; 2020.
G. ASTM D2247 - Standard Practice for Testing Water Resistance of Coatings in 100 % Relative Humidity; 2015 (Reapproved 2020).
H. ASTM D3273 - Standard Test Method for Resistance to Growth of Mold on the Surface of Interior Coatings in an Environmental Chamber; 2021.
I. ASTM D3274 - Standard Test Method for Evaluating Degree of Surface Disfigurement of Paint Films by Fungal or Algal Growth, or Soil and Dirt Accumulation; Current Edition, Including All Revisions.
J. ASTM E330/E330M - Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference; 2014 (Reapproved 2021).

K. ASTM E2098 - Standard Test Method for Determining Tensile Breaking Strength of Glass Fiber Reinforcing Mesh for Use in Class PB Exterior Insulation and Finish Systems (EIFS), after Exposure to a Sodium Hydroxide Solution; Current Edition.

L. ASTM G153 - Standard Practice for Operating Enclosed Carbon Arc Light Apparatus for Exposure of Nonmetallic Materials; 2013 (Reapproved 2021).

M. ASTM G155 - Standard Practice for Operating Xenon Arc Lamp Apparatus for Exposure of Materials; 2021.

N. ICC-ES AC219 - Acceptance Criteria for Exterior Insulation and Finish Systems; 2009, with Editorial Revision (2022).

1.05 PERFORMANCE REQUIREMENTS

A. IFS Performance: Comply with the following:
   1. Bond Integrity: Free from bond failure within IFS components or between system and supporting wall construction, resulting from exposure to fire, wind loads, weather, or other in-service conditions.
   2. Weathertightness: Resistant to water penetration from exterior into IFS and assemblies behind it or through them into interior of building that results in deterioration of thermal-insulating effectiveness or other degradation of IFS and assemblies behind it, including substrates, supporting wall construction, and interior finish.

B. Class PB IFS: Provide IFS having physical properties and structural performance that comply with the following:
   1. Abrasion Resistance: Sample consisting of 1-inch- (25.4-mm-) IFS mounted on 1/2-inch- (12.7-mm-) thick gypsum board; cured for a minimum of 28 days; and showing no cracking, checking, or loss of film integrity after exposure to 528 quarts (500 L) of sand when tested per ASTM D968, Method A.
   2. Absorption-Freeze Resistance: No visible deleterious effects and negligible weight loss after 60 cycles per EIMA 101.01.
   3. Accelerated Weathering: Five samples per ICC-ES AC219 showing no cracking, checking, crazing, erosion, rusting, blistering, peeling, delamination, or other characteristics that might affect performance as a wall cladding after testing for 2000 hours when viewed under 5 times magnification per ASTM G153 or ASTM G155.
   4. Freeze-Thaw: No surface changes, cracking, checking, crazing, erosion, rusting, blistering, peeling, or delamination, or indications of delamination between components when viewed under 5 times magnification after 10 cycles per ICC-ES AC219.
   5. Mildew Resistance of Finish Coat: Sample applied to 2-by-2-inch (50.8-by-50.8-mm) clean glass substrate, cured for 28 days, and showing no growth when tested per ASTM D3273 and evaluated according to ASTM D3274.
   6. Salt-Spray Resistance: No deleterious affects when tested according to ICC-ES AC219.
   7. Tensile Adhesion: No failure in the IFS, adhesive, base coat, or finish coat when tested per ICC-ES AC219.
   8. Water Penetration: Sample consisting of IFS Base Coat and Finish Coat mounted on 1/2-inch-(12.7-mm-)thick gypsum board, cured for 28 days, and showing no water penetration into the plane of the base coat to expanded-polystyrene board interface of the test specimen after 15 minutes at 6.24 lbf/sq. ft. (299 Pa) of air pressure difference or 20 percent of positive design wind pressure, whichever is greater, across the specimen during a test period when tested per EIMA 101.02.
   9. Water Resistance: Three samples, each consisting of IFS Base Coat and Finish Coat mounted on 1/2-inch- (12.7-mm-) thick gypsum board; cured for 28 days; and showing no cracking, checking, crazing, erosion, rusting, blistering, peeling, or delamination after testing for 14 days per ASTM D2247.
   10. Wind-Driven-Rain Resistance: Resist wind-driven rain according to ICC-ES AC219.

11. Impact Resistance: Sample consisting of IFS Base Coat and Finish Coat when constructed, conditioned, and tested per EIMA 101.86; and meeting or exceeding the Standard Impact Resistance: 25 to 49 inch-lb (2.8 to 5.6 J).
12. Structural Performance Testing: IFS assembly and components shall comply with ICC-ES AC219 when tested per ASTM E330/E330M.

1.06 SUBMITTALS

A. Product Data: For each type and component of IFS indicated.

B. Samples for Verification: 24-inch- (600-mm-) square panels for each type of finish-coat color and texture indicated, prepared using same tools and techniques intended for actual work including a typical control joint filled with sealant of color selected.
   1. Include sealants Samples to verify color selected.

C. Qualification Data: For Installer, fabricator/erector, and testing agency.

D. Product Test Reports:
   1. Based on evaluation of comprehensive tests performed by a qualified testing agency, for each insulation, reinforcing mesh, and coating.

E. Compatibility and Adhesion Test Reports: For joint sealants from sealant manufacturer indicating the following:
   1. Materials forming joint substrates and joint-sealant backings have been tested for compatibility and adhesion with joint sealants.
   2. Interpretation of test results and written recommendations for primers and substrate preparation needed for adhesion.

F. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

G. Operation and Maintenance Data: Submit O&M manuals according to the requirements of Section 01 92 00 - Facility Operation and Maintenance.

1.07 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Installer Qualifications: An installer who is certified in writing by manufacturer as qualified to install manufacturer's system using trained workers.

C. Source Limitations: Obtain IFS from single source from single manufacturer and from sources approved by IFS manufacturer as compatible with system components.

D. Fire-Test-Response Characteristics: Provide IFS and system components with the following fire-test-response characteristics as determined by testing identical IFS and system components per UL or another testing and inspecting agency acceptable to authorities having jurisdiction. Identify products with appropriate markings of applicable testing agency.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in original, unopened packages with manufacturers' labels intact and clearly identifying products.

B. Store materials inside and under cover; keep them dry and protected from weather, direct sunlight, surface contamination, aging, corrosion, damaging temperatures, construction traffic, and other causes.

1.09 PROJECT CONDITIONS

A. Weather Limitations: Maintain ambient temperatures above 40 deg F (4.4 deg C) for a minimum of 24 hours before, during, and after adhesives or coatings are applied. Do not apply IFS adhesives or coatings during rainfall. Proceed with installation only when existing and forecasted weather

conditions and ambient outdoor air, humidity, and substrate temperatures permit IFS to be applied, dried, and cured according to manufacturers' written instructions and warranty requirements.

1.10 COORDINATION

A. Coordinate installation of IFS with related Work specified in other Sections to ensure that wall assemblies, including sheathing, flashing, trim, joint sealants, windows, and doors, are protected against damage from the effects of weather, age, corrosion, moisture, and other causes. Do not allow water to penetrate behind flashing and barrier coating of IFS.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Basis-of-Design Product: Subject to compliance with requirements, provide Senergy; Basecoat, Mesh and Finish Coat., or comparable product by one of the following:
   1. Dryvit Systems, Inc.
   2. Parex, Inc.; a brand of ParexLahabra, Inc.
   3. TEC; an H. B. Fuller company.

2.02 MATERIALS

A. Compatibility: Provide adhesive, fasteners, board insulation, reinforcing meshes, base- and finish-coat systems, sealants, and accessories that are compatible with one another and with substrates and approved for use by manufacturer for Project.

B. Base-Coat Materials: IFS manufacturer's standard mixture complying with one of the following:
   1. Job-mixed formulation of Portland cement complying with ASTM C150/C150M, Type I, white or natural color; and manufacturer's standard polymer-emulsion adhesive designed for use with portland cement.
   2. Job-combined formulation of manufacturer's standard polymer-emulsion adhesive and manufacturer's standard dry mix containing portland cement.
   3. Factory-blended dry formulation of portland cement, dry polymer admixture, and inert fillers to which only water is added at Project site.
   4. Factory-mixed noncementitious formulation of polymer-emulsion adhesive and inert fillers that is ready to use without adding other materials.

C. Finish-Coat Materials: Manufacturer's manufacturer's standard, siliconized acrylic-based coating complying with the following:
   1. Factory-mixed formulation of polymer-emulsion binder, colorfast mineral pigments, sound stone particles, and fillers.
   2. Colors: See sub-section 3.9 IFS Schedule, below.

D. Water: Potable.

E. Trim Accessories: Type as designated or required to suit conditions indicated and to comply with IFS manufacturer's written instructions; manufactured from UV-stabilized PVC; and complying with ASTM D1784, manufacturer's standard Cell Class for use intended, and ASTM C1063.
   1. Casing Bead: Prefabricated, one-piece type for attachment behind insulation, of depth required to suit thickness of coating and insulation, with face leg perforated for bonding to coating and back leg.
   2. Drip Screed/Track: Prefabricated, one-piece type for attachment behind insulation with face leg extended to form a drip, of depth required to suit thickness of coating and insulation, with face leg perforated for bonding to coating and back leg.
   3. Expansion Joint: Prefabricated, one-piece V profile; designed to relieve stress of movement.

2.03 MIXING

A. General: Comply with Manufacturer's requirements for combining and mixing materials. Do not introduce admixtures, water, or other materials except as recommended by manufacturer. Mix materials in clean containers. Use materials within time period specified by manufacturer or discard.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of IFS.

B. Examine roof edges, wall framing, flashings, openings, substrates, and junctures at other construction for suitable conditions where IFS will be installed.

C. Proceed with installation only after unsatisfactory conditions have been corrected.
   1. Begin coating application only after surfaces are dry.
   2. Application of coating indicates acceptance of surfaces and conditions.

3.02 PREPARATION

A. Protect contiguous work from moisture deterioration and soiling caused by application of IFS. Provide temporary covering and other protection needed to prevent spattering of exterior finish coats on other work.

B. Protect IFS, substrates, and wall construction behind them from inclement weather during installation. Prevent penetration of moisture behind IFS and deterioration of substrates.

C. Prepare and clean substrates to comply with IFS manufacturer's written instructions to obtain optimum bond between substrate and adhesive for insulation.
   1. Concrete Substrates: Provide clean, dry, neutral-pH substrate for insulation installation. Verify suitability of substrate by performing bond and moisture tests recommended by manufacturer.

3.03 INSTALLATION, GENERAL

A. Comply with ASTM C1397 and manufacturer's written instructions for installation as applicable to each type of substrate indicated.

B. Comply with applicable recommendations provided by EIMA (EIFS Industry Members Association)

3.04 TRIM INSTALLATION

A. Trim: Apply trim accessories at perimeter of IFS, at expansion joints, and elsewhere as indicated, according to manufacturer's written instructions. Coordinate with installation of insulation.
   1. Drip Screed/Track: Use at bottom edges of IFS unless otherwise indicated.
   2. Plastic Corner/Casing Bead: Use at other locations.

3.05 BASE-COAT INSTALLATION

A. Base Coat: Apply to exposed surfaces of insulation and foam shapes in minimum thickness recommended in writing by manufacturer, but not less than 1/16-inch (1.6-mm) dry-coat thickness.

B. Reinforcing Mesh: Embed type indicated below in wet base coat to produce wrinkle-free installation with mesh continuous at corners and overlapped not less than 2-1/2 inches (64 mm) or otherwise treated at joints to comply with ASTM C 1397 and manufacturer's written instructions. Do not lap reinforcing mesh within 8 inches (204 mm) of corners. Completely embed mesh, applying additional base-coat material if necessary, so reinforcing-mesh color and pattern are not visible.
   1. Standard-impact reinforcing mesh unless otherwise indicated.

C. Additional Reinforcing Mesh: Apply strip reinforcing mesh around openings extending 4 inches (100 mm) beyond perimeter. Apply additional 9-by-12-inch (230-by-300-mm) strip reinforcing mesh diagonally at corners of openings (re-entrant corners). Apply 8-inch- (200-mm-) wide strip reinforcing mesh at both inside and outside corners unless base layer of mesh is lapped not less than 4 inches (100 mm) on each side of corners.
   1. At aesthetic reveals, apply strip reinforcing mesh not less than 8 inches (200 mm) wide.
   2. Embed strip reinforcing mesh in base coat before applying first layer of reinforcing mesh.

D. Double Base-Coat Application: Where indicated, apply second base coat in same manner and thickness as first application except without reinforcing mesh. Do not apply until first base coat has cured.

3.06 FINISH-COAT INSTALLATION

A. Finish Coat:
   1. Apply over dry base coat, maintaining a wet edge at all times for uniform appearance, in thickness required by manufacturer to produce a uniform finish of color and texture matching approved sample and free of cold joints, shadow lines, and texture variations.
   2. Do not apply finish coat into or over sealant joints; apply to outside of wall only.

3.07 CLEANING AND PROTECTION

A. Remove temporary covering and protection of other work. Promptly remove coating materials from window and door frames and other surfaces outside areas indicated to receive IFS coatings.

3.08 IFS SCHEDULE

A. IFS-1 (**NOT USED)** (Interior)
   1. Substrate: Sheathing or Concrete
   2. System: Senerflex Interior Finish System
   3. Base-Coat Materials: Senergy Xtra-Stop Base Coat
   4. Reinforcing Mesh: Standard-Impact Reinforcing Mesh
   5. Finish-Coat Materials: Senergy Siliconite Finish Coat
   6. Texture: Senergy Sahara., or Dryvit “Sand Pebble” Texture
   7. Color: Custom color to match Sherwin Williams, SW 7695 Mesa Tan
   8. Location: Interior Pool Deck, See Drawings
   9. URL: https://www.sherwin-williams.com/homeowners/color/find-and-explore-colors/paint-colors-by-family/SW7695-mesa-tan

B. **IFS-2**
   1. Manufacturer: Dryvit System, Inc.
   2. Product: Interior Architectural Coating, DS174
   3. Texture: Sand Pebble
   4. Color: Custom to match Benjamin Moore HC-173 Edgecomb Gray
   5. Sealer: Manufacturer’s waterproof, clear acrylic-based sealer for protecting finish coat

SECTION 07 27 00

SHEET-APPLIED MEMBRANE AIR BARRIERS (VAPOR IMPERMEABLE)

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This Section includes the following:

1. Materials and installation methods for sheet-applied, vapor impermeable air barrier membrane system located in the non-accessible part of the wall.
2. Materials and installation methods to bridge and seal air leakage pathways in roof and foundation junctions, window and door openings, control and expansion joints, masonry ties, piping and other penetrations through the wall assembly.

B. Related Sections include the following:

1. Section 03 30 00 – Cast-In-Place Concrete
2. Section 04 20 00 – Unit Masonry
3. Section 07 13 25 – Self-Adhering Sheet Waterproofing
4. Section 07 62 00 – Sheet Metal Flashing and Trim
5. Section 07 92 00 – Joint Sealants
6. Section 09 21 16 – Gypsum Board Assemblies

1.03 DEFINITIONS

A. Air Barrier Assembly: The collection of air barrier materials and auxiliary materials applied to an opaque wall, including joints and junctions to abutting construction, to control air movement through the wall.

1.04 PERFORMANCE REQUIREMENTS

A. General: Air barrier shall be capable of performing as a continuous vapor-impermeable air barrier and as a liquid-water drainage plane flashed to discharge to the exterior incidental condensation or water penetration. Air barrier assemblies shall be capable of accommodating substrate movement and of sealing substrate expansion and control joints, construction material changes, and transitions at perimeter conditions without deterioration and air leakage exceeding specified limits.

B. The building envelope shall be designed and constructed with a continuous air barrier to control air leakage into, or out of the conditioned space. An air barrier shall also be provided for interior partitions between conditioned space and space designed to maintain temperature or humidity levels which differ from those in the conditioned space by more than 50% of the difference between the conditioned space and design ambient conditions. The air barrier shall have the following characteristics:

1. It must be continuous, with all joints made airtight.
2. It shall have an air permeability not to exceed 0.004 cfm/sq. ft. under a pressure differential of 0.3 in. water (1.57 psf) (equal to 0.02 L/s. x sq. m. @ 75 Pa), when tested in accordance with ASTM E2178.
3. It shall have an air permeability not to exceed 0.04 cfm/sq. ft. under a pressure differential of 0.3 in. water (1.57 psf) (equal to 0.2 L/s. x sq. m. @ 75 Pa), when tested in accordance with ASTM E2357.
4. It shall be capable of withstanding positive and negative combined design wind, fan and stack pressures on the envelope without damage or displacement, and shall transfer the load to the structure. It shall not displace adjacent materials under full load.
5. It shall be durable or maintainable.
6. The air barrier shall be joined in an airtight and flexible manner to the air barrier material of adjacent systems, allowing for the relative movement of systems due to thermal and moisture variations and creep. Connection shall be made between:

    a. Foundation and walls
    b. Walls and windows or doors
    c. Different wall systems
    d. Wall and roof
    e. Wall and roof over unconditioned space
    f. Walls, floor and roof across construction, control and expansion joints
    g. Walls, floors and roof to utility, pipe and duct penetrations

7. All penetrations of the air barrier and paths of air infiltration/exfiltration shall be made airtight.

1.05 REFERENCES

A. The following standards and publications are applicable to the extent referenced in the text. The most recent version of these standards is implied unless otherwise stated.

1.06 SUBMITTALS

A. Product Data: Include manufacturer's written instructions for evaluating, preparing, and treating substrate; technical data; and tested physical and performance properties of air barrier.

B. Shop Drawings: Show locations and extent of air barrier. Include details for substrate joints and cracks, counterflashing strip, penetrations, inside and outside corners, terminations, and tie-ins with adjoining construction.

1. Include details of interfaces with other materials that form part of air barrier
2. Include details of mockups

C. Samples: Submit representative samples of the following for approval:

1. Sheet-Applied membrane
2. Self-Adhered Transition Membrane
3. Self-Adhered Through Wall Flashing

D. Product Certificates: For air barriers, certifying compatibility of air barrier and accessory materials with project materials that connect to or that come in contact with the barrier; signed by product manufacturer.

E. Qualification Data: For Applicator.

F. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for air barriers, submit certified test report showing compliance with requirements specified for ASTM E2178.

G. Warranty: Submit a sample warranty identifying the terms and conditions stated in Article 1.10.

1.07 QUALITY ASSURANCE

A. Manufacturer: Air barrier systems shall be manufactured and marketed by a firm with a minimum of 20 years experience in the production and sales of waterproofing and air barriers. Manufacturers proposed for use, but not named in these specifications shall submit evidence of ability to meet all requirements specified, and include a list of projects of similar design and complexity completed within the past five years.

B. Source Limitations: Obtain primary air-barrier material and all air barrier assembly materials through one source from a single manufacturer. Should project require a vapor permeable and a vapor impermeable air barrier on same project, obtain vapor-permeable and vapor impermeable air barrier and through wall flashing from one source from a single manufacturer. See specification Section 072727 for fully-adhered vapor permeable air barrier.

C. Applicator Qualifications: A firm experienced in applying air barrier materials similar in material, design, and extent to those indicated for this Project, whose work has resulted in applications with a record of successful in-service performance.

D. Mockups: Before beginning installation of air barrier, provide air barrier work for exterior wall assembly mockups, incorporating backup wall construction, external cladding, window, door frame and sill, insulation, and flashing to demonstrate surface preparation, crack and joint treatment, and sealing of gaps, terminations, and penetrations of air barrier membrane.

1. Coordinate construction of mockup to permit inspection by Owner's testing agency of air barrier before external insulation and cladding is installed
2. If Architect determines mockups do not comply with requirements, reconstruct mockups and apply air barrier until mockups are approved

E. Pre-Installation Conference: A pre-installation conference shall be held prior to commencement of field operations to establish procedures to maintain optimum working conditions and to coordinate this work with related and adjacent work. Preinstallation conference shall include the Contractor, installer, Architect, and system manufacturer's field representative. Agenda for meeting shall include but not be limited to the following:

1. Review of submittals
2. Review of surface preparation, minimum curing period and installation procedures
3. Review of special details and flashings
4. Sequence of construction, responsibilities and schedule for subsequent operations
5. Review of mock-up requirements
6. Review of inspection, testing, protection and repair procedures

1.08 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials and products in labeled packages. Store and handle in strict compliance with manufacturer’s instructions, recommendations and material safety data sheets. Protect from damage from sunlight, weather, excessive temperatures and construction operations. Remove damaged material from the site and dispose of in accordance with applicable regulations.

B. Do not double-stack pallets of sheet applied membrane components on the job site. Provide cover on top and all sides, allowing for adequate ventilation.

C. Protect sheet-applied membrane components from freezing and extreme heat.

D. Sequence deliveries to avoid delays, but minimize on-site storage.

1.09 PROJECT CONDITIONS

A. Environmental Limitations: Apply air barrier within the range of ambient and substrate temperatures recommended by air barrier manufacturer. Protect substrates from environmental conditions that affect performance of air barrier. Do not apply air barrier to a wet substrate or during snow, rain, fog, or mist.

1.10 WARRANTY

A. Submit manufacturer's warranty that air barrier and accessories are free of defects at time of delivery and are manufactured to meet manufacturer's published physical properties and material specifications.

B. Warranty Period: Five years from date of completion of the air barrier membrane installation.

PART 2 PRODUCTS

2.01 SHEET-APPLIED, VAPOR IMPERMEABLE MEMBRANE AIR BARRIER

A. SHEET-APPLIED AIR BARRIER MEMBRANE: Perm-A-Barrier® NPS, as manufactured by GCP Applied Technologies; 0.012-inch adhesive, 0.004 inch HDPE / AL, sheet-applied, vapor impermeable membrane that forms a resilient, monolithic, fully bonded elastomeric membrane when applied to construction surfaces. The membrane provides superior protection against the damaging effects of air and liquid water ingress on the building structures. Product shall meet the following requirements:

1. Membrane Air Permeance: ASTM E2178: Not to exceed 0.004 cfm/sq. ft. under a pressure differential of 0.3 in. water (1.57 psf) (equal to 0.02 L/s. x sq. m. @ 75 Pa)
2. Assembly Air Permeance: Provide a continuous air barrier assembly that has an air leakage not to exceed 0.04 cfm/sq. ft. of surface area under a pressure differential of 0.3 in. water (1.57 psf) (equal to 0.2 L/s. x sq. m. of surface area at 75 Pa) when tested in accordance with ASTM E2357.
3. Water Resistance: ASTM E331: Pass.
4. Water Vapor Permeance: ASTM E96, Method A: < 1 perm
5. Water Vapor Permeance: ASTM E96, Method B: < 1 perm
6. Elongation: ASTM D412-Die C: minimum 200%
7. Low temperature flexibility and crack bridging: ASTM C1305: Pass.
8. Nail sealability: ASTM D1970: Pass
9. Fire Resistance: Evaluated to NFPA 285 as part of various wall assemblies

B. TRANSITION MEMBRANE: Perm-A-Barrier Detail Membrane manufactured by GCP Applied Technologies; a 0.9 mm (36 mils) of self-adhesive rubberized asphalt integrally bonded to 0.1 mm (4 mil) of cross-laminated, high-density polyethylene film to provide a min. 1.0 mm (40 mil) thick membrane. Membrane shall be interleaved with disposable silicone-coated release paper until installed, conforming with the following:

1. Water Vapor Transmission: ASTM E96, Method B: 0.05 perms (2.9 ng/Pa s. sq. m.) maximum
2. Air Permeance at 75 Pa (0.3 in. water) pressure difference: 0.0006 L/s. sq. m (0.00012 cfm/ sq. ft.) maximum
3. Puncture Resistance: ASTM E154: 178 N (40 lbs.) minimum
4. Lap Adhesion at minus 4 degrees Celsius (25 degrees Fahrenheit): ASTM D1876: 880 N/m (5.0 lbs./in.) of width

5. Low Temperature Flexibility: ASTM D1970: Unaffected to minus 43 degrees Celsius (minus 45 degrees Fahrenheit)
6. Tensile Strength: ASTM D412, Die C Modified: minimum 2.7 MPa (400 psi)
7. Elongation, Ultimate Failure of Rubberized Asphalt: ASTM D412, Die C: minimum 200%

C. TRANSITION ALUMINUM MEMBRANE: Perm-A-Barrier Aluminum flashing manufactured by GCP Applied Technologies; a 0.9 mm (35 mils) of self-adhesive rubberized asphalt integrally bonded to 0.1 mm (5 mil) of aluminum film to provide a min. 1.0 mm (40 mil) thick membrane. Membrane shall be interleaved with disposable silicone-coated release paper until installed, conforming with the following:

1. Water Absorption: ASTM D570: max 0.1% by weight
2. Puncture Resistance: ASTM E154: 355N (80 lbs) min.
3. Lap Adhesion at minus 4 degrees Celsius (25 degrees Fahrenheit): ASTM D1876 Modified: 880 N/m (5.0 lbs./in.) of width
4. Low Temperature Flexibility: ASTM D1970 Modified: Unaffected to minus 26 degrees Celsius (minus15 degrees Fahrenheit)
5. Tensile Strength: ASTM D412, Die C Modified: minimum 4.1 MPa (600 Psi)
6. Elongation, Ultimate Failure of Rubberized Asphalt: ASTM D412, Die C Modified: minimum 200%

D. FLEXIBLE MEMBRANE THRU-WALL FLASHING: Perm-A-Barrier Wall Flashing manufactured by GCP Applied Technologies; a 0.8 mm (32 mils) of self-adhesive rubberized asphalt integrally bonded to 0.2 mm (8 mil) of cross-laminated, high-density polyethylene film to provide a min. 1.0 mm (40 mil) thick membrane. Membrane shall be interleaved with disposable silicone-coated release paper until installed, conforming with the following:

1. Water Vapor Transmission: ASTM E96, Method B: 0.05 perms (2.9 ng/ Pa s. sq. m.) maximum
2. Water Absorption: ASTM D570: max. 0.1% by weight
3. Puncture Resistance: ASTM E154: 356 N (80 lbs.) minimum
4. Tear Resistance
    a. Initiation, ASTM D1004: min. 58 N (13.0 lbs.) M.D.
    b. Propagation, ASTM D1938: min. 40 N (9.0 lbs.) M.D.
5. Lap Adhesion at minus 4 degrees Celsius (25 degrees Fahrenheit): ASTM D1876: 880 N/m (5.0 lbs./in.) of width
6. Low Temperature Flexibility: ASTM D1970: Unaffected to minus 43 degrees Celsius (minus 45 degrees Fahrenheit)
7. Tensile Strength: ASTM D412, Die C Modified: minimum 5.5 MPa (800 psi)
8. Elongation, Ultimate Failure of Rubberized Asphalt: ASTM D412, Die C: minimum 200%

E. HIGH TEMPERATURE TRANSITION MEMBRANE: Perm-A-Barrier Ultra manufactured by GCP Applied Technologies; a 25 mil (0.635 mm) of self-adhesive butyl integrally bonded to 5 mil (0.127 mm) of high-density polyethylene film laminated to aluminum facer to provide a min. 30 mil (0.76 mm) thick robust membrane. Membrane shall be interleaved with disposable silicone-coated release paper until installed, conforming to the following:

1. Heat Resistance, 300°F (149°C)
2. Tensile Strength, ASTM D882: 5000 psi (34.5 MPa)
3. Elongation, membrane, ASTM D882: 200%
4. Adhesion to gypsum sheathing, ASTM D903: 5.0 lbs/in.

2.02 PRIMERS – Required for some applications below 25°F

A. Primer for Self-Adhered Transition Membrane and Flexible Membrane Wall Flashing: Perm-A-Barrier WB Primer manufactured by GCP Applied Technologies; a water-based primer which imparts an aggressive, high tack finish on the treated substrate.

1. Flash Point: No flash to boiling point
2. VOC Content: Not to exceed 10 g/L
3. Application Temperature: minus 4 degrees Celsius (25 degrees Fahrenheit) and above
4. Freezing point (as packaged): minus 7 degrees Celsius (21 degrees Fahrenheit)

2.03 PENETRATIONS & TERMINATION SEALANT

A. Liquid Membrane for Details and Terminations and Substrate Patching: Bituthene Liquid Membrane manufactured by GCP Applied Technologies; a two-part, elastomeric, trowel grade material designed for use with SHEET-applied membranes, self-adhered membranes and tapes. 10 g/L maximum VOC content.

B. Sealant for Details, Final Terminations and Sheathing: Perm-A-Barrier Universal Flashing & Sealant manufactured by GCP Applied Technologies: a one-part, moisture curing, STPE material designed for use with SHEET-applied membranes, self-adhered membrane and tapes.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that substrates and conditions are ready to accept the Work of this section. Notify [engineer] [architect] [consultant] in writing of any discrepancies. Commencement of the Work or any parts thereof shall mean acceptance of the prepared substrates.

B. All surfaces must be sound, dry, clean and free of oil, grease, dirt, excess mortar or other contaminants detrimental to the adhesion of the membranes. Fill voids, gaps and spalled areas in substrate to provide an even plane. Strike masonry joints full-flush.
Curing compounds or release agents used in concrete construction must be resin based without oil, wax or pigments.

3.02 SURFACE PREPARATION

A. Refer to manufacturer's literature for requirements for preparation of substrates. Surfaces shall be sound and free of voids, spalled areas, loose aggregate and sharp protrusions. Remove contaminants such as grease, oil and wax from exposed surfaces. Remove dust, dirt, loose stone and debris. Use repair materials and methods that are acceptable to manufacturer of the SHEET-applied air barrier assembly.

B. Exterior sheathing panels: Ensure that the boards are sufficiently stabilized with corners and edges fastened with appropriate screws.

C. Masonry Substrates: Apply air and vapor barrier over concrete block and brick with smooth trowel-cut mortar joints, struck full and flush. Fill all voids and holes, particularly in the mortar joints, with a lean mortar mix, non-shrinking grout or parge coat.

D. Related Materials: Treat construction joints and install flashing as recommended by manufacturer.

E. Clean, prepare, treat, and seal substrate according to manufacturer's written instructions. Provide clean, dust-free, and dry substrate for air barrier application.

F. Mask off adjoining surfaces not covered by air barrier to prevent spillage and overspray affecting other construction.

G. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.

H. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids in concrete with substrate patching membrane.

I. Remove excess mortar from masonry ties, shelf angles, and other obstructions.

J. At changes in substrate plane, apply Bituthene Liquid Membrane at sharp corners and edges to form a smooth transition from one plane to another.

K. Cover gaps in substrate plane and form a smooth transition from one substrate plane to another with stainless-steel sheet mechanically fastened to structural framing to provide continuous support for air barrier.

3.03 JOINT TREATMENT

A. Concrete and Masonry: Prepare, treat, rout, and fill joints and cracks in substrate according to ASTM C1193 and air barrier manufacturer's written instructions. Remove dust and dirt from joints and cracks complying with ASTM D4258 before coating surfaces.

3.04 AIR BARRIER MEMBRANE INSTALLATION

A. Apply air barrier membrane to achieve a continuous air barrier according to air barrier manufacturer's written instructions.

B. Apply air barrier membrane within manufacturer's recommended application temperature ranges.

C. Do not cover air barrier until it has been tested and inspected by Owner's testing agency.

D. Correct deficiencies in or remove air barrier that does not comply with requirements; repair substrates and reapply air barrier components.

3.05 PREFABRICATED WINDOW CORNER INSTALLATION

A. Install prefabricated window corners into rough openings of windows at bottom corners of the window openings prior to installing primer and transition membrane. Install the corners into the rough opening in accordance with manufacturer’s installation instructions.

3.06 TRANSITION MEMBRANE INSTALLATION

A. Install strips, transition membrane, and auxiliary materials according to air barrier manufacturer's written instructions to form a seal with adjacent construction and maintain a continuous air barrier.

B. Apply primer to substrates to receive transition membrane at required rate and allow to dry. Limit priming to areas that will be covered by transition tape in same day. Re-prime areas exposed for more than 24 hours.

1. Prime glass-fiber-surfaced gypsum sheathing not covered with air membrane material with number of prime coats needed to achieve required bond, with adequate drying time between coats.

C. Connect and seal exterior wall air barrier membrane continuously to roofing membrane air barrier, concrete below-grade structures, floor-to floor construction, exterior glazing and window systems, glazed curtain-wall systems, storefront systems, exterior louvers, exterior door framing, and other construction used in exterior wall openings, using accessory materials.

D. At end of each working day, seal top edge of strips and transition membrane to substrate with termination sealant.

E. Apply joint sealants forming part of air barrier assembly within sealant manufacturer's recommended application temperature ranges. Consult sealant manufacturer when sealant cannot be applied within these temperature ranges.

1. Wall Openings: Prime concealed perimeter frame surfaces of windows, curtain walls, storefronts, and doors. Apply transition membrane so that a minimum of 3 inches (75 mm) of coverage is achieved over both substrates. Roll firmly to enhance adhesion.

F. Fill gaps in perimeter frame surfaces of windows, curtain walls, storefronts, and doors, and miscellaneous penetrations of air barrier membrane with foam sealant.

G. Repair punctures, voids, and deficient lapped seams in strips and transition membrane. Slit and flatten fish-mouths and blisters. Patch with transition membrane extending 6 inches (150 mm) beyond repaired areas in strip direction.

3.07 FIELD QUALITY CONTROL

A. Testing Agency: Owner may engage a qualified testing agency to perform tests and inspections and prepare test reports.

B. Inspections: Air barrier materials and installation are subject to inspection for compliance with requirements. Inspections may include the following:

1. Continuity of air barrier system has been achieved throughout the building envelope with no gaps or holes
2. Continuous structural support of air barrier system has been provided
3. Masonry and concrete surfaces are smooth, clean and free of cavities, protrusions, and mortar droppings
4. Site conditions for application temperature and dryness of substrates have been maintained
5. Maximum exposure time of materials to UV deterioration has not been exceeded
6. Surfaces have been primed, if applicable

7. Laps in strips and transition membrane have complied with minimum requirements and have been shingled in the correct direction (or mastic has been applied on exposed edges), with no fish-mouths
8. Termination sealant has been applied on cut edges
9. Strips and transition membrane have been firmly adhered to substrate
10. Compatible materials have been used
11. Transitions at changes in direction and structural support at gaps have been provided.
12. Connections between assemblies (membrane and sealants) have complied with requirements for cleanliness, preparation and priming of surfaces, structural support, integrity, and continuity of seal
13. All penetrations have been sealed

C. Tests: Testing to be performed will be determined by Owner's testing agency from among the following tests:

1. Qualitative Testing: Air barrier assemblies will be tested for evidence of air leakage according to ASTM E1186.

D. Remove and replace deficient air barrier components and retest as specified above.

3.08 CLEANING AND PROTECTION

A. Protect air barrier system from damage during application and remainder of construction period, according to manufacturer's written instructions.

B. Protect air barrier from exposure to UV light and harmful weather exposure as required by manufacturer. Remove and replace main air barrier material exposed for more than 12 months.

C. Clean spills, stains, and soiling from construction that would be exposed in the completed work using cleaning agents and procedures recommended by manufacturer of affected construction.

D. Remove masking materials after installation.

F. ASTM E2357 - Standard Test Method for Determining Air Leakage Rate of Air Barrier Assemblies; 2024.

1.04 SUBMITTALS

A. Product Data: Include manufacturer's written instructions for evaluating, preparing, and treating substrate; technical data; and tested physical and performance properties of air barrier.
   1. Include all accessory material data.
B. Shop Drawings: Show locations and extent of air barrier. Include details for substrate joints and cracks, counterflashing strip, penetrations, inside and outside corners, terminations, and tie-ins with adjoining construction.
   1. Include details of interfaces with other materials that form part of air barrier.
   2. Include details of mock-ups.
C. Compatibility Letters:

1. Submit letters from the Manufacturer ensuring compatibility with adjacent materials, including Waterproofing, EIFS, sealants, etc.

D. Procurement:
1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
2. Submit inventory to Owner within 5 days of delivery of materials.
3. See Sections 01 33 00 and 01 60 00.

1.05 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Applicator Qualifications: Company experienced in applying air barrier materials similar in material, design, and extent to those indicated for this Project, whose work has resulted in applications with a record of successful in-service performance.

C. Mockup: See drawings for requirements for Mockup.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Store liquid materials in their original undamaged packages in a clean, dry, protected location and within temperature range required by air barrier manufacturer.

B. Remove and replace liquid materials that cannot be applied within their stated shelf life.

C. Store rolls per manufacturer's written instructions.

D. Store materials at Project site in a cool, dry location, out of direct sunlight, protected from inclement weather and other sources of damage. Minimum storage temperature shall be 40 degrees F (4 degrees C).

1.07 PROJECT CONDITIONS

A. Environmental Limitations: Apply air barrier within range of ambient and substrate temperatures recommended by air barrier manufacturer. Protect substrates from environmental conditions that affect performance of air barrier. Do not apply air barrier to a damp or wet substrate or during snow, rain, fog, or mist.
1. Do not apply wet materials during inclement weather unless appropriate protection is provided. Protect materials from inclement weather until they are completely dry.
2. At time of application, minimum air and wall surface temperatures shall be 40 degrees F (4 degrees C).and rising. Maintain these temperatures, with adequate air ventilation and circulation, for a minimum of 12 hours thereafter, or until products are dry.

PART 2 PRODUCTS

2.01 FLUID-APPLIED MEMBRANE AIR BARRIER

A. General: Provide products that are certified to be compatible by manufacturer of substrate.

B. Air and Water-Resistive Barrier Components:
1. Acceptable Product: Subject to compliance with requirements, provide Tremco ExoAir 130 (impermeable) and ExoAir 230 (permeable).
2. Barrier Membrane: Flexible, polymer-based, noncementitious, water-resistive coating.
a. Finish Surface: Smooth.
3. Grid Tape: Open weave fiberglass mesh tape with pressure sensitive adhesive in rolls 4 inch (102 mm) wide by 100 yards (91 m) long.

C. Load Bearing Fluid Applied Membrane Air Barrier:
1. General: Load bearing membrane, for the application of adhered masonry or tile.
a. Meet or exceed requirements ANSI A118.10, ANSI A118.12 for adhered masonry or tile.
b. Meet or exceed requirements of ASTM E2357 for air barrier assemblies.
c. Compatible with products specified for adhered tile and masonry assemblies, see Sections 04 20 00 and 09 30 00.
2. Manufacturer and Product:

a. Same as Manufacturer listed above.

D. Flashing Materials: Used to protect substrate edges at terminations.
1. All Liquid Applied and Sheet flashings shall be provided by Manufacturer of the Air/ WRB.

2.02 AUXILIARY MATERIALS

A. General: Auxiliary materials recommended by air barrier manufacturer for intended use and compatible with air barrier membrane. Liquid-type auxiliary materials shall comply with VOC limits of authorities having jurisdiction.

B. Modified Bituminous Strip: Vapor-retarding, 40 mil (1.0 mm) thick, smooth-surfaced, self-adhering; consisting of 36 mils (0.9 mm) of rubberized asphalt laminated to a 4 mil (0.1 mm) thick polyethylene film with release liner backing.

C. Butyl Strip: Vapor-retarding, 30 to 40 mil (0.76 to 1.0 mm) thick, self-adhering; polyethylene-film-reinforced top surface laminated to layer of butyl adhesive with release liner backing.
1. For use with vapor-permeable barrier.

D. Adhesive-Coated Transition Strip: Vapor-permeable, 17 mil (0.43 mm) thick, self-adhering strip consisting of an adhesive coating over a permeable laminate with a permeance of 37 perms (2145 ng/Pa x s x sq. m).

E. Joint Reinforcing Strip: Air barrier manufacturer's glass-fiber-mesh tape.

F. Joint Sealant: ASTM C920, single-component, neutral-curing silicone; Class 100/50 (low-modulus), Grade NS, Use NT related to exposure, and, as applicable to joint substrates indicated, Use O. Comply with Section 07 92 00 – Joint Sealants.
1. Acceptable Product: LM 800XL by Carlislefor joints and terminations.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.
1. Verify that substrates are sound and free of oil, grease, dirt, excess mortar, or other contaminants.
2. Verify that concrete has cured and aged for minimum time period recommended by air-barrier manufacturer.
3. Verify that concrete is visibly dry and free of moisture. Test for capillary moisture by plastic sheet method according to ASTM D4263.
4. Verify that masonry joints are flush and completely filled with mortar.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 SURFACE PREPARATION

A. Clean, prepare, treat, and seal substrate per manufacturer's written instructions. Provide clean, dust-free, and dry substrate for air-barrier application.

B. Mask off adjoining surfaces not covered by air barrier to prevent spillage and overspray affecting other construction.

C. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.

D. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids in concrete with substrate-patching membrane.

E. Remove excess mortar from masonry ties, shelf angles, and other obstructions.

F. At changes in substrate plane, apply sealant or termination mastic beads at sharp corners and edges to form a smooth transition from one plane to another.

G. Cover gaps in substrate plane and form a smooth transition from one substrate plane to another with stainless-steel sheet mechanically fastened to structural framing to provide continuous support for air barrier.

3.03 JOINT TREATMENT

A. Concrete and Masonry: Prepare, treat, rout, and fill joints and cracks in substrate per ASTM C1193 and air barrier manufacturer's written instructions.

B. Gypsum Sheathing: Fill joints greater than 1/4 inch (6 mm) with sealant per ASTM C1193 and with air barrier manufacturer's written instructions. Apply first layer of fluid air barrier membrane at joints. Tape joints with joint reinforcing strip after first layer is dry. Apply a second layer of fluid air barrier membrane over joint reinforcing strip.

3.04 TRANSITION STRIP INSTALLATION

A. Install strips, transition strips, and auxiliary materials per air-barrier manufacturer's written instructions to form a seal with adjacent construction and maintain a continuous air-barrier.
   1. Coordinate installation of air-barrier with installation of roofing membrane and base flashing to ensure continuity of air-barrier with roofing membrane.
   2. Install butyl (transitions to roof membrane) strip on roofing membrane or base flashing so that a minimum of 3 inches (76 mm) of coverage is achieved over both substrates.

B. Apply primer to substrates at required rate and allow to dry. Limit priming to areas that will be covered by air-barrier sheet in same day. Reprime areas exposed for more than 24 hours.
   1. Prime glass-fiber-surfaced gypsum sheathing with number of prime coats needed to achieve required bond, with adequate drying time between coats.

C. Connect and seal exterior wall air-barrier membrane continuously to roofing membrane air-barrier, concrete below-grade structures, floor-to floor construction, exterior glazing and window systems, glazed curtain-wall systems, storefront systems, exterior louvers, exterior door framing, and other construction used in exterior wall openings, using accessory materials.

D. At end of each working day, seal top edge of strips and transition strips to substrate with termination mastic.

E. Apply joint sealants forming part of air-barrier assembly within manufacturer's recommended application temperature ranges. Consult manufacturer when sealant cannot be applied within these temperature ranges.

F. Seal top of through-wall flashings to air-barrier with an additional 6 inch (152 mm) wide strip as recommended by air-barrier manufacturer.

G. Seal exposed edges of strips at seams, cuts, penetrations, and terminations not concealed by metal counterflashings or ending in reglets with termination mastic.

H. Repair punctures, voids, and deficient lapped seams in strips and transition strips. Slit and flatten fishmouths and blisters. Patch with transition strips extending 6 inches (152 mm) beyond repaired areas in strip direction.

3.05 MEMBRANE INSTALLATION

A. Smooth Surface Finish: Apply smooth surface material per system manufacturer's published instructions.
   1. Mix materials with equipment and for duration recommended by system manufacturer.
   2. Prior to application of finish surface, apply strip of grid tape over sheathing joints, including inside and outside corners, and trowel apply layer of texture finish over grid tape. Spot cover fastener heads.
   3. Apply finish to substrate using a trowel, roller, or spray equipment, depending on substrate, and backroll. Apply membrane to achieve uniform thickness over wall area. Measure thickness of membrane during installation to confirm minimum thickness is being met.
   4. Apply smooth finish over entire wall surface, including previously treated joints and fasteners.
   5. Allow material to dry a minimum of 4 hours prior to application of flashing liquid or tape, and adhesively applied EPS insulation board. Cool damp weather will require longer drying times. During cool damp weather, flashing tape surface conditioner may be necessary for proper flashing tape adhesion. Protect fluid applied waterproofing from exposure to precipitation and damage until membrane is fully cured.

6. Install specified Exterior Insulation and Finish System per published installation instructions for specific system being used.

3.06 CLEANING

A. Clean spills, stains, and soiling from construction that would be exposed in completed Work using cleaning agents and procedures recommended by manufacturer of affected construction.

B. Remove masking materials after installation.

3.07 PROTECTION

A. Protect air barrier system from damage during application and remainder of construction period, according to manufacturer's written instructions.
   1. Protect air barrier from exposure to UV light and harmful weather exposure as required by manufacturer. Remove and replace air barrier exposed for more than 30 days.
   2. Protect air barrier from contact with creosote, uncured coal-tar products, TPO, EPDM, flexible PVC membranes, and sealants not approved by air barrier manufacturer.

SECTION 07 42 00
METAL WALL PANELS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Factory-formed and assembled, composite metal wall panels.
   2. Factory-formed and finished modular metal wall panels.
   3. Metal Soffit Panels.
   4. Thermal bridging clips.

1.02 RELATED SECTIONS

A. Section 01 33 00 - Submittal Procedures.

B. Section 01 40 00 - Quality Requirements.

C. Section 01 60 00 - Product Requirements.

D. Section 04 20 00 - Unit Masonry.

E. Section 07 08 00 - Commissioning of Thermal and Moisture Protection.

F. Section 07 21 00 - Thermal Insulation

G. Section 07 27 00 - Sheet-Applied Membrane Air Barriers

O. AWS D1.3/D1.3M - Structural Welding Code - Sheet Steel; 2018, with Errata (2022).

P. NFPA 285 - Standard Fire Test Method for Evaluation of Fire Propagation Characteristics of Exterior Wall Assemblies Containing Combustible Components; 2025.

Q. SMACNA (ASMM) - Architectural Sheet Metal Manual; 2012.

R. UL 94 - Tests for Flammability of Plastic Materials for Parts in Devices and Appliances; Current Edition, Including All Revisions.

1.04 SYSTEM DESCRIPTION

A. Performance Requirements:
   1. Structural Performance: Capable of withstanding the effects of gravity loads and the following loads and stresses, based on testing per ASTM E330/E330M.
   2. Wind Loads: Design wind pressures shall be based on Basic Wind Speed, Risk Category, Exposure Category, and Internal Pressure Coefficient indicated on Structural Drawings.
   3. Snow Load: Design snow load shall be based on snow load parameters found in the Structural Drawings.
   4. Dead Load, Live Load: As required by applicable building code.
   5. Thermal Movements: Provide assemblies that allow for thermal movements resulting from maximum change (range) in ambient and surface temperatures by preventing buckling, opening of joints, overstressing of components and other detrimental effects:
      a. Temperature Change (range): 120 deg F (64 deg C), ambient; 180 deg F (100 deg C), material surfaces.
      b. Sealed joints shall allow free and silent movement of panels during expansion and contraction while preventing uncontrolled penetration of moisture.
      c. Manufacturing, installation and sealing shall prevent deformation of exposed surfaces.
      d. Design panel system to accommodate substructure tolerance of +0 to -1/8 inch.
      e. Not Permitted: Vibration harmonics; wind whistles; noises caused by thermal movement transmitted to other building elements; loosening, weakening or fracturing of attachments or components of system.
   6. Joints: Dry Joint System

1.05 SUBMITTALS

A. Product Data: For each type of metal wall panel and accessory indicated.

B. Shop Drawings: Show layouts of metal wall panels, including plans, elevations, sections, details, and attachments to other Work.
   1. For Metal Panels: include details of edge conditions, joints, panel profiles, corners, anchorages, attachment system, trim, flashings, closures, and accessories.
   2. Calculations: Signed and Stamped by Engineer licensed in the State where the Project is located, certifying the assembly will withstand design loads. See Structural Drawings.
   3. Indicate how girts are sealed.
   4. Indicate how drainage is maintained at base and soffit location conditions.

C. Coordination Drawings: Drawn to scale and coordinating metal wall panel installation with penetrations and wall-mounted items.

D. Samples for Verification: Of each type of metal finish required, prepared on samples of same thickness and material indicated for final work.

E. Quality Assurance Submittals: Submit the following:
   1. Certificates: Product certificates signed by manufacturer certifying materials comply with the specified performance characteristics and criteria, and physical requirements.
   2. Weld Strength Calculations shall be stamped and signed by a professional engineer specializing in the application of welding technology.
   3. Installer Qualifications: Acceptable to manufacturer.

F. Procurement:

1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
2. Submit inventory to Owner within 5 days of delivery of materials.
3. See Sections 01 33 00 and 01 60 00.

1.06 QUALITY ASSURANCE

A. Installer's responsibilities include fabricating and installing metal wall panel assemblies and providing professional engineering services needed to assume engineering responsibility.

1.07 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of metal wall panel assemblies that fail in materials or workmanship within specified warranty period.
   1. Failures include the following:
      a. Structural failures including rupturing, cracking, or puncturing.
      b. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
   2. Warranty Period: 2 years from date of Substantial Completion.
   3. The contractor shall warrant the materials to be free of faults and defects in accordance with the General Conditions, except that the warranty shall be extended by paint manufacturer’s standard multi-year warranty. The warranty shall be in writing and shall be signed by the manufacturer.

B. Material Finish Warranty:
   1. Failures include the following:
      a. Cracking.
      b. Fading or discoloration beyond normal weathering.
      c. Chalking.
      d. Flaking.
   2. Warranty Period: 20 years from Substantial Completion.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Subject to compliance with requirements, provide products from 1 of the following manufacturers:
   1. Atas International Inc.
   2. Alpolic.
   3. Protean.
   4. Alucobond USA.
   5. Metal Sales Manufacturing Corporation.
   6. Or approved substitution.

2.02 MISCELLANEOUS METAL FRAMING

A. Z-Shaped Furring: With slotted or nonslotted web, face flange of 1-1/4 inches (32 mm), wall attachment flange of 7/8 inch (22 mm), minimum bare metal thickness of 0.0179 inch (0.45 mm), and depth required to fit insulation thickness indicated.

2.03 MISCELLANEOUS MATERIALS

A. Fasteners: Self-tapping screws, bolts, nuts, self-locking rivets and bolts, end-welded studs, and other suitable fasteners designed to withstand design loads. Provide exposed fasteners with heads matching color of metal wall panels by means of plastic caps or factory-applied coating.
   1. Fasteners for Wall Panels: Self-drilling or self-tapping, zinc-plated, hex-head carbon-steel screws, with a stainless-steel cap or zinc-aluminum-alloy head and EPDM or neoprene sealing washer.
   2. Fasteners for Flashing and Trim: Blind fasteners or self-drilling screws with hex washer head.
   3. Blind Fasteners: High-strength aluminum or stainless-steel rivets.

B. Joint Splines:
   1. Aluminum/Metal Composite material to match panel, provided by panel Manufacturer.

C. Bituminous Coating: Cold-applied asphalt mastic, SSPC-Paint 12, compounded for 15-mil (0.4-mm) dry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.

D. Welding Standards: As follows:
   1. Comply with AWS AWS D1.2/D1.2M, “Structural Welding Code – Aluminum.”
   2. Comply with AWS AWS D1.3/D1.3M , “Structural Welding Code – Sheet Steel.”

2.04 COMPOSITE METAL WALL PANELS

A. General: Provide factory formed and assembled metal wall panels fabricated from 2 metal facing sheets and core material laminated or otherwise securely bonded, without use of contact adhesives or pinch rollers, to facing sheets during fabrication.
   1. Face Sheets: Aluminum alloy 3105 H14, 0.020 inch (0.51 mm) thick and as follows:
      a. Class I, Color Anodic Finish: AA-M12C22A42/A44.
      b. Thermally bonded in a continuous process, under tension, to the core material.
   2. Core: Thermoplastic material that meets performance characteristics specified when fabricated into composite assembly.
   3. Bond Integrity: Tested for resistance to delamination as follows:
      a. Peel Strength (ASTM D1781): 22.5 in-lb/in (100 N-m/m) minimum.
      b. No degradation in bond performance after 8 hours of submersion in boiling water and after 21 days of immersion in water at 70 degrees F (21 degrees C).
   4. Fire Performance:
      a. Flamespread (NFPA 285): Meets Requirements (in tested assembly).
      b. Flamespread (ASTM E84): 25 maximum (4 and 6 mm).
      c. Smoke Developed (ASTM E84): 450 maximum (4 and 6 mm).
      d. Surface Flammability (Modified ASTM E108): Pass (4 and 6 mm).
      e. V-O Rating (4 mm): Comply with UL 94.
   5. Production Tolerances:
      a. Width: +/- 2 mm.
      b. Length: +/- 4 mm.
      c. Thickness (4 mm Panel): +/- 0.008 inch (0.2 mm).
      d. Thickness (6 mm Panel): +/- 0.012 inch (0.3 mm).
      e. Bow: Maximum 0.5% length or width.
      f. Squareness: Maximum 0.2 inch (5 mm).
      g. Edges of sheets shall be square and trimmed.
   6. Drainage: Provide positive drainage to exterior for moisture entering or condensation occurring with panel system.
   7. Finish:
      a. Anodic Finish, see below.
   8. Accessories:
      a. General: Provide fabricator’s standard accessories, including fasteners, clips, anchorage devices and attachments for specific applications indicated on contract documents.

2.05 MODULAR METAL WALL PANELS

A. General: Provide factory formed and assembled modular, prefinished metal wall panels with hemmed edges.
   1. Basis of Design: ATAS International, Versa-Lok.
   2. Panel Composition:
      a. Aluminum, .040 in thick.
      b. Comply with ASTM B209/B209M.
   3. Finish:
      a. PVDF Finish, see below.
   4. Panel size:
      a. As shown on drawings.

5. Panel installation:
    a. Panels are installed overlapping and with staggered joints.
    b. See drawings and manufacturer's standard details.
6. Accessories:
    a. General: Provide fabricator’s standard accessories, including fasteners, clips, anchorage devices and attachments for specific applications indicated on contract documents.

2.06 ACCESSORIES

A. Wall Panel Accessories: Provide components required for a complete metal wall panel assembly including trim, copings, fasciae, mullions, sills, corner units, clips, flashings, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of metal wall panels, unless otherwise indicated.

B. Flashing and Trim: Formed from 0.0179-inch- (0.45-mm-) thick, metallic-coated steel sheet. Provide flashing and trim as required to seal against weather and to provide finished appearance. Locations include, but are not limited to, bases, drips, sills, jambs, corners, endwalls, framed openings, rakes, fasciae, parapet caps, soffits, reveals, and fillers. Finish flashing and trim with same finish system as adjacent metal wall panels.

C. Butyl Tape: Type and size as recommended by panel manufacturer.

D. Clip Angles/Channels: 1/8 inch thick formed metal, compatible with plate panel skin.

E. Fasteners: As recommended by panel manufacturer.

F. Soffit Panels:
1. Architectural Building Components; Flush Panel.
2. ATAS International, Inc.; Wind-Lok Soffit Panel.
3. Berridge Manufacturing Co.; FW-12 Panel.
4. Carlisle Metals Company: CM FWI Panel.
5. Approved substitution.

2.07 FABRICATION

A. General: Fabricate and finish metal wall panels and accessories at factory to greatest extent possible, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements demonstrated by laboratory testing. Comply with indicated profiles and with dimensional and structural requirements.
1. Form panel lines, breaks, and angles to be sharp and true, with surfaces free from warp and buckle.
2. Fabricate wall panels with panel stiffeners as required to maintain fabrication tolerances and to withstand design loads.

B. Fabricate metal wall panels in a manner that eliminates condensation on interior side of panel and with joints between panels designed to form weathertight seals.

C. Composite Metal Wall Panels: Fabricate panels using manufacturer's standard thermosetting structural adhesive in a lamination process that bonds panel under minimum 10-psi (69-kPa) pressure. Use of contact adhesives with pinch-roll process is not acceptable.

D. Sheet Metal Accessories: Fabricate flashing and trim to comply with recommendations in SMACNA (ASMM) "Architectural Sheet Metal Manual" that apply to design, dimensions, metal, and other characteristics of item indicated.

E. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

2.08 ALUMINUM FINISHES

A. Finish designations prefixed by AA comply with system established by the Aluminum Association for designating aluminum finishes.

B. Class I, Color Anodic Finish: AA-M12C22A42/A44 (Mechanical finish: nonspecular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I integrally colored or

electrolytically deposited color coating 0.018 mm or thicker) complying with AAMA 606.1 or AAMA 608.1.
1. Color: Dark Bronze. Match Exterior Storefront Color.

C. Factory applied Polyvinylidene fluoride (PVDF) finish.
1. Dry Film Thickness: ASTM D1005, ASTM D1400, ASTM D4138 or ASTM D5796
2. Abrasion Resistance: ASTM D968
3. Acid Resistance: ASTM D1308
4. Acid Rain Resistance (Kesternich): ASTM G87 or DIN 50018
5. Salt Spray: ASTM B117
6. Color: to be selected by Architect.

PART 3 EXECUTION

3.01 PREPARATION

A. Install flashings and other sheet metal to comply with requirements specified in Section 07 62 00.

B. Miscellaneous Framing: Install subgirts, base angles, sills, furring, and other miscellaneous wall panel support members and anchorage per ASTM C754 and metal wall panel manufacturer's written recommendations.

3.02 METAL WALL PANEL INSTALLATION, GENERAL

A. General: Install metal wall panels in orientation, sizes, and locations indicated on Drawings. Install panels perpendicular to girts and subgirts, unless otherwise indicated. Anchor metal wall panels and other components of Work securely in place, with provisions for thermal and structural movement.
1. Field cutting of metal wall panels by torch is not permitted.
2. Rigidly fasten base end of metal wall panels and allow eave end free movement due to thermal expansion and contraction. Predrill panels.
3. Install screw fasteners in predrilled holes.
4. Locate panel splices over, but not attached to, structural supports. Stagger panel splices and end laps to avoid a four-panel lap splice condition.
5. Apply elastomeric sealant continuously between metal base channel (sill angle) and concrete, and elsewhere as indicated or, if not indicated, as necessary for waterproofing.
6. Provide weatherproof escutcheons for pipe and conduit penetrating exterior walls.

B. Fasteners: Use aluminum or stainless-steel fasteners for surfaces exposed to exterior and aluminum or galvanized steel fasteners for surfaces exposed to interior.

C. Metal Protection: Where dissimilar metals will contact each other or corrosive substrates, protect against galvanic action by painting contact surfaces with bituminous coating, by applying rubberized-asphalt underlayment to each contact surface, or by other permanent separation as recommended by metal wall panel manufacturer.
1. Coat back side of aluminum wall panels with bituminous coating where wall panels will contact wood, ferrous metal, or cementitious construction.

3.03 CLEANING AND PROTECTION

A. Remove temporary protective coverings and strippable films, if any, as metal wall panels are installed, unless otherwise indicated in manufacturer's written installation instructions. On completion of metal wall panel installation, clean finished surfaces as recommended by metal wall panel manufacturer. Maintain in a clean condition during construction.

B. After metal wall panel installation, clear weep holes and drainage channels of obstructions, dirt, and sealant.

C. Clean exposed surfaces of sun control devices that are not protected by temporary covering to remove fingerprints and soil during construction period.

D. Clean exposed surfaces with water and a mild soap or detergent not harmful to finishes. Thoroughly rinse surfaces and dry.

E. Protect sun control assemblies from damage during construction. Use temporary protective coverings where needed as approved by the sun control manufacturer.

F. Clean and touch up minor abrasions in finished with air-dried coating that matches color and gloss, and is compatible with, factory–applied finish coating.

END OF SECTION

This page intentionally left blank

SECTION 07 46 33
PHENOLIC WALL SIDING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Exterior solid phenolic cladding: factory fabricated panel system and accessories as required for a complete drained and back-ventilated rainscreen system.
   1. Wall panels.
   2. Fascia.
   3. Horizontal soffits.
   4. Storefront panels.

B. Interior solid phenolic cladding: factory fabricated panel system and accessories as required for a complete drained and back-ventilated rainscreen system.
   1. Wall panels.
   2. Horizontal soffits and trim around door and window openings.

1.02 RELATED SECTIONS

A. Section 01 33 00 - Submittal Procedures.

B. Section 01 40 00 - Quality Requirements.

C. Section 01 60 00 - Product Requirements.

D. Section 04 20 00 - Unit Masonry

E. Section 07 54 23 - Thermoplastic Polyolefin (TPO) Roofing.

F. Section 07 62 00 - Sheet Metal Flashing and Trim.

G. Section 09 21 16 - Gypsum Board Assemblies.

H. Section 10 14 00 - Signage.

1.03 REFERENCE STANDARDS

A. ASTM International (ASTM):
   1. ASTM B 117 – Standard Practice for Operating Salt Spray (Fog) Apparatus.
   2. ASTM D 635 – Standard Test Method for Small Scale Burning.
   3. ASTM D 1929 – Standard Test Method for Ignition Temperature.
   4. ASTM D 2244 – Standard Practice for Calculation of Color Tolerances and Color Differences from Instrumentally Measured Color Coordinates.
   5. ASTM D 2247 – Standard Practice for Testing Water Resistance of Coatings in 100% Relative Humidity.
   6. ASTM E 84 – Standard Test Method for Surface Burning Characteristics of Building Materials.
   7. ASTM E 119 – Standard Test Method for Fire Rated or Fire Resistive Construction.
   8. ASTM E 330 – Standard Test Method for Structural Performance of Exterior Windows, Curtain Walls, and Doors Under the Influence of Wind Loads.

B. European Standards (EN):
   1. EN 438-2 – Decorative High Pressure Laminate (HPL) Sheets Based on Thermosetting Resins - Determination of Properties.
   2. EN 12524 – Building Materials and Products, Hygrothermal Properties, Tabulated Design Values.

C. International Organization for Standardization (ISO):
   1. ISO 105 A02-93 – Tests for Color Fastness – Part A02: Grey scale for assessing change in color.
   2. ISO 178 – Determination of Flexural Properties.
   3. ISO 527-2 – Determination of Tensile Properties.
   4. ISO 846 – Evaluation of the Action of Organisms.

5. ISO 1183 – Determination of Density of Non Cellular Plastics.
6. ISO 13894-1 – High Pressure Decorative Laminates.

1.04 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00.

1.05 SUBMITTALS

A. Submit under provisions of Section 01 30 00.

B. Product Data: Manufacturer's data sheets on each product to be used, including:
   1. Material Property Datasheet.
   2. Storage and handling requirements and recommendations.
   3. Installation Manual.

C. Drawings: Submit plan, section, elevation and perspective drawings necessary to describe and convey the layout, profiles and product components, including edge conditions, panel joints, fixture location, anchorage, accessories, finish colors.

D. Code Compliance: Documents showing product compliance with local building code shall be submitted prior to the bid. These documents shall include, but not be limited to, appropriate Evaluation Reports and/or test reports supporting the use of the product. Alternate materials must be approved by the architect of record prior to the bid date.

E. Selection Samples: For each finish product specified, submit color chips representing manufacturer's full range of available colors and patterns.

F. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

G. Operation and Maintenance Data: Submit O&M manuals according to the requirements of Section 01 92 00 - Facility Operation and Maintenance.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Delivery:
   1. During transportation, use stable, flat pallets that are at least the same dimension as the material.
   2. Materials are packaged to minimize or eliminate the possibility of damage during shipping. Items such as wooden side boards, wooden lid, and spacers or protective sheeting between panels shall be used to protect the panels from surface and/or edge damage.

B. Storage:
   1. Store products in an enclosed area protected from direct sunlight, moisture and heat. Maintain a consistent temperature and humidity.
   2. Store products in manufacturer's unopened packaging until ready for installation.
   3. Stack panels using protective dividers to avoid damage to decorative surface.
   4. For horizontal storage, store on pallets of equal or greater size as the panels with a protective layer between the pallet and panel.
   5. Do not store fabricated panels vertically.

C. Handling:
   1. Remove protective film within 24 hours of the panels being removed from the pallet.
   2. When moving panels, lift evenly to avoid dragging panels across each other and scratching the decorative surface.
   3. Remove all labels and stickers immediately after installation.

1.07 PROJECT CONDITIONS

A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.

B. Field Measurements: Verify actual measurements/openings by field measurements performed by the installer. Recorded measurements to be indicated on drawings based on field measurements provided by the installer.

1.08 WARRANTY

A. Warranty: At project closeout, provide manufacturer's limited ten year warranty covering defects in materials.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Exterior Phenolic Panels **[PHP-1]**: Acceptable Manufacturer: Trespa International B.V.; P.O. Box 110, 6000 AC Weert Wetering 20, 6002 SM Weert The Netherlands; www.trespa.com.
   1. Acceptable Manufacturer's Representative: Trespa North America, Ltd.; 62 Greene St (Ground Floor) New York, New York 10012. ASD. Toll Free Tel: (800) 4-TRESPA. Fax: (866) 298-3499. Email: info.northamerica@trespa.com. Web: http://www.trespa.com/na.
   2. Requests for substitutions will be considered in accordance with provisions of Section 01 60 00.

B. Interior Phenolic Panels **[PHP-2]**: Acceptable Manufacturer: Abet Laminati. https://abetlaminati.com/en.
   1. Vendor: Tegan Marketing. Contact Paul Tegan. Phone 763-475-1340. Email: paul@teganmarketing.com.
   2. Substitutions: Not permitted.

2.02 WALL SIDING SYSTEM

A. **[PHP-1]** Solid Phenolic Wall Panels: Trespa® PuraNFC® by Trespa International as represented by Trespa North America, LTD. http://live.trespa.com/
   1. Material: Solid panel manufactured using a combination of high pressure and temperature to create a flat panel created from thermosetting resins, homogenously reinforced with wood-based fibers and an integrated decorative surface or printed décor.
   2. Siding System: Trespa® PuraNFC® is a factory fabricated High Pressure Laminate material used in conjunction with siding accessories and components to provide a cladding for a drained and back ventilated rainscreen wall system.
   3. Color: PU24 Mystic Cedar
   4. Finish: Matte sheen.
   5. Flush Siding System.
   6. Panel Core: Fire retardant (FR) core.
   7. Panel Thickness: 5/16 inch (8 mm).
   8. Physical Properties:
      a. Modulus of Elasticity: 1,300,000 psi (9000 N/mm2) minimum, ISO 178.
      b. Tensile Strength: 10,100 psi (70 N/mm2) minimum, ISO 527-2.
      c. Flexural Strength: 14,500psi (120 N/mm2) minimum, ISO 178.
   9. Fire Performance:
      a. Flame Spread: Class A, ASTM E84.
      b. Smoke Development: Less than 450, ASTM E84.
   10. Finish Performance: Electron Beam Cure resin in conformance with the following general requirements:
      a. Color: As selected by the architect/engineer from manufacturer's standard colors.
      b. Resistance to Climactic Shock: EN 438-2:19.
      c. Resistance to Artificial Weathering: EN 438-2:29.

d. Color Stability: The decorative surface comply with, classification, 4 - 5 measured with the grey scale according to ISO 105 A02-93 according to test method EN 438-2:29.
e. Resistance to SO2: DIN 50018.
f. Microbial Characteristics: Will not support micro-organic growth (ISO 846).

11. Mounting System:
    a. Flush Siding System.
    b. Other installation systems – Include test documentation showing compliance with the performance criteria set forth in the specification and in accordance with the local building code.
12. Sub Structure:
    a. Sub-structure designed to withstand structural loading due to wind load and the dead load of the panel, painted as required to conceal behind the open joinery of the attachment system.
    b. Extrusions, battens, including corner closures, joint closures and vent screens, formed members, sheet, and plate shall conform with the recommendations of the manufacturer.
13. Fasteners: All fasteners to be concealed, no exceptions. Fasteners are non-corrosive. Fastener color to be black.
14. Accessories:
    a. Extruded aluminum trim includes outside corners, inside corners, start profiles, j channel, and finish profiles.
    b. All Trim pieces color to be Black.

B. **[PHP-2]** Phenolic Exterior Wall Cladding: Solid phenolic laminate panel with UV protective clear coat.
1. Style: EASY MEG Closed Joint.
2. Color: Walnut: Match Architect's sample.
3. Install Pattern: See drawings.
4. Finish: Matte.
5. Size: 7 5/8" x 96"
6. Thickness: 5/16"
7. Panel Core: Phenolic resin treated layer, black and natural brown kraft paper.
8. Decorative Layer: Melamine resin, proprietary pigmented and treated.
9. Weather and UV Resistant Layer: 2-mil, proprietary layer combining pigment protection, Ultraviolet light and weather resistant layer.
10. Physical Properties:
    a. Flexural Strength, ASTM D790.
        1) Machine Direction: 19,000 psi.
        2) Cross Direction: 16,000 psi.
    b. Flexural Modulus, ASTM D790.
        1) Machine Direction: 1,300,000 psi.
        2) Cross Direction: 1,000,000 psi.
    c. Tensile Modulus, ASTM D638.
        1) Machine Direction: 14,000 psi.
        2) Cross Direction: 10,000 psi.
    d. Structural Performance: Withstand design wind load based on building code, but not less than 23 psf with maximum L/180 tested to ASTM E330.
    e. Fire Performance:
        1) Flame Spread/Smoke Developed: Class A tested to ASTM E84.
        2) Ignition Temperature: Greater than 650 degrees F (350 degrees C) above ambient, tested to ASTM D1929.
        3) Extended Surface Burn: Max Flame Front less than 10 feet, tested to ASTM E2768.
        4) When required for compliance with local building codes, wall assembly shall meet the performance requirements of NFPA 285.

5) When required for compliance with local building codes, wall assemblies shall not ignite when exposed to a radiant heat energy source, NFPA 268.

f. Finish Performance:

1) Humidity Resistance: No cracking, checking, crazing, erosion, delamination, distress, tested to ASTM D2247.

2) Salt Spray Resistance: No cracking, checking, crazing, Erosion, Delamination, or distress, tested to ASTM B117.

3) Weather Exposure: Maximum gray scale change of 3-4 according to DIN EN 438-2 29 when tested to ASTM D2244 at accelerated – 3000 Hours in Atlas Type Weatherometer using cycle of 102 minutes light and 18 minutes diminished light and demineralized water.

11. Mounting System:
    a. Close Joint Clip.
12. Accessories:
    a. Horizontal, perforated rails, edge closures, shims and sealant by manufacturer.
    b. Concealed Fasteners.
    c. All exposed elements to be finished Black.

2.03 FABRICATION

A. Panels: Solid phenolic impregnated kraft paper wall panels with no voids, air spaces or foamed insulation in the core material. Accessory items in accordance with manufacturer's recommendations and approved submittals. Panel edges are factory fabricated to be used with the provided hardware system.

B. Panel Dimensions: Field fabrication shall be allowed where necessary, but shall be kept to an absolute minimum.

C. Appearance: Panel lines, breaks, and angles shall be sharp, true, and surfaces free from warp and buckle.

D. Fabrication Tolerances: Manufacturer to provide shop fabrication and pre-finishing for a warranted finish.
1. NEMA Testing Results:
    a. Dimensional Change, 3.11 test.
    b. Length (Machine Direction): 0.25 percent.
    c. Width (Cross Direction): 0.50 percent.
2. Weight Per Unit Area:
    a. Pounds/ square feet: 2.4-2.7
    b. Density: 86 pounds per cubic foot.

PART 3 EXECUTION

3.01 EXAMINATION

A. Do not begin installation until substrates have been properly prepared.

B. Surfaces to receive panels shall be even, smooth, dry, and free from defects detrimental to the installation of the panel system.
1. Notify Contractor in writing of conditions detrimental to proper and timely completion of the work.

C. Confirm substrate is plumb and level, with no deflection greater than 1/4 inch (6 mm) in 20 feet (6096 mm).

D. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.
1. Do not proceed with installation until unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Clean surfaces thoroughly prior to installation.

B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

3.03 INSTALLATION

A. Install solid phenolic wall panels and sub-frame system in accordance with manufacturer's instructions.

B. Install solid phenolic wall panels plumb and level and accurately spaced in accordance with manufacturer's recommendations and approved submittals and drawings.

C. Anchor panels and sub-framing securely per engineering recommendations and in accordance with approved shop drawings to allow for necessary movement and structural support.

D. Fasten solid phenolic wall panels with fasteners approved for use with supporting substrate.

E. Do not install panels or component parts which are observed to be defective or damaged including, but not limited to: warped, bowed, abraded, scratched, and broken members.
   1. Damaged components are to be replaced at no cost to Owner.

F. Do not cut or trim component parts during installation in a manner that would damage the finish, decrease the strength, or result in visual imperfection or a failure in performance. Return component parts with require alteration to the shop for re-fabrication or replacement.

G. Install corner profiles and trim with fasteners appropriate for use with adjoining construction as indicated on the Contract Drawings and as recommended by manufacturer.

3.04 ADJUSTING AND CLEANING

A. Remove masking or panel protection as soon as possible after installation. Any masking intentionally left in place after panel installation on an elevation, shall become the responsibility of the General Contractor to remove.

B. Adjust final panel installation so that all joints are true and even throughout the installation. Panels out of plane shall be adjusted with the surrounding panels to minimize any imperfection.

C. Repair panels with minor damage. Remove and replace panels damaged beyond repair as a direct result of the panel installation.
   1. After installation, panel repair and replacement shall become the responsibility of the General Contractor.

D. Clean finished surfaces as recommended by panel manufacturer. After installation cleaning, cleaning during construction shall become the responsibility of the General Contractor.

END OF SECTION

SECTION 07 54 23
THERMOPLASTIC POLYOLEFIN (TPO) ROOFING

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Vapor barrier.
   2. Roof insulation.
   3. Substrate for roofing.
   4. Fully adhered thermoplastic polyolefin (TPO) roofing system.
   5. Flexible flashings.
   6. Accessory sealants.
   7. Roof walkway system.

1.02 RELATED SECTIONS

A. Section 01 33 00 - Submittal Procedures.

B. Section 01 40 00 - Quality Requirements.

C. Section 01 60 00 - Product Requirements.

D. Section 03 30 00 - Cast in Place Concrete.

1.04 SYSTEM DESCRIPTION

A. Design: Drawings are based on generic, single ply membrane roofing system.
   1. System to be fully adhered upon a composite roof deck.
   2. Selected roofing system manufacturer and installer shall provide all necessary details to ensure roofing system meets specified regulatory and performance requirements, over building structure indicated.

1.05 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings: For roofing system. Include plans, elevations, sections, details, and attachments to other Work.
   1. Base flashings and membrane terminations.
   2. Tapered insulation, including slopes.
   3. Insulation fastening patterns for corner, perimeter, and field-of-roof locations.

C. Meeting Submittals:
   1. Pre-installation meeting minutes.

D. Materials and Equipment Submittals:
   1. Shop Drawings:
      a. Prepared by roofing membrane manufacturer, indicating roof configuration, sheet layout, perimeter details and all joint details or termination conditions and conditions of interface with other materials. Assign Shop Drawings a project number or name referencing this specific project.
      b. Pre-Warranty Submittal: Submit “Sample” warranty from membrane manufacturer. Sample warranty shall include manufacturer’s warranty number, duration of warranty, name of project, address of project, and shall identify the roofing contractor and describe the roofing materials and assembly to be installed by this roofing contractor.
   2. Product Data and Installation Instructions: Indicating sheet membrane, elastic flashing, joint cover sheet, and joint and crack sealants, with temperature range for application of membrane.

E. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

F. Quality Control Submittals: Submit the following:
   1. Certification: Indicating that applicator has been factory trained and approved by membrane manufacturer to install roofing membrane.
   2. Certification: Indicating compliance with specified regulatory requirements.
      a. Submit test reports, listing cards, or other documentation showing compliance.
      b. Include wind uplift resistance in roofing system submittals. Indicate compliance with uplift performance requirements.
   3. Inspection Report: Indicating approval by membrane manufacturer's inspector.

G. Closeout Submittals:
   1. Warranty: As specified in this Section.

1.06 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Manufacturer Qualifications: Qualified manufacturer that is approved by FM Approvals for membrane roofing system identical to that used for this Project.

C. Installer Qualifications: Qualified firm, with a minimum of 5 years experience specializing in the installation of specified roofing system, which is approved, authorized, or licensed by membrane

roofing system manufacturer to install manufacturer's product and that is eligible to receive manufacturer's special warranty.

1. Installer shall be experienced in seam probe and patch activity. Include in Bid Costs to execute a complete probe of welds on roofing system and to make repairs to seam defects.
2. Maintain full-time field superintendent or foreman, with minimum of 5 years experience in all phases of installation with specified roofing system, at Project site during roofing installation.

D. Source Limitations: Obtain components, including roof insulation and fasteners, if any, for membrane roofing system from same manufacturer as membrane roofing or approved by membrane roofing manufacturer.

E. Exterior Fire-Test Exposure: ASTM E108, Class A; for application and roof slopes indicated, as determined by testing identical membrane roofing materials by qualified testing agency. Identify materials with appropriate markings of applicable testing agency.

F. Pre-Installation Meeting: Convene pre-installation meeting a minimum of 1 week prior to commencing Work of this Section.
   1. Require attendance of LTF Construction Project Manager or Superintendent, Roofing System Applicator, Technical Representative employed by Roofing System Manufacturer and other parties directly affecting Work of this Section.
   2. Meeting Notes: Roofing Contractor shall maintain minutes of meeting and shall distribute within 3 working days of the meeting to the following LTF Construction.
   3. Pre-Installation Meeting Agenda:
      a. Review of drawings and specifications for application of roofing system.
      b. Review of applicable local code requirements for roofing system.
      c. Review proposed application procedures and coordination required with other trades.
      d. Presentation of a booklet of the standard technical details from the manufacturer's Technical Manual that shall be utilized for the installation.
      e. Deviations from the Technical Manual, (i.e. approved project details, either from project Drawings or proposed by roofing contractor), that have also been approved by LTF Construction.
      f. Review of permitting process and local code requirements, where applicable.
      g. Review of Project Conditions:
         1) Tentative timetable of execution.
         2) Work Crew: expectations for the execution of the project within the timetable.
         3) Roofing contractor's superintendent: Identify individual who shall be present during the duration of the installation.
         4) Emergency Contact and 24 hour Response Number.
         5) Review of Forecasted Weather Conditions:
            (a) Roofing contractor's practice for securing and storage of product on the roof which shall prevent damage or loss of product during high winds or precipitation.
      h. Review the following with the roofing contractor:
         1) Commitment to a timely execution.
         2) Summary statement of roof quality control practices:
            (a) Routine seam sampling.
            (b) Complete and systematic probe and patch of all seam defects.
         3) Roofing contractor to identify rooftop conditions and locations where other trades are notified against abuse of roof membrane from:
            (a) Contaminants.
            (b) Smoking.
            (c) Construction debris.
         4) Review proposed changes and deviations from drawings and specifications.
      i. Review of shop drawings for perimeter edge, tie in of lower roofs to vertical walls (where specified) and other required submittals.

j. Review required inspections, contractor licensing by manufacturer, contractor history managing and executing projects of this size, and quality expectations for this application.
k. Review definition of what is an “approved deck” which shall be covered with roofing system.
l. Review perimeter wall cap elevations and lumber attachment as a suitable substrate for receiving the waterproofing perimeter flashings.
m. Review submission of Pre-Warranty Submittal as specified herein.
1) Pre-Application Inspection:
(a) Walk-through of area to receive roofing application.
(b) Agreement on condition of decking and walls as acceptable for receiving new roofing system.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver roofing materials to Project site in original containers with seals unbroken and labeled with manufacturer's name, product brand name and type, date of manufacture, approval or listing agency markings, and directions for storing and mixing with other components.

B. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by roofing system manufacturer. Protect stored liquid material from direct sunlight.
1. Discard and legally dispose of liquid material that cannot be applied within its stated shelf life.

C. Protect roof insulation materials from physical damage and from deterioration by sunlight, moisture, soiling, and other sources. Store in a dry location. Comply with insulation manufacturer's written instructions for handling, storing, and protecting during installation.

D. Handle and store roofing materials and place equipment in a manner to avoid permanent deflection of deck.

E. Roofing Contractor shall store roofing materials according to Manufacturer’s Requirements.

1.08 FIELD CONDITIONS

A. Ambient Conditions: Proceed with installation only when existing and forecasted weather conditions permit roofing system to be installed per manufacturer's written instructions and warranty requirements.

B. Ensure roof is temporarily protected from water infiltration at end of each work day. Do not install for water tight condition during construction phase.

1.09 WARRANTY

A. Special Warranty: Manufacturer's Total System Warranty, without monetary limitation, in which manufacturer agrees to repair or replace components of membrane roofing system that fail in materials or workmanship within specified warranty period.
1. Special warranty includes membrane roofing, base flashings, roof insulation, fasteners, roofing accessories, and other components of a complete membrane roofing system.
a. Include warranted wind speed rating with documentation.
2. Warranty Period: 20 years from date of Substantial Completion.
3. Certification is required with bid submittal indicating the manufacturer has reviewed and agreed to such wind coverage.
4. Pro-rated system warranties will not be accepted.
5. As a special consideration for Owner – Manufacturer shall provide an inspection at 24 months post warranty start date. Inspection request shall be initiated by Owner.

B. Include evidence of manufacturer's warranty reserve as part of Project submittals for Architect's approval.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. General Performance: Installed membrane roofing and base flashings shall withstand specified uplift pressures, thermally induced movement, and exposure to weather without failure due to defective

manufacture, fabrication, installation, or other defects in construction. Membrane roofing and base flashings shall remain watertight.

B. Structural loads by the Engineer of Record are as indicated in the Structural documents.

C. Material Compatibility: Provide roofing materials that are compatible with one another under conditions of service and application required, as demonstrated by membrane roofing manufacturer based on testing and field experience.

D. Roofing System Design: Provide membrane roofing system that is identical to systems that have been successfully tested by qualified testing and inspecting agency to resist uplift pressure calculated per ASCE 7.
   1. Structural loads shall be provided by the Engineer of Record.

E. FM Approvals Listing: Provide membrane roofing, base flashings, and component materials that comply with the following requirements:
   1. FM 4450 and FM 4470 as part of a membrane roofing system, and that are listed in FM Approvals' "RoofNav" for Class 1 or noncombustible construction, as applicable.
   2. ANSI/SPRI/FM 4435/ES-1 as part of edge performance for membrane roofing system in resistance to wind uplift.
   3. Fire/Windstorm Classification: Class 1A-90. To be verified prior to bidding.
   4. Identify materials with FM Approvals markings.

F. Warranty: Insulation supplied by membrane manufacturer to be included with roof warranty.

2.02 TPO MEMBRANE ROOFING

A. **(NOT USED)**: Mechanically Fastened Thermoplastic Polyolefin Sheet: ASTM D6878/D6878M, internally fabric or scrim reinforced, uniform, flexible TPO sheet.
   1. Basis of design: Amrize Building Envelope: Elevate UltraPly TPO, InvisiWeld System.
   2. Mechanically attached via induction welding process at steel deck roofs. See Drawings.
   3. Thickness: 60 mils (1.5 mm), nominal.
   4. Color:
      a. TPO-1: Exposed Face Color: White. (Typical)
   5. Other Acceptable Manufacturers:
      a. Carlisle SynTec Incorporated.
      b. Flex Roofing Systems.
      c. GAF Materials Corporation.
      d. Johns Manville.
      e. Mule-Hide Products Co., Inc.
      f. Versico Incorporated.

B. Fully Adhered Thermoplastic Polyolefin Sheet: ASTM D6878/D6878M, externally reinforced, uniform, flexible TPO sheet.
   1. Basis of design: Amrize Building Envelope: Elevate: Ultraply Flex SA
   2. Fully adhered at concrete or composite roof decks. See Drawings.
   3. Thickness: 60 mils (1.5 mm), nominal.
   4. Color:
      a. TPO-1: Exposed Face Color: White. (Typical)
   5. Other Acceptable Manufacturers:
      a. Carlisle SynTec Incorporated.
      b. Flex Roofing Systems.
      c. GAF Materials Corporation.
      d. Johns Manville.
      e. Mule-Hide Products Co., Inc.
      f. Versico Incorporated.

2.03 AUXILIARY MEMBRANE ROOFING MATERIALS

A. General: Auxiliary membrane roofing materials recommended by roofing system manufacturer for intended use, and compatible with membrane roofing.
   1. Liquid-type auxiliary materials shall comply with VOC limits of authorities having jurisdiction.

B. Membrane Adhesive: Manufacturer's recommended spray adhesive.
   1. Elevate Building Products: Jet Bond Spray Adhesive
   2. Or approved Equal.

C. Sheet Flashing: Manufacturer's standard unreinforced thermoplastic polyolefin sheet flashing, 55 mils (1.4 mm) thick, minimum, of same color as sheet membrane.

D. Bonding Adhesive: Manufacturer's standard.

E. Slip Sheet: Manufacturer's standard, of thickness required for application, when required by roof system manufacturer.

F. Metal Termination Bars: Manufacturer's standard, predrilled stainless-steel or aluminum bars, approximately 1 inch by 1/8 inch (25 by 3 mm) thick; with anchors.

G. Metal Battens: Manufacturer's standard, aluminum-zinc-alloy-coated or zinc-coated steel sheet, approximately 1 inch wide by 0.05 inch thick (25 mm wide by 1.3 mm thick), prepunched.

H. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM 4470, designed for fastening membrane to substrate, and acceptable to membrane roofing system manufacturer and designer of substrate.

I. Miscellaneous Accessories: Provide pourable sealers, preformed cone and vent sheet flashings, cover boards, preformed inside and outside corner sheet flashings, T-joint covers, lap sealants, termination reglets, and other accessories.

2.04 ROOF INSULATION

A. General: Preformed roof insulation boards manufactured or approved by TPO membrane roofing manufacturer, selected from manufacturer's standard sizes suitable for application, of thicknesses indicated.

B. Roof Insulation: Where indicated, provide the following types of insulation:
   1. Main Roof Field: Polyisocyanurate board insulation, ASTM C1289, felt or glass-fiber mat facer on both major surfaces. Insulation shall be provided in two layers, maximum board thickness of 2.6" inches.
      a. Manufacturers and product: Ox Engineered Products: Ox ISO Red Max Polyisocyanurate.
         1) Or approved equal.
      b. Edges: Square.
      c. Type II, Class I, Grade 2.
      d. Total System R Value: 30 min.
   2. Tapered Insulation: Provide factory-tapered insulation boards fabricated to slope of 1/4 inch per 12 inches (1:48) unless otherwise indicated.

C. Provide preformed saddles, crickets, tapered edge strips, and other insulation shapes where indicated for sloping to drain. Fabricate to slopes indicated.

2.05 INSULATION ACCESSORIES

A. General: Furnish roof insulation accessories recommended by insulation manufacturer for intended use and compatibility with membrane roofing.
   1. Cover Board: High density Insulating cover board by Manufacturer.
   2. Insulation fasteners: Specially engineered and manufactured for the induction welding process. Type and size by roofing manufacturer.

B. Applied Insulation Adhesive: Insulation manufacturer's recommended low-rise, 2-component polyurethane adhesive formulated to attach roof insulation to substrate or to another insulation layer.
   1. Elevate Building Product: ISO Twin Pack Adhesive.
   2. Or approved equal.

2.06 WALKWAYS

A. Flexible Walkways: Factory-formed, nonporous, heavy-duty, slip-resisting, surface-textured walkway pads, approximately 3/16 inch (5 mm) thick, and acceptable to membrane roofing system manufacturer.

2.07 VAPOR BARRIER

A. Provide a Class I vapor barrier as recognized by the International Building Code. Prepare substrate and install per manufacturer's published specification.
   1. Provide vapor barrier equivalent to Holcim Elevate: V-Force Vapor Barrier Membrane.

PART 3 EXECUTION

3.01 GENERAL

A. Install roofing, insulation, flashings, and accessories in accordance with roofing manufacturer's published instructions and recommendations for the specified roofing system. Where manufacturer provides no instructions or recommendations, follow good roofing practices and industry standards. Comply with federal, state, and local regulations.

B. Obtain all relevant instructions and maintain copies at project site for duration of installation period.

C. Do not start work until Pre-Installation Notice has been submitted to manufacturer as notification that this project requires a manufacturer's warranty.

D. Perform work using competent and properly equipped personnel.

E. Temporary closures, which ensure that moisture does not damage any completed section of the new roofing system, are the responsibility of the applicator. Completion of flashings, terminations, and temporary closures shall be completed as required to provide a watertight condition.

F. Install roofing membrane only when surfaces are clean, dry, smooth and free of snow or ice; do not apply roofing membrane during inclement weather or when ambient conditions will not allow proper application; consult manufacturer for recommended procedures during cold weather. Do not work with sealants and adhesives when material temperature is outside the range of 60 to 80 degrees F (15 to 25 degrees C).

G. Protect adjacent construction, property, vehicles, and persons from damage related to roofing work; repair or restore damage caused by roofing work.
   1. Protect from spills and overspray from bitumen, adhesives, sealants and coatings.
   2. Particularly protect metal, glass, plastic, and painted surfaces from bitumen, adhesives, and sealants within the range of wind-borne overspray.
   3. Protect finished areas of the roofing system from roofing related work traffic and traffic by other trades.

H. Until ready for use, keep materials in their original containers as labeled by the manufacturer.

I. Consult membrane manufacturer's instructions, container labels, and Material Safety Data Sheets (MSDS) for specific safety instructions. Keep all adhesives, sealants, primers and cleaning materials away from all sources of ignition.

J. Until ready for use, keep materials in their original containers as labeled by the manufacturer.

K. Consult membrane manufacturer's instructions, container labels, and Material Safety Data Sheets (MSDS) for specific safety instructions. Keep all adhesives, sealants, primers and cleaning materials away from all sources of ignition.

3.02 EXAMINATION

A. Examine roof deck to determine that it is sufficiently rigid to support installers and their mechanical equipment and that deflection will not strain or rupture roof components or deform deck.

B. Verify that surfaces and site conditions are ready to receive work. Correct defects in the substrate before commencing with roofing work.

C. Verify that the specifications and drawing details are workable and not in conflict with the roofing manufacturer's recommendations and instructions; start of work constitutes acceptable of project conditions and requirements.

3.03 PREPARATION

A. Take appropriate measures to ensure that fumes from adhesive solvents are not drawn into the building through air intakes.

B. Prior to proceeding, prepare roof surface so that it is clean, dry, and smooth, and free of sharp edges, fins, roughened surfaces, loose or foreign materials, oil, grease and other materials that may damage the membrane.

C. Fill all surface voids in the immediate substrate that are greater than 1/4 inch (6 mm) wide with fill material acceptable to membrane manufacturer.

D. Seal, grout, or tape deck joints, where needed, to prevent material seepage into building.

3.04 VAPOR BARRIER INSTALLATION

A. All deck/deck cover substrates (except metal decks) must be primed prior to application. Use only primer supplied by membrane manufacturer.

B. Application can be made at ambient temperatures as low as 25 °F (-4 °C) as long as membrane has been stored in a heated area so that it will be between 50 °F (10 °C) and 100 °F (38 °C) at the time of application.

C. Install insulation in a manner that will not compromise the vapor retarder integrity.

D. Install with minimum 3" (76.2 mm) side laps and 6" (152.4 mm) end laps.

E. Roll in with a 75 lb (34 kg) roller to fully mate each roll to substrate, including all lap areas.

3.05 INSULATION INSTALLATION

A. Install insulation in configuration and with attachment method(s) specified in PART 2, under Roofing System.

B. Install only as much insulation as can be covered with the completed roofing system before the end of the day's work or before the onset of inclement weather.

C. Lay roof insulation in courses parallel to roof edges.

D. Neatly and tightly fit insulation to all penetrations, projections, and nailers, with gaps not greater than 1/4 inch (6 mm). Fill gaps greater than 1/4 inch (6 mm) with acceptable insulation. Do not leave the roofing membrane unsupported over a space greater than 1/4 inch (6 mm).

E. Mechanical Fastening: Using specified fasteners and TPO coated insulation plates engage fasteners through insulation into deck to depth and in pattern required by Factory Mutual for FM Class specified in PART 2 and membrane manufacturer, whichever is more stringent.

F. Stagger insulation joints at each layer and between panels.
   1. Follow Manufacturers instructions for panel overlap.

3.06 SINGLE-PLY MEMBRANE INSTALLATION

A. Install only as much insulation as can be covered with the completed roofing system before the end of the day's work or before the onset of inclement weather.

B. Lay out the membrane pieces so that field and flashing splices are installed to shed water.

C. Install membrane without wrinkles and without gaps or fishmouths in seams; bond and test seams and laps in accordance with membrane manufacturer's instructions and details.

D. Install membrane mechanically attached to the substrate using fasteners and edge securement as specified and as required by membrane manufacturers.

E. Induction welding equipment shall be provided by others but approved for use by Manufacturer. All roofing contractors intending to use the equipment shall have successfully completed a training course provided by Manufacturer prior to installation.

1. Induction welding tool calibration: As per the tool manufacturer’s printed guidelines, perform a tool calibration with induction welding tool, making test samples in the field with the TPO membrane and InvisiWeld plate. Before welding the membrane to the plates, calibrate the energy setting of the induction device following manufacturer’s instructions. Perform a peel test, at different energy settings and set the device at the lowest energy setting that creates a 100% bond.

F. All membrane to be welded shall be clean and dry.

G. Induction welding of the membrane: Follow induction tool manufacturer’s printed guidelines. Activate the weld between the TPO membrane and InvisiWeld plate using the electromagnetic induction device as supplied by others. The induction coil, demarked by a red circle on the device, shall be positioned over the center of the InvisiWeld plate, ± 1 inch (25 mm). Cycle time will be affected by available power, use a heavy gauge power cord, at a minimum 12 gauge by 100 feet.

H. When the induction welding cycle is complete, immediately place a weighted magnetic cooling clamp over the welded TPO membrane & plate assembly. This will ensure that there is adequate clamping of the membrane to the plate during cooling, ensuring a good weld. The magnetic cooling clamp device shall be left in place for a period of 60 seconds, at minimum, while the weld cools and sets.

I. Repeat steps G and H for every plate in assembly.

J. Edge Securement: Secure membrane at all locations where membrane terminates or goes through an angle change greater than 2 in:12 inches (1:6) using mechanically fastened reinforced perimeter fastening strips, HD plates, or metal edging as indicated or as recommended by roofing manufacturer. Do not use InvisiWeld plates for edge securement.
   1. Exceptions: Round pipe penetrations less than 18 inches (460 mm) in diameter and square penetrations less than 4 inches (200 mm) square.
   2. Metal edging is not merely decorative; ensure anchorage of membrane as intended by roofing manufacturer.

3.07 FLASHING AND ACCESSORIES INSTALLATION

A. Install flashings, including laps, splices, joints, bonding, adhesion, and attachment, as required by membrane manufacturer's recommendations and details.

B. Metal Accessories: Install metal edgings, gravel stops, and copings in locations indicated on the drawings, with horizontal leg of edge member over membrane and flashing over metal onto membrane.
   1. Follow roofing manufacturer's instructions.
   2. Remove protective plastic surface film immediately before installation.
   3. Install water block sealant under the membrane anchorage leg.
   4. Flash with manufacturer's recommended flashing sheet unless otherwise indicated.
   5. Where single application of flashing will not completely cover the metal flange, install additional piece of flashing to cover the metal edge.
   6. If the roof edge includes a gravel stop and sealant is not applied between the laps in the metal edging, install an additional piece of self-adhesive flashing membrane over the metal lap to the top of the gravel stop; apply seam edge treatment at the intersections of the two flashing sections.
   7. When the roof slope is greater than 1:12, apply seam edge treatment along the back edge of the flashing.

C. Scuppers: Set in sealant and secure to structure; flash as recommended by manufacturer.

D. Roofing Expansion Joints: Install as shown on drawings and as recommended by roofing manufacturer.

E. Flashing at Walls, Curbs, and Other Vertical and Sloped Surfaces: Install weathertight flashing at all walls, curbs, parapets, curbs, skylights, and other vertical and sloped surfaces that the roofing membrane abuts to; extend flashing at least 8 inches (200 mm) high above membrane surface.
   1. Use the longest practical flashing pieces.

2. Evaluate the substrate and overlay and adjust installation procedure in accordance with membrane manufacturer's recommendations.
3. Complete the splice between flashing and the main roof sheet with specified splice adhesive before adhering flashing to the vertical surface.
4. Provide termination directly to the vertical substrate as shown on roof drawings.

F. Roof Drains:
1. Taper insulation around drain to provide smooth transition from roof surface to drain. Use specified pre-manufactured tapered insulation with facer or suitable bonding surface to achieve slope; slope not to exceed manufacturer's recommendations.
2. Position membrane, then cut a hole for roof drain to allow 1/2 to 3/4 inch (12 to 19 mm) of membrane to extend inside clamping ring past drain bolts.
3. Make round holes in membrane to align with clamping bolts; do not cut membrane back to bolt holes.
4. Apply sealant on top of drain bowl where clamping ring seats below the membrane.
5. Install roof drain clamping ring and clamping bolts; tighten clamping bolts to achieve constant compression.

G. Flashing at Penetrations: Flash all penetrations passing through the membrane; make flashing seals directly to the penetration.
1. Pipes, Round Supports, and Similar Items: Flash with specified pre-molded pipe flashings wherever practical; otherwise use specified self-curing elastomeric flashing.
2. Pipe Clusters and Unusual Shaped Penetrations: Provide penetration pocket at least 2 inches (50 mm) deep, with at least 1 inch (25 mm) clearance from penetration, sloped to shed water.
3. Structural Steel Tubing: If corner radii are greater than 1/4 inch (6 mm) and longest side of tube does not exceed 12 inches (305 mm), flash as for pipes; otherwise, provide a standard curb with flashing.
4. Flexible and Moving Penetrations: Provide weathertight gooseneck set in sealant and secured to deck, flashed as recommended by manufacturer.

3.08 FINISHING AND WALKWAY INSTALLATION

A. Install walkways at access points to the roof, around rooftop equipment that may require maintenance, and where indicated on the drawings.

B. Walkway Pads: Adhere to the roofing membrane, spacing each pad at minimum of 1.0 inch (25 mm) and maximum of 3.0 inches (75 mm) from each other to allow for drainage.
1. If installation of walkway pads over field fabricated splices or within 6 inches (150 mm) of a splice edge cannot be avoided, adhere another layer of flashing over the splice and extending beyond the walkway pad a minimum of 6 inches (150 mm) on either side.
2. Prime the membrane, remove the release paper on the pad, press in place, and walk on pad to ensure proper adhesion.

3.09 FIELD QUALITY CONTROL

A. Roof shall be inspected by inspector under the direct employment of the membrane manufacturer.

B. Seam Inspection:
1. Roof shall be inspected upon completion, or more often as requested by LTF Construction, by inspector under the direct employment of the roof membrane manufacturer.

C. Daily inspections re required to be performed by the roofing applicator.
1. Inspect welded seams after cooling or curing for continuity and integrity, using rounded, blunt end tool suitable for testing membrane which shall not damage roofing.
2. Re-inspect and fully probe completed seams at end of each workday.

3.10 PROTECTION

A. Upon completion of roofing system installation, institute appropriate procedures for protection of completed roofing during remainder of construction period until Project is turned over to the Owner.

B. Make every effort to keep workers off completed roof. Obtain prior approval from Roofing Manufacturer and LTF Construction Project Manager and provide all required membrane protection should it be necessary for workers to access and work on completed roofing membrane.

C. Remove sharp construction debris materials such as loose fasteners and plates, metal strapping, metal clips, sheet metal trimmings, conduit and pipe scrap, nails, etc. immediately and place in protective containers. Remove waste material, packaging material, and construction debris from the roof surface on a daily basis.

D. Partial and Final Inspections:
   1. Inspection: Inspection by Manufacturer: Provide and 50-percent completion and final inspection of the roofing system by a Technical Representative employed by roofing system manufacturer specifically to inspect installation for warranty purposes (i.e. not a sales person).
   2. Perform all corrections necessary for issuance of warranty.
   3. Submit confirmation of completed punchlist to LTF Construction Project Manager.

E. Repairs: Repair and replace, as required deteriorated or defective roofing found at final inspection.

F. Warranty: Warranty period shall commence with date of completion as defined in warranty of manufacturer.

END OF SECTION

SECTION 07 62 00
SHEET METAL FLASHING AND TRIM

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Prefinished cap flashings.
   2. Counter-flashing over roof membrane base flashings.
   3. Roof joint cover flashings.
   4. Counter flashing at roof mounted mechanical equipment and vent stacks.

1.02 RELATED SECTIONS

A. Section 01 33 00 - Submittal Procedures.

B. Section 01 40 00 - Quality Requirements.

C. Section 01 60 00 - Product Requirements.

D. Section 04 20 00 - Unit Masonry Assemblies.

E. Section 06 10 00 - Rough Carpentry.

F. Section 07 08 00 - Commissioning of Thermal and Moisture Protection.

G. Section 07 42 00 - Metal Wall Panels.

H. Section 07 46 33 - Phenolic Wall Siding.

I. Section 07 54 23 - Thermoplastic Polyolefin (TPO) Roofing.

J. Section 07 72 33 - Roof Hatches.

K. Section 07 92 00 - Joint Sealants.

L. Section 08 41 13 - Aluminum Framed Entrances and Storefronts.

M. Section 08 44 13 - Glazed Aluminum Storefront.

N. Section 23 74 13 - Packaged, Outdoor, Air-Handling Units.

1.03 REFERENCE STANDARDS

A. AAMA 611 - Voluntary Specification for Anodized Architectural Aluminum 2014 (2015 Errata).

B. ANSI/SPRI/FM 4435/ES-1 - Test Standard for Edge Systems Used with Low Slope Roofing Systems; 2022.

C. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process; 2023.

D. ASTM A666 - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar; 2023.

E. ASTM D226/D226M - Standard Specification for Asphalt-Saturated Organic Felt Used in Roofing and Waterproofing; 2017 (Reapproved 2023).

F. ASTM D962 - Standard Specification for Aluminum Powder and Paste Pigments for Paints; Current ed..

G. FM 1-49 - FM Global Loss Prevention Data Sheet; Current ed..

H. SMACNA (ASMM) - Architectural Sheet Metal Manual; 2012.

1.04 SYSTEM DESCRIPTION

A. Work of this Section is to physically protect related work from damage that would permit water leakage to building interior.

B. Roof perimeter flashing installations to meet requirements of FM 1-49.

1.05 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. General workmanship to comply with recommendations of Revere's "Copper and Common Sense" standards for detail and SMACNA (ASMM) architectural sheet metal manual.

C. Applicator: Company specializing in sheet metal flashing work with three years minimum experience.

1.06 SUBMITTALS

A. Material and Equipment Submittals:
   1. Shop Drawings: Describe material profile, jointing pattern, jointing details, fastening methods, and installation details.
   2. Samples: Submit 6" x 6" samples of prefinished sheet metal for color approval.

B. Certifications, test reports, and calculations showing that all roofing edge metal meet the requirements of ANSI/SPRI/FM 4435/ES-1.

C. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

D. Closeout Submittals:
   1. Warranty.

1.07 STORAGE AND HANDLING

A. Store products under provisions of Section 01 60 00 - Product Requirements.

B. Stack preformed and prefinished material to prevent twisting, bending, or abrasion, and to provide ventilation.

C. Prevent contact with materials during storage which may cause discoloration, staining, or damage.

D. Discard and replace materials that are damaged during storage or installation.

1.08 WARRANTY

A. Watertightness Warranty: Provide five (5) year warranty signed by Contractor and installer for water tightness.

B. Finish Warranty: Provide manufacturer's standard 20 year warranty covering color fade, chalking and film integrity; agreeing to replace, without additional cost, flashing which fails in materials or workmanship.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. General: Sheet metal flashing and trim assemblies shall withstand wind loads, structural movement, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Completed sheet metal flashing and trim shall not rattle, leak, or loosen, and shall remain watertight.

B. Sheet Metal Standard for Flashing and Trim: Comply with NRCA's "The NRCA Roofing Manual" and SMACNA's "Architectural Sheet Metal Manual" requirements for dimensions and profiles shown unless more stringent requirements are indicated.

C. Sheet Metal Standard for Copper: Comply with CDA's "Copper in Architecture Handbook." Conform to dimensions and profiles shown unless more stringent requirements are indicated.

D. SPRI Wind Design Standard: Manufacture and install roof edge flashings tested according to ANSI/SPRI/FM 4435/ES-1 and capable of resisting the following design pressure:
   1. Design Pressure: As indicated on Drawings.

E. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes to prevent buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
   1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

2.02 SHEET MATERIALS

A. Cap Flashings: Pre-coated galvanized steel; ASTM A653/A653M, G90; 24 gage minimum core steel, shop pre-coated with fluoropolymer coating.
   1. Firestone, Una-Clad.
   2. Peterson Aluminum Corporation, Pac-Clad.
   3. AlumaKlad/ColorKlad.
   4. Or Approved Substitution.
   5. Colors: T.B.D. - as selected and verified by Architect from the full line of available colors.

B. Non-Coated Galvanized Steel: ASTM A653/A653M, G90; 24 gage core steel.

C. Stainless Steel base flashing and drip edges: ASTM A666, Type 304 alloy, soft temper, 28 gage, (0.0156 inch) (0.40 mm) thick; smooth No. 4 - Brushed finish.

2.03 GAUGES OF SHEET METAL

A. As indicated on Drawings. Where not indicated, use galvanized steel of minimum gauges as follows:
   1. Fascias, coping, and roof 24 gauge flashing with an exposed vertical face of 8" or less.
   2. Fascias, coping, and roof 22 gauge flashing with an exposed vertical face of 8" to 10".
   3. Fascias, coping, and roof 20 gauge flashing with an exposed vertical face of 10" to 15".
   4. Hook strips and keepers: 22 gauge (Minimum one gauge heavier that the flashing is securing).
   5. Other sheet metal work: 24 gauge.

B. Provide thicker gauge of sheet metal where required to meet ANSI/SPRI/FM 4435/ES-1.

2.04 FASCIA

A. Fascia Anchor Bar and cover:
   1. Manufacturer and Product:
      a. Elevate, Anchor-Gard SP.
      b. Or approved equal.
   2. Galvanized Steel Fascia anchor bar
      a. Size: See detail
      b. Gauge: 22 or 24 Ga, according to wind requirements
   3. Cover
      a. Cover gauge and profile by Manufacturer.
      b. Cover color: Match cap flashing.
   4. Quality Requirements:
      a. Complies with IBC requirements for ANSI/SPRI/FM 4435/ES-1 testing.
      b. FM Approved for wind uplift
      c. Miami-Dade approved for High Velocity Hurricane Zone of the Florida Building Code.

2.05 ACCESSORIES

A. Fastener: Galvanized steel or stainless steel with soft neoprene washers at exposed fasteners. Finish exposed fasteners same as flashing metal.

B. Underlayment: ASTM D226/D226M; No.15 asphalt saturated roofing felt.

C. Protective Backing Paint: Bituminous.

D. Slip Sheet: Rosin sized building paper.

E. Sealant: SLNT-1, as specified in Section 07 92 00 - Joint Sealers.

F. Bedding Compound: Type compatible with materials with which it will come in contact.

G. Plastic Cement: Type compatible with materials with which it will come in contact.

H. Ice and Water Protection: Sheet membrane of rubberized asphalt bonded to sheet polyethylene with strippable release paper protecting rubberized asphalt side of membrane; 40 mil total membrane thickness; 36" wide. To be installed in all roof valleys and as starter strip 42” from bottom edge of roof. Unless other stated in manufactures recommended installation guidelines.
   1. GCP Vycor v40.
   2. Carlisle, WIP 300 HT.
   3. Or approved substitution.

I. Aluminum Foil Separation Tape: Where sheet membrane flashing comes in contact with incompatible material. See details, manufacturer's recommendations.
   1. 3M Venture Tape; Building Facing Tape.
   2. Or approved substitution.

2.06 FABRICATION

A. Form sections true to shape, accurate in size, square, and free from distortion or defects.

B. Fabricate cleats and starter strips of same material as sheet, interlockable with sheet.

C. Form pieces in longest practical lengths; minimum 12 feet.

D. Hem exposed edges on underside 1/2 inch; miter and seam corners. Use release tape, un-cored membrane and metal cover plate for seam construction.
   1. Base flashing and drip edges adjacent to exterior walking, seating or play areas shall have preformed corners without exposed sharp edges.

E. Form material with cover plate seam. Use release tape, un-cored membrane and metal cover plate for seam construction.

F. Fabricate corners from one piece with minimum 18 inch long legs; seam for rigidity, seal with sealant. Use release tape, un-cored membrane and metal cover plate for seam construction.

G. Fabricate vertical faces with bottom edge formed outward 1/4" and hemmed to form drip.

H. Form sheet metal pans 6 inch nominal square size, seal all seams in flashing watertight. Use Roof Membrane coated metal if required by roof system manufacture with 3 inch upstand, and 4 inch flanges. Fill pans watertight with pourable sealer.

2.07 FINISH

A. Typical Surfaces:
   1. Shop prepare and prime exposed ferrous metal surfaces.
   2. Back paint concealed metal surfaces with protective backing paint to a minimum dry film thickness of 15 mil.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, substrate, and other conditions affecting performance of the Work.
   1. Verify compliance with requirements for installation tolerances of substrates.
   2. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored.
   3. Verify roof openings, curbs, pipes, sleeves, ducts, or vents through roof are solidly set, cant strips and reglets in place, and nailing strips located.
   4. Verify membrane termination and base flashings are in place, sealed, and secure.
   5. Verify that air- or water-resistant barriers have been installed over sheathing or backing substrate to prevent air infiltration or water penetration.

B. Proceed with installation only after unsatisfactory conditions have been corrected.
   1. Beginning of installation means acceptance of existing conditions.

3.02 PREPARATION

A. Field measure site conditions prior to fabricating work.

B. Install starter and edge strips, and cleats before starting installation.

C. Install surface mounted reglets true to lines and levels. Seal top of reglets with sealant.

D. Insert flashings into reglets to form tight fit. Secure in place with lead or plastic wedges at maximum 24 inches on center. Seal flashings into reglets with sealant.

E. Secure flashings in place using concealed fasteners. Use exposed fasteners only in locations approved by Architect.

F. Seam and seal all joints. Use release tape, un-cored membrane and metal cover plate for seam construction.

G. Fit flashings tight in place. Make corners square, surfaces true and straight in planes, and lines accurate to profiles.

H. Seal metal joints watertight. Use release tape, un-cored membrane and metal cover plate for seam construction.

3.03 UNDERLAYMENT INSTALLATION

A. Self-Adhering Sheet Underlayment: Install self-adhering sheet underlayment, wrinkle free. Prime substrate if recommended by underlayment manufacturer. Comply with temperature restrictions of underlayment manufacturer for installation; use primer for installing underlayment at low temperatures. Apply in shingle fashion to shed water, with end laps of not less than 6 inches staggered 24 inches between courses. Overlap side edges not less than 3-1/2 inches. Roll laps and edges with roller. Cover underlayment within 14 days.

B. Apply slip sheet, wrinkle free, directly on substrate before installing sheet metal flashing and trim.

3.04 INSTALLATION, GENERAL

A. General: Anchor sheet metal flashing and trim and other components of the Work securely in place, with provisions for thermal and structural movement. Use fasteners, solder, protective coatings, separators, sealants, and other miscellaneous items as required to complete sheet metal flashing and trim system.
   1. Install sheet metal flashing and trim true to line, levels, and slopes. Provide uniform, neat seams with minimum exposure of solder, welds, and sealant.
   2. Install sheet metal flashing and trim to fit substrates and to result in watertight performance. Verify shapes and dimensions of surfaces to be covered before fabricating sheet metal.
   3. Space cleats not more than 12 inches apart. Attach each cleat with at least two fasteners. Bend tabs over fasteners.
   4. Install exposed sheet metal flashing and trim with limited oil canning, and free of buckling and tool marks.
   5. Torch cutting of sheet metal flashing and trim is not permitted.
   6. Do not use graphite pencils to mark metal surfaces.
   7. Conform to drawing details included in SMACNA Architectural Sheet Metal manual and the 8th edition of Copper and Common Sense (by Revere).

B. Metal Protection: Where dissimilar metals contact each other, or where metal contacts pressure-treated wood or other corrosive substrates, protect against galvanic action or corrosion by painting contact surfaces with bituminous coating or by other permanent separation as recommended by sheet metal manufacturer or cited sheet metal standard.
   1. Coat concealed side of stainless-steel sheet metal flashing and trim with bituminous coating where flashing and trim contact wood, ferrous metal, or cementitious construction.
   2. Underlayment: Where installing sheet metal flashing and trim directly on cementitious or wood substrates, install underlayment and cover with slip sheet.

C. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at maximum of 10 feet with no joints within 24 inches of corner or intersection.
   1. Form expansion joints of intermeshing hooked flanges, not less than 1 inch deep, filled with sealant concealed within joints.
   2. Use lapped expansion joints only where indicated on Drawings.

D. Fasteners: Use fastener sizes that penetrate wood blocking or sheathing not less than 1-1/4 inches for nails and not less than 3/4 inch for wood screws.

E. Conceal fasteners and expansion provisions where possible in exposed work and locate to minimize possibility of leakage. Cover and seal fasteners and anchors as required for a tight installation.

F. Seal joints as required for watertight construction.
   1. Use sealant-filled joints unless otherwise indicated. Embed hooked flanges of joint members not less than 1 inch into sealant. Form joints to completely conceal sealant. When ambient temperature at time of installation is between 40 and 70 deg F, set joint members for 50 percent movement each way. Adjust setting proportionately for installation at higher ambient temperatures. Do not install sealant-type joints at temperatures below 40 deg F.
   2. Prepare joints and apply sealants to comply with requirements in Section 07 92 00 "Joint Sealants."

G. Soldered Joints: Clean surfaces to be soldered, removing oils and foreign matter. Pre-tin edges of sheets with solder to width of 1-1/2 inches; however, reduce pre-tinning where pre-tinned surface would show in completed Work.
   1. Do not solder metallic-coated steel sheet.
   2. Do not pre-tin zinc-tin alloy-coated stainless steel.
   3. Do not use torches for soldering.
   4. Heat surfaces to receive solder, and flow solder into joint. Fill joint completely. Completely remove flux and spatter from exposed surfaces.
   5. Stainless-Steel Soldering: Tin edges of uncoated sheets, using solder for stainless steel and acid flux. Promptly remove acid flux residue from metal after tinning and soldering. Comply with solder manufacturer's recommended methods for cleaning and neutralization.

H. Rivets: Rivet joints in zinc where necessary for strength.

3.05 ROOF-DRAINAGE SYSTEM INSTALLATION

A. General: Install sheet metal roof-drainage items to produce complete roof-drainage system according to cited sheet metal standard unless otherwise indicated. Coordinate installation of roof perimeter flashing with installation of roof-drainage system.

B. Conductor Heads: Anchor securely to wall, with elevation of conductor head rim at minimum of 1 inch below gutter discharge.

C. Expansion-Joint Covers: Install expansion-joint covers at locations and of configuration indicated. Lap joints minimum of 4 inches in direction of water flow.

3.06 ROOF FLASHING INSTALLATION

A. General: Install sheet metal flashing and trim to comply with performance requirements, sheet metal manufacturer's written installation instructions, and cited sheet metal standard. Provide concealed fasteners where possible, and set units true to line, levels, and slopes. Install work with laps, joints, and seams that are permanently watertight and weather resistant.

B. Fascia installation:
   1. Install Fascia Anchor bar and cover according to Manufacturer’s instructions.
   2. Do not penetrate roof membrane on horizontal surfaces.
   3. Protect Roof membrane during installation.
   4. Coordinate installation with the work of other Trades.

C. Roof Edge Flashing: Anchor to resist uplift and outward forces according to recommendations in FM Global Property Loss Prevention Data Sheet 1-49 for FM Approvals' listing for required windstorm classification.

D. Copings: Anchor to resist uplift and outward forces according to recommendations in FM Global Property Loss Prevention Data Sheet 1-49 for specified FM Approvals' listing for required windstorm classification.

E. Pipe or Post Counterflashing: Install counterflashing umbrella with close-fitting collar with top edge flared for elastomeric sealant, extending minimum of 4 inches over base flashing. Install stainless-steel draw band and tighten.

F. Counterflashing: Coordinate installation of counterflashing with installation of base flashing. Insert counterflashing in reglets or receivers and fit tightly to base flashing. Extend counterflashing 4 inches over base flashing. Lap counterflashing joints minimum of 4 inches. Secure in waterproof manner by means of interlocking folded seam or blind rivets and sealant, anchor and washer at 36-inch centers unless otherwise indicated.

G. Roof-Penetration Flashing: Coordinate installation of roof-penetration flashing with installation of roofing and other items penetrating roof. Seal with elastomeric sealant and clamp flashing to pipes that penetrate roof.

3.07 WALL FLASHING INSTALLATION

A. General: Install sheet metal wall flashing to intercept and exclude penetrating moisture according to cited sheet metal standard unless otherwise indicated. Coordinate installation of wall flashing with installation of wall-opening components such as windows, doors, and louvers.

B. Through-Wall Flashing: Installation of through-wall flashing is specified in Section 04 20 00 "Unit Masonry."

C. Opening Flashings in Frame Construction: Install continuous head, sill, jamb, and similar flashings to extend 4 inches beyond wall openings.

3.08 MISCELLANEOUS FLASHING INSTALLATION

A. Equipment Support Flashing: Coordinate installation of equipment support flashing with installation of roofing and equipment. Weld or seal flashing with elastomeric sealant to equipment support member.

B. Overhead-Piping Safety Pans: Suspend pans from structure above, independent of other overhead items such as equipment, piping, and conduit, unless otherwise indicated on Drawings. Pipe and install drain line to plumbing waste or drainage system.

3.09 ERECTION TOLERANCES

A. Installation Tolerances: Shim and align sheet metal flashing and trim within installed tolerance of 1/4 inch in 20 feet on slope and location lines indicated on Drawings and within 1/8-inch offset of adjoining faces and of alignment of matching profiles.

3.10 CLEANING AND PROTECTION

A. Clean exposed metal surfaces of substances that interfere with uniform oxidation and weathering.

B. Clean and neutralize flux materials. Clean off excess solder.

C. Clean off excess sealants.

D. Remove temporary protective coverings and strippable films as sheet metal flashing and trim are installed unless otherwise indicated in manufacturer's written installation instructions. On completion of sheet metal flashing and trim installation, remove unused materials and clean finished surfaces as recommended by sheet metal flashing and trim manufacturer. Maintain sheet metal flashing and trim in clean condition during construction.

E. Replace sheet metal flashing and trim that have been damaged or that have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

SECTION 07 72 33
ROOF HATCHES

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Prefabricated roof hatches with integral support curbs, operable hardware, and counter-flashing.
   2. Roof hatch railing system.

1.02 RELATED REQUIREMENTS

A. Section 01 33 00 - Submittal Procedures.

B. Section 01 40 00 - Quality Requirements.

C. Section 01 45 33 - Code-Required Special Inspections and Procedures.

D. Section 01 60 00 - Product Requirements.

E. Section 06 10 00 - Rough Carpentry.

F. Section 07 54 23 - Thermoplastic Polyolefin Roofing.

G. Section 07 62 00 - Sheet Metal Flashing and Trim.

H. Section 07 92 00 - Joint Sealants.

1.03 REFERENCE STANDARDS

A. 29 CFR 1910.23 - Ladders; Current Edition.

B. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware; 2023.

C. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process; 2023.

D. ASTM A780/A780M - Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings; 2020.

E. ASTM B209/B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate; 2021a.

F. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes; 2021.

G. ASTM B221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes (Metric); 2021.

H. ASTM C920 - Standard Specification for Elastomeric Joint Sealants; 2018.

I. ASTM C1311 - Standard Specification for Solvent Release Sealants; 2022.

J. ASTM D4397 - Standard Specification for Polyethylene Sheeting for Construction, Industrial, and Agricultural Applications; 2016 (Reapproved 2023).

K. ASTM D4586/D4586M - Standard Specification for Asphalt Roof Cement, Asbestos-Free; 2007 (Reapproved 2018).

L. ASTM F2329/F2329M - Standard Specification for Zinc Coating, Hot-Dip, Requirements for Application to Carbon and Alloy Steel Bolts, Screws, Washers, Nuts, and Special Threaded Fasteners; Current edition.

M. NAAMM AMP 500-06 - Metal Finishes Manual; 2006.

1.04 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00.

1.05 SUBMITTALS

A. Product Data: For each type of roof accessory indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.

B. Shop Drawings: For roof accessories. Include plans, elevations, keyed details, and attachments to other Work. Indicate dimensions, loadings, and special conditions. Distinguish between plant- and field-assembled Work.

C. Pre-Warranty Submittal: Submit “Sample” warranty from membrane manufacturer. Sample warranty shall include manufacturer’s warranty number, duration of warranty, name of project, address of project, and shall identify the roofing contractor and describe the materials and assembly to be installed by this contractor.

D. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

E. Operations and Maintenance: Submit Operation and Maintenance information as specified in 01 77 00 Closeout Procedures.

PART 2 PRODUCTS

2.01 PERFORMANCE CRITERIA

A. Performance Requirements:
   1. General Performance: Roof accessories shall withstand exposure to weather and resist thermally induced movement without failure, rattling, leaking, or fastener disengagement due to defective manufacture, fabrication, installation, or other defects in construction.
   2. U-Value: 0.75 or less per 2021 IECC.

2.02 METAL MATERIALS

A. Zinc-Coated (Galvanized) Steel Sheet: ASTM A653/A653M, G90 (Z275) coating designation.
   1. Factory Prime Coating: Where field painting is indicated, apply pretreatment and white or light-colored, factory-applied, baked-on epoxy primer coat, with a minimum dry film thickness of 0.2 mil (0.005 mm).

B. Aluminum Sheet: ASTM B209/B209M, manufacturer's standard alloy for finish required, with temper to suit forming operations and performance required.
   1. Mill Finish: As manufactured.
   2. Concealed Finish: Pretreat with manufacturer's standard white or light-colored acrylic or polyester-backer finish consisting of prime coat and wash coat, with a minimum total dry film thickness of 0.5 mil (0.013 mm).

C. Aluminum Extrusions and Tubes: ASTM B221 (ASTM B221M), manufacturer's standard alloy and temper for type of use, finished to match assembly where used, otherwise mill finished.

2.03 MISCELLANEOUS MATERIALS

A. General: Provide materials and types of fasteners, protective coatings, sealants, and other miscellaneous items required by manufacturer for a complete installation.

B. Wood Nailers: Softwood lumber, pressure treated with waterborne preservatives for aboveground use, acceptable to authorities having jurisdiction, containing no arsenic or chromium, and complying with AWPA C2; not less than 1-1/2 inches (38 mm) thick.

C. Underlayment:
   1. Polyethylene Sheet: 6 mil (0.15 mm) thick polyethylene sheet complying with ASTM D4397.

D. Fasteners: Roof accessory manufacturer's recommended fasteners suitable for application and metals being fastened. Match finish of exposed fasteners with finish of material being fastened. Provide nonremovable fastener heads to exterior exposed fasteners. Furnish the following unless otherwise indicated:

1. Fasteners for Zinc-Coated or Aluminum-Zinc Alloy-Coated Steel: Series 300 stainless steel or hot-dip zinc-coated steel per ASTM A153/A153M or ASTM F2329/F2329M.
2. Fasteners for Aluminum Sheet: Aluminum or Series 300 stainless steel.

E. Gaskets: Manufacturer's standard tubular or fingered design of neoprene, EPDM, PVC, or silicone or a flat design of foam rubber, sponge neoprene, or cork.

F. Elastomeric Sealant: ASTM C920, elastomeric polymer sealant as recommended by roof accessory manufacturer for installation indicated; low modulus; of type, grade, class, and use classifications required to seal joints and remain watertight.

G. Butyl Sealant: ASTM C1311, single-component, solvent-release butyl rubber sealant; polyisobutylene plasticized; heavy bodied for expansion joints with limited movement.

H. Asphalt Roofing Cement: ASTM D4586/D4586M, asbestos free, of consistency required for application.

2.04 ROOF HATCH

A. Roof Hatches: Metal roof-hatch units with lids and insulated double-walled curbs, welded or mechanically fastened and sealed corner joints, continuous lid-to-curb counterflashing and weathertight perimeter gasketing, stepped integral metal cant raised the thickness of roof insulation, and integrally formed deck-mounting flange at perimeter bottom.
1. Acceptable Products: Subject to compliance with requirements, provide 1 of the following specified products:
a. Babcock-Davis: BRHU.
b. Bilco Company (The): Type L Roof Hatch.
c. Milcor Inc.: Model No. RCS-3.

B. Type and Size: Single-leaf lid, 30 by 96 inches (762 by 2438 mm) at main roof; single-leaf lid, 36 by 30 inches at Bistro

C. Loads: Minimum 40 pound-force per square foot (1.9 kPa) external live load and 20 pound-force per square foot (0.95 kPa) internal uplift load.

D. Curb Material: Zinc-coated (galvanized) steel sheet, 0.079 inch (2.01 mm) (14 gage) thick.
1. Finish: Mill phosphatized.

E. Cover and Liner: 0.090 inch (2.3 mm) (11 gage) thick aluminum cover with 1 inch (25 mm) thick rigid fiberboard insulation and 0.040 inch (1.02 mm) (18 gage) thick aluminum cover liner.
1. Finish: Mill.

F. Construction:
1. Insulation: Manufacturer's rigid board.
2. Hatch Lid: Opaque, insulated, and double walled, with manufacturer's standard metal liner of same material and finish as outer metal lid.
3. Curb Liner: Manufacturer's standard, of same material and finish as metal curb.
4. On ribbed or fluted metal roofs, form flange at perimeter bottom to conform to roof profile.
5. Fabricate curbs to minimum height of 12 inches (305 mm) unless otherwise indicated.

G. Hardware: Galvanized Stainless-steel spring latch with turn handles, butt- or pintle-type hinge system, and padlock hasps inside and outside.
1. Provide 2-point latch on lids larger than 84 inches (2134 mm).

2.05 ROOF HATCH RAIL SYSTEM

A. Furnish and install hatch rail system at all roof hatches shown on plans. The hatch rail system shall be field assembled and installed per the manufacturer’s instructions.

B. Performance characteristics:
1. High visibility safety yellow color shall be molded in.
2. Hatch rail system shall attach to the capflashing of the roof hatch and shall not penetrate any roofing material.

3. Hatch rail system shall satisfy the requirements of OSHA 29 CFR 1910.23 and shall meet OSHA strength requirements with a factor of safety of two.
4. UV and corrosion resistant construction with a twenty-five year warranty.
5. Self-closing gate shall be provided with hatch rail system.
6. Posts and Rails: Shall be round pultruded reinforced fire retardant yellow fiberglass treated with a UV inhibitor.

C. Hardware: Mounting brackets shall be ¼" thick hot dip galvanized steel. Hinges and post guides shall be 6063T5 aluminum. Fasteners shall be Type 316 stainless steel.

2.06 GENERAL FINISH REQUIREMENTS

A. Comply with NAAMM AMP 500-06 "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within range of approved Samples and are assembled or installed to minimize contrast.

PART 3 EXECUTION

3.01 INSTALLATION

A. General: Install roof accessories per manufacturer's written instructions.
1. Install roof accessories level, plumb, true to line and elevation, and without warping, jogs in alignment, excessive oil canning, buckling, or tool marks.
2. Anchor roof accessories securely in place so they are capable of resisting indicated loads.
3. Use fasteners, separators, sealants, and other miscellaneous items as required to complete installation of roof accessories and fit them to substrates.
4. Install roof accessories to resist exposure to weather without failing, rattling, leaking, or loosening of fasteners and seals.

B. Metal Protection: Protect metals against galvanic action by separating dissimilar metals from contact with each other or with corrosive substrates by painting contact surfaces with bituminous coating or by other permanent separation as recommended by manufacturer.
1. Coat concealed side of uncoated aluminum roof accessories with bituminous coating where in contact with wood, ferrous metal, or cementitious construction.
2. Underlayment: Where installing roof accessories directly on cementitious or wood substrates, install a course of felt underlayment and cover with a slip sheet, or install a course of polyethylene sheet.
3. Bed flanges in thick coat of asphalt roofing cement where required by manufacturers of roof accessories for waterproof performance.

C. Roof-Hatch Installation:
1. Install roof hatch so top surface of hatch curb is level.
2. Verify that roof hatch operates properly. Clean, lubricate, and adjust operating mechanism and hardware.
3. Attach safety railing system to roof-hatch curb.
4. Coordinated with installation of roof assembly installation to provide a continuous air/ vapor/ water/ thermal protection.

D. Seal joints with sealant as required by roof accessory manufacturer.

3.02 REPAIR AND CLEANING

A. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing per ASTM A780/A780M.

B. Clean exposed surfaces per manufacturer's written instructions.

C. Clean off excess sealants.

D. Replace roof accessories that have been damaged or that cannot be successfully repaired by finish touchup or similar minor repair procedures.

END OF SECTION

SECTION 07 81 00
APPLIED FIREPROOFING

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Sprayed fire-resistive materials (SFRM).
   2. Thermal Barrier for installation at closed-cell spray foam insulation not directly covered by gypsum board.

1.02 RELATED SECTIONS

A. Section 01 33 00 - Submittal Procedures.

B. Section 01 40 00 - Quality Requirements.

C. Section 01 45 33 - Code-Required Special Inspections and Procedures.

D. Section 01 60 00 - Product Requirements.

E. Section 05 12 00 - Structural Steel Framing

F. Section 05 31 00 - Steel Decking

G. Section 05 40 00 - Cold-Formed Metal Framing

H. Section 07 21 00 - Thermal Insulation.

I. Section 07 81 60 - Intumescent Fireproofing.

J. Section 07 84 00 - Firestopping.

1.03 REFERENCE STANDARDS

A. ASTM D3273 - Standard Test Method for Resistance to Growth of Mold on the Surface of Interior Coatings in an Environmental Chamber; 2021.

B. ASTM D3274 - Standard Test Method for Evaluating Degree of Surface Disfigurement of Paint Films by Fungal or Algal Growth, or Soil and Dirt Accumulation; Current Edition, Including All Revisions.

C. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2023d.

D. ASTM E119 - Standard Test Methods for Fire Tests of Building Construction and Materials; 2022.

E. ASTM E136 - Standard Test Method for Assessing Combustibility of Materials Using a Vertical Tube Furnace at 750 Degrees C; 2024.

F. ASTM E605/E605M - Standard Test Methods for Thickness and Density of Sprayed Fire-Resistive Material (SFRM) Applied to Structural Members; 2019 (Reapproved 2023).

G. ASTM E736/E736M - Standard Test Method for Cohesion/Adhesion of Sprayed Fire-Resistive Materials Applied to Structural Members; 2019 (Reapproved 2023).

H. ASTM E759/E759M - Standard Test Method for Effect of Deflection on Sprayed Fire-Resistive Material Applied to Structural Members; 1992 (Reapproved 2023).

I. ASTM E760/E760M - Standard Test Method for Effect of Impact on Bonding of Sprayed Fire-Resistive Material Applied to Structural Members; 1992 (Reapproved 2023).

J. ASTM E761/E761M - Standard Test Method for Compressive Strength of Sprayed Fire-Resistive Material Applied to Structural Members; 1992 (Reapproved 2023).

K. ASTM E859/E859M - Standard Test Method for Air Erosion of Sprayed Fire-Resistive Materials (SFRMs) Applied to Structural Members; 2023.

L. ASTM E937/E937M - Standard Test Method for Corrosion of Steel by Sprayed Fire-Resistive Material (SFRM) Applied to Structural Members; 1993 (Reapproved 2023).

M. ASTM G21 - Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi; 2015, with Editorial Revision (2021).

N. ICC (IBC) - International Building Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

O. ICC-ES AC23 - Sprayed Fire-resistant Materials (SFRMs), Intumescent Fire-resistant Coatings and Mastic Fire-resistant Coatings Used to Protect Structural Steel Members; Current Edition, Including All Revisions.

P. UL 263 - Standard for Fire Tests of Building Construction and Materials; Current Edition, Including All Revisions.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Pre-Installation Meetings: Conduct meeting at Project site to comply with requirements in Section 01 31 00 – Project Management and Coordination.
   1. Review methods and procedures related to SFRM.
   2. Review products, design ratings, restrained and unrestrained conditions, densities, thicknesses, bond strengths, and other performance requirements.

1.05 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: Framing plans, schedules, or both, indicating the following:
   1. Extent of fireproofing for each construction and fire-resistance rating.
   2. Applicable fire-resistance design designations of a qualified testing and inspecting agency acceptable to authorities having jurisdiction.
   3. Minimum fireproofing thicknesses needed to achieve required fire-resistance rating of each structural component and assembly.
   4. Treatment of fireproofing after application.

1.06 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Product Certificates: For each type of fireproofing.
   1. Provide fire-rated assembly ratings to UL Design Nos. as shown on Drawings.

C. Evaluation Reports: For fireproofing, from ICC-ES AC23.

D. Preconstruction Test Reports: For fireproofing.

E. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

F. Field quality-control reports.

G. Perform and submit reports of Code Required Special Inspections as required in Section 01 45 33.

1.07 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Installer Qualifications: A firm or individual certified, licensed, or otherwise qualified by fireproofing manufacturer as experienced and with sufficient trained staff to install manufacturer's products per specified requirements.

1.08 PRECONSTRUCTION TESTING

A. Preconstruction Testing Service: Owner will engage qualified testing agency to perform preconstruction testing on field mock-ups of fireproofing.
   1. Provide test specimens and assemblies representative of proposed materials and construction.

B. Preconstruction Adhesion and Compatibility Testing: Test for compliance with requirements for specified performance and test methods.

1. Bond Strength: Test for cohesive and adhesive strength per ASTM E736/E736M. Provide bond strength indicated in referenced fire-resistance design, but not less than minimum specified in Part 2.
2. Density: Test for density per ASTM E605/E605M. Provide density indicated in referenced fire-resistance design, but not less than minimum specified in Part 2.
3. Verify that manufacturer, through its own laboratory testing or field experience, attests that primers or coatings are compatible with fireproofing.
4. Schedule sufficient time for testing and analyzing results to prevent delaying Work.
5. For materials failing tests, obtain applied-fireproofing manufacturer's written instructions for corrective measures including use of specially formulated bonding agents or primers.

1.09 FIELD CONDITIONS

A. Environmental Limitations: Do not apply fireproofing when ambient or substrate temperature is 44 degrees F (7 degrees C) or lower unless temporary protection and heat are provided to maintain temperature at or above this level for 24 hours before, during, and for 24 hours after product application.

B. Ventilation: Ventilate building spaces during and after application of fireproofing, providing complete air exchanges per manufacturer's written instructions. Use natural means or, if they are inadequate, forced-air circulation until fireproofing dries thoroughly.

PART 2 PRODUCTS

2.01 MATERIALS, GENERAL

A. Assemblies: Provide fireproofing, including auxiliary materials, per requirements of each fire-resistance design and manufacturer's written instructions.

B. Source Limitations: Obtain fireproofing for each fire-resistance design from single source.

C. Fire-Resistance Design: Indicated on Drawings, tested per ASTM E119 or UL 263 by qualified testing agency. Identify products with appropriate markings of applicable testing agency.
1. Steel members are to be considered unrestrained unless specifically noted otherwise.

D. VOC Content: Products shall comply with VOC content limits of authorities having jurisdiction.

E. Asbestos: Provide products containing no detectable asbestos.

2.02 SPRAYED FIRE-RESISTIVE MATERIALS

A. SFRM: Manufacturer's standard, factory-mixed, lightweight, dry formulation, complying with indicated fire-resistance design, and mixed with water at Project site to form a slurry or mortar before conveyance and application or conveyed in a dry state and mixed with atomized water at place of application.

B. Low Density, Concealed/Commercial SFRMs:
1. Products: Subject to compliance with requirements, provide one of the following:
   a. Carboline Company, subsidiary of RPM International, Fireproofing Products Div.: Pyrolite 15 High Yield.
   b. Grace, W. R. & Co. - Conn.; Grace Construction Products: Monokote MK-6 Series.
   c. Isolatek International: Cafco Blaze-Shield II, Cafco 300.
   d. Southwest Fireproofing Products Co.: Type 5GP. Southwest is a Carboline Co.
   e. Or approved equal.
2. Physical Properties:
   a. Bond Strength: Minimum 150-lbf/sq. ft. (7.18-kPa) (20.59-kPa) (47.88-kPa), cohesive and adhesive strength based on field testing according to ASTM E 736.
   b. Density: Not less than 15 lb/cu. ft. and as specified in the approved fire-resistance design, per ASTM E605/E605M.
   c. Thickness: As required for fire-resistance design indicated, measured per requirements of fire-resistance design or ASTM E605/E605M, whichever is thicker, but not less than 0.375 inch (9 mm).

d. Combustion Characteristics: When tested in accordance with ASTM E136 shall be noncombustible.
e. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
1) Flame-Spread Index: 10 or less.
2) Smoke-Developed Index: 10 or less.
f. Compressive Strength: When tested in accordance with ASTM E761/E761M, the material shall not deform more than 10 percent when subjected to a crushing force of 1,440 psf.
g. Corrosion Resistance: No evidence of corrosion per ASTM E937/E937M.
h. Deflection: No cracking, spalling, or delamination per ASTM E759/E759M.
i. Effect of Impact on Bonding: No cracking, spalling, or delamination per ASTM ASTM E760/E760M.
j. Air Erosion: Maximum weight loss of 0.025 grams per square foot (0.270 g/sq. m) in 24 hours per ASTM E859/E859M.
k. Fungal Resistance: Treat products with manufacturer's standard antimicrobial formulation to result in no growth on specimens per ASTM G21 or rating of 10 per ASTM D3274 when tested per ASTM D3273.

C. Medium Density SFRMs.
1. Products: Subject to compliance with requirements, provide one of the following:
a. Isolatek International: Cafco 400.
b. Grace, W. R. & Co. - Conn.; Grace Construction Products: MonoKote Z-106/G.
c. Southwest Fireproofing Products Co.: Type 7GP.
d. Or approved equal.
2. Physical Properties:
a. Bond Strength: Minimum 430-lbf/sq. ft. (7.18-kPa) (20.59-kPa) (47.88-kPa), cohesive and adhesive strength based on field testing according to ASTM E 736.
b. Density: Not less than 22 lb/cu. ft. and as specified in the approved fire-resistance design, per ASTM E605/E605M.
c. Thickness: As required for fire-resistance design indicated, measured per requirements of fire-resistance design or ASTM E605/E605M, whichever is thicker, but not less than 0.375 inch (9 mm).
d. Combustion Characteristics: ASTM E136.
e. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
1) Flame-Spread Index: 10 or less.
2) Smoke-Developed Index: 10 or less.
f. Compressive Strength: When tested in accordance with ASTM E761/E761M, the material shall not deform more than 10 percent when subjected to a crushing force of 7,344 psf.
g. Corrosion Resistance: No evidence of corrosion per ASTM E937/E937M.
h. Deflection: No cracking, spalling, or delamination per ASTM E759/E759M.
i. Effect of Impact on Bonding: No cracking, spalling, or delamination per ASTM E760/E760M.
j. Air Erosion: Maximum weight loss of 0.025 grams per square foot (0.270 g/sq. m) in 24 hours per ASTM E859/E859M.
k. Fungal Resistance: Treat products with manufacturer's standard antimicrobial formulation to result in no growth on specimens per ASTM G21 or rating of 10 per ASTM D3274 when tested per ASTM D3273.

D. Medium Density, Moisture Resistant SFRMs.
1. Products: Subject to compliance with requirements, provide one of the following:
a. Isolatek International: Blaze-Shield HP.
b. Grace, W. R. & Co. - Conn.; Grace Construction Products: MonoKote Z-106HY.
c. Southwest Fireproofing Products Co.: Type 7HD.
d. Or approved equal.
2. Physical Properties:

a. Bond Strength: Minimum 430-lbf/sq. ft. (7.18-kPa) (20.59-kPa) (47.88-kPa), cohesive and adhesive strength based on field testing according to ASTM E736/E736M.
b. Density: Not less than 22 lb/cu. ft. and as specified in the approved fire-resistance design, per ASTM E605/E605M.
c. Thickness: As required for fire-resistance design indicated, measured per requirements of fire-resistance design or ASTM E605/E605M, whichever is thicker, but not less than 0.375 inch (9 mm).
d. Combustion Characteristics: ASTM E136.
e. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
    1) Flame-Spread Index: 10 or less.
    2) Smoke-Developed Index: 10 or less.
f. Compressive Strength: When tested in accordance with ASTM E761/E761M, the material shall not deform more than 10 percent when subjected to a crushing force of 7,344 psf.
g. Corrosion Resistance: No evidence of corrosion per ASTM E937/E937M.
h. Deflection: No cracking, spalling, or delamination per ASTM E759/E759M.
i. Effect of Impact on Bonding: No cracking, spalling, or delamination per ASTM E760/E760M.
j. Air Erosion: Maximum weight loss of 0.025 grams per square foot (0.270 g/sq. m) in 24 hours per ASTM E859/E859M.
k. Fungal Resistance: Treat products with manufacturer's standard antimicrobial formulation to result in no growth on specimens per ASTM G21 or rating of 10 per ASTM D3274 when tested per ASTM D3273.

2.03 AUXILIARY MATERIALS

A. General: Provide auxiliary materials that are compatible with fireproofing and substrates and are approved by UL or another testing and inspecting agency acceptable to authorities having jurisdiction for use in fire-resistance designs indicated.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for substrates and other conditions affecting performance of Work and per each fire-resistance design. Verify compliance with the following:
    1. Substrates are free of dirt, oil, grease, release agents, rolling compounds, mill scale, loose scale, incompatible primers, paints, and encapsulants, or other foreign substances capable of impairing bond of fireproofing with substrates under conditions of normal use or fire exposure.
    2. Objects penetrating fireproofing, including clips, hangers, support sleeves, and similar items, are securely attached to substrates.
    3. Substrates receiving fireproofing are not obstructed by ducts, piping, equipment, or other suspended construction that will interfere with fireproofing application.

B. Verify that roof construction, installation of roof-top HVAC equipment, and other related Work is complete before beginning fireproofing Work.

C. Conduct tests per fireproofing manufacturer's written recommendations to verify that substrates are free of substances capable of interfering with bond.

D. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of Work.

E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Cover other Work subject to damage from fallout or overspray of fireproofing materials during application.

B. Clean substrates of substances that could impair bond of fireproofing.

3.03 APPLICATION

A. Construct fireproofing assemblies that are identical to fire-resistance design indicated and products as specified, tested, and substantiated by test reports; for thickness, primers, and other materials and procedures affecting fireproofing Work.

B. Comply with fireproofing manufacturer's written instructions for mixing materials, application procedures, and types of equipment used to mix, convey, and apply fireproofing; as applicable to particular conditions of installation and as required to achieve fire-resistance ratings indicated.

C. Coordinate application of fireproofing with other construction to minimize need to cut or remove fireproofing.
   1. Do not begin applying fireproofing until clips, hangers, supports, sleeves, and other items penetrating fireproofing are in place.
   2. Defer installing ducts, piping, and other items that would interfere with applying fireproofing until application of fireproofing is completed.

D. Metal Decks:
   1. Do not apply fireproofing to underside of metal roof deck until roofing has been completed; prohibit roof traffic during application and drying of fireproofing.

E. Install auxiliary materials as required, as detailed, and per fire-resistance design and fireproofing manufacturer's written recommendations for conditions of exposure and intended use. For auxiliary materials, use attachment and anchorage devices of type recommended in writing by fireproofing manufacturer.

F. Spray apply fireproofing to maximum extent possible. Following spraying operation in each area, complete coverage by trowel application or other placement method recommended in writing by fireproofing manufacturer.

G. Extend fireproofing in full thickness over entire area of each substrate to be protected.

H. Install body of fireproofing in single course unless otherwise recommended in writing by fireproofing manufacturer.

I. Provide a uniform finish complying with description indicated for each type of fireproofing material and matching finish approved for required mock-ups.

J. Cure fireproofing per fireproofing manufacturer's written recommendations.

K. Do not install enclosing or concealing construction until after fireproofing has been applied, inspected, and tested and corrections have been made to deficient applications.

L. Finishes: Where indicated, apply fireproofing to produce the following finishes:
   1. Manufacturer's Standard Finishes: Finish per manufacturer's written instructions for each finish selected.
   2. Spray-Textured Finish: Finish left as spray applied with no further treatment.

3.04 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage qualified special inspector to perform the following special inspections:
   1. Test and inspect as required by the ICC (IBC), 1704.10.

B. Perform tests and inspections of completed Work in successive stages. Do not proceed with application of fireproofing for next area until test results for previously completed applications of fireproofing show compliance with requirements. Tested values must equal or exceed values as specified and as indicated and required for approved fire-resistance design.

C. Fireproofing will be considered defective if it does not pass tests and inspections.
   1. Remove and replace fireproofing that does not pass tests and inspections, and retest.
   2. Apply additional fireproofing, per manufacturer's written instructions, where test results indicate insufficient thickness, and retest.

D. Prepare test and inspection reports.

3.05 CLEANING, PROTECTING, AND REPAIRING

A. Cleaning: Immediately after completing spraying operations in each containable area of Project, remove material overspray and fallout from surfaces of other construction and clean exposed surfaces to remove evidence of soiling.

B. Protect fireproofing, per advice of manufacturer and Installer, from damage resulting from construction operations or other causes, so fireproofing will be without damage or deterioration at time of Substantial Completion.

C. As installation of other construction proceeds, inspect fireproofing and repair damaged areas and fireproofing removed due to Work of other trades.

D. Repair fireproofing damaged by other Work before concealing it with other construction.

E. Repair fireproofing by reapplying it using same method as original installation or using manufacturer's recommended trowel-applied product.

SECTION 07 81 60
INTUMESCENT FIREPROOFING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Spray applied intumescent fireproofing on interior structural steel.

B. Preparation of surfaces and protection of adjacent surfaces.

C. Topcoat protective decorative finish.

1.02 RELATED SECTIONS

A. Section 01 33 00 - Submittal Procedures.

1.04 SUBMITTALS

A. Submit under provisions of Section 01 33 00.

B. Manufacturer's data sheets on each product to be used, including:
   1. UL Design Listings for specific applications required.
   2. Storage and handling requirements and recommendations.
   3. Field application manual.

C. Samples:
   1. Two sets of samples representing anticipated texture and finish.
   2. Submit Topcoat color options for Architect selection.

D. Certification: Obtain and submit certification by authority having jurisdiction that fireproofing products are acceptable.

E. Installer's qualification statement indicating installer is approved by the manufacturer as an installer.

F. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

G. Perform and submit reports of Code Required Special Inspections as required in Section 01 45 33.

1.05 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Manufacturer Qualifications: Company specializing in the manufacture of the products specified, with minimum of 20 years documented experience.

C. Installer Qualifications: Trained and approved by manufacturer, with minimum of 5 years documented experience.

D. Fire-Resistance Ratings: As indicated by UL Fire Resistance Directory designation.

E. Mock-Up: Provide a mock-up for evaluation of surface preparation techniques and application workmanship.
   1. Finish at least 100 sq ft in area designated by Architect.
   2. Evaluate mock-up for compliance with specified requirements, including thickness and finish texture.
   3. Refinish mock-up area as required to produce acceptable work.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufacturer's unopened packaging until ready for installation.

B. Store and dispose of solvent-based materials, and materials used with solvent-based materials, in accordance with requirements of local authorities having jurisdiction.

1.07 PROJECT CONDITIONS

A. When the temperature at the job site is less than 50º F (10º C), a minimum substrate and ambient temperature of 50º F (10º C) shall be maintained prior to, during, and a minimum of 72 hours after application. If necessary for job schedule, the General Contractor shall provide enclosures and heat to maintain proper temperatures and humidity levels in the application areas.

B. In enclosed areas, ventilation shall not be less than 4 complete air exchanges per hour until the material is dry.

C. Relative humidity shall not exceed 85% throughout the total period of application and drying for the intumescent fire resistive material, and must not exceed 85% throughout the application and drying for the protective decorative topcoat.

1.08 WARRANTY

A. Provide manufacturer's standard warranty for intumescent fireproofing.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Basis of Design Manufacturer: Hilti.

B. Approved Alternate manufacturer: Isolatek International.

C. Accepted substitutions in accordance with provisions of Section 01 60 00.

2.02 MATERIALS

A. Primer: As recommended by fireproofing manufacturer, to suit substrate.
   1. Acceptable Products and Manufacturers:
      a. Amerlock® 2, Two-component, high solids epoxy coating; PPG Industries, Inc, Architectural Coatings.
      b. Or approved equal.
   2. Acceptable substitutions in accordance with provisions of Section 01 60 00.
      a. Substituted products must be certified by Manufacturer of Intumescent Fire-Protection System as compatible with their product.

B. Intumescent Fire-Protection System:
   1. Wet areas: Acceptable Products and Manufacturers:
      a. Hilti Fire Finish 120+ CFP-SP WB by Hilti.
      b. Cafco SprayFilm WB 4 by Isolatek International.
      c. Or approved equal.
   2. Dry areas: Acceptable Products and Manufacturers:
      a. Hilti Fire Finish 120+ CFP-SP WB by Hilti.
      b. Cafco SprayFilm WB 5 by Isolatek International.
      c. A/D Firefilm III by Carboline.
      d. Or approved equal.
   3. Acceptable substitutions in accordance with provisions of Section 01 60 00.
   4. Intumescent fire resistive material shall be applied in accordance with drawings and/or specifications, and shall have been tested in accordance with the procedures of ANSI/UL 263 or ASTM E119 or CAN/ULC-S101, and reported by Underwriters Laboratories, Inc. or Underwriters Laboratories of Canada only.
   5. Thin-Film Fire-Resistive Intumescent Mastic Coating: Factory-mixed formulation.
   6. Water-Based Formulation: Approved by manufacturer and authorities having jurisdiction for indicated use.
   7. Water-Based Formulation: Approved by manufacturer and authorities having jurisdiction for indicated use.
   8. Verify with manufacturer that products selected are suitable for use indicated.
   9. UL Fire Tested Designs Only based on ANSI/UL 263 (ASTM E119).
   10. Minimum Shore D Hardness of 40 before the topcoat and finish coat is applied.
   11. Meet UL Interior General Purpose Classification Requirements without any topcoat.
   12. To assure an acceptable Architectural finish, no mesh is allowed.
   13. A representative mock-up sprayed Architectural finish sample must be submitted, reviewed, and accepted by the architect in advance.

C. Topcoat: Flexible aliphatic polyurethane coating recommended by fireproofing manufacturer.

1. Topcoat materials shall be as required for color-coding, aesthetics or additional surface protection, and approved by the thin-film fire resistive material manufacturer.
2. Acceptable Products and Manufacturer, as approved by Fire-Protection product Manufacturer:
   a. Durethane® DTM Urethane Mastic; PPG Industries, Inc, Architectural Coatings.
   b. Or approved equal.
3. Acceptable substitutions in accordance with provisions of Section 01 60 00.
   a. Substituted products must be certified by Manufacturer of Intumescent Fire-Protection System as compatible with their product.
4. Color:
   a. Match PT-1. See 09 91 00.

PART 3 EXECUTION

3.01 EXAMINATION

A. Do not begin installation until substrates have been properly prepared.

B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

C. Verify that substrates are ready to receive fireproofing.

D. Ensure that all primers applied beneath fireproofing are compatible with the applied fireproofing.

E. Verify that items that need to penetrate the fireproofing film are in place, including clips, hangers, supports, and sleeves.

F. Verify that other work that would obstruct access to surfaces to be fireproofed has not yet been installed.

G. Where fireproofing is to be exposed to view as a finished surface, verify that surfaces are smooth, without voids, cracks, or projections.

H. Start of work constitutes acceptance of substrates.

3.02 PREPARATION

A. Clean surfaces thoroughly prior to installation.

B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

C. Clean surfaces of dirt, dust, grease, oil, loose material, and other matter that may affect bond of fireproofing.

D. Clean surfaces in accordance with manufacturer's instructions and SSPC-1, SSPC-2, SSPC-3, or SSPC-6 as required to obtain substrate suitable for installation of fireproofing.

E. Seal penetrations and open ended fireproofing terminations as required by manufacturer.

F. Install durable protective coverings on floors and adjacent walls and ceilings, to protect from overspray, fall-out, and dusting.

3.03 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Prime all surfaces unless existing primer is suitable and undamaged and compatible with fireproofing.

C. Install fireproofing in sufficient thickness to achieve fire rating indicated. Use as many passes as necessary to cover with a monolithic coating of uniform hardness, density, and texture.
   1. Roll smooth the finished surface.

D. Remove fireproofing from surfaces not specifically required to be fireproofed.

3.04 FIELD QUALITY CONTROL

A. Field inspection and testing will be performed by Owner's independent testing agency.

B. Correct defective work and provide further inspection and testing to verify compliance, at no cost to Owner.

3.05 CLEANING AND PROTECTION

A. Clean fireproofing surfaces as recommended by manufacturer.

B. Remove excess material, overspray, droppings, and debris.

C. Protect installed products until completion of project.

D. Touch-up, repair, or replace damaged products before Substantial Completion.

E. Where fireproofing is subsequently cut away to facilitate installation of other work, patch fireproofing to same thickness and texture after installation of other work at no cost to Owner.

SECTION 07 84 00
FIRESTOPPING

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Penetrations in fire-resistance-rated walls.
   2. Penetrations in horizontal assemblies.
   3. Penetrations in smoke barriers.

1.02 SYSTEM DESCRIPTION

SECTION 07 84 00
FIRESTOPPING

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Penetrations in fire-resistance-rated walls.
   2. Penetrations in horizontal assemblies.
   3. Penetrations in smoke barriers.

1.02 SYSTEM DESCRIPTION

A. Firestopping shall consist of furnishing and installing a material or a combination of materials to form an effective barrier against the spread of flame, smoke and gases, and maintain the integrity of fire resistance rated walls, partitions, floors, and ceiling-floor assemblies, including through-penetrations and construction joints. Through-penetrations include the annular space around pipes, tubes, conduit, wires, cables and vents. Construction joints include those used to accommodate expansion, contraction, wind, or seismic movement; firestopping material shall not interfere with the required movement of the joint. The following list includes some possible locations and applications, but is not all inclusive:
   1. Penetrations of duct, conduit, tubing, cable and pipe through floors and through fire-resistance rated walls, partitions, and ceiling-floor assemblies.
   2. Penetrations of vertical shafts such as pipe chases, elevator shafts, and utility chutes.
   3. Gaps at the intersection of floor slabs and curtain walls, including inside of hollow curtain walls at the floor slab.
   4. Gaps at the intersection of floor slabs and any exterior wall that is continuous between floors.
   5. Gaps at perimeter of fire-resistance rated walls and partitions, such as between the top of the walls and the bottom of roof decks.
   6. Openings between curtain walls and structural floor slabs.
   7. Construction joints in floors and fire rated walls and partitions.
   8. At expansion joints in walls, floors and wall and floor slab assemblies.
   9. Other existing penetrations at demising walls and other locations where required to maintain fire resistance rating of the construction.

1.05 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Product Schedule: For each penetration firestopping system. Include location and design designation of qualified testing and inspecting agency.

C. Qualification Data: For qualified Installer.

D. Installer Certificates: From Installer indicating penetration firestopping has been installed in compliance with requirements and manufacturer's written recommendations.

E. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for penetration firestopping.

F. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

G. Perform and submit reports of Code Required Special Inspections as required in Section 01 45 33.

1.06 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Installer Qualifications: A firm experienced in installing penetration firestopping similar in material, design, and extent to that indicated for this Project, whose work has resulted in construction with a record of successful performance. Qualifications include having the necessary experience, staff, and training to install manufacturer's products per specified requirements. Manufacturer's willingness to sell its penetration firestopping products to Contractor or to Installer engaged by Contractor does not in itself confer qualification on buyer. Refer to FM 4991.

C. Fire-Test-Response Characteristics: Penetration firestopping shall comply with the following requirements:
   1. Penetration firestopping tests are performed by a qualified testing agency acceptable to authorities having jurisdiction.
   2. Penetration firestopping is identical to those tested per testing standard referenced in "Penetration Firestopping" Article. Provide rated systems complying with the following requirements:
      a. Penetration firestopping products bear classification marking of qualified testing and inspecting agency.
      b. Classification markings on penetration firestopping correspond to designations listed by the following:
         1) UL in its "Fire Resistance Directory." UL (FRD) and UL 263
         2) Intertek ETL SEMKO in its "Directory of Listed Building Products." ITS (DIR)
         3) FM Global in its "Building Materials Approval Guide." FM (AG)

1.07 PROJECT CONDITIONS

A. Environmental Limitations: Do not install penetration firestopping when ambient or substrate temperatures are outside limits permitted by penetration firestopping manufacturers or when substrates are wet because of rain, frost, condensation, or other causes.

B. Install and cure penetration firestopping per manufacturer's written instructions using natural means of ventilations or, where this is inadequate, forced-air circulation.

1.08 COORDINATION

A. Coordinate construction of openings and penetrating items to ensure that penetration firestopping is installed according to specified requirements.

B. Coordinate sizing of sleeves, openings, core-drilled holes, or cut openings to accommodate penetration firestopping.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Specified Technologies, Inc.

2. Grace Construction Products.
3. Hilti, Inc.
4. Johns Manville.
5. Owen's Corning.
6. RectorSeal Corporation.
7. 3M Fire Protection Products.
8. Tremco, Inc.; Tremco Fire Protection Systems Group.
9. USG Corporation.

2.02 PENETRATION FIRESTOPPING

A. Provide penetration firestopping that is produced and installed to resist spread of fire according to requirements indicated, resist passage of smoke and other gases, and maintain original fire-resistance rating of construction penetrated. Penetration firestopping systems shall be compatible with one another, with the substrates forming openings, and with penetrating items if any.

B. Penetrations in Fire-Resistance-Rated Walls: Provide penetration firestopping with ratings determined per ASTM E814 or UL 1479, based on testing at a positive pressure differential of 0.01-inch wg (2.49 Pa).
   1. Fire-resistance-rated walls include fire-barrier walls.
   2. F-Rating: Not less than the fire-resistance rating of constructions penetrated.

C. Penetrations in Horizontal Assemblies: Provide penetration firestopping with ratings determined per ASTM E 814 or UL 1479, based on testing at a positive pressure differential of 0.01-inch wg (2.49 Pa).
   1. Horizontal assemblies include floors and ceiling membranes of roof/ceiling assemblies.
   2. F-Rating: At least 1 hour, but not less than the fire-resistance rating of constructions penetrated.
   3. T-Rating: At least 1 hour, but not less than the fire-resistance rating of constructions penetrated except for floor penetrations within the cavity of a wall. T-rating to be applied according to the standards of ASTM E119

D. Exposed Penetration Firestopping: Provide products with flame-spread and smoke-developed indexes of less than 25 and 450, respectively, as determined per ASTM E84.

E. Accessories: Provide components for each penetration firestopping system that are needed to install fill materials and to maintain ratings required. Use only those components specified by penetration firestopping manufacturer and approved by qualified testing and inspecting agency for firestopping indicated.
   1. Permanent forming/damming/backing materials, including the following:
      a. Slag-wool-fiber or rock-wool-fiber insulation.
      b. Sealants used in combination with other forming/damming/backing materials to prevent leakage of fill materials in liquid state.
      c. Fire-rated form board.
      d. Fillers for sealants.
   2. Temporary forming materials.
   3. Substrate primers.
   4. Collars.
   5. Steel sleeves.

2.03 FILL MATERIALS

A. Cast-in-Place Firestop Devices: Factory-assembled devices for use in cast-in-place concrete floors and consisting of an outer metallic sleeve lined with an intumescent strip, a radial extended flange attached to one end of the sleeve for fastening to concrete formwork, and a neoprene gasket.

B. Latex Sealants: Single-component latex formulations that do not re-emulsify after cure during exposure to moisture. Comply with UL 2079

C. Firestop Devices: Factory-assembled collars formed from galvanized steel and lined with intumescent material sized to fit specific diameter of penetrant. Comply with UL 1479.

D. Intumescent Composite Sheets: Rigid panels consisting of aluminum-foil-faced elastomeric sheet bonded to galvanized-steel sheet.

E. Intumescent Putties: Nonhardening dielectric, water-resistant putties containing no solvents, inorganic fibers, or silicone compounds.

F. Intumescent Wrap Strips: Single-component intumescent elastomeric sheets with aluminum foil on one side.

G. Mortars: Prepackaged dry mixes consisting of a blend of inorganic binders, hydraulic cement, fillers, and lightweight aggregate formulated for mixing with water at Project site to form a nonshrinking, homogeneous mortar.

H. Pillows/Bags: Reusable heat-expanding pillows/bags consisting of glass-fiber cloth cases filled with a combination of mineral-fiber, water-insoluble expansion agents, and fire-retardant additives. Where exposed, cover openings with steel-reinforcing wire mesh to protect pillows/bags from being easily removed.

I. Silicone Foams: Multicomponent, silicone-based liquid elastomers that, when mixed, expand and cure in place to produce a flexible, nonshrinking foam.

J. Silicone Sealants: Single-component, silicone-based, neutral-curing elastomeric sealants of grade indicated below:

1. Grade: Pourable (self-leveling) formulation for openings in floors and other horizontal surfaces, and nonsag formulation for openings in vertical and sloped surfaces, unless indicated firestopping limits use of nonsag grade for both opening conditions.

2.04 MIXING

A. For those products requiring mixing before application, comply with penetration firestopping manufacturer's written instructions for accurate proportioning of materials, water (if required), type of mixing equipment, selection of mixer speeds, mixing containers, mixing time, and other items or procedures needed to produce products of uniform quality with optimum performance characteristics for application indicated.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine substrates and conditions, with Installer present, for compliance with requirements for opening configurations, penetrating items, substrates, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Surface Cleaning: Clean out openings immediately before installing penetration firestopping to comply with manufacturer's written instructions and with the following requirements:

1. Remove from surfaces of opening substrates and from penetrating items foreign materials that could interfere with adhesion of penetration firestopping.
2. Clean opening substrates and penetrating items to produce clean, sound surfaces capable of developing optimum bond with penetration firestopping. Remove loose particles remaining from cleaning operation.
3. Remove laitance and form-release agents from concrete.

B. Priming: Prime substrates where recommended in writing by manufacturer using that manufacturer's recommended products and methods. Confine primers to areas of bond; do not allow spillage and migration onto exposed surfaces.

C. Masking Tape: Use masking tape to prevent penetration firestopping from contacting adjoining surfaces that will remain exposed on completion of the Work and that would otherwise be permanently stained or damaged by such contact or by cleaning methods used to remove stains. Remove tape as soon as possible without disturbing firestopping's seal with substrates.

3.03 INSTALLATION

A. General: Install penetration firestopping to comply with manufacturer's written installation instructions and published drawings for products and applications indicated.

B. Install forming materials and other accessories of types required to support fill materials during their application and in the position needed to produce cross-sectional shapes and depths required to achieve fire ratings indicated.
   1. After installing fill materials and allowing them to fully cure, remove combustible forming materials and other accessories not indicated as permanent components of firestopping.

C. Install fill materials for firestopping by proven techniques to produce the following results:
   1. Fill voids and cavities formed by openings, forming materials, accessories, and penetrating items as required to achieve fire-resistance ratings indicated.
   2. Apply materials so they contact and adhere to substrates formed by openings and penetrating items.
   3. For fill materials that will remain exposed after completing the Work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.

3.04 CLEANING AND PROTECTION

A. Clean off excess fill materials adjacent to openings as the Work progresses by methods and with cleaning materials that are approved in writing by penetration firestopping manufacturers and that do not damage materials in which openings occur.

B. Provide final protection and maintain conditions during and after installation that ensure that penetration firestopping is without damage or deterioration at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, immediately cut out and remove damaged or deteriorated penetration firestopping and install new materials to produce systems complying with specified requirements.

3.05 PENETRATION FIRESTOPPING SCHEDULE

A. Where UL-classified systems are indicated, they refer to system numbers in UL's "Fire Resistance Directory" under product Category XHEZ.

B. Firestopping with No Penetrating Items:
   1. UL-Classified Systems: As indicated.

C. Firestopping for Metallic Pipes, Conduit, or Tubing:
   1. UL-Classified Systems: As indicated.

D. Firestopping for Nonmetallic Pipe, Conduit, or Tubing:
   1. UL-Classified Systems: As indicated.

E. Firestopping for Electrical Cables:
   1. UL-Classified Systems: As indicated.

F. Firestopping for Insulated Pipes:
   1. UL-Classified Systems: As indicated.

G. Firestopping for Miscellaneous Electrical Penetrants:
   1. UL-Classified Systems: As indicated.

H. Firestopping for Miscellaneous Mechanical Penetrants:
   1. UL-Classified Systems: As indicated.

I. Firestopping for Groupings of Penetrants:
   1. UL-Classified Systems: As indicated.
   2. Intertek ETL SEMKO-Listed Systems.
   3. FM Global-Approved Systems.
   4. F-Rating: 2 hours.
   5. T-Rating: 2 hours.
   6. L-Rating at Ambient: As indicated.
   7. L-Rating at 400 deg F (204 deg C): As indicated.

8. Type of Fill Materials: As required to achieve rating.

END OF SECTION

SECTION 07 92 00
JOINT SEALANTS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Hybrid joint sealants.
   2. Silicone joint sealants.
   3. Polyurethane joint sealants.
   4. Latex joint sealants.
   5. Acoustic Joint Sealants.
   6. Glazing Sealants.

B. See Section 13 11 15 – Swimming Pool Finishes: for Sealants around Swimming Pools.

1.02 RELATED SECTIONS

1.04 SUBMITTALS

A. Product Data: For each joint-sealant product indicated.

B. Samples for Color Selection: Provide range of available colors for each sealant type as indicated on schedule below.

C. Mock Up. See drawings for requirements of Free Standing Mockup Panel. Provide selected color and types of sealants as applicable.
   1. Provide Mockups in accordance with ASTM C1521.
   2. If Mockup Panel is insufficiently large to show all required sealants, these additional sealants shall be mockuped in place.

D. Joint-Sealant Schedule: Include the following information:
   1. Joint-sealant application, joint location, and designation.
   2. Joint-sealant manufacturer and product name.
   3. Joint-sealant formulation and color.

E. Qualification Data: see Section 01 40 00.

F. Product Certificates: For each kind of joint sealant and accessory, from manufacturer.
   1. Include data for review of non-staining performance.

G. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, indicating that sealants comply with requirements.

H. Preconstruction Compatibility and Adhesion Test Reports: From sealant manufacturer, indicating the following:
   1. Materials forming joint substrates and joint-sealant backings have been tested for compatibility and adhesion with joint sealants.
   2. Interpretation of test results and written recommendations for primers and substrate preparation needed for adhesion.

I. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

J. Warranties: Sample of special warranties.

1.05 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of units required for this Project.

C. Source Limitations: Obtain each kind of joint sealant from single source from single manufacturer.

D. Product Testing: Test joint sealants using a qualified testing agency.
   1. Testing Agency Qualifications: An independent testing agency qualified according to ASTM C1021 to conduct the testing indicated.

E. Mockups: Install sealant in mockups of assemblies specified in other Sections that are indicated to receive joint sealants specified in this Section. Use materials and installation methods specified in this Section.

F. Pre-Installation Conference: Conduct conference at Project site.
   1. Field adhesion testing required. Sealant adhesive testing to all substrates to verify surface preparation, priming, etc. Submit the results of the on-site adhesion testing. (Perform project specific adhesion testing of the joint sealants for all surfaces to receive sealant)

1.06 PROJECT CONDITIONS

A. Do not proceed with installation of joint sealants under the following conditions:

1. When ambient and substrate temperature conditions are outside limits permitted by joint-sealant manufacturer.
2. When joint substrates are wet.
3. Where joint widths are less than those allowed by joint-sealant manufacturer for applications indicated.
4. Where contaminants capable of interfering with adhesion have not yet been removed from joint substrates.

1.07 WARRANTY

A. Special Installer's Warranty: Manufacturer's standard form in which Installer agrees to repair or replace joint sealants that do not comply with performance and other requirements specified in this Section within specified warranty period.
   1. Warranty Period: (From date of Substantial Completion)
      a. Silicone, Urethane and Latex: Two (2) years.
      b. Hybrid Sealants: Ten (10) years.

B. Special Manufacturer's Warranty: Manufacturer's standard form in which joint-sealant manufacturer agrees to furnish joint sealants to repair or replace those that do not comply with performance and other requirements specified in this Section within specified warranty period.
   1. Warranty Period: (From date of Substantial Completion)
      a. Silicone, Urethane and Latex: Two (2) years.
      b. Hybrid Sealants: Ten (10) years.

C. Special warranties specified in this article exclude deterioration or failure of joint sealants from the following:
   1. Movement of the structure caused by structural settlement or errors attributable to design or construction resulting in stresses on the sealant exceeding sealant manufacturer's written specifications for sealant elongation and compression.
   2. Disintegration of joint substrates from natural causes exceeding design specifications.
   3. Mechanical damage caused by individuals, tools, or other outside agents.
   4. Changes in sealant appearance caused by accumulation of dirt or other atmospheric contaminants.

PART 2 PRODUCTS

2.01 MATERIALS, GENERAL

A. Definitions: All terms in this section are defined by ASTM C717.

B. Compatibility: Provide joint sealants, backings, and other related materials that are compatible with one another and with joint substrates under conditions of service and application, as demonstrated by joint-sealant manufacturer, based on testing and field experience.

C. Liquid-Applied Joint Sealants: Comply with ASTM C920 and other requirements indicated for each liquid-applied joint sealant specified, including those referencing ASTM C920 classifications for type (ASTM C639), grade, class, and uses related to exposure and joint substrates.

D. Stain-Test-Response Characteristics: Where sealants are specified to be non-staining to porous substrates, provide products that have undergone testing according to ASTM C1248and have not stained porous joint substrates indicated for Project.

E. Suitability for Contact with Food: Where sealants are indicated for joints that will come in repeated contact with food, provide products that comply with 21 CFR 177.2600.

F. Colors of Exposed Joint Sealants: As selected by Architect from manufacturer's full range. See Schedule for number of colors.

2.02 HYBRID JOINT SEALANTS (SLNT-1)

A. High performance, Low modulus, High movement, Non-sag, Non-staining, Fast curing, Hybrid Joint Sealant: ASTM C920. Type S, Grade NS, Class 50. ASTM C1382 for use with EIFS wall systems at 100% extension.

1. Products: Subject to compliance with requirements, provide the following:
    a. Dowsil 790, 791, and 795
    b. Dowsil 758 at air barrier substrates.
    c. Or approved substitution.

2.03 SILICONE JOINT SEALANTS

A. Plumbing and Bathroom Sealant **(SLNT-2)** Mildew-Resistant, Single-Component, Acid-Curing Silicone Joint Sealant: ASTM C920, Type S, Grade NS, Class 25, for Use NT.
    1. Products: Subject to compliance with requirements, provide one of the following:
        a. Dow Corning Corporation; 786 Mildew Resistant.
        b. GE Advanced Materials - Silicones; 2* Kitchen and Bath.
        c. Tremco Incorporated; Tremsil 200 Sanitary.
        d. Or approved equal.

B. General Use Interior Sealant **(SLNT-7)** Single Component, General Purpose Acetoxy Cure Silicone Sealant: ASTM C920, Type S, Grade NS, Class 25 for Use NT.
    1. Products: Subject to compliance with requirements, provide one of the following:
        a. Sikasil GP
        b. Tremco, Tremsil 200
        c. Dow Corning Corporation, Dowsil General Purpose Sealant
        d. Or approved equal.

C. Neutral curing, non-staining Silicone Sealant **(SLNT-7A)** for use at masonry. Low modulus, One-part, neutral curing.
    1. Products: Subject to compliance with requirements, provide one of the following:
        a. Tremco Spectrum 3 and Spectrum 4TS,
        b. Pecora 890 NST
        c. Dowsil 991, 688
        d. Or approved equal.

2.04 URETHANE JOINT SEALANTS (SLNT-3)

A. Single-Component, Non-sag, Traffic-Grade, Self Leveling, Polyurethane Joint Sealant: ASTM C920. Type S, Grade NS, Class 25, for Use T.
    1. Products: Subject to compliance with requirements, provide one of the following:
        a. Sika Sikaflex 15LM
        b. Pecora Corporation; Urexpan NR-200.
        c. Tremco Vulkem 45SSL

2.05 LATEX JOINT SEALANTS (SLNT-4)

A. Latex Joint Sealant: Acrylic latex or siliconized acrylic latex, ASTM C834, Type OP, Grade NF.
    1. Products: Subject to compliance with requirements, provide one of the following:
        a. Pecora Corporation; AC-20+.
        b. Tremco Incorporated; Tremflex 834.

2.06 ACOUSTIC JOINT SEALANTS (SLNT-5)

A. Acoustic Sealant for Exposed and Concealed Joints: Manufacturer's standard non-sag, paintable, non-staining latex acoustical sealant complying with ASTM C834.
    1. Products: Subject to compliance with requirements, provide one of the following:
        a. Accumetric, LLC; "BOSS 826 Acoustical Sound Sealant".
        b. Grabber Construction Products; "Acoustical Sealant GSC".
        c. OSI; "SC-175 Acoustic Sound Sealant".

2.07 GLAZING SEALANTS (SLNT-6)

A. Single-Component, Non-sag, Neutral-Curing Silicone Joint Sealant: ASTM C1184, Type S, Grade NS, Class 50, for Use G. Color: As selected by Architect.
    1. Products: Subject to compliance with requirements, provide one of the following:

a. Dow Corning Corporation; 791, 795, 995, or 999-A.
b. GE Advanced Materials - Silicones; SilGlaze II SCS2800, SilPruf NB SCS900,0 SilPruf SCS2000, and UltraPruf II SCS2900.
c. Pecora Corporation; 864.
d. Tremco Incorporated; Spectrem 2 or Spectrem 3.

B. See Section 08 81 00 Glazing.

2.08 SEALANTS FOR EIFS.

A. See Section 07 24 19 Water Drainage Insulation and Finish System.

2.09 JOINT SEALANT BACKING

A. General: Provide sealant backings of material that are non-staining; are compatible with joint substrates, sealants, primers, and other joint fillers as defined by ASTM C719 ; and are approved for applications indicated by sealant manufacturer based on field experience and laboratory testing.

B. Cylindrical Sealant Backings: ASTM C1330, Type C (closed-cell material with a surface skin) Type O (open-cell material) Type B (bicellular material with a surface skin) or any of the preceding types, as approved in writing by joint-sealant manufacturer for joint application indicated, and of size and density to control sealant depth and otherwise contribute to producing optimum sealant performance.

C. Bond-Breaker Tape: Polyethylene tape or other plastic tape recommended by sealant manufacturer for preventing sealant from adhering to rigid, inflexible joint-filler materials or joint surfaces at back of joint. Provide self-adhesive tape where applicable. Provide backer rod sizes approximately 20% in excess of joint width.

2.10 MISCELLANEOUS MATERIALS

A. Primer: Material recommended by joint-sealant manufacturer where required for adhesion of sealant to joint substrates indicated, as determined from preconstruction joint-sealant-substrate tests and field tests.

B. Cleaners for Non-porous Surfaces: Chemical cleaners acceptable to manufacturers of sealants and sealant backing materials, free of oily residues or other substances capable of staining or harming joint substrates and adjacent nonporous surfaces in any way, and formulated to promote optimum adhesion of sealants to joint substrates.

C. Masking Tape: Non-staining, nonabsorbent material compatible with joint sealants and surfaces adjacent to joints.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine joints indicated to receive joint sealants, with Installer present, for compliance with requirements for joint configuration, installation tolerances, and other conditions affecting joint-sealant performance.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

C. Adhesion testing in compliance with Section 1.3 Part E-1 of this section.

3.02 PREPARATION

A. Surface Cleaning of Joints: Clean out joints immediately before installing joint sealants to comply with joint-sealant manufacturer's written instructions and the following requirements:
1. Remove all foreign material from joint substrates that could interfere with adhesion of joint sealant, including dust, paints (except for permanent, protective coatings tested and approved for sealant adhesion and compatibility by sealant manufacturer), old joint sealants, oil, grease, waterproofing, water repellents, water, surface dirt, and frost.
2. Clean porous joint substrate surfaces by brushing, grinding, mechanical abrading, or a combination of these methods to produce a clean, sound substrate capable of developing optimum bond with joint sealants. Remove loose particles remaining after cleaning operations

above by vacuuming or blowing out joints with oil-free compressed air. Porous joint substrates include the following:
   a. Concrete.
   b. Masonry.
   c. Unglazed surfaces of ceramic tile.
   d. Exterior insulation and finish systems.
3. Remove laitance and form-release agents from concrete.
4. Clean nonporous joint substrate surfaces with chemical cleaners or other means that do not stain, harm substrates, or leave residues capable of interfering with adhesion of joint sealants. Nonporous joint substrates include the following:
   a. Metal.
   b. Glass.
   c. Porcelain enamel.
   d. Glazed surfaces of ceramic tile.

B. Joint Priming: Prime joint substrates where recommended by joint-sealant manufacturer including recommended cure times and special instructions/ materials for porous substrates or as indicated by preconstruction joint-sealant-substrate tests or prior experience. Apply primer to comply with joint-sealant manufacturer's written instructions. Confine primers to areas of joint-sealant bond; do not allow spillage or migration onto adjoining surfaces.

C. Masking Tape: Use masking tape where required to prevent contact of sealant or primer with adjoining surfaces that otherwise would be permanently stained or damaged by such contact or by cleaning methods required to remove sealant smears. Remove tape immediately after tooling without disturbing joint seal.

3.03 INSTALLATION OF JOINT SEALANTS

A. General: Comply with joint-sealant manufacturer's written installation instructions for products and applications indicated, unless more stringent requirements apply.

B. Sealant Installation Standard: Comply with recommendations in ASTM C1193 and for use of joint sealants as applicable to materials, applications, and conditions indicated.

C. Install sealant backings of kind indicated to support sealants during application and at position required to produce cross-sectional shapes and depths of installed sealants relative to joint widths that allow optimum sealant movement capability.
   1. Do not leave gaps between ends of sealant backings.
   2. Do not stretch, twist, puncture, or tear sealant backings.
   3. Remove absorbent sealant backings that have become wet before sealant application and replace them with dry materials.

D. Install bond-breaker tape behind sealants where sealant backings are not used between sealants and backs of joints. Avoid three sided adhesion for all sealant joints.

E. Install sealants using proven techniques that comply with the following and at the same time backings are installed:
   1. Place sealants so they directly contact and fully wet joint substrates.
   2. Completely fill recesses in each joint configuration.
   3. Produce uniform, cross-sectional shapes and depths relative to joint widths that allow optimum sealant movement capability.

F. Tooling of Non-sag Sealants: Immediately after sealant application and before skinning or curing begins, tool sealants according to requirements specified in subparagraphs below to form smooth, uniform beads of configuration indicated; to eliminate air pockets; and to ensure contact and adhesion of sealant with sides of joint.
   1. Remove excess sealant from surfaces adjacent to joints.
   2. Use tooling agents that are approved in writing by sealant manufacturer and that do not discolor sealants or adjacent surfaces.
   3. Provide concave joint profile per Figure 8A in ASTM C1193, unless otherwise indicated.

3.04 CLEANING

A. Clean off excess sealant or sealant smears adjacent to joints as the Work progresses by methods and with cleaning materials approved in writing by manufacturers of joint sealants and of products in which joints occur.

3.05 PROTECTION

A. Protect joint sealants during and after curing period from contact with contaminating substances and from damage resulting from construction operations or other causes so sealants are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out and remove damaged or deteriorated joint sealants immediately so installations with repaired areas are indistinguishable from original work.

3.06 FIELD ADHESION TESTING (PULL TEST)

A. Extent of Testing: Test completed and cured sealant joints per ASTM C1521 as follows:
   1. Perform a minimum of 10 tests for the first 1000 feet (300 m) of joint length for each type of sealant and joint substrate.
   2. Perform a minimum of 10 tests for the first 1000 feet (300 m) of joint length for each type of sealant and joint substrate.

B. Perform a minimum of 10 tests for the first 1000 feet (300 m) of joint length for each type of sealant and joint substrate.

C. Inspection and Reporting:
   1. Inspect the tested joints for signs of adhesive failure (failure at the bond line) or cohesive failure (the sealant itself tearing).
   2. Record test results in a field adhesion test log. The log shall include test dates, locations, adhesion results, and a comparison to manufacturer's criteria.

D. Remediation: If a sealant fails the adhesion test, remove and replace the deficient sealant application. Retest until results comply with project requirements.

3.07 JOINT-SEALANT SCHEDULE

A. (SLNT-1) Joint-Sealant Application: Exterior joints in vertical surfaces and horizontal nontraffic surfaces.
   1. Joint Locations:
      a. Construction joints in cast-in-place concrete.
      b. Joints between precast architectural concrete units.
      c. Control and expansion joints in unit masonry.
      d. Joints in dimension stone cladding.
      e. Joints in glass unit masonry assemblies.
      f. Joints in exterior insulation and finish systems.
      g. Joints between metal panels.
      h. Secondary exterior sealant at joints around windows, storefronts and curtain walls.
      i. Joints between different materials listed above.
      j. Typical at Facade locations.
      k. Air Barrier substrates
      l. Other joints as indicated.
   2. Joint-Sealant Color: As selected by Architect from manufacturer's full range of colors.
      a. Assume (1) color for each material transition. (eg: Brick to Metal panel, EIFS to Quarried stone, etc)

B. (SLNT-2) Joint-Sealant Application: Mildew-resistant interior joints in vertical surfaces and horizontal nontraffic surfaces.
   1. Joint Sealant Location:
      a. Joints between plumbing fixtures and adjoining walls, floors, and counters.
      b. Joints around toilet accessories.
      c. Joints between mirrors and adjacent material.

d. Joints at countertops to walls.
e. Tile control and expansion joints where indicated.
f. Around access panels and penetrations in natatorium, locker rooms, toilet rooms, pump rooms, and any other room where moisture will be present.
g. At interior IFS, as required by specification 07 24 20.
h. Joints at kitchen equipment, fixtures and stainless steel shelvings to walls and counters.
i. Other joints as indicated.

2. Joint-Sealant Color: As selected by Architect from manufacturer's full range of colors, Clear, White.

C. (SLNT-3) Joint-Sealant Application: Interior joints in horizontal traffic surfaces.
1. Joint Locations:
a. Isolation joints in cast-in-place concrete slabs.
b. Control and expansion joints in stone flooring.
c. Control and expansion joints in tile flooring.
d. Other joints as indicated.
2. Joint-Sealant Color: As selected by Architect from manufacturer's full range of colors.
a. Assume (1) color for each material transition. (eg: Tile to concrete, each tile color, etc)

D. (SLNT-4) Joint-Sealant Application: Interior joints in vertical surfaces and horizontal nontraffic surfaces.
1. Joint Locations:
a. Control and expansion joints on exposed interior surfaces of exterior walls.
b. Perimeter joints of exterior openings where indicated.
c. Tile control and expansion joints.
d. Vertical joints on exposed surfaces of interior unit masonry concrete walls and partitions.
e. Joints between stone or tile and wall coverings.
f. Joints around access panels and fire extinguisher cabinets in dry locations. (where panels are located in a wet area, such as a locker room, natatorium, wet spa, kitchen, bathroom, etc, use SLNT-2 above)
g. Perimeter joints between interior wall surfaces and frames of interior doors, windows and elevator entrances.
h. Other joints as indicated.
2. Joint-Sealant Color: As selected by Architect from manufacturer's full range of colors.
a. Assume (1) color for each material transition. (eg: Metal Frame to wall, each tile color, etc)

E. (SLNT-5) Joint-Sealant Application: Interior joints in vertical surfaces and horizontal nontraffic surfaces at Acoustical Separation Walls.
1. Joint Locations:
a. Control and expansion joints on exposed interior surfaces of exterior walls.
b. Perimeter joints of exterior openings where indicated.
c. Tile control and expansion joints.
d. Vertical joints on exposed surfaces of interior unit masonry concrete walls and partitions.
e. Joints on underside of plant-precast structural concrete beams and planks.
f. Perimeter joints between interior wall surfaces and frames of interior doors windows and elevator entrances.
g. Other joints as indicated.
2. Joint-Sealant Color: As selected by Architect from manufacturer's full range of colors.
a. Assume (1) color for each material transition. (eg: Metal Frame to wall, each tile color, etc)

F. (SLNT-6) Glazing Sealant Application: Apply according to ASTM C1401. See Section 08 81 00.
1. Joint Locations:
a. Around Glazing, according to ASTM C1401.
b. Perimeter joints between materials listed above and frames of doors, windows and louvers (Primary Seal).

G. (SLNT-7) General Use Interior Sealant: Use at interior joints between dissimilar materials where no other above sealant applies:
   1. Joint Locations:
      a. Between casework and walls. (where casework is located in a wet area, such as a locker room, natatorium, wet spa, kitchen, bathroom, etc, use SLNT-2 above)
      b. Between wall covering and bases or ceilings where edges of wall covering would otherwise be exposed.
      c. Around mirrors in exercise areas and studios. See SLNT-2 above for other mirrors.
      d. Between stone countertops, benchtops, sills etc and casework and walls.
      e. Where aesthetic sealants are indicated on drawings.
   2. Joint-Sealant Color: Clear, typ.

H. See Section 13 11 15 for Sealants around Swimming Pools.

SECTION 07 95 00
PREFORMED TRAFFIC DURABLE SEALANT SYSTEMS

PART 1 GENERAL

1.01 SUMMARY

A. Preformed traffic durable sealant systems and accessories.

1.02 RELATED WORK

A. Section 01 33 00 - Submittal Procedures.

B. Section 01 40 00 - Quality Requirements.

C. Section 01 60 00 - Product Requirements.

D. Section 03 41 00 - Precast Structural Concrete.

E. Section 07 92 00 - Joint Sealants.

F. Section 32 13 13 - Concrete Paving.

G. Section 32 14 00 - Unit Paving.

1.03 REFERENCES

A. ASTM C881: Standard Specification for Epoxy-Resin-Base Bonding Systems for Concrete

B. ASTM D545: Standard Test Methods for Preformed Expansion Joint Fillers for Concrete Construction (Nonextruding and Resilient Types)

C. ASTM D624: Standard Test Method for Tear Strength of Conventional Vulcanized Rubber and Thermoplastic Elastomers

D. ASTM D3575: Standard Test Methods for Flexible Cellular Materials Made From Olefin Polymers.

E. AASHTO T42: Standard Method of Test for Preformed Expansion Joint Filler for Concrete Construction

1.04 SUBMITTALS

A. General - Submit the following according to Section 01 33 00 - Submittal Procedures.

B. Product information and independent lab test results.

C. Shop Drawing - Submit typical expansion joint drawing(s) indicating pertinent dimensions, general construction, corners, expansion joint opening dimensions.

D. Material sample and color selector.

E. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

1.05 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Deliver and store all products according to Manufacturer's recommendations. Allow product to equalize with ambient temperature prior to installation.

1.06 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Installer's qualifications. Installer must be ISO-9001 certified and approved by product manufacturer.

PART 2 PRODUCT

2.01 MANUFACTURERS

A. General: Provide traffic durable, watertight, UV stable expansion joint for isolation joints in concrete structures and paving.

1. Typical locations include, but are not limited to the following: joints over occupied space, below-grade, stair tower perimeters, elevator perimeters, curbs, parking deck joints, and structural expansion joints.
2. System shall perform waterproofing, traffic bearing and movement-accommodation functions as the result of a single installation and without the addition of gutters, vapor barriers, bladders, or other devices suspended beneath or within the system in any way.
3. System shall be heat stable for a range of -40F to 150F without any bleeding of material. Material shall be capable of expansion after being subjected to extreme temperatures.

B. Traffic Sealant: Low density, closed cell, cross linked polymer joint seal. Acceptable Manufacturers and products:
1. **TSLNT-1**: Precompressed silicone and impregnated foam seal bonded with epoxy adhesive.
a. Emseal, DSM
b. Or approved substitution.
2. **TSLNT-2**: Low density closed cell joint seal bonded with expoxy adhesive:
a. Watson, Bowman, Acme, Wabo Evazote UV
b. Or approved substitution.
3. Color: To be selected by Architect from Manufacturer's full range.

2.02 ACCESSORIES

A. Adhesive as supplied by product manufacturer.

B. Provide Factory-manufacturered bends for directional changes. Butting two non-bended units together at corners is not acceptable.

PART 3 EXECUTION

3.01 INSTALLATION

A. Preparation of the Work Area:
1. Verify that joint opening matches the manufacturer's recommended range for selected product. Report discrepencies to Architect/Engineer and adjust sealant sizes as directed.
2. Clean joint opening of all contaminants before installation.
3. Repair spalled, irregular or unsound joint surfaces using accepted industry practices. Smooth sides to meet Manufacturer's installation standards.
4. Verify all surfaces meet Manufacturer's requirements to the full depth of the installation.

B. Installation of Product:
1. Use only Manufacturer's adhesive.
2. Do not install if temperature, humidity or weather are outside the range recommended by Manufacturer.
3. Do not drill, screw or use fasteners of any type.
4. Install so that the finished product is flush with the traffic surface.
5. Precompress joint material to size smaller than joint prior to installation.
6. Conform to all Manufacturer's instructions.

3.02 CLEAN AND PROTECT

A. Protect the system and its components during construction.

B. After work is complete, clean exposed surfaces with a suitable cleaner that will not harm or attack the finish.

END OF SECTION

SECTION 08 08 00
COMMISSIONING OF OPENINGS

PART 1 GENERAL

1.01 SUMMARY

A. This section includes specific requirements that apply to the implementation of the Commissioning Process and this Division Contractors' participation in this process. This section details the project specific equipment and systems that are included in the Commissioning Process. For general descriptions and responsibilities, refer to SECTION 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

1.02 RELATED DOCUMENTS

A. The Owner's Project Requirements (OPR) document.

B. The Basis of Design (BoD) document.

C. The Project Commissioning Plan (CxP) document.

D. ASHRAE Standard 202-2013 - Commissioning Process for Buildings and Systems.

1.03 RELATED SECTIONS

A. SECTION 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS

B. SECTION 07 08 00 - COMMISSIONING OF THERMAL AND MOISTURE PROTECTION

C. SECTION 11 08 00 - COMMISSIONING OF EQUIPMENT

D. SECTION 13 08 00 - COMMISSIONING OF SPECIAL CONSTRUCTION

E. SECTION 14 08 00 - COMMISSIONING OF CONVEYING SYSTEMS

F. SECTION 21 08 00 - COMMISSIONING OF FIRE SUPPRESSION SYSTEMS

G. SECTION 22 08 00 - COMMISSIONING OF PLUMBING SYSTEMS

H. SECTION 23 08 00 - COMMISSIONING OF MECHANICAL SYSTEMS

I. SECTION 25 08 00 - COMMISSIONING OF INTEGRATED AUTOMATION SYSTEMS

J. SECTION 26 08 00 - COMMISSIONING OF ELECTRICAL SYSTEMS

K. SECTION 27 08 00 - COMMISSIONING OF COMMUNICATIONS SYSTEMS

L. SECTION 28 08 00 - COMMISSIONING OF SAFETY AND SECURITY SYSTEMS

M. SECTION 33 08 00 - COMMISSIONING OF UTILITIES

1.04 DEFINITIONS

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

1.05 RESPONSIBILITIES

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

PART 2 PRODUCTS

2.01 NO PRODUCTS SUPPLIED

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

B. Contractors and/or Vendors shall provide the specialty testing equipment necessary to fulfill the functional testing requirements, for the duration of the testing period.

PART 3 EXECUTION

3.01 GENERAL

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.02 MEETINGS

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.03 SYSTEM START-UP

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.04 PRE-FUNCTIONAL CHECKLISTS

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.05 FUNCTIONAL PERFORMANCE TESTING

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.06 TRAINING

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.07 SYSTEMS TO BE COMMISSIONED

A. GENERAL
   1. Commissioning specifications supplement the requirements of individual specifications sections, but shall not be interpreted to replace or diminish the specified scope of any individual section.
   2. For all systems listed below, Division Contractor shall comply with all commissioning requirements specified.

B. APPLICABLE SYSTEMS
   1. Hollow Metal Doors and Frames
   2. Aluminum Framed Entrances and Storefronts
   3. Glazed Aluminum Curtainwalls
   4. Door Hardware
   5. Automatic Door Operators
   6. Glazing

END OF SECTION

SECTION 08 11 13
HOLLOW METAL DOORS AND FRAMES

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Non-rated and fire rated steel doors.
   2. Non-rated and fire rated steel frames.
   3. Accessories:
      a. Glazing stops.
      b. Louvers.
      c. Astragals.
      d. Misc Accessories.

1.02 RELATED SECTIONS

A. Section 01 33 00 - Submittal Procedures.

B. Section 01 40 00 - Quality Requirements.

C. Section 01 60 00 - Product Requirements

D. Section 04 20 00 - Unit Masonry.

E. Section 06 10 00 - Rough Carpentry.

F. Section 06 20 00 - Finish Carpentry.

G. Section 07 92 00 - Joint Sealants.

H. Section 08 08 00 - Commissioning of Openings.

I. Section 08 14 16 - Flush Wood Doors.

J. Section 08 41 13 - Aluminum Entrances and Storefronts

P. SDI 111 - Recommended Details for Standard Steel Doors, Frames, and Accessories; 2024.

Q. SDI 117 - Manufacturing Tolerances for Standard Steel Doors and Frames; 2023.

R. UL 10C - Standard for Positive Pressure Fire Tests of Door Assemblies; Current Edition, Including All Revisions.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Pre-Submittal Hardware and Keying Meeting: Prior to preparing final submittals, conduct meeting including Owner, Architect, and supplier of hardware to determine the following:
   1. Lock Function: Demonstrate function/type of each lockset scheduled and verify function at each door.
   2. Electrical Operation: Verify function of openings requiring electrified hardware.
   3. Keying: Determine keying requirements for preparation of final keying schedule.
   4. Submit letter of compliance, indicating when this meeting was held and who was in attendance, to Architect, Owner, and hardware supplier.

1.05 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Provide doors and frames complying with Steel Door Institute "Recommended Specifications Standard Steel Doors and Frames" ANSI/SDI A250.8, SDI 111, SDI 117 and as herein specified.

C. Fire rated door and frame construction to conform to NFPA 252.

D. Installed frame and door assembly to conform to NFPA 80 for fire rated class indicated in Schedule.

1.06 REGULATORY REQUIREMENTS

A. Conform to applicable code for fire rated frames and doors.
   1. Where fire rated doors are indicated on the Door Schedule, doors shall comply with the requirements of UL 10C for positive pressure requirements. Door assemblies shall bear a fire-rating label issued by a listing agency showing the hourly fire rating followed by the letter “S”.

B. All doors to conform to Accessibility Standards of ICC A117.1-2009.

1.07 SUBMITTALS

A. Material and Equipment Submittals: Submit the following under provisions of Section 01 33 00-Submittal Requirements.
   1. Shop Drawings:
      a. Provide schedule of doors and frames using same opening numbers referenced on the drawings.
      b. Indicate frame gage and configuration, fire label, anchor types and spacing, location of cutouts for hardware, and reinforcement.
      c. Indicate door elevations, hardware group, core material, internal reinforcement, closure method, and cut outs for glazing and louvers.
      d. Include details of connection to surrounding air/ water barrier.
   2. Product Data: Materials and details of design and construction, hardware locations, reinforcement type and locations, anchorage and fastening methods, and finishes.
   3. Procurement:
      a. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.

b. Submit inventory to Owner within 5 days of delivery of materials.
c. See Sections 01 33 00 and 01 60 00.

1.08 DELIVERY, STORAGE AND PROTECTION

A. Protect products under provisions of Section 01 60 00 - Product Requirements.
1. Protect doors and frames with resilient packaging sealed with heat shrunk plastic.
2. Break seal on-site to permit ventilation.

1.09 WARRANTY

A. See Section 01 77 00 - Closeout Procedures for additional warranty requirements.

B. Correct defective Work within a five year period after Date of Substantial Completion.

C. Provide ten year manufacturer warranty for defects in workmanship and materials.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Products: Subject to compliance with requirements, provide products from 1 of the following:
1. Amweld Building Products, Inc.
2. Ceco Corporation.
3. Curries Mfg., Inc.
4. Republic Builders Products Corp.
5. Steelcraft Mfg. Co.
6. Approved substitution from SDI Member as approved by the Architect.

2.02 STEEL DOORS

A. Exterior Doors: ANSI/SDI A250.8 Level 3, Model 2; minimum 16 gage zinc-iron alloy-coated Galvannealed steel sheet faces complying with ASTM A653/A653M A60 seamless, composite construction; polystyrene or polyurethane foam core bonded to the inside of both faces. Exterior doors shall have a minimum operable "U" value of 0.77 meeting requirements of ASTM C1363.

B. Interior Non-Fire-Rated Doors: ANSI/SDI A250.8 Level 2, Model 2; minimum 18 gage cold rolled steel sheet complying with ASTM A1008/A1008M seamless, composite construction; honeycomb core laminated to the inside of both face sheets.

C. Interior Fire-Rated Stairwell Doors: ANSI/SDI A250.8 Level 2, Model 2; minimum 18 gage cold rolled steel sheet complying with ASTM A1008/A1008M; seamless, composite construction; temperature rise door.
1. Provide interior fire-rated doors with UL label as indicated on Room Opening Schedule.

D. Interior Fire-Rated Doors: ANSI/SDI A250.8 Level 2, Model 2; minimum 18 gage cold rolled steel sheet complying with ASTM A1008/A1008M; seamless, composite construction; temperature rise door with mineral fiber core.
1. Provide interior fire-rated doors with UL label as indicated on Room Opening Schedule.

2.03 STEEL FRAMES

A. General: Comply with ANSI/SDI A250.8.

B. Exterior Frames: Metallic-coated steel sheet, minimum 14 gauge, ASTM A653/A653M, Commercial Steel (CS), Type B; with minimum A60 (Z180) zinc-iron alloy-coated Galvannealed coating. Frame profiles shall include a thermal barrier at the frame soffit providing a positive thermal break within the frame profile.

C. Interior Frames: Cold-rolled steel sheet, minimum 16 gauge ASTM A1008/A1008M, CS, Type B; suitable for exposed applications.

D. Interior frames in high humidity, moisture areas (Locker rooms, shower areas, pool areas ect.): Metallic-coated steel sheet, minimum 14 gauge, ASTM A653/A653M, Commercial Steel (CS), Type B; with minimum A60 (Z180) zinc-iron alloy-coated Galvannealed coating.

E. Hardware Reinforcement: Fabricate per ANSI/SDI A250.6 with reinforcement plates from same material as frames.

2.04 ACCESSORIES

A. Glazing Stops: Rolled steel channel shape, mitered or butted corners; prepared for countersink style tamperproof screws.

B. Louvers: Manufacturer's standard roll formed steel material, wiped coat of zinc; inverted 'Y' blade, sight proof; standard frame with surface tamperproof fasteners; prime painted finish.

C. Astragals: Provide “Z” style astragals at pairs of doors as required by hardware application. Flat bar astragals are not allowed.

D. Grout Guards: Formed from same material as frames, not less than 0.016 inch (0.4 mm) thick.

E. Rubber Silencers: Resilient rubber.

F. Sill Pan W/ Back Dams: Pemko 2008 PK.

2.05 FABRICATION

A. Tolerances: Fabricate hollow metal Work to tolerances indicated in SDI 117.

B. Fabricate frames with saw miter or saw butt end corner construction. Joints are to be die-mitered with integral tabs for reinforcement and interlocking of the jambs to the head. Grind exposed welds and surfaces smooth with no joints visible anywhere on the face of frame.

C. Provide frames of required throat depth for wall thickness.

D. Hardware Preparation: Factory prepare hollow metal Work to receive templated mortised hardware per Door Hardware Schedule and templates furnished as specified in Section 08 71 00 - Door Hardware.
   1. Locate hardware as indicated, or if not indicated, per ANSI/SDI A250.8 and DHI (LOCS).
   2. Reinforce doors and frames to receive non-templated, mortised and surface-mounted door hardware.
   3. Comply with applicable requirements in ANSI/SDI A250.6 and ANSI/DHI A115 Series specifications for preparation of hollow metal Work for hardware.
   4. Coordinate locations of conduit and wiring boxes for electrical connections with Division 16 electrical Sections.

E. Where grouting or mortar filled frames and frames in high humidity, moisture areas (Locker rooms, shower areas, pool areas etc.) are specified, or where antifreeze additive are used in fill, protect inside throat of each frame with a waterproof undercoating type material, minimum 1/8 inch thick.

F. Fabricate doors without seams on faces or vertical edges of door. Continuously weld vertical edge seams, and grind smooth.

G. Reinforce frames wider than 48" with roll formed steel channels fitted tightly into frame head, flush with top.

H. Prepare frame for silencers. Provide three single rubber silencers on strike jamb for single doors, two single rubber silencers on strike jamb of ½ height doors and two single silencers on frame head at double doors.

I. Attach metal fire rated label to each frame and door unit, where required.

J. Reinforce top and bottom edges with a 14 gauge channel welded to face sheets.

K. Close top edge of exterior door flush with inverted 16 gauge steel channel closure. Seal joints watertight.

L. Provide fixed glazing stops on outside of exterior doors and on secure side of interior doors.

M. Provide screw-applied, removable glazing beads on inside of glass, louvers and other panels in doors.

N. Provide shipping separation panel for all exterior door frames with ½” plywood spacer panel, two feet high by width of frame to maintain integrity of frame width during shipping and installation.

2.06 STEEL FINISHES

A. Prime Finish: Apply manufacturer's standard primer immediately after cleaning and pretreating. Apply primer uniformly inside and outside of frame, and under removable stops and trim.
   1. Shop Primer: ANSI/SDI A250.10.
   2. Final Finish: Refer to door schedule, submit all finishes to architect for approval.

PART 3 EXECUTION

3.01 INSTALLATION

A. General: Install hollow metal Work plumb, rigid, properly aligned, and securely fastened in place; comply with Drawings and manufacturer's written instructions.

B. Hollow Metal Frames: Install hollow metal frames of size and profile indicated. Comply with ANSI/SDI A250.11.
   1. Set frames accurately in position, plumbed, aligned, and braced securely until permanent anchors are set. After wall construction is complete, remove temporary braces, leaving surfaces smooth and undamaged.
      a. At fire-protection-rated openings, install frames per NFPA 80.

C. Hollow Metal Doors: Fit hollow metal doors accurately in frames, within clearances specified below. Shim as necessary.
   1. Non-Fire-Rated Standard Steel Doors:
      a. Jambs and Head: 1/8 inch (3 mm) plus or minus 1/16 inch (1.6 mm).
      b. Between Edges of Pairs of Doors: 1/8 inch (3 mm) plus or minus 1/16 inch (1.6 mm).
      c. Between Bottom of Door and Top of Threshold: Maximum 3/8 inch (10 mm).
      d. Between Bottom of Door and Top of Finish Floor (No Threshold): Maximum 3/4 inch (19 mm).
   2. Fire-Rated Doors: Install doors with clearances per NFPA 80.
   3. Smoke-Control Doors: Install doors per NFPA 105.

D. Glazing: Comply with requirements in Section 08 81 00 - Glass Glazing and with hollow metal manufacturer's written instructions.
   1. Glaze doors at factory or in supplier shop with glass of type and thickness indicated on Drawings. Coordinate with Section 08 81 00 for glass types. Install glass as recommended by manufacturer and in compliance with ITS (DIR) - Warnock Hersey or UL approved glazing system.
   2. Secure stops with countersunk flat- or oval-head machine screws spaced uniformly not more than 9 inches (229 mm) on center and not more than 2 inches (51 mm) on center from each corner.

E. Coordinate with masonry and wallboard wall construction for anchor placement.
   1. Masonry Construction: Install frames up to 60" high in masonry construction with minimum 2 jamb anchors each jamb; add an additional anchor for every 30" or fraction thereof.
   2. Wallboard Construction: Install frames up to 60" high in wallboard construction with minimum 3 jamb anchors each jamb; add an additional anchor for every 24" or fraction thereof.

F. Coordinate installation of glass and glazing.

3.02 TOLERANCES

A. Installation Tolerances: Adjust hollow metal door frames for squareness, alignment, twist, and plumb to the following tolerances:
   1. Squareness: Plus or minus 1/16 inch (1.6 mm), measured at door rabbet on a line 90 degrees from jamb perpendicular to frame head.
   2. Alignment: Plus or minus 1/16 inch (1.6 mm), measured at jambs on a horizontal line parallel to plane of wall.
   3. Twist: Plus or minus 1/16 inch (1.6 mm), measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
   4. Plumbness: Plus or minus 1/16 inch (1.6 mm), measured at jambs at floor.

3.03 ADJUSTING AND CLEANING

A. Final Adjustments: Check and readjust operating hardware items immediately before final inspection. Leave Work in complete and proper operating condition. Remove and replace defective Work, including hollow metal Work that is warped, bowed, or otherwise unacceptable.

B. Remove grout and other bonding material from hollow metal Work immediately after installation.

C. Prime-Coat Touchup: Immediately after erection, sand smooth rusted or damaged areas of prime coat and apply touchup of compatible air-drying, rust-inhibitive primer.

END OF SECTION

SECTION 08 14 16
FLUSH WOOD DOORS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Wood doors.

B. Rated wood doors.

C. Pre-fitting and pre-machining for hardware.

D. Factory pre-finishing wood doors.

1.02 RELATED SECTIONS

A. Section 01 33 00 - Submittal Procedures.

B. Section 01 40 00 - Quality Requirements.

C. Section 01 60 00 - Product Requirements.

D. Section 04 20 00 - Unit Masonry.

E. Section 06 10 00 - Rough Carpentry.

F. Section 06 20 00 - Finish Carpentry.

G. Section 08 71 00 - Door Hardware.

H. Section 08 81 00 - Glazing.

1.03 REFERENCE STANDARDS

A. ANSI A135.4 American National Standard for Basic Hardboard.

B. ASTM D1037 - Standard Test Methods for Evaluating Properties of Wood-Base Fiber and Particle Panel Materials; 2012 (Reapproved 2020).

C. AWI (AWS) - Architectural Woodwork Standards; 2014, with Errata (2016).

D. NFPA 80 - Standard for Fire Doors and Other Opening Protectives; 2025.

E. NFPA 252 - Standard Methods of Fire Tests of Door Assemblies; 2022.

F. UL 10C - Standard for Positive Pressure Fire Tests of Door Assemblies; Current Edition, Including All Revisions.

G. WDMA I.S. 1A - Interior Architectural Wood Flush Doors; 2021, with Errata (2022).

H. ASTM E84 Standard Test Method for Surface Burning.

I. AWI (QCP) American Wood Institute Quality Certification Program.

J. AWI/AWMAC/WI (AWS) American Wood Institute Architectural Wood Standards.

K. AWMAC (GIS) Architectural Woodwork Standards.

L. AWMAC/WI (NAAWS) North American Architectural Woodwork Standards.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Pre-Submittal Hardware and Keying Meeting: Prior to preparing final submittals, conduct meeting including Owner, Architect, and supplier of hardware to determine the following:
   1. Lock Function: Demonstrate function/type of each lockset scheduled and verify function at each door.
   2. Electrical Operation: Verify function of openings requiring electrified hardware.
   3. Keying: Determine keying requirements for preparation of final keying schedule.
   4. Submit letter of compliance, indicating when this meeting was held and who was in attendance, to Architect, Owner, and hardware supplier.

1.05 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Source Limitations: Obtain flush wood doors from single manufacturer.

C. Quality Standard: In addition to requirements specified, comply with WDMA I.S. 1A, "Architectural Wood Flush Doors. AWI (AWS) "Architectural Woodwork Quality Standards Illustrated."

D. Fire-Rated Wood Doors: Doors complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at positive pressure per NFPA 252 or UL 10C.
   1. Temperature-Rise Limit: Where indicated, provide doors that have a maximum transmitted temperature end point of not more than 450 degrees F (250 degrees C) above ambient after 30 minutes of standard fire-test exposure.

E. Factory Finishing of Doors: Arrange with Owner to remove at least 1 existing wood door for the purpose of storing at wood door factory as a basis for matching existing stain and finish. Select appropriate door with Architect's direction.

1.06 REGULATORY REQUIREMENTS

A. Conform to applicable code for fire rated doors.

B. Furnish manufacturer's appropriate listed door to maintain rated assembly, including compatibility with specified hardware.

C. Where fire rated doors are indicated on the Door Schedule, doors shall comply with the requirements of UL 10C for positive pressure requirements. Door assemblies shall bear a fire-rating label issued by a listing agency showing the hourly fire rating followed by the letter "S".

1.07 SUBMITTALS

A. Material and Equipment Submittals: Submit the following under provisions of Section 01 30 00- Submittals:
   1. Shop Drawings: Indicate elevations for each door type, location, size, fire ratings, swing, undercuts, stile and rail reinforcement, internal blocking for hardware attachment, and cutouts for glazing and louvers.
   2. Product Data: Submit product data for each type of door specified.
   3. Samples: Submit four (4) 12" x 12" samples of factory finishing for approval.

B. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

C. Closeout Submittals: Submit the following under provisions of Section 01 77 00 - Contract Closeout.
   1. Warranty.
   2. Operation and Maintenance information.

1.08 DELIVERY, STORAGE, AND PROTECTION

A. Comply with requirements of referenced standard and manufacturer's written instructions.

B. Package doors individually in cardboard cartons and wrap bundles of doors in plastic sheeting.
   1. Stack wood doors as recommended by door manufacturer.
   2. Use opaque plastic sheeting for natural finished doors.

C. Mark each door on top and bottom with a label from the manufacturer indicating the following: Opening number used on Shop Drawings, door construction, face veneer species, cut and grade. If factory finished, include finishing information.

D. Do not deliver doors until building is enclosed, warm, dry, and at design humidity levels, and painting Subcontractors are on Project site ready to apply finish immediately after delivery.

1.09 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install doors until spaces are enclosed and weathertight, wet Work in spaces is complete and dry, and HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during remainder of construction period.

1.10 WARRANTY

A. Warranty: Provide written warranty signed by door manufacturer, installer and Contractor agreeing to replace defective doors. Door defects include, but are not limited to the following:
   1. Delamination in any degree.
   2. Warp or twist of 1/4" or more in any door panel.
   3. Telegraphing of any part of core assembly through face veneer to cause surface variation of 1/100" or more in a 3" span.
   4. Other defects which affect performance of door.

B. Warranty shall cover the cost of refinishing, installation of hardware and re-hanging defective doors. Warranty shall be in effect for the following time periods:
   1. Interior Solid Core Doors: For the life of the installation.

PART 2 PRODUCTS

2.01 FLUSH SOLID CORE INTERIOR WOOD DOORS

A. Flush 5-ply door construction with solid particle core, urea-formaldehyde free bonded to stiles and rails using Type 1 waterproof glue.
   1. Quality Grade: AWI Premium.
   2. Door Thickness: 1-3/4” thick.
   3. Acceptable Manufacturers:
      a. Oshkosh Architectural Door Company.
      b. Masonite Architectural.
      c. VT Industries.

B. Non-Rated Doors:
   1. Quality Type: AWI Type PC-5.
   2. Stiles: 2-ply, 1-1/4” thick after trimming laminated stiles. Outer ply 1/4" hardwood to match veneer face; inner ply 1-1/8 “mill option hardwood or softwood.
   3. Rails: 1-1/8" thick mill option hardwood or softwood. Thicker as required for hardware concealed fastener.
   4. Acceptable Products:
      a. Masonite Architectural "Aspiro."
      b. VT "Heritage Collection."
      c. Oshkosh “GP5V”.

C. 20 Minute Doors:
   1. Quality Type: AWI Type FD 1/3; and complying to UL10C positive pressure requirements.
   2. Stiles: 2-ply, minimum 5-1/2" thick laminated stiles after trimming. Outer ply 3/4" hardwood to match veneer face; inner ply mill option hardwood or softwood.
   3. Top Rail: Minimum 5-1/2" thick mill option lumber.
   4. Acceptable Products:
      a. Masonite Architectural "Aspiro," 20 Minute.
      b. VT "Heritage Collection," 20 Minute.
      c. Oshkosh “GP5V”, 20 Minute.

D. 3/4 and 1-1/2 Hour Doors:
   1. Quality Type: AWI Type FD 3/4 or Type FD 1 as indicated on Door Schedule; and complying to UL10C positive pressure requirements with intumescent seals concealed by outer stile (Category A).

2. Stiles: Provide wood door manufacturer's standard laminated edge construction capable of withstanding a minimum of 740 pounds of pull per screw when tested in accordance with ASTM D1037.
3. Top Rail: 5-1/2” minimum thick mill option lumber.
4. Bottom Rail: 1-1/8" thick mill option hardwood or softwood.
5. Internal Reinforcement:
    1) Lock Blocks: 5-1/2" x 12" minimum mill option lumber. Provide two blocks for doors scheduled to receive exit devices.
    2) Flush Bolts: Provide 5-1/2" x 12" lumber reinforcement at flush bolt locations.
6. Acceptable Products:
    a. Masonite Architectural "Aspiro," 45 and 60 Minute.
    b. VT "Heritage Collection," 45 and 60 Minute.
    c. Oshkosh “GF5V”, 45 and 60 Minute.

2.02 FACE VENEER

A. Veneer: AWI Grade A, 1/50" thick minimum veneer thickness prior to sanding.
1. Species: Walnut, stain to match PLAM-34. See Door Schedule and Section 06 40 00 – Architectural Woodwork.
2. Cut: Plain sliced (Flat Cut).
3. Matching between Individual Pieces of Veneer: Book match.
4. Assembly of Spliced Veneer on Face: Balance match (5 pieces maximum).

2.03 ACCESSORIES

A. Glass Stops: Square, beveled, to be provided by door manufacturer to match door species and finish and provide required fire rating.

2.04 FABRICATION

A. Fabricate non-rated doors in accordance with AWI Quality Standards requirements.

B. Fabricate fire rated doors in accordance with AWI Quality Standards and UL requirements. Permanently attach UL fire rating label to door edge of all fire rated doors. Provide S-Label where indicated on Door Schedule.

C. Provide non-rated and 20 minute rated flush doors with 1-3/8" thick minimum, 2-ply edge bands, with outer ply 1/2" thick minimum edge strips of wood species to match face veneer or as otherwise required to comply with UBC

D. Provide fire rated doors with ratings greater than 20 minute with manufacturer's laminated edge construction to provide specified screw holding capability.

E. Provide minimum 5” top blocking, sill blocking and lock block on all doors. Provide 10” high intermediate blocking on all doors when exit devices are specified.

F. Pre-fit and pre-machine doors for finish hardware, except for hardware items considered to be surface mounted, as specified in Section 08 71 00. Comply with AWI Section 01 30 00 for factory pre-fitting and pre-machining.

G. Bevel strike edge of double doors 1/8” in 2”. Radius strike edge of double acting swing doors.

H. Seal cutouts prior to installation of moldings or stops.

2.05 FACTORY FINISHING

A. General: Comply with referenced quality standard for factory finishing. Complete fabrication, including fitting doors for openings and machining for hardware that is not surface applied, before finishing.
1. Finish faces, all 4 edges, edges of cutouts, and mortises. Stains and fillers may be omitted on bottom edges, edges of cutouts, and mortises.

B. Finish doors at factory that are indicated to receive transparent finish. Field finish doors indicated to receive opaque finish.

C. Transparent Finish:
1. Grade: Premium.

2. Finish: AWI conversion varnish catalyzed polyurethane system.
3. Staining: Custom match to millwork. Contact LT to obtain control sample. Provide stain match samples to architect for approval.
4. Sheen: Satin.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine doors and installed door frames before hanging doors.
   1. Verify that frames comply with indicated requirements for type, size, location, and swing characteristics and have been installed with level heads and plumb jambs.
   2. Reject doors with defects.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Hardware: For installation, see Section 08 71 00 - Door Hardware.

B. Installation Instructions: Install doors to comply with manufacturer's written instructions and referenced quality standard, and as indicated.
   1. Install fire-rated doors in corresponding fire-rated frames per NFPA 80.

C. Job-Fitted Doors: Align and fit doors in frames with uniform clearances and bevels; do not trim stiles and rails in excess of limits set by manufacturer or permitted for fire-rated doors. Machine doors for hardware. Seal edges of doors, edges of cutouts, and mortises after fitting and machining.
   1. Clearances: Provide 1/8 inch (3.2 mm) at heads, jambs, and between pairs of doors. Provide 3/4 inch (18 mm) from bottom of door to top of decorative floor finish or covering unless otherwise indicated. Where threshold is shown or scheduled, provide 1/4 inch (6.4 mm) from bottom of door to top of threshold unless otherwise indicated.
      a. Comply with NFPA 80 for fire-rated doors.
   2. Bevel non-fire-rated doors 1/8 inch in 2 inches (3-1/2 degrees) at lock and hinge edges.
   3. Bevel fire-rated doors 1/8 inch in 2 inches (3-1/2 degrees) at lock edge; trim stiles and rails only to extent permitted by labeling agency.

D. Factory-Fitted Doors: Align in frames for uniform clearance at each edge.

E. Factory-Finished Doors: Restore finish before installation if fitting or machining is required at Project site.

3.03 ADJUSTING

A. Operation: Rehang or replace doors that do not swing or operate freely. If door cannot be made to operate properly, remove and install new door.

B. Protect doors as recommended by door manufacturer to ensure that wood doors are without damage or deterioration at the time of Substantial Completion.
   1. Remove doors damaged during installation and install new doors.

C. Finished Doors: Replace doors that are damaged or that do not comply with requirements. Doors may be repaired or refinished if Work complies with requirements and shows no evidence of repair or refinishing.
   1. Restore finish before installation, if fitting or machining is required at Project site.

SECTION 08 31 13
ACCESS DOORS AND FRAMES

PART 1 GENERAL

1.01 SUMMARY

A. This Section includes the following:
   1. Access doors and frames for walls and ceilings.

1.02 RELATED SECTIONS

A. Section 01 33 00 - Submittal Procedures.

B. Section 01 40 00 - Quality Requirements.

C. Section 01 60 00 - Product Requirements.

D. Section 06 10 00 - Rough Carpentry.

E. Section 06 20 00 - Finish Carpentry.

F. Section 06 64 00 - Plastic Paneling.

G. Section 08 71 00 - Door Hardware.

H. Section 09 21 16 - Gypsum Board Assemblies.

I. Section 09 30 00 - Tiling.

J. Section 09 91 00 - Painting.

K. Div 21 - Fire Suppression.

L. Div 22 - Plumbing.

M. Div 23 - HVAC.

N. Div 25 - Automation.

O. Div 26 - Electrical.

P. Div 27 - Communications.

1.03 REFERENCE STANDARDS

A. ASTM A36/A36M - Standard Specification for Carbon Structural Steel; 2019.

B. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products; 2017.

C. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware; 2023.

D. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process; 2023.

E. ASTM A780/A780M - Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings; 2020.

F. ASTM A924/A924M - Standard Specification for General Requirements for Steel Sheet, Metallic-Coated by the Hot-Dip Process; 2022a.

G. ASTM A1008/A1008M - Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, Required Hardness, Solution Hardened, and Bake Hardenable; 2023, with Editorial Revision.

H. SSPC-Paint 20 - Zinc-Rich Coating (Type I - Inorganic, and Type II - Organic); 2019.

I. SSPC-SP 1 - Solvent Cleaning; 2015, with Editorial Revision (2016).

J. SSPC-SP 5 - White Metal Blast Cleaning; 2007.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Pre-Submittal Hardware and Keying Meeting: Prior to preparing final submittals, conduct meeting including Owner, Architect, and supplier of hardware to determine the following:
   1. Keying: Determine keying requirements for preparation of final keying schedule.
   2. Submit letter of compliance, indicating when this meeting was held and who was in attendance, to Architect, Owner, and hardware supplier.

1.05 SUBMITTALS

A. Product Data: For each type of access door and frame indicated. Include construction details, materials, individual components and profiles, and finishes.

B. Shop Drawings: Show fabrication and installation details of access doors and frames for each type of substrate. Include plans, elevations, sections, details, and attachments to other work.

C. Access Door and Frame Schedule: Provide complete access door and frame schedule, including types, locations, sizes, latching or locking provisions, and other data pertinent to installation.

D. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

1.06 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Source Limitations: Obtain access door(s) and frame(s) through one source from a single manufacturer.

C. Size Variations: Obtain Architect's acceptance of manufacturer's standard-size units, which may vary slightly from sizes indicated.

1.07 COORDINATION

A. Verification: Determine specific locations and sizes for access doors needed to gain access to concealed plumbing, mechanical, or other concealed work, and indicate in the schedule specified in "Submittals" Article.

PART 2 PRODUCTS

2.01 STEEL MATERIALS

A. Steel Plates, Shapes, and Bars: ASTM A36/A36M.
   1. ASTM A123/A123M, for galvanizing steel and iron products.
   2. ASTM A153/A153M, for galvanizing steel and iron hardware.

B. Steel Sheet: Uncoated cold-rolled steel sheet substrate complying with ASTM A1008/A1008M, Commercial Steel (CS), exposed.

C. Metallic-Coated Steel Sheet: ASTM A653/A653M, Commercial Steel (CS) with A60 (ZF180) zinc-iron-alloy (galvannealed) coating or G60 (Z180) mill-phosphatized zinc coating; stretcher-leveled standard of flatness; with minimum thickness indicated representing specified thickness according to ASTM A924/A924M.

D. Steel Finishes: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
   1. Surface Preparation for Steel Sheet: Clean surfaces to comply with SSPC-SP 1, "Solvent Cleaning," to remove dirt, oil, grease, or other contaminants that could impair paint bond. Remove mill scale and rust, if present, from uncoated steel, complying with SSPC-SP 5 /NACE No. 1, "White Metal Blast Cleaning", or SSPC-SP 8, "Pickling".
   2. Surface Preparation for Metallic-Coated Steel Sheet: Clean surfaces with nonpetroleum solvent so surfaces are free of oil and other contaminants. After cleaning, apply a conversion coating suited to the organic coating to be applied over it. Clean welds, mechanical connections, and

abraded areas, and apply galvanizing repair paint specified below to comply with ASTM A780/A780M.

a. Galvanizing Repair Paint: High-zinc-dust-content paint for re-galvanizing welds in steel, complying with SSPC-Paint 20.

2.02 ACCESS DOORS AND FRAMES FOR WALLS AND CEILINGS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Acudor Products, Inc.
   2. Babcock-Davis.
   3. Cendrex Inc.
   4. Cesco.
   5. Dur-Red Products.
   6. Elmdor/Stoneman.
   7. Karp Associates, Inc.
   8. Larsen's Manufacturing Company.
   9. MIFAB, Inc.
   10. Milcor Inc.
   11. Nystrom, Inc.
   12. Williams Bros. Corporation of America (The).

B. Recessed Access Door / Drywall Panel Door.
   1. Locations: Wall and ceiling surfaces, see plans and elevations.
   2. Door: Minimum 0.060 inch (1.5 mm) thick sheet metal.
   3. Frame: Minimum 0.060 inch (1.5-mm) thick sheet metal with 1-1/4 inch (32-mm) wide, recessed trim.
   4. Hinges: Continuous piano.
   5. Lock: Cylinder.
      a. Lock Preparation: Section 08 71 00 - Door Hardware.

C. Flush Access Doors and Frames with Exposed Trim: Fabricated from steel sheet.
   1. Locations: Wall and ceiling surfaces.
   2. Door: Minimum 0.060 inch (1.5 mm) thick sheet metal.
   3. Frame: Minimum 0.060 inch (1.5-mm) thick sheet metal with 1-1/4 inch (32-mm) wide, surface-mounted trim.
   4. Hinges: Continuous piano.
   5. Lock: Cylinder.
      a. Lock Preparation: Section 08 71 00 - Door Hardware.

D. Fire-Rated, Insulated, Flush Access Doors and Frames with Exposed Trim: Fabricated from steel sheet.
   1. Locations: Wall and ceiling surfaces.
   2. Fire-Resistance Rating: Not less than that of adjacent construction.
   3. Temperature Rise Rating: 250 degrees F (139 degrees C) at the end of 30 minutes.
   4. Door: Flush panel with a core of mineral-fiber insulation enclosed in sheet metal with a minimum thickness of 0.036 inch (0.9 mm).
   5. Frame: Minimum 0.060 inch (1.5 mm) thick sheet metal with 1 inch (25 mm) wide, surface-mounted trim.
   6. Hinges: Continuous piano.
   7. Automatic Closer: Spring type.
   8. Lock: Self-latching device with cylinder lock.

E. Tile-ready Recessed Access door.
   1. Locations: Tiled Walls and Ceilings, only where indicated. Typical access doors for tiled areas are flush.
   2. Size: Coordinate size with access requirements and tile size. Provide larger panel than needed for access to time out with tile pattern if necessary.

3. Door: Aluminum extrusion with tile backer fitted in door panel.
4. Frame: Aluminum extrusion 6063-T6 recessed to provide similar edge to allow for even finishing of wall or ceiling surface.
5. Hinge: Wing hinge with 90 degree opening with removable door.
6. Gasket: Dust Gasket.
7. Lock: Cylinder.
    a. Lock Preparation: Section 08 71 00 - Door Hardware.

2.03 FABRICATION

A. General: Provide access door and frame assemblies manufactured as integral units ready for installation.

B. Metal Surfaces: For metal surfaces exposed to view in the completed Work, provide materials with smooth, flat surfaces without blemishes. Do not use materials with exposed pitting, seam marks, roller marks, rolled trade names, or roughness.

C. Doors and Frames: Grind exposed welds smooth and flush with adjacent surfaces. Furnish attachment devices and fasteners of type required to secure access panels to types of supports indicated.
    1. Exposed Flanges: Nominal 1 to 1-1/2 inches (25 to 38 mm) wide around perimeter of frame.
    2. Provide mounting holes in frames for attachment of units to metal or wood framing.
    3. Provide mounting holes in frame for attachment of masonry anchors.

D. Latching Mechanisms: Furnish number required to hold doors in flush, smooth plane when closed.
    1. For cylinder lock, furnish 2 keys per lock and key all locks alike.
    2. For recessed panel doors, provide access sleeves for each locking device. Furnish plastic grommets and install in holes cut through finish.

PART 3 EXECUTION

3.01 INSTALLATION

A. Comply with manufacturer's written instructions for installing access doors and frames.

B. Set frames accurately in position and attach securely to supports with plane of face panels aligned with adjacent finish surfaces.

C. Install doors flush with adjacent finish surfaces or recessed to receive finish material.

D. Paint access panels according to the wall finish; see section 09 91 00.

3.02 ADJUSTING AND CLEANING

A. Adjust doors and hardware after installation for proper operation.

B. Remove and replace doors and frames that are warped, bowed, or otherwise damaged.

END OF SECTION

SECTION 08 36 16
SINGLE-PANEL DOORS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Single-panel tilt-up doors, electrically operated.

B. Exterior cladding for door panels.

C. Interior cladding for door panels.

D. Door opening frame structure.

1.02 RELATED REQUIREMENTS

A. Section 01 33 00 - Submittal Procedures.

B. Section 01 40 00 - Quality Requirements.

C. Section 01 60 00 - Product Requirements.

D. Section 01 92 00 - Facility Operation and Maintenance.

E. Section 05 50 00 - Metal Fabrications

F. Section 07 92 00 - Joint Sealants

G. Section 08 81 00 - Glazing

H. Section 26 05 83 - Wiring Connections.

1.03 DEFINITIONS

A. Electrically Operated Door: A rigid single-panel door hinged along the horizontal header of the opening and is commonly actuated with linear actuators mounted to each vertical jamb of the opening. The door opens from the bottom to the top of the opening, and door panel extends horizontally out from the top of the opening in fully open position.

B. Rigid Doors. A door made in one rigid piece designed to close an entire opening. Opening and closing are accomplished by pivoting the door about an axis, with or without a horizontal track to guide the top of the door.

C. Tilt-Up Door: Door made of a single panel that pivots from the fully closed position to the fully open position which is horizontal and above the floor. Each single panel is rigid.

1.04 REFERENCE STANDARDS

A. ASTM A36/A36M - Standard Specification for Carbon Structural Steel; 2019.

B. ASTM A108 - Standard Specification for Steel Bar, Carbon and Alloy, Cold-Finished; 2018.

C. ASTM A501/A501M - Standard Specification for Hot-Formed Welded and Seamless Carbon Steel Structural Tubing; 2021.

D. ASTM B209/B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate; 2021a.

E. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes; 2021.

F. ASTM B221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes (Metric); 2021.

G. ASTM C1048 - Standard Specification for Heat-Strengthened and Fully Tempered Flat Glass; 2018.

H. AWS A2.4 - Standard Symbols for Welding, Brazing, and Nondestructive Examination; 2020.

I. AWS B2.1/B2.1M - Specification for Welding Procedure and Performance Qualification; 2021, with Errata (2023).

J. AWS D1.1/D1.1M - Structural Welding Code - Steel; 2020, with Errata (2023).

K. AWS D1.2/D1.2M - Structural Welding Code - Aluminum; 2014, with Errata (2020).

L. ITS (DIR) - Directory of Listed Products; Current Edition.

M. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

N. UL (DIR) - Online Certifications Directory; Current Edition.

O. UL 325 - Standard for Door, Drapery, Gate, Louver, and Window Operators and Systems; Current Edition, Including All Revisions.

1.05 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Convene a preinstallation meeting one week before starting work of this section; request attendance by affected installers; review preparation and installation procedures and coordination and scheduling necessary for related work.

1.06 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements for submittal procedures.

B. Door Product Data: Include component construction, anchorage method, power unit, actuating device, and hardware.

C. Door Shop Drawings: Indicate opening dimensions and required tolerances, connection details, anchorage spacing, hardware locations, and installation details. Include summary of forces and loads applied to door opening framing members and building structure.

D. Door Opening Frame Structure Shop Drawings: Indicate dimensions, locations of load-bearing members, bracing, connections, attachments, cambers, and loads; general construction details, anchors and methods of anchorage; indicate welded connections with AWS A2.4 welding symbols; indicate net weld lengths.

E. Design Documents: Drawings and calculations signed and sealed by Design Professional. Design door and door opening frame structure to same loading criteria for live, dead, seismic, and wind loads as the surrounding construction.

F. Welders' Qualification Statement: Welders' certificates in accordance with AWS B2.1/B2.1M and dated no more than 12 months before start of scheduled welding work.

G. Manufacturer's qualification statement.

H. Installer's qualification statement.

I. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

J. Operation Data: Normal operation, troubleshooting, and adjusting.

K. Maintenance Data: Motor and transmission, shaft and gearing, lubrication frequency, spare part sources.

L. Specimen warranty.

1.07 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Designer Qualifications: Perform design of door panel framing structure under direct supervision of Professional Structural Engineer experienced in design of this type of work and licensed in the State in which the Project is located.

C. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years of documented experience.

D. Installer Qualifications: Company specializing in performing work of type specified and with at least three years documented experience and approved by manufacturer.

E. Welder Qualifications: Welding processes and welding operators qualified in accordance with AWS D1.1/D1.1M and AWS D1.2/D1.2M and dated no more than 12 months before start of scheduled welding work.

F. Comply with applicable code for motor and motor control requirements.

G. Products Requiring Electrical Connection: Listed and classified by ITS (DIR), UL (DIR), or testing firm acceptable to authorities having jurisdiction, as suitable for purpose specified.

1.08 WARRANTY

A. See Section 01 77 00 - Closeout Procedures for additional warranty requirements.

B. Manufacturer's Warranty: Provide 2-year manufacturer warranty for electric operating equipment, Complete forms in Owner's name and register with manufacturer.

C. Manufacturer's Warranty: Provide 2-year manufacturer warranty for a period fo two (2) years from original purchase.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Single-Panel Electrically-Operated Doors:
   1. EVO-Vue by Renlita, 903-308-3309, www.evo-doors.com, www.renlitausa.com.
   2. Substitutions: Not permitted.

2.02 DESIGN CRITERIA

A. Regulatory Requirements: As a minimum, comply with applicable code criteria for loads, including seismic loads.

B. Design Loads: As indicated on drawings.

2.03 PERFORMANCE REQUIREMENTS

2.04 SINGLE-PANEL TILT-UP DOORS, ELECTRICALLY OPERATED

A. Description: Assemblies consisting of primary door panel framing members, secondary framing members, exterior face cladding, lift mechanism with lift cables, electrical components, and interior face cladding.

B. Product: EVO-Vue
   1. Door Panel: Manufacturer's custom design for intended application.
      a. Nominal Size: As indicated on drawings.
      b. Primary Framing Structure: Structural steel tubing.
      c. Secondary Framing: Welded structural steel tubing.
      d. Exterior Face Longitudinal Truss: Welded structural steel tubing, integral with bottom framing member of door panel.
      e. Exterior Face Cladding: Metal wall panels.
      f. Interior Face Cladding: Metal wall panels.
   2. Operation: Manufacturer's standard. Evo-Drive
      a. Operators and Control Stations: Provide products listed by ITS (DIR), UL (DIR), or testing agency acceptable to authorities having jurisdiction.
      b. Comply with UL 325 when required by authority having jurisdiction.
      c. Power Units:
         1) Motor Rating: As required for proper operation; continuous duty.
         2) Motor Voltage: Electrical service characteristics indicated on drawings.
         3) Manual override in case of power failure.
         4) See Section 26 05 83 for electrical connections.
      d. Wiring Terminations: Provide terminal lugs to match branch circuit conductor quantities, sizes, and materials indicated; enclose terminal lugs in terminal box, sized to comply with NFPA 70.
      e. Control Station: Provide standard Two-button Open-Close control device for each door.

1) 24-volt circuit.
2) Surface mounted, at or near interior door jamb.

3. Lift Mechanism: Manufacturer's standard design for intended application.

2.05 EXTERIOR CLADDING FOR DOOR PANELS

A. Metal Panel Cladding:
1. Manufacturer's standard metal panels.

2.06 INTERIOR CLADDING FOR DOOR PANELS

A. Metal Panel Cladding:
1. Manufacturer's standard metal panels.

2.07 DOOR OPENING FRAMING STRUCTURE

A. Design to accommodate horizontal and vertical loads while supporting the door and lift mechanism in every position.

B. Framing Components: As required for structural design.

2.08 MATERIALS

A. Aluminum Sheet: ASTM B209/B209M, 5005 alloy, H14 temper, plain surface.

B. Aluminum Extrusions: ASTM B221 (ASTM B221M), 6063 alloy, T6 temper.

C. Finish Color: As selected by Architect.

D. Steel Components:
1. Steel Shape and Flat Sections: ASTM A36/A36M.
2. Steel Tubing: ASTM A501/A501M hot-formed structural tubing.
3. Hinge Pins: Machined from steel complying with requirements of ASTM A108, Grade 4140.

E. Glazing Panes: Type and thickness as required for each application.
1. Float Glass:
a. Heat-Strengthened and Fully Tempered Types: ASTM C1048.
b. Glazing, Insulating Glass: 1 Inch dual pane insulated glass.
1) See Section 08 81 00.
2. Glazing Wedges: Co-extrusions, fitted between aluminum profiles.

F. Insulation: Foamed-in-place polyurethane, bonded to facing.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that wall openings are ready to receive work and opening dimensions and tolerances are within specified limits.

B. Verify that structural building elements at head and jambs of opening are constructed to adequately receive and support door panel and lift mechanisms.

C. Verify that electric power is available in correct locations and has correct characteristics.

3.02 PREPARATION

A. Prepare opening to permit correct installation of door unit to perimeter air and vapor barrier seal.

B. Apply primer to wood frame.

3.03 INSTALLATION

A. Install door unit assembly in accordance with manufacturer's instructions.

B. Anchor assembly to wall construction and building framing without distortion or stress.

C. Securely brace door tracks suspended from structure. Secure tracks to structural members only.

D. Fit and align door assembly including lift mechanisms.

E. Coordinate installation of electrical service. Complete power and control wiring from disconnect to unit components.

F. Install perimeter trim.

3.04 TOLERANCES

A. Maximum Variation from Plumb: 1/16 inch (1.5 mm).

B. Maximum Variation from Level: 1/16 inch (1.5 mm).

C. Longitudinal or Diagonal Warp: Plus or minus 1/8 inch (3 mm) from 10-foot (3 m) straight edge.

D. Maintain dimensional tolerances and alignment with adjacent work.

3.05 ADJUSTING

A. Adjust door assembly for smooth operation and full contact with weatherstripping.

3.06 CLEANING

A. Clean doors and frames and glazing.

B. Remove temporary labels and visible markings.

3.07 PROTECTION

A. Protect installed products from damage until Date of Substantial Completion.

B. Do not permit construction traffic through overhead door openings after adjustment and cleaning.

END OF SECTION

SECTION 08 38 00
TRAFFIC DOORS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Traffic doors.

1.02 RELATED SECTIONS

A. Section 01 33 00 - Submittal Procedures.

B. Section 01 40 00 - Quality Requirements.

C. Section 01 60 00 - Product Requirements.

D. Section 06 10 00 - Rough Carpentry.

E. Section 06 64 00 - Plastic Paneling.

F. Section 08 71 00 - Door Hardware.

G. Section 09 21 16 - Gypsum Board Assemblies

1.03 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00.

1.04 SUBMITTALS

A. Material and Equipment Submittals: Submit the following under provisions of Section 01 33 00-Submittals:
   1. Shop Drawings: Indicate elevations, size, location, color and installation details.
   2. Product data.
   3. Samples: Submit sample for door cladding material for final color approval.
   4. Installation Instructions.

B. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

PART 2 PRODUCTS

2.01 TRAFFIC DOORS

A. Rigid Traffic Door (Café): Double-acting, self-closing, 3/4" thick solid core door body with 0.032” thick decorative plastic laminate applied to both sides of door. Size as indicated on Drawings.
   1. Eliason Easy Swing Door Division, Model ENG-1.
   2. Finish: Non-standard, 0.032” thick decorative laminate finish. Color to match PLAM-19, or as selected by the Architect.
   3. Vision Panels: 9” x 14” vision panel glazed with clear acrylic.
   4. Hardware: Manufacturer's standard.
   5. Trim: Provide 18 gauge stainless steel edge trim and top hardware cover plates.
   6. Base Plates: 18” high stainless steel base plates both sides of door.
   7. Jamb Guards: 5” x 9” stainless steel welded assembly of ¼” steel.

B. Rigid Insulated Traffic Door (Bistro): Double-acting, self-closing, 3 3/4” thick, foamed-in-place monolithic door panel with an outer skin thickness of .125”. Core foam to be CFC-Free urethane foam, providing and R-Value of 25.
   1. Chase Doors, Model Durulite R25 Insulated Cooler Door. Or approved equal.
   2. Finish: Color to be “Beige” or as selected by the Architect from manufacturer’s standard colors.
   3. Vision Panel: 12”x18” triple pane polycarbonate.
   4. Hinge: By Manufacturer, double acting.
   5. Gasketing: Replaceable Perimeter edge gasketing.

6.
7. Spring Bumpers: None.
8. Jamb Guard: 5”x18” Jamb Guard.
9. Push Plates: None.

C. Rigid Traffic Gate (Bistro): Double-acting, self-closing, 1/2" thick solid core door body with 0.125” thick high impact thermoplastic exterior laminate applied to both sides of door. Size as indicated on Drawings.
   1. Eliason Easy Swing Door Division, Model P11- Plus Gate.
   2. Finish: High impact thermoplastic exterior laminate applied to both sides of door. Color to be selected by the Architect from manufacturer’s color chart.
   3. Hardware: Manufacturer's standard.
   4. Gate Post Size: Refer to drawings for door/ post height.
   5. Gate Post Finish: Powder coated scratch resistant steel post color to be “black” or as selected by architect.
   6. Gate Post Mounting: Threaded 3” floor anchors at 4 points of contact. (anchor bolts to be mounted to concrete slab. Finished tile floor to cover anchor bolts).
   7. Gate Post Hardware: Eliason EasySwing Hardware

D. Rigid Traffic Gate (Bar): Double-acting, self-closing, 1/2" thick, foamed-in-place monolithic door panel with an outer skin thickness of 0.125”, applied to both sides of door. Size as indicated on Drawings.
   1. Eliason Easy Swing Door Division, Model P11- Plus Gate.
   2. Finish: Non-standard, 0.032" thick decorative laminate finish. Color to match PLAM-19, or as selected by the Architect.
   3. Hardware: Manufacturer's standard.
   4. Gate Post Size: Refer to drawings for door/post height.
   5. Gate Post Finish: Powder coated scratch resistant steel post color to be “black” or as selected by architect.
   6. Gate Post Mounting: Threaded 3” floor anchors at 4 points of contact. (anchor bolts to be mounted to concrete slab. Finished tile floor to cover anchor bolts).
   7. Gate Post Hardware: Eliason Easy Swing Hardware

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify door openings are prepared with headers and floors level, jambs plumb, without projections, and of specified dimensions.

B. Verify jambs of frames are properly reinforced at hinge locations.

C. Beginning of installation means acceptance of existing conditions.

3.02 INSTALLATION

A. Install traffic doors according to Manufacturer's installation instructions. Adjust and leave in good operating order.

3.03 PROTECTION

A. Protect door according as recommended by traffic door manufacturer to assure that doors will be without damage at time of Substantial Completion.

END OF SECTION

SECTION 08 41 13
ALUMINUM FRAMED ENTRANCES AND STOREFRONTS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Exterior storefront framing.
   2. Interior storefront framing.
   3. Sealants.
   4. Hardware (refer to Section 08 71 00 for hardware set information)

1.02 DEFINITIONS

A. ADA Standards, ADA/ABA Accessibility Guidelines: U.S. Architectural & Transportation Barriers Compliance Board's "Americans with Disability Act (ADA) and Architectural Barriers Act (ABA) Accessibility Guidelines for Buildings and Facilities."

1.05 PERFORMANCE REQUIREMENTS

A. Prepare design drawings and calculations under seal of a Professional Structural Engineer licensed in the state/province of the project and fully experienced in the design of curtainwall framing systems.

B. General Performance: Aluminum-framed systems shall withstand the effects of the following performance requirements without exceeding performance criteria or failure due to defective manufacture, fabrication, installation, or other defects in construction:
   1. Movements of supporting structure indicated on Drawings including, but not limited to, story drift and deflection from uniformly distributed and concentrated live loads.
   2. Dimensional tolerances of building frame and other adjacent construction.

3. Failure includes the following:
    a. Deflection exceeding specified limits.
    b. Thermal stresses transferring to building structure.
    c. Framing members transferring stresses, including those caused by thermal and structural movements to glazing.
    d. Noise or vibration created by wind and by thermal and structural movements.
    e. Loosening or weakening of fasteners, attachments, and other components.
    f. Sealant failure.
    g. Failure of operating units.

C. Structural Loads:
    1. Wind Loads: Design wind pressures shall be based on Basic Wind Speed, Risk Category, Exposure Category, and Internal Pressure Coefficient indicated on Structural Drawings.

D. Member Deflection:
    1. For spans less than 13'-6", limit member deflection to the flexure limit of glass in any direction, and maximum of L/175 of span or ¾ inch, whichever is less wand with full recovery.

E. Structural-Test Performance: Provide aluminum-framed systems tested according to ASTM E330/E330M as follows:
    1. When tested at positive and negative wind-load design pressures, systems do not evidence deflection exceeding specified limits.
    2. When tested at 150 percent of positive and negative wind-load design pressures, systems, including anchorage, do not evidence material failures, structural distress, and permanent deformation of main framing members exceeding 0.2 percent of span.
    3. Test Durations: As required by design wind velocity, but not fewer than 10 seconds.

F. Air Infiltration: Provide aluminum-framed systems with maximum air leakage through fixed glazing and framing areas of 0.06 CFM/SF @ 6.24 psf (. (30.47 ksf/sq. m) of fixed wall area when tested according ASTM E283/E283M at a minimum static-air-pressure difference of 1.57 lbf/sq. ft. (75 Pa). Operable door units shall not exceed 1.0 cfm/sq ft at 1.57 psf pressure differential.

G. Water Penetration under Static Pressure: Provide aluminum-framed systems that do not evidence water penetration through fixed glazing and framing areas when tested according to ASTM E331 at a minimum static-air-pressure difference of 20 percent of positive wind-load design pressure, but not less than 8 lbf/sq. ft.

H. Thermal Movements: Provide aluminum-framed systems that allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
    1. Temperature Change (Range): 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.
    2. Interior Ambient-Air Temperature: 75 deg F (24 deg C).

I. Thermal Conductance:
    1. Fenestration Maximum U-Factor:
       Fixed fenestration: 0.36
       Operable fenestration: 0.45
       Entrance doors: 0.63
       SHGC:
       PF < 0.2 - Fixed: 0.38 Operable: 0.33
       PF 0.2 ≤ PF < 0.5 Fixed: 0.46 Operable: 0.40
       PF ≥ 0.5 Fixed: 0.61 Operable: 0.53
    2. Run thermal analysis of as-designed window installation with perimeter conditions to determine risk of interior condensation in pool area.

J. Condensation Performance: Condensation Resistance Factor (CRF) Minimum of 77 at assemblies around pool areas.

1.06 SUBMITTALS

A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for aluminum-framed systems.

B. Shop Drawings: For aluminum-framed systems. Include plans, elevations, sections, details, and attachments to other work.
   1. Include details of provisions for system expansion and contraction and for drainage of moisture in the system to the exterior.
   2. For entrance doors, include hardware schedule and indicate operating hardware types, functions, quantities, and locations.
   3. Provide full project specific structural calculations in compliance with referenced documents, all applicable codes and these specifications. Submit stamped calculations by P.E. including framing attachment and Insulated Glazing Units.

C. Fabrication Sample: Of each vertical-to-horizontal intersection of aluminum-framed systems, made from 12-inch (300-mm) lengths of full-size components and showing details of the following:
   1. Joinery, including concealed welds.
   2. Anchorage.
   3. Expansion provisions.
   4. Glazing.
   5. Flashing and drainage.

D. Material Finish Sample for review and approval by Architect prior to releasing windows for fabrication.

E. Sealant Color Samples for selection.

F. Other Action Submittals:
   1. Entrance Door Hardware Schedule: Prepared by or under the supervision of supplier, detailing fabrication and assembly of entrance door hardware, as well as procedures and diagrams. Coordinate final entrance door hardware schedule with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of entrance door hardware.

G. Qualification Data: For qualified Installer.

H. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for aluminum-framed systems, indicating compliance with performance requirements. Test reports shall be no more than five years old and shall apply to correct standards.

I. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 – Submittal Procedure and 01 60 00 – Product Requirements.

J. Operation and Maintenance Data: Submit O&M manuals according to the requirements of Section 01 92 00 - Facility Operation and Maintenance.

K. Warranties: Sample of special warranties.

1.07 ADMINISTRATIVE REQUIREMENTS

A. Pre-Submittal Hardware and Keying Meeting: Prior to preparing final submittals, conduct meeting including Owner, Architect, and supplier of hardware to determine the following:
   1. Lock Function: Demonstrate function/type of each lockset scheduled and verify function at each door.
   2. Electrical Operation: Verify function of openings requiring electrified hardware.
   3. Keying: Determine keying requirements for preparation of final keying schedule.
   4. Submit letter of compliance, indicating when this meeting was held and who was in attendance, to Architect, Owner, and hardware supplier.

B. Pre-Installation Conference

1. Convene a pre-installation conference under provisions of Section 01 31 00 - Project Management and Coordination prior to commencing work of this Section.
    a. Attendance required of Contractor, system installer, and parties directly affecting work of this Section.
    b. Review conditions of installation, installation procedures and coordination required with Related Work.
    c. Coordinate Keying, Compatibility and appearance of visible hardware with hardware provider.

1.08 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Manufacturer’s qualifications: minimum of ten years of experience in the manufacture of similar glass and metal systems with success.

C. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of units required for this Project. Minimum of five years of successful experience in the installation of systems similar to those required.

D. Engineering Responsibility: Prepare data for aluminum-framed systems, including Shop Drawings, based on testing and engineering analysis of manufacturer's standard units in systems similar to those indicated for this Project.

E. Product Options: Information on Drawings and in Specifications establishes requirements for systems' aesthetic effects and performance characteristics. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction. Performance characteristics are indicated by criteria subject to verification by one or more methods including preconstruction testing, field testing, and in-service performance.

F. Accessible Entrances: Comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines and ICC A117.1.

G. Source Limitations for Aluminum-Framed Systems: Obtain each type and variety of aluminum, steel and wood hardware from the same manufacturer, unless otherwise indicated.

H. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
    1. Test Mockup according to ASTM E783, ASTM E1105 spray wand testing to ensure performance.
    2. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

I. Field Testing:
    1. Submit results of field tests as required in Part 3.

1.09 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of aluminum-framed systems that do not comply with requirements or that fail in materials or workmanship within specified warranty period.
    1. Failures include the following:
        a. Structural failures including, but not limited to, excessive deflection.
        b. Noise or vibration caused by thermal movements.
        c. Deterioration of metals and other materials beyond normal weathering.
        d. Adhesive or cohesive sealant failures.
        e. Water leakage through fixed glazing and framing areas.
        f. Failure of operating components.
    2. Warranty Period: 5 years from date of Substantial Completion.
    3. Sub-Contractor 2 year warranty for all work.

4. Provide finish coating warranty.

1.10 MAINTENANCE SERVICE

A. Entrance Door Hardware:
   1. Maintenance Tools and Instructions: Furnish a complete set of specialized tools and maintenance instructions as needed for Owner's continued adjustment, maintenance, and removal and replacement of entrance door hardware.

PART 2 PRODUCTS

2.01 EXTERIOR STOREFRONT

A. Basis-of-Design Product: Subject to compliance with requirements, provide Kawneer Trifab 451UT, or comparable product by one of the following:
   1. EFCO Corporation, Xtherm 403X.
   2. Tube Lite, 1400 TU
   3. Oldcastle Building Envelope, 3000XT.
   4. Midland Glass Company.
   5. CMI Architectural Products, Inc.

2.02 INTERIOR STOREFRONT

A. Provide interior, non-thermally broken storefront system for interior aluminum doors and frames from the same manufacturer as the Exterior storefront.

B. Basis-of-Design Product: Subject to compliance with requirements, provide INT14 Interior Flush Glaze System. or comparable product by one of the following:
   1. EFCO Corporation.
   2. Kawneer North America.
   3. Oldcastle Building Envelope.
   4. Midland Glass Company.
   5. CMI Architectural Products, Inc.
   6. Or approved equal.

2.03 MATERIALS

A. Aluminum: Alloy and 6063-T6 temper recommended by manufacturer for type of use and finish indicated.
   1. Sheet and Plate: ASTM B209/B209M.
   2. Extruded Bars, Rods, Profiles, and Tubes: ASTM B221, ASTM B221M.
   3. Extruded Structural Pipe and Tubes: ASTM B429/B429M .
   4. Structural Profiles: ASTM B308/B308M.

B. Steel Reinforcement: Manufacturer's standard zinc-rich, corrosion-resistant primer, complying with SSPC-PS 12; applied immediately after surface preparation and pretreatment. Select surface preparation methods according to recommendations in SSPC-SP COM and prepare surfaces according to applicable SSPC standard.
   1. Structural Shapes, Plates, and Bars: ASTM A36/A36M.
   2. Cold-Rolled Sheet and Strip: ASTM A1008/A1008M.
   3. Hot-Rolled Sheet and Strip: ASTM A1011/A1011M.

2.04 FRAMING SYSTEMS

A. Framing Members: Manufacturer's standard extruded-aluminum framing members of thickness required and reinforced as required to support imposed loads.
   1. Construction: Thermally broken at Exterior Framing and Non-thermal at Interior Framing.
   2. Glazing System: Retained mechanically with gaskets on four sides.
   3. Glazing Plane: As indicated.

B. Brackets and Reinforcements: Manufacturer's standard high-strength aluminum with non-staining, nonferrous shims for aligning system components.

C. Fasteners and Accessories: Manufacturer's standard corrosion-resistant, non-staining, non-bleeding fasteners and accessories compatible with adjacent materials.
   1. Use self-locking devices where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration.
   2. Reinforce members as required to receive fastener threads.

D. Concrete and Masonry Inserts: Hot-dip galvanized cast-iron, malleable-iron, or steel inserts, complying with ASTM A123/A123M or ASTM A153/A153M.

E. Concealed Flashing: Manufacturer's standard corrosion-resistant, non-staining, non-bleeding flashing compatible with adjacent materials.

F. Framing System Gaskets and Sealants: Manufacturer's standard, recommended by manufacturer for joint type.
   1. Provide sealants for use inside of the weatherproofing system that have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

G. Storefront:
   1. Sub-sill shall be anchored to continuous interior aluminum angle. Anchorage down through the bottom (Horizontal Portion) of the sub-sill is not acceptable. Interior angle size and attachment to storefront system and to perimeter framing to be engineered and installed as part of this work. Show angle and anchors on shop drawings. Stamped and signed by Professional Engineer.
   2. Seal joints in sub-sill with silicone tape, including transverse joints, mitered corners, end dams and so on. Reliance on metal splice plates and/or sealant is unacceptable.
   3. Provide reinforcing of mullion framing, as necessary, to meet design loads per project specific structural calculations.

H. Aluminum Frames for Doors, Sidelights, or Transoms: Extruded aluminum, non-thermally broken hollow or C-shaped sections; no steel components
   1. Frame Depth: To fit wall thicknesses as indicated on drawings.
   2. Profiles:
      a. Typical frames:
         1) Double rabbets, see Door Schedule for size.
         2) .5" stop.
      b. Single rabbetted frames, see Door Schedule.
         1) Stopless frame with custom aluminum tube stop each side, as shown on detail.
         2) Custom aluminum tube stop sized to accommodate magnetic lock and finished to match frame. See details and section 08 71 00.
         3) Exposed top of frame:
            (a) Cover exposed end with aluminum cap with eased edges, finish to match.
            (b) Cover exposed end of aluminum tube stop with LDPE plastic cap with eased edges.
               (1) Color to match frame.
               (2) Top of plastic cap to be flush with aluminum cap.
               (3) Permanently adhere cap to tube.
         4) Contractor's option: fabricate single rabbetted frame to match profile on detail and accommodate magnetic lock.
            (a) Cap frame to match.
   3.

2.05 GLAZING SYSTEMS

A. Glazing: As specified in Section 08 81 00 - Glazing.

B. Glazing Gaskets: Manufacturer's standard compression types; replaceable, molded or extruded, of profile and hardness required to maintain watertight seal.

C. Spacers and Setting Blocks: Manufacturer's standard silicone type.

2.06 SILICONE SEALANTS

A. Provide sealed end caps at tops of vertical mullions, thermally-broken caulk-stops at jamb and head conditions, and other accessories needed.

B. See Section 07 92 00 for glazing sealants.

C. Single-Component, Non-sag, Neutral-Curing Silicone Joint Sealant: ASTM C920, Type S, Grade NS, Class 50, for Use NT. Color: Submit full range for Architect's selection.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Dow Corning Corporation; 791, 795, 995, or 999-A.
      b. GE Advanced Materials - Silicones; SilGlaze II SCS2800, SilPruf NB SCS900,0 SilPruf SCS2000, and UltraPruf II SCS2900.
      c. Pecora Corporation; 864.
      d. Tremco Incorporated; Spectrem 2 or Spectrem 3.
   2. Provide sealants for use inside of the weatherproofing system that have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.07 ENTRANCE DOOR SYSTEMS

A. Entrance Doors: Manufacturer's standard glazed entrance doors for manual-swing operation.
   1. Door Construction: 1-3/4-inch (44.5-mm) overall thickness, with minimum 0.125-inch- (3.2-mm-) thick, extruded-aluminum tubular rail and stile members. Mechanically fasten corners with reinforcing brackets that are deeply penetrated and fillet welded or that incorporate concealed tie rods. No thermal break.
   2. Door Design: Wide stile; 5-inch (127-mm) nominal width.
      a. Accessible Doors: Smooth surfaced for width of door in area within 10 inches (255 mm) above floor or ground plane.
   3. Glazing Stops and Gaskets: Beveled, snap-on, extruded-aluminum stops and preformed gaskets.
      a. Provide non-removable glazing stops on outside of door.

2.08 ENTRANCE DOOR HARDWARE

A. General: Provide entrance door hardware and entrance door hardware sets indicated in Section 08 71 00 - Door Hardware.
   1. Coordinate Keying with Hardware providers and Keying Schedule.

2.09 ACCESSORY MATERIALS

A. Joint Sealants: For installation at perimeter of aluminum-framed systems, as specified in Section 07 92 00 - Joint Sealants.

B. Bituminous Paint: Cold applied asphalt mastic, containing no asbestos fibers.

C. Flashing: See Section 07 62 00.

2.10 FABRICATION

A. Form or extrude aluminum shapes before finishing.

B. Framing Members, General: Fabricate components that, when assembled, have the following characteristics:
   1. Profiles that are sharp, straight, and free of defects or deformations.
   2. Accurately fitted joints with ends coped or mitered.
   3. Means to drain water passing joints, condensation within framing members, and moisture migrating within the system to exterior.
   4. Physical and thermal isolation of glazing from framing members.
   5. Accommodations for thermal and mechanical movements of glazing and framing to maintain required glazing edge clearances.
   6. Provisions for field replacement of glazing from interior for vision glass and exterior for spandrel glazing or metal panels.

7. Fasteners, anchors, and connection devices that are concealed from view to greatest extent possible.

C. Mechanically Glazed Framing Members: Fabricate for flush glazing without projecting stops.

D. Storefront Framing: Fabricate components for assembly using screw-spline system.

E. Entrance Door Frames: Reinforce as required to support loads imposed by door operation and for installing entrance door hardware.
   1. At exterior doors, provide compression weather stripping at fixed stops.

F. Entrance Doors: Reinforce doors as required for installing entrance door hardware.
   1. At pairs of exterior doors, provide sliding-type weather stripping retained in adjustable strip and mortised into door edge.
   2. At exterior doors, provide weather sweeps applied to door bottoms.

G. Entrance Door Hardware Installation: Factory install entrance door hardware to the greatest extent possible. Cut, drill, and tap for factory-installed entrance door hardware before applying finishes.

H. After fabrication, clearly mark components to identify their locations in Project according to Shop Drawings.

2.11 ALUMINUM FINISHES

A. Dark Bronze Finish: AAMA 611, AA-M12C22A, Class 1, 0.018 mm or thicker.

B. Superior Performing Organic Coatings System: Manufacturer's standard multi-coat superior performing organic coatings system complying with AAMA 2605, including at least 70 percent polyvinylidene fluoride (PVDF) resin, and at least 80 percent of aluminum extrusion and panels surfaces having minimum total dry film thickness (DFT) of 1.2 mils, 0.0012 inch (0.030 mm).
   1. Match Color of Anodized Doors.
   2. Apply to Wet suite doors as indicated. See Door Schedule.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. General:
   1. Comply with manufacturer's written instructions.
   2. Do not install damaged components.
   3. Fit joints to produce hairline joints free of burrs and distortion.
   4. Rigidly secure non-movement joints.
   5. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration.
   6. Seal joints watertight unless otherwise indicated.

B. Metal Protection:
   1. Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or applying sealant or tape, or by installing nonconductive spacers as recommended by manufacturer for this purpose.
   2. Where aluminum will contact concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.

C. Install components to drain water passing joints, condensation occurring within framing members, and moisture migrating within the system to exterior. Install sponge baffles at weep holes.

D. Set continuous sill members and flashing in full sealant bed as specified in Section 07 92 00 - Joint Sealants to produce weather-tight installation. Provide additional sealant as detailed.

E. Install components plumb and true in alignment with established lines and grades, and without warp or rack.

F. Install glazing as specified in Section 08 81 00 - Glazing.

G. Entrance Doors: Install doors to produce smooth operation and tight fit at contact points.
   1. Exterior Doors: Install to produce weather-tight enclosure and tight fit at weather stripping.
   2. Field-Installed Entrance Door Hardware: Install surface-mounted entrance door hardware according to entrance door hardware manufacturers' written instructions using concealed fasteners to greatest extent possible.
   3. Set threshold in full sealant bed as specified in Section 07 92 00 - Joint Sealants to produce weather-tight installation. See 08 71 00.

H. Install perimeter joint sealants as specified in Section 07 92 00 - Joint Sealants to produce weather-tight installation.
   1. Minimum joint size: 3/8"

3.03 ERECTION TOLERANCES

A. Install aluminum-framed systems to comply with the following maximum erection tolerances:
   1. Location and Plane: Limit variation from true location and plane to 1/8 inch in 12 feet; 1/4 inch over total length.
   2. Alignment:
      a. Where surfaces abut in line, limit offset from true alignment to 1/16 inch.
      b. Where surfaces meet at corners, limit offset from true alignment to 1/32 inch (0.8 mm).

B. Diagonal Measurements: Limit difference between diagonal measurements to 1/8 inch (3 mm).

3.04 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified independent testing and inspecting agency to perform field tests and inspections.
   1. ASTM E1105 – Field Water/Air testing. Contractor to assist with testing by providing safe access, water, power, chamber materials and personnel to perform the tests. If failure occurs, provide additional test assistance as needed to pa ss test at no additional cost.
   2. See Structural drawings for required wind loads and pressures to be tested.
   3. No increase in allowable rate of air infiltration or increase in the volume of water leakage, nor any decrease in the specified test pressures is permitted. Test first frames installed.

B. Repair or remove work if test results and inspections indicate that it does not comply with specified requirements.

C. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.
   1. Coordinate testing with the requirements of Section 01 91 13. Re-test as required to ensure passing of specimens.

D. Aluminum-framed assemblies will be considered defective if they do not pass tests and inspections.

E. Prepare test and inspection reports.

3.05 ADJUSTING

A. Adjust operating entrance door hardware to function smoothly as recommended by manufacturer.
   1. For entrance doors accessible to people with disabilities, adjust closers to provide a 3-second closer sweep period for doors to move from a 70-degree open position to 3 inches (75 mm) from the latch, measured to the leading door edge.

END OF SECTION

SECTION 08 42 45
SLIDING ALUMINUM DOORS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Includes individual panel aluminum and glass door system, including aluminum frame, tracks, sliding panels, stacking bays, anchors, brackets, attachments, sliding and locking hardware, glass and glazing; designed to provide an opening glass wall with sizes and configurations as shown on drawings and specified herein.
      a. Thermally broken at exterior, where occurs on Drawings.

1.02 RELATED REQUIREMENTS

A. Section 01 33 00 - Submittal Procedures.

B. Section 01 40 00 - Quality Requirements.

C. Section 01 60 00 - Product Requirements.

D. Section 01 92 00 - Facility Operation and Maintenance.

E. Section 03 30 00 - Cast in Place Concrete.

F. Section 08 71 00 - Door Hardware.

G. Section 08 81 00 - Glazing.

H. Section 09 21 16 - Gypsum Board Assemblies.

I. Section 09 30 00 - Tiling.

J. Section 09 65 19 - Resilient Tile Flooring.

1.03 PERFORMANCE

A. Provide aluminum sliding doors engineered, fabricated and installed to withstand normal movement and impact loading without failure, as demonstrated by testing manufacturer’s standard sliding door assemblies representing types, grades, classes and sizes required for the Project.

1.04 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Installer Qualifications: Engage an experienced Installer who has completed installation of similar sliding doors in material, design and extent to those required for this Project and with a record of successful in-service performance.

1.05 SUBMITTALS

A. Material and Equipment Submittals: Submit under provisions of Section 01 33 00 - Submittals:
   1. Samples: Samples for Verification: LTF Construction reserves the right to require samples that show fabrication techniques, workmanship and design of hardware and accessories.
   2. Shop Drawings: Include elevations; system and component dimensions; components within assembly; framed opening requirements and tolerances; anchorage and fasteners; reinforcement; glass and infill’s; detailed door hardware schedule; and affected related work.
   3. Product Data: For each type of sliding door; include construction details and fabrication methods, profiles and dimensions of individual components and data on hardware, accessories and finishes.
   4. Manufacturer's Installation Instructions.

B. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.

3. See Sections 01 33 00 and 01 60 00.

C. Closeout Submittals: Submit the following under provisions of Section 01 77 00 - Closeout Procedures:
   1. Warranty: As specified in this Section.

1.06 ADMINISTRATIVE REQUIREMENTS

A. Pre-Submittal Hardware and Keying Meeting: Prior to preparing final submittals, conduct meeting including Owner, Architect, and supplier of hardware to determine the following:
   1. Lock Function: Demonstrate function/type of each lockset scheduled and verify function at each door.
   2. Electrical Operation: Verify function of openings requiring electrified hardware.
   3. Keying: Determine keying requirements for preparation of final keying schedule.
   4. Submit letter of compliance, indicating when this meeting was held and who was in attendance, to Architect, Owner, and hardware supplier.

B. Pre-Installation Conference.
   1. Convene a pre-installation conference under provisions of Section 01 31 00 - Project Management and Coordination prior to commencing work of this Section.
      a. Attendance required of Contractor, system installer, and parties directly affecting work of this Section.
      b. Review conditions of installation, installation procedures and coordination required with Related Work.
      c. Coordinate Keying, Compatibility and appearance of visible hardware with hardware provider.

1.07 PROJECT CONDITIONS

A. Field Measurements: Check door openings by field measurements before fabrication and show recorded measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Deliver, handle, store, and protect system components under provisions of Section 01 60 00 -Product Requirements.

B. Provide wrapping to protect prefinished aluminum surfaces.

1.09 WARRANTY

A. Provide 1 year manufacturer's warranty to cover complete system for failure to meet specified requirements.

PART 2 PRODUCTS

2.01 ALUMINUM SLIDING DOORS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated in the Work include, but are not limited to, one of the following:
   1. CR Laurence/US Aluminum: Series 2000 Sliding Glass Doors.
   2. Midland Glass, Custom Aluminum Framed Multiple Track Sliding System.
   3. Or approved substitution.

2.02 MATERIALS

A. Door and frame members shall be extruded architectural aluminum 6063-T5 alloy and temper

B. Major portion of all door sections, except glazing beads, shall be nominal .125 inch (3.2 mm).

C. Wall thickness of frame members shall be nominal .093 inch (2.4 mm).

D. Screws, nuts, washers, bolts, rivets, and other fastening devices shall be aluminum, stainless steel or other non-corrosive materials.

E. Sliding door floor track(s) shall have stainless steel cover cap. Perimeter fasteners shall be aluminum or steel. Steel is to be properly isolated from the aluminum.
   1. Bottom track to be ADA compliant. See details for installation.

F. Glass: As specified in Section 08 81 00 Glazing; fully tempered.

G. Thickness: 1/4 inch (6 mm), or 1 inch (25 mm).

2.03 SLIDING DOOR CONSTRUCTION

A. Aluminum Extrusions: Provide alloy and temper recommended by manufacturer for strength, corrosion resistance and application of required finish for main frame and sash members.

B. Fasteners: Provide aluminum, nonmagnetic stainless steel, epoxy adhesive or other materials warranted by manufacturer to be non-corrosive and compatible with aluminum sliding door members, trim, hardware, anchors and other components.

C. Anchors, Clips and Sliding Door Accessories: Fabricate anchors, clips and sliding door accessories of aluminum, nonmagnetic stainless steel or hot-dip zinc-coated steel or iron of sufficient strength to withstand design pressure.

D. Compression-Type Glazing Strips and Weather-stripping: Unless otherwise indicated, provide compressive stripping for glazing and weather-stripping such as molded EPDM or neoprene gaskets.

E. Sealant: For sealants required within fabricated window units, provide type recommended by manufacturer for joint size and movement. Sealant shall remain permanently elastic, non-shrinking and non-migrating. Comply with Section 07 92 00 - Joint Sealants, for selection and installation of sealants.

2.04 HARDWARE

A. Provide manufacturer’s standard hardware fabricated from aluminum, stainless steel or other corrosion-resistant material compatible with aluminum and of sufficient strength to perform the function for which it is intended.
   1. Coordinate Lock cylinders with hardware supplier.

B. Overhead and floor track (for each aluminum sliding door section), hangers, guides, wheels, locks, recessed pull and noise reduction gaskets shall be provided.

2.05 FINISHES

A. Aluminum Finish:
   1. Dark Bronze Finish: AAMA 611, AA-M12C22A, Class 1, 0.010 mm or thicker.

2.06 GLASS AND GLAZING MATERIALS

A. Glazing Materials: As specified in Section 08 81 00 - Glazing.

2.07 SEALANT MATERIALS

A. Sealant and Backing Materials: As specified in Section 07 92 00 - Joint Sealers.

2.08 ACCESSORIES

A. Fasteners: Aluminum or non-magnetic stainless steel, or other corrosion resistant material warranted by manufacturer to be non-corrosive and compatible with aluminum components. Avoid use of exposed fasteners. Provide matching Phillips flat-head screws for exposed fasteners.

B. Glazing Accessories: Manufacturer's standard elastomeric glazing gaskets and setting blocks designed specifically for specified system.

2.09 FABRICATION

A. Fabricate doors and frames allowing for minimum clearances and shim spacing around perimeter of assembly. Shop fabricate frame components where possible.

B. Rigidly fit and secure joints and corners with internal reinforcement. Make joints and connections flush, hairline, and weatherproof.

C. Arrange fasteners, attachments, and jointing to ensure concealment from view.

D. Provide internal reinforcement for all door hardware components as required.

PART 3 EXECUTION

3.01 INSPECTION

A. Verify wall openings and adjoining air and vapor seal materials are ready to receive work of this Section.

B. Beginning of installation means acceptance of existing conditions.

3.02 INSTALLATION

A. Comply with manufacturer's specifications and recommendations for installing sliding door units, hardware, and other components of the Work.

B. Set sliding door units plumb, level and true to line, without warp or rack of frames or sash. Provide proper support and anchor securely in place.

C. Use anchorage devices to securely attach frame assembly to structure.

D. Align assembly plumb and level, free of warp or twist. Maintain assembly dimensional tolerances, aligning with adjacent work.

E. Install glass in accordance with Section 08 81 00, using dry method of glazing.

F. Install perimeter sealant and backing materials, in accordance with Section 07 92 00 - Joint Sealers.

G. Install hardware in accordance with Section 08 71 00 - Door Hardware.

3.03 ADJUSTING

A. Adjust operating entrance door hardware to function smoothly as recommended by manufacturer.

END OF SECTION

SECTION 08 44 13
GLAZED ALUMINUM CURTAINWALL

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Aluminum curtain wall framing.

B. Anchors, brackets, attachments, and cap flashing as indicated.

1.02 RELATED STANDARDS

A. Section 01 31 00 - Project Management and Coordination.

B. Section 01 33 00 - Submittal Procedures.

C. Section 01 40 00 - Quality Requirements.

D. Section 01 60 00 - Product Requirements.

E. Section 03 45 00 - Precast Architectural Concrete.

F. Section 04 20 00 - Unit Masonry Assemblies.

G. Section 05 12 00 - Structural Steel Framing.

H. Section 05 31 00 - Steel Decking.

I. Section 05 40 00 - Cold-Formed Metal Framing.

J. Section 06 10 00 - Rough Carpentry.

K. Section 07 21 00 - Thermal Insulation.

L. Section 07 27 26 - Fluid Applied Membrane Air Barrier.

M. Section 07 62 00 - Sheet Metal Flashing and Trim.

N. Section 07 84 00 - Firestopping.

O. Section 07 92 00 - Joint Sealants.

P. Section 08 08 00 - Commissioning of Openings.

Q. Section 08 71 00 - Door Hardware.

R. Section 08 81 00 - Glazing.

1.03 REFERENCE STANDARDS

A. AAMA 501.2 - Quality Assurance and Diagnostic Water Leakage Field Check of Installed Storefronts, Curtain Walls, and Sloped Glazing Systems; 2015.

B. AAMA 503 - Voluntary Specification for Field Testing of Newly Installed Storefronts, Curtain Walls and Sloped Glazing Systems; 2014.

C. AAMA 611 - Specification for Anodized Architectural Aluminum; 2024.

D. AAMA 1503 - Voluntary Test Method for Thermal Transmittance and Condensation Resistance of Windows, Doors and Glazed Wall Sections; 2009.

E. AAMA CWM - Curtain Wall Manual; 2019.

F. ADAAG - Americans With Disabilities Act Accessibility Guidelines; 2010.

G. ASTM A36/A36M - Standard Specification for Carbon Structural Steel; 2019.

H. ASTM A446/A446M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) by the Hot-Dip Process, Structural (Physical) Quality; Current edition.

I. ASTM B209/B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate; 2021a.

J. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes; 2021.

K. ASTM B221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes (Metric); 2021.

L. ASTM E283/E283M - Standard Test Method for Determining Rate of Air Leakage Through Exterior Windows, Skylights, Curtain Walls, and Doors Under Specified Pressure Differences Across the Specimen; 2019.

M. ASTM E330/E330M - Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference; 2014 (Reapproved 2021).

N. ASTM E331 - Standard Test Method for Water Penetration of Exterior Windows, Skylights, Doors, and Curtain Walls by Uniform Static Air Pressure Difference; 2000 (Reapproved 2023).

O. ASTM E1105 - Standard Test Method for Field Determination of Water Penetration of Installed Exterior Windows, Skylights, Doors, and Curtain Walls, by Uniform or Cyclic Static Air Pressure Difference; 2015 (Reapproved 2023).

1.04 PERFORMANCE

A. Prepare design drawings and calculations under seal of a Professional Structural Engineer licensed in the state/province of the project and fully experienced in the design of curtainwall framing systems.

B. Full design and detail structural connections of curtainwall system to building. Consult with building structural engineer before transferring any loads back to building structure.

C. System to provide for expansion and contraction within system components caused by a cycling temperature range of 170 F deg. without causing detrimental effects to system or components.

D. Design and size members to withstand dead loads and live loads caused by pressure and suction of wind to the design pressures as measured in accordance with ASTM E330/E330M.
   1. Wind Loads: Design wind pressures shall be based on Basic Wind Speed, Risk Category, Exposure Category, and Internal Pressure Coefficient indicated on Structural Drawings.

E. Member Deflection: for spans less than 13 feet 6 inches, limit member deflection to flexure limit of glass in any direction, and maximum of L/175 of span or ¾ inch, whichever is less and with full recovery of glazing materials.

F. Drain water entering joints, condensation occurring in glazing channels, or migrating moisture occurring within system, to exterior.

G. Air Infiltration: Limit air infiltration through curtainwall framing assembly to 0.06 cfm/sq ft at a static air pressure differential of 6.24 psf, when tested in accordance with ASTM E283/E283M.

H. Water Resistance (dynamic): System shall demonstrate no water penetration at a test pressure of 15.00 psf as measured in accordance with ASTM E331.

I. System to accommodate, without damage to system or components, or deterioration of perimeter seal: Movement within system; movement between system and perimeter framing components; dynamic loading and release of loads; and deflection of structural support framing.

J. Condensation Resistance Factor: CRF minimum of 77 when tested in according to AAMA 1503.

K.
Fenestration Maximum U-Factor:
Fixed fenestration: 0.36
Operable fenestration: 0.45
Entrance doors: 0.63
SHGC:
PF < 0.2 - Fixed: 0.38 Operable: 0.33
PF 0.2 ≤ PF < 0.5 Fixed: 0.46 Operable: 0.40
PF ≥ 0.5 Fixed: 0.61 Operable: 0.53

1.05 SUBMITTALS

A. Material and Equipment Submittals:
   1. Calculations: Submit design calculations with engineer's stamp showing assembly meets requirements of Part 1.04 above.

B. Shop Drawings: Prepared by curtainwall framing manufacturer (Delegated Design); including elevations, system dimensions, framed opening requirements and tolerances, anticipated deflection under load, affected related Work, weep drainage network, expansion and contraction joint location and details, and field welding required. Provide large-scale details of entrance doors detailed hardware schedule. Stamp drawings by Designer of Record.
   1. Samples: Submit samples of anodized aluminum finish for final color approval.
   2. Installation Data: Special installation requirements.
   3. Indicate connection to, and continuity with adjacent thermal, weather, air and vapor barrier.

C. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

D. Mock-Ups: Provide mock-up of sufficient size to show all components of the system to be installed.
   1. See drawings for information on required mock-ups.
   2. Coordinate work on mock-up with work of other sections.

E. Closeout Submittals:
   1. Warranty: As specified in this Section.

1.06 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Perform Work in accordance with AAMA CWM - Metal Curtain Wall, Window, Store Front and Entrance - Guide Specifications Manual. Maintain one copy on site.

C. Manufacturer Qualifications: Company specializing in manufacturing the Products specified in this section with minimum 5 years' experience.

D. Installer Qualifications: Company specializing in performing the work of this section with minimum five years experience and approved by manufacturer.

E. Design structural support framing components under direct supervision of a Professional Structural Engineer experienced in design of this Work and licensed in the State of Project.

F. Manufacturer Qualifications: Minimum of 5 years experience in manufacturing exterior sun control devices similar to those specified.

G. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in the jurisdiction where the project is located and who is experienced in providing engineering services of kind indicated. Engineering services are defined as those performed for installations of sun controls that are similar to those indicated for this project in material, design and extent.

1.07 PRE-INSTALLATION MEETING

A. Convene a pre-installation conference under provisions of Section 01 31 00 - Project Management and Coordination one-week prior to commencing work of this Section.
   1. Attendance required of Contractor, system installer, and parties directly affecting work of this Section.
   2. Review conditions of installation, installation procedures and coordination required with Related Work.
   3. Coordinate Keying, Compatibility and appearance of visible hardware with hardware provider.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Deliver, handle, store, and protect system components under provisions of Section 01 60 00-Material and Equipment.

1.09 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of aluminum-framed systems that do not comply with requirements or that fail in materials or workmanship within specified warranty period.
   1. Failures include the following:
      a. Structural failures including, but not limited to, excessive deflection.
      b. Noise or vibration caused by thermal movements.
      c. Deterioration of metals and other materials beyond normal weathering.
      d. Adhesive or cohesive sealant failures.
      e. Water leakage through fixed glazing and framing areas.
      f. Failure of operating components.
   2. Warranty Period: 5 years from date of Substantial Completion.
   3. Sub-Contractor 2 year warranty for all work.

PART 2 PRODUCTS

2.01 CURTAINWALL FRAMING SYSTEMS

A. Curtainwall Framing: Aluminum extrusions conforming to ASTM B221, alloy 6060-T5; thermally improved, exterior glazed pressure plate type curtainwall system framing system to accept 1" insulated glazing; 2-1/2" wide face dimension x depth as indicated on Drawings. Must accept primary seal at shoulder of curtain wall mullion, directly behind glazing. See details.
   1. “Basis of Design” Kawneer Company, Inc., 1600UT Wall System 1

B. Acceptable Manufacturers and Products:
   1. EFCO Corporation, Xtherm 5500X
   2. Tubelite, 400TU
   3. Oldcastle Building Envelope, Reliance TC

2.02 ALUMINUM ENTRANCES

A. Aluminum Entrances: As specified in Section 08 41 13 - Aluminum Entrances and Storefronts.

2.03 MATERIALS

A. Extruded Aluminum: ASTM B221/ASTM B221M.

B. Sheet Aluminum: ASTM B209/B209M.

C. Sheet Steel: ASTM A446/A446M.

D. Steel Sections: ASTM A36/A36M; shaped to suit mullion sections.

E. Fasteners: Stainless steel.

F. Flashings: .063 inch thick aluminum finish to match curtain wall mullion sections where exposed, secured with concealed fastening method.

2.04 FINISHES

A. Dark Bronze Finish: AAMA 611, AA-M12C22A, Class I, 0.018 mm or thicker.

2.05 GLASS AND GLAZING MATERIALS

A. Glazing Materials: As specified in Section 08 81 00 - Glazing.

2.06 SEALANT MATERIALS

A. Sealant and Backing Materials: As specified in Section 07 92 00 - Joint Sealers.

2.07 ACCESSORIES

A. Fasteners: Aluminum or non-magnetic stainless steel, warranted by manufacturer to be non-corrosive and compatible with aluminum components. Avoid use of exposed fasteners. Provide matching Phillips flat-head screws for exposed fasteners.

B. Glazing Accessories: Manufacturer's standard silicone glazing gaskets and setting blocks designed specifically for specified system.

C. Cap/Sill Flashings: Aluminum, anodized finish to match curtainwall mullion sections where exposed, secured with concealed fastening method.

2.08 FABRICATION

A. Fabricate curtainwall frames allowing for minimum clearances and shim spacing around perimeter of assembly. Shop fabricate frame components where possible.

B. Rigidly fit and secure joints and corners with internal reinforcement. Make joints and connections flush, hairline, and weatherproof.

C. Develop drainage holes with moisture pattern to exterior.

D. Prepare components to receive anchor devices. Fabricate anchorage items.

E. Arrange fasteners, attachments, and jointing to ensure concealment from view.

F. Prepare components with required internal reinforcement for door hardware.

G. Finish, fabricate and shop assemble curtainwall under the responsibility of single manufacturer.

PART 3 EXECUTION

3.01 INSPECTION

A. Verify wall openings and adjoining air and vapor seal materials are ready to receive work of this Section.

B. Beginning of installation means acceptance of existing conditions.

3.02 INSTALLATION

A. Install curtainwall frames in accordance with manufacturer's instructions, or more stringent requirements indicated.

B. Use anchorage devices to securely attach frame assembly to structure.

C. Align assembly plumb and level, free of warp or twist. Maintain assembly dimensional tolerances, aligning with adjacent work. Install aluminum infill panels in curtainwall framing similar to glazing.

D. Apply one coat of bituminous paint to concealed aluminum and steel surfaces in contact with cementitious or dissimilar materials.

E. Pack fibrous insulation in shim spaces at perimeter of assembly to maintain continuity of thermal barrier.

F. Install glass in accordance with Section 08 81 00, using dry method of glazing.

G. Install perimeter sealant and backing materials, in accordance with Section 07 92 00.

H. Install hardware in accordance with Section 08 71 00 - Door Hardware.

I. Adjust operating hardware. All door operation to comply with requirements of ADAAG.

3.03 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified independent testing and inspecting agency to perform field tests and inspections.
   1. ASTM E1105, ASTM E283/E283M and AAMA 501.2 Water/Air testing. Contractor to assist with testing by providing safe access, water, power, chamber materials and personnel to perform the tests. If failure occurs, provide additional test assistance as needed to pa ss test at no additional cost.
   2. See Structural drawings for required wind loads and pressures to be tested.
   3. No increase in allowable rate of air infiltration or increase in the volume of water leakage, nor any decrease in the specified test pressures is permitted. Test according to AAMA 503. Test first frames installed.
   4. Coordinate testing with the requirements of Section 01 91 13.

B. Repair or remove work if test results and inspections indicate that it does not comply with specified requirements.

C. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.
   1. Coordinate testing with the requirements of Section 01 91 13. Re-test as required to ensure passing of specimens.

D. Aluminum-framed assemblies will be considered defective if they do not pass tests and inspections.

E. Prepare test and inspection reports.

3.04 CLEANING

A. Remove protective material from prefinished aluminum surfaces.

B. Wash down exposed surfaces using a solution of mild detergent in warm water, applied with soft, clean wiping cloths. Take care to remove dirt from corners. Wipe surfaces clean.

C. Remove excess sealant by moderate use of mineral spirits or other solvent acceptable to sealant manufacturer.

END OF SECTION

SECTION 08 71 00

DOOR HARDWARE

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Mechanical door hardware for the following:
      a. Swinging doors.
      b. Sliding doors.
      c. Folding doors.
      d. Site gates.
      e. Other doors to the extent indicated.
   2. Cylinders for doors specified in other Sections.
   3. Electrified door hardware.

1.2 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Installation Templates: Distribute for doors, frames, and other Work specified to be factory prepared. Check Shop Drawings of other Work to confirm that adequate provisions are made for locating and installing door hardware to comply with indicated requirements.
   2. Security: Coordinate installation of door hardware, keying, and access control with Owner's security consultant.
   3. Electrical System Roughing-In: Coordinate layout and installation of electrified door hardware with connections to power supplies and building safety and security systems.

B. Pre-Submittal Hardware and Keying Meeting: Prior to preparing final submittals, conduct meeting including Owner, Architect, and supplier of hardware to determine the following:
   1. Lock Function: Demonstrate function/type of each lockset scheduled and verify function at each door.
   2. Electrical Operation: Verify function of openings requiring electrified hardware.
   3. Keying: Determine keying requirements for preparation of final keying schedule.
   4. Submit letter of compliance, indicating when this meeting was held and who was in attendance, to Architect, Owner, and hardware supplier.

C. Pre-Installation Meeting: Conduct meeting at Project site to comply with requirements in Section 01 31 00 - Project Management and Coordination. Review methods and procedures related to electrified door hardware including the following:
   1. Inspect and discuss electrical roughing-in and other preparatory Work performed by other trades.
   2. Review sequence of operation for each type of electrified door hardware.
   3. Review and finalize construction schedule and verify availability of materials, installer's personnel, equipment, and facilities needed to make progress and avoid delays.
   4. Review required testing, inspecting, and certifying procedures.
   5. Record minutes of meeting, indicating when it was held and who was in attendance, and submit to Owner, Architect, and hardware supplier.

D. Keying Meeting: Conduct meeting at Project site to comply with requirements in Section 01310 - Project Management and Coordination. Incorporate keying meeting decisions into final keying schedule after reviewing door hardware keying system.

1.3 ACTION SUBMITTALS

A. Product Data: Include construction and installation details, material descriptions, dimensions of individual components and profiles, and finishes.

B. Shop Drawings: Details of electrified door hardware, indicating the following:
   1. Wiring Diagrams: Power, signal, and control wiring. Verify voltage with electrical engineer. Include the following:
      a. System schematic.
      b. Point-to-point wiring diagram indicating detailed interface between electrified door hardware, fire alarm, and security systems. Clarify between manufacturer-installed and field-installed wiring.
      c. Riser diagram, including electrified components, gage of wire, and wire run.
      d. Elevation of each door.
   2. Detail interface between electrified door hardware and fire alarm, access control, security and building control, system.
   3. Operation Narrative: Describe operation of doors controlled by electrified door hardware.

C. Samples for Verification: For exposed door hardware of each type, in specified finish, full size. Tag with full description for coordination with the door hardware sets. Submit Samples before, or concurrent with, submission of final door hardware sets.
   1. Sample Size: Submit minimum 2-by-4-inch plate Samples of each type of finish required, except primed finish.
   2. Full-size Samples will be returned to Contractor. Units that are acceptable and remain undamaged through submittal, review, and field comparison process may, after final check of operation, be incorporated into Work, within limitations of keying requirements.

D. Other Action Submittals:
   1. Door Hardware Sets: Prepared by or under supervision of, and signed by, Architectural Hardware Consultant (AHC), detailing fabrication and assembly of door hardware, as well as procedures and diagrams. Coordinate final door hardware sets with doors, frames, and related Work to ensure proper size, thickness, hand, function, and finish of door hardware.
      a. Hardware schedules submitted without AHC’s signature will be rejected without review.
      b. Format: Comply with scheduling sequence and vertical format in DHI's "Sequence and Format for the Hardware Schedule." Double space entries, and number and date each page.
         1) Use same scheduling sequence, format, and door numbers indicated in Contract Documents.
      c. Content: Include the following information:
         1) Identification number, location, hand, fire rating, and material of each door and frame.
         2) Type, style, function, size, quantity, and finish of each door hardware item. Include description and function of each lockset and exit device.
         3) Complete designations of every item required for each door or opening including name and manufacturer.
         4) Fastenings and other pertinent information.
         5) Location of each door hardware set, cross-referenced to Drawings, both on floor plans and in door and frame schedule.
         6) Explanation of abbreviations, symbols, and codes contained in schedule.
         7) Mounting locations for door hardware.
         8) Door and frame sizes and materials.
         9) Description of each electrified door hardware function, including location, sequence of operation, and interface with other building control systems.
            a) Sequence of Operation: Include description of component functions that occur in the following situations: Authorized person wants to enter; authorized person wants to exit; unauthorized person wants to enter; unauthorized person wants to exit.

10) List of related door devices specified in other Sections for each door and frame.

d. Submittal Sequence: Submit final door hardware sets at earliest possible date, particularly where approval of door hardware sets must precede fabrication of other Work that is critical in Project construction schedule. Include Product Data, Samples, Shop Drawings of other Work affected by door hardware, and other information essential to coordinated review of door hardware sets.

2. Keying Schedule: Prepared by or under supervision of Architectural Hardware Consultant (AHC), detailing Owner's final keying instructions for locks. Include schematic keying diagram and index each key set to unique door designations.
   a. Submit 1 copy to Architect for information only.

E. Special Submittal Requirements: Combine submittals of this Section with Sections listed below to ensure design intent of system/assembly is understood and can be reviewed together.
   1. Section 08 11 13 – Hollow Metal Doors and Frames.
   2. Section 08 14 16 – Flush Wood Doors.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer and Architectural Hardware Consultant.

B. Product Certificates: For electrified door hardware, from the manufacturer.
   1. Certify that door hardware approved for use on types and sizes of labeled fire-rated doors complies with listed fire-rated door assemblies.

C. Product Test Reports: For compliance with accessibility requirements, based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified testing agency, for door hardware on doors located in accessible routes.

D. Warranty: Special warranty specified in this Section.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance Data: For each type of door hardware to include in maintenance manuals. Include final hardware and keying schedule.
   1. Operating and maintenance manuals: Submit 3 sets containing the following:
      a. Maintenance instructions and warranty information for each item of hardware.
      b. Catalog pages for each product.
      c. Contact information for supplier of hardware and local representatives of each product manufacturer.
      d. Parts list for each product.
      e. Copy of final hardware schedule.
      f. Copy of final wiring diagrams.
      g. Copy of final keying schedule.

1.6 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish complete units of door hardware listed in group 300.0, at project completion, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents

1.7 QUALITY ASSURANCE

A. Installer Qualifications: Firm with 3 years experience in installation of commercial hardware similar to that required for this Project, and an employer of workers trained and approved by product manufacturers and an Architectural Hardware Consultant who is available during the course of the Work to consult with Contractor, Architect, and Owner about door hardware and keying.
   1. Installer's responsibilities include supplying and installing door hardware and providing qualified Architectural Hardware Consultant (AHC) available during course of Work to consult with Contractor, Architect, and Owner about door hardware and keying.

2. Successfully completed not less than 5 comparable scale projects.
3. Warehousing Facilities: In Project's vicinity.
4. Scheduling Responsibility: Preparation of door hardware and keying schedules.
5. Engineering Responsibility: Preparation of data for electrified door hardware, including Shop Drawings, based on testing and engineering analysis of manufacturer's standard units in assemblies similar to those indicated for this Project.

B. Supplier Qualifications: Recognized commercial hardware supplier that maintains and operates an office and stocking warehouse in Project area for at least 2 years and can document experience with projects of similar type and scale.
1. For door hardware, an Architectural Hardware Consultant (AHC).
2. Consulting services include overseeing scheduling, coordinating of hardware, establishing keying schedule, and being available during construction to consult with Contractor, Architect, and Owner about mechanical and electrical door hardware specified.

C. Source Limitations: Obtain each type of door hardware from a single manufacturer.
1. Provide electrified door hardware from same manufacturer as mechanical door hardware, unless otherwise indicated. Manufacturers that perform electrical modifications and that are listed by a testing and inspecting agency acceptable to authorities having jurisdiction are acceptable.

D. Fire-Rated Door Assemblies: Where fire-rated door assemblies are indicated, provide door hardware rated for use in assemblies complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at positive pressure per NFPA 252 or UL 10C, unless otherwise indicated.

E. Smoke- and Draft-Control Door Assemblies: Where smoke- and draft-control door assemblies are required, provide door hardware that meet requirements of assemblies tested according to UL 1784 and installed per NFPA 105.
1. Air Leakage Rate: Maximum air leakage of 0.3 cfm per square foot at the tested pressure differential of 0.3 inch wg of water.

F. Electrified Door Hardware: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction.

G. Means of Egress Doors: Latches do not require more than 15 pound-force to release the latch. Locks do not require use of a key, tool, or special knowledge for operation.

H. Accessibility Requirements: For door hardware on doors in an accessible route, comply with U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines and ICC/ANSI A117.1.
1. Provide operating devices that do not require tight grasping, pinching, or twisting of wrist and that operate with a force of not more than 5 pound-force.
2. Comply with the following maximum opening-force requirements:
   a. Interior, Non-Fire-Rated Hinged Doors: 5 pound-force applied perpendicular to door.
   b. Sliding or Folding Doors: 5 pound-force applied parallel to door at latch.
   c. Fire Doors: Minimum opening force allowable by authorities having jurisdiction.
3. Bevel raised thresholds with a slope of not more than 1:2. Provide thresholds not more than 1/2 inch high.
4. Adjust door closer sweep periods so that, from an open position of 70 degrees, door will take at least 3 seconds to move to a point 3 inches from the latch, measured to leading edge of door.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Inventory door hardware on receipt and provide secure lock-up for door hardware delivered to Project site.

B. Tag each item or package separately with identification related to the final door hardware sets, and include basic installation instructions, templates, and necessary fasteners with each item or package.

C. Deliver keys to manufacturer of key control system for subsequent delivery to Owner.

D. Deliver permanent keys and cores to Owner by registered mail or overnight package service.

1.9 WARRANTY

A. Warrant materials and workmanship against defects including coverage for operation of specified hardware, after completion and final acceptance of Work.
   1. Repair defects from faulty materials or workmanship developed during guarantee period, or replace with new materials, at no expense to Owner.
   2. Replace shortages and incorrect items with correct materials at no additional cost to Owner.

PART 2 - PRODUCTS

2.1 SCHEDULED DOOR HARDWARE

A. Provide door hardware for each door as scheduled in Part 3 Door Hardware Schedule Article and on Drawings to comply with requirements in this Section.
   1. Door Hardware Sets: Provide quantity, item, size, finish or color indicated, and named manufacturers'
   2. Sequence of Operation: Provide electrified door hardware function, sequence of operation, and interface with other building control systems indicated.

B. Designations: Requirements for design, grade, function, finish, size, and other distinctive qualities of each type of door hardware are indicated in Part 3 Door Hardware Schedule Article. Products are identified by using door hardware designations, as follows:
   1. Named Manufacturers' Products: Manufacturer and product designation are listed for each door hardware type required for purpose of establishing minimum requirements. Manufacturers' names are abbreviated in Part 3 Door Hardware Schedule Article.
   2. References to BHMA Designations: Where products are not specified by name, provide products complying with BHMA designations and requirements for description, quality, and function.

2.2 HINGES

A. Hinges: BHMA A156.1. Provide template-produced hinges for hinges installed on hollow-metal doors and hollow-metal frames.]
   1. Manufacturers: Subject to compliance with requirements, provide specified products by one of the following:
      a. Bommer Industries, Inc.
      b. Hager Companies.
      c. HB Ives (Div of Ingersoll Rand)
      d. McKinney Products Company; an ASSA ABLOY Group company.
      e. Stanley Commercial Hardware; Div. of The Stanley Works.

B. Butts and Hinges: BHMA A156.1. Listed under Category A in BHMA's "Certified Product Directory."

C. Hinge Sizes: Provide the following hinges in widths sufficient to minimally clear trim.

Thickness	Size
2-1/4 inch Doors	5 inch by 5 inch
1-3/4 inch Doors	4-1/2 inch by 4-1/2 inch
1-3/8 inch Doors	3-1/3 inch by 3-1/2 inch

D. Furnish butt hinges for each door leaf as follows:
   1. 1 pair per leaf for openings through 60 inches high.
   2. 1 additional hinge per leaf for each additional 30 inches in height or fractions thereof.
   3. 1 additional hinge for doors 3’-4” wide to 4’-0” wide.
   4. 1 additional hinge for exterior and vestibule doors.

E. Applications:
1. Exterior out swinging doors: Type 4 x NRP.
2. Exterior in swinging doors and vestibule doors: Type 3.
3. Interior doors over 36 inches in width: Type 3.
4. Interior doors 36 inches or less: Type 1.
5. Exterior and reversed beveled interior lockable doors: Non-removable loose pin (NRP) hinges.

F. Acceptable Manufacturers and Products:

Type	Bommer	Hager	Ives	McKinney	Stanley
Type 1	BB5000	BB1279	5BB1	TA2714	FBB179
Type 2	BB5002	BB1191	5BB1	TA2314	FBB191
Type 3	BB5004	BB1168	5BB1HW	T4B3786	FBB168
Type 4	BB5006	BB1199	5BB1HW	T4B3386	FBB199

2.3 CONTINUOUS HINGES

A. Continuous Hinges: BHMA A156.26; minimum 0.120 inch thick, hinge leaves with minimum overall width of 4 inches; fabricated to full height of door and frame and to template screw locations; with components finished after milling and drilling are complete.

B. Continuous, Gear-Type Hinges: Extruded-aluminum, pinless, geared hinge leaves joined by continuous extruded-aluminum channel cap; with concealed, self-lubricating thrust bearings.

	McKinney	Hager	Ives	Stanley	Select	Pemko
SS Pin and Barrel	MCK-FM300	790-900	700	651	SL300	
Continuous, Gear-Type Hinges	MCK-12HD	780-112HD	112HD	661HD	SL-11HD	
Continuous, Safety Hinge						_FM_SF

C. Prep hinges for electric power transfers and automatic door bottoms where specified.

D. Provide 1 of 2 models above of continuous hinges as appropriate for type, inset, and thickness of door where specified. Coordinate hinge types with door supplier.

2.4 ELECTRIC POWER TANSFER

A. Electrified Functions for Hinges: Comply with the following:
1. Manufacturers: Subject to compliance with requirements, provide specified products by one of the following:
a. Securitron Corporation; an ASSA ABLOY Group company: CEPT-10.
b. Von Duprin; an Ingersoll-Rand Company: EPT-2/EPT-10.

2.5 MECHANICAL LOCKS AND LATCHES

A. Lock Functions: As indicated in door hardware schedule.

B. Lock Throw: Comply with testing requirements for length of bolts required for labeled fire doors, and as follows:
1. Bored Locks: Minimum 1/2 inch latchbolt throw.
2. Mortise Locks: Minimum 3/4 inch latchbolt throw.
3. Deadbolts: Minimum 1 inch bolt throw.

C. Lock Backset: 2-3/4 inch, with deadlocking feature unless otherwise indicated.

D. Strikes: Provide manufacturer's standard strike for each lock bolt or latchbolt complying with requirements indicated for applicable lock or latch and with strike box and curved lip extended to protect frame; finished to match lock or latch.
1. Flat-Lip Strikes: For locks with 3-piece antifriction latchbolts, as recommended by manufacturer.
2. Extra-Long-Lip Strikes: For locks used on frames with applied wood casing trim.

3. Aluminum-Frame Strike Box: Manufacturer's special strike box fabricated for aluminum framing.

E. Bored Locks – Heavy Duty Type: BHMA A156.2; Grade 1; Series 4000.
1. Manufacturers: Subject to compliance with requirements, provide specified products by one of the following:
a. Base Bid: Schlage, No Substitutions
b. Alternate pricing will be accepted from the following manufacturers. Owner to accept or decline alternate pricing.
1) Corbin Russwin Architectural Hardware; an ASSA ABLOY Group company.
2) SARGENT Manufacturing Company; an ASSA ABLOY Group company.
3) Yale Commercial Locks; an ASSA ABLOY Group company.
4) Falcon Locks; an Allegion Company.
2. Where listed, provide electrified locks that comply with above requirements and that incorporate self-contained integral continuous duty solenoid. Provide 24V, either AC or DC as required in Fail-Safe or Fail-Secure function as listed in hardware sets. Provide electrified locks from same manufacturer as mechanical locks.
3. Acceptable Manufacturers and Products:

	Corbin-Russwin	Sargent	Schlage	Yale	Falcon
Lock	CL3300	FW-10-Line	L- ND	5400LN	T-Series
Trim	NZD	LL	RHO	AU	D - Dane

F. Mortise Locks: BHMA A156.13; Operational Grade 1; stamped steel case with steel or brass parts; Series 1000.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Base Bid: Schlage, No Substitutions.
b. Alternate pricing will be accepted from the following manufacturers. Owner to accept or decline alternate pricing.
1) Corbin Russwin Architectural Hardware; an ASSA ABLOY Group company.
2) SARGENT Manufacturing Company; an ASSA ABLOY Group company.
3) Yale Commercial Locks; an ASSA ABLOY Group company.
4) Falcon Locks; an Allegion company.
2. Provide locks with reversible handing of lock without disassembly of lock.
3. Where listed, provide electrified locks that comply with above requirements and that incorporate self-contained integral continuous duty solenoid. Provide 24V, either AC or DC as required in Fail-Safe or Fail-Secure function as listed in hardware sets. Provide electrified locks from same manufacturer as mechanical locks.

	Corbin-Russwin	Sargent	Schlage	Yale	Falcon
Lock	ML2000	8200	L-9000	8800FL	MA-Series
Trim-Sect.	NSA	LNL	06A	AUR	DG

2.6 STAND ALONE ACCESS CONTROL LOCKS

A. Provide security-locking system that is stand alone battery operated ANSI/BHMA Grade One locks. All locks shall have an interchangeable core cylinder bypass. All levers shall match mechanical locks and trim. Provide units with a weather seal when used in areas of moisture and high humidity. All readers shall be equipped with non-volatile memory. Provide locks capable of minimum of 100 user capacity.
1. Manufacturers: Subject to compliance with requirements, provide specified products by one of the following:
a. Alarm Lock DL2700
b. Corbin-Russwin CL33800 series.
c. Sargent 10G77Lk
d. Schlage CO-100 Series
e. Yale E5496LN

2.7 MANUAL FLUSH BOLTS

A. Manual Flush Bolts: BHMA A156.16; Grade 1; minimum 3/4 inch throw; designed for use in metal doors and mortised into door edge for all doors. Coordinate with Wood Door Manufacturers.
   1. Manufacturers: Subject to compliance with requirements, provide specified products by one of the following:
      a. Door Controls International, Inc.
      b. Hager Companies.
      c. IVES Hardware; an Ingersoll-Rand company.
      d. McKinney Products Company; an ASSA ABLOY Group company.
      e. Trimco.

2.8 AUTOMATIC AND SELF-LATCHING FLUSH BOLTS

A. Automatic and Self-Latching Flush Bolts: BHMA A156.16; Grade 1; minimum 3/4 inch throw; designed for use in metal doors and mortised into door edge for all doors. Coordinate with Wood Door Manufacturers.
   1. Manufacturers: Subject to compliance with requirements, provide specified products by one of the following:
      a. Door Controls International, Inc.
      b. Hager Companies.
      c. IVES Hardware; an Ingersoll-Rand company.
      d. McKinney Products Company; an ASSA ABLOY Group company.
      e. Rockwood Architectural Hardware; an ASSA ABLOY Group company.
      f. Trimco.

	DCI	Hager	Ives	McKinney	Rockwood	Trimco
Manual-Metal Door	780F	282D	FB458	FB01M	555	3917
Auto-Metal Door	842	292D	FB31P	FB06M	1842	3810
Dust Proof Strike	82	280X	DP2	DPS3	570	3911

2.9 EXIT DEVICES AND AUXILIARY ITEMS

A. Exit Devices and Auxiliary Items: BHMA A156.3, Grade 1.
   1. Manufacturers: Subject to compliance with requirements, provide specified products by one of the following:
      a. Base Bid: Von Duprin, No Substitutions.
      b. Alternate pricing will be accepted from the following manufacturers. Owner to accept or decline alternate pricing.
         1) Corbin Russwin Architectural Hardware; an ASSA ABLOY Group company.
         2) SARGENT Manufacturing Company; an ASSA ABLOY Group company.
         3) Yale Commercial Locks; an ASSA ABLOY Group company.
         4) Falcon Exit Devices; an Allegion Company
   2. Provide exit devices by single manufacturer.
   3. Provide vandal resistant outside trim to discourage abuse when door is locked. Provide trim with lever design to match locks.
   4. Provide device where noted with a photoluminescent coating which will produce visible EXIT signage in darkness or low lit areas similar to Yale “LUM”.
   5. Provide cylinder dogging on non-rated devices.
   6. Provide devices with a heavy duty flush end cap.
   7. Removable Mullions: Keyed.
   8. When Electrified functions are specified, provide manufacturer’s recommended power supply that is filtered and regulated; and listed and labeled for use with fire alarm systems, with power sufficient to operate electrified function specified.

	Corbin-Russwin	Von Duprin	Yale	Sargent	Falcon
Wide Stile	ED5000S-M110	70 Series	7100-ECK Series	GL-43-80 Series	25-Series
Active Trim	900 Series	996L	600 series	740ET	510L

B. Value Series Alarmed Exits only as specified in hardware groups.
   1. Exit Device and Auxiliary Items: BHMA A156.3, Grade 1.
      a. Manufacturers: Subject to compliance with requirements, provide specified products by the following manufacturer:
         1) Detex.
      b. Provide exit devices by single manufacturer.
      c. Provide devices with weatherized exit alarm that allows cylinder dogging. Touchpad shall be RED with the following silk screened on the face “Emergency Exit Only Alarm will Sound”.
      d. Removable Mullions: When used in conjunction with valued series alarmed exits, provide Yale M300 aluminum mullion including mullion stabilizer kit.

	Detex
Wide Stile	V40xEBxW

2.10 ELECTRIC STRIKES

A. Comply with ANSI/BHMA A156.5 requirements for Grade 1.

B. Provide electric strikes UL listed for fire rated doors and frames where required.

C. Provide corrosion-resistant case and working parts

D. Provide 4 7/8 inch face plates for use with mortise cylindrical locks.

E. Provide fail secure strikes (locked when power is off) for labeled doors.

F. Provide electric strikes that comply with above requirements with plug connector. Provide wiring harness as listed below. Provide 24VDC with function as listed in hardware sets.

G. Acceptable Manufacturers and Products:

	Folger-Adam	HES	Von Duprin
Cylindrical Lock	700 Series	1006 Series	6211

2.11 MAGNETIC LOCKS

A. Acceptable Manufacturers and respective catalog numbers:

	Schlage Electronics
Shear Lock	320M Series

B. Provide magnetic locks as specified, complete with mounting brackets and fasteners appropriate to the application. Shear Locks shall have a minimum of 500 lbs holding force.

C. Provide magnetic locks with integral magnetic bond sensor, time delay (1-90 Seconds) for re-locking.

D. Provide regulated and filtered power supplies for magnetic locks by the same manufacturer.

2.12 LOCK CYLINDERS

A. Lock Cylinders: Tumbler type, constructed from brass or bronze, stainless steel, or nickel silver.
   1. Manufacturer: Same manufacturer as for locking devices.
   2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Base Bid: Schlage, No Substitutions.

b. Alternate pricing will be accepted from the following manufacturers. Owner to accept of decline alternate pricing.
   1) Corbin Russwin Architectural Hardware; an ASSA ABLOY Group company.
   2) SARGENT Manufacturing Company; an ASSA ABLOY Group company.
   3) Yale Commercial Locks; an ASSA ABLOY Group company.

B. Standard Lock Cylinders: BHMA A156.5; Grade 1; permanent cores that are 6-Pin Utility Patented interchangeable; face finished to match lockset.

C. Construction Cores: Provide temporary keyed construction cores and keys for all doors during the construction period. Construction control and operating keys and cores shall not be part of the Owner's permanent keying system or furnished on the same keyway (or key section) as the Owner's permanent keying system. .

2.13 KEYING

A. Keying System: Factory registered, complying with guidelines in BHMA A156.28, Appendix A. Incorporate decisions made in keying conference.
1. Base Bid: Schlage, No Substitutions.
2. Alternate pricing will be accepted from the following manufacturers. Owner to accept or decline alternate pricing.
3. Acceptable Manufacturers and Products:

	Corbin-Russwin	Sargent	Schlage	Yale
Utility Patented Keyway	Pyramid	Signature	Classic Primus	KeyMark

B. Keys: Nickel silver factory-cut keys furnished with large bow.
1. Stamping: Permanently inscribe each key with a visual key control number and include the following notation:
   a. Notation: "DO NOT DUPLICATE."
2. Quantity: In addition to 1 extra key blank for each lock, provide the following:
   a. Change Keys: 3 each per cylinder.
   b. Control Keys: 2 each.
   c. Extra Key Blanks: 50 each.
   d. Master Keys: 6 each per master key group.
   e. Construction Control Keys: 2 each.
   f. Construction Keys: 15 each.
3. Ship permanent keys, cores, master keys, change keys, and additional key blanks, permanent control keys, and bitting list indicating bitting generated for this Project, directly to Owner, via registered mail. Shipment shall be complete, with keys enveloped in sets and tagged with key set numbers (with proper code numbers and factory file or folio number). Do not pack permanent keys and cores with locks. If permanent keys, cores, or both are sent anywhere other than previously stated, replace at no additional cost to Owner.
   a. Forward Owner's Key System Registration Certificates, which shall accompany each procurement during construction period, to hardware supplier.

2.14 KEY CONTROL SYSTEM

A. Key Control Cabinet: Provide BHMA A156.5, Grade 1; metal cabinet with baked-enamel finish; containing key-holding hooks, labels, 2 sets of key tags with self-locking key holders, key-gathering envelopes, and temporary and permanent markers; with key capacity of 150 percent of number of locks.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. American Key Boxes and Cabinets.
   b. GE Security, Inc.
   c. HPC, Inc.
   d. Lund Equipment Co., Inc.
   e. MMF Industries.

f. Tri Palm International.

2. Wall-Mounted Cabinet: Cabinet with hinged-panel door equipped with key-holding panels and pin-tumbler cylinder door lock.

2.15 ACCESSORIES FOR PAIRS OF DOORS

A. Coordinators: BHMA A156.3; consisting of active-leaf, hold-open lever and inactive-leaf release trigger; fabricated from steel with nylon-coated strike plates; with built-in, adjustable safety release and with internal override.

1. Manufacturers: Subject to compliance with requirements, provide specified products by one of the following:
   a. Door Controls International (DCI).
   b. Hager Companies.
   c. Ives Hardware; an Ingersoll-Rand Company.
   d. Rockwood Manufacturing Company; an ASSA ABLOY Group company.
   e. Trimco.

	DCI	Hager	Ives	Rockwood	Trimco
Bar Type Coordinator	600 Series	297D	COR	1600	3094

2.16 SURFACE CLOSERS

A. Surface Closers: BHMA A156.4 Grade 1; rack-and-pinion hydraulic type with adjustable sweep and latch speeds controlled by key-operated valves and forged-steel main arm. Comply with manufacturer's written recommendations for size of door closers depending on size of door, exposure to weather, and anticipated frequency of use. Provide factory-sized closers, adjustable to meet field conditions and requirements for opening force.

1. Manufacturers: Subject to compliance with requirements, provide specified products by one of the following:
   a. Base Bid: LCN, No Substitutions
   b. Alternate pricing will be accepted from the following manufacturers. Owner to accept or decline alternate pricing.
      1) Corbin Russwin Architectural Hardware; an ASSA ABLOY Group company.
      2) Falcon Closers, an Allegion Company.
      3) SARGENT Manufacturing Company; an ASSA ABLOY Group company.
2. Fully adjustable type, with complete spring power adjustment, sizes 1 through 6.
3. Provide closers with swing, latch, and back check features.
4. Provide parallel rigid arm for closers mounted on push side of opening.
5. Coordinate with door supplier to provide proper blocking for surface mounting. Use of through-bolts is not acceptable.
6. Where closers are indicated to be closer/stops provide heavy-duty arms with means of positive stop. For closer/holders, provide heavy-duty units with additional built-in mechanical holder assembly. Manually select holder to off/on position.
7. Provide meeting requirements to physically handicapped, provide units complying with ANSI/ICC A117.1 provisions for door opening force closing force.
8. Install closers using only manufacturer-furnished template machine screws for metal doors and manufacturer -furnished wood screws for wood doors.
   a. Use of self-drilling or self-tapping fasteners is not allowed.
9. Accessories: Mounting brackets, drop plates, special shoes required by door and frames conditions.
10. Acceptable Products: Subject to compliance with requirements, provide one of the following:

	Corbin-Russwin	LCN	Sargent	Falcon
Heavy Duty-	DC8000A10/DC8000A3	4011/4111	281/281P-10	SC70 Series

2.17 AUTOMATIC DOOR OPERATORS

A. Acceptable manufacturers and respective catalog numbers:

	Horton	LCN	Norton	Stanley
Electro-Hydraulic Operator	4000LE	4640	5900	Magic Force

B. Where low kinetic energy, as defined by ANSI/BHMA Standard A156.19, power operators are indicated for doors required to be accessible to the disabled, provide electrically powered operators complying with the ADA for opening force and time to close standards.

C. The closing action shall be controlled by modern type cast iron door closer cylinder filled with a flat viscosity fluid, stable from +120F to -30F that would require no seasonal adjustments. The closer shall have field adjustable spring power; have two independent closing speed adjustment valves, and hydraulic back-check.

D. Full closing force shall be provided when the power or assist cycle ends.

E. All power operator systems shall include the following features and functions:

1. Provisions for separate conduits to carry high and low voltage wiring in compliance with the National Electrical Code, section 725-31.
2. The operator will be designed with an electronically controlled mechanical clutching mechanism to prevent damage to the operator if the system is actuated while the door is latched or if the door is forced closed during the opening cycle.
3. All covers, mounting plates and arm systems shall be powder coated and successfully pass a minimum of 100 hours testing as outlined in ANSI/BHMA Standard A156.18.
4. UL listed for use on labeled doors.
5. All operators shall be non-handed with spring power over a range of at least four sizes; either 1 through 4 or 2 through 5.
6. The power operator shall incorporate microprocessor controlled digital controls including: factory default memory settings, on-board diagnostics, non-volital memory, and intergrated delay and relay for controlling door release devices.
7. Provisions in the control box or module shall provide control {inputs and outputs) for; electric strike delay, auxiliary contacts, sequential operation, fire alarms systems, actuators, swing side sensors, and stop side sensors.
8. Wall mounted actuators shall consist of a 4-1/2 inch diameter stainless steel touch plate with a blue filled handicapped symbol. Switches shall be weather resistant and mount on a single gang electrical box furnished by Division 16.

F. All electrically powered operators shall include the following features or functions:

1. When an obstruction or resistance to the opening swing is encountered, the operator will pause at that point, then attempt to continue opening the door. If the obstruction or resistance remains, the operator will again pause the door.
2. Easily accessible main power and maintain hold open switches will be provided on the operator.
3. An electronically controlled clutch to provide adjustable opening force.
4. A microprocessor to control all motor and clutch functions.
5. An on-board power supply capable of delivering both 12V and 24V outputs up to a maximum of 1.0 ampere combined load.
6. All input and output power wiring shall be protected by slow blow fuses. These fuses shall be easily replaceable without special tools or component replacement.
7. If electrical failure occurs, the unit shall operate as a standard door closer.

G. Power Operators shall be warranted by the manufacture to be free from defects in material and workmanship for a period of two years.

H. Activation and Safety Devices.

1. General: Provide activation devices per BHMA standards, for condition of exposure and for long-term, maintenance-free operation under normal traffic load for type of occupancy indicated. Coordinate activation and safety devices with door operation and door operator mechanisms.
2. Push-Plate Switch: Momentary-contact door control switch with flat push-plate actuator with contrasting-colored, engraved message and weather resistant gasket for exterior openings.
    a. Configuration: Round push plate with 4-1/2-inch (100-by-100-mm) with surface mount box.
        1) Mounting: Surface mounted as indicated on Drawings.
    b. Push-Plate Material: Stainless steel.
    c. Message: International symbol of accessibility and "Push to Open."

d. Products similar to Wikk N4RS x4R-3

3. Electrical Interlocks: Unless units are equipped with self-protecting devices or circuits, provide electrical interlocks to prevent activation of operator when door is locked, latched, or bolted.

2.18 MECHANICAL STOPS AND HOLDERS

A. Wall- Stops: BHMA A156.16; polished cast brass, bronze, or aluminum base metal

1. Manufacturers: Where indicated in doors and hardware schedules, provide specified products from one of the following:
   a. Door Controls International, Inc.
   b. Hager Companies.
   c. IVES Hardware; an Ingersoll-Rand company.
   d. McKinney; an ASSA ABLOY Group Company
   e. Rockwood Manufacturing Company; an ASSA ABLOY Group Company.
   f. Trimco.
2. Install surface-mounted stops and holders using only manufacturer supplied template machine screws for metal doors and manufacturer supplied wood screws for wood doors. Use of self-drilling or self-tapping fasteners is not allowed.
3. Coordinate with door supplier to provide proper blocking for surface mounting. Use of through-bolts is not acceptable.

B. Wall Stops:

	DCI	Hager	Ives	Rockwood	Trimco
Convex	3210	236W	WS406CVX	407	1270CX
Concave	3211	232W	WS406CCV	410	1270CV
Extended	3260X	255W	WS11	518	1208

2.19 ELECTROMAGNETIC STOPS AND HOLDERS

A. Electromagnetic Door Holders: BHMA A156.15, Grade 1; wall-mounted or floor-mounted electromagnetic units with strike plate attached to swinging door; coordinated with fire detectors and interface with fire alarm system for labeled fire-rated door assemblies.

1. Acceptable Products: Subject to compliance with requirements, provide one of the following:

	LCN	Rixson	Sargent
Flush-Mount	SEM1900	FM998	1561

2. UL listed, triple voltage, field-selectable units. Provide extension pieces as required to meet wall conditions.

2.20 OVERHEAD STOPS AND HOLDERS

A. Overhead Stops and Holders: BHMA A156.8.

1. Acceptable Products: Subject to compliance with requirements, provide one of the following:

	Glynn-Johnson	Rixson	Sargent
Heavy Duty Concealed	GJ-100	6-Series	690
Heavy Duty Surface	GJ-90	9-Series	590
Standard Duty Surface	GJ-450	10-Series	1540

2. Provide overhead stop for doors that are capable of swinging more than 145 degrees before striking wall and where door strikes fixed object such as sink, cabinet, and similar obstructions.

2.21 DOOR GASKETING

A. Door Gasketing: BHMA A156.22; air leakage not to exceed 0.50 cfm per foot of crack length for gasketing other than for smoke control, as tested per ASTM E283; with resilient or flexible seal strips that are easily replaceable and readily available from stocks maintained by manufacturer.

1. Basis of Design Product: Subject to compliance with requirements, provide MCKS88 Silicone Seal by McKinney Products Company or comparable product by one of the following:

a. McKinney; an ASSA ABLOY Group company
b. National Guard Products.
c. Pemko Manufacturing Co.; an ASSA ABLOY Group company.
d. Reese Enterprises, Inc.
e. Zero Manufacturing

2. Coordinate with door manufacturer. Comply with UL10C for intumescent fire and smoke material.
3. Provide smoke gasket at each labeled opening similar to McKinney MCKS88.

2.22 THRESHOLDS

A. Thresholds: BHMA A156.21; full saddle, fabricated to full width of opening indicated.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. McKinney Products Company; an ASSA ABLOY Group company
b. National Guard Products.
c. Pemko Manufacturing Co.; an ASSA ABLOY Group company.
d. Reese Enterprises, Inc.

	McKinney	National Guard	Pemko	Reese	Zero
Thermal Break	MCK252 x 3FG	8425	252 x 3FG	S471A	625A

2.23 SWEEPS:

A. Hollow Metal and Wood Doors:
1. Acceptable Manufacturers and Products:

	McKinney	National Guard	Pemko	Reese	Zero
Neoprene	MCK315-N	200N	315-N	323	39A
with Rain Drip	MCK3452	C627	3452NB	354	8198A

B. Aluminum doors:
1. Acceptable Manufacturers and Products:

	Special-Lite
Adjustable sweep	SL-301

2.24 WEATHERSTRIP

A. Acceptable Manufacturers and Products:

	McKinney	National Guard	Pemko	Reese	Zero
Polyprene	MCK303PK	135NA	303PK	815	8303

2.25 AUTOMATIC DOOR BOTTOMS

A. Provide units with a light-spring action which reduces the operating force to 3-5 pounds required for actuation.
1. Pemko No. 4131 Series specified.
2. Provide Pemko “RL” Sponge neoprene for units sealing against hard surfaces. Semi-mortised on non-rated openings.
3. Provide Pemko “NBL” aluminum bar with nylon brush for units sealing over carpet. Semi-mortised on non-rated openings..
4. Provide Pemko 420PKL for use in hollow metal and aluminum doors.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. McKinney Products Company; an ASSA ABLOY Group company
2. National Guard Products.
3. Pemko Manufacturing Co.; an ASSA ABLOY Group company.
4. Reese Enterprises, Inc.

5. Zero Manufacturing

2.26 METAL PROTECTIVE TRIM UNITS

A. Metal Protective Trim Units: BHMA A156.6; fabricated from 0.050 inch thick stainless steel; with manufacturer's standard machine or self-tapping screw fasteners.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Burns Manufacturing Incorporated.
      b. Hager Companies.
      c. Hiawatha, Inc.
      d. Ives; an Ingersoll Rand Company
      e. McKinney Products Company; an ASSA ABLOY Group company
      f. Rockwood Manufacturing Company.
      g. Trimco.

B. Push Plates: Beveled edges (B4E).
   1. Size: 8 inch by 16 inch. Provide 4 inch by 16 inch where 8 inch by 16 inch is not applicable due to door conditions.
   2. Acceptable Manufacturers and Products:

	Burns	Hager	Hiawatha	Ives	Rockwood	Trimco
8 inch x 16 inch	57	30S	200K	8200	70F	1001-11
4 inch x 16 inch	54	30S	200F	8200	70C	1001-3

C. Door Pulls: 1-1/4 inch round material, 18 inch screw centers, and 3-1/4 inch total projection with concealed screw mounting wherever through bolt attachment would leave an exposed screw. Provide reinforcement for hollow metal doors.

Burns	Hager	Hiawatha	McKinney	Rockwood	Trimco
M39G	23Q	HG122	OP9017	RM202	1191-5J

D. Pool Area Pulls: 1-1/8 inch round nylon material 14-3/16 inch x 6-7/8 inch.
   1. Acceptable Manufacturers and Products:
      a. Hafele HEWI 114.23.590 BTB Mount

E. Push/Pull Bars: 1-1/4 inch round material, pull with 12 inch screw centers, and 3-1/4 inch total projection
   1. Push bar 3 inches less than door width.
   2. Provide back-to-back mounting with top of pull and lock side of push bar. Provide decorative through-bolt at hinge stile and bottom of pull.
   3. Provide heavy-duty concealed fasteners with dual shoulder-mount set screws at mounting locations. Use of through-bolts is not acceptable.
   4. Coordinate with door supplier to provide proper blocking for mounting.

Burns	Hiawatha	McKinney	Rockwood	Trimco
M422 x M396D	HG111 x HG113	PB820-OP9017	RM251	1747-1

F. Push Bars: 1-1/4 inch round material, 3 inches less than door width. Provide decorative through-bolt.

Burns	Hiawatha	McKinney	Rockwood	Trimco
M422	HG111	PB820	RM350	1745

G. Kick Plates: Beveled edges (B4E).
   1. Widths: 2 inches less than door width.
   2. Height: 12 inches or 1/2 inch less than height of bottom rail, whichever is less.

H. Armor Plates: Beveled edges (B4E).
   1. Widths: 2 inches less than door width.
   2. Height: 42 inches, and complying with door conditions.

3. Notch for surface hardware.
4. Where indicated for fire-rated doors, provide armor plates that are labeled and installed per listings.

I. Door Edge Guards: Stainless steel, 42 inches high, 0.0478 inch thick unless otherwise specified in "Finishes" or in hardware groups. Notch for hinges.
1. Surface-applied, for single acting doors. Delete if on hollow metal doors.

J. Latch Protection Plates: Stainless steel, 3 inches wide by 11 inches high, 0.0478 inch thick unless otherwise specified in "Finishes" or in hardware groups.

K. Trim Protection Bars: Stainless steel, 14 inch center-to-center with 3-1/4 inch projection, 3/8 inch thickness.

McKinney	Rockwood
TPB05	R115LBP

2.27 AUXILIARY DOOR HARDWARE

A. Clothes Hooks:
1. Acceptable products of the following manufacturers:

Don-Jo	Rockwood	Ives
302	796	582

B. Strip Curtain:
1. Type: PVC
2. Width: See Drawings.
3. Height: 96" (VIF).
4. Hardware: Galvanized Steel Hardware, Industrial Heavy Duty, Pre-Studded.
5. Strip Width: 12" (66% overlap).
6. Gauge: 0.12
7. Color: Clear

2.28 FABRICATION

A. Manufacturer's Nameplate: Do not provide products that have manufacturer's name or trade name displayed in a visible location except in conjunction with required fire-rated labels and as otherwise approved by Architect.
1. Manufacturer's identification is permitted on rim of lock cylinders only.

B. Base Metals: Produce door hardware units of base metal indicated, fabricated by forming method indicated, using manufacturer's standard metal alloy, composition, temper, and hardness. Furnish metals of a quality equal to or greater than that of specified door hardware units and BHMA A156.18.

C. Fasteners: Provide door hardware manufactured to comply with published templates prepared for machine, wood, and sheet metal screws. Provide screws that comply with commercially recognized industry standards for application intended, except aluminum fasteners are not permitted. Provide Phillips flat-head screws with finished heads to match surface of door hardware, unless otherwise indicated.
1. Concealed Fasteners: For door hardware units that are exposed when door is closed, except for units already specified with concealed fasteners. Do not use through bolts for installation where bolt head or nut on opposite face is exposed unless it is only means of securely attaching door hardware. Where through bolts are used on hollow door and frame construction, provide sleeves for each through bolt.
2. Fire-Rated Applications:
a. Wood or Machine Screws: For the following:
1) Hinges mortised to doors or frames; Use threaded-to-head wood screws for wood doors.

2) Strike plates to frames.
3) Closers to doors and frames.

b. Steel Through Bolts: For the following unless door blocking is provided:
1) Surface hinges to doors.
2) Closers to doors and frames.
3) Surface-mounted exit devices.

3. Spacers or Sex Bolts: For through bolting of hollow-metal doors.
4. Fasteners for Wood Doors: Comply with requirements in DHI WDHS.2, "Recommended Fasteners for Wood Doors."
5. Gasketing Fasteners: Provide noncorrosive fasteners for exterior applications and elsewhere as indicated.

2.29 ELECTROMECHANICAL HARDWARE

A. The electrical products contained within this specification represent a complete engineered system. If alternate electrical products are submitted, it is the responsibility of the supplier to bear the cost of providing a complete and working system including re-engineering of electrical diagrams and system layout, as well as power supplies, power transfers and all required electrical components. Coordinate with electrical engineer and electrician to ensure that line voltage and low voltage wiring is coordinated to provide a complete and working system.

B. For each item of electrified hardware specified, provide standardized Molex plug connectors to accommodate up to twelve (12) wires. Molex plug connectors shall plug directly into through-door wiring harnesses, frame wiring harnesses to power supplies.
1. If plug connectors are not available, coordinate installation and hook-up of hardware with a company that is licensed by the Local Electricity Board. Hinges shall be UL fire tested and listed for labeled doors up to and including Class “A”.

C. Where Electrified functions are specified, provide manufacturer’s recommended power supply that is filtered and regulated; and listed and labeled for use with fire alarm systems, with power sufficient to operate electrified function specified.

D. Electrical: Electrical boxes in walls, electrical service, conductors and final connections provided under Division 16:

E. Electro-Lynx Cables: McKinney Listed for use with Corbin Russwin, Sargent

2.30 FINISHES

A. Provide finishes complying with BHMA A156.18 as indicated in door hardware schedule.

B. Protect mechanical finishes on exposed surfaces from damage by applying strippable, temporary protective covering before shipping.

C. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within 1/2 of range of approved Samples. Noticeable variations in same piece are not acceptable. Variations in appearance of other components are acceptable if they are within range of approved Samples and are assembled or installed to minimize contrast.

Exposed Metal Finishes:	BHMA 613 / US10B = Oil Rubbed Bronze over nickel, over brass or bronze base metal. BHMA 643e = Dark Bronze power coated over nickel, over steel base metal. BHMA 614 = Oxidized Satin Bronze over bronze base metal. BHMA 630 / US32D = Satin Stainless Steel, over stainless-steel base material.
Hinges-Exterior:	614 – Oxidized Bronze
Hinges-Interior:	641 – Oxidized Bronze
Continuous Gear Hinges	710 / 313AN – Anodized Duranodic

Continuous Pin & Barrel	710 / 313AN – Dark Bronze Anodized
Locksets:	643e – Aged Bronze Clear Coated
Closers:	695 - Dark Bronze powder coat or painted over any base material.
Exit Devices:	710 / 313AN – Anodized Duranodic
Pushes, Pulls, Kick Plates:	695 – Dark Bronze powder coat or painted over any base material.
Armor Plates:	695 – Dark Bronze powder coat or painted over any base material.
Door Edge Guards:	695 – Dark Bronze powder coat or painted over any base material.
Overhead Stops & Holders:	SP313 – Dark Bronze powder coat
Door Stops:	643e – Aged Bronze
Thresholds:	719 / AL – Mill finish aluminum
Weatherstrip:	DKBRZ - Dark Bronze Anodized
Sweep Strips:	DKBRZ – Dark Bronze Anodized
Automatic Door Bottoms:	
(Concealed)	DKBRZ – Dark Bronze Anodized
(Semi-Mortised)	DKBRZ – Dark Bronze Anodized
Rain Drips:	DKBRZ – Dark Bronze Anodized
Miscellaneous Items:	613 / US10B– Oil Rubbed Bronze

1. Hardware on aluminum doors shall match finish of doors and frames.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine doors and frames, with installer present, for compliance with requirements for installation tolerances, labeled fire door assembly construction, wall and floor construction, and other conditions affecting performance.

B. Examine roughing-in for electrical power systems to verify actual locations of wiring connections before electrified door hardware installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Hollow Metal Doors and Frames: For surface applied door hardware, drill and tap doors and frames per ANSI/SDI A250.6.

B. Wood Doors: Comply with DHI WDHS.5 "Recommended Hardware Reinforcement Locations for Mineral Core Wood Flush Doors."

3.3 INSTALLATION

A. Mounting Heights: Mount door hardware units at heights indicated as follows unless otherwise indicated or required to comply with governing regulations.
   1. Hollow Metal Doors and Frames: ANSI/SDI A250.8.
   2. Custom Hollow Metal Doors and Frames: HMMA 831.
   3. Wood Doors: DHI WDHS.3, "Recommended Locations for Architectural Hardware for Wood Flush Doors."

B. Install each door hardware item to comply with manufacturer's written instructions. Where cutting and fitting are required to install door hardware onto or into surfaces that are later to be painted or finished in another way, coordinate removal, storage, and reinstallation of surface protective trim units with finishing work specified in Division 09 Sections. Do not install surface-mounted items until finishes have been completed on substrates involved.

1. Set units level, plumb, and true to line and location. Adjust and reinforce attachment substrates as necessary for proper installation and operation.
2. Drill and countersink units that are not factory prepared for anchorage fasteners. Space fasteners and anchors according to industry standards.

C. Hinges: Install types and in quantities indicated in door hardware schedule but not fewer than number recommended by manufacturer for application indicated or 1 hinge for every 30 inches of door height, whichever is more stringent, unless other equivalent means of support for door, such as spring hinges or pivots, are provided.

D. Intermediate Offset Pivots: Where offset pivots are indicated, provide intermediate offset pivots in quantities indicated in door hardware schedule but not fewer than 1 intermediate offset pivot per door and 1 additional intermediate offset pivot for every 30 inches of door height greater than 90 inches.

E. Lock Cylinders: Install construction cores to secure building and areas during construction period.
1. Replace construction cores with permanent cores as indicated in keying schedule.
2. Furnish permanent cores to Owner for installation.

F. Key Control System: Tag keys and place them on markers and hooks in key control system cabinet, as determined by final keying schedule.

G. Boxed Power Supplies: Locate power supplies as indicated or, if not indicated, above accessible ceilings. Verify location with Architect.
1. Configuration: Provide one manufacturer's power supply for each door opening, with power sufficient to operate locks.
a. Verify voltage requirements with electrical engineer, or Architect.
2. Configuration: Provide least number of power supplies required to adequately serve doors with electrified door hardware.

H. Thresholds: Set thresholds for exterior and acoustical doors in full bed of sealant complying with requirements specified in Section 07920 - Joint Sealants.

I. Stops: Provide floor stops for doors unless wall or other type stops are indicated in door hardware schedule. Do not mount floor stops where they will impede traffic.

J. Perimeter Gasketing: Apply to head and jamb, forming seal between door and frame.

K. Meeting Stile Gasketing: Fasten to meeting stiles, forming seal when doors are closed.

L. Door Bottoms: Apply to bottom of door, forming seal with threshold when door is closed.

3.4 FIELD QUALITY CONTROL

A. Independent Architectural Hardware Consultant: Owner will engage qualified independent Architectural Hardware Consultant to perform inspections and to prepare inspection reports.
1. Independent Architectural Hardware Consultant will inspect door hardware and state in each report whether installed Work complies with or deviates from requirements, including whether door hardware is properly installed and adjusted.

3.5 ADJUSTING

A. Initial Adjustment: Adjust and check each operating item of door hardware and each door to ensure proper operation or function of every unit. Replace units that cannot be adjusted to operate as intended. Adjust door control devices to compensate for final operation of heating and ventilating equipment and to comply with referenced accessibility requirements.
1. Spring Hinges: Adjust to achieve positive latching when door is allowed to close freely from an open position of 30 degrees.
2. Electric Strikes: Adjust horizontal and vertical alignment of keeper to properly engage lock bolt.

3. Door Closers: Unless otherwise required by authorities having jurisdiction, adjust sweep period so that, from an open position of 70 degrees, door will take at least 3 seconds to move to a point 3 inches from latch, measured to leading edge of door.

B. Occupancy Adjustment: Approximately 6 months after date of Substantial Completion, schedule installer's architectural hardware consultant to examine and readjust, including adjusting operating forces, each item of door hardware as necessary to ensure function of doors, door hardware, and electrified door hardware.

3.6 CLEANING AND PROTECTION

A. Clean adjacent surfaces soiled by door hardware installation.

B. Clean operating items as necessary to restore proper function and finish.

C. Provide final protection and maintain conditions that ensure that door hardware is without damage or deterioration at time of Substantial Completion.

3.7 DEMONSTRATION

A. Engage factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain door hardware and door hardware finishes. Refer to Section 017900 - Demonstration and Training.

3.8 MAINTENANCE SERVICE

A. Maintenance Tools and Instructions: Furnish complete set of specialized tools and maintenance instructions as needed for Owner's continued adjustment, maintenance, and removal and replacement of door hardware.

B. Maintenance Service: Beginning at Substantial Completion, provide 6 months' full maintenance by skilled employees of door hardware installer. Include quarterly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper door hardware operation. Provide parts and supplies same as those used in manufacture and installation of original products.

END OF SECTION

SECTION 08 81 00
GLAZING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Insulated glass and glazing for aluminum windows, entrances, storefronts, and curtainwall.

B. Monolithic Glazing for interior wood doors, hollow metal doors and side-lites, decorative metal handrails and smoke baffles.

C. Unframed mirrors and metal trim.

D. Glazed food service fixtures and metal trim.

E. Decorative Cast Glass.

1.02 RELATED SECTIONS

A. Section 01 33 00 - Submittal Procedures.

B. Section 01 40 00 - Quality Requirements.

C. Section 01 60 00 - Product Requirements.

D. Section 05 70 00 - Decorative Metal.

E. Section 05 73 13 - Glazed Decorative Metal Railings.

F. Section 08 08 00 - Commissioning of Openings.

G. Section 08 11 13 - Hollow Metal Doors and Frames.

H. Section 08 14 16 - Flush Wood Doors.

I. Section 08 38 00 - Traffic Doors.

J. Section 08 41 13 - Aluminum Framed Entrances and Storefronts

K. Section 08 42 45 - Sliding Aluminum Doors.

L. Section 08 44 13 - Glazed Aluminum Curtain Walls.

M. Section 08 87 13 - Solar Control Film.

1.03 REFERENCE STANDARDS

A. 16 CFR 1201 - Safety Standard for Architectural Glazing Materials; Current Edition.

B. ANSI Z97.1 - American National Standard for Safety Glazing Materials Used in Buildings - Safety Performance Specifications and Methods of Test; 2015 (Reaffirmed 2020).

C. ASTM C1036 - Standard Specification for Flat Glass; 2021.

D. ASTM C1048 - Standard Specification for Heat-Strengthened and Fully Tempered Flat Glass; 2018.

E. ASTM C1172 - Standard Specification for Laminated Architectural Flat Glass; 2019.

F. ASTM C1503 - Standard Specification for Silvered Flat Glass Mirror; 2024.

G. ASTM E576 - Standard Test Method for Frost/Dew Point of Sealed Insulating Glass Units in the Vertical Position; Current Edition.

H. ASTM E2188 - Standard Test Method for Insulating Glass Unit Performance; 2019.

I. ASTM E2189 - Standard Test Method for Testing Resistance to Fogging in Insulating Glass Units; 2019.

J. ASTM E2190 - Standard Specification for Insulating Glass Unit Performance and Evaluation; 2019.

K. ASTM E2358 - Standard Specification for the Performance of Glass in Permanent Glass Railing Systems, Guards, and Balustrades; 2017.

L. CPSC 16CFR1201 - SAFETY STANDARD FOR ARCHITECTURAL GLAZING MATERIALS; 2016.

M. GSA CID A-A-3002 - Mirrors, Glass; 1996.

N. NFPA 80 - Standard for Fire Doors and Other Opening Protectives; 2025.

O. NFPA 252 - Standard Methods of Fire Tests of Door Assemblies; 2022.

P. NFPA 257 - Standard on Fire Test for Window and Glass Block Assemblies; 2022.

Q. FGMA Glazing Manual - Flat Glass Marketing Association.

1.04 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Comply with safety glazing requirements of ANSI Z97.1 and CPSC 16CFR1201.

C. Conform to Flat Glass Marketing Association (FGMA) Glazing Manual for glazing installation methods.

D. Provide insulating glass units permanently marked with certification label of Insulating Glass Certification Council (IGCC) indicating compliance with Class CBA.

E. Fire Rated Door Assemblies: Provide assemblies complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated, based on testing according to NFPA 252.

F. Fire Rated Window Assemblies: Provide assemblies complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated, based on testing according to NFPA 257.

1.05 SUBMITTALS

A. Material and Equipment Submittals: Submit the following under provisions of Section 01 33 00-Submittals:
   1. Product Data:
      a. Glass Units: Provide product data indicating compliance with specified requirements. Include information on size limitations, special handling or installation requirements.
      b. Glazing Sealant: Provide data on glazing sealant. Identify colors available.
      c. Calculations prepared by a professional engineer, licensed in the state in which the project is located, for the design of all glass units and showing that the glass units meet the building code.
   2. Samples for Verification:
      a. Glass Units: Submit three 12" x 12" samples of each type of tinted insulating glass specified. Submit Insulating Glass samples with Project specific features such as spacer bar and hermetic seal construction, low-E coatings and other specified features. Samples shall show extremes of variation / range of appearance if applicable.
      b. Laminated Glass: Submit three 12” x 12” samples of each type of laminated glass for final approval of interlayer color.
      c. Glazing Sealant: Submit color samples for color selection.

B. Quality Assurance Submittals: Submit the following under provisions of Section 01 40 00:
   1. Manufacturer's Certificate: Submit sealed glass unit manufacturer's certificate indicating units meet or exceed specified to requirements.

C. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00: Submittal Procedures and 01 60 00: Product Requirements.

D. Closeout Submittals: Submit the following under provisions of Section 01 77 00: Closeout Procedures.
   1. Warranty: As specified in this Section.

1.06 WARRANTY

A. Insulating Glass: Provide written ten-year manufacturer's warranty, including coverage of sealed glass units from seal failure due manufacturing defects, as evidenced by inner-pane dusting or misting, and replacement of same.

B. Provide written ten-year warranty covering reflective coating against peeling, and other indications of deterioration in reflective coating.

1.07 DEFINITIONS

A. GANA – Glass Association of North America.

PART 2 PRODUCTS

2.01 GLASS PRODUCTS

A. Coordinate U-factors with frames to provide a total assembly values.

B. Solar Control Low-E Clear Insulated Glass Units: IGCC Class CBA when tested according to ASTM E2188, ASTM E2189, ASTM E2190; dual sealed unit with primary polyisobutylene seal, secondary silicone seal and 1/2" airspace. Glass edges shall be clean scored and cut.
   1. Provide Fully Tempered glass where indicated per glass types.

C. Fully Tempered Clear Glass: ASTM C1048 Type I, Class 1, q3, Kind FT, horizontally tempered; 1/4" thick unless noted otherwise.

D. Heat-Strengthened Float Glass: ASTM C1036, Kind HS (heat strengthened), Type I, Condition A (uncoated) unless otherwise indicated, Type I, Class 1 (clear), Quality-Q3.

E. Clear Float Glass: ASTM C1036, Type I, Class 1, q3; 1/4" thick unless noted otherwise.

F. Laminated Glass: ASTM C1172, and complying with testing requirements in 16 CFR 1201 for category II Materials. Use materials that have a proven record of no tendency to bubble, discolor, or lose physical and mechanical properties after fabrication and installation.
   1. Construction: Laminate glass with polyvinyl butyral interlayer as specified per glass type.
   2. Interlayer Thickness: Provide thickness not less than indicated in glass type.
   3. Interlayer Color: Clear unless otherwise indicated.

G. Spacer Bar and hermetic seal requirements:
   1. Hermetic seal to consist of Polyisobutylene (Butyl) Primarily and Silicone Secondary seal. Primary and Secondary seals shall be uniform and continuous. Hermetic seals shall also meet the following requirements:
      a. Secondary seal shall extend from exterior face of inner glass pane to interior face of exterior glass pane and shall not contain any of the contaminants or imperfections described below.
      b. Primary seal shall not contain fingerprints, dirt, debris, or any other contaminants or interruptions that may affect adhesion or continuity of the seal.
      c. Primary seal shall not be reduced to less than 1/8” in width at any point along the perimeter of the Insulated Glass Unit or 1/32” in thickness (side spacer shall not be visible through a “transparent” layer of thin primary seal)
      d. Primary and secondary seal shall not contain voids and must be continuously bonded to the surface of the glass.
      e. Units shall carry CBA Rating as established by ASTM E774 and shall have an initial frost point less than -60 degrees F when tested per ASTM E576.

H. Solar Control Film: Where Glass type is followed by a "T" (e.g. G-1T), apply Solar Film as specified in section 08 87 13 - Solar Control Film.

2.02 INSULATED GLASS UNITS

A. Solar Control Coated, Low E Insulating Clear Glass (G-1)
   1. Basis of Design Product: Vitro Architectural Glass (formerly PPG)
   2. Overall Unit Thickness: 1”
   3. Indoor Lite: 1/4” clear float glass.
   4. 1/2” Airspace.

5. Outdoor Lite: 1/4” clear glass.
6. Low E coating: Installed on second surface (#2)
    a. Solarban 70 Solar Control Low-E by Vitro Architectural Glass (formerly PPG)

B. Solar Control Coated, Low E Insulating Clear – Fully Tempered Glass (G-2)
1. Basis of Design Product: Vitro Architectural Glass (formerly PPG)
2. Overall Unit Thickness: 1”
3. Indoor Lite: 1/4" thick clear, fully tempered glass.
4. 1/2” Airspace.
5. Outdoor Lite: 1/4" thick clear, fully tempered glass.
6. Low E coating: Installed on second surface (#2)
    a. Solarban 70 Solar Control Low-E by Vitro Architectural Glass (formerly PPG)

C. Insulating Spandrel Glass (G-3)
1. Basis of Design Product: Oldcastle Insulating Glass.
2. Overall Unit Thickness: 1”
3. Indoor Lite: 1/4" thick clear fully tempered glass.
    a. Coating: Harmony Solex Spandrel on fourth surface (#4)
4. 1/2” Airspace.
5. Outdoor Lite: 1/4" thick clear heat-strengthened float glass.

D. Insulating Frosted Glass (G-9)
1. Basis of Design Product: Vitro Architectural Glass (formerly PPG)
2. Overall Unit Thickness: 1”
3. Indoor Lite: Two (2) pieces 1/8" thick Clear Float Glass, laminated.
    a. Interlayer Thickness: 0.030”
    b. Interlayer Color: White frosted; “Arctic Snow” by Oldcastle or equivalent.
4. 1/2” Airspace Outdoor Lite: 1/4" thick clear float glass.
5. Low E coating: Installed on second surface (#2)
    a. Solarban 70 Solar Control Low-E by Vitro Architectural Glass (formerly PPG)

E. Insulating Frosted Safety Glass (G-10)
1. Basis of Design Product: Oldcastle Insulating Glass.
2. Overall Unit Thickness: 1”
3. Indoor Lite: Two (2) pieces 1/8" thick Clear Float Glass, laminated.
    a. Interlayer Thickness: 0.030”
    b. Interlayer Color: White frosted; “Arctic Snow” by Oldcastle or equivalent.
4. 1/2” Airspace.
5. Outdoor Lite: 1/4" thick clear fully tempered glass.

F. Insulating Fully Tempered Safety Glass (G-11)
1. Basis of Design Product: Oldcastle Insulating Glass.
2. Overall Unit Thickness: 1”
3. Indoor Lite: 1/4" thick clear fully tempered glass.
4. 1/2” Airspace.
5. Outdoor Lite: 1/4" thick clear fully tempered glass.

G. Insulating Fully Tempered Spandrel Glass (G-13)
1. Basis of Design Product: Oldcastle Insulating Glass.
2. Overall Unit Thickness: 1”
3. Indoor Lite: 1/4" thick clear fully tempered glass.
    a. Coating: Harmony Solex Spandrel on fourth surface (#4)
4. 1/2” Airspace.
5. Outdoor Lite: 1/4" thick clear fully tempered glass.

H. Insulating Clear Glass (G-14)
1. Basis of Design Product: Oldcastle Insulating Glass.

2. Overall Unit Thickness: 1”
3. Indoor Lite: 1/4" thick clear float glass.
4. 1/2” Airspace.
5. Outdoor Lite: 1/4" thick clear float glass.

2.03 MONOLITHIC GLASS UNITS

A. Clear Float Glass (G-4)
   1. 1/4" thick clear float glass.

B. Clear Fully Tempered Glass (G-5)
   1. 1/4" thick clear fully tempered glass.

C. Clear Fully Tempered Glass (G-5A)

D. Laminated Safety Glass (G-6)
   1. Overall Unit Thickness: 1/2”
   2. Two (2) pieces of 1/4” clear float glass, laminated.
      a. Polished glass edges.
   3. Interlayer Thickness: 0.030”
   4. Interlayer Color: Clear.

E. Frosted Laminated Safety Glass (G-7)
   1. Overall Unit Thickness: 1/4"
   2. Two (2) pieces of 1/8” clear float glass, laminated.
      a. Polished glass edges.
   3. Interlayer Thickness: 0.030”
   4. Interlayer Color: “Arctic Snow” by Oldcastle or equivalent.

F. Acid-Etched, Fully Tempered Glass (G-8) (Shower Doors)
   1. 3/8” thick fully tempered glass.
   2. One Side polished: Polished side shall face interior of shower stall.
   3. One Side Acid-Frosted, obscure.

G. Clear Tempered Glass with Digitally Printed Pattern: (G-12)
   1. Basis of Design Product: Skyline Design “Light & Shadow.”
   2. 1/4” Clear fully tempered glass.
   3. Pattern:
      a. Side 1: No pattern (Whirlpool side)
      b. Side 2: Light & Shadow Cascade Opt A Pattern Eco-etched (Locker room side)
   4. Panel Size: Refer to drawing details.
   5. Frame: Stylmark Frame # 110361 with Brushed Brite Brown #216 finish.
   6. Note: Long lead time item. Coordinate with manufacturer and tile installer.

H. Clear Fully Tempered, Laminated Glass (Glass Guard Rail, typ) (G-15)
   1. Type 1, Clear Laminated Glass, 2 layers. Polyvinyl Butyl (PVB) interlayer.
      a. Interlayer Thickness: 0.030” min.
      b. Total thickness as required by structural load, but not less than 1/2" (12 mm)
   2. Meets or exceeds ASTM E2358.

I. Fully Tempered Clear Glass (G-16)
   1. Glass: Tempered float glass meeting requirements of ASTM C1036, Type I, Quality Q3, fully tempered in accordance with ASTM C1048, Kind FT.
   2. Thickness: 1/2"

J. Frosted Fully Tempered, Laminated Glass (Glass Guard Rail as indicated) (G-17)
   1. Type 1, Clear Laminated Glass, 2 layers. Frosted Polyvinyl Butyl (PVB) interlayer.
      a. Interlayer Thickness: 0.030” min.
      b. Interlayer Color: "Arctic Snow" by Oldcastle, Viracon, or equivalent.
      c. Total thickness as required by structural load, but not less than 1/2" (12 mm)

2. Meets or exceeds ASTM E2358.

2.04 UNFRAMED MIRROR GLASS AND TRIM

A. Unframed Mirror Glass: GSA CID A-A-3002, 1/4" thick. Provide fully adhered mirrors where mirror glass extends to within 18” of the floor. Comply with ASTM C1503. Provide pencil polished edge treatment at vertical butt joints. Miter mirror glass at inside corners.
   1. Safety Glass: Where required by code, glass shall be laminated and heat-strengthened. Laminated and heat-strengthened glass shall conform to ASTM C1048 (for heat-strengthened glass) and ASTM C1172 (for laminate glass) and the following requirements:
      a. Consumer Product Safety Commission Standard 16 CFR 1201.
      b. Safety Certification council.
      c. ANSI Z97.1
      d. Local Codes, whichever is most stringent.
   2. Safety Tape: Where Safety Glass is not otherwise required, provide and install safety tape backing at all Unframed Mirror Glass.
      a. Basis of Design: C.R. Laurence, CRL White Category II Shatterproof Safety Tape for Mirrors; Sized as required.

B. Mirror Types:
   1. MIR-1:
      a. Tint: None
      b. Location: Typical unless noted otherwise.
   2. MIR-2:
      a. Tint: Gray
      b. Location: Yoga, MB360 and Yoga Foyer
   3. MIR-3:
      a. Tint: Bronze
      b. Location: Columns as indicated.

C. Unframed Mirror J Molding:
   1. Product: Stylmark, Inc. 420107.
   2. Locations:
      a. At multiple piece mirrors: Top, bottom and outside corner terminations.
      b. At single piece mirrors: Top, bottom and both sides.
   3. Size: J-molding (5/8”) or equal.
   4. Finish:
      a. Typical: No. 128 Buffed Satin Stainless Steel.
      b. Group Fitness, Barre, Cycle & ADA Mirrors: 22BRN80049.
      c. Or approved equal.
   5. Miter all corners.

D. Unframed Mirror Mastic: Provide MDI polymer based, low VOC mirror mastic compliant with SCAQMD 1168 rule 51< 250 g/L
   1. CRL Palmer Mirro-Mastic.
   2. Or approved equal.

E. Double-Sided Mirror Divider:
   1. Product: Stylmark, 510000X031.
   2. Color: #216 Brushed Brite Brown.
   3. Location: Locker Room Vanities.

F. Backlit mirror edge:
   1. Product: Stylmark Angle 110728
   2. Location: Pilates, Yoga, Yoga Foyer
   3. Color: 22BRN80049

2.05 GLAZED FOOD SERVICE FIXTURES

A. Sneeze Guard:
   1. Glazing:
      a. 1/4" Fully Tempered Glass (G-5).
      b. Ease all exposed edges.
      c. Miter corners.
      d. Panel sizes:
         1) See drawings.
   2. Metal Structure:
      a. Manufacturer: Stylmark.
      b. 1" x 1" Sill.
      c. Part Number: 110361.
      d. Hardware: As necessary for field assembly.
      e. Color: All metal components: 216 Brushed Brite Brown.
      f. Anchors: Coordinate with Casework. See details.

2.06 DECORATIVE CAST GLASS

A. Tempered, Tinted,Kiln formed decorative glass (G-21)
   1. Manufacturer: Nathan Allan Glass Studios.
   2. Series: Channel.
   3. Tint: Bronze.
   4. Thickness: 3/8"
   5. Size: See Drawings.
   6. URL: https://www.nathanallan.com/glass-types-bronze-black/

2.07 GLAZING ACCESSORIES AS RECOMMENDED IN GANA GLAZING MANUAL

A. Silicone Glazing Sealant: Specified in Section 07 92 00 - Joint Sealers. Ensure compatibility with silicone.

B. Setting Blocks: Neoprene; 80-90 Shore A durometer hardness. Ensure compatibility with silicone.

C. Edge Blocks/Shims: Neoprene; 60-70 Shore A durometer hardness. Ensure compatibility with silicone.

D. Glazing Tape: Preformed butyl compound coiled on release paper; properly sized for application, black/bronze color. Tremco, 440 Tape. Ensure compatibility with silicone.

E. Glazing Clips: Manufacturer's standard type. Ensure compatibility with silicone.

PART 3 EXECUTION

3.01 INSPECTION

A. Verify surfaces of glazing channels or recesses are clean, free of obstructions, and ready for work of this Section.

B. Beginning of installation means acceptance of substrate.

3.02 ALUMINUM, ENTRANCES, STOREFRONTS AND CURTAIN WALL SYSTEM

A. Glaze aluminum entrances and storefronts and curtain wall system in accordance with manufacturer's glazing instructions.

3.03 INTERIOR COMBINATION METHOD (TAPE AND SEALANT)

A. Cut glazing tape to length and install against permanent stops, projecting 1/16" above sightline.

B. Place setting blocks at quarter points.

C. Rest glass on setting blocks and push against tape to ensure full contact at perimeter of pane.

D. Install removable stops, spacer shims inserted between glass, and applied stops at 24" intervals, 1/4" below sightline.

E. Fill gap between pane and applied stop with silicone sealant to depth equal to bite of frame on pane to uniform and level line.

F. Trim protruding tape edge.

3.04 UNFRAMED MIRROR GLASS

A. Install Safety Tape at all non-safety unframed mirror glass in accordance with safety tape manufacturer’s instructions.

B. Install tape in shop environment prior to delivering to site whenever possible.

C. Hold tape edges back from edge of mirror sufficient to prevent visibility after installation.

3.05 CLEANING

A. After installation, mark pane with an "X" by using plastic tape or removable paste.

B. Remove glazing materials from finish surfaces.

C. Remove labels after work is completed.

END OF SECTION

SECTION 08 87 13
SOLAR CONTROL FILM

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Solar control film applied to glass.

1.02 RELATED SECTIONS

A. Section 01 33 00 - Submittal Procedures.

B. Section 01 40 00 - Quality Requirements.

C. Section 01 60 00 - Product Requirements.

D. Section 08 41 13 - Aluminum Framed Entrances and Storefronts.

E. Section 08 44 13 - Glazed Aluminum Curtainwall.

F. Section 08 81 00 - Glazing.

1.03 REFERENCES

A. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2023d.

B. ISO 9001 - Quality Management Systems — Requirements; 2015, with Amendment (2024).

C. ISO 14001 - Environmental Management Systems — Requirements with Guidance for Use; 2015.

D. LBNL WINDOW SOFTWARE - A computer program for calculating total window thermal performance indices (i.e. U-values, solar heat gain coefficients, and visible transmittances).

E. NFRC 100/200 - Standard Methods of Test for Solar Absorbance, Reflectance and Transmittance of Materials Using Integrating Spheres.

1.04 PERFORMANCE REQUIREMENTS

A. Flammability: Meets surface burning characteristics in accordance with ASTM E84 Class A
   1. Flame Spread Index = < 25
   2. Smoke Development Index = < 450

B. Volatile Organic Compound Content:
   1. Compliant with the performance standard established for low-emitting materials under the CDPH, the Collaborative for High Performance Schools (CHPS) and the LEED v4 programs.

1.05 SUBMITTALS

A. Submit under provisions of Section 01 30 00.

B. Product Data: Manufacturer's data sheets on each product to be used, including:
   1. Physical properties and independent testing agency reports showing compliance with specified tests.
   2. Preparation instructions and recommendations.
   3. Storage and handling requirements and recommendations.
   4. Installation methods.

C. Shop Drawings: Detailing installation of film, anchoring accessories, and/or sealant.

D. Verification Samples: For each finish product specified, two samples, minimum size 6 inches (150 mm) square, representing the actual product, color, and patterns.

E. Manufacturer's Certificates: Certify products meet or exceed specified requirements.

F. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

G. Manufacturer's warranty information.

1.06 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Manufacturer Qualifications: Products specified shall be a standard product of a manufacturer regularly engaged in the manufacturing and distribution of such products for a minimum of 10 years.
   1. Provide a Quality Management certificate stating the manufacturing facility's location conformance with ISO 9001.
   2. Provide an Environmental Management certificate stating the manufacturing facility's location conformance with ISO 14001.

C. Installer Qualifications: Documented experience in the application of self-adhesive window films with at least 3 applications of similar size and complexity, and approved by the solar film manufacturer.

1.07 DELIVERY, STORAGE AND HANDLING

A. Store products indoors in manufacturer's unopened packaging until ready for installation.

1.08 PROJECT CONDITIONS

A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.

1.09 WARRANTY

A. Provide film manufacturer's limited warranty against failure of film, including peeling, bubbling, rippling, cracking, delamination and demetallization; includes cost of material and labor for removal and reinstallation. Duration of warranty shall be as follows:
   1. Twelve (12) Year Limited Warranty.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Acceptable Manufacturer: Solar Gard®, which is located at: 4540 View Ridge Ave.; San Diego, CA 92123; Toll Free Tel: 866-572-1922; Tel: 858-576-0200; Email: info@solargard.com; Web:www.solargard.com

B. Requests for substitutions will be considered in accordance with provisions of Section 01 60 00.

2.02 SOLAR CONTROL FILM

A. For use in indoor Pickleball areas, where indicated.
   1. Solar Gard TrueVue 5 solar control film shall have the following nominal properties when applied to 1/4 inch (6 mm) clear glass with pressure sensitive adhesive calculated using NFRC methodology and LBNL Window software.
      a. Film Performance Results, Nominal
         1) Film Color: Grey
         2) Visible Light Transmittance: 5 percent
         3) Visible Light Reflectance: (Exterior) 44 percent
         4) Visible Light Reflectance: (Interior) 8 percent
         5) Total Solar Energy Rejected: 79 percent
         6) Solar Heat Gain Coefficient: .21
         7) U-Factor Btu/h-ft² F (Winter): .98
         8) Solar Transmittance: 5 percent
         9) Solar Absorptance: 54 percent
         10) Solar Reflectance: 41 percent
         11) Ultraviolet Light Blocked (300-380 nanometers): > 99 percent
         12) UV Tdw-ISO @ 300 to 700 nm: 4 percent

B. For use in other indicated areas.

1. Solar Gard TrueVue 15 solar control film shall have the following nominal properties when applied to 1/4 inch (6 mm) clear glass with pressure sensitive adhesive calculated using NFRC methodology and LBNL Window software.
    a. Film Performance Results, Nominal
        1) Film Color: Grey
        2) Visible Light Transmittance: 15 percent
        3) Visible Light Reflectance: (Exterior) 44 percent
        4) Visible Light Reflectance: (Interior) 23 percent
        5) Total Solar Energy Rejected: 77 percent
        6) Solar Heat Gain Coefficient: .23
        7) U-Factor Btu/h-ft² F (Winter): .98
        8) Solar Transmittance: 8 percent
        9) Solar Absorptance: 51 percent
        10) Solar Reflectance: 41 percent
        11) Ultraviolet Light Blocked (300-380 nanometers): > 99 percent
        12) UV Tdw-ISO @ 300 to 700 nm: 10 percent

PART 3 EXECUTION

3.01 EXAMINATION

A. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

B. Glass surfaces should be inspected for defects including scratches or defects which will affect the final appearance.

C. Do not begin installation until substrates have been properly inspected.

D. Coordinate location of windows where film is to be installed with Drawings and Architect.

3.02 PREPARATION

A. Clean surfaces thoroughly prior to installation.

B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

3.03 INSTALLATION

A. Install in accordance with manufacturer's instructions. Installation must be accomplished by a recognized professional installer of film for energy control purposes or safety and security purposes. Completed work must meet IWFA visual acceptance standard.

B. Install without bubbles, ripples, drips, dirt, cuts, tears or gaps between film and frame.

C. Clean newly installed film and window frames after installation.

D. Clean up cleaning solutions, run-off cleaning water and adhesive mounting solution.

3.04 PROTECTION

A. Protect installed products until completion of project.

B. Where installed film could be damaged by subsequent construction provide tape warning strips or barricades to prevent contact.

END OF SECTION

This page intentionally left blank

SECTION 09 05 61
COMMON WORK RESULTS FOR FLOORING PREPARATION

PART 1 GENERAL

1.01 SECTION INCLUDES

A. This section applies to floors identified in Contract Documents that are receiving the following types of floor coverings:
   1. Resilient flooring.
   2. Resinous flooring.
   3. Carpet tile.
   4. Wood Athletic Flooring.
   5. Ceramic tile and stone tile.

B. Preparation of new concrete floor slabs for installation of floor coverings.

C. Testing of concrete floor slabs for moisture and alkalinity (pH).

D. Remediation of concrete floor slabs due to unsatisfactory moisture or alkalinity (pH) conditions.
   1. Contractor shall perform all specified remediation of concrete floor slabs. If such remediation is indicated by testing agency's report and is due to a condition not under Contractor's control or could not have been predicted by examination prior to entering into the contract, a contract modification will be issued.

E. Patching compound.

F. Remedial floor coatings.

G. Remedial floor sheet membrane.

1.02 RELATED REQUIREMENTS

A. Section 01 22 00 - Unit Prices: Bid pricing for remediation treatments if required.

B. Section 01 40 00 - Quality Requirements: Additional requirements relating to testing agencies and testing.

C. Section 01 84 21 - Interior Concrete Floor Finishing Quality Requirements.

D. Section 03 30 00 - Cast-in-Place Concrete: Concrete compostition, curing, tolerances and admixtures.

E. Section 09 30 00 - Tiling.

F. Section 09 64 66 - Wood Athletic Flooring.

G. Section 09 65 19 - Resilient Flooring.

H. Section 09 67 23 - Resinous Flooring.

I. Section 09 68 13 - Tile Carpeting.

1.03 PRICE AND PAYMENT PROCEDURES

A. Unit Prices: See Section 01 22 00 - Unit Prices.

B. Unit Price for Alternate Flooring Adhesive: Do not include the cost of the alternate adhesive in the base bid; state on the bid form the unit price per square foot (square meter) for using the alternate adhesive, in the event such remediation is required.

C. Unit Price for Remedial Floor Coating or Sheet Membrane: Do not include the cost of the floor coating or underlayment in the base bid; state on the bid form the unit price per square foot (square meter) for the floor coating or underlayment, installed, in the event such remediation is required.

1.04 REFERENCE STANDARDS

A. ASTM C109/C109M - Standard Test Method for Compressive Strength of Hydraulic Cement Mortars (Using 50 mm [2 in.] Cube Specimens); 2023.

B. ASTM C472 - Standard Test Methods for Physical Testing of Gypsum, Gypsum Plasters, and Gypsum Concrete; 2020.

C. ASTM F710 - Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring; 2022.

D. ASTM F1869 - Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride; 2023.

E. ASTM F2170 - Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes; 2019a.

F. ASTM F3311 - Standard Practice for Mat Bond Evaluation of Performance and Compatibility for Resilient Flooring System Components Prior to Installation; Current Edition.

1.05 ADMINISTRATIVE REQUIREMENTS

A. Coordinate scheduling of cleaning and testing, so that preliminary cleaning has been completed for at least 24 hours prior to testing.

1.06 SUBMITTALS

A. Floor Covering and Adhesive Manufacturers' Product Literature: For each specific combination of substrate, floor covering, and adhesive to be used; showing:
   1. Moisture and alkalinity (pH) limits and test methods.
   2. Manufacturer's required bond/compatibility test procedure.

B. Testing Agency's Report:
   1. Description of areas tested; include floor plans and photographs if helpful.
   2. Summary of conditions encountered.
   3. Temperature:
      a. Ambient Air
      b. Substrate Surface
   4. Moisture and alkalinity (pH) test reports.
   5. Surface Porosity.
   6. Subfloor Flatness.
   7. Copies of specified test methods.
   8. Recommendations for remediation of unsatisfactory surfaces.
   9. Product data for recommended remedial coating.
   10. Submit report to Architect.
   11. Submit report not more than two business days after conclusion of testing.

C. Adhesive Bond and Compatibility Test Report. (ASTM F3311-19)

1.07 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Moisture and alkalinity (pH) testing shall be performed by an independent testing agency employed and paid by Contractor.

C. Testing Agency Qualifications: Independent testing agency experienced in the types of testing specified.
   1. Submit evidence of experience consisting of at least 3 test reports of the type required, with project Construction Manager's project contact information.

D. Contractor's Responsibility Relating to Independent Agency Testing:
   1. Provide access for and cooperate with testing agency.
   2. Confirm date of start of testing at least 10 days prior to actual start.
   3. Allow at least 4 business days on site for testing agency activities.
   4. Achieve and maintain specified ambient conditions.
   5. Notify Architect when specified ambient conditions have been achieved and when testing will start.

1.08 FIELD CONDITIONS

A. Maintain ambient temperature in spaces where concrete testing is being performed, and for at least 48 hours prior to testing, at not less than 65 degrees F (18 degrees C) or more than 85 degrees F (30 degrees C).

B. Maintain relative humidity in spaces where concrete testing is being performed, and for at least 48 hours prior to testing, at not less than 40 percent and not more than 60 percent.

PART 2 PRODUCTS

2.01 MATERIALS

A. Patching Compound: Floor covering manufacturer's recommended product, suitable for conditions, and compatible with adhesive and floor covering. In the absence of any recommendation from flooring manufacturer, provide a product with the following characteristics:
   1. Cementitious moisture-, mildew-, and alkali-resistant compound, compatible with floor, floor covering, and floor covering adhesive, and capable of being feathered to nothing at edges.
   2. Compressive Strength: 3000 psi, minimum, after 28 days, when tested in accordance with ASTM C109/C109M or ASTM C472, whichever is appropriate.
   3. Products:
      a. TEC, an H.B. Fuller Construction Products Brand; TEC Feather Edge Skim Coat: www.tecspecialty.com/#sle.
      b. USG Corporation; Durock Brand Advanced Skim Coat Floor Patch: www.usg.com/#sle.
      c. Substitutions: See Section 01 60 00 - Product Requirements.

B. Alternate Flooring Adhesive: Floor covering manufacturer's recommended product, suitable for the moisture and pH conditions present; low-VOC. In the absence of any recommendation from flooring manufacturer, provide a product recommended by adhesive manufacturer as suitable for substrate and floor covering and for conditions present.

C. Remedial Floor Coating: Single- or multi-layer coating or coating/overlay combination intended by its manufacturer to resist water vapor transmission to degree sufficient to meet flooring manufacturer's emission limits, resistant to the level of alkalinity (pH) found, and suitable for adhesion of flooring without further treatment.
   1. Thickness: As required for application and in accordance with manufacturer's installation instructions.
   2. Use product recommended by testing agency.

D. Remedial Floor Sheet Membrane: Pre-formed multi-ply sheet membrane installed over concrete subfloor and intended by its manufacturer to resist water vapor transmission to degree sufficient to meet flooring manufacturer's emission limits, resistant to the level of alkalinity (pH) found, and suitable for adhesion of flooring without further treatment.
   1. Thickness: 28 mil (0.028 inch) (0.711 mm).
   2. Tape: Types recommended by underlayment manufacturer to install membrane and cover seams.

PART 3 EXECUTION

3.01 CONCRETE SLAB PREPARATION

A. Follow recommendations of testing agency.

B. Perform following operations in the order indicated:
   1. Preliminary cleaning.
   2. Moisture vapor emission tests; 3 tests in the first 1000 square feet (100 square meters) and one test in each additional 1000 square feet (100 square meters), unless otherwise indicated or required by flooring manufacturer.
   3. Internal relative humidity tests; in same locations as moisture vapor emission tests, unless otherwise indicated.
   4. Alkalinity (pH) tests; in same locations as moisture vapor emission tests, unless otherwise indicated.

5. Specified remediation, if required.
6. Patching, smoothing, and leveling, as required.
7. Other preparation specified.
8. Adhesive bond and compatibility test.
9. Protection.

C. Remediations:
1. Active Water Leaks or Continuing Moisture Migration to Surface of Slab: Correct this condition before doing any other remediation; re-test after correction.
2. Excessive Moisture Emission or Relative Humidity: If an adhesive that is resistant to the level of moisture present is available and acceptable to flooring manufacturer, use that adhesive for installation of the flooring; if not, apply remedial floor coating or remedial sheet membrane over entire suspect floor area.
3. Excessive Alkalinity (pH): If remedial floor coating is necessary to address excessive moisture, no additional remediation is required; if not, if an adhesive that is resistant to the level present is available and acceptable to the flooring manufacturer, use that adhesive for installation of the flooring; otherwise, apply a skim coat of specified patching compound over entire suspect floor area.

3.02 PRELIMINARY CLEANING

A. Clean floors of dust, solvents, paint, wax, oil, grease, asphalt, residual adhesive, adhesive removers, film-forming curing compounds, sealing compounds, alkaline salts, excessive laitance, mold, mildew, and other materials that might prevent adhesive bond.

B. Do not use solvents or other chemicals for cleaning.

3.03 MOISTURE VAPOR EMISSION TESTING

A. Where the floor covering manufacturer's requirements conflict with either the referenced test method or this specification, comply with the manufacturer's requirements.

B. Where this specification conflicts with the referenced test method, comply with the requirements of this section.

C. Test in accordance with ASTM F1869 and as follows.

D. Plastic sheet test and mat bond test may not be substituted for the specified ASTM test method, as those methods do not quantify the moisture content sufficiently.

E. In the event that test values exceed floor covering manufacturer's limits, perform remediation as indicated. In the absence of manufacturer limits, perform remediation if test values exceed 3 pounds per 1000 square feet (1.4 kg per 93 square meters) per 24 hours.

F. Report: Report the information required by the test method.

3.04 INTERNAL RELATIVE HUMIDITY TESTING

A. Where the floor covering manufacturer's requirements conflict with either the referenced test method or this specification, comply with the manufacturer's requirements.

B. Where this specification conflicts with the referenced test method, comply with the requirements of this section.

C. Test in accordance with ASTM F2170 Procedure A and as follows.

D. Testing with electrical impedance or resistance apparatus may not be substituted for the specified ASTM test method, as the values determined are not comparable to the ASTM test values and do not quantify the moisture content sufficiently.

E. In the event that test values exceed floor covering manufacturer's limits, perform remediation as indicated. In the absence of manufacturer limits, perform remediation if any test value exceeds 75 percent relative humidity.

F. Report: Report the information required by the test method.

3.05 ALKALINITY TESTING

A. Where the floor covering manufacturer's requirements conflict with either the referenced test method or this specification, comply with the manufacturer's requirements.

B. The following procedure is the equivalent of that described in ASTM F710, repeated here for the Contractor's convenience.
   1. Use a wide range alkalinity (pH) test paper, its associated chart, and distilled or deionized water.
   2. Place several drops of water on a clean surface of concrete, forming a puddle approximately 1 inch (25 mm) in diameter. Allow the puddle to set for approximately 60 seconds, then dip the alkalinity (pH) test paper into the water, remove it, and compare immediately to chart to determine alkalinity (pH) reading.
   3. Use of a digital pH meter with probe is acceptable; follow meter manufacturer's instructions.

C. In the event that test values exceed floor covering manufacturer's limits, perform remediation as indicated. In the absence of manufacturer limits, perform remediation if alkalinity (pH) test value is over 10.

3.06 PREPARATION

A. See individual floor covering section(s) for additional requirements.

B. Comply with requirements and recommendations of floor covering manufacturer.

C. Correction of uneven concrete surface.
   1. Grind high spots down.
   2. Fill and smooth surface cracks, grooves, depressions, control joints and other non-moving joints, and other irregularities with patching compound.
   3. Do not fill expansion joints, isolation joints, or other moving joints.
   4. Prepared surfaces shall conform to the levelness requirements of the floor covering manufacturer, or no more than 3/16."

3.07 ADHESIVE BOND AND COMPATIBILITY TESTING

A. Comply with requirements and recommendations of floor covering manufacturer.

3.08 APPLICATION OF REMEDIAL FLOOR COATING

A. Comply with requirements and recommendations of coating manufacturer.

3.09 INSTALLATION OF REMEDIAL FLOOR SHEET MEMBRANE

A. Install in accordance with sheet membrane manufacturer's instructions.

3.10 PROTECTION

A. Cover prepared floors with building paper or other durable covering.

END OF SECTION

This page intentionally left blank

SECTION 09 21 16
GYPSUM BOARD ASSEMBLIES

PART 1 GENERAL

1.01 SUMMARY

A. This Section includes the following:
   1. Interior gypsum board.
      a. Standard Gypsum Board.
      b. Type X.
      c. Type C.
      d. Flexible Type.
      e. High Impact Type.
      f. Moisture Resistant Type.
      g. Glass Mat Sheathing.
   2. Tile backing panels.
      a. Glass Mat Backing Panels.
      b. Cementitious Backing Panels.
   3. Exterior sheathing.
   4. Interior framing systems (e.g., supports for partition walls, framed soffits, furring, canopies, etc.).
   5. Interior suspension systems (e.g., supports for ceilings, suspended soffits, etc.).
   6. Isolated ceiling system (e.g. engineered gypsum board system)
   7. Partition gap closure accessories (between partition and curtain wall)

X. ASTM D3273 - Standard Test Method for Resistance to Growth of Mold on the Surface of Interior Coatings in an Environmental Chamber; 2021.

Y. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2023d.

Z. ASTM E90 - Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements; 2023.

AA. ASTM E119 - Standard Test Methods for Fire Tests of Building Construction and Materials; 2022.

BB. ASTM E413 - Classification for Rating Sound Insulation; 2022.

CC. ASTM E488/E488M - Standard Test Methods for Strength of Anchors in Concrete Elements; 2022.

DD. ASTM E1190 - Standard Test Methods for Strength of Power-Actuated Fasteners Installed in Structural Members; Current edition.

1.04 PERFORMANCE REQUIREMENTS

A. Performance: Provide cold-formed metal framing capable of withstanding design loads within limits and under conditions indicated.

1. All non-structural steel framing members, including studs and runners shall meet the requirements of ASTM C645.
    a. Provide galvanized coatings on all members consistent with ASTM and industry standards and as otherwise specified.
2. Construct typical walls and framing in accordance to ASTM C754 Applying the design criteria below.
3. Design Loads (use governing load cases):
    a. 5 psf differential pressure (IBC 1607.13) minimum.
    b. As indicated on drawings.
    c. Seismic loading per ASCE 7, Chapter 13, and section 13.5.8, for Seismic Design Categories C, D, E and F. See Architectural Drawings Sheet G003 for Seismic Design Category designation.
    d. 12 psf dead load for ceilings with rigid finishes (tile or wood)
4. Deflection Limits: Design framing systems to withstand design loads without deflections greater than the following:
    a. Interior Wall Framing: Design wall framing to meet the following horizontal deflection conditions:
        1) Typical Conditions: L/180 of wall height.
        2) IFS Finishes: L/360 of wall height.
        3) Rigid Finishes Wall and Ceiling (Tile): L/240
        4) Headers: Vertical deflection of L/240 or ½" max
5. Jamb studs around openings shall be capable of resisting tributary load applied from supporting members using common engineering practices. The deflection criteria for the jamb member shall meet or exceed L/120.
6. Walls with gypsum board on both sides full height are to be sized using the Maximum Stud Height tables in ASTM C754.
7. Walls without gypsum board on both sides full height shall have horizontal bridging or blocking per manufacturer instructions.
8. The use of powder activated fasteners to make connection to precast concrete is allowed with manufacturer approval through a fastener testing program. In some cases, the precast concrete produced achieves greater concrete compressive strengths than allowed by the powder activated manufacturer specification.
9. Provide soffit bracing to resist loading requirements specified.
10. Design framing system to maintain clearances at openings, to allow for construction tolerances, and to accommodate live load deflection of primary building structure as follows:
    a. Floors: Upward and downward movement of 1.0 inch (25 mm).
    b. Roof – Typ: Upward and downward movement of 1.5 inch (38 mm)
    c. Roof – Long Span Tees (> 50 ft): Upward movement of 1.5 inch and downward movement of 3.0 inch (75 mm)
11. Field conditions observed by the Architect, Engineer, or building official deemed to be unacceptable shall be reviewed by a qualified professional engineer hired by the light gauge installer at no additional cost to the owner. Conditions in question will require engineered design prepared by a qualified professional engineer registered in the jurisdiction where the project is located to validate the existing design or corrective actions required to meet project specifications.

1.05 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings: Submit fabrication and erection shop drawings for approval prior to fabrication of framing. Indicate details of connections or welds, and manufacturer of connections.

C. Certified Shop (erection) Drawings: Submit signed and certified fabrication and erection Shop Drawings for approval prior to fabrication for framing components subject to seismic loading per ASCE 7, Chapter 13, and section 13.5.8 (Seismic Design Categories C, D, E, F), and for any additional components as indicated on drawings as "Engineered by Fabricator".

1. Show layout, spacing, sizes, thicknesses and types of cold-formed metal framing, fabrication and fastening and anchorage details, including mechanical fasteners. Show reinforcing channels, opening framing, supplemental framing, strapping, bracing, bridging, splices, accessories, connection details and attachment to adjoining work.
2. Provide complete design calculations for each part of system and each condition including studs, runner channels, hangers and fasteners.

D. Submit certification that all steel components meet specified galvanization or alternate coatings as specified.

E. Procurement:
1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
2. Submit inventory to Owner within 5 days of delivery of materials.
3. See Sections 01 33 00 and 01 60 00.

F. Qualification Data: for professional engineer.

1.06 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Engineering Responsibility: Preparation of shop drawings, design calculations and other structural data by a qualified professional engineer.

C. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of cold-formed metal framing that are similar to those indicated for this Project in material, design, and extent.

D. Design Confirmation: For items indicated as “Engineered by Fabricator” provide letter of confirmation that the work of this section has been designed by a qualified professional engineer registered in the jurisdiction where the project is located.

E. Fire-Resistance-Rated Assemblies: For fire-resistance-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E119 by an independent testing agency.

F. STC-Rated Assemblies: For STC-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E90 and classified according to ASTM E413 by an independent testing agency.

1.07 STORAGE AND HANDLING

A. Store materials inside under cover and keep them dry and protected against damage from weather, condensation, direct sunlight, construction traffic, and other causes. Stack panels flat to prevent sagging.

1.08 PROJECT CONDITIONS

A. Environmental Limitations: Comply with ASTM C840 requirements or gypsum board manufacturer's written recommendations, whichever are more stringent.

B. Do not install interior products until installation areas are enclosed and conditioned.

C. Do not install panels that are wet, those that are moisture damaged, and those that are mold damaged.
1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

PART 2 PRODUCTS

2.01 PANELS, GENERAL

A. Size: Provide in maximum lengths and widths available that will minimize joints in each area and that correspond with support system indicated.

2.02 INTERIOR GYPSUM BOARD

A. General: Complying with ASTM E84 and ASTM C365/C365M or ASTM C1396/C1396M as applicable to type of gypsum board indicated and whichever is more stringent.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. American Gypsum Co.
      b. G-P Gypsum.
      c. National Gypsum Company.
      d. USG Corporation.
      e. PABCO Gypsum.
      f. CertainTeed Corp.

B. Standard Gypsum Board: Use where no more stringent requirements are called for.
   1. Thickness 5/8."
   2. Long Edges: Tapered.
   3. Surfaced with paper on front, back and long edges.

C. Type X:
   1. Thickness: 5/8 inch (15.9 mm).
   2. Fire resistance rating: ASTM 1396; 1hr per 5/8" thickness.
   3. Long Edges: Tapered.

D. Type C:
   1. Thickness: As required by fire-resistance-rated assembly indicated on Drawings.
   2. Long Edges: Tapered.

E. Flexible Type: Manufactured to bend to fit radii and to be more flexible than standard regular-type gypsum board of same thickness.
   1. Thickness: 1/4 inch (6.4 mm).
   2. Long Edges: Tapered.

F. High-Impact Type: Manufactured with Type X core, with high impact and mold resistance.
   1. Core: 5/8 inch (15.9 mm) thick.
   2. Reinforcement: Internal Fiberglass mesh or equivalent: Meets or exceeds ASTM C1629/C1629M level 3 for both Hard and Soft body impacts.
   3. Mold Resistance: Meets ASTM D3273 level 10.

G. Moisture- and Mold-Resistant Type: With moisture- and mold-resistant core and surfaces.
   1. Core: 5/8 inch (15.9 mm), Type X.
   2. Mold Resistance: Meets ASTM D3273 level 10.
   3. Long Edges: Tapered.

H. Indoor Pool Room Type: Glass-Mat Gypsum Sheathing Board, ASTM C1177/C1177M.
   1. Product: Subject to compliance with requirements, provide "Dens-Glass Gold" by G-P Gypsum.
   2. 5/8 inch (15.6 mm), regular type.

2.03 TILE BACKING PANELS

A. Glass-Mat, Water-Resistant Backing Board:
   1. Complying with ASTM C1178/C1178M.
      a. Product: Subject to compliance with requirements, provide "DensShield Tile Guard" by G-P Gypsum.
   2. Thickness as shown on drawings.
   3. Fire rating: as shown on drawings.

B. Cementitious Backer Units: ANSI A118.9. (Cement Board)
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Custom Building Products; Wonderboard.
      b. FinPan, Inc.; Util-A-Crete Concrete Backer Board.
      c. USG Corporation; DUROCK Cement Board.
   2. Thickness:
      a. 1/2 inch (12.7 mm) typical.
      b. 5/8 inch at steam room ceilings.

2.04 EXTERIOR GYPSUM BOARD SHEATHING

A. Exterior Gypsum Sheathing: ASTM C1396/C1396M, with manufacturer's standard edges.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. American Gypsum Co.
      b. G-P Gypsum.
      c. National Gypsum Company.
      d. USG Corporation.
   2. Core: 1/2 inch (12.7 mm), regular type.

B. Glass-Mat Gypsum Sheathing Board: ASTM C1177/C1177M.
   1. Product: Subject to compliance with requirements, provide "Dens-Glass Gold" by G-P Gypsum.
   2. 5/8" (15.6 mm), regular type.

2.05 PANEL FASTENERS:

A. Self-drilling, self-tapping steel screws.
   1. For steel framing less than 0.03 inch thick: Comply with ASTM C1002.
      a. For steel framing from 0.033 inch thick to 0.112 inch thick: Comply with ASTM C954.
      b. For wood framing: 8-18 x 0.323 ribbed drywall nail.
      c. Fastener length: for steel min. ¾” over panel thickness; for wood min. 1” over panel thickness.
      d. Corrosion-resistance: Coating to resist rust for a min. of 48 hours per ASTM B117.
      e. Maximum fastener spacing 8” o.c. for vertical surfaces and 6” o.c. for ceilings.

2.06 TRIM ACCESSORIES

A. General Interior Trim: ASTM C1047.
   1. Material: Galvanized or aluminum-coated steel sheet, rolled zinc, plastic, or paper-faced galvanized steel sheet.
   2. Shapes:
      a. Cornerbead.
      b. Bullnose bead.
      c. LC-Bead: J-shaped; exposed long flange receives joint compound.
      d. L-Bead: L-shaped; exposed long flange receives joint compound.
      e. U-Bead: J-shaped; exposed short flange does not receive joint compound.
      f. Expansion (control) joint.
      g. Curved-Edge Cornerbead: With notched or flexible flanges.

B. General Exterior Trim: ASTM C1047.
   1. Material: Hot-dip galvanized steel sheet, plastic, or rolled zinc.
   2. Shapes:
      a. Cornerbead.
      b. LC-Bead: J-shaped; exposed long flange receives joint compound.
      c. Expansion (Control) Joint: One-piece, rolled zinc with V-shaped slot and removable strip covering slot opening.

C. Reveals and Moldings:
   1. (REG-1) Basis of Design:

a. Manufacturer: Fry Reglet Architectural Metals; https://fryreglet.com/reveals-and-moldings.
1) Substitutions: In accordance with Section 01 60 00 Product Requirements.
b. Product ID: DRM-625-100.
c. Description / Size: 5/8"D x 1"H pre-finished reveal.
d. Finish: Powder Coat, Dark Bronze (factory finished)
e. Location: LT Recover, horizontal datum in Strength Area.
f. Contact: Steve Delvo, stevedelvo@fryreglet.com, (253) 507-6095

D. High Impact Corner Protection:
1. Inpro Architectural Products. "Aluminum Corner Guard"
a. Leg Dimension: 1/2" or as indicated on drawings.
b. Length: as indicated on drawings
c. Finish: Bronze
d. To be used on wall and soffit outside corners where high-impact Gypsum bd is indicated on drawings.
2. Food Service SS Corner Guards: Stainless Steel
a. 16 ga.
b. Leg Dimension: 2"
c. Length: 48"
d. Finish: Plain
e. See drawings for location.
f. See Section 05 50 00 for more information.

2.07 JOINT TREATMENT MATERIALS

A. General: Comply with ASTM C475/C475M.

B. Joint Tape:
1. Interior Gypsum Wallboard: Paper.
2. Exterior Gypsum Soffit Board: Paper.
3. Glass-Mat Gypsum Sheathing Board: 10-by-10 glass mesh.
4. Tile Backing Panels: As recommended by panel manufacturer.

C. Joint Compound for Interior Gypsum Wallboard: For each coat use formulation that is compatible with other compounds applied on previous or for successive coats.
1. Prefilling: At open joints, rounded or beveled panel edges, and damaged surface areas, use setting-type taping compound.
2. Embedding and First Coat: For embedding tape and first coat on joints, fasteners, and trim flanges, use drying-type, all-purpose compound.
a. Use setting-type compound for installing paper-faced metal trim accessories.
3. Fill Coat: For second coat, use drying-type, all-purpose compound.
4. Finish Coat: For third coat, use drying-type, all-purpose compound.
5. Skim Coat: For final coat of Level 5 finish, use drying-type, all-purpose compound.

D. Joint Compound for Exterior Applications:
1. Exterior Gypsum Soffit Board: Use setting-type taping compound and setting-type, sandable topping compound.
2. Glass-Mat Gypsum Sheathing Board: As recommended by sheathing board manufacturer.

E. Joint Compound for Tile Backing Panels:
1. Glass-Mat, Water-Resistant Backing Panel: As recommended by backing panel manufacturer.
2. Cementitious Backer Units: As recommended by backer unit manufacturer.

2.08 AUXILIARY MATERIALS

A. General: Provide auxiliary materials that comply with referenced installation standards and manufacturer's written recommendations.

B. Laminating Adhesive: Adhesive or joint compound recommended for directly adhering gypsum panels to continuous substrate.

C. Steel Drill Screws: ASTM C1002, unless otherwise indicated.
   1. For fastening cementitious backer units, use screws of type and size recommended by panel manufacturer.

D. Sound Attenuation Blankets: ASTM C665, Type I (blankets without membrane facing) produced by combining thermosetting resins with mineral fibers manufactured from glass, slag wool, or rock wool.
   1. Fire-Resistance-Rated Assemblies: Comply with mineral-fiber requirements of assembly.
   2. See Section 07 21 00 - "Thermal Insulation" for more information.

E. Thermal Insulation: As specified in Section 07 21 00 - "Thermal Insulation.

F. Gypsum Board Adhesives: High performance latex-based construction adhesive designed for gypsum board applications.
   1. Green Series SW-325 Shear & Drywall Adhesive by OSI.
   2. Green Drywall Adhesive by Grabberman.
   3. Or approved Substitution.

G. Acoustical Sealant: Sheetrock Acoustical Sealant by USG or equal.
   1. For gypsum board to gypsum board and gypsum board to structural joints: USG Acoustical Sealant or equal, non-hardening sealant specifically for gypsum board joints.

H. For penetrations at fire-rated construction, provide firestopping as specified in Sections “Firestopping” and “Applied Fireproofing”.

2.09 NON-LOAD-BEARING STEEL FRAMING, GENERAL

A. Recycled Content of Steel Products: Provide products with average recycled content of steel products such that postconsumer recycled content plus one-half of pre-consumer recycled content is not less than 25 percent.

B. Framing Members, General: Comply with ASTM C754 for conditions indicated.
   1. Steel Sheet Components: Comply with ASTM C645 and ASTM A653/A653M requirements for metal, unless otherwise indicated.
   2. Coatings:
      a. General: Provide minimum G40 coating or EQ equivalent on all components except as otherwise indicated.
      b. Provide minimum G90 coating or EQ equivalent on all components within or adjacent to the following areas: Indoor Pool Room and Locker Room Wet Areas, including Showers Areas, Steam Rooms and Whirlpool Suites as indicated on Drawings.

2.10 SUSPENSION SYSTEM COMPONENTS

A. Tie Wire: ASTM A641/A641M, Class 1 zinc coating, soft temper, 0.0625-inch- (1.59-mm-) diameter wire, or double strand of 0.0475-inch- (1.21-mm-) diameter wire.

B. Hanger Attachments to Concrete:
   1. Anchors: Fabricated from corrosion-resistant materials with holes or loops for attaching wire hangers and capable of sustaining, without failure, a load equal to 5 times that imposed by construction as determined by testing according to ASTM E488/E488M by an independent testing agency.
      a. Type: Post-installed, expansion anchor.
   2. Powder-Actuated Fasteners: Suitable for application indicated, fabricated from corrosion-resistant materials with clips or other devices for attaching hangers of type indicated, and capable of sustaining, without failure, a load equal to 10 times that imposed by construction as determined by testing according to ASTM E1190 by an independent testing agency.

C. Sound Isolation Ceiling Hangers:
   1. Provide manufactured Isolation Ceiling Hangers and required components as part of engineered isolation ceiling system indicated on Drawings. Determine appropriate model and accessories required for complete installation.
      a. Manufacturer/Products: Subject to compliance with requirements, provide one of the following:

1) Mason Industries, Inc., “30NCC”; www.Mason-Ind.com.
2) Kinetics Noise Control, “ICC Isolation Hanger”; www.kineticsnoise.com
3) Or approved equal.

D. Sound Isolation Clips:
1. Provide manufactured Isolation Ceiling clips and required components as part of engineered isolation ceiling system indicated on Drawings. Determine appropriate model and accessories required for complete installation.
a. Manufacturer/Products: Subject to compliance with requirements, provide one of the following:
1) PAC International, Inc, “RSIC-1” Sound Isolation Clips; www.pac-intl.com.
2) Kinetics Noise Control, “IsoMax”; www.kineticsnoise.com
3) PLITEQ, “GenieClip”; www.pliteq.com
4) Or approved equal.

E. Wire Hangers: ASTM A641/A641M, Class 1 zinc coating, soft temper, 0.162-inch (4.12-mm) diameter.

F. Flat Hangers: Steel sheet, 1 by 3/16 inch (25.4 by 4.76 mm) by length indicated.

G. Carrying Channels: Cold-rolled, commercial-steel sheet with a base-metal thickness of 0.0538 inch (1.37 mm) and minimum 1/2-inch- (12.7-mm-) wide flanges.
1. Depth: 2-1/2 inches (64 mm).
2. Form to required radius at curved ceilings
3. At ceilings and soffits to receive tile. Brace as required to reduce upward deflection.

H. Furring Channels (Furring Members):
1. Cold-Rolled Channels: 0.0538-inch (1.37-mm) bare-steel thickness, with minimum 1/2-inch- (12.7-mm-) wide flanges, 3/4 inch (19.1 mm) deep.
2. Steel Studs: ASTM C645.
a. Minimum Base-Metal Thickness: 0.0179 inch (0.45 mm).
b. Depth: As indicated on Drawings.
3. Hat-Shaped, Rigid Furring Channels: ASTM C645, 7/8 inch (22.2 mm) deep.
a. Minimum Base Metal Thickness: As indicated on Drawings.
4. Resilient Furring Channels: 1/2-inch- (12.7-mm-) deep members designed to reduce sound transmission.

I. Grid Suspension System for Ceilings: ASTM C645, direct-hung system composed of main beams and cross-furring members that interlock.
1. Products: Subject to compliance with requirements, provide one of the following:
a. Armstrong World Industries, Inc.; Drywall Grid Systems.
b. Chicago Metallic Corporation; Drywall Furring System.
c. USG Corporation; Drywall Suspension System.

2.11 STEEL FRAMING FOR FRAMED ASSEMBLIES

A. Steel Components: Comply with ASTM C645 requirements for metal, unless otherwise indicated.
1. Coatings:
a. General: Provide minimum G40 coating or EQ equivalent on all components except as otherwise indicated.
b. Provide minimum G90 coating or EQ equivalent on all components within or adjacent to the following areas: Indoor Pool Room and Locker Room Wet Areas, including Showers Areas, Steam Rooms and Whirlpool Suites as indicated on Drawings.

B. Slip-Type Head Joints: Where indicated, provide one of the following:
1. Single Long-Leg Runner System: ASTM C645 top runner with 2-inch- (50.8-mm-) deep flanges in thickness not less than indicated for studs, installed with studs friction fit into top runner and with continuous bridging located within 12 inches (305 mm) of the top of studs to provide lateral bracing.

2. Double-Runner System: ASTM C645 top runners, inside runner with 2-inch- (50.8-mm-) deep flanges in thickness not less than indicated for studs and fastened to studs, and outer runner sized to friction fit inside runner.
3. Deflection Track: Steel sheet top runner manufactured to prevent cracking of finishes applied to interior partition framing resulting from deflection of structure above; in thickness not less than indicated for studs and in width to accommodate depth of studs.

C. Firestop Tracks: Top runner manufactured to allow partition heads to expand and contract with movement of the structure while maintaining continuity of fire-resistance-rated assembly indicated; in thickness not less than indicated for studs and in width to accommodate depth of studs.

D. Hat-Shaped, Rigid Furring Channels: ASTM C645.
1. Minimum Base Metal Thickness: 0.0179 inch (0.45 mm).
2. Depth: 7/8 inch (22.2 mm).

E. Resilient Furring Channels: 1/2-inch- (12.7-mm-) deep, steel sheet members designed to reduce sound transmission.

F. Cold-Rolled Furring Channels: 0.0538-inch (1.37-mm) bare-steel thickness, with minimum 1/2-inch- (12.7-mm-) wide flanges.
1. Depth: 3/4 inch (19.1 mm).
2. Furring Brackets: Adjustable, corrugated-edge type of steel sheet with minimum bare-steel thickness of 0.0312 inch (0.79 mm).
3. Tie Wire: ASTM A641/A641M, Class 1 zinc coating, soft temper, 0.0625-inch- (1.59-mm-) diameter wire, or double strand of 0.0475-inch- (1.21-mm-) diameter wire.

G. Z-Shaped Furring: With slotted or non-slotted web, face flange of 1-1/4 inches (31.8 mm), wall attachment flange of 7/8 inch (22.2 mm), minimum bare-metal thickness of 0.0179 inch (0.45 mm), and depth required to fit insulation thickness indicated.

H. Stud Isolation Strips:
1. Provide Isolation strips and washers as part of engineered isolation wall system indicated on Drawings.
a. Manufacturer/Products: Subject to compliance with requirements, provide one of the following:
1) Kinetics Noise Control, “Wallmat Stud Isolation Strip”; www.kineticsnoise.com
2) CMS Danskin Acoustics, “Regupol Strips”; www.cmsdanskin.com.uk
3) Or approved equal.

I. Floor Ties:
1. Provide floor ties at half-walls and as recommended by manufacturers to prevent wall deflection.
a. ASTM A1003/A1003M Structural Grade 50, Type H, ST50H, with 50 ksi min yield strength and 65 ksi minimum tensile strength with ASTM A653/A653M galvanized coating.
1) The Steel Network: Stiffclip CL.
2) Or approved equal.

2.12 AUXILIARY MATERIALS

A. General: Provide auxiliary materials that comply with referenced installation standards.
1. Fasteners for Metal Framing: Of type, material, size, corrosion resistance, holding power, and other properties required to fasten steel members to substrates.

B. Isolation Strip at Exterior Walls: Provide one of the following:
1. Asphalt-Saturated Organic Felt: ASTM D226/D226M, Type I (No. 15 asphalt felt), non-perforated.
2. Foam Gasket: Adhesive-backed, closed-cell vinyl foam strips that allow fastener penetration without foam displacement, 1/8 inch (3.2 mm) thick, in width to suit steel stud size.

2.13 PARTITION GAP CLOSURE ACCESSORIES

A. Adjustable, insulated metal closures for installation between gypsum board walls and curtain wall or window mullions.

B. Where indicated on drawings, install the following where indicated:
   1. Mullion Mate: Series 60
   2. Or approved equal.

C. Color: To be selected by Architect.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine areas and substrates, with Installer present, and including welded hollow-metal frames and framing, for compliance with requirements and other conditions affecting performance.

B. Examine panels before installation. Reject panels that are wet, moisture damaged, and mold damaged.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 APPLYING AND FINISHING PANELS, GENERAL

A. Comply with ASTM C840 A.

B. Install ceiling panels across framing to minimize the number of abutting end joints and to avoid abutting end joints in central area of each ceiling. Stagger abutting end joints of adjacent panels not less than one framing member.

C. Install panels with face side out. Butt panels together for a light contact at edges and ends with not more than 1/16 inch (1.5 mm) of open space between panels. Do not force into place.

D. Locate edge and end joints over supports, except in ceiling applications where intermediate supports or gypsum board back-blocking is provided behind end joints. Do not place tapered edges against cut edges or ends. Stagger vertical joints on opposite sides of partitions. Do not make joints other than control joints at corners of framed openings.

E. Form control and expansion joints with space between edges of adjoining gypsum panels.

F. Cover both faces of support framing with gypsum panels in concealed spaces (above ceilings, etc.), except in chases braced internally.
   1. Unless concealed application is indicated or required for sound, fire, air, or smoke ratings, coverage may be accomplished with scraps of not less than 8 sq. ft. (0.7 sq. m) in area.
   2. Fit gypsum panels around ducts, pipes, and conduits.
   3. Where partitions intersect structural members projecting below underside of floor/roof slabs and decks, cut gypsum panels to fit profile formed by structural members; allow 1/4- to 3/8-inch- (6.4- to 9.5-mm-) wide joints to install sealant.

G. Isolate perimeter of gypsum board applied to non-load-bearing partitions at structural abutments, except floors. Provide 1/4- to 1/2-inch- (6.4- to 12.7-mm-) wide spaces at these locations, and trim edges with edge trim where edges of panels are exposed. Seal joints between edges and abutting structural surfaces with acoustical sealant.

H. Attachment to Steel Framing: Attach panels so leading edge or end of each panel is attached to open (unsupported) edges of stud flanges first.

I. STC-Rated Assemblies: Seal construction at perimeters, behind control joints, and at openings and penetrations with a continuous bead of acoustical sealant. Install acoustical sealant at both faces of partitions at perimeters and through penetrations. Comply with ASTM C919 and with manufacturer's written recommendations for locating edge trim and closing off sound-flanking paths around or through assemblies, including sealing partitions above acoustical ceilings.
   1. Install sound attenuation blankets before installing gypsum panels, unless blankets are readily installed after panels have been installed on one side.

3.03 APPLYING INTERIOR GYPSUM BOARD

A. Install interior gypsum board in the following locations:
   1. Type X: Vertical surfaces, unless otherwise indicated.
   2. Type C: Where required for specific fire-resistance-rated assembly indicated.

3. Flexible Type: Apply in double layer at curved assemblies.
4. High-Impact Type: As indicated on Drawings.
5. Moisture and Mold-Resistant Type: As indicated on Drawings.

B. Rated Assemblies:
1. Install all rated assemblies in accordance with rated assemblies indicated on Drawings.

C. Single-Layer Application:
1. On ceilings, apply gypsum panels before wall/partition board application to greatest extent possible and at right angles to framing, unless otherwise indicated.
2. On partitions/walls, apply gypsum panels vertically (parallel to framing), unless otherwise indicated or required by fire-resistance-rated assembly, and minimize end joints.
a. Stagger abutting end joints not less than one framing member in alternate courses of panels.
b. At stairwells and other high walls, install panels horizontally, unless otherwise indicated or required by fire-resistance-rated assembly.
3. On Z-furring members, apply gypsum panels vertically (parallel to framing) with no end joints. Locate edge joints over furring members.
4. Fastening Methods: Apply gypsum panels to supports with steel drill screws.

D. Double Layer Application:
1. Place first layer parallel to framing or furring members, with ends and edges occurring over firm bearing. Place second layer perpendicular to framing or furring members. Offset joints of second layer from joints of first layer.

E. Curved Surfaces:
1. Install panels horizontally (perpendicular to supports) and unbroken, to extent possible, across curved surface plus 12-inch- (300-mm-) long straight sections at ends of curves and tangent to them.
2. For double-layer construction, fasten base layer to studs with screws 16 inches (400 mm) o.c. Center gypsum board face layer over joints in base layer, and fasten to studs with screws spaced 12 inches (300 mm) o.c.

3.04 APPLYING EXTERIOR GYPSUM SHEATHING

A. Apply panels perpendicular to supports, with end joints staggered and located over supports.
1. Install with 1/4-inch (6.4-mm) open space where panels abut other construction or structural penetrations.
2. Fasten with corrosion-resistant screws.

3.05 APPLYING TILE BACKING PANELS

A. Water-Resistant Gypsum Backing Board: Install at locations indicated on drawings. Install with 1/4-inch (6.4-mm) gap where panels abut other construction or penetrations.

B. Glass-Mat, Water-Resistant Backing Panel: Comply with manufacturer's written installation instructions and install where indicated on drawings. Install with 1/4-inch (6.4-mm) gap where panels abut other construction or penetrations.

C. Cementitious Backer Units: Per ANSI A108.11, Comply with manufacturer's written installation instructions and install where indicated on drawings.

D. Areas Not Subject to Wetting: Install regular-type gypsum wallboard panels to produce a flat surface except where indicated to receive water-resistant panels.

E. Where tile backing panels abut other types of panels in same plane, shim surfaces to produce a uniform plane across panel surfaces.

3.06 INSTALLING TRIM ACCESSORIES

A. General: For trim with back flanges intended for fasteners, attach to framing with same fasteners used for panels. Otherwise, attach trim according to manufacturer's written instructions.

B. Control Joints: Install control joints at locations indicated on Drawings.

C. Interior Trim: Install in the following locations:
   1. Cornerbead: Use at outside corners, unless otherwise indicated.
   2. Bullnose Bead: Use where indicated.
   3. LC-Bead: Use at exposed panel edges.
   4. L-Bead: Use where indicated.
   5. U-Bead: Use at exposed panel edges.
   6. Curved-Edge Cornerbead: Use at curved openings.

D. Exterior Trim: Install in the following locations:
   1. Cornerbead: Use at outside corners.
   2. LC-Bead: Use at exposed panel edges.

3.07 FINISHING GYPSUM BOARD

A. General: Treat gypsum board joints, interior angles, edge trim, control joints, penetrations, fastener heads, surface defects, and elsewhere as required to prepare gypsum board surfaces for decoration. Promptly remove residual joint compound from adjacent surfaces.

B. Prefill open joints and damaged surface areas.

C. Apply joint tape over gypsum board joints, except those with trim having flanges not intended for tape.

D. Gypsum Board Finish Levels: Finish panels to levels indicated below and according to ASTM C840:
   1. Level 1: Ceiling plenum areas, concealed areas, and where indicated.
   2. Level 2: Panels that are substrate for tile.
   3. Level 3: Panels that are exposed to view in Back of House areas.
   4. Level 4: At panel surfaces that will be exposed to view in member facing areas, unless otherwise indicated.
      a. Primer and its application to surfaces are specified in other Division 9 Sections.
   5. Level 5: Where Indicated.
      a. Primer and its application to surfaces are specified in other Division 9 Sections.

E. Glass-Mat Gypsum Sheathing Board: Finish according to manufacturer's written instructions for use as exposed soffit board.

F. Glass-Mat, Water-Resistant Backing Panels: Finish according to manufacturer's written instructions.

G. Cementitious Backer Units: Finish according to manufacturer's written instructions.

3.08 FRAMING INSTALLATION, GENERAL

A. Installation Standard: ASTM C754, except comply with framing sizes and spacing indicated.
   1. Gypsum Board Assemblies: Also comply with requirements in ASTM C840 that apply to framing installation.

B. Install supplementary framing, and blocking to support fixtures, equipment services, heavy trim, grab bars, toilet accessories, furnishings, or similar construction.

C. Install bracing at terminations in assemblies.

D. Do not bridge building control and expansion joints with non-load-bearing steel framing members. Frame both sides of joints independently.

3.09 INSTALLING SUSPENSION SYSTEMS

A. Install suspension system components in sizes and spacing indicated on Drawings, but not less than those required by referenced installation standards for assembly types and other assembly components indicated.

B. Isolate suspension systems from building structure where they abut or are penetrated by building structure to prevent transfer of loading imposed by structural movement.

C. Suspend hangers from building structure as follows:
   1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structural or suspension system.

a. Splay hangers only where required to miss obstructions and offset resulting horizontal forces by bracing, counter-splaying, or other equally effective means.

2. Where width of ducts and other construction within ceiling plenum produces hanger spacing that interfere with locations of hangers required to support standard suspension system members, install supplemental suspension members and hangers in the form of trapezes or equivalent devices.
   a. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced installation standards.
3. Wire Hangers: Secure by looping and wire tying, either directly to structures or to inserts, eye screws, or other devices and fasteners that are secure and appropriate for substrate, and in a manner that will not cause hangers to deteriorate or otherwise fail.
4. Flat Hangers: Secure to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices and fasteners that are secure and appropriate for structure and hanger, and in a manner that will not cause hangers to deteriorate or otherwise fail.
5. Do not attach hangers to steel roof deck.
6. Do not attach hangers to rolled-in hanger tabs of composite steel floor deck.
7. Do not connect or suspend steel framing from ducts, pipes, or conduit.

D. Fire-Resistance-Rated Assemblies: Wire tie furring channels to supports.

E. Grid Suspension Systems: Attach perimeter wall track or angle where grid suspension systems meet vertical surfaces. Mechanically join main beam and cross-furring members to each other and butt-cut to fit into wall track.

F. Installation Tolerances: Install suspension systems that are level to within 1/8 inch in 12 feet (3 mm in 3.6 m) measured lengthwise on each member that will receive finishes and transversely between parallel members that will receive finishes.

3.10 INSTALLING FRAMED ASSEMBLIES

A. Where studs are installed directly against exterior masonry walls or dissimilar metals at exterior walls, install isolation strip between studs and exterior wall.

B. Install studs so flanges within framing system point in same direction.
   1. Space studs as follows:
      a. Single-Layer Application: 24 inches (610 mm) o.c., unless otherwise indicated.
      b. Tile backing panels: 16 inches (406 mm) o.c., unless otherwise indicated.

C. Install tracks (runners) at floors and overhead supports. Extend framing full height to structural supports or substrates above suspended ceilings, except where partitions are indicated to terminate at suspended ceilings. Continue framing around ducts penetrating partitions above ceiling.
   1. Slip-Type Head Joints: Where framing extends to overhead structural supports, install to produce joints at tops of framing systems that prevent axial loading of finished assemblies.
   2. Door Openings: Screw vertical studs at jambs to jamb anchor clips on door frames; install runner track section (for cripple studs) at head and secure to jamb studs.
      a. Install two studs at each jamb, unless otherwise indicated.
      b. Install cripple studs at head adjacent to each jamb stud, with a minimum 1/2-inch (12.7-mm) clearance from jamb stud to allow for installation of control joint in finished assembly.
      c. Extend jamb studs through suspended ceilings and attach to underside of overhead structure.
   3. Other Framed Openings: Frame openings other than door openings the same as required for door openings, unless otherwise indicated. Install framing below sills of openings to match framing required above door heads.
   4. Fire-Resistance-Rated Partitions: Install framing to comply with fire-resistance-rated assembly indicated and support closures and to make partitions continuous from floor to underside of solid structure.
      a. Firestop Track: Where indicated, install to maintain continuity of fire-resistance-rated assembly indicated.
   5. Sound-Rated Partitions: Install framing to comply with sound-rated assembly indicated.

6. Curved Partitions:
    a. Bend track to uniform curve and locate straight lengths so they are tangent to arcs.
    b. Begin and end each arc with a stud, and space intermediate studs equally along arcs. On straight lengths of not less than 2 studs at ends of arcs, place studs 6 inches (150 mm) o.c.

D. Direct Furring:
    1. Attach to concrete or masonry with stub nails, screws designed for masonry attachment, or powder-driven fasteners spaced 24 inches (610 mm) o.c.

E. Z-Furring Members:
    1. Erect insulation (specified in 07 21 00 Thermal Insulation) vertically and hold in place with Z-furring members spaced 24 inches (610 mm) o.c.
    2. Except at exterior corners, securely attach narrow flanges of furring members to wall with concrete stub nails, screws designed for masonry attachment, or powder-driven fasteners spaced 24 inches (600 mm) o.c.
    3. At exterior corners, attach wide flange of furring members to wall with short flange extending beyond corner; on adjacent wall surface, screw-attach short flange of furring channel to web of attached channel. At interior corners, space second member no more than 12 inches (300 mm) from corner and cut insulation to fit.

3.11 PROTECTION

A. Protect installed products from damage from weather, condensation, direct sunlight, construction, and other causes during remainder of the construction period.

B. Remove and replace panels that are wet, moisture damaged, or mold damaged.
    1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
    2. Indications that panels are mold damaged include fuzzy or splotchy surface contamination and discoloration.

SECTION 09 30 00
TILING

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Tile:
      a. Porcelain/Ceramic tile.
      b. Glass tile.
      c. Stone tile.
      d. Pool tile, Pool Accent tile, Nosing and Coping.
      e. Stone Base.
   2. Interior Tile Application:
      a. Mortar floor sloping.
      b. Crack isolation membrane.
      c. Setting Materials.
      d. Grout Materials.
      e. Miscellaneous Materials.
         1) Trowelable Underlayments.
         2) Metal edge strips.
         3) Tile Cleaner.
         4) Grout Sealer.
         5) Stone tile Sealer/enhancer.
      f. Waterproof System.
         1) Waterproof Membrane.
            (a) Membrane Components.
            (b) Accessories.
   3. Exterior Tile Application:
      a. Setting Materials.
      b. Grout Materials.

1.02 DEFINITIONS

A. General: Definitions in the ANSI A108 series of tile installation standards and in ANSI A137.1 apply to Work of this Section unless otherwise specified.

B. Module Size: Actual tile size plus joint width indicated.

C. Face Size: Actual tile size, excluding spacer lugs.

D. Wet Areas: Any area where waterproofing is installed. See key plan on Drawings.

1.03 RELATED SECTIONS

BB. TCNA (HB) - Handbook for Ceramic, Glass, and Stone Tile Installation; 2024.

1.05 QUALITY ASSURANCE

A. Installer Qualifications: Company specializing in performing the work of this section with minimum five years experience.

B. Source Limitations for Setting Materials and Accessories: Obtain product of a uniform quality for each application condition from a single manufacturer.

C. Static Coefficient of Friction: For tile installed on walkway surfaces, provide products with the following values as determined by testing identical products per ASTM C1028 and:
   1. Level Surfaces: Accessible Routes as defined by ADAAG, Minimum 0.5 static coefficient of friction.
   2. Step Treads: Accessible Routes as defined by ADAAG, Minimum 0.5 static coefficient of friction.
   3. Ramp Surfaces: Accessible Ramps as defined by ADAAG, Minimum 0.8 static coefficient of friction.

D. Preinstallation Conference: Conduct conference at the Project site.
   1. Convene one week prior to commencing work of this section.
   2. Require attendance of installation material manufacturer, tile supplier, tile installer and installers of related work. Review installation procedures and coordination required with related work.
   3. Meeting agenda includes but is not limited to:
      a. Surface preparation.
      b. Tile and installation material compatibility.
      c. Edge protection, transition and pre-fabricated movement joint profiles.
      d. Waterproofing techniques.
      e. Crack isolation techniques.
      f. Flood testing techniques.

1.06 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Samples for Verification:
   1. Full-size units of each type and composition of tile and for each color and finish required. For ceramic mosaic tile in color blend patterns, provide full sheets of each color blend.

C. Quantity Take-offs:
   1. Submit material quantity take offs for all material types.

D. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

E. Mock-Up:
   1. Tile: Provide a mock-up for evaluation of surface preparation techniques and application quality of work.
      a. Finish areas designated by Architect.
      b. Do not proceed with remaining work until mock up is approved by Architect.
      c. Refinish mock-up area as required to produce acceptable work.
      d. Mock up may be used as part of finished work.
   2. Waterproofing Provide mock-up of each waterproofing system.

a. Steam Room: (Sheet applied)
    1) Mock up to consist of 1 shower stall, including drain, pipe penetration, wall to wall and wall to floor transitions.
    2) Show materials 'cut away' such that each layer of the assembly are exposed to view.
    3) Include all applicable materials of the assembly.
b. General application: (Fluid applied)
    1) Mock up to consist of a 4' x 4' x 4' minimum area. Include a bottom corner, with transitions between wall to wall and wall to floor, and bench.
    2) Show materials 'cut away' such that each layer of the assembly are exposed to view.
    3) Include all applicable materials of the assembly.
c. Do not proceed with work until mock up is approved by Architect.
d. Refinish mock-up area as required to produce acceptable work.
e. Mock-up may be incorporated into finished work.
f. Tile included as part of a system mock-up may serve as the required tile mock-up.

3. Procurement:
    a. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
    b. Submit inventory to Owner within 5 days of delivery of materials.
    c. See Sections 01 33 00 and 01 60 00.
4. Executed Warranty.
    a. See below.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver and store packaged materials in original containers with seals unbroken and labels intact until time of use. Comply with requirements in ANSI A137.1 for labeling tile packages.

B. Store tile and cementitious materials on elevated platforms, under cover, and in a dry location.

C. Store aggregates where grading and other required characteristics can be maintained, and contamination can be avoided.

D. Store liquid materials in unopened containers and protected from freezing.

E. Protect waterproofing, grout and mortar materials from exposure to moisture. Do not deliver until after wet work is complete and dry.

F. Handle tile that has temporary protective coating on exposed surfaces to prevent coated surfaces from contacting backs or edges of other units. If coating does contact bonding surfaces of tile, remove coating from bonding surfaces before setting tile.

1.08 PROJECT CONDITIONS

A. Environmental Limitations: Do not install tile or waterproofing materials until construction in spaces is complete and ambient temperature and humidity conditions are maintained at the levels indicated in referenced standards and manufacturer's written instructions.

1.09 WARRANTY

A. Provide manufacturer's standard warranty for each tile.

B. The Contractor warrants the work of this Section to be in accordance with the Contract Documents and free from faults and defects in materials and workmanship for a period as determined by local or project requirements. The manufacturer of adhesives, mortars, grouts and other installation materials shall provide a written twenty five (25) year warranty, which covers materials and labor - reference LATICRETE Warranty Data Sheet 025.0 for complete details and requirements. Single source manufacture.

PART 2 PRODUCTS

2.01 PRODUCTS, GENERAL

A. Tile:

1. ANSI Ceramic Tile Standard: Provide tile that complies with ANSI A137.1 for types, compositions, and other characteristics indicated.
2. ANSI Standards for Tile Installation Materials: Provide materials complying with ANSI A108.02, ANSI standards referenced in other Part 2 articles, ANSI standards referenced by TCNA (HB) installation methods specified in tile installation schedules, and other requirements specified.
3. Factory Blending: For tile exhibiting color variations within ranges, blend tile in factory and package so tile units taken from one package show same range in colors as those taken from other packages and match approved Samples.
4. Mounting: For factory-mounted tile, provide back- or edge-mounted tile assemblies as standard with manufacturer unless otherwise indicated.
    a. Where tile is indicated for installation in swimming pools on exteriors or in wet areas, do not use back- or edge-mounted tile assemblies unless tile manufacturer specifies in writing that this type of mounting is suitable for installation indicated and has a record of successful in-service performance.
5. Factory-Applied Temporary Protective Coating: Where indicated under tile type, protect exposed surfaces of tile against adherence of mortar and grout by precoating with continuous film of petroleum paraffin wax, applied hot. Do not coat unexposed tile surfaces.
6. At Pool Shower Wall and all outside corners / drains where tile cut edge is exposed. To be wet saw cut mechanically sanded, polished and profiled as not to be sharp. Ease edge smooth to touch.

2.02 PORCELAIN/CERAMIC TILE

A. See attached Schedule.

2.03 GLASS TILE

A. See attached Schedule.

2.04 STONE TILE

A. See attached Schedule.

2.05 STONE BASE

A. See attached Schedule.

2.06 WATERPROOF SYSTEMS

A. Fluid Applied Membrane System:
1. General Application: Waterproofing and Crack Isolation Membrane to be thin, cold applied, single component liquid and load bearing and UL GREENGUARD Gold certified. Reinforcing fabric to be non-woven rot-proof specifically intended for waterproofing membrane. Waterproofing Membrane to be non-toxic, non-flammable, and non-hazardous during storage, mixing, application and when cured with ANSI A118.10 and ANSI A118.12; ASTM C627.
    a. LATICRETE International, Inc.; HYDRO BAN®.
2. Steam application: Waterproofing Sheet Membrane to be thin, durable polyethylene core with a fused non-woven polypropylene exterior surface, IAPMO (UPC) approved as shower pan liner, and allow for use of either polymer modified or un-modified tile mortars, depending upon substrate and type of tile used. ANSI 118.10, ASTM C627.
    a. LATICRETE International, Inc.; HYDRO BAN Sheet Membrane®.
    b. Accessories: Pipe & Corner reinforcement; LATICRETE International, Inc.; HYDRO BAN Sheet Membrane® Corners & Pipe Collars as recommended by manufacturer.
3. Tile Setting Materials: Latex-Portland Cement Mortar: (Inside Pool Shell (non-stainless steel)
    a. LATICRETE International, Inc. 254 Platinum®, Exceeds ANSI ANSI A118.4, ANSI A118.11, & ANSI A118.15.
    b. LATICRETE International, Inc. 254R Platinum Rapid (Rapid Set Mortar when specified) ANSI A118.11.
4. Epoxy Adhesive:
    a. LATICRETE International, Inc. LATAPOXY® 300 Adhesive (Epoxy Adhesive, Suitable steel substrates when specified) ANSI A118.3

5. See below for grout materials.

2.07 CRACK ISOLATION MEMBRANE

A. General: Manufacturer's standard product that complies with ANSI A118.12 for standard performance and is recommended by the manufacturer for the application indicated. Include reinforcement and accessories recommended by manufacturer.

B. Membrane strips must cover three (3) times the width of the floor tile used, with a minimum width of 36 inches.
   1. Crack Isolation and Waterproof Membrane: Waterproofing and anti-fracture/crack suppression membrane.
      a. LATICRETE International, Inc; HYDRO BAN®.

2.08 MORTAR BED MATERIALS

A. Pre-Blended, Polymer-Modified, Cement-Based, Sloping Mortar.
   1. LATICRETE International, Inc.; 3701 Fortified Mortar or 3701 LITE Fortified Mortar.

B. Quick Setting, Polymer Modified, Fiber-Reinforced, Cementitious Rendering, Patching and Leveling Mortar.
   1. LATICRETE International, Inc.; 3701 Lite Mortar R.

2.09 SELF-LEVELING UNDERLAYMENT

A. High quality, fiber reinforced, cement-based, self leveling underlayment for use in leveling suitable interior substrates. For large format tile as identified by TCNA, or as specified. 5300 psi (36.5 MPa) (ASTM C1708/C1708M 28 days)
   1. LATICRETE International, Inc; NXT Level Plus with NXT Primer.

2.10 SETTING MATERIALS

A. Improved Modified, Dry-Set Portland Cement Mortar (Thin-Set,): ANSI A118.15.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following: (Except in connection with the Waterproof systems specified herein.)
      a. LATICRETE International, Inc.; MULTIMAX LITE®

2.11 GROUT MATERIALS

A. Premium Epoxy Mortar and Grout: (Wet Areas: Floors, Walls, Ceilings) For grout joints from 1/16 inch to 1/2" ANSI A118.3, ISO 13007-2 R2 and RG, with a VOC content of 65 g/L or less when calculated according to 40 CFR 59, Subpart D.
   1. Product: Subject to compliance with requirements, provide the following:
      a. LATICRETE International, Inc; SPECTRALOCK PRO PREMIUM®

B. High Performance, Polymer-Modified Tile Grout: (Non-Wet Area Walls) ANSI A118.7.
   1. Manufacturers: Subject to compliance with requirements, provide products of the following:
      a. LATICRETE International, Inc.; PERMACOLOR ®

C. Flexible Sealant: Professional-grade, 100%-silicone sealant specifically formulated for heavy traffic expansion and movement joints, horizontal and vertical complying with ASTM standards; joint movement (ASTM C920), adhesion (ASTM C794) and passes weatherability (Accelerated Weathering Tester QUV), Shore A hardness (27).
   1. Product: Subject to compliance with requirements, provide the following:
      a. LATICRETE International, Inc.; LATASIL™

2.12 MISCELLANEOUS MATERIALS

A. Trowelable Underlayments and Patching Compounds: Latex-modified, portland cement-based formulation provided or approved by manufacturer of tile-setting materials for installations indicated.
   1. Product: Subject to compliance with requirements, provide the following:
      a. LATICRETE International, Inc., NXT Skim Lite.
      b. LATICRETE International, Inc., NXT Patch.

B. Metal Edge Strips: Angle or L-shape, height to match tile and setting-bed thickness, metallic or combination of metal and PVC or neoprene base, designed specifically for flooring applications.
   1. Acceptable Manufacturers:
      a. Schluter.
      b. Laticrete.
      c. Or approved equal.

C. Custom Transitions:
   1. Sloped Mortar:
      a. Description: Mortar slope to achieve flush transition between tile and another floor material.
      b. Material and Finish: See drawings.
      c. Height: As required.
      d. Location: See drawings.

D. Tile Cleaner: A neutral cleaner capable of removing soil and residue without harming tile and grout surfaces, specifically approved for materials and installations indicated by tile and grout manufacturers.
   1. Product: Subject to compliance with requirements, provide the following:
      a. LATICRETE International, Inc.; STONETECH® Stone & Tile Cleaner (Concentrate) Daily.
      b. LATICRETE International, Inc.; STONETECH® Klenzall Cleaner (Concentrate) Deep Clean.

E. Grout Sealer: Premium, water based penetrating sealer, for sealing grout joints and that does not change color or appearance of grout.
   1. Product: Subject to compliance with requirements, provide the following:
      a. LATICRETE International, Inc; STONETECH® BulletProof.

F. Flexible Sealant: Professional-grade, 100%-silicone sealant specifically formulated for heavy traffic expansion and movement joints, horizontal and vertical complying with ASTM standards; shore A hardness (27), joint movement (ASTM C920), adhesion (ASTM C794) and passes weatherability (Accelerated Weathering Tester QUV).
   1. Product: Subject to compliance with requirements, provide the following:
      a. LATICRETE International, Inc., LATASIL.

G. Stone Tile Sealer/Enhancer: Solvent based, penetrating sealer formulated to prevent oil and water based staining to stone while not changing the surface's appearance or finish. To be used on indicated Stone Tile only, see schedule.
   1. Product: Subject to compliance with requirements, provide the following:
      a. Laticrete, Stonetech Bulletproof Sealer.

2.13 EXTERIOR APPLICATION

A. General: Where exterior tile installation is indicated, provide products recommended by their manufacturers for the application.

B. Exterior Wall and Soffit application:
   1. Backing material: As indicated on drawings and approved for tile application by its manufacturer and Laticrete.
   2. Polymer-Modified Mortar.
      a. One-component, polymer fiber reinforced veneer mortar, to meet or exceed ASTM C270 compressive strength requirements and IBC ASTM C482 Shear bond strength requirements, and ANSI A118.4 for adhered stone and tile.
      b. For use to adhere exterior thin masonry units or ceramic tile as shown on drawings.
         1) Exposed joints shall use Cementitious Mortar above.
      c. Manufacturers and Products:
         1) Basis of Design: Laticrete MVIS Veneer Mortar. Verify mortar is compatible with EIFS substrate prior to ordering.
         2) Or approved equal.
      d. Water: Potable.
   3. High Performance, Polymer-Modified Tile Grout: ANSI A118.7.

a. Manufacturers: Subject to compliance with requirements, provide products of the following:
1) LATICRETE International, Inc.; PERMACOLOR ®

4. High Performance, STPE Sealant: ASTM C1382 for use with EIFS.
a. Manufacturers: StoSeal STPE Sealant, #81802, with primer.
1) Sealant shall conform to physical and mechanical property requirements of ASTM C920 with minimum elongation and contraction capability of +100% and -50%
2) Location: Corners and around fixtures at EIFS substrate.

C. Exterior Floor application:
1. Quick Setting, Polymer Modified, Fiber-Reinforced, Cementitious Rendering, Patching and Leveling Mortar.
a. LATICRETE International, Inc.; 3701 Lite Mortar R.
2. High Performance, Polymer-Modified Tile Grout: ANSI A118.7.
a. Manufacturers: Subject to compliance with requirements, provide products of the following:
1) LATICRETE International, Inc.; PERMACOLOR ®

D. Expansion Joint:
1. Stainless Steel profile as detailed.
2. Install as shown on drawings and recommended by tile Manufacturer.

PART 3 EXECUTION

3.01 SYSTEMS

A. Provide Waterproof system components only where indicated on Drawings.

B. At Waterproof systems, do not begin tiling work until flood test(s) have been performed.

3.02 EXAMINATION

A. Examine substrates, areas, and conditions where tile will be installed, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of installed tile.
1. Verify that substrates for setting tile are firm, dry, clean, free of coatings that are incompatible with tile-setting materials including curing compounds and other substances that contain soap, wax, oil, or silicone; and comply with flatness tolerances required by ANSI A108.01 for installations indicated.
2. Verify that concrete substrates for tile floors installed with bonded mortar bed or thin-set mortar comply with surface finish requirements in ANSI A108.01 for installations indicated.
a. Verify that surfaces that received a steel trowel finish have been mechanically scarified.
b. Verify that protrusions, bumps, and ridges have been removed by sanding or grinding.
3. Verify that installation of grounds, anchors, recessed frames, electrical and mechanical units of work, and similar items located in or behind tile has been completed.
4. Verify that joints and cracks in tile substrates are coordinated with tile joint locations; if not coordinated, adjust joint locations in consultation with Architect.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.03 PREPARATION

A. Fill cracks, holes, and depressions in concrete substrates for tile floors installed with thin-set mortar with trowelable leveling and patching compound specifically recommended by tile-setting material manufacturer.

B. Where indicated, prepare substrates to receive waterproofing by applying a reinforced mortar bed that complies with ANSI A108.1a and is sloped 1/4 inch per foot (1:50) toward drains. All waterproofing to be sloped to drains.

C. All recessed areas sloped / apply waterproofing. Bead elastomeric caulk at all drains.

D. Blending: For tile exhibiting color variations, verify that tile has been factory blended and packaged so tile units taken from one package show same range of colors as those taken from other packages and

match approved Samples. If not factory blended, either return to manufacturer or blend tiles at Project site before installing.

3.04 WATERPROOFING INSTALLATION

A. Install waterproofing to comply with ANSI A108.13 and manufacturer's written instructions to produce waterproof membrane of uniform thickness and bonded securely to substrate.

B. Do not install tile or setting materials over waterproofing until waterproofing has cured and been tested to determine that it is watertight.

C. Testing:
   1. Perform ELD (Electronic Leak Detection) test of vertically applied waterproof membrane to ensure that it attains specified resistance to moisture penetration.
      a. Testing to be performed according to the requirements of ASTM D7877 by ISO/IEC 17025 certified personnel.
      b. Patch or replace failed areas as recommended by manufacturer.
   2. Perform Flood testing of all waterproofing systems.
      a. Perform test according to ASTM D5957.
      b. Examine all adjacent areas and areas below for signs of water leakage.
      c. If leakage is detected, demolish and replace waterproof membrane.
      d. Do not proceed with work until flood tests are passed.

3.05 CRACK ISOLATION MEMBRANE INSTALLATION

A. Install crack isolation membrane to comply with ASTM A108.17 and manufacturer's written instructions to produce membrane of uniform thickness and bonded securely to substrate.

B. Do not install tile or setting materials over crack isolation membrane until membrane has cured.

3.06 TILE INSTALLATION

A. Comply with TCNA's "Handbook for Ceramic Tile Installation" for TCNA installation methods specified in tile installation schedules. Comply with parts of the ANSI A108 Series "Specifications for Installation of Ceramic Tile" that are referenced in TCNA installation methods, specified in tile installation schedules, and apply to types of setting and grouting materials used.

B. Extend tile work into recesses and under or behind equipment and fixtures to form complete covering without interruptions unless otherwise indicated. Terminate work neatly at obstructions, edges, and corners without disrupting pattern or joint alignments.

C. Tile setting:
   1. All tile installed over a waterproof system to be 90% min bonded to substrate. Do not allow voids behind tiles in wet areas.
   2. Slope setting materials in waterproofed areas to drains.
      a. Cut large format tile if necessary to slope to drain.
      b. Do not install a drain within a large format tile without proper sloping.

D. Accurately form intersections and returns. Perform cutting and drilling of tile without marring visible surfaces. Carefully grind cut edges of tile abutting trim, finish, or built-in items for straight aligned joints. Fit tile closely to electrical outlets, piping, fixtures, and other penetrations so plates, collars, or covers overlap tile.

E. Jointing Pattern: Lay tile in grid pattern unless otherwise indicated. Lay out tile work and center tile fields in both directions in each space or on each wall area. Lay out tile work to minimize the use of pieces that are less than half of a tile. Provide uniform joint widths unless otherwise indicated.
   1. For tile mounted in sheets, make joints between tile sheets same width as joints within tile sheets so joints between sheets are not apparent in finished work.
   2. Where adjoining tiles on floor, base, walls, or trim are specified or indicated to be same size, align joints.
   3. Where tiles are specified or indicated to be whole integer multiples of adjoining tiles on floor, base, walls, or trim, align joints unless otherwise indicated.

F. Lay out tile wainscots to dimensions indicated or to next full tile beyond dimensions indicated.

G. Expansion Joints: Provide expansion joints and other sealant-filled joints, including control, contraction, and isolation joints, where indicated. Form joints during installation of setting materials, mortar beds, and tile. Do not saw-cut joints after installing tiles.
   1. Where joints occur in concrete substrates, locate joints in tile surfaces directly above them.
   2. Provide 3/16; expansion joints in Pool Deck: locate expansion joints at perimeter of Lap and Leisure pools; aligned with saw/control joints in concrete throughout the entire pool deck. See movement joint layout on Floor Finish Drawings.
   3. Install expansion and control joints in accordance with TCNA method EJ171.

H. Metal Edge Strips: Install where exposed edge of tile flooring meets carpet, wood, or other flooring that finishes flush with top of tile.
   1. Fill metal edge strips and coves in wet areas with grout.

I. Mortar and Grout Curing:
   1. Allow Mortar and Grout to cure for the minimum duration recommended by manufacturer before proceeding.
   2. Ensure temperature and humidity are within required range during this period.

J. Grout Sealer: Apply grout sealer to cementitious grout joints according to grout-sealer manufacturer's written instructions. As soon as grout sealer has penetrated grout joints, remove excess sealer and sealer from tile faces by wiping with soft cloth.

K. Exterior Application:
   1. Wet bonding surfaces of tile thoroughly prior to installation in dry climates.
   2. See Section 04 20 00 for more information.

3.07 STONE TILE SEALER APPLICATION

A. Apply only to scheduled materials, see schedule.

B. Apply according to Manufacturer's instructions.

C. Do not apply multiple coats.

D. Wipe away excess sealer before it dries.

E. Protect surface during drying period.
   1. See manufacturer's written instructions.

3.08 CLEANING AND PROTECTING

A. Cleaning: On completion of placement and grouting, clean all ceramic tile surfaces so they are free of foreign matter.
   1. Remove grout residue from tile as soon as possible.
   2. Clean grout smears and haze from tile according to tile and grout manufacturer's written instructions but no sooner than 10 days after installation. Use only cleaners recommended by tile and grout manufacturers and only after determining that cleaners are safe to use by testing on samples of tile and other surfaces to be cleaned. Protect metal surfaces and plumbing fixtures from effects of cleaning. Flush surfaces with clean water before and after cleaning.
   3. Remove temporary protective coating by method recommended by coating manufacturer and that is acceptable to tile and grout manufacturer. Trap and remove coating to prevent drain clogging.

B. Protect installed tile work with kraft paper or other heavy covering during construction period to prevent staining, damage, and wear. If recommended by tile manufacturer, apply coat of neutral protective cleaner to completed tile walls and floors.

C. Prohibit foot and wheel traffic from tiled floors for at least seven days after grouting is completed.

D. Before final inspection, remove protective coverings and rinse neutral protective cleaner from tile surfaces.

END OF SECTION

SECTION 09 30 01
TILING - SCHEDULES

GROUT

1.01 LATICRETE SPECTRALOCK PRO PREMIUM

A. Color: as specified per tile type.

B. Location:
   1. Vanity area - Floors.
   2. Showers - Floors, walls, ceilings.
   3. Whirlpool Suites - Floors, walls.
   4. Steam rooms - Floors, walls, ceilings.
   5. Sauna - Floors.
   6. Family Locker - Floors.
   7. Family Changing Rooms - Floors, walls, ceilings.
   8. Pool Restrooms - Floors, walls, ceilings.
   9. Pool - Grip at edge of pool and all tiled surfaces interior of vessel - waterline, steps, nosing, benches, lane lines and markers, etc.

1.02 LATICRETE PERMACOLOR

A. Color: As specified per tile type.

B. Location: All other locations not listed above for Spectralock; general tile walls, floors, ceilings.

PORCELAIN/CERAMIC TILE

2.01 TL-9A

A. Distributor: Kate Lo

B. Manufacturer: Olympia Tile

C. Series: Boutique Selections

D. Color: Bianco Wood

E. Size: 12" x 24"

F. Code: GM.B.WOOD.1224.HN

G. Joint Width: 1/8”

G. Joint Width: 1/8 inch
H. Grout: Laticrete CLR #44 Bright White
I. Location: Tile trim below waterline at indoor/outdoor lap or leisure pools where universal trim grip edge occurs.
J. Profiles:
    1. 2" x 2"
K. Contact: E-mail: Lifetime.fitness@daltile.com, Phone: 877.556.5728
L. URL: https://www.daltile.com/product/Keystones?shape=Straight%20Joint&color=Arctic-White

4.08 TL-103M2G

A. Manufacturer: Daltile
B. Pattern: Keystone Mosaics
C. Color: Arctic White D617
D. Finish: Abrasive
E. Module Size: 2” x 2”
F. Nominal Tile Thickness: 1/4 inch
G. Joint Width: 1/8 inch
H. Grout: Laticrete #44 Bright White
I. Location: Tiled treads of warm spas, cold spas and outdoor pool stairs – water side, Tiled band at leisure pool zero depth entry.
J. Profiles:
    1. 2” x 2”
K. Contact: E-mail: Lifetime.fitness@daltile.com, Phone: 877.556.5728
L. URL: https://www.daltile.com/product/Keystones?shape=Straight%20Joint&color=Arctic-White

4.09 TL-104M2

A. Manufacturer: Daltile
B. Pattern: Keystone Mosaics
C. Color: Artisan Brown D144
D. Finish: Matte, unglazed
E. Module Size: 2” x 2”
F. Nominal Tile Thickness: 1/4 inch
G. Joint Width: 1/8 inch
H. Grout: Laticrete #57 Hot Cocoa
I. Location: Accent floor tile at indoor pool room, universal trim grip edge at indoor pools, accent floor tile and cove trim at outdoor warm spa, universal trim grip edge at outdoor warm spa, and universal trim grip edge at outdoor pools (pending climate zone, refer to details)
J. Profiles:
    1. 2x2 tile
    2. S886 (Bullnose)
    3. SC886 (Bullnose Corner)
    4. C833 (Cove Base)
    5. C701 (Universal Trim – grip edge)
K. Contact: E-mail: Lifetime.fitness@daltile.com, Phone: 877.556.5728
L. URL: https://www.daltile.com/product/Keystones?shape=Straight%20Joint&color=Arctic-White

4.10 TL-104M2G

A. Manufacturer: Daltile
B. Pattern: Keystone Mosaics
C. Color: Artisan Brown D144
D. Finish: Abrasive
E. Module Size: 2” x 2”
F. Nominal Tile Thickness: 1/4 inch
G. Joint Width: 1/8 inch

H. Grout: Laticrete CLR #57 Hot Cocoa

I. Location: For use only when filed tile DCOF must exceed 0.42

J. Profiles:
   1. 2x2 tile
   2. S886 (Bullnose)
   3. SC886 (Bullnose Corner)

K. Contact: E-mail: Lifetime.fitness@daltile.com, Phone: 877.556.5728

L. URL: https://www.daltile.com/product/Keystones?shape=Straight%20Joint&color=Arctic-White

4.11 TL-105M2

A. Manufacturer: Daltile

B. Pattern: Keystone Mosaics

C. Color: Medium Mottled Brown D050

D. Finish: Matte, unglazed

E. Module Size: 2” x 2”

F. Nominal Tile Thickness: 1/4 inch

G. Joint Width: 1/8 inch

H. Grout: Laticrete CLR #57 Hot Cocoa

I. Location: Field floor tile and cove base trim at indoor pool room, treads at outdoor warm spa

J. Profiles:
   1. 2” x 2”
   2. C833 (Cove Base)
   3. CB813 (Cove Base In-Corner)
   4. SC813 (Cove Base Out-corner for 1x1 or 2x2 cove corners)

K. Contact: E-mail: Lifetime.fitness@daltile.com, Phone: 877.556.5728

STONE TILE

5.01 ST-23:

A. Distributor: Virginia Tile
B. Manufacturer: Island Stone
C. Series: Uniform Cladding
D. Color: Sandstone Mint
E. Finish: Textured (Flamed)
F. Module Size: 15 ½” x 4 ¾”
G. Nominal Tile Thickness: ½ -1”
H. Installation: Butt-jointed
I. Grout: Do NOT grout.
J. Sealer: none.
K. Location: Sauna Accent Wall
L. Contact: Cristin Hennessy, 612-801-6758, Cristin.Hennessy@VirginiaTile.com
M. https://islandstone.com/collections/all/products/stone-textured-wall-tile-uniform-sandstone-mint-chipped?variant=39580204761271

5.02 ST-30:

A. Manufacturer: Tile x Design
B. Stone Type: Woodridge Mini Wall Ledge
C. Color Number: Quartzite WR714
D. Module Size: 7" x 14"
E. Thickness: 3/4"
F. Sealer: none.
G. URL: https://thorntreeslate.com/collections/natural-stone-collections/woodridge-quartzite/woodridge-mini-wall-ledge/

5.03 ST-32:

A. Distributor: Tile x Design
B. Manufacturer: New Ravenna Mosaics

C. Series: Semplice Collection
D. Pattern: Winona – NRWINONA-2
E. Color: Horizon
F. Finish: Honed
G. Repeat: 11 11/16” x 11 11/16”, Repeat SF: .95 SF
H. Joint Width: 1/8 inch
I. Grout: Laticrete CLR #97 Iron
J. Sealer: none.
K. Location: One Wall Street – Coffee Bar
L. Contact: Pam Gilbert – 612 991 4770, pgilbert@tilexdesign.com
M. URL: https://newravenna.com/nr-product/winona-horizon/

5.04 ST-33

A. Distributor: Platform Surfaces
B. Manufacturer: Realstone Systems
C. Color: Pewter Ledgestone
D. Format: Panel 6" x 24" | 1 sq. ft.
   1. Avg. Unit Thickness: 0.4" - 1"
   2. Avg. Unit Weight: 9lbs
E. Finish: Splitface
F. Nosing: N/A
G. Grout: Laticrete CLR #78 Sterling Silver
H. Sealer: none.
I. Location: Exterior, see drawings
J. Contact: Frank Palumbo; 312-860-1904; fpalumbo@platformsurfaces.com
K. URL: https://www.realstonesystems.com/product/pewter-ledgestone-panel/

5.05 ST-34

A. Manufacturer: Daltile
B. Stone Type: Granite, complying with ASTM C615.
C. Color: Absolute Black
D. Finish: Honed
E. Module Size: 12" x 12" (cut to 2" with 1 eased and polished edge)
F. Nominal Tile Thickness: 1/2"
G. Installation: Stacked
H. Grout: Laticrete CLR #60 Dusty Grey
I. Sealer: Stonetech Sealer.
J. Location: Stair nosing
K. Contact: E-mail: Lifetime.fitness@daltile.com, Phone: 877.556.5728
L. URL: https://www.daltile.com/products/Natural-Stone/Granite/Absolute-Black

5.06 ST-35

A. Distributor: Virginia Tile
B. Manufacturer: Island Stone

C. Series: Paragon Hex
D. Color: Sandstone Mint
E. SKU: ISLSAMIPARAHEX
F. Finish: Honed
G. Module Size: mosaic
H. Nominal Tile Thickness: 12.7mm
I. Installation: Hexagon
J. Grout: no grout.
K. Location: Outdoor Bar focal
L. Contact: Cristin Hennessy, 612-801-6758, Cristin.Hennessy@VirginiaTile.com

5.08 ST-37A:

A. Manufacturer: Daltile
B. Stone Type: Uba Tuba
C. Color: G761
D. Finish: Flamed
E. Module Size: 12" x 24" x 3/8"
F. Nominal Tile Thickness: 3/8 inch
G. Joint Width: 1/4 inch
H. Grout: Laticrete CLR #60 Dusty Grey
I. Sealer: Stonetech Sealer
J. Installation: Stacked
K. Location: Grand Stair, Entry Vestibule
L. Contact: E-mail: Lifetime.fitness@daltile.com, Phone: 877.556.5728
M. URL: http://daltilestonecenter.com/StGeorge/ProductDetail.aspx?ID=682

5.09 ST-37F:

A. Manufacturer: Daltile
B. Stone Type: Uba Tuba
C. Color: G761
D. Finish: Flamed
E. Module Size: 4" x 24" x 3/8" (cut on site from 12" x 24" ST-37A)
F. Nominal Tile Thickness: 3/8 inch
G. Joint Width: 1/4 inch
H. Grout: Laticrete CLR #60 Dusty Grey
I. Sealer: Stonetech Sealer
J. Installation: Stacked
K. Location: Entry Vestibule
L. Contact: E-mail: Lifetime.fitness@daltile.com, Phone: 877.556.5728

METAL EDGE STRIPS

6.01 L-SHAPED PROFILE

A. Manufacturers and products:
   1. Schluter: Jolly
   2. Laticrete: L-shaped edge.
   3. Or approved equal.
B. Description: L-shaped profile with 1/8" (3.2mm) wide top section and vertical wall section that together form the visible surface, integrated perforated anchoring leg and integrated grout joint spacer.
C. Anchoring Leg:
   1. Provide with straight anchoring leg.
   2. Provide with special radius anchoring leg for radius application.
D. Material and Finish: Brushed antique bronze anodized aluminum or as selected by Architect.
E. Height: As required
F. Location: Tile Edge protection as indicated on drawings.

6.02 COVE PROFILE

A. Manufacturers and products:
   1. Schluter: DILEX-AHK
   2. Laticrete: Cove Profile
   3. Or approved equal.
B. Description: Anodized aluminum profile with integrated perforated anchoring leg, connected at a 90-degree angle by a cove-shaped section with 3/8" (10mm) radius that forms the visible surface.
C. Corners/End Caps/Connectors: Provide matching units.
D. Material and Finish: Satin Nickel Anodized Aluminum, or as selected by architect.
E. Height: As required.
F. Location: Wet areas throughout.

6.03 EXPANSION JOINT

A. Manufacturers and products:
   1. Schluter: DILEX-BWB
   2. Laticrete: Expansion and movement profile, Style 4.
   3. Or approved equal.

B. Description: Stainless Steel profile with integrated perforated anchoring legs connected by 15/32" wide tongue and groove joint that forms the visible surface.

C. Corners/End Caps/Connectors: Provide matching units.

D. Material and Finish: E- Stainless Steel type 304 = V2A

E. Location: Exterior Tile expansion joints.

6.04 CORNER EXPANSION JOINT

A. Manufacturer: Schluter
   1. Series: DILEX-EKE
   2. Or approved equal.

B. Description: Profile with integrated rigid, recycled PVC perforated anchoring legs, connected at a 90-degree angle by a 3/16" (5mm) wide soft CPR movement zone that forms the visible surface.

C. Movement Zone Color: Light Beige

D. Height: As required

E. Location: Steam Room and Sauna

6.05 DECORATIVE ACCENT PROFILE

A. Manufacturers and products:
   1. Schluter: DESIGNLINE
   2. Laticrete: Decorative Border Profile (DB1)
   3. Or approved equal.

B. Description: Vertical tile divider. 1" wide

C. Material and Finish: ATGB brushed nickel anodized aluminum or as selected by architect

D. Height: As required. See drawings

6.06 TILE FLOOR EDGE TRANSITION

A. Manufacturer: Schluter
   1. Series: RENO RAMP
   2. Laticrete: Transition profile (TR4)
   3. Or approved equal.

B. Description: Material transition

C. Material and Finish: Anodized Aluminum, or as selected by architect

D. Height: As required

E. Location: Transition between tile and concrete

6.07 TILE FLOOR SAME HEIGHT TRANSITION

A. Manufacturers and products:
   1. Schluter: DECO
   2. Laticrete:
   3. Or approved equal.

B. Description: Same height transition.

C. Material and Finish: Solid Brass, or as selected by Architect.

D. Height: As required

E. Location: Transition between tiles, Transition between tile and contrasting stone strip at Grand Stair Nosing.

6.08 SQUARE OUTSIDE CORNER

A. Manufacturers and products:
   1. Schluter: QUADEC

2. Or approved equal.

B. Laticrete: Square edge profile (SQ2)

C. Description: Edge Protection

D. Material and Finish: As selected by architect

E. Height: As required.

SCHEDULE OF FACEPLATE AND WIRING DEVICES COLORS BY WALL FINISH:

7.01 WHITE FACEPLATES ARE TO BE USED ON WALLS WITH THE FOLLOWING FINISHES"

A. TL-1 (series)

B. TL-11 (series)

C. TL-22 (series)

D. TL-24 (series)

E. TL-27 (series)

7.02 ALL OTHER FACEPLATES AND WIRING DEVICES INSTALLED ON TILE ARE TO BE BLACK.

END OF SECTION

SECTION 09 51 13
ACOUSTICAL PANEL CEILINGS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Acoustical ceiling tiles and exposed suspension systems for ceilings.

B. Products furnished, but not installed under this Section, include anchors, clips, and other ceiling attachment devices to be cast in concrete at ceilings.

1.02 RELATED REQUIREMENTS

A. Section 01 33 00 - Submittal Procedures.

B. Section 01 40 00 - Quality Requirements.

C. Section 01 60 00 - Product Requirements.

D. Section 01 92 00 - Facility Operation and Maintenance.

E. Section 05 21 00 - Steel Decking.

F. Section 07 92 00 - Joint Sealants.

G. Section 09 21 16 - Gypsum Board Assemblies.

H. Section 09 51 14 - Acoustic Panel Ceilings Schedule.

I. Section 09 74 16 - Flexible Wood Veneer Wall Covering.

J. Section 09 84 14 - Acoustic Stretched-Fabric Wall Systems.

K. Section 09 84 30 - Sound Absorbing Wall and Ceiling Units.

L. Section 09 91 00 - Painting.

1.03 REFERENCE STANDARDS

A. ASCE 7 - Minimum Design Loads and Associated Criteria for Buildings and Other Structures; Most Recent Edition Cited by Referring Code or Reference Standard.

B. ASTM A641/A641M - Standard Specification for Zinc-Coated (Galvanized) Carbon Steel Wire; 2019.

C. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process; 2023.

D. ASTM C635/C635M - Standard Specification for Manufacture, Performance, and Testing of Metal Suspension Systems for Acoustical Tile and Lay-in Panel Ceilings; 2022.

E. ASTM C636/C636M - Standard Practice for Installation of Metal Ceiling Suspension Systems for Acoustical Tile and Lay-In Panels; 2019.

F. ASTM D3274 - Standard Test Method for Evaluating Degree of Surface Disfigurement of Paint Films by Fungal or Algal Growth, or Soil and Dirt Accumulation; Current Edition, Including All Revisions.

G. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2023d.

H. ASTM E795 - Standard Practices for Mounting Test Specimens during Sound Absorption Tests; 2023.

I. ASTM E1190 - Standard Test Methods for Strength of Power-Actuated Fasteners Installed in Structural Members; Current edition.

J. ASTM E1264 - Standard Classification for Acoustical Ceiling Products; 2023.

K. ASTM G21 - Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi; 2015, with Editorial Revision (2021).

L. CISCA (AC) - Acoustical Ceilings: Use and Practice; 1999.

M. NAAMM AMP 500-06 - Metal Finishes Manual; 2006.

1.04 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Samples for Verification: For each component indicated and for each exposed finish required, prepared on Samples of size indicated below.
   1. Acoustical Panel: Set of 6-inch- (150-mm-) square Samples of each type, color, pattern, and texture.
   2. Exposed Suspension System Members, Moldings, and Trim: Set of 12-inch- (300-mm-) long Samples of each type, finish, and color.

C. Research/Evaluation Reports: For each acoustical panel ceiling and components and anchor and fastener type.

D. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

E. Operation and Maintenance Data: Submit O&M manuals according to the requirements of Section 01 92 00 - Facility Operation and Maintenance.

F. Delegated-Design Submittal: For seismic restraints for ceiling systems.
   1. Include design calculations for seismic restraints including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.05 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Source Limitations: Obtain each type of acoustical ceiling panel and supporting suspension system through one source from a single manufacturer.

C. Fire-Test-Response Characteristics: Provide acoustical panel ceilings that comply with the following requirements:
   1. Surface-Burning Characteristics: Provide acoustical panels with the following surface-burning characteristics complying with ASTM E1264 for Class A materials as determined by testing identical products per ASTM E84.

D. Engineering Responsibility: Preparation of shop drawings, design calculations and other structural data by a qualified professional engineer.

E. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of cold-formed metal framing that are similar to those indicated for this Project in material, design and extent.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Deliver acoustical panels, suspension system components, and accessories to Project site in original, unopened packages and store them in a fully enclosed, conditioned space where they will be protected against damage from moisture, humidity, temperature extremes, direct sunlight, surface contamination, and other causes.

B. Before installing acoustical panels, permit them to reach room temperature and a stabilized moisture content.

C. Handle acoustical panels carefully to avoid chipping edges or damaging units in any way.

1.07 PROJECT CONDITIONS

A. Environmental Limitations: Do not install acoustical panel ceilings until spaces are enclosed and weatherproof, wet work in spaces is complete and dry, work above ceilings is complete, and ambient

temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

1. Pressurized Plenums: Operate ventilation system for not less than 48 hours before beginning acoustical panel ceiling installation.

1.08 COORDINATION

A. Coordinate layout and installation of acoustical panels and suspension system with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system, and partition assemblies.

1.09 SYSTEM DESCRIPTION

A. Loading:
   1. Design and size components to withstand gravity and seismic loads in accordance with the building code. See ASCE 7, Chapter 13.

B. See Architectural Drawings Sheet G010 for Seismic Design Category designation.

C. Structural Performance. See ASCE 7, 13.5.6:
   1. IBC Seismic Categories C
      a. Heavy Duty Grid.
      b. Design and install in accordance with ASTM C635/C635M and ASTM C636/C636M.
      c. Interior suspended ceilings, soffits, and bulkheads: Maintain deflection of not more than L/360 of distance between supports.

D. Seismic Standard: Provide acoustical panel ceilings designed and installed to withstand the effects of earthquake motions according to the following:
   1. Delegated Design: Engage a qualified professional engineer, licensed in the State of Utah, to design seismic restraints for ceiling systems.
   2. Suspended ceilings shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

PART 2 PRODUCTS

2.01 ACOUSTICAL PANELS, GENERAL

A. Recycled Content: Provide acoustical panels with recycled content such that postconsumer recycled content plus one-half of pre-consumer recycled content constitutes a minimum of 5 percent by weight.

B. Acoustical Panel Standard: Provide manufacturer's standard panels of configuration indicated that comply with ASTM E1264 classifications as designated by types, patterns, acoustical ratings, and light reflectance, unless otherwise indicated.
   1. Mounting Method for Measuring NRC: Type E-400; plenum mounting in which face of test specimen is 15-3/4 inches (400 mm) away from test surface per ASTM E795.

C. Acoustical Panel Colors and Patterns: Match appearance characteristics indicated for each product type.

D. Broad Spectrum Antimicrobial Fungicide and Bactericide Treatment: Provide acoustical panels treated with manufacturer's standard antimicrobial formulation that inhibits fungus, mold, mildew, and gram-positive and gram-negative bacteria and showing no mold, mildew, or bacterial growth when tested according to ASTM D3274 and evaluated according to ASTM D3274 or ASTM G21.

2.02 ACOUSTICAL PANELS FOR ACOUSTICAL PANEL CEILING

A. See Attached Schedule.

B. Classification: Provide panels complying with ASTM E1264.

2.03 METAL SUSPENSION SYSTEMS, GENERAL

A. Recycled Content: Provide products made from steel sheet with average recycled content such that postconsumer recycled content plus one-half of preconsumer recycled content is not less than 25 percent.

B. Metal Suspension System Standard: Provide manufacturer's standard direct-hung metal suspension systems of types, structural classifications, and finishes indicated that comply with applicable requirements in ASTM C635/C635M.

C. Finishes and Colors, General: Comply with NAAMM AMP 500-06 "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes. Provide manufacturer's standard factory-applied finish for type of system indicated.

D. Attachment Devices: Size for five times the design load indicated in ASTM C635/C635M, Table 1, "Direct Hung," unless otherwise indicated. Comply with seismic design requirements.
   1. Powder-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching hangers of type indicated, and with capability to sustain, without failure, a load equal to 10 times that imposed by ceiling construction, as determined by testing per ASTM E1190, conducted by a qualified testing and inspecting agency.

E. Wire Hangers, Braces, and Ties: Provide wires complying with the following requirements:
   1. Zinc-Coated, Carbon-Steel Wire: ASTM A641/A641M, Class 1 zinc coating, soft temper.
   2. Size: Select wire diameter so its stress at 3 times hanger design load (ASTM C635/C635M, Table 1, "Direct Hung") will be less than yield stress of wire, but provide not less than 0.106-inch-(2.69-mm-) diameter wire.

F. Hanger Rods Flat Hangers: Mild steel, zinc coated or protected with rust-inhibitive paint.

2.04 METAL SUSPENSION SYSTEM FOR ACOUSTICAL PANEL CEILING

A. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include the following:
   1. See Schedule.

B. Capped, Double-Web, Hot-Dip Galvanized, G30 Steel Suspension System: Main and cross runners roll formed from cold-rolled steel sheet, hot-dip galvanized according to ASTM A653/A653M, G30 coating designation, with prefinished, cold-rolled, aluminum caps on flanges.
   1. See schedule for width.
   2. Structural Classification: See part 1.10 above for requirements.
   3. Face Design: Flat, flush.
   4. Face Finish: White satin. Unless noted otherwise.

C. ACT hold-down clips and related materials.
   1. Hold-Down Clips: Manufacturer's standard hold-down.
   2. Impact Clips: Manufacturer's standard impact-clip system designed to absorb impact forces against acoustical panels.
   3. Seismic Clips: Manufacturer's standard seismic clips designed to secure acoustical panels in place during a seismic event.
   4. Seismic Stabilizer Bars: Manufacturer's standard perimeter stabilizers designed to accommodate seismic forces.
   5. Seismic Struts: Manufacturer's standard compression struts designed to accommodate seismic forces.

2.05 METAL EDGE MOLDINGS AND TRIM

A. Products: Subject to compliance with requirements, provide the following:
   1. See Schedule.

B. Roll-Formed, Sheet-Metal Edge Moldings and Trim: Manufacturer's standard flat wall angle, unless other profile indicated, for edges and penetrations that comply with seismic design requirements; formed from sheet metal of same material, finish, and color as that used for exposed flanges of suspension system runners.

C. Fasteners: Shall be prefinished or painted white.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine substrates, areas, and conditions, including structural framing to which acoustical panel ceilings attach or abut, with Installer present, for compliance with requirements specified in this and other Sections that affect ceiling installation and anchorage and with requirements for installation tolerances and other conditions affecting performance of acoustical panel ceilings. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Measure each ceiling area and establish layout of acoustical panels to balance border widths at opposite edges of each ceiling. Avoid using less-than-half-width panels at borders, and comply with layout shown on reflected ceiling plans.

3.03 ACOUSTICAL PANEL CEILING INSTALLATION

A. General: Based on Seismic Design Category, install acoustical panel ceilings to comply with ASTM C636/C636M and seismic design requirements indicated, per manufacturer's written instructions and CISCA (AC) "Ceiling Systems Handbook".
   1. Install suspension systems with hangers supported only from building structural members. Locate hangers not less than 6 inches from each end and spaced 4'-0" along each carrying channel or direct-hung runner, unless otherwise indicated, leveling to tolerance of 1/8" in 12'-0". Comply with detail on drawings for seismic bracing.

B. Suspend ceiling hangers from building's structural members and as follows:
   1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structure or of ceiling suspension system.
   2. Splay hangers only where required to miss obstructions; offset resulting horizontal forces by bracing, counter-splaying, or other equally effective means.
   3. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with location of hangers at spacings required to support standard suspension system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices.
   4. Secure wire hangers to ceiling suspension members and to supports above with a minimum of three tight turns. Connect hangers directly either to structures or to inserts, eye screws, or other devices that are secure and appropriate for substrate and that will not deteriorate or otherwise fail due to age, corrosion, or elevated temperatures.
   5. Do not support ceilings directly from permanent metal forms or floor deck. Fasten hangers to cast-in-place hanger inserts, post-installed mechanical or adhesive anchors, or powder-actuated fasteners that extend through forms into concrete.
   6. When steel framing does not permit installation of hanger wires at spacing required, install carrying channels or other supplemental support for attachment of hanger wires.
   7. Do not attach hangers to steel deck tabs.
   8. Do not attach hangers to steel roof deck.
   9. Attach hangers to structural members.
   10. Space hangers not more than 48 inches (1200 mm) o.c. along each member supported directly from hangers, unless otherwise indicated; provide hangers not more than 8 inches (200 mm) from ends of each member.
   11. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards and publications.

C. Secure bracing wires to ceiling suspension members and to supports with a minimum of four tight turns. Suspend bracing from building's structural members as required for hangers, without attaching to permanent metal forms, steel deck, or steel deck tabs. Fasten bracing wires into concrete with cast-in-place or post-installed anchors.

D. Install edge moldings and trim of type indicated at perimeter of acoustical ceiling area and where necessary to conceal edges of acoustical panels.

1. Screw attach moldings to substrate at intervals not more than 16 inches (400 mm) o.c. and not more than 3 inches (75 mm) from ends, leveling with ceiling suspension system to a tolerance of 1/8 inch in 12 feet (3.2 mm in 3.6 m). Miter corners accurately and connect securely.
2. Do not use exposed fasteners, including pop rivets, on moldings and trim.

E. Install suspension system runners so they are square and securely interlocked with one another. Remove and replace dented, bent, or kinked members.

F. Install acoustical panels with undamaged edges and fit accurately into suspension system runners and edge moldings. Scribe and cut panels at borders and penetrations to provide a neat, precise fit.
1. Arrange directionally patterned acoustical panels as follows:
   a. Install panels with pattern running in one direction parallel to long axis of space.
2. For square-edged panels, install panels with edges fully hidden from view by flanges of suspension system runners and moldings.

G. Install acoustical panel hold-down clips at ACT-1 installed in entry vestibule.

3.04 CLEANING

A. Clean exposed surfaces of acoustical panel ceilings, suspended decorative grid ceiling systems, including trim, edge moldings, and suspension system members. Comply with manufacturer's written instructions for cleaning and touchup of minor finish damage. Remove and replace ceiling components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage.

SECTION 09 51 14
ACOUSTICAL PANEL CEILING - SCHEDULE

ACOUSTICAL PANELS FOR ACOUSTICAL PANEL CEILING

1.01 ACT-2:

A. Manufacturer: Armstrong

B. Product: Ultima Vector #1920

C. Color: White

D. LR: 0.86

E. NRC: 0.7

F. CAC: 35

G. Edge Detail: Angled Tegular

H. Thickness: 3/4”

I. Size: 24”’ x 24”

J. Metal Suspension System
   1. Manufacturer: Armstrong
   2. Product: Suprafine
   3. Size: 9/16”

K. Color: White Satin

L. Location: Coffee Bar

M. Contact: Lisa Cavataio E-mail: lycavataio@armstrongceilings.com Phone: 773-882-0299

N. URL: https://www.armstrongceilings.com/commercial/en/commercial-ceilings-walls/ultima-vector-ceiling-tiles/item/1920.html

1.02 ACT-7

A. Manufacturer: USG Interiors, Inc.; Sheetrock brand Clima Plus Vinyl No. 3260

B. Type and Form: Type XX, other types; described as high-density, ceramic- and mineral-base panels with scrubbable finish, resistant to heat, moisture, and corrosive fumes

C. Pattern: G (smooth)

D. Color: White

E. LR: Not less than 0.77

F. NRC: Not less than .1

G. CAC: Not less than 35

H. Edge/Joint Detail: Square

I. Thickness: 1/2".

J. Modular Size: 24 by 24"

K. Metal Suspension System.
   1. Manufacturer: USG
   2. Product: Donn DX
   3. Size: 15/16”
   4. Color: Flat White

L. Location: Cafe Service, Kitchen, Bistro

SCHEDULE OF FACEPLATE AND WIRING DEVICES COLORS BY WALL FINISH:

3.01 BROWN FACEPLATES ARE TO BE USED ON WALLS WITH THE FOLLOWING FINISHES:

A. ACT-19

B. ACT-21

3.02 ALL OTHER FACEPLATES AND WIRING DEVICES INSTALLED ON ACT CEILINGS ARE TO BE WHITE.

END OF SECTION

This page intentionally left blank

SECTION 09 54 23
LINEAR METAL CEILINGS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Linear metal ceilings.
   1. Interior Application.
   2. Exterior Application.

1.02 RELATED REQUIREMENTS

A. Section 01 33 00 - Submittal Procedures.

B. Section 01 40 00 - Quality Requirements.

C. Section 01 60 00 - Product Requirements.

D. Section 01 92 00 - Facility Operation and Maintenance.

E. Section 05 21 00 - Steel Decking.

F. Section 07 92 00 - Joint Sealants.

G. Section 09 21 16 - Gypsum Board Assemblies.

H. Section 09 51 13 - Acoustical Panel Ceilings.

1.03 REFERENCE STANDARDS

A. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process; 2023.

B. ASTM B209/B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate; 2021a.

C. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes; 2021.

D. ASTM C423 - Standard Test Method for Sound Absorption and Sound Absorption Coefficients by the Reverberation Room Method; 2023.

E. ASTM C636/C636M - Standard Practice for Installation of Metal Ceiling Suspension Systems for Acoustical Tile and Lay-In Panels; 2019.

F. ASTM C665 - Standard Specification for Mineral-Fiber Blanket Thermal Insulation for Light Frame Construction and Manufactured Housing; 2023.

G. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2023d.

H. ASTM E90 - Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements; 2023.

I. ASTM E413 - Classification for Rating Sound Insulation; 2022.

J. ASTM E580/E580M - Standard Practice for Installation of Ceiling Suspension Systems for Acoustical Tile and Lay-in Panels in Areas Subject to Earthquake Ground Motions; 2022.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination: Coordinate work of this section with installation of mechanical and electrical components and with other construction activities affected by work of this section.

B. Preinstallation Meeting: Convene one week before starting work of this section.

C. Sequencing: Supply hanger clips during steel deck erection. Supply additional hangers and inserts as required.

1.05 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements for submittal procedures.

B. Product Data: Furnish for component profiles.

C. Shop Drawings: Indicate reflected ceiling plan.

D. Samples: Submit two samples illustrating color and finish of components exposed to view.

E. Installer's qualification statement.

F. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.
   1. Extra Linear Panels: Ten, standard length.

G. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

1.06 QUALITY ASSURANCE

A. Installer Qualifications: Company specializing in performing the work of this section.
   1. Approved by metal ceiling manufacturer.

B. Products Requiring Electrical Connection: Listed and classified by Underwriters Laboratories Inc.

1.07 DELIVERY, STORAGE, AND HANDLING

A. See Section 01 74 19 - Construction Waste Management and Disposal for packaging waste requirements.

1.08 WARRANTY

A. See Section 01 78 00 - Closeout Submittals for additional warranty requirements.

B. Manufacturer Warranty: Provide 1 manufacturer warranty; include coverage for corrosion resistance and discoloration of surface finish.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Linear Metal Ceilings:
   1. Certainteed; Box Series:
      a. LMC-2B, Interior Application:
         1) Series: Deep Box 4
         2) Color: Regatta Teak
         3) Size: 4" x 16'-0"
         4) Panel Depth: 1"
         5) Carrier Spacing: 4' OC.
         6) Acoustic Panel Backer: 1 1/2" Polywrapped Fiberglass.
         7) Overall Depth: 2 1/8"
         8) Contact: Paul Teagan; 763.475.1340
         9) URL: https://certainteed.widen.net/view/pdf/awqtqqgj2s/metal-box-series-data-sheet-e-us-2206ctc.pdf?t.download=true&u=ictwif
      b. LMC-2C, Exterior Application:
         1) Series: Deep Box 4
         2) Color: Regatta Teak
         3) Size: 4" x 16'-0"
         4) Panel Depth: 1"
         5) Carrier Spacing: 2' OC.
         6) Acoustic Panel Backer: None, provide black metal filler strip by Manufacturer.
         7) Overall Depth: 2 1/8"
         8) Contact: Paul Teagan; 763.475.1340
         9) URL: https://certainteed.widen.net/view/pdf/awqtqqgj2s/metal-box-series-data-sheet-e-us-2206ctc.pdf?t.download=true&u=ictwif
   2. Substitutions: Not permitted.

2.02 LINEAR METAL CEILINGS

A. Linear Metal Ceiling System: Panels, suspension members, trim, and accessories as required to provide a complete system.

B. Performance Requirements:
   1. Design to support imposed loads of indicated items without eccentric loading of supports.
   2. Design for maximum deflection of 1/360 of span.
   3. Surface Burning Characteristics: Flame spread index of >25, smoke developed index of >50, when tested in accordance with ASTM E84.

2.03 COMPONENTS

A. Linear Metal Panels:
   1. Type: Linear panel with reveals; snap-in installation.
      a. Size and Configuration: As indicated on drawings.
      b. Panel Profile: Box shaped.
      c. Spacing: 3/4 inch (18 mm) reveal between panels.
   2. Material: Aluminum sheet, ASTM B209/B209M.
      a. Finish: Wood Veneer. See above for type.

B. Edge Molding, Expansion Joints, and Splices: Same material, thickness, and finish as linear panels. Matte finish, Black.
   1. Metal Filler Strip: As recommended by Manufacturer for Exterior Application.

C. End Caps: Formed metal; same color and finish as sight-exposed surfaces of linear panels.

D. Accessories: Stabilizer bars as required for suspended grid system; sight-exposed surfaces same color and finish as sight-exposed surfaces of linear panels.

E. Suspension Members: Formed steel sections, with integral attachment points; galvanized finish; size and type to suit application, seismic requirements, and ceiling system flatness requirement specified.

F. Suspension Wire: Steel, annealed, galvanized finish, 9 gauge, 0.1144 inch (2.91 mm) diameter.

G. Subgirt Members: Hot-dip galvanized steel sheet, ASTM A653/A653M, with G90/Z275 coating; formed to resist imposed loads and to provide attachment for linear ceiling and accessories.

H. Insulation: Acoustical Insulation where indicated.
   1. Polywrapped Fiberglass acoustic insulation by Manufacturer.
      a. Thickness: 1.5"
      b. Density: 1.5 pcf.
      c. Color: Black.
      d. Finish: Matte.

2.04 COORDINATION WITH WORK OF OTHER SECTIONS

A. Color of faceplates and wiring devices installed in linear metal ceilings:
   1. Brown.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify existing conditions before starting work.

B. Verify that layout of hangers will not interfere with other work.

C. Verify that required utilities are available, in proper location, and ready for use.

D. Verify that field measurements are as indicated.

3.02 INSTALLATION

A. Suspension Components:
   1. Install after above-ceiling work is complete in accordance with manufacturer's instructions, ASTM C636/C636M, and ASTM E580/E580M.

2. Hang carrying members independent of walls, columns, ducts, light fixtures, pipe, and conduit; where carrying members are spliced, avoid visible displacement of face panels with adjacent panels.
3. Where ducts or other equipment prevent regular spacing of hangers, reinforce nearest adjacent hangers to span the required distance.

B. Linear Metal Ceiling:
1. Install linear panels, baffles, and other system components in accordance with manufacturer's instructions.
2. Stagger end joints minimum 12 inches (300 mm).
3. Provide expansion joints to accommodate plus or minus 1 inch (25 mm) movement and maintain visual closure.
4. Install end caps at sight-exposed ends of linear panels.
5. Exercise care when site cutting sight-exposed finished components to ensure surface finish is not defaced.

C. Insulation: Install above panel members; fit tight between grid members; place insulation with facing side down.

3.03 CLEANING

A. Clean exposed surfaces.

B. Replace damaged or abraded components.

END OF SECTION

SECTION 09 65 19
RESILIENT FLOORING

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Rubber tile flooring.
   2. Vinyl composition floor tile.
   3. Static dissipative tile, with copper grounding strips.
   4. Luxury vinyl plank floor tile.
   5. Resilient Sheet/Roll flooring.
   6. Resilient molding accessories.
   7. Floor paint.

1.02 RELATED SECTIONS

A. Section 01 33 00 - Submittal Procedures.

B. Section 01 40 00 - Quality Requirements.

C. Section 01 60 00 - Product Requirements.

D. Section 01 92 00 - Facility Operation and Maintenance.

E. Section 03 30 00 - Cast in Place Concrete.

F. Section 09 05 61 - Common Work Results for Flooring Preparation.

G. Section 09 30 00 - Tile.

H. Section 09 64 00 - Wood Flooring.

I. Section 09 64 66 - Wood Athletic Flooring.

J. Section 09 65 20 - Resilient Tile Flooring Schedules.

K. Section 09 64 66 - Wood Athletic Flooring.

L. Section 09 65 66 - Resilient Athletic Sports Surface.

M. Section 09 68 13 - Tile Carpeting.

1.03 REFERENCE STANDARDS

A. 40 CFR 59, Subpart D - National Volatile Organic Compound Emissions Standards for Consumer and Commercial Products; Current Edition.

B. ASTM F710 - Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring; 2022.

C. ASTM F1869 - Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride; 2023.

D. ASTM E84 Standard Test Method for Surface Burning Characteristics of Building Materials.

E. GBC, Section 5.504.4.6 - Resilient flooring systems.

1.04 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Samples for Verification: Full-size units of each color and pattern of floor tile required.

C. Samples for Color Selection: For each of the following items.
   1. Floor Transitions.
   2. Stair Nosings.

D. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.

3. See Sections 01 33 00 and 01 60 00.

E. Operation and Maintenance Data: Submit O&M manuals according to the requirements of Section 01 92 00 - Facility Operation and Maintenance.

1.05 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Installer Qualifications: A qualified installer who employs workers for this Project who are competent in techniques required by manufacturer for flooring installation indicated.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Store flooring and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by manufacturer, but not less than 55 deg F (13 deg C) or more than 90 deg F (32 deg C). Store floor tiles on flat surfaces.

1.07 PROJECT CONDITIONS

A. Maintain ambient temperatures within range recommended by manufacturer, but not less than 65 deg F (18 deg C) or more than 86 deg F (30 deg C), in spaces to receive floor tile during the following time periods:
   1. 48 hours before installation.
   2. During installation.
   3. 48 hours after installation.

B. Until Substantial Completion, maintain ambient temperatures within range recommended by manufacturer, but not less than 65 deg F (18 deg C) or more than 86 deg F (30 deg C).

C. Close spaces to traffic during flooring installation.

D. Close spaces to traffic for 48 hours after flooring installation.

E. Install flooring after other finishing operations, including painting, have been completed.

1.08 WARRANTY

A. Provide Manufacturer's standard warranty for each tile/system.

PART 2 PRODUCTS

2.01 RUBBER FLOOR TILE

A. See Attached Schedule.

2.02 VINYL COMPOSITION FLOOR TILE

A. See Attached Schedule.

2.03 STATIC DISSIPATIVE TILE FLOORING

A. See Attached Schedule.

2.04 LUXURY VINYL PLANK TILE

A. See Attached Schedule.

2.05 RESILIENT ROLL/SHEET FLOORING

A. See Attached Schedule

2.06 RESILIENT BASE

A. See Attached Schedule.

2.07 VINYL RESILIENT BASE

A. See Attached Schedule.

2.08 RESILIENT MOLDING ACCESSORIES

A. Flooring Transition:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    a. Johnsonite. (Basis of Design)
    b. Armstrong World Industries, Inc.
    c. Roppe Corporation, USA.
    d. VPI, LLC; Floor Products Division.
2. Description: Carpet edge, reducer strip for resilient floor covering, and transition strips.
3. Material: Rubber.
4. Profile and Dimensions: As indicated.
5. Transition type:
    a. LVT to Isolated floor slab:
        1) Manufacturer: Johnsonite
        2) Product: CD-XX-C and Track Base MT-00A
        3) Color: TB1 Peppercorn
        4) Location: Yoga, Group Fitness, see drawings.
    b. LVT to VCT:
        1) Manufacturers: Johnsonite
        2) Product: SLT-XX-A Slimline Transition
        3) Color: TB1 Peppercorn
        4) Location: Fitness Floor
    c. LVT to CPT:
        1) Manufacturers: Johnsonite
        2) Product: SLT-XX-F Slimline Transition
            (a) Color: TB1 Peppercorn
        3) Location: Spa Treatment to waiting
    d. LVT to Resilient Athletic Sports Surface (Racquet Sports):
        1) Manufacturer and Products:
            (a) Schluter Vinpro-U
            (b) Laticrete: Transition TR1
        2) Finish: Brushed chrome anodized aluminum (ACGB)
        3) Dimension: Coordinate with LVT depth
        4) Location: Pickleball
    e. LVT to Resilient Sheet Flooring or Rubber Tile Flooring:
        1) Manufacturer: Johnsonite
        2) Product: CD-XX-X and Track Base MT-00A
        3) Color: TB1 Peppercorn
        4) Dimension: Coordinate with flooring depths
        5) Location: Fitness Floor, LT Kid's Gym, and Movement Studio
    f. Rubber Floor to Resilient Sheet Flooring
        1) Manufacturer: Johnsonite
        2) Product: CCA-XX Adaptor
        3) Color: TB1 Peppercorn
        4) Location: Group Fitness Studio to Fitness Floor
    g. Resilient Sheet Flooring (RSF-3) to Resilient Sheet Flooring (RSF-4)
        1) Manufacturer: Johnsonite
        2) Product: CD-XX-X and Track Base MT-00A
        3) Color: TB1 Peppercorn
        4) Location: Movement Studio
    h. Resilient Sheet Flooring to Concrete
        1) Manufacturers: Johnsonite
        2) Product: CD-XX-X and Track Base MT-00A
        3) Color: TB1 Peppercorn

4) Dimension: Coordinate with flooring depths
5) Location: Fitness Floor, LT Kid's Gym, and Movement Studio

i. LVT to Concrete:
1) Manufacturer and products:
(a) Schluter; Vinpro-U
(b) Laticrete; Transition TR1
2) Finish: Brushed chrome anodized aluminum (ACGB)

j. Rubber Floor to Concrete
1) Manufacturers: Johnsonite
2) Product: CTA-TB1-P
3) Color: TB1 Peppercorn
4) Location: Fitness Floor

k. Levelers:
1) LS-40X
(a) Manufacturer: Johnsonite
(b) Color: Black
(c) Location: Floor transitions as necessary.

B. Stair Nosing:
1. Rubber stair nosing:
a. Unless indicated otherwise on drawings, provide rubber stair nosings as follows:
b. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1) Johnsonite.
2) Armstrong World Industries, Inc.
3) Roppe Corporation, USA.
4) VPI, LLC; Floor Products Division.
c. Description: Where stair treads are finished in resilient flooring, furnish matching nosings.
d. Material: To match tread material.
e. Profile and Dimensions: As indicated.
f. Colors and Patterns: As selected by Architect from full range of industry colors.
2. Wood stair nosing:
a. Where indicated on drawings, furnish wood nosings as follows:
1) Solid wood.
(a) Species and finish as indicated on drawings.

C. Resilient Expansion Covers:
1. Manufacturers and products: Subject to compliance with requirements, provide one of the following:
a. Johnsonite: CD-XX-C.
b. Armstrong World industries, Inc.
c. Roppe Corporation, USA.
d. VPI, LLC; Floor Products Division.
2. Description: Covering for expansion joints in LVT material on details.
3. Material and Color: Match floor material.

D. Aluminum Expansion Covers: Provide type as shown on details.
1. Aluminum Transitions:
a. Inpro Architectural Products 801 Series floor expansion joint cover (ADA saddle threshold).
1) Size: coordinate with size of joint.
b. Or approved equal.

2.09 FLOOR PAINT

A. Where indicated on drawings, apply paint at play surfaces:

1. Manufacturer and Product:
    a. Endura Low VOC EX-2C Topcoat Gameline Coating.
    b. Endura Prepare Thinner II.
2. Description: two component polyurethane paint and adhesion promoter.
3. 2" wide lines, color as indicated on drawings.

2.10 INSTALLATION MATERIALS

A. Trowelable Leveling and Patching Compounds: Latex-modified, portland cement based or blended hydraulic-cement-based formulation provided or approved by manufacturer for applications indicated.

B. Static Dissipative Tile Adhesive: 2 in. (5.08 cm) wide x 24 in. (60.96 cm) long copper ground-connection strips under the tile and wall base as recommended by the flooring manufacturer.

C. Rubber Tile Adhesives: Certified by the Manufacturer: PU 105 polyurethane adhesive or EP 55 epoxy adhesive. Refer to instruction manual of adhesives provided by rubber athletic flooring Manufacturer.

D. Floor Polish: Provide protective liquid floor polish products as recommended by manufacturer.

E. Adhesives: Water-resistant, mildew-resistant, no staining type to suit products and subfloor conditions indicated, that complies with flammability requirements for installed resilient tile and as recommended/ required by the manufacturer for warrantee acceptance or provided by resilient tile manufacturer for the type of flooring being installed.

F. Use adhesives that comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):

G. VCT and Asphalt Tile Adhesives: 50 g/L.

H. Cove Base Adhesives: 50 g/L.

I. Rubber Floor Adhesives: 60 g/L.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine substrates, with Installer present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.

B. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of floor tile.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Prepare substrates according to manufacturer's written instructions to ensure adhesion of resilient products.

B. Concrete Substrates: Prepare according to ASTM F710.
1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
2. Remove substrate coatings and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by manufacturer. Do not use solvents.
3. Alkalinity and Adhesion Testing: Perform tests recommended by manufacturer. Proceed with installation only after substrates pass testing.
4. Moisture Testing: Perform tests recommended by manufacturer. Proceed with installation only after substrates pass testing.
    a. Perform anhydrous calcium chloride test, ASTM F1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. (1.36 kg of water/92.9 sq. m) in 24 hours.

C. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound and remove bumps and ridges to produce a uniform and smooth substrate.

D. Do not install floor tiles until they are same temperature as space where they are to be installed.
   1. Move resilient products and installation materials into spaces where they will be installed at least 48 hours in advance of installation.

E. Sweep and vacuum clean substrates to be covered by resilient products immediately before installation.

3.03 RESILIENT FLOORING INSTALLATION

A. Comply with manufacturer's written instructions for installing floor.

B. Lay out floor tiles/rolls from center marks established with principal walls, discounting minor offsets, so tiles/rolls at opposite edges of room are of equal width. Adjust as necessary to avoid using cut widths that equal less than one-half unit at perimeter.
   1. Lay tiles/rolls square with room axis.

C. Expansion Joints: Provide expansion joints as required by manufacturer.
   1. Joints to be located as indicated on drawings, or placed equidistant throughout surface.
   2. Install cover strips as specified.

D. Match floor tiles/rolls for color and pattern by selecting from cartons in the same sequence as manufactured and packaged, if so numbered. Discard broken, cracked, chipped, or deformed tiles.
   1. Unroll and install all rolled goods in the same direction.

E. Scribe, cut, and fit floor tiles/rolls to butt neatly and tightly to vertical surfaces and permanent fixtures including built-in furniture, cabinets, pipes, outlets, and door frames.

F. Extend floor tiles/rolls into toe spaces, door reveals, closets, and similar openings. Extend floor tiles/rolls to center of door openings.

G. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on floor tiles/rolls as marked on substrates. Use chalk or other nonpermanent, nonstaining marking device.

H. Install floor tiles/cut rolls on covers for telephone and electrical ducts, building expansion-joint covers, and similar items in finished floor areas. Maintain overall continuity of color and pattern between pieces of material installed on covers and adjoining material. Tightly adhere edges to substrates that abut covers and to cover perimeters.

I. Adhere floor tiles/rolls to flooring substrates using a full spread of adhesive applied to substrate to produce a completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.

J. Install copper grounding strips into adhesive in strict accordance with manufacturer’s written instructions.

K. Roll flooring with a 100-pound (45.36 kilogram) roller. Refer to specific rolling instructions of the flooring manufacturer.

3.04 RESILIENT BASE INSTALLATION

A. Comply with manufacturer's written instructions for installing resilient base.

B. Apply resilient base to walls, columns, pilasters, casework and cabinets in toe spaces, and other permanent fixtures in rooms and areas where base is required.

C. Install resilient base in lengths as long as practicable without gaps at seams and with tops of adjacent pieces aligned.

D. Tightly adhere resilient base to substrate throughout length of each piece, with base in continuous contact with horizontal and vertical substrates. Do not stretch resilient base during installation.

E. On masonry surfaces or other similar irregular substrates, fill voids along top edge of resilient base with manufacturer's recommended adhesive filler material.

F. Preformed Corners: Install preformed corners before installing straight pieces.

G. Job-Formed Corners:

1. Outside Corners: Use straight pieces of maximum lengths possible. Form without producing discoloration (whitening) at bends.
2. Inside Corners: Use straight pieces of maximum lengths possible.

H. Mitered Corner
1. Where two base pieces meet at a corner, inside or outside, both shall be mitered.
2. Butting base materials together at corners is not acceptable.

3.05 RESILIENT MOLDING INSTALLATION

A. Comply with manufacturer's written instructions for installing resilient accessories.

B. Resilient Molding Accessories: Butt to adjacent materials and tightly adhere to substrates throughout length of each piece. Install reducer strips at edges of carpet and resilient floor covering that would otherwise be exposed.

C. Place resilient edge strips tightly butted to flooring, and secure with adhesive recommended by the edge strip manufacturer. Install edge strips at edges of flooring that would otherwise be exposed.

D. Provide transition/reducing strips tapered to meet abutting materials.

E. Provide threshold of thickness and width as shown on the drawings.

F. Provide resilient edge strips of equal gauge to the flooring, homogeneous vinyl or rubber composition, tapered or bullnose edge, with color to match or contrast with the flooring, or as selected by the Architect from standard colors available.

3.06 FLOOR PAINT INSTALLATION

A. Comply with manufacturer's written instructions.

B. Prepare floor surfaces as indicated by manufacturer.
1. Mark off lines as indicated on drawings with solvent resistant tape.
2. Sand and clean.
3. Apply Prepare Thinner II to areas to be painted. Do not apply thinner to other areas.
4. Apply paint lines according to manufacturer's instructions.
5. Allow paint to cure according to manufacturer's instructions. Do not allow any traffic during this period.

3.07 CLEANING AND PROTECTION

A. Comply with manufacturer's written instructions for cleaning and protection of floor.

B. Perform the following operations immediately after completing floor installation:
1. Remove adhesive and other blemishes from exposed surfaces.
2. Sweep and vacuum surfaces thoroughly.
3. Damp-mop surfaces to remove marks and soil.

C. Protect floor products from marring, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.

D. Floor Polish: Remove soil, visible adhesive, and surface blemishes from floor surfaces before applying liquid floor polish.
1. Apply two coats.

E. Cover floor until Substantial Completion.

SECTION 09 65 20
RESILIENT FLOORING - SCHEDULE

RUBBER FLOOR TILE

1.01 RT-2:

A. Distributor: Hank's Specialties
B. Manufacturer: Tarkett / Johnsonite
C. Product: Triumph Sports and Multi-Function Rubber Flooring
D. Thickness: 3/8'' (10 mm)
E. Tiles: 24" x 24"
F. Colors: "LTF Custom Brown"
G. Installation: 1/2 Ashlar
H. Location: Fitness Floor, GTX, Alpha
I. Contact: Baker, Kellan kellan.baker@tarkett.com; Schaeffel, Andy Andy.Schaeffel@tarkett.com
J. URL: https://www.tarkettexchange.com/m/5a54639d98130cee/original/DS_TNA_TRIUMPH.pdf

1.02 RT-7:

A. Manufacturer: Ecore
B. Product: DbTile
C. Size: 24" x 24"
D. Thickness: 2.5"
E. Colors: Mocha Latte 2
F. Installation: Stacked
G. Location: Alpha
H. URL: https://ecoreathletic.com/products/rubber/performance/performance-dbtile

1.03 RT-7A:

A. Manufacturer: Ecore
B. Product: DbTile
C. Size: 24" x 24"
D. Thickness: 1"
E. Colors: Mocha Latte 2
F. Installation: Stacked
G. Location: Team Burn, Resistance
H. URL: https://ecoreathletic.com/products/rubber/performance/performance-dbtile

1.04 RT-8:

A. Manufacturer: Ecore
B. Product: Heritage Motivate
C. Size: 6.25" x 48" Plank
D. Thickness: 7 mm
E. Colors: Northwood 1005
F. Installation: 1/3 Offset
G. Location: Group Fitness #1, #2 and Yoga

H. URL: https://ecoreathletic.com/performance-vinyl-tile/heritage-motivate

VINYL COMPOSITION FLOOR TILE

2.01 VCT-1:

A. Manufacturer: Armstrong World Industries
B. Product: Standard Excelon Imperial Texture
C. Color: 51810 Washed Linen
D. Size: 12” x 12”
E. Thickness: 1/8”
F. URL: https://www.armstrongflooring.com/commercial/en-us/products/vinyl-composition-tile/std-excelon-imp-texture/item/51810.html

STATIC DISSIPATIVE TILE FLOORING

3.01 VCT-3:

A. Manufacturer: Static Smart
B. Static Dissipative Tile (SDT) ESD
C. Color: Rainer C6005
D. Size: 12”x12”
E. Thickness: 1/8”
F. Location: MDF Room
G. URL: https://staticsmart.com/resilient-flooring/esd-vinyl-tile/

LUXURY VINYL PLANK TILE

4.01 LVT-17A2

A. Manufacturer: Mohawk
B. Product: Life Wood
C. Color: Endurance
D. Size: 9” x 59”
E. Thickness: 5mm
F. Wear Layer: 20 mil
G. Installation: Glue-down: M-Force Enhanced Urethane
H. Location: General LVT
I. Contact: Casey Barbee email: casey_barbee@mohawkind.com
J. URL: https://www.mohawkgroup.com/detail/HardSurface/14795/182458/Better-Together-12-x-36

4.02 LVT-18:

A. Product: Better Together C0097
B. Color: 989 Argus
C. Size: 12” x 36”
D. Thickness: 5mm
E. Wear Layer: 20 mil
F. Finish: M-Force Enhanced Urethane
G. Installation: Glue-down

H. Location: Dark Border at LVT Fitness Floor
I. Contact: Tim Ranagan, tim_ranagan@mohawkind.com, 612.859.8982
J. URL: https://www.mohawkgroup.com/detail/HardSurface/14795/182463/Better-Together-12-x-36

4.03 LVT-19:

A. Manufacturer: Mohawk
B. Product: Better Together C0097
C. Color: 766 Argus
D. Size: 8" x 48”
E. Thickness: 5mm
F. Wear Layer: 20 mil
G. Finish: M-Force Enhanced Urethane
H. Installation: Glue-down
I. Location: LT Work
J. Contact: Tim Ranagan, tim_ranagan@mohawkind.com, 612.859.8982
K. URL: https://www.mohawkgroup.com/detail/HardSurface/14795/182463/Better-Together-12-x-36

4.04 LVT-22:

A. Manufacturer: Milliken
B. Product: Powergrid
C. Color: PWG15 Conduit
D. Size: 36” x 36”
E. Thickness: 5mm
F. Wear Layer: .7 mil
G. Finish: Reinforced Polyurethane Coating
H. Installation: Loose lay with perimeter glue
I. Location: LT Recovery, Mobility and Waiting areas
J. Contact: Cari Kapsner, cari.kapsner@milliken.com, 612.750.8585
K. URL: https://floors.milliken.com/product-catalog/en-us/design-details?region=Americas&market=Contract&catalog=Products&ColorId=31996

4.05 LVT-23A:

A. Manufacturer: Mannington
B. Product: Upward 20
C. Color: Sugared Oak UPW20-1220
D. LTF SKU: #585424
E. Size: 6" x 36"
F. Thickness: 2.5mm
G. Wear Layer: 20 mil
H. Profile: Unbeveled
I. Installation: Glue-down in random pattern
J. Location: Infant, Toddler, Activity Studio, Language Arts
K. Contact: Lisa Fahey lisa.fahey@mannington.com 612-759-5472

RESILIENT ROLL/SHEET FLOORING

5.01 RSF-1A

A. Manufacturer: Ecore
B. Product: Performance Beast
C. Size: 48" x 25' roll
D. Thickness: 10.5 mm
E. Color: ES43A Mocha Latte 2
F. Installation: See specs
G. Location: See drawings.
H. Contact: Dan Anderson dmanderson@ecoreintl.com
I. URL: https://ecoreintl.com/products/rubber/fit-collection

5.02 RSF-1B

A. Manufacturer: Ecore
B. Product: Custom Fit Collection
C. Size: 51" x 25' roll
D. Thickness: 3.2 mm
E. Color: ES43A Mocha Latte 2
F. Installation: See specs
G. Location: See drawings.
H. Contact: Dan Anderson dmanderson@ecoreintl.com
I. URL: https://ecoreintl.com/products/rubber/fit-collection

5.03 RSF-2:

A. Manufacturer: Ecore
B. Product: Performance Beast
C. Size: 48" x 25' Roll
D. Thickness: 10.5 mm
E. Color: ES506 Dark Taupe
F. Installation: Sheet
G. Location: Fitness Floor
H. Contact: Dan Anderson dmanderson@ecoreintl.com
I. URL: https://ecoreathletic.com/products/rubber/performance/performance-beast

5.04 RSF-3:

A. Manufacturer: Ecore
B. Product: Baller Motivate Class 1
C. Size: 70" x 65' Roll
D. Thickness: 7 mm
E. Color: Spike
F. Installation: Sheet

G. Location: LTKA Gym
H. Contact: Dan Anderson dmanderson@ecoreintl.com
I. URL: https://ecoreathletic.com/products/vinyl/sheet-vinyl/baller/baller-motivate-class-i

5.05 RSF-4:

A. Manufacturer: Ecore
B. Product: Performance Rally
C. Size: 48" x 50' Roll
D. Thickness: 14.5 mm
E. Color: ES43A Mocha Latte 2
F. Installation: Sheet
G. Location: LT Kid's Movement
H. Contact: Dan Anderson dmanderson@ecoreintl.com

VINYL COMPOSITION FLOOR TILE ACCESSORIES

6.01 RESILIENT BASE

A. RB-3:
   1. Color: Black
   2. Size: 4” cove base
   3. Location: Back of House at drywall walls only – Install at Drywall Only. Do not apply to CMU.
B. RB-8
   1. Color: Black
   2. Size: 4” straight base
   3. Location: Alpha Training; at artificial turf
C. RB-9
   1. Manufacturer: Johnsonite
   2. Product Profile: MW-66-F- Reveal
   3. Color: 66 Either Ore
   4. Size: 4.25” Wall Base
   5. Thickness: 0.25"
   6. Location: Reception, Offices, Spa waiting, Spa treatment, Fitness floor, Cycle, Mothers Room, LT Recovery
   7. URL: https://commercial.tarkett.com/en_US/collection-C001527-scs-color-chips/66-either-ore

6.02 VINYL RESILIENT BASE

A. VB-2:
   1. Manufacturer: Johnsonite
   2. Product: CB-XX
   3. Color: 66 Either Ore
   4. Size: four (4”) inch cove base
   5. Location: Kids Academy
   6. URL: https://commercial.tarkett.com/en_US/collection-C001527-scs-color-chips/66-either-ore
B. VB-3:
   1. Manufacturer: Johnsonite
   2. Product: MW-XX-J
   3. Color: 47 Brown
   4. Size: Four (4”) inch millwork wall base

5. Location: Spa Waiting
6. URL: https://commercial.tarkett.com/en_US/collection-C001527-scs-color-chips/47-brown

END OF SECTION

SECTION 09 65 66
RESILIENT ATHLETIC SPORTS SURFACE (RACQUET SPORTS)

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Provide labor, materials, tools and equipment to perform work and services of resilient coatings over concrete for the following:
   1. Indoor Tennis. [CPS-1] – **Not Used**
   2. Outdoor Tennis. [CPS-2] – **Not Used**
   3. Pickleball: New wood substrate. [CPS-3] – **Not Used**
   4. Pickleball: Concrete substrate. [CPS-4] – **Not Used**
   5. Exterior [CPS-5}
   6. Interior [CPS-6]

B. Work not included:
   1. Sub-base materials.
   2. Base materials.
      a. Concrete: Specified in Division 3.
      b. Asphalt: By Civil.

1.02 RELATED SECTIONS

A. Section 01 33 00 - Submittal Procedures.

B. Section 01 40 00 - Quality Requirements.

C. Section 01 60 00 - Product Requirements.

D. Section 01 92 00 - Facility Operation and Maintenance.

E. Section 03 30 00 - Cast-in-Place Concrete.

F. Section 03 38 00 - Post-Tensioned Concrete.

G. Section 06 10 00 - Rough Carpentry

H. Section 09 05 61 - Common Work Results for Flooring Preparation.

I. Section 09 65 19 - Resilient Flooring.

1.03 REFERENCES

A. BS EN ISO 6272-1: Paints and varnishes. Rapid-deformation (impact resistance) tests. Falling-weight test, large-area indenter: 2011

1.04 SUBMITTALS

A. Submit under provisions of Section 01 30 00.

B. Product Data: Manufacturers descriptive literature for specified cushioned athletic resilient sports coatings.

C. Shop Drawings, Dimensioned plans indicating layout of athletic resilient sports coatings.

D. Quality Assurance Submittals: Manufacturers printed installation instructions. Proprietary techniques are accepted.

E. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

F. Closeout Submittals:
   1. Operation and Maintenance Data: Submit O&M manuals according to the requirements of Section 01 92 00 - Facility Operation and Maintenance. Manufacturer’s recommendations for cleaning and maintaining coatings.

2. Warranty documents specified in Warranty Article of Part 1 of this section.

1.05 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Qualifications:
   1. Manufacturer: Minimum ten (10) years documented experience producing athletic resilient sports coatings similar to those specified in this section.
      a. Minimum ISO 9001 certification for design, manufacture and distribution.
      b. Minimum ten (10) years documented use of cushioned athletic resilient sports surfaces by major sporting venues worldwide.
   2. Installer: Minimum five (5) years documented experience installing athletic resilient sports coatings similar to those specified in this section.

1.06 DELIVERY, STORAGE & HANDLING

A. Acceptance at Site: Ensure materials arrive at the site in unopened and undamaged containers. Do not allow unacceptable materials to be used.

B. Storage: Keep material from freezing, store on pallets in a cool place. Avoid exposure to Sun.

C. Record batch numbers from delivered material and enter into Warranty registration form.

1.07 PROJECT CONDITIONS

A. Existing conditions: Examine areas where materials are to be installed, particularly the sub-base, drainage, compaction and levelness.

B. Ensure area to be surfaced is to be clear of any construction traffic, pedestrian traffic and any obstructions during application of Resilient Sports Surface.

C. Provide protection to adjacent surfaces to avoid spills.

D. Approximately one 10 yard dumpster or trash container per 7,000 sq. ft. near the area of installation and shall be within easy access.

E. Electricity (110V) and a supply of drinkable water shall be on hand during entire installation process.

F. Indoor Installation with wood components requires the following conditioning period:
   1. Conditioning period begins not less than seven days before wood flooring installation, and is continuous through installation.
      a. Environmental Conditioning: Maintain an ambient temperature between 65 and 75 deg F (18 and 24 deg C) and relative humidity planned for building occupants in spaces to receive wood flooring during the conditioning period.
      b. Wood SubFlooring Conditioning: Move wood subflooring into spaces where it will be installed, no later than the beginning of the conditioning period.
         1) Do not install flooring until it adjusts to relative humidity of, and is at same temperature as, space where it is to be installed.
         2) Open sealed packages to allow wood flooring to acclimatize immediately on moving flooring into spaces in which it will be installed.
   2. Humidity Control: relative humidity between thirty-five (35%) percent and fifty-five (55%) percent.
   3. After conditioning period, maintain relative humidity and ambient temperature planned for building occupants.

1.08 WARRANTY

A. Manufacturer’s Warranty: Manufacturer’s standard warranty against defects in products.

B. Installers Warranty: Installers standard warranty against defective workmanship.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Acceptable Manufacturers:
   1. California Sports Surfaces, 150 Dascomb Rd. Andover, MA 01810 (978) 623.9980.

2. Laykold by Advanced Polymer Technology Corp. 109 Conica Lane PO Box 160, Harmony PA 16037.
3. Or approved equal.

2.02 [CPS-5] EXTERIOR COURT SURFACE

A. Characteristics: Hard court system:
   1. Substrate (by others):
      a. Concrete
      b. Asphalt.
   2. Seamless liquid installation.

B. Basis of Design Product:
   1. Laykold: Masters Color.

C. Acceptable Alternates
   1. California Sport Surfaces: Plexipave: Plexi I.W. Hardcourt System.

D. Surfacing:
   1. Composition: Acrylic resin blended with sand.
      a. Primer/ Leveller Layer by Manufacturer.
      b. Surface by Manufacturer:
         1) Apply to thickness according to Manufacturer's written instructions.
      c. Line Paint: Acylic latex by Manufacturer.
      d. Sand: Local sands are not acceptable. Provide sand as approved by the Manufacturer.
   2. UV stable.
   3. Slip resistance: Co-efficient of static friction U=1.
   4. Size and configuration: See Drawings.
   5. Accessories:
      a. Patching Mix: By Manufacturer.
      b. Crack Filler: By Manufacturer.
   6. Linemaking: non-slip acrylic linemarking.
   7. Colors:
      a. Boundary Lines: White.
      b. Tennis:
         1) In Bounds: LM Pro Blue or approved match
         2) Out of Bounds: LM Grass Green or approved match.
      c. Pickleball:
         1) In Bounds: LM Pro Blue or approved match
         2) Out of Bounds: LM Grass Green or approved match.
         3) Kitchen: LM Dark Gray or approved match.

2.03 [CPS-6] INTERIOR COURT SURFACE

A. Characteristics: Cushioned court surface.
   1. Substrate (by others):
      a. Concrete
   2. Seamless liquid installation.

B. Basis of Design Product:
   1. Laykold: Masters 5

C. Acceptable Alternates
   1. California Sport Surfaces: Rebound Ace Club 5 Mat System

D. Surfacing:
   1. Composition:
      a. Adhesive layer by Manufacturer.
      b. Shock pad (5mm) by Manufacturer.
      c. Sealer by Manufacturer.

d. Reinforcing Mesh by Manufacturer.
e. Bond Coat, by Manufacturer.
1) Latex emulsion primer.
f. Top Coat by Manufacturer.
1) Sand filled 100% acrylic emulsion.
2. 12% Force reduction, Min.
3. Slip resistance: Co-efficient of static friction U=1.
4. UV stable.
5. Size and configuration: See Drawings.
6. Accessories: See below.
7. Linemaking: non-slip acrylic linemarking.
8. Colors:
a. Boundary Lines: White.
b. Tennis:
1) In Bounds: LM Pro Blue or approved match.
2) Out of Bounds: LM Modern Green or approved match.
c. Pickleball:
1) In Bounds: LM Pro Blue or approved match.
2) Out of Bounds: LM Modern Green or approved match.
3) Kitchen: LM Dark Gray or approved match.

2.04 ACCESSORIES

A. Floor Transitions: Provide type as shown on details.
1. Aluminum Transitions:
a. Inpro Architectural Products 801 Series floor expansion joint cover (ADA saddle threshold)
1) Size: coordinate with size of joint.
b. Or approved equal.
2. Resilient Transitions: Subject to compliance with requirements, provide products by one of the following:
a. Johnsonite. (Basis of Design)
b. Armstrong World Industries, Inc.
c. Roppe Corporation, USA.
d. VPI, LLC; Floor Products Division.
3. Description: Transition strips between flooring materials.
4. Material: Rubber.
5. Profile and Dimensions: As indicated.
6. Transition Type:
a. See other flooring type and details.

PART 3 EXECUTION

3.01 EXAMINATION

A. Check concrete surfaces for spalling, depressions, cracking and surface irregularities, and adhesion of any existing acrylic surfaces or residues.

B. Installers Examination:
1. Installer shall examine conditions under which construction activities of this section are to be performed, then submit written notification if such conditions are unacceptable.
2. Transmit two copies of installers report to architect or owner.
3. Beginning construction activities of this section before unacceptable conditions have been corrected is prohibited.
4. Beginning construction activities of this section indicates installer’s acceptance of conditions.

3.02 PREPARATION

A. Concrete Substrate:

1. Sub-base, by others, Part. 1.1c-2a - To be trimmed smooth and compacted to a field dry density of not less than 95%.
2. Moisture/Vapor Barrier, by others, Part. 1.1c-2a – Moisture/vapor barrier, consisting of polyethylene (6 mil. Minimum thickness) should be installed prior to installation of any steel and/or cables. Overlap polyethylene sheets at least 6” and tape joints. Once in place no vehicular traffic should be allowed on the moisture/vapor barrier nor any other object, which could puncture the barrier or otherwise compromise the integrity of the surface.
3. Surface Accuracy, by others, Part 1.1c-2a - Base concrete surface to be laid to an accuracy of a maximum deviation of 1/8 inch beneath a 10-foot straight edge when measured in any direction.
4. Curing - New concrete is to cure for 30 days prior to application of any athletic resilient sport coating materials.
5. Cleaning/Acid Etching - Ensure the surface is clean and free from dirt, dust, grease and foreign materials to receive cushioned sports system. When acid etching, follow manufacturer’s instructions and wash with copious amounts of water. Use a stiff bristle broom.
6. Pressure washing - Pressure wash entire surface to remove any residues.
7. Scraping - Scrape surface then broom and blow surface clean.
8. Leveling - Flood courts with water to test for ponding, any areas still retaining water 1/8” deep after 20 minutes shall be leveled with Flowing Topping and Repair Mortar, as specified in Section 03 30 00.
9. Cracking - Vee out any cracks and fill with Polymer Patching Mortar, as specified in Section 03 30 00.

3.03 INSTALLATION

A. Install athletic resilient sports surfaces in accordance with shop drawings and manufacturers written instructions.

3.04 PROTECTION

A. Prevent any sort of traffic over flooring until the manufacturer's required curing time elapses.

B. Protect installed products of this section from damage to function or finish by subsequent construction activities.

C. Repair minor damage to finishes in accordance with manufacturer’s recommendations.

3.05 DEFECTIVE WORK OR MATERIALS

A. Remove from the work site and replace material, which has deteriorated, or become contaminated in any way, prior to its application, at no additional expense to Owner. Dispose of waste materials legally, off site.

END OF SECTION

SECTION 09 67 23
RESINOUS FLOORING

PART 1 GENERAL

1.01 SUMMARY

A. This Section includes resinous, epoxy flooring.

1.02 RELATED SECTIONS

A. Section 01 33 00 - Submittal Procedures.

B. Section 01 40 00 - Quality Requirements.

C. Section 01 60 00 - Product Requirements.

D. Section 01 92 00 - Facility Operation and Maintenance.

E. Section 03 30 00 - Cast in Place Concrete.

F. Section 09 05 61 - Common Work Results for Flooring Preparation.

G. Section 09 30 00 - Tile.

H. Section 09 65 19 - Resilient Flooring.

1.03 REFERENCE STANDARDS

A. ASTM C307 - Standard Test Method for Tensile Strength of Chemical-Resistant Mortar, Grouts, and Monolithic Surfacings; 2018.

B. ASTM C579 - Standard Test Methods for Compressive Strength of Chemical-Resistant Mortars, Grouts, Monolithic Surfacings, and Polymer Concretes; 2023.

C. ASTM C580 - Standard Test Method for Flexural Strength and Modulus of Elasticity of Chemical-Resistant Mortars, Grouts, Monolithic Surfacings, and Polymer Concretes; 2018 (Reapproved 2023).

D. ASTM D2240 - Standard Test Method for Rubber Property--Durometer Hardness; 2015 (Reapproved 2021).

E. ASTM D2369 - Standard Test Method for Volatile Content of Coatings; 2020.

F. ASTM D2794 - Standard Test Method for Resistance of Organic Coatings to the Effects of Rapid Deformation (Impact); 1993 (Reapproved 2024).

G. ASTM D4060 - Standard Test Method for Abrasion Resistance of Organic Coatings by the Taber Abraser; 2019.

H. ASTM E413 - Classification for Rating Sound Insulation; 2022.

I. ASTM E648 - Standard Test Method for Critical Radiant Flux of Floor-Covering Systems Using a Radiant Heat Energy Source; 2023.

J. ASTM F1869 - Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride; 2023.

K. ASTM F2170 - Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes; 2019a.

L. ICRI 310.2R - Selecting and Specifying Concrete Surface Preparation for Sealers, Coatings, Polymer Overlays, and Concrete Repair.

1.04 SUBMITTALS

A. Product Data: For each type of product indicated. Include manufacturer's technical data, application instructions, and recommendations for each resinous flooring component required.

B. Samples for Verification: For each resinous flooring system required, 5 inches (150 mm) square, applied to a rigid backing.

C. Product Schedule: Use resinous flooring designations indicated in Part 2 and room designations indicated on Drawings in product schedule.

D. Installer Certificates: Signed by manufacturer certifying that installers comply with specified requirements.

E. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

F. Operation and Maintenance Data: Submit O&M manuals according to the requirements of Section 01 92 00 - Facility Operation and Maintenance.

1.05 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. No request for substitution shall be considered that would change the generic type of floor system specified (i.e. epoxy mortar based system with decorative quartz topping). Equivalent materials of other manufactures may be substituted only on approval of Architect or Engineer. See 01 33 00 Submittal Procedures and 01 60 00 Product requirements.

C. Installer Qualifications:
   1. Engage an installer who is certified in writing by resinous flooring manufacturer as qualified to apply resinous flooring systems indicated.
   2. Contractor shall have completed at least 10 projects of similar size and complexity.

D. Source Limitations: Obtain primary resinous flooring materials, including primers, resins, hardening agents, grouting coats, and topcoats, through one source from a single manufacturer, with not less than ten years of successful experience in manufacturing and installing principal materials described in this section. Provide secondary materials, including patching and fill material, joint sealant, and repair materials, of type and from source recommended by manufacturer of primary materials.

E. Manufacturer Field Technical Service Representatives: Resinous flooring manufacture shall retain the services of Field Technical Service Representatives who are trained specifically on installing the system to be used on the project.
   1. Field Technical Services Representatives shall be employed by the system manufacture to assist in the quality assurance and quality control process of the installation and shall be available to perform field problem solving issues with the installer.

F. Pre-installation Conference:
   1. General contractor shall arrange a meeting not less than thirty days prior to starting work.
   2. Attendance:
      a. General Contractor
      b. Architect/Owner's Representative.
      c. Manufacturer/Installer's Representative.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in original packages and containers, with seals unbroken, bearing manufacturer's labels indicating brand name and directions for storage and mixing with other components.

B. Store materials to prevent deterioration from moisture, heat, cold, direct sunlight, or other detrimental effects. Store material per product data sheet.

C. All materials used shall be factory pre-weighed and pre-packaged in single, easy to manage batches to eliminate on site mixing errors. No on site weighing or volumetric measurements allowed.

1.07 PROJECT CONDITIONS

A. Environmental Limitations: Comply with resinous flooring manufacturer's written instructions for substrate temperature, ambient temperature, moisture, ventilation, and other conditions affecting resinous flooring application.
   1. Maintain material and substrate temperature between 65 and 85 deg F (18 and 30 deg C) during resinous flooring application and for not less than 24 hours after application.

B. Lighting: Provide permanent lighting or, if permanent lighting is not in place, simulate permanent lighting conditions during resinous flooring application.

C. Close spaces to traffic during resinous flooring application and for not less than 24 hours after application, unless manufacturer recommends a longer period.

D. Concrete substrate shall be properly cured. A vapor barrier must be present for concrete subfloors on or below grade. Otherwise, an osmotic pressure resistant grout must be installed prior to the resinous flooring

1.08 WARRANTY

A. Manufacturer shall furnish a single, written warranty covering both material and workmanship for a period of (1) full years from date of installation, or provide a joint and several warranty signed on a single document by material manufacturer and applicator jointly and severally warranting the materials and workmanship for a period of (1) full year from date of installation. A sample warranty letter must be included with bid package or bid may be disqualified.

PART 2 PRODUCTS

2.01 RESINOUS FLOORING

A. Resinous Flooring with Epoxy base and Quartz broadcast. (**RF-1**)
   1. Acceptable Manufactures:
      a. Stonhard.
      b. Tnemec.
      c. Neogard.
      d. Or approved equal
   2. Products: Subject to compliance with requirements:
      a. Stonhard, Inc.; Stonshield HRI®.
      b. Tnemec; Deco-Tread N222 Quartz System
      c. Neogard; NeoQuartz HD
      d. Or approved equal.

B. System Characteristics:
   1. Color and Pattern:
      a. Basis of Design: Stonshield Frappe
      b. Or approved equal.
   2. Wearing Surface: Standard or medium.
   3. Integral Cove Base: 6”.
   4. Overall System Thickness: nominal 1/8” - 3/16”

C. System Components: Manufacturer's standard components that are compatible with each other and as follows:
   1. Primer:
      a. Manufacturer's standard primer as recommended for the substrate.
      b. Resin: Epoxy.
      c. Formulation Description: (2) two component, 100 percent solids.
      d. Application Method: Squeegee and roller.
      e. Number of Coats: (1) one.
   2. Mortar Base:
      a. Manufacturer's standard.
      b. Resin: Epoxy.
      c. Formulation Description: (3) three component, 100 percent solids.
      d. Application Method: Metal Trowel.
         1) Thickness of Coats: nominal 1/8” (inch).
         2) Number of Coats: One.
      e. Aggregates: Pigmented Blended aggregate.
   3. Undercoat:
      a. Manufacturer's standard.

b. Resin: Epoxy
c. Formulation Description: (2) two-component, 100% solids, UV Stable.
d. Type: Clear.
e. Finish: Gloss.
f. Number of Coats: one.

4. Broadcast Media:
   a. Material Basis: Quartz aggregate
   b. Type: Pigmented.
   c. Finish: Standard.
   d. Number of Coats: One.
   e. Pattern: Tweed.
5. Sealer:
   a. Manufacturer's standard.
   b. Resin: Epoxy.
   c. Formulation Description: (2) two-component, 100% solids, UV Stable.
   d. Type: Clear.
   e. Finish: Gloss.
   f. Number of Coats: one.
   g. Texture level: Standard or medium.

D. System Physical Properties: Provide resinous flooring system with the following minimum physical property requirements when tested according to test methods indicated:
1. Compressive Strength: 10,000 psi after 7 days per ASTM C579
2. Tensile Strength: 2,000 psi per ASTM C307
3. Flexural Strength: 4,300 psi per ASTM C580
4. Flexural Modulus of Elasticity: 2.0 x 106 psi per ASTM C580
5. Hardness: 85 to 90 per ASTM D2240, Shore D
6. Impact Resistance: > 160 in./lbs. per ASTM D2794
7. Abrasion Resistance: 0.06 gm max. weight loss per ASTM D4060, CS-17
8. Flammability: Class 1 per ASTM E648.
9. Thermal Coefficient of Linear Expansion: 1.3 x 10-5 in./in. oF
10. Water Absorption: 0.1% per ASTM E413
11. VOC Content per ASTM D2369:
    a. Completed Assembly complies with requirements of USGBC LEED-NC
12. Cure Rate @ 77oF/25oC:12 hours foot traffic, 24 hours normal operations.

2.02 ACCESSORY MATERIALS

A. Patching, Leveling and Fill Material: Resinous product of or approved by resinous flooring manufacturer and recommended by manufacturer for application indicated.

B. Joint Sealant: Type recommended or produced by resinous flooring manufacturer for type of service and joint condition indicated. Allowances should be included for Stonflex MP7 joint fill material.

PART 3 EXECUTION

3.01 PREPARATION

A. General: Prepare and clean substrates according to resinous flooring manufacturer's written instructions for substrate indicated. Provide clean and dry substrate for resinous flooring application.

B. Concrete Substrates: Prepare concrete substrates with Topping and Repair material as specified in Section 03 30 00 - Cast in Place Concrete.
1. Provide sound concrete surfaces free of laitance, glaze, efflorescence, curing compounds, form-release agents, dust, dirt, grease, oil, and other contaminants incompatible with resinous flooring.
2. Mechanically prepare substrates as follows:

a. Shot-blast surfaces with an apparatus that abrades the concrete surface, contains the dispensed shot within the apparatus, and recirculates the shot by vacuum pickup, or Diamond Grind with dust free system.

3. Repair damaged and deteriorated concrete according to resinous flooring manufacturer's written recommendations.
4. Verify that concrete substrates meet the following requirements.
   a. Perform in situ probe test, ASTM F2170. Proceed with application only after substrates do not exceed a maximum potential equilibrium relative humidity of 85 percent.
   b. Perform anhydrous calcium chloride test, ASTM F1869. Proceed with application only after substrates have maximum moisture-vapor-emission rate of 6 lb of water/1000 sq. ft. of slab in 24 hours.
   c. Perform additional moisture tests recommended by manufacturer. Proceed with application only after substrates pass testing.

C. Use patching and fill material to fill holes and depressions in substrates according to manufacturer's written instructions.

D. Treat control joints and other nonmoving substrate cracks to prevent cracks from reflecting through resinous flooring according to manufacturer's written recommendations. Allowances should be included for Stonflex MP7 joint fill material, and CT5 concrete crack treatment.

3.02 APPLICATION

A. General: Apply components of resinous flooring system according to manufacturer's written instructions to produce a uniform, monolithic wearing surface of thickness indicated.
   1. Coordinate application of components to provide optimum adhesion of resinous flooring system to substrate, and optimum intercoat adhesion.
   2. Cure resinous flooring components according to manufacturer's written instructions. Prevent contamination during application and curing processes.
   3. At substrate expansion and isolation joints, provide joint in resinous flooring to comply with resinous flooring manufacturer's written recommendations.
      a. Apply joint sealant to comply with manufacturer's written recommendations.

B. Integral Cove Base: Stonshield cove mortar, apply cove base mix to wall surfaces before applying flooring. Apply according to manufacturer's written instructions and details including those for taping, mixing, priming, troweling, sanding, of cove base. Round internal and external corners.
   1. Integral Cove Base: 4 inches high, minimum.

C. Apply primer where required by resinous system, over prepared substrate at manufacturer's recommended spreading rate.

D. Apply metal trowel single mortar coat in thickness indicated for flooring system into wet primer. Hand or power trowel and grout to fill voids. When cured, sand to remove trowel marks and roughness.

E. Undercoat: Remove any surface irregularities by lightly abrading and vacuuming the floor surface. Mix and apply undercoat with strict adherence to manufacturer's installation procedures and coverage rates.

F. Broadcast: Immediately broadcast quartz silica aggregate into the undercoat using manufacturer's specially designed spray caster. Strict adherence to manufacturer's installation procedures and coverage rates is imperative.

G. Apply topcoat(s) in number of coats indicated for flooring system and at spreading rates recommended in writing by manufacturer.

3.03 TERMINATIONS

A. Chase edges to “lock” the flooring system into the concrete substrate along lines of termination.

B. Penetration Treatment: Lap and seal resinous system onto the perimeter of the penetrating item by bridging over compatible elastomer at the interface to compensate for possible movement.

C. Trenches: Continue flooring system into trenches to maintain monolithic protection. Treat cold joints to assure bridging of potential cracks.

D. Treat floor drains by chasing the flooring system to lock in place at point of termination.

3.04 JOINTS AND CRACKS

A. Treat control joints to bridge potential cracks and to maintain monolithic protection.

B. Treat cold joints and construction joints and maintain monolithic protection on horizontal and vertical surfaces as well as horizontal and vertical interfaces.

C. Install backer rod and compatible sealant at vertical and horizontal control joints after coating installation is completed. Provide sealant type recommended by manufacturer for traffic conditions and chemical exposures to be encountered.

3.05 FIELD QUALITY CONTROL

A. Material Sampling: Owner may at any time and any numbers of times during resinous flooring application require material samples for testing for compliance with requirements.
   1. Owner will engage an independent testing agency to take samples of materials being used. Material samples will be taken, identified, sealed, and certified in presence of Contractor.
   2. Testing agency will test samples for compliance with requirements, using applicable referenced testing procedures or, if not referenced, using testing procedures listed in manufacturer's product data.
   3. If test results show applied materials do not comply with specified requirements, pay for testing, remove noncomplying materials, prepare surfaces coated with unacceptable materials, and reapply flooring materials to comply with requirements.

3.06 CLEANING, PROTECTING, AND CURING

A. Cure resinous flooring materials in compliance with manufacturer's directions, taking care to prevent contamination during stages of application and prior to completion of curing process. Close area of application for a minimum of 24 hours.

B. Protect resinous flooring materials from damage and wear during construction operation. Where temporary covering is required for this purpose, comply with manufacturer's recommendations for protective materials and method of application. General Contractor is responsible for protection and cleaning of surfaces after final coats.

C. Cleaning: Remove temporary covering and clean resinous flooring just prior to final inspection. Use cleaning materials and procedures recommended by resinous flooring manufacturer. General contractor is responsible for cleaning prior to inspection.

END OF SECTION

SECTION 09 68 13
TILE CARPETING

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Modular carpet tile.

1.02 RELATED SECTIONS

A. Section 01 33 00 - Submittal Procedures.

B. Section 01 40 00 - Quality Requirements.

C. Section 01 60 00 - Product Requirements.

D. Section 03 30 00 - Cast-in-Place Concrete.

E. Section 09 05 61 - Common Work Results for Flooring Preparation.

F. Section 09 30 00 - Tile.

G. Section 09 65 66 - Resilient Flooring.

H. Section 09 68 14 - Tile Carpeting Schedule.

1.03 REFERENCE STANDARDS

A. ASTM D5116 - Standard Guide for Small-Scale Environmental Chamber Determinations of Organic Emissions from Indoor Materials/Products; Current Edition.

B. ASTM E648 - Standard Test Method for Critical Radiant Flux of Floor-Covering Systems Using a Radiant Heat Energy Source; 2023.

C. ASTM F710 - Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring; 2022.

D. CRI 104 - Standard for Installation of Commercial Carpet; 2015.

E. GBC, Section 5.504.4 – Carpet Systems. All carpet installed in the building shall meet the testing and product requirements of one of the following:
   1. Carpet and Rug Institute’s Green Label Plus Program.
      a. California Department of Public Health Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers, Version 1.1, February 2010 (also known as Specification 01350).
      b. NSF/ANSI 140 at the Gold level or higher.
      c. Scientific Certifications Systems Sustainable Choice.

1.04 SUBMITTALS

A. Product Data: For each type of product indicated. Include manufacturer's written data on physical characteristics, durability, and fade resistance. Include installation recommendations for each type of substrate.

B. Samples for Verification: For each of the following products and for each color and texture required. Label each Sample with manufacturer's name, material description, color, pattern, and designation indicated on Drawings and in schedules.
   1. Carpet Tile: Full-size Sample.
   2. Exposed Edge, Transition, and other Accessory Stripping: 12-inch- (300-mm-) long Samples.

C. Product Schedule: For carpet tile. Use same designations indicated on Drawings.

D. Qualification Data: For Installer.

E. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency.

F. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.

2. Submit inventory to Owner within 5 days of delivery of materials.
3. See Sections 01 33 00 and 01 60 00.

G. Maintenance Data: For carpet tiles to include in maintenance manuals. Include the following:
1. Methods for maintaining carpet tile, including cleaning and stain-removal products and procedures and manufacturer's recommended maintenance schedule.
2. Precautions for cleaning materials and methods that could be detrimental to carpet tile.

H. Warranty: Special warranty specified in this Section.

1.05 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Installer Qualifications: An experienced installer who is certified by the Floor Covering Installation Board or who can demonstrate compliance with its certification program requirements.

C. Fire-Test-Response Characteristics: Provide products with the critical radiant flux classification indicated in Part 2, as determined by testing identical products per ASTM E648 by an independent testing and inspecting agency acceptable to authorities having jurisdiction.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Comply with CRI 104, Section 5, "Storage and Handling."

1.07 PROJECT CONDITIONS

A. Comply with CRI 104, Section 7.2, "Site Conditions; Temperature and Humidity" and Section 7.12, "Ventilation."

B. Environmental Limitations: Do not install carpet tiles until wet work in spaces is complete and dry, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

C. Do not install carpet tiles over concrete slabs until slabs have cured and are sufficiently dry to bond with adhesive and concrete slabs have pH range recommended by carpet tile manufacturer.

D. Where demountable partitions or other items are indicated for installation on top of carpet tiles, install carpet tiles before installing these items.

1.08 WARRANTY

A. Special Warranty for Carpet Tiles: Manufacturer's standard form in which manufacturer agrees to repair or replace components of carpet tile installation that fail in materials or workmanship within specified warranty period.
1. Warranty does not include deterioration or failure of carpet tile due to unusual traffic, failure of substrate, vandalism, or abuse.
2. Failures include, but are not limited to, more than 10 percent loss of face fiber, edge raveling, snags, runs, loss of tuft bind strength, dimensional stability, excess static discharge, and delamination.
3. Warranty Period: 10 years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 CARPET TILE

A. See Attached Schedule.

2.02 CARPET BASE

A. See Attached Schedule.

2.03 INSTALLATION ACCESSORIES

A. Trowelable Leveling and Patching Compounds: Latex-modified, hydraulic-cement-based formulation provided or recommended by carpet tile manufacturer.

B. Adhesives: Stix 2400 by XL Brands – Zero VOC, 4 gallon Pail, water-based, pressure sensitive adhesive as recommended by carpet tile manufacturer for releasable installation.

C. Adhesives: Water-resistant, mildew-resistant, no staining type to suit products and subfloor conditions indicated, that complies with flammability requirements for installed carpet and as recommended/ required by the manufacturer for warrantee acceptance or provided by carpet tile manufacturer for the type of carpet being installed.

D. VOC Limits: Provide adhesives that comply with the following limits for VOC content when tested according to ASTM D5116:
   1. Total VOCs: 50g/L.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for maximum moisture content, alkalinity range, installation tolerances, and other conditions affecting carpet tile performance. Examine carpet tile for type, color, pattern, and potential defects.

B. Concrete Subfloors: Verify that concrete slabs comply with ASTM F710 and the following:
   1. Slab substrates are dry and free of curing compounds, sealers, hardeners, and other materials that may interfere with adhesive bond. Determine adhesion and dryness characteristics by performing bond and moisture tests recommended by carpet tile manufacturer.
   2. Subfloor finishes comply with requirements specified in Division 3 Section "Cast-in-Place Concrete" for slabs receiving carpet tile.
   3. Subfloors are free of cracks, ridges, depressions, scale, and foreign deposits.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. General: Comply with CRI 104, Section 6.2, "Site Conditions; Floor Preparation," and with carpet tile manufacturer's written installation instructions for preparing substrates indicated to receive carpet tile installation.

B. Use trowelable leveling and patching compounds, according to manufacturer's written instructions, to fill cracks, holes, depressions, and protrusions in substrates. Fill or level cracks, holes and depressions 1/8 inch (3 mm) wide or wider and protrusions more than 1/32 inch (0.8 mm), unless more stringent requirements are required by manufacturer's written instructions.

C. Remove coatings, including curing compounds, and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, without using solvents. Use mechanical methods recommended in writing by carpet tile manufacturer.

D. Broom and vacuum clean substrates to be covered immediately before installing carpet tile.

3.03 INSTALLATION

A. General: Comply with CRI 104, Section 14, "Carpet Modules," and with carpet tile manufacturer's written installation instructions.

B. Installation Method: As recommended in writing by carpet tile manufacturer.

C. Follow standard installation instructions, including but not limited to pre-installation moisture and alkalinity testing of the concrete, removal of existing adhesive or other coatings (create a clean, smooth floor surface), and encapsulation of any residue left from this removal. Encapsulation should be completed using TriSeal or similar product specifically designed for encapsulation of adhesive residue. Skim coating using a Portland based cement compound may also be an option to create a clean surface prior to the carpet installation.

D. The following exceptions should be included as part of the installation process.
   1. Installation should be completed using a full spread of application of XL Brands Dyna-Stix MOD adhesive making sure to install carpet tiles within 15 minutes of adhesive application to increase bond strength. Adhesive should be applied using a 1/16” x 1/32” x 1/32” U notched trowel with an application rate not to exceed 30 yards per gallon.

E. Maintain dye lot integrity. Do not mix dye lots in the same area.

F. Cut and fit carpet tile to butt tightly to vertical surfaces, permanent fixtures, and built-in furniture including cabinets, pipes, outlets, edgings, thresholds, and nosings. Bind or seal cut edges as recommended by carpet tile manufacturer.

G. Extend carpet tile into toe spaces, door reveals, closets, open-bottomed obstructions, removable flanges, alcoves, and similar openings.

H. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on finish flooring as marked on subfloor. Use nonpermanent, nonstaining marking device.

I. Install pattern parallel to walls and borders.

3.04 CLEANING AND PROTECTION

A. Perform the following operations immediately after installing carpet tile:
   1. Remove excess adhesive, seam sealer, and other surface blemishes using cleaner recommended by carpet tile manufacturer.
   2. Remove yarns that protrude from carpet tile surface.
   3. Vacuum carpet tile using commercial machine with face-beater element.

B. Protect installed carpet tile to comply with CRI 104, Section 16, "Protection of Indoor Installations."

C. Protect carpet tile against damage from construction operations and placement of equipment and fixtures during the remainder of construction period. Use protection methods indicated or recommended in writing by carpet tile manufacturer.

END OF SECTION

SECTION 09 72 00
WALL COVERINGS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Acoustical wall covering.
   2. Vinyl wall covering.
      a. Vinyl wall covering with perforations at all exterior walls with vapor barrier.

1.02 RELATED SECTIONS

A. Section 01 33 00 - Submittal Procedures.

B. Section 01 40 00 - Quality Requirements.

C. Section 01 60 00 - Product Requirements.

D. Section 01 92 00 - Facility Operation and Maintenance.

E. Section 09 21 16 - Gypsum Board Assemblies.

F. Section 09 72 00 - Wall Coverings Schedules.

G. Section 09 74 16 - Flexible Wood Veneer Wall Covering.

H. Section 09 75 00 - Interior Stone.

I. Section 09 84 14 - Acoustic Stretched-Fabric Wall Systems.

J. Section 09 84 30 - Sound Absorbing Wall and Ceiling Units.

K. Section 09 91 00 - Painting.

1.03 REFERENCE STANDARDS

A. 40 CFR 59, Subpart D - National Volatile Organic Compound Emission Standards for Architectural Coatings; U.S. Environmental Protection Agency; Current Edition.

B. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2023d.

C. ASTM E96/E96M - Standard Test Methods for Gravimetric Determination of Water Vapor Transmission Rate of Materials; 2023.

D. ASTM F793/F793M - Standard Classification of Wall Coverings by Use Characteristics; 2020.

E. W-101 WA - WA QUALITY STANDARD FOR POLYMER COATED FABRIC WALLCOVERING; Current edition.

1.04 SUBMITTALS

A. Product Data: For each type of product indicated. Include data on physical characteristics, durability, fade resistance, and flame-resistance characteristics.

B. Samples for Verification: Full width by 36-inch- (914-mm-) long section of wall covering.

C. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for wall covering.

D. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

E. Operation and Maintenance Data: Submit O&M manuals according to the requirements of Section 01 92 00 - Facility Operation and Maintenance.

1.05 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Fire-Test-Response Characteristics: As determined by testing identical wall coverings applied with identical adhesives to substrates according to test method indicated below by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
   1. Surface-Burning Characteristics: As follows, per ASTM E84:
      a. Flame-Spread Index: 25 or less.
      b. Smoke-Developed Index: 50 or less.

1.06 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install wall coverings until spaces are enclosed and weathertight, wet Work in spaces is complete and dry, work above ceilings is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

B. Lighting: Do not install wall covering until a permanent level of lighting is provided on the surfaces to receive wall covering.

C. Ventilation: Provide continuous ventilation during installation and for not less than the time recommended by wall-covering manufacturer for full drying or curing.

PART 2 PRODUCTS

2.01 WALL COVERINGS

A. General: Provide rolls of each type of wall covering from same print run or dye lot.

2.02 ACOUSTICAL WALL COVERING

A. See Attached Schedule.

2.03 VINYL WALL COVERING

A. Vinyl Wall-Covering Standards: Provide mildew-resistant products complying with the following:
   1. W-101 WA for Type II, Medium-Duty products.
   2. ASTM F793/F793M for wall coverings that qualify as Category V, Type II, Commercial Serviceability products.
   3. Perforated Vinyl Wall Covering: Provide perforations at all wall covering installed on exterior walls with vapor barrier.

B. See attached Schedule.

2.04 ACCESSORIES

A. Adhesive: Mildew-resistant, nonstaining, strippable adhesive, for use with specific wall covering and substrate application; as recommended in writing by wall-covering manufacturer and with a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
   1. Adhesive for Perforated Vinyl Wall Covering: Primer and Adhesive to be vapor permeable per ASTM E96/E96M-02.
      a. Gardner-Gibson: Dynamite 234.
      b. Roman (Sherwin Williams): Eco 788.
      c. Or approved substitution.

B. Primer/Sealer: Mildew-resistant primer/sealer recommended in writing by wall-covering manufacturer for intended substrate.
   1. Primer for Perforated Vinyl Wall Covering: Primer and Adhesive to be vapor permeable per ASTM E96/E96M-02.
      a. Use manufacturer's recommended permeable primer.

C. Seam Tape: As recommended in writing by wall-covering manufacturer.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine substrates and conditions, with Installer present, for compliance with requirements for levelness, wall plumbness, maximum moisture content, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Comply with manufacturer's written instructions for surface preparation.

B. Clean substrates of substances that could impair bond of wall covering, including dirt, oil, grease, mold, mildew, and incompatible primers.

C. Prepare substrates to achieve a smooth, dry, clean, structurally sound surface free of flaking, unsound coatings, cracks, and defects.

1. Moisture Content: Maximum of 5 percent on new plaster, concrete, and concrete masonry units when tested with an electronic moisture meter.
2. Metals: If not factory primed, clean and apply metal as recommended in writing by primer/sealer manufacturer and wall-covering manufacturer.
3. Gypsum Board: Prime with primer as recommended in writing by primer/sealer manufacturer and wall-covering manufacturer.
4. Painted Surfaces: Treat areas susceptible to pigment bleeding.

D. Check painted surfaces for pigment bleeding. Sand gloss, semigloss, and eggshell finish with fine sandpaper.

E. Remove hardware and hardware accessories, electrical plates and covers, light fixture trims, and similar items.

F. Acclimatize wall-covering materials by removing them from packaging in the installation areas not less than 24 hours before installation.

3.03 INSTALLATION

A. General: Comply with wall-covering manufacturers' written installation instructions applicable to products and applications indicated except where more stringent requirements apply.

B. Cut wall-covering strips in roll number sequence. Change roll numbers at partition breaks and corners.

C. Install strips in same order as cut from roll.

D. Install reversing every other strip.

E. Install wall covering with no gaps or overlaps, no lifted or curling edges, and no visible shrinkage.

F. Match pattern 72 inches (1830 mm) above the finish floor.

G. Install seams vertical and plumb at least 6 inches (150 mm) from outside corners and 3 inches (75 mm) 6 inches (150 mm) from inside corners unless a change of pattern or color exists at corner. No horizontal seams are permitted.

H. Fully bond wall covering to substrate. Remove air bubbles, wrinkles, blisters, and other defects.

I. Trim edges and seams for color uniformity, pattern match, and tight closure. Butt seams without any overlay or spacing between strips.

3.04 CLEANING

A. Remove excess adhesive at finished seams, perimeter edges, and adjacent surfaces.

B. Use cleaning methods recommended in writing by wall-covering manufacturer.

C. Replace strips that cannot be cleaned.

D. Re-install hardware and hardware accessories, electrical plates and covers, light fixture trims, and similar items.

1.03 TACKABLE WALL COVERING

A. TAC-6
1. Manufacturer: Forbo Flooring
2. Series: Bulletin Board

3. Color: 2206 Oyster shell
4. Dimensions: See Drawings

1.04 SCHEDULE OF FACEPLATE AND WIRING DEVICES COLORS BY WALL FINISH:

A. White faceplates are to be used on walls with the following finishes:
   1. WC-1
   2. WC-3
   3. WC-4C
   4. WC-5A
   5. WC-13A
   6. WC-23
   7. WC-25

B. All other faceplates and wiring devices installed on wallcovering are to be black.

This page intentionally left blank

SECTION 09 75 00
INTERIOR STONE

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Stone countertops.
   2. Benches.
   3. Wall caps.
   4. Soap dishes in shower.

1.02 RELATED SECTIONS

A. Section 01 31 00 - Project Management and Coordination.

B. Section 01 33 00 - Submittal Procedures.

C. Section 01 40 00 - Quality Requirements.

D. Section 01 60 00 - Product Requirements.

E. Section 01 92 00 - Facility Operation and Maintenance.

F. Section 09 21 16 - Gypsum Board Assemblies.

G. Section 09 21 17 - Gypsum Board Shaft Wall Assemblies.

H. Section 09 30 00 - Tiling.

I. Section 09 72 00 - Wall Coverings.

J. Section 09 74 16 - Flexible Wood Veneer Wall Covering.

K. Section 09 75 01 - Interior Stone Schedules.

L. Section 09 84 14 - Acoustic Stretched-Fabric Wall Systems.

M. Section 09 84 30 - Sound Absorbing Wall and Ceiling Units.

N. Section 09 91 00 - Painting.

O. Section 12 56 90 - Spa Furniture.

1.03 REFERENCE STANDARDS

1. 40 CFR 59, Subpart D - National Volatile Organic Compound Emission Standards for Architectural Coatings; U.S. Environmental Protection Agency; Current Edition.
2. ANSI A118.3 - American National Standard Specifications for Chemical Resistant, Water Cleanable Tile-Setting and -Grouting Epoxy and Water Cleanable Tile-Setting Epoxy Adhesive; 2021.
3. ILI (HB) - Indiana Limestone Handbook; 2007.
4. MIA (DM) - Dimension Stone Design Manual; Current Edition.
5. NBGQA (SPEC) - Specifications for Architectural Granite, Version 20-1; 2020.

1.04 SUBMITTALS

A. Product Data: For the following:
   1. Each variety of stone.
   2. Stone installation materials and other manufactured products.

B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.

C. Samples for Verification:
   1. For each stone type indicated, in sets of Samples not less than 12 inches (300 mm) square. Include two or more Samples in each set and show the full range of variations in appearance characteristics expected in completed Work. Samples will establish the standard by which stone will be judged.
   2. For each color of grout and sealant required.

D. Sealant Compatibility Test Report: From sealant manufacturer, complying with requirements in Division 7 Section "Joint Sealants" and indicating that sealants will not stain or damage stone.

E. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

F. Operation and Maintenance Data: Submit O&M manuals according to the requirements of Section 01 92 00 - Facility Operation and Maintenance.

1.05 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Fabricator Qualifications: Shop that employs skilled workers who custom-fabricate interior stone similar in material, design, and extent to that indicated for this Project, whose work has resulted in applications with a record of successful in-service performance.

C. Installer Qualifications: Fabricator of interior stone.

D. Source Limitations for Stone: Obtain each variety of stone, regardless of finish, from a single quarry, whether specified in this Section or in another Section, with resources to provide materials of consistent quality in appearance and physical properties.

E. Source Limitations for Other Materials: Obtain each type of grout, stone accessory, sealant, and other material through one source from a single manufacturer.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Lift stone with wide-belt slings; do not use wire rope or ropes that might cause staining. Move stone, if required, using dollies with cushioned wood supports.

B. Store stone on wood A-frames or pallets with non-staining separators and non-staining, waterproof covers. Ventilate under covers to prevent condensation.

C. Store cementitious materials on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.

1.07 PROJECT CONDITIONS

A. Maintain air and material temperatures to comply with requirements of installation material manufacturers, but not less than 50 deg F (10 deg C) during installation and for 7 days after completion.

B. Field Measurements: Verify dimensions of construction to receive interior stone by field measurements before fabrication and indicate measurements on Shop Drawings.
   1. Established Dimensions: Where field measurements cannot be made without delaying the Work, establish dimensions and proceed with fabrication without field measurements. Coordinate construction to ensure that actual dimensions correspond to established dimensions.

1.08 COORDINATION

A. Coordinate installation of inserts that are to be embedded in concrete or masonry and similar items to be used by interior stone Installer for anchoring and supporting interior stone. Furnish setting drawings, templates, and directions for installing such items and deliver to Project site in time for installation.

B. Time delivery and installation of interior stone to avoid extended on-site storage and to coordinate with work adjacent to interior stone.

PART 2 PRODUCTS

2.01 SEE ATTACHED SCHEDULE

2.02 SETTING MATERIALS

A. Adhesives, General: Use only adhesives formulated for stone and recommended by their manufacturer for the application indicated.

B. Water-Cleanable Epoxy Adhesive: ANSI A118.3, with a VOC content of 65 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24)].
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Laticrete International, Inc.
      b. MAPEI Corp.
      c. Summitville Tiles, Inc.
      d. Akemi.

2.03 STONE ACCESSORIES

A. Vent Grommets: Doug Mockett & Company, 2-1/2” Air Vent Grommet Cap Set, Model # EDPAVG3, color: matte black, or similar.

B. Temporary Setting Shims: Rigid plastic shims, non-staining to stone, sized to suit joint thickness.

C. Cleaner: Stone cleaner specifically formulated for stone types, finishes, and applications indicated, as recommended by stone producer. Do not use cleaning compounds containing acids, caustics, harsh fillers, or abrasives.

D. Stone Sealer: Colorless, stain-resistant sealer that does not affect color or physical properties of stone surfaces, as recommended by stone producer for application indicated.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Bostik Findley Inc.
      b. Custom Building Products.
      c. HMK Stone Care System.
      d. Stonecare International.
      e. Summitville Tiles, Inc.

2.04 STONE FABRICATION, GENERAL

A. Select stone for intended use to prevent fabricated units from containing cracks, seams, and starts that could impair structural integrity or function.
   1. Repairs that are characteristic of the varieties specified are acceptable provided they do not impair structural integrity or function and are not aesthetically unpleasing, as judged by Architect.

B. Fabricate interior stone in sizes and shapes required to comply with requirements indicated, including details on Drawings and Shop Drawings.
   1. For granite, comply with recommendations in NBGQA (SPEC) "Specifications for Architectural Granite."
   2. For limestone, comply with recommendations in ILI (HB) "Indiana Limestone Handbook."
   3. Cut stone to produce pieces of thickness, size, and shape indicated and to comply with fabrication and construction tolerances recommended by applicable stone association.
   4. Where items are installed with adhesive or where edges of stone is visible in the finished work, make items uniform in thickness and of identical thickness for each type of item; gage back of stone if necessary.
   5. Clean sawed backs of stones to remove rust stains and iron particles.
   6. Dress joints straight and at right angle to face, unless otherwise indicated.
   7. Cut and drill sinkages and holes in stone for anchors, supports, and lifting devices as indicated or needed to set stone securely in place; shape beds to fit supports.
   8. Provide openings, reveals, and similar features as needed to accommodate adjacent work.

C. Finish exposed faces and edges of stone to comply with requirements indicated for finish of each type of stone required and to match approved Samples.

D. Carefully inspect finished stone units at fabrication plant for compliance with requirements for appearance, material, and fabrication. Replace defective units.
   1. Grade and mark stone for overall uniform appearance when assembled in place. Natural variations in appearance are acceptable if installed stone units match range of colors and other appearance characteristics represented in approved Samples.

2.05 STONE COUNTERTOPS

A. General: Comply with recommendations in MIA (DM) "Dimension Stone - Design Manual."

B. Nominal Thickness: Provide thickness indicated, but not less than 1-1/4 inches (32 mm). Gage backs to provide units of identical thickness.

C. Edge Detail: 1-1/4 inch (20-mm) (3 cm) 1/8 inch eased at top and bottom edges.

D. Splashes: Provide 3/4-inch- (20-mm-) thick backsplashes and end splashes, unless otherwise indicated.
   1. Height: 4 inches (100 mm).
   2. Top-Edge Detail: Straight, slightly eased at corner.

E. Joints: Fabricate countertops in sections for joining in field, with joints at locations indicated and as follows:
   1. Color match stone epoxy all seams. Black at Verde Butterfly, Clear or Shaded at Santa Cecilia. 1/16 inch (1.5 mm) in width.

F. Cutouts and Holes:
   1. Under-counter Fixtures: Make cutouts for under-counter fixtures in shop using template or pattern furnished by fixture manufacturer. Form cutouts to smooth, even curves.
      a. Provide vertical edges, slightly eased at juncture of cutout edges with top and bottom surfaces of countertop and projecting 3/16 inch (5 mm) into fixture opening.
   2. Counter-Mounted Fixtures: Prepare countertops in shop for field cutting openings for counter-mounted fixtures. Mark tops for cutouts and drill holes at corners of cutout locations. Make corner holes of largest radius practical.
   3. Fittings: Drill countertops in shop for plumbing fittings, under-counter soap dispensers, and similar items.

2.06 STONE BENCHES

A. Tops:
   1. Nominal Thickness: 1-1/4 inch (3 cm), unless otherwise indicated.
   2. Edge Detail: 1/8 inch (10-mm) radius eased at top edge and polished back at underside – 2 inch min., bottom corner slightly eased.
   3. Corner Detail: Match top edge.
   4. Bottom Surface Finish: Smooth.

2.07 STONE WALL CAPS AND SOAP SHELVES

A. Tops:
   1. Nominal Thickness: 1-1/4 inch (3 cm), unless otherwise indicated.
   2. Edge Detail: 1/8 inch Radius Eased @ Top Edge
   3. Corner Detail: Match top edge.
   4. Bottom Surface Finish: Polish underside
   5. Soap Shelf: 1/8 inch Radius Eased

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine surfaces indicated to receive interior stone and conditions under which interior stone will be installed, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance.

1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Clean dirty or stained stone surfaces by removing soil, stains, and foreign materials before setting. Clean stone by thoroughly scrubbing with fiber brushes and then drenching with clear water. Use only mild cleaning compounds that contain no caustic or harsh materials or abrasives.

3.03 SETTING OF STONE, GENERAL

A. Do necessary field cutting as stone is set. Use power saws with diamond blades to cut stone. Cut lines straight and true, with edges eased slightly to prevent snipping. Wet-cutting is preferred.

B. Contiguous Work: Provide reveals and openings as required to accommodate contiguous work.

C. Set stone to comply with requirements indicated on Drawings and Shop Drawings. Install anchors, supports, fasteners, and other attachments indicated or necessary to secure stone in place. Shim and adjust anchors, supports, and accessories to set stone accurately in locations indicated, with edges and faces aligned according to established relationships and indicated tolerances.

D. Erect stone units level, plumb, and true with uniform joint widths. Use temporary shims to maintain joint width.

3.04 CONSTRUCTION TOLERANCES

A. Variation from Plumb: For vertical lines and surfaces, do not exceed 1/8 inch in 96 inches (3 mm in 2400 mm), 1/4 inch (6 mm) maximum.

B. Variation from Level: For lintels, sills, chair rails, horizontal bands, horizontal grooves, and other conspicuous lines, do not exceed 1/8 inch in 10 feet (3 mm in 3 m), 1/4 inch in 20 feet (6 mm in 6 m), 3/8 inch (10 mm) maximum.

C. Variation in Joint Width: Do not vary joint thickness more than 1/16 inch (1.5 mm) or 1/4 of nominal joint width, whichever is less.

D. Variation in Plane between Adjacent Stone Units (Lipping): Do not exceed 1/32-inch (0.8-mm) difference between planes of adjacent units.

3.05 INSTALLATION OF STONE COUNTERTOPS

A. General: Install countertops by adhering to supports with water-cleanable epoxy adhesive.

B. Set stone to comply with requirements indicated on Drawings and Shop Drawings. Shim and adjust stone to locations indicated, with uniform joints of widths indicated and with edges and faces aligned according to established relationships.

C. Space joints with 1/16-inch (1.5-mm) gap for filling with color match epoxy. Use temporary shims to ensure uniform spacing.

D. Clamp units to temporary bracing, supports, or each other to ensure that countertops are properly aligned and joints are of specified width.

E. Complete cutouts not finished in shop. Mask areas of countertops adjacent to cutouts to prevent damage while cutting. Use power saws with diamond blades to cut stone. Make cutouts to accurately fit items to be installed, and at right angles to finished surfaces unless beveling is required for clearance. Ease edges slightly to prevent snipping.

F. Install backsplash and end splash by adhering to wall with 100% silicone adhesive. Leave 1/16-inch (1.5-mm) gap between countertop and splash for filling with sealant. Use temporary shims to ensure uniform spacing.

3.06 INSTALLATION OF STONE WALL CAPS

A. Stone Caps at Walls: Adhere units to tile backer or concrete masonry with 100% silicone adhesive. Shim/clamp as needed until dry, remove shims, epoxy (color match) joints.

3.07 INSTALLATION OF STONE BENCHES

A. Stone Bench Tops: Set stone bench tops on concrete or masonry bases in thin set. Shim/clamp as needed until dry, remove shims, epoxy (color match) joints.

3.08 JOINT-SEALANT INSTALLATION

A. Prepare joints and apply sealants of type and at locations indicated to comply with applicable requirements in Division 7 Section "Joint Sealants." Remove temporary shims before applying sealants.

3.09 ADJUSTING AND CLEANING

A. In-Progress Cleaning: Clean interior stone as work progresses. Remove adhesive, grout, mortar, and sealant smears immediately.

B. Remove and replace interior stone of the following description:
   1. Broken, chipped, stained, or otherwise damaged stone. Stone may be repaired if methods and results are approved by Architect.
   2. Defective stone.
   3. Defective joints, including misaligned joints.
   4. Interior stone and joints not matching approved Samples and mockups.
   5. Interior stone not complying with other requirements indicated.

C. Replace in a manner that results in interior stone's matching approved Samples and mockups, complying with other requirements, and showing no evidence of replacement.

D. Clean interior stone no fewer than six days after completion of grouting and pointing, using clean water and soft rags or stiff-bristle fiber brushes. Do not use wire brushes, acid-type cleaning agents, cleaning compounds with caustic or harsh fillers, or other materials or methods that could damage stone.

E. Sealer Application: Apply stone sealer to comply with stone producer's and sealer manufacturer's written instructions and recommendations.

3.10 PROTECTION

A. Protect stone surfaces, edges, and corners from construction damage. Use securely fastened untreated wood, plywood, or heavy cardboard to prevent damage.

B. Before inspection for Substantial Completion, remove protective coverings and clean surfaces.

END OF SECTION

SECTION 09 75 01
INTERIOR STONE - SCHEDULE

PART 2 PRODUCTS

1.01 GRANITE

A. Cut stone from contiguous, matched slabs in which natural markings occur.

B. Granite: Comply with ASTM C615.

C. STN-1:
   1. Manufacturer: Daltile
   2. Color: Verde Butterfly
   3. Thickness: 1-1/4”, 3 cm
   4. Finish: Polished
   5. Nosing: Eased Edge- 1/8 inch radius eased at top and bottom

6. Location: Non-member facing offices, Locker room bench

1.02 QUARTZ

A. QTZ-17
1. Manufacturer: Cambria
2. Quartz Surface: 93% pure quartz with polyester resin, pigments and special effects.
3. Complying with ASTM C97, ASTM C99, ASTM C170, ASTM C501
4. Mounting Adhesive: Structural grade ’50 year’ 100% silicone or epoxy adhesive
5. Collection: Luxury Series
6. Color: Brittanicca Gold Warm
7. Finish: Matte.
8. Size: 65 ½” x 132” (Jumbo).
9. Fabricated to site specific requirements by regional, Cambria-authorized fabricators
10. Thickness: 2 cm, 3 cm
11. Nosing: Ridgeline Edge (TR3)
12. Joint Sealant: Clear
13. Location: See Plans
14. Contact:Kalna Bobyn, 952.944.1676

B. QTZ-17P
1. Manufacturer: Cambria
2. Quartz Surface: 93% pure quartz with polyester resin, pigments and special effects.
3. Complying with ASTM C97, ASTM C99, ASTM C170, ASTM C501
4. Mounting Adhesive: Structural grade ’50 year’ 100% silicone or epoxy adhesive
5. Collection: Luxury Series
6. Color: Brittanicca Gold Warm
7. Finish: Polished.
8. Size: 65 ½” x 132” (Jumbo).
9. Fabricated to site specific requirements by regional, Cambria-authorized fabricators
10. Thickness: 2 cm, 3 cm
11. Nosing: Ridgeline Edge (TR3)
12. Joint Sealant: Clear
13. Location: See Plans
14. Contact: Kalna Bobyn, 952.944.1676

C. QTZ-18
1. Manufacturer: Cambria
2. Quartz Surface: 93% pure quartz with polyester resin, pigments and special effects.

3. Complying with ASTM C97, ASTM C99, ASTM C170, ASTM C501
4. Mounting Adhesive: Structural grade ’50 year’ 100% silicone or epoxy adhesive
5. Collection: Signature Series
6. Color: CHARLESTOWN
7. Finish: Matte.
8. Size: 65 ½” x 132” (Jumbo).
9. Fabricated to site specific requirements by regional, Cambria-authorized fabricators
10. Thickness: 2cm, 3cm
11. Nosing: Ridgeline Edge (TR3)
12. Joint Sealant: Clear
13. Location: See plans
14. Contact: Kalna Bobyn, 952.944.1676

D. QTZ-18P
1. Manufacturer: Cambria
2. Quartz Surface: 93% pure quartz with polyester resin, pigments and special effects.
3. Complying with ASTM C97, ASTM C99, ASTM C170, ASTM C501
4. Mounting Adhesive: Structural grade ’50 year’ 100% silicone or epoxy adhesive
5. Collection: Signature Series
6. Color: CHARLESTOWN
7. Finish: Polished.
8. Size: 65 ½” x 132” (Jumbo).
9. Fabricated to site specific requirements by regional, Cambria-authorized fabricators
10. Thickness: 2cm, 3cm
11. Nosing: Ridgeline Edge (TR3)
12. Grout Color: Midnight Black #22
13. Location: Reception Desk, Focal Walls.
14. Contact: Kalna Bobyn, 952.944.1676

SECTION 09 84 30
SOUND ABSORBING WALL AND CEILING UNITS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Sound-absorbing ceiling baffles.

B. Mounting accessories.

1.02 RELATED REQUIREMENTS

A. Section 01 33 00 - Submittal Procedures.

B. Section 01 40 00 - Quality Requirements.

C. Section 01 60 00 - Product Requirements.

D. Section 09 21 16 - Gypsum Board Assemblies.

E. Section 09 51 13 - Acoustic Panel Ceilings.

F. Section 09 74 16 - Flexible Wood Veneer Wall Covering.

G. Section 09 75 00 - Interior Stone.

H. Section 09 91 00 - Painting.

1.03 REFERENCE STANDARDS

A. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2023d.

1.04 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements, for submittal procedures.

B. Product Data: Manufacturer's printed data sheets for products specified.

C. Shop Drawings: Fabrication and installation details, panel layout, and fabric orientation.

D. Selection Samples: Manufacturer's color charts for fabric covering, indicating full range of fabrics, colors, and patterns available.

E. Verification Samples: Fabricated samples of each type of panel specified; 12 by 12 inch (305 by 305 mm), showing construction, edge details, and fabric covering.

F. Test Reports: Certified test data from an independent test agency verifying that panels meet specified requirements for acoustical and fire performance.

G. Manufacturer's Qualification Statement.

H. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Construction Manager within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

I. Maintenance Materials: Furnish the following for Operator's use in maintenance of project.
   1. See Section 01 60 00 - Product Requirements, for additional provisions.
   2. Extra Panels: Quantity equal to 5 percent of total installed, but not less than one of each type.

1.05 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Manufacturer Qualifications: Company with not less than five years of experience in manufacturing acoustical products similar to those specified.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Protect acoustical units from moisture during shipment, storage, and handling. Deliver in factory-wrapped bundles; do not open bundles until units are needed for installation.

B. Store units flat, in dry, well-ventilated space; do not stand on end.

C. Protect edges from damage.

PART 2 PRODUCTS

2.01 FABRIC-COVERED SOUND-ABSORBING BAFFLES

A. B-3
   1. Basis of Design:
      a. Manufacturers: CSI Creative
   2. Product ID: BFL-FLD-002
   3. Acoustics: 0.75-0.95 NRC
   4. Flammability: ASTM E84: Class A.
   5. Material: 12mm acoustic PET substrate
   6. Color: Abalone SND131
   7. Panel Size: 10" H x 1” D x 9'-0" L, typical – Refer to RCP for specific Lengths
   8. Patterns: As indicated on Drawings
   9. Spacing: 14" OC
   10. Installation: Rail suspension by manufacturer.
      a. CSI substrate clad linear system with No. 1 cable

2.02 FABRICATION

A. Fabricate panels to sizes and configurations as indicated, with facing installed without sagging, wrinkles, blisters, or visible seams.
   1. For panels suspended from ceiling, provide facing covering both sides, with seams only at panel edges.

B. Tolerances: Fabricate to finished tolerance of plus or minus 1/16 inch (1.6 mm) for thickness, overall length and width, and squareness from corner to corner.

2.03 ACCESSORIES

A. Ceiling-Suspended Accessories: Manufacturer's standard accessories at locations as indicated on each acoustical unit, sized appropriately for weight of acoustical unit.

B. Fixing Clips: Manufacturers standard for application as indicated.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine substrates for conditions detrimental to installation of acoustical units. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Install acoustical units in locations as indicated, following manufacturer's installation instructions.

B. Suspend ceiling baffles at locations and heights as indicated.

C. Install acoustical units to construction tolerances of plus or minus 1/16 inch (1.6 mm) for the following:
   1. Plumb and level.
   2. Flatness.

3.03 CLEANING

A. Clean fabric facing upon completion of installation from dust and other foreign materials, following manufacturer's instructions.

3.04 PROTECTION

A. Provide protection of installed acoustical panels until Date of Substantial Completion.

B. Replace panels that cannot be cleaned and repaired to satisfaction of the Architect.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 09 91 00
PAINTING

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Paint systems including application on the following substrates:
      a. Concrete.
      b. Masonry.
      c. Ferrous Metal
      d. Non-Ferrous Metal.
      e. Gypsum board.
      f. Wood.
   2. Powder Coating systems including application on the following substrates:
      a. Ferrous Metal
      b. Non-Ferrous Metal.
   3. Products include applications for the following conditions:
      a. Interior/Dry Environment.
      b. Interior/Wet Chemical Environment.
      c. Interior/Wet Environment.
      d. Exterior.
   4. See the following sections for coating of other surfaces:
      a. 06 40 00 - Architectural Woodwork.
      b. 07 81 60 - Intumescent Fireproofing.

1.02 RELATED SECTIONS

A. Section 01 33 00 - Submittal Procedures.

B. Section 01 40 00 - Quality Requirements.

C. Section 01 60 00 - Product Requirements.

D. Section 03 30 00 - Cast-in-Place Concrete.

E. Section 04 20 00 - Unit Masonry Assemblies.

F. Section 05 12 00 - Structural Steel Framing.

G. Section 05 40 00 - Cold-Formed Metal Framing.

H. Section 05 50 00 - Metal Fabrications.

I. Section 06 40 00 - Architectural Woodwork

J. Section 07 24 20 - Polymer Based Interior Finish System.

K. Section 07 81 60 - Intumescent Fireproofing.

L. Section 08 11 13 - Hollow Metal Doors and Frames.

M. Section 09 21 16 - Gypsum Board Assemblies.

N. Section 09 91 01 - Painting Schedules.

1.03 REFERENCE STANDARDS

A. 40 CFR 59, Subpart D - National Volatile Organic Compound Emission Standards for Architectural Coatings; U.S. Environmental Protection Agency; Current Edition.

B. GreenSeal GS-11 - Standard for Paints, Coatings, Stains, and Sealers; 2021, with Editorial Revision (2024).

C. MPI (APL) - Master Painters Institute Approved Products List; Master Painters and Decorators Association; Current Edition.

D. MPI (APSM) - Master Painters Institute Architectural Painting Specification Manual; Current Edition.

E. SCAQMD 1113 - Architectural Coatings; 1977, with Amendment (2016).

F. USGBC LEED-CI - LEED Green Building Rating System for Commercial Interiors; 2016.

1.04 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Samples for Verification: For each type of paint system and in each color and gloss of topcoat indicated.
   1. Submit Samples (3) on rigid backing, 8 inches (200 mm) square.
   2. Step coats on Samples to show each coat required for system.
   3. Label each coat of each Sample.
   4. Label each Sample for location and application area.

C. Product List: For each product indicated, include the following:
   1. Cross-reference to paint system and locations of application areas. Use same designations indicated on Drawings and in schedules.
   2. Printout of current MPI (APL) "Approved Products List" for each product category specified in Part 2, with the proposed product highlighted.

D. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 – Submittal Procedure and 01 60 00 – Product Requirements.

1.05 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. MPI Standards:
   1. Products: Complying with MPI standards indicated and listed in "MPI Approved Products List."
   2. Preparation and Workmanship: Comply with requirements in MPI (APSM) "Architectural Painting Specification Manual" for products and paint systems indicated.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Store materials not in use in tightly covered containers in well-ventilated areas with ambient temperatures continuously maintained at not less than 45 deg F (7 deg C).
   1. Maintain containers in clean condition, free of foreign materials and residue.
   2. Remove rags and waste from storage areas daily.

1.07 PROJECT CONDITIONS

A. Apply paints only when temperature of surfaces to be painted and ambient air temperatures are between 50 and 95 deg F (10 and 35 deg C).

B. Do not apply paints when relative humidity exceeds 85 percent; at temperatures less than 5 deg F (3 deg C) above the dew point; or to damp or wet surfaces.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Basis-of-Design Product: Subject to compliance with requirements, provide Sherwin Williams Company, or comparable product by one of the following:
   1. Benjamin Moore & Co.
   2. Diamond Vogel Paints.
   3. Hirshfield's, Inc.
   4. PPG.

B. If a specific Manufacturer/Product is given in the Paint Schedule, furnish only that product for given application. Provide primers as recommended by that product's Manufacturer.

C. Match paint color provided in Schedule.

2.02 PAINT, GENERAL

A. Material Compatibility:
   1. Provide materials for use within each paint system that are compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
   2. For each coat in a paint system, provide products recommended in writing by manufacturers of topcoat for use in paint system and on substrate indicated.

B. VOC Content of Field-Applied Interior Paints and Coatings: Provide products that comply with the following limits for VOC content, exclusive of colorants added to a tint base, when calculated according to 40 CFR 59, Subpart D (EPA Method 24); these requirements do not apply to paints and coatings that are applied in a fabrication or finishing shop:
   1. Low-Emitting Materials:
      a. Architectural paints and coatings applied on the building interior shall not exceed the VOC content limits established in GreenSeal GS-11 and USGBC LEED-CI
      b. Anti-corrosive and anti-rust paints applied to interior ferrous metal substrates must not exceed the VOC content limit of 250 g/L established in GreenSeal GS-11, 2.5.
      c. Clear wood finishes, floor coatings, stains, primers, and shellacs applied to interior elements must not exceed VOC content limits established in SCAQMD 1113, Architectural Coatings.
   2. Colors: As indicated in a color schedule.

2.03 PAINTING SYSTEMS

A. Interior Dry Environment:
   1. Gypsum Board walls and ceilings, Typ.
      a. Primer:
         1) Interior Latex Primer, MPI #50
      b. Topcoat, (2) coats of paint as indicated by surface:
         1) Interior Latex, MPI #53 (Flat)
         2) Interior Latex, MPI #54 (Semi-Gloss, enamel finish required)
   2. Masonry, Concrete walls, Typ.
      a. Primer:
         1) Block Filler MPI #4.
      b. Topcoat, (2) coats:
         1) Interior Latex, MPI #53
   3. Wood, where indicated to be painted. Coordinate with millwork supplier.
      a. Primer:
         1) Shop primed.
         2) Where not shop primed, Interior Latex, MPI #39
      b. Topcoat
         1) Alkyd, MPI #168
   4. Non-galvanized Steel.
      a. Primer:
         1) Shop primed as specified
         2) Anti-Corrosive Alkyd primer, MPI #79
      b. Topcoat, (2) coats:
         1) Alkyd, MPI #51, #47, #48; see below for gloss level per application
   5. Galvanized Steel or Aluminum.
      a. Primer:
         1) Water Based MPI #134
      b. Topcoat, (2) coats:

1) Alkyd, MPI #51, #47, #48; see below for gloss level per application.

B. Interior Pool, Mechanical and Chemical Storage Areas:
   1. Glass-Mat Gypsum Board or Cement Board.
      a. Primer:
         1) Interior Latex Primer, MPI #50
      b. Topcoat, (2) coats:
         1) Water Based Catalyzed Epoxy, MPI #115
   2. Masonry, Concrete walls.
      a. Primer:
         1) Block Filler MPI #4.
      b. Topcoat, (2) coats:
         1) Water Based Catalyzed Epoxy, MPI #115
   3. Non-galvanized Steel.
      a. Primer:
         1) Shop primed as specified
         2) Water-based Rust inhibitive primer, MPI #107
      b. Topcoat, (2) coats:
         1) Water Based Catalyzed Epoxy, MPI #115
   4. Galvanized Steel or Aluminum.
      a. Primer:
         1) Shop primed as specified
         2) Water-based Rust inhibitive primer, MPI #107
      b. Topcoat, (2) coats:
         1) Water Based Catalyzed Epoxy, MPI #115

C. Other Interior Wet areas (Locker rooms, Vanities, Toilets, etc):
   1. Gypsum Board walls and ceilings, Typ.
      a. Primer:
         1) Interior Latex Primer, MPI #50
      b. Topcoat, (2) coats:
         1) Anti-Microbial Interior Latex, MPI #53
   2. Non-galvanized Steel.
      a. Primer:
         1) Shop primed as specified
         2) Water-based Rust inhibitive primer, MPI #107
      b. Topcoat, (2) coats:
         1) Alkyd, MPI #51, #47, #48; see below for gloss level per application
   3. Galvanized Steel or Aluminum.
      a. Primer:
         1) Water Based MPI #134
      b. Topcoat, (2) coats:
         1) Alkyd, MPI #51, #47, #48; see below for gloss level per application.

D. Exterior:
   1. Masonry, Concrete walls, Typ.
      a. Primer:
         1) Block Filler MPI #4.
      b. Topcoat, (2) coats:
         1) Exterior Latex, MPI #10
   2. Non-galvanized Steel.
      a. Primer:
         1) Shop primed as specified
         2) Water-based Rust inhibitive primer, MPI #107

b. Topcoat, (2) coats:
1) HS Polyurethane Semi-Gloss, MPI #174

3. Galvanized Steel or Aluminum.
a. Primer:
1) Water Based MPI #134
b. Topcoat, (2) coats:
1) HS Polyurethane Semi-Gloss, MPI #174

2.04 PAINT FINISHES

A. Provide Paint finishes according to the types of surfaces applied to as follows, unless noted otherwise:
1. Ceilings/soffits: Flat
2. Food/Liquor spaces: Semi Gloss
3. Walls above wallcovering datum: Flat
4. Hollow metal doors: Semi-gloss
5. Painted wood: Satin enamel
6. Access Panels: Semi-gloss
7. Back of house, non public facing spaces: Semi-gloss.

B. Note: MPI numbers given in systems above refer to most typical conditions. In the event that those MPI numbers conflict with finishes here, select equivalent product in the gloss level indicated.

2.05 POWDER COATING

A. General: Provide powder coating systems by the Manufacturers and products as specified on the Powder Coating Schedule.

B. Exterior Applications:
1. Non-galvanized Steel
a. Polyester
2. Aluminum or Galvanized Steel
a. Fluoropolymer

C. Interior Applications:
1. Steel or Aluminum
a. Epoxy/Polyester blend

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine substrates and conditions, with Applicator present, for compliance with requirements for maximum moisture content and other conditions affecting performance of work.

B. Maximum Moisture Content of Substrates: When measured with an electronic moisture meter as follows:
1. Concrete: 12 percent.
2. Gypsum Board: 12 percent.

C. Verify suitability of substrates, including surface conditions and compatibility with existing finishes and primers.

D. Begin coating application only after unsatisfactory conditions have been corrected and surfaces are dry.
1. Beginning coating application constitutes Contractor's acceptance of substrates and conditions.

3.02 PREPARATION - PAINT

A. Comply with manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual" MPI (APSM) applicable to substrates indicated.

B. Remove plates, machined surfaces, and similar items already in place that are not to be painted. If removal is impractical or impossible because of size or weight of item, provide

surface-applied protection before surface preparation and painting.

1. After completing painting operations, use workers skilled in the trades involved to reinstall items that were removed. Remove surface-applied protection if any.
2. Do not paint over labels of independent testing agencies or equipment name, identification, performance rating, or nomenclature plates.

C. Clean substrates of substances that could impair bond of paints, including dirt, oil, grease, and incompatible paints and encapsulants.

1. Remove incompatible primers and re-prime substrate with compatible primers as required to produce paint systems indicated.

D. Steel Substrates: Remove rust and loose mill scale. Clean using methods recommended in writing by paint manufacturer.

E. Gypsum Board Substrates: Do not begin paint application until finishing compound is dry and sanded smooth.

3.03 APPLICATION - PAINT

A. Apply paints according to manufacturer's written instructions.

1. Use applicators and techniques suited for paint and substrate indicated.
2. Paint surfaces behind movable equipment, AV equipment and furniture same as similar exposed surfaces. Before final installation, paint surfaces behind permanently fixed equipment or furniture with prime coat only.
3. Paint front and backsides of access panels, removable or hinged covers, and similar hinged items to match exposed surfaces.

B. Tint each undercoat a lighter shade to facilitate identification of each coat if multiple coats of same material are to be applied. Tint undercoats to match color of topcoat, but provide sufficient difference in shade of undercoats to distinguish each separate coat.

C. If undercoats or other conditions show through topcoat, apply additional coats until cured film has a uniform paint finish, color, and appearance.

D. Apply paints to produce surface films without cloudiness, spotting, holidays, laps, brush marks, roller tracking, runs, sags, ropiness, or other surface imperfections. Cut in sharp lines and color breaks.

3.04 APPLICATION - POWDER COATING

A. Perform coating and curing in shop according to Manufacturer's instructions and according to the methods of the PCI-PCCFH Handbook. Deliver parts with coating completed and in protective wrapping.

B. Inspect parts after installation for damage.

C. Touch-up damaged surfaces as recommended by Manufacturer.

D. Parts damaged in installation to an extent that acceptable touch ups and repairs cannot be performed shall be replaced at no cost to the Owner.

3.05 CLEANING AND PROTECTION

A. At end of each workday, remove rubbish, empty cans, rags, and other discarded materials from Project site.

B. After completing paint application, clean spattered surfaces. Remove spattered paints by washing, scraping, or other methods. Do not scratch or damage adjacent finished surfaces.

C. Protect work of other trades against damage from paint application. Correct damage to work of other trades by cleaning, repairing, replacing, and refinishing, as approved by Architect, and leave in an undamaged condition.

D. At completion of construction activities of other trades, touch up and restore damaged or defaced painted surfaces.

3.06 PAINT SCHEDULE

A. See Attached Schedule.

3.07 POWDER COATING SCHEDULE

A. See Attached Schedule.

SECTION 09 91 01
PAINTING - SCHEDULES

PART 1 GENERAL

PART 2 PRODUCTS

PART 3 EXECUTION

3.01 PAINT SCHEDULE

A. PT-1
   1. Manufacturer: Benjamin Moore
   2. Color: OC-24 Winds Breath
   3. Finish: By Surface
   4. Location: General Ceiling, Soffits unless otherwise specified, Gyms Above AWC, Pools, Back of House (BOH), Exposed Ducts at Gyms, Access Panels, See Schedule.
   5. Notes: Color Preview Collection
   6. URL: https://www.benjaminmoore.com/en-us/color-overview/find-your-color/color/oc-24/winds-breath?color=OC-24

B. PT-2
   1. Manufacturer: Sherwin Williams
   2. Color: SW 7038 Tony Taupe
   3. Finish: By Surface
   4. Location: Door Frames, Exterior Metal-Door Frames, Bistro, Trash Enclosure, Access Panels; see schedule
   5. URL: https://www.sherwin-williams.com/homeowners/color/find-and-explore-colors/paint-colors-by-family/SW7038-tony-taupe

C. PT-3
   1. Manufacturer: Benjamin Moore
   2. Color: HC-110 Wethersfield Moss
   3. Finish: By Surface
   4. Location: Soffits at Café, Fitness Floor
   5. URL: https://www.benjaminmoore.com/en-us/color-overview/find-your-color/color/hc-110/wethersfield-moss?color=HC-110

D. PT-4
   1. Manufacturer: Sherwin Williams
   2. Color: SW 7037 Balanced Beige
   3. Finish: By Surface
   4. Location: Soffits at Salon, Spa Waiting, Yoga, Barre, Pilates, Cycle, Recovery, Access Panels; see schedule
   5. URL: https://www.sherwin-williams.com/homeowners/color/find-and-explore-colors/paint-colors-by-family/SW7037-balanced-beige

E. PT-5
   1. Manufacturer: Sherwin Williams
   2. Color: SW 0038 Library Pewter
   3. Finish: By Surface
   4. Location: See Drawings.
   5. URL: https://www.sherwin-williams.com/homeowners/color/find-and-explore-colors/paint-colors-by-family/SW0038-library-pewter

F. PT-6
   1. Manufacturer: Sherwin Williams
   2. Color: SW 7020 Black Fox
   3. Finish: By Surface
   4. Location: Door Frames at Spa, Yoga, Exterior Awning, Access Panels; see schedule

5. URL: https://www.sherwin-williams.com/homeowners/color/find-and-explore-colors/paint-colors-by-family/SW7020-black-fox

G. PT-7
1. Manufacturer: Sherwin-Williams.
2. Color: SW 6991 Black Magic
3. Finish: By Surface
4. Location: Desk Legs, Behind Mirrors, Pockets, Group Fitness Platform, Access Panels; see schedule
5. Notes: Macropoxy 646-100 – (2) Coats based on manufacturers recommendation at desk legs
6. URL: https://www.sherwin-williams.com/homeowners/color/find-and-explore-colors/paint-colors-by-family/SW6991-black-magic

H. PT-8
1. Manufacturer: Sherwin Williams
2. Color: SW 7642 Paverstone
3. Finish: By Surface
4. Location: Soffits at Coffee Lounge, Access Panels; see schedule.
5. URL: https://www.sherwin-williams.com/homeowners/color/find-and-explore-colors/paint-colors-by-family/SW7642-pavestone

I. PT-10
1. Manufacturer: Scuff master/Wolf Gordon
2. Color: WG 5854214
3. Finish: Solid Metal
4. Location: See drawings, Access Panels; see schedule

J. PT-12
1. Manufacturer: Sherwin Williams
2. Color: SW 7695 Mesa Tan
3. Finish: By Surface
4. Location: Pool IFS, Door frames at pools
5. URL: https://www.sherwin-williams.com/homeowners/color/find-and-explore-colors/paint-colors-by-family/SW7695-mesa-tan

K. PT-14

11. WC-8A: PT-15
12. WC-8B: PT-16
13. WC-8C: PT-17
14. WC-9: PT-23
15. WC-11A: PT-25
16. WC-11B: PT-45
17. WC-12: PT-23
18. WC-13A: PT-1
19. WC-15: PT-25
20. WC-16: PT-24
21. WC-17: PT-8
22. WC-19: PT-8
23. WC-23: PT-46
24. WC-26: PT-1
25. WC-27: PT-27

3.04 SCHEDULE OF FACEPLATE AND WIRING DEVICES COLORS BY WALL FINISH:

A. White faceplates are to be used on walls with the following finishes:
1. PT-1
2. PT-4
3. PT-14
4. PT-18
5. PT-25
6. PT-26
7. PT-27
8. PT-44
9. PT-46

B. All other faceplates and wiring devices installed on painted walls are to be black.

END OF SECTION

SECTION 10 14 00
SIGNAGE

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Exterior Signage.
   2. Interior Signage.

1.02 RELATED SECTIONS

A. Section 01 33 00 - Submittal Procedures.

B. Section 01 40 00 - Quality Requirements.

C. Section 01 60 00 - Product Requirements.

D. Section 03 30 00 - Cast-in-Place Concrete.

E. Section 04 20 00 - Unit Masonry.

F. Section 05 50 00 - Metal Fabrications.

G. Section 07 24 00 - Exterior Insulation and Finish System.

H. Section 07 92 00 - Joint Sealants.

I. Section 09 91 00 - Painting.

1.03 REFERENCES

A. Standards of the following as referenced:
   1. Aluminum Association (AA)
   2. Americans with Disabilities Act Accessibility Guidelines (ADAAG)
   3. American National Standards Institute (ANSI)
   4. American Society for Testing and Materials (ASTM)
   5. Manual on Uniform Traffic Control Devices (MUTCD)
   6. Underwriters' Laboratories, Inc. (UL)

1.04 SUBMITTALS

A. Product data: for each type of sign specified, including details of construction relative to materials, dimensions of individual components, profiles and finishes.

B. Shop drawings: identifying all materials, sizes, construction details, graphics layout, type style specifications and mounting methods showing fabrication and attachment of signs. Include plans, elevations and large-scale sections of typical members and other components. Show anchors, grounds, layout, reinforcement, accessories and installation details.
   1. Templates: Furnish full-size spacing templates for individually mounted dimensional letters and numbers.
   2. For signs supported by or anchored to permanent construction, provide setting drawings, templates and directions for installation of anchor bolts and other anchors to be installed as a unit of Work in other Sections.
   3. If required by the state, all exterior signage anchorage to be designed by a professional engineer registered by the state. Submit signed and sealed anchor details to architect for approval.
   4. Field Measurements: Take field measurements prior to preparation of shop drawings and fabrication to ensure proper fitting. Show recorded measurements on final shop drawings. Coordinate fabrication schedule with construction progress to avoid delay.

C. Signage Schedule: Complete with the location of each sign and the required copy/text.

D. Wiring diagrams from the manufacturer for illuminated sign units must be submitted to for approval. Include the following:
   1. Proposed LED configuration and layout within each letter and cabinet.
   2. Quantity of modules per letter and cabinet.

3. Power supply quantities, locations and loads.

E. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

1.05 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Sign Fabricator Qualifications: Firm experienced in producing signs similar to those required for this Project, with a record of successful in-service performance and sufficient production capacity to produce sign units without causing delay in the Work.

C. UL and NEMA Compliance: Provide sign lighting fixtures and electrical components for illuminated signs that are labeled and listed by UL and comply with applicable NEMA standards.

D. Single-Source Responsibility: For each separate sign type required, obtain signs from one source of a single manufacturer.

1.06 PERFORMANCE REQUIREMENTS

A. Provide signage that conforms to the requirements of regulatory agencies holding jurisdiction.

B. Products shall meet the current requirements of the Americans with Disabilities Act Accessibility Guidelines (ADAAG) and local amendments and modifications. All signage to comply with ADAAG provisions for signage, at appropriate locations, with respect to the following:
   1. Character proportion.
   2. Character height.
   3. Raised and braille characters.
   4. Pictorial symbols.
   5. Finish and contrast.

1.07 DELIVERY, STORAGE AND HANDLING

A. Comply with requirements of Division 1.

B. Comply with manufacturer's ordering instructions and lead-time requirements to avoid construction delays.

C. Deliver products in manufacturer's original, unopened, undamaged containers with identification labels intact.

D. Store products protected from weather, temperature, and other harmful conditions as recommended by supplier.

E. Handle products in accordance with manufacturer's instructions.

1.08 WARRANTY

A. Project Warranty: Comply with requirements of Division 1.

B. Manufacturer's Warranty: Submit manufacturer's standard warranty document executed by authorized company official.
   1. Warranty Period:
      a. LEDs: 5 year parts and labor warranty.
      b. LED power supplies: 5 year parts and labor warranty.

PART 2 PRODUCTS

2.01 SIGN MATERIALS: DRIVEWAYS, PARKING LOTS AND RAMPS

A. Manufacturers: Subject to compliance with requirements, provide products as specified and shown on drawings.

B. Traffic Control Signage: All traffic control signs must comply with the latest requirements per MUTCD. See Civil drawings for schedules, locations and details.

2.02 SIGN MATERIALS: MONUMENT, EXTERIOR BUILDING FACADES & POOL AREAS

A. Manufacturers: Subject to compliance with requirements, provide products as specified and shown on drawings.

B. Halo-Illuminated Channel Letters – LIFE TIME Sign.
   1. Letter Type: Reverse pan channels with halo illumination.
   2. Interior of channel letters shall be painted white or coated with reflective 3M film.
   3. Depth: 3” or as shown on drawings.
   4. Faces:
      a. “LIFE” = .090” Aluminum w/80 grit vertical brushed finish.
      b. “TIME” = .090” Aluminum w/80 grit vertical brushed finish.
   5. Backs: .150” clear Lexan w/riveted angle clips for face/return attachment.
   6. Returns: .090” Aluminum.
   7. Color: Shine seal finish.
   8. Mounting: Mount to exterior substrate with 2” spacers and anchors as required.
   9. Illumination: White LEDs:
      a. Manufacturers:
         1) Samsung.
         2) GE.
         3) Principal.
         4) Approved equivalent.
      b. LED requirements:
         1) Color Temp: 7,000K.
         2) Wet location rated.
         3) (3) LEDs per module.
         4) Minimum 90 lumens per foot or as required to provide adequate illumination. Illumination determined based on size of object and reflectance of supporting wall.
   10. Power: Power supplies to be dual rated for 120/277V and not be loaded more than 75% of the rated power supply capacity. Provide integral disconnect switch accessible to technician without entering cabinet.

C. Halo-Illuminated Channel Letters - LIFE CAFÉ & LIFE SPA Signs.
   1. Letter Type: Reverse pan channels with halo illumination.
   2. Interior of channel letters shall be painted white or coated with reflective 3M film.
   3. Depth: 2” or as shown on drawings.
   4. Faces:
      a. “LIFE” = .090” Aluminum w/80 grit vertical brushed finish.
      b. “CAFE” & “SPA”= .090” Aluminum w/80 grit vertical brushed finish.
   5. Backs: .150” clear Lexan w/riveted angle clips for face/return attachment Returns: .063” aluminum.
   6. Returns: .090” Aluminum.
   7. Color: Shine seal finish.
   8. Mounting: Mount to substrate with 2” spacers and anchors as required.
   9. Illumination: White LEDs:
      a. Manufacturers:
         1) Samsung.
         2) GE.
         3) Principal.
         4) Approved equivalent.
      b. LED requirements:
         1) Color Temp: 7,000K.

2) Wet location rated.
3) (3) LEDs per module.
4) Minimum 90 lumens per foot or as required to provide adequate illumination. Illumination determined based on size of object and reflectance of supporting wall.

10. Power: Power supplies to be dual rated for 120/277V and not be loaded more than 75% of the rated power supply capacity. Provide integral disconnect switch accessible to technician without entering cabinet.

D. Illuminated LOGO – LIFE CAFÉ & LIFE SPA Signs.
1. Cabinet: Lighted Box Cabinet.
2. Depth: 2” or as shown on drawings.
3. Face: 3/16” translucent white acrylic.
4. Back: .063” aluminum w/riveted angle clips for face/return attachments.
5. Returns: .063” aluminum.
6. Logo: 3/16” flat cut-out aluminum, painted P.T.M. MAP “Black.”
7. Color (returns): P.T.M. MAP “Black.”
8. Illumination: Internal White LEDs:
   a. Manufacturers:
      1) Samsung.
      2) GE.
      3) Principal.
      4) Approved equivalent.
   b. LED requirements:
      1) Color Temp: 7,000K.
      2) Wet location rated.
      3) (3) LEDs per module.
      4) Minimum 90 lumens per foot or as required to provide adequate illumination. Illumination determined based on size of object and reflectance of supporting wall.
9. Power: Power supplies to be dual rated for 120/277V and not be loaded more than 75% of the rated power supply capacity. Provide integral disconnect switch accessible to technician without entering cabinet.
10. Mounting: Mount to substrate as required and shield fasteners though frame stand-offs as required. Provide galvanized screws as required at exterior substrates.

E. Halo illuminated Channel Letters: LIFE TIME PICKLEBALL.
1. Letter Type: Reverse pan channels with halo illumination.
2. Interior of channel letters shall be painted white or coated with reflective 3M film.
3. Depth: 3” or as shown on drawings.
4. Stand offs: 2" min from face of wall to back of letter.
5. Faces:
   a. “LIFE TIME” = .125” Anodized Aluminum w/80 grit vertical brushed finish and clear coat.
   b. “Pickleball” and Logo = .125” Anodized Aluminum w/80 grit vertical brushed finish painted to match Pantone PMS 2995 Blue.
6. Returns:
   a. .080 x 3" Anodized Aluminum. Finish to match face.
7. Backs: .150” clear Lexan w/riveted angle clips for face/return attachment Returns: .063” aluminum.
8. Illumination: Internal White LEDs:
   a. Manufacturers:
      1) Samsung.
      2) GE.
      3) Principal.
      4) Approved equivalent.
   b. LED requirements:

1) Color Temp: 7,000K.
2) Wet location rated.
3) Minimum 90 lumens per foot or as required to provide adequate illumination. Illumination determined based on size of object and reflectance of supporting wall.

9. Power: Power supplies to be dual rated for 120/277V and not be loaded more than 75% of the rated power supply capacity. Provide integral disconnect switch accessible to technician without entering cabinet.
10. Mounting: Mount to substrate as required and shield fasteners though frame stand-offs as required. Provide galvanized screws as required at exterior substrates.

F. Address: Non-Illuminated Address F.C.O.
1. Type: Flat cut-out.
2. Faces: ¼" aluminum w/80 grit vertical brushed finish on faces.
3. Returns: ¼" aluminum with natural aluminum finish.
4. Numbers: As shown on drawings and/or as provided by owner.
5. Color: Shine seal finish.
6. Illumination: Non-illuminated.
7. Mounting: Mount flush to wall substrate with ¼" x 4" studs and Hilti injectable mortar as required.

2.03 SIGN MATERIALS: INTERIOR

A. Interior signage to be furnished and installed by Owner or by Manufacturer of related equipment.
1. Contractor to coordinate blocking, electrical, and other requirements.

B. Fasteners and Anchors: Manufacturer's standard as required for secure anchorage of signage, noncorrosive and compatible with each material joined, and complying with the following:
1. Use concealed fasteners and anchors unless indicated to be exposed.
2. For exterior exposure, furnish hot-dip galvanized devices unless otherwise indicated.
3. Sign Mounting Fasteners:
a. Concealed Studs: Concealed (blind), threaded studs welded or brazed to back of sign material or screwed into back of sign assembly, unless otherwise indicated.
4. Inserts: Furnish inserts to be set by other trades into concrete or masonry work.

C. Adhesives: As recommended by sign manufacturer and with a VOC content of 70 g/L or less for adhesives used inside the weatherproofing system and applied on-site when calculated per 40 CFR 59, Subpart D (EPA Method 24).

2.04 FINISHES

A. Colors and Surface Textures: For exposed sign that require selection of materials with integral or applied colors, surface textures, or other characteristics related to appearance, provide color matches indicated or if not indicated, as selected by Owner from manufacturer's full standard color range.

B. Metal Finishes: Comply with NAAMM "Metal Finishes Manual" for finish designations and applications recommendations.

C. Aluminum Finishes: Finish designations prefixed by "AA" conform to the system established by the Aluminum Association for designating aluminum finishes.
1. Class II Clear Anodized Fine Satin Finish: AA-M31C21A31 (Mechanical Finish: Fine satin directional textured; Chemical Finish: Fine matte etched finish; Anodic Coating: Class II Architectural, clear film thicker than 0.4 mil).

PART 3 EXECUTION

3.01 EXAMINATION

A. Site Verification of Conditions: Verify installation conditions previously established under other sections are acceptable for product installation in accordance with manufacturer's instructions including for correct location of cast-in anchor installed under other section.

B. Notify Architect in writing of unacceptable substrate or improper anchor location(s).

C. Scheduling of installation by Owner or it's representative implies that substrate and conditions are prepared and ready for product installation. Proceeding with installation implies installer's acceptance of substrate and acceptance of substrate and conditions.

3.02 INSTALLATION

A. Locate sign units and accessories where indicated, using mounting methods of the type described and in compliance with the manufacturer's instructions.
   a. Install product level, plumb, and at heights indicated.
   b. Install product at heights to conform to Americans with Disabilities Act Accessibility Guidelines (ADAAG) and applicable local amendments and regulations.
   c. Install signs within the following tolerances and in accordance with manufacturer's recommendations:
      1) Interior Signs: Within 1/4 inch vertically and horizontally of intended location.

B. Halo - Illuminated Signs.
   1. Channel letters:
      a. Reverse pan channel letters with halo illumination.
      b. LED modules to wrap letters in continuous rows approximately 1.5" off edge; spacing to be approximately 3" on center between modules; closer as required to achieve uniform halo.
      c. Mount to clear lexan back pointed toward letter front to allow for double bounce of light.
      d. Install reflective backing on wall of building behind each letter.
   2. Cabinet:
      a. Reverse pan channel cabinet with halo illumination and face illuminated text graphics.
      b. LED modules to run in straight line, parallel with top and bottom of cabinet, spacing to be approximately 3" on center between modules and 6" on center between rows. Spacing should be modified as needed to achieve uniform illumination.

C. Wall-Mounted Panel Signs: Attach panel signs to wall surfaces using the methods indicated below:
   1. Silicone-Adhesive Mounting: Use liquid silicone adhesive recommended by the sign manufacturer to attach sign units to irregular, porous or vinyl-covered surfaces. Use double-sided vinyl tape where recommended by the sign manufacturer to hold the sign in place until the adhesive has fully cured.
   2. Shim Plate Mounting: Provide 1/8-inch-thick concealed aluminum shim plates with predrilled and countersunk holes, where other mounting methods are not practicable. Attach the plate with fasteners and anchors suitable for secure attachment to the substrate. Attach panel sign units to the plate using the method specified above.

D. Bracket-Mounted Units: Provide the manufacturer's standard brackets, fittings and hardware as appropriate for mounting signs that project from walls and ceilings. Attach brackets and fittings securely to walls or ceilings with concealed fasteners and anchoring devices to comply with manufacturer's directions.

E. Cast Metal Plaques: Mount plaques using the standard method recommended by the manufacturer for the type of wall surface indicated.
   1. Concealed Mounting: Mount the plaques by inserting threaded studs into tapped lugs on the back of the plaque. Set in predrilled holes filled with quick-setting cement.
   2. Face Mounting: Mount plaques using exposed fasteners with rosettes attached through the face of the plaque into the wall surface.

3.03 CLEANING, PROTECTION AND REPAIR

A. Repair scratches and other damage which might have occurred during installation. Replace components where repairs were made but are still visible to the unaided eye from a distance of 3 feet.

B. After installation, clean sign surfaces according to the manufacturer's instructions. Protect units from damage until acceptance by Owner.

C. Remove temporary coverings and protection to adjacent work areas. Clean installed products in accordance with manufacturer's instructions prior to Owner's acceptance. Remove construction debris from project in accordance with provisions in Division 1.

3.04 SIGN SCHEDULE

A. Exterior Signs: Refer to drawings, including civil, for sizes, locations, and layout of signage types, sign text copy, and graphics.

B. Interior Signs: Refer to signage phasing schedules and drawings for sizes, locations, and layout of signage types, sign text copy, and graphics.

SECTION 10 21 13.16
PLASTIC-LAMINATE-CLAD TOILET COMPARTMENTS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Plastic laminate toilet compartments.

B. Plastic laminate doors for changing rooms.

C. Plastic laminate Urinal screens.

1.02 RELATED REQUIREMENTS

A. Section 01 33 00 - Submittal Procedures.

B. Section 01 40 00 - Quality Requirements.

C. Section 01 60 00 - Product Requirements.

D. Section 05 12 00 - Structural Steel Framing: Concealed steel support members.

E. Section 05 50 00 - Metal Fabrications: Concealed steel support members.

F. Section 06 10 00 - Rough Carpentry: Blocking and supports.

G. Section 09 30 00 - Tiling: Adjacent Surfaces

H. Section 10 28 13 - Toilet and Bath Accessories.

1.03 REFERENCE STANDARDS

A. ANSI A208.1 - American National Standard for Particleboard; 2022.

B. ASTM A666 - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar; 2023.

C. NEMA LD 3 - High-Pressure Decorative Laminates; 2005.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination: Coordinate the work with placement of support framing and anchors in walls and ceilings.

1.05 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00.

1.06 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements, for submittal procedures.

B. Shop Drawings: Indicate partition plan, elevation views, dimensions, details of wall supports, door swings.

C. Product Data: Provide data on panel construction, hardware, and accessories.

D. Manufacturer's Installation Instructions: Indicate special procedures.

E. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

1.07 WARRANTY

A. Provide Manufacturer's standard three-year warranty.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Plastic Laminate Toilet Compartments:
   1. ASI Accurate Partitions; Legacy Plastic Laminate. www.asi-accuratepartitions.com/#sle.

2. Substitutions: Not permitted.

2.02 MATERIALS

A. Particleboard for Core: ANSI A208.1 composed of wood chips, sawdust or flakes, made with waterproof resin binder; 45 lb density, 7/8" thick; sanded faces.
   1. All components shall be edge banded prior to face lamination.

B. Plastic Laminate: NEMA LD 3, HGS. .50 Thickness decorative, vertical grade laminate.
   1. PLAM-19. See Section 06 40 00 - Architectural Woodwork for more information.
   2. Substitutions: Not permitted.

C. Adhesive: non-toxic, water resistant type.

2.03 COMPONENTS

A. Toilet Compartments: Plastic laminate finished, floor-mounted headrail-braced.

B. Doors, Panels, and Pilasters: Plastic laminate adhesive and pressure bonded to faces and edges of particleboard core, with beveled corners and edges; edges of cut-outs sealed.
   1. Plastic Laminate Color: Plastic Laminate Finish: PLAM-19, unless noted otherwise. See section 06 40 00 – Architectural Woodwork for PLAM schedule.

C. Door and Panel Dimensions:
   1. Thickness: 1 inch (25 mm).
   2. See Drawings for size.

D. Urinal Screens: Wall mounted with two panel brackets.

2.04 ACCESSORIES

A. Pilaster Shoes: Formed chromed steel with polished finish, 3 inches (75 mm) high, concealing floor fastenings.

B. Head Rails: Hollow anodized aluminum tube, size by manufacturer, with anti-grip strips and cast socket wall brackets.

C. Wall and Pilaster Brackets: Polished stainless steel.

D. Attachments, Screws, and Bolts: Stainless steel, tamper proof type.
   1. For attaching panels and pilasters to brackets: Through-bolts and nuts; tamper proof.

E. Steel Plate Reinforcement: Carbon steel, prepared for fasteners, 1/8 inch (3 mm) thick.

F. Hardware: Manufacturer's standard heavy duty hardware. Polished stainless steel.
   1. Pivot hinges, gravity type, adjustable for door close positioning; two per door.
   2. Thumb turn door latch with exterior emergency access feature. Provide units that comply with regulatory requirements for accessibility at compartments designated as accessible.
   3. Door strike and keeper with rubber bumper; mounted on pilaster in alignment with door latch.
   4. Coat hook with rubber bumper; one per compartment, mounted on door. Omit at Life Time Kids' Academy (LTKA) and replace with wall mounted stop, Jacknob 4123 or eq.
   5. Provide door pull for outswinging doors that complies with regulatory requirements for accessibility. Provide units on both sides of doors at compartments designated as accessible.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify correct spacing of and between plumbing fixtures.

C. Verify correct location of built-in framing, anchorage, and bracing.

3.02 INSTALLATION

A. Install partitions secure, rigid, plumb, and level in accordance with manufacturer's instructions.

B. Maintain 3/8 to 1/2 inch (9 to 13 mm) space between wall and panels and between wall and end pilasters.

C. Attach panel brackets securely to walls using anchor devices.

D. Attach panels and pilasters to brackets. Locate head rail joints at pilaster center lines.

E. Field touch-up of scratches or damaged finish will not be permitted. Replace damaged or scratched materials with new materials.

3.03 ADJUSTING

A. Adjust and align hardware to uniform clearance at vertical edge of doors, not exceeding 3/16 inch (5 mm).

B. Adjust hinges to position doors in full closed position when unlatched. Return out-swinging doors to closed position.

C. Adjust adjacent components for consistency of line or plane.

END OF SECTION

This page intentionally left blank

SECTION 10 22 36
COILED WIRE FABRIC AND ATTACHMENT SYSTEMS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Coiled Wire Fabric and Attachment Systems.

1.02 RELATED SECTIONS

A. Section 01 33 00 - Submittal Procedures.

B. Section 01 40 00 - Quality Requirements.

C. Section 01 60 00 - Product Requirements.

D. Section 05 50 00 - Metal Fabrications.

E. Section 06 10 00 - Rough Carpentry.

F. Section 08 71 00 - Door Hardware.

G. Section 09 21 16 - Gypsum Board Assemblies.

1.03 REFERENCES

A. American Iron and Steel Institute (AISI) - Steel Product Manual; Stainless and Heat Resisting Steel.

B. ASTM A380/A380M - Standard Practice for Cleaning, Descaling, and Passivation of Stainless Steel Parts, Equipment, and Systems; 2017.

C. AWS D1.1/D1.1M - Structural Welding Code - Steel; 2020, with Errata (2023).

D. AWS D1.6/D1.6M - Structural Welding Code - Stainless Steel; 2017, with Amendment (2021).

E. MIL-C-5688 - Pre-Stretching and Proof-Testing of Wire Rope Assemblies.

1.04 DEFINITIONS

A. Coiled Wire Fabric: A building material manufactured by Cascade Coil Drapery. The material is created by interlocking strands of coiled wire to form a larger flexible sheet. Coiled wire fabric is made from a variety of metals and gauges of wire, and in a wide variety of scales.

B. Attachment Systems: Component materials required to present Coiled Wire Fabric in a specified manner (i.e., tensioned flat in two directions, tensioned in two directions with a percentage of fullness, tensioned flat in four directions, hanging in one direction, wrapping a form, etc.), for connecting it to the built environment and for attaining a specified performance capability. Engineered attachments may allow Coiled Wire Fabric panels to remain in a static position or to move, either manually or mechanically.

1.05 ADMINISTRATIVE REQUIREMENTS

A. Pre-Submittal Hardware and Keying Meeting: Prior to preparing final submittals, conduct meeting including Owner, Architect, and supplier of hardware to determine the following:
   1. Lock Function: Demonstrate function/type of each lockset scheduled and verify function at each door.
   2. Electrical Operation: Verify function of openings requiring electrified hardware.
   3. Keying: Determine keying requirements for preparation of final keying schedule.
   4. Submit letter of compliance, indicating when this meeting was held and who was in attendance, to Architect, Owner, and hardware supplier.

1.06 DESIGN / PERFORMANCE REQUIREMENTS

A. Structural Requirements: Provide coiled wire fabric systems capable of withstanding the effects of gravity and applied loads and stresses within limits and under conditions indicated on the Drawings:
   1. Components: Design and size to withstand dead and live loads of components, vegetation, rain, snow and ice and loads caused by positive and negative wind pressure acting normal to plane of the coiled wire fabric as calculated in accordance with applicable code.

B. Coiled Wire Fabric systems shall accommodate expansion and contraction of metal components without causing undue stress, buckling, opening of joints, and distortion.

C. Supports and hardware shall withstand loads encountered without excessive deflection or distortion when cables are tensioned to required amounts required to conform to applicable building codes.

1.07 SUBMITTALS

A. Submit under provisions of Section 01 33 00 - Submittal Procedures.
   1. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
   2. Shop Drawings: For fabrication and installation. Include plans, elevations, sections, details, and attachments to other work.
      a. Indicate materials, methods, finishes, fittings, hardware, anchorage, and accessory items.
      b. Provide setting diagrams and templates for anchorages and hardware to be installed by others.
      c. Where materials or fabrications are indicated to comply with design loadings, include material and safety factor properties, and other information need for structural analysis.
   3. Structural Calculations: Submit manufacturer’s design data, including structural calculations prepared by a qualified professional engineer.
   4. Samples for Verification:
      a. Submit samples for initial color selection of each specified finish.
      b. Sample size of coiled wire fabric to be 6 in. wide by 10 in. long.
   5. Certificates: 1 mill certificates signed by manufacturers of wire products certifying that products furnished comply with requirements.

1.08 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Installer Qualifications: Company experienced in manufacturer's products, or similar, for a minimum of 5 years. The Contractor shall provide trained laborers with prior experience in the type of construction involved as well as experience installing the materials and techniques specified.

C. Qualified Professional Engineer: A professional engineer licensed in the state of the Project location and who is qualified to design the portion of the work described in this Section.

D. Pre-installation Meetings: Conduct meetings including Contractor, Architect, fabricator, installer and other subcontractors whose work involves Coiled Wire Fabric to verify project requirements, framing and support conditions, mounting surfaces and manufacturer's installation. Comply with Division 1 requirements.

E. Product Options:
   1. Information on the Drawings and in the specifications, establishes requirements for system's aesthetic effects and performance characteristics. Aesthetic effects are indicated by dimensions, arrangements, alignment, profiles of components, and assemblies as they relate to sightlines, to one another, and adjoining construction. Performance characteristics are indicated by criteria subject to verification by one or more methods including structural analysis, preconstruction testing, field-testing, and in-service performance.
   2. The Drawings indicate size, profiles, and dimensional requirements of Coiled Wire Fabric Systems and are based on the specific system indicated. Refer to Section 01 60 00 - Product Requirements.

F. Modifications: Do not modify intended aesthetic effects as judged solely by the Architect, expect with the Architect's approval. If modifications are proposed, submit comprehensive explanatory data to the Architect for review.

G. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M and AWS D1.6/D1.6M.

1.09 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufacturer's unopened packaging until ready for installation.

B. Handle and store products according to manufacturer's recommendations. Leave products wrapped or otherwise protected and under clean and dry storage conditions until required for installation.

C. Exercise care not to scratch, mark, dent, or bend metal components during delivery, storage, and installation.

D. Store Material within limits of for temperature and humidity recommended by manufacturer.

1.10 PROJECT CONDITIONS

A. Verify actual openings by field measurements before fabrication; show recorded measurements on shop drawings.

1.11 COORDINATION AND SCHEDULING

A. Coordinate field measurements and fabrication schedule with construction progress to avoid construction delays.

1.12 WARRANTY

A. Manufacturer’s standard limited warranty for materials and workmanship.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Provide Coiled Wire Fabrics and Coiled Wire Fabric Attachment Systems as indicated on the Drawings. Manufacturer/Contractor shall engineer and fabricate components and assemblies for installation.

B. Manufacturer:
   1. Basis of Design: Cascade Coil Drapery, Inc., PO Box 3707, 19505 SW 90th Ct.; Tualatin, OR 97062; Contact: Andrew Schoenheit Toll Free Tel: 800-999-2645; Tel: 281-771-3339; Fax: 971-224-2199; Email: (request info (andrew@cascadecoil.com); Web: www.cascadecoil.com, www.cascadearchitectural.com, http://www.fabricoil.com

C. Substitutions: In accordance with Division 1 Requirements.

2.02 COILED WIRE FABRIC SYSTEMS

A. Provide Coiled Wire Fabrics and Coiled Wire Fabric Attachment Systems as indicated on the Drawings. Manufacturer/Contractor shall engineer and fabricate components and assemblies for installation.

B. CWF-3: Security Screen
   1. Coiled Wire Fabric.
      a. Material – Aluminum.
      b. Panel Depth – 5/16”.
      c. Wire Gauge – 14GA.
      d. Finish – Metaltone Finish – Powder Coated Antique Bronze.
      e. Fullness – As required.
   2. Attachment Systems - Secura Double Track System for Coiled Wire Fabrics - Direct Mount.
      a. Material – Galvanized Steel.
      b. System Type - (2) #4511S
      c. Finish – Powder coated to Match Fabric.
   3. Guardian Coil Semi Security Gate Systems: Guardian Coil Security Hardware
      a. Double 90-degree (All Track Curves to be 24” Minimum Radius)
      b. Material - Galvanized Steel.
      c. Configuration – The system is to utilize V103, V107 and V111 Channels with S525 Positive Locking Mesh Mount Foot bolt on Secured Side Only.
      d. Fabric Fasteners, hooks and double bolt guardian grade trolley carriers.
      e. Connector Type: #4518-G1B Nylon Carrier w/ hardware staggered @ 7” O.C. Typ.
      f. Receiver Socket for S525 Footbolt to be countersunk into floor and slab and to be flush with finished floor.
      g. Baton - (BT0500XX-S – size dependent on gate height)

1) Material - Stainless Steel.
2) Finish - Powder coated to match fabric.

4. Keying/Locking Device.
   a. Keyed - Unsecured Side, Thumb Turn - Secured Side.
   b. L215 Handle Both Sides.
   c. L200SCH Schlage Lock Assembly.
   d. Schlage Primus Core 20-740-6 pin.
   e. Schlage Mortise Housing PN 20-060626-IC.
   f. Schlage Control Key for Primus core 20-740.
   g. Powder coat finish to match coil system.
   h. Metal Components shall be factory-finished.

C. CWF-4: Fixed Divider Drapery
   1. Product: Fabricoil - Coiled Wire Fabric as manufactured by Cascade Coil Drapery.
      a. Material - Fabricoil Type Bright Basic Steel.
      b. Panel Depth - 3/16".
      c. Fullness - 200%
      d. Wire Gauge - 19GA.
      e. Finish - Metatone Finish - Powder coated Antique Bronze.
   2. Attachment Systems: Steel angle.
      a. Product: 4592 S-Hooks and 1/8” Steel mounting angle directly mounted to substrate.
      b. Material – Steel.
      c. Finish – Metatone Finish – Powder coated Antique Bronze.

2.03 FABRICATION

A. Tolerances: Verify dimensions on site prior to shop fabrication.

B. Fabricate steel and stainless steel in accordance with AISI Steel Product Manual and the manufacturer's requirements.

C. Welded connections shall comply with AWS standards for recommended practice in shop welding. Welds behind finished surfaces shall be without distortion or discoloration of exposed side.

D. Components shall be accurately cut, drilled and/or tapped to receive coiled wire fabric, hardware, fasteners, and accessories.

E. Shop fabricate to designs indicated on Drawings and to meet performance requirements specified. Shop fabricate hardware, interfacing parts and assemblies so that field cutting adjustments are not necessary.

F. Coordinate requirements, dimensions and spacing of attachment systems to ensure required factory drilled holes in supporting framework are correctly located.

G. Make exposed joints butt, flush, and hairline.

H. Fabricate connections that will be exposed to weather in a manner to exclude water, per Architect.

2.04 FINISH

A. After fabrication and/or weaving, clean and prepare Coiled Wire Fabric System in accordance with ASTM A380/A380M, if applicable.

PART 3 EXECUTION

3.01 EXAMINATION

A. Before beginning installation, verify that conditions installed under other sections are acceptable for installation of Coiled Wire Fabric and Attachment Systems in accordance with manufacturer's installation instructions.

B. Coordinate setting diagrams, plans, templates, and drawings and verify the proper installation of any necessary anchorages as detailed in the Drawings.

C. Verify supporting system for Coiled Wire Fabric is prepared for attachment of framework, hardware, anchors and wire rope and transfer of calculated loads.

D. If conditions are the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

E. Coordinate with appropriate entity to correct unsatisfactory conditions, if any exist.

F. Beginning of the work shall indicate acceptance of the areas and conditions as satisfactory by the Installer.

3.02 PREPARATION

A. Installer to verify inventory components to ensure all required items are available for installation. Inspect components for damage. Remove damaged components from site and replace.

B. Contractor shall verify alignment, support dimensions, and tolerances are correct.

C. Contactor shall verify all necessary framework and blocking is installed prior to mounting Coiled Wire Fabric Attachment Systems to existing structure.

3.03 INSTALLATION

A. Coiled Wire Fabric:
   1. Install Coiled Wire Fabric in accordance with the approved shop drawings.
   2. Assemblies shall be installed based on manufacturer's dimensions and specifications.
   3. Joints shall accommodate expansion and contraction of metal components without causing undue stress, buckling, joint fatigue and/or distortion. Follow manufacturer's installation.
   4. Install manufacturer-supplied brackets and mounting hardware onto Coiled Wire Fabric as indicated in shop drawings for specific Coiled Wire Fabric Attachment Systems. Attach with approved fasteners and techniques to ensure that sections are horizontal and parallel to grade/slab or rake to within 1/16 inch (1.58 mm) in 4 feet (1.2 m).
   5. Verify that support framing and other surfaces to receive Coiled Wire Fabric are clean and free of obstructions.
   6. Follow shop drawings to attach Coiled Wire Fabric to support framing using appropriate manufacturer supplied hardware.
   7. Provide anchorage devices and fittings to secure to in-place construction; including additional frame work, blocking, threaded rods and anchors.
   8. Install infill plumb, level, square, and rigid without kinks or sags.
   9. Anchor Coiled Wire Fabric and Attachment Systems to mounting surfaces as indicated on the Drawings.
   10. Separate dissimilar materials with bushings, grommets, or washers to prevent electrolytic corrosion.
   11. Use manufacturer's supplied hardware.
   12. Tension Coiled Wire Fabric per drawings, or as necessary, so that no slack is visible.
   13. After final adjustment provide tamper resistant lock tight materials on all fittings.

B. Coiled Wire Fabric Attachment Systems:
   1. Install Coiled Wire Fabric Attachment Systems in accordance with the approved shop drawings.
   2. Assemblies shall be installed based on manufacturer's dimensions and specifications.
   3. Joints shall accommodate expansion and contraction of metal components without causing undue stress, buckling, joint fatigue and/or distortion. Follow manufacturer's installation.
   4. Should Coiled Wire Fabric Attachment Systems require wall mounting, the Contractor shall provide structure.
   5. Install manufacturer-supplied brackets and mounting hardware onto Coiled Wire Fabric Attachment Systems as indicated in shop drawings for specific Coiled Wire Fabric Attachment Systems. Attach with approved fasteners and techniques to ensure that sections are horizontal and parallel to grade/slab or rake to within 1/16 inch (1.58 mm) in 4 feet (1.2 m).
   6. Verify that support framing and other surfaces to receive Coiled Wire Fabric and Attachment Systems are clean and free of obstructions.

7. Follow shop drawings to attach Coiled Wire Fabric Attachment Systems to support framing using appropriate manufacturer supplied hardware.
8. Provide anchorage devices and fittings to secure to in-place construction; including additional frame work, blocking, threaded rods and anchors.
9. Install infill plumb, level, square, and rigid without kinks or sags.
10. Anchor Coiled Wire Fabric and Attachment Systems to mounting surfaces as indicated on the Drawings.
11. Separate dissimilar materials with bushings, grommets, or washers to prevent electrolytic corrosion.
12. Use manufacturer's supplied hardware.
13. Tension Coiled Wire Fabric per drawings, or as necessary, so that no slack is visible.
14. After final adjustment provide tamper resistant lock tight materials on all fittings.

3.04 ADJUSTING AND CLEANING

A. Remove temporary coverings and protection of adjacent work areas. Clean installed products before owner's acceptance.

B. Follow manufacturer's cleaning instructions. Provide to owner per Closeout Requirements.
   1. Vacuum dust and dirt from fabric with a brush-ended vacuum cleaner.
   2. Use mild detergent and damp rags to remove persistent dust or grease.
   3. Do not use abrasive cleaners.

C. Remove from project site and legally dispose of construction debris associated with this work.

3.05 PROTECTION

A. Protect installed products until completion of project.

B. Touch-up, repair or replace damaged products before Substantial Completion.

C. Protect installed products and finished surfaces from damage during construction.

D. Replace defective or damaged components as directed by Architect.

END OF SECTION

SECTION 10 23 26
GLASS PARTITION SYSTEMS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Site-assembled demountable office partitions.- (**Not Used)**
   2. Glazing system for Saunas and Steam rooms.

1.02 RELATED SECTIONS

A. Section 01 33 00 - Submittal Procedures.

B. Section 01 40 00 - Quality Requirements.

C. Section 01 60 00 - Product Requirements.

D. Section 08 71 00 - Door Hardware.

E. Section 08 81 00 - Glazing.

1.03 REFERENCES

A. ANSI Z97.1 - Safety Glazing Materials Used in Buildings - Safety Performance Specifications and Methods of Test.

B. ASTM International (ASTM):
   1. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.
   2. ASTM C1036 - Standard Specification for Flat Glass.
   3. ASTM C1048 - Standard Specification for Heat-Treated Flat Glass-Kind HS, Kind FT, Coated and Uncoated Glass.
   4. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

C. AAMA 611 - Voluntary Specification for Anodized Architectural Aluminum.

D. AAMA 2603 - Voluntary Specification, Performance Requirements and Test Procedures for Pigmented Organic Coatings on Architectural Extrusions and Panels.

E. Builders Hardware Manufacturers Association (BHMA)

F. Glass Association of North America (GANA) - Glazing Manual.

G. ICC A117.1 - Standard for Accessible and Usable Buildings and Facilities.

H. NAAMM "Metal Finishes Manual for Architectural and Metal Products"

I. NFPA 70 - National Electrical Code (NEC).

J. UL 723 - Standard Test Method for Surface Burning Characteristics of Building Materials.

1.04 SUBMITTALS

A. Submit under provisions of Division 01 requirements.

B. Product Data: Manufacturer's data sheets on each product to be used, including:
   1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
   2. Preparation instructions and recommendations.
   3. Storage and handling requirements and recommendations.
   4. Installation methods.

C. Shop Drawings: Include plans, elevations, sections, full-size details, and attachments to other work.
   1. Include details of provisions for assembly, showing the following:
      a. Joinery.
      b. Anchorage.

c. Glazing.
2. Include point-to-point wiring diagrams showing the following:
a. Power requirements for each electrically operated door hardware.

D. Coordination Drawings: Reflected ceiling plans and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from the installers of the items involved:
1. Glass partition systems.
2. Suspended-ceiling components and dimensioned ceiling-grid layout.
3. Locations of fixed door and window mullions.
4. Overhead bracing, and related structural members.
5. Ductwork above ceiling.
6. Ceiling mounted items, including the following:
a. Lighting fixtures.
b. HVAC ductwork, outlets, and inlets.
c. Speakers.
d. Sprinklers.
e. Smoke detectors.
f. Access panels.
7. Plenum acoustical barriers.

E. Verification Samples: For each finish product specified, two samples, minimum size 6 inches square representing actual product, color, and patterns.

F. Informational Submittals:
1. Qualification Data: For Installer.
2. Sample Warranties.

G. Procurement:
1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
2. Submit inventory to Owner within 5 days of delivery of materials.
3. See Sections 01 33 00 and 01 60 00.

H. Closeout Submittals:
1. Maintenance Data: For glass partition systems to include in maintenance manuals.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Minimum 5 year experience manufacturing similar products.

B. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

C. Product Options: Information on Drawings and in Specifications establishes requirements for aesthetic effects and performance characteristics of assemblies. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction.
1. Do not change intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If changes are proposed, submit comprehensive explanatory data to Architect for review.

1.06 PRE-INSTALLATION MEETINGS

A. Convene minimum two weeks prior to starting work of this section.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver and store products in manufacturer's unopened packaging bearing the brand name and manufacturer's identification until ready for installation.

B. Handling: Handle materials to avoid damage.

1.08 PROJECT CONDITIONS

A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's recommended limits.

1.09 SEQUENCING

A. Ensure that products of this section are supplied to affected trades in time to prevent interruption of construction progress.

PART 2 PRODUCTS

2.01 DEMOUNTABLE OFFICE PARTITIONS (NOT USED)

A. Acceptable Manufacturers and Products:
   1. Modernus: Riga Demountable Partition
      System 10 E 34th Street, FL 2
      New York, NY 10016
      800 755 8940
   2. Falkbuilt: Kai Glass Wall
      81 S 9th St, Suite 450
      Minneapolis, Minnesota 55402
      920 764 0773
   3. Substitutions: Not Permitted.
   4. Source Limitations: Obtain aluminum-framed partition system with sliding glass doors from single source from single manufacturer.

B. Site-Assembled Demountable Partitions:
   1. General: Site-assembled demountable-partition assembly and components that are the standard products of manufacturer.
   2. Performance Requirements:
      a. Surface-Burning Characteristics: Comply with ASTM E84 or UL 723 testing. Identify products with appropriate markings of applicable testing agency.
         1) Flame-Spread Index: 25 or less.
         2) Smoke-Developed Index: 450 or less.
      b. Structural Performance: Provide demountable partitions capable of withstanding the effects of gravity loads and stresses within limits and under conditions.
   3. Trim: Continuous, factory-finished.
      a. Adjustable for variations in floor and ceiling levels.
      b. Trim Material: Aluminum.
      c. Panel Joints: Closure trim.
      d. Outside Corner Trim: Square.
      e. Ceiling Trim Profile: Projected.
      f. Other pre-finished trim as indicated on drawings.
   4. Aluminum Finishes.
      a. Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of 1.5 mils. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
         1) Color Black.
   5. Glazing Frames: Manufacturer's standard aluminum frames for glazing thickness indicated.
      a. Material: Aluminum; Powder Coated
      b. Profile Heights: 1-3/8”
      c. Profile Width: 7/8”
      d. Frame Finish: As indicated on drawings.
      e. Carré Applique: Aluminum C-Channel; Powder Coated; Adhered to glass with 3M Double Adhesive Tape
   6. Glazing: Fully tempered clear float glass. Thickness: 3/8 inch.

7. Seals: Manufacturer's standard.
8. Hardware: By Manufacturer.
9. Doors: Sliding, Manufacturer's standard. See Door Schedule
10. Fabrication:
    a. General: Fabricate demountable walls for installation with concealed fastening devices and pressure-fit members that will not damage ceiling or floor coverings. Fabricate systems for installation with continuous seals at floor, ceiling, and other locations where partitions abut fixed construction.
    b. Panels for Site-Assembled Demountable Partitions: Face panels fabricated and finished in modular widths indicated.
        1) Transom Panels: Fabricated in material and finish to match wall panels unless otherwise indicated.
    c. Wiring: Conceal conductors and cables in raceways. Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii.

2.02 GLAZING SYSTEM FOR SAUNA AND STEAM ROOMS

A. Acceptable Manufacturer:
    1. C.R. Laurence
        a. 2503 E Vernon Ave, Los Angeles, CA 90058-1826
        b. 800.421.6144. https://www.crlaurence.com/products/brands/listing/A07A_AH
    2. Substitutions: Not Permitted.
    3. Source Limitations: Obtain products from single source and from single manufacturer.

B. Aluminum Dry Glaze Partition System:
    1. General: Site-assembled demountable-partition assembly and components that are the standard products of manufacturer.
        a. Basis-of-Design Product: Subject to compliance with requirements, provide CRL DRS Low Profile Square Door and Sidelite Rails.
    2. Performance Requirements:
        a. Surface-Burning Characteristics: Comply with ASTM E84 or UL 723 testing. Identify products with appropriate markings of applicable testing agency.
            1) Flame-Spread Index: 25 or less.
            2) Smoke-Developed Index: 450 or less.
        b. Structural Performance: Provide demountable partitions capable of withstanding the effects of gravity loads and stresses within limits and under conditions.
    3. Rails: Continuous, factory-finished.
        a. Rail Material: Aluminum.
        b. Finish: Satin Anodized
        c. End Caps: As provided by Manufacturer.
        d. Products:
            1) Bottom Rail: #SR2SSA12SL
            2) Head and Jamb Rail: #WU1SA240
        e. Other pre-finished trim as indicated on drawings.
        f. Exposed-Metal Trim Finish: to match.
    4. Door Hardware:
        a. Sauna Door Pull:
            1) Manufacturer: ASSA ABLOY
            2) Product: Rockwood RM 4010 ArborMet
            3) Metal Finish: Satin Stainless Steel - US32D
            4) Grip Finish: Clear Coated Maple.
            5) Length: 36"
            6) Mounting: Back-to-Back Heavy Duty.
        b. Steam Door Pull:

1) Manufacturer: ASSA ABLOY
2) Product: Rockwood RM 2510 SoftMet
3) Metal Finish: Satin Stainless Steel - US32D
4) Grip Finish: Black Santoprene.
5) Length: 36"
6) Mounting: Back-to-Back Heavy Duty.

c. Hinge:
1) Manufacturer: C.R.Laurence
2) Product: Glass-to-glass oil dynamic hold open 180 degrees hinges.
3) Catalog Number: H8015BTSN
4) Finish: Brite Satin Nickel

d. Additional Required Hardware by Manufacturer.

5. Accessories:
a. Door Seal:
1) Manufacturer: C.R.Laurence
2) Product: 'h' Jamb Seal with Hard Leg for 180 Degrees
3) Catalog Number: P120HJ
4) Finish: Clear

C. Fabrication:
1. General: Fabricate for installation with concealed fastening devices and pressure-fit members that will not damage ceiling or floor substrates. Fabricate systems for installation with continuous seals at floor, ceiling, and other locations where partitions abut adjacent construction.

2.03 PERFORMANCE REQUIREMENTS

A. General Performance: Comply with performance requirements specified, as determined by testing of glass partition systems representing those indicated for this Project without failure due to defective manufacture, fabrication, installation, or other defects in construction.

B. Deflection of Framing Members:
1. Deflection Normal to Wall Plane: Limited to edge of glass in a direction perpendicular to glass plane not exceeding 1/175 of the glass edge length for each individual glazing lite or an amount that restricts edge deflection of individual glazing lites to 3/4 inch, whichever is less.
2. Deflection Normal to Wall Plane: Limited to 1/175 of clear span for spans of up to 13 feet 6 inches and to 1/240 of clear span plus 1/4 inch for spans greater than 13 feet 6 inches or an amount that restricts edge deflection of individual glazing lites to 3/4 inch, whichever is less.
3. Deflection Parallel to Glazing Plane: Limited to amount not exceeding that which reduces glazing bite to less than 75 percent of design dimension and that which reduces edge clearance between framing members and glazing or other fixed components to less than 1/8 inch.
a. Operable Units: Provide a minimum 1/16-inch clearance between framing members and operable units.

C. Regulatory Requirements: Provide tempered or laminated safety glass for locations subject to human impact as required by the applicable Building Code.

2.04 ACCESSORIES

A. Fasteners and Accessories: Manufacturer's standard corrosion-resistant, non-staining, non-bleeding fasteners and accessories compatible with adjacent materials.
1. Use self-locking devices where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration.
2. Reinforce members as required to receive fastener threads.
3. Use exposed fasteners with countersunk Phillips screw heads, finished to match framing system, fabricated from 300 series stainless steel.

B. Anchors: Three-way adjustable anchors that accommodate fabrication and installation tolerances compatible with adjoining materials and recommended by manufacturer.

C. Decorative Glazing Film:

1. Manufacturer: Decorative Films.
2. Product: Solyx Bronze Frost SX-1305.
3. Material: Polymeric Vinyl film.
4. Adhesive: Pressure sensitive adhesive by manufacturer.
5. Roll width: 60"
6. Thickness: 4 mil.
7. Visible Light Transmission: 70%
8. Installation: see drawings for location. Install on exterior face (facing circulation) of glass partitions.

2.05 FABRICATION

A. Form or extrude aluminum shapes before finishing.

B. Fabricate components that, when assembled, have the following characteristics:
   1. Profiles that are sharp, straight, and free of defects or deformations.
   2. Accurately fitted joints with ends coped or mitered.
   3. Fasteners, anchors, and connection devices that are concealed from view to greatest extent possible.

C. After fabrication, clearly mark components to identify their locations in Project according to Shop Drawings.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 ERECTION TOLERANCES

A. Erection Tolerances: Install glass partition systems to comply with the following maximum tolerances:
   1. Level: 1/8 inch in 20 feet (3.2 mm in 6 m); 1/4 inch in 40 feet.
   2. Alignment:
      a. Where surfaces abut in line or are separated by reveal or protruding element up to 1/2 inch wide, limit offset from true alignment to 1/16 inch.
      b. Where surfaces are separated by reveal or protruding element from 1/2 to 1 inch (12.7 to 25.4 mm) wide, limit offset from true alignment to 1/8 inch.
      c. Where surfaces are separated by reveal or protruding element of 1 inch wide or more, limit offset from true alignment to 1/4 inch.
   3. Location: Limit variation from plane to 1/8 inch in 12 feet; 1/2 inch over total length.

3.03 INSTALLATION

A. General:
   1. Comply with manufacturer's written instructions.
   2. Do not install damaged components.
   3. Fit joints to produce hairline joints free of burrs and distortion.
   4. Rigidly secure non-movement joints.
   5. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration and to prevent impeding movement of moving joints.
   6. Seal perimeter and other joints watertight unless otherwise indicated.

B. Metal Protection:
   1. Where aluminum is in contact with dissimilar metals, protect against galvanic action by painting contact surfaces with materials recommended by manufacturer for this purpose or installing nonconductive spacers.

C. Install components plumb and true in alignment with established lines and grades.

3.04 DEMOUNTABLE PARTITION INSTALLATION

A. Install partitions after other finishing operations have been completed.
   1. Install partitions rigid, level, plumb, and aligned. Install seals at connections with floors, ceilings, fixed walls, and abutting surfaces to prevent light and sound transmission.
   2. Except for filler panels scribed to fixed walls or columns, do not modify manufacturer's standard components.

B. Doors and Frames: Install door-and-frame and glazing-and-glazing-frame assemblies securely anchored to partitions and with doors aligned and fitted. Install and adjust door hardware for proper operation.

C. Electrical Devices: Connect integral, concealed wiring to serve electrical power and communication devices indicated on Drawings.
   1. Connect electrical service at junction-box locations according to Division 16 Section "Low-Voltage Electrical Power Conductors and Cables."
   2. Connect data communication service at junction-box locations according to Division 16 - Electrical requirements.

D. Erection Tolerances:
   1. Install each partition so surfaces vary not more than 1/8 inch from the plane formed by the faces of adjacent partitions.

3.05 PROTECTION

A. Protect installed products until completion of project.

B. Touch-up, repair or replace damaged products before Substantial Completion.

END OF SECTION

SECTION 10 28 13
TOILET AND BATH ACCESSORIES

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Public-use washroom accessories.
   2. Public-use shower room accessories.
   3. Childcare accessories.
   4. Custodial accessories.

1.02 RELATED SECTIONS

A. Section 01 31 00 - Project Management and Coordination.

B. Section 01 33 00 - Submittal Procedures.

C. Section 01 40 00 - Quality Requirements.

D. Section 01 60 00 - Product Requirements.

E. Section 05 40 00 - Cold Formed Metal Framing.

F. Section 06 10 00 - Rough Carpentry.

G. Section 08 81 00 - Glazing.

H. Section 09 21 16 - Gypsum Board Assemblies.

I. Section 09 30 00 - Tiling.

J. Section 10 21 13.16 - Plastic Laminate Toilet Compartments.

1.03 REFERENCE STANDARDS

A. ASTM F446 - Standard Consumer Safety Specification for Grab Bars and Accessories Installed in the Bathing Area; 2019.

B. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

1.04 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Product Schedule: Indicating types, quantities, sizes, and installation locations by room of each accessory required.
   1. Identify locations using room designations indicated.
   2. Identify products using designations indicated.

C. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Construction Manager within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

1.05 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

1.06 WARRANTY

A. Special Mirror Warranty: Manufacturer's standard form in which manufacturer agrees to replace mirrors that develop visible silver spoilage defects and that fail in materials or workmanship within specified warranty period.

1. Warranty Period: 10 years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 PUBLIC-USE WASHROOM ACCESSORIES

A. Toilet Tissue (Roll) Dispenser:
   1. Provided by Owner, installed by Contractor.
      a. See section 01 64 00.

B. Paper Towel (Folded) Dispenser:
   1. Provided by Owner, installed by Contractor.
      a. See section 01 64 00.

C. Liquid-Soap Dispenser:
   1. Coordinate installation with Life Time's vendor.

D. Grab Bar:
   1. Products: Subject to compliance with requirements, provide products by one of the following:
      a. American Specialties, Inc., 3800 Series.
      b. Bobrick Washroom Equipment Inc., B-6806 Series.
      c. Bradley Corporation, 812 Series.
   2. Mounting: Flanges with concealed fasteners.
   3. Material: Stainless steel, 0.05 inch (1.3 mm) thick.
      a. Finish: Smooth, No. 4 finish (satin) on ends and slip-resistant texture in grip area.
   4. Outside Diameter: 1-1/2 inches (38 mm).
   5. Configuration and Length: As indicated on Drawings.

E. Sanitary-Napkin Disposal Unit:
   1. Products: Subject to compliance with requirements, provide products by one of the following:
      a. American Specialities Inc., No. 0852.
      b. Bobrick Washroom Equipment Inc., B-270.
      c. Bradley Corporation, Model 4781-11.
   2. Mounting: Surface mounted.
   3. Door or Cover: Self-closing, disposal-opening cover.
   4. Receptacle: Removable.
   5. Material and Finish: Stainless steel, No. 4 finish (satin).

F. Manufactured Mirror Unit: See drawings for size:
   1. American Specialties, 0600 Series.
   2. Or approved equal.

G. Frameless Mirror Glazing: By glazing provider. See 08 81 00.

H. SLIM dri Hand Dryer:
   1. World Dryer Model L-973 with Brushed Stainless Steel Finish.
   2. Or approved equal.

I. Self-Retracting Step: Stainless Steel.
   1. Step ‘n Wash model SNW-SS 975.
      a. Manufactured by Step ‘n’ Wash, Inc., 4829 Mill Brook Drive, Atlanta, Georgia 30338; (770) 677-4000 www.stepnwash.com.
      b. Construction: 14 gauge 304 stainless steel, reinforced with two (2) stainless steel plates Tig welded in place, one (1) stainless steel bracket and one (1) 304 stainless steel support rod.
      c. Mounting: Secured directly to concrete substrate utilizing four (4) stainless steel wedge anchors (supplied by manufacturer) with tension rating of 3999 lbs. and shear rating of 3031 lbs.
   2. Or approved equal.

2.02 PUBLIC-USE SHOWER ROOM ACCESSORIES

A. Shower Curtain Rod:

1. Products: Subject to compliance with requirements, provide products by one of the following:
    a. American Specialties, Inc., 1204-2 Shower Rod with 1204-1 Flange.
    b. Bobrick Washroom Equipment Inc., B-6047 Series.
    c. Bradley Corporation, Model 9531.
2. Description: 1-1/4-inch (32-mm) OD; fabricated from nominal 0.05-inch-(1.3-mm) thick stainless steel.
3. Mounting Flanges: Stainless-steel flanges designed for exposed fasteners.
4. Finish: No. 4 (satin).

B. Shower Curtain: By Owner.

C. L Shaped Folding Shower Seat:
1. Products: Subject to compliance with requirements, provide products by one of the following:
    a. American Specialties Inc., 8206 (L/R).
    b. Bradley Corporation, 9569.
2. Configuration: L-Shaped.
3. Seat: Phenolic or polymeric composite of slat-type or one-piece construction in color as selected by Architect.
4. Mounting Mechanism: Stainless steel, No. 4 finish (satin).
5. Dimensions: 21” x 32” – see drawings.

D. Rectangular Folding Shower Seat:
1. Products: Subject to compliance with requirements, provide products by one of the following:
    a. American Specialties Inc., 8203-20.
    b. Bradley Corporation, 9562.
2. Configuration: Rectangular.
3. Seat: Phenolic or polymeric composite of slat-type or one-piece construction in color as selected by Architect.
4. Mounting Mechanism: Stainless steel, No. 4 finish (satin).
5. Dimensions: 28 1/2” x 15” – see drawings.

E. Towel Hook:
1. Products: Subject to compliance with requirements, provide products by one of the following:
    a. American Specialties Inc., 7340-S.
    b. Bobrick Washroom Equipment Inc., B-6717.
    c. Bradley Corporation, 9114.
2. Description: Single-prong unit.
3. Material and Finish: Stainless steel, No. 4 finish (satin).

F. Swimsuit Water Extractor:
1. Products: Subject to compliance with requirements, provide:
    a. The Swimsuit Dryer: Next Generation wall mounted dryer.
    b. Or approved equal.
    c. Color: Cool Gray.
    d. Coordinate with Plumbing and Electrical.

G. Shampoo and Lotion Brackets Showers:
1. Provided by Owner, installed by Contractor.
    a. See section 01 64 00.

H. Weight Scales:
1. Products: Subject to compliance with requirements, provide products by one of the following:
    a. Benchmark SS Steel Bench Scale.
2. Configuration: Rectangular.
3. Material: 304 Stainless Steel.
4. High traction adjustable feet
5. Dimensions: 18" x 18"

I. Weight Scale Display:
   1. Products: Subject to compliance with requirements, provide products by one of the following:
      a. Rice Lake Weighing Systems: 680 Synergy Plus Digital Weight Indicator.
   2. Industrial grade.
   3. Material: 304 stainless steel.
   4. Seven Digit display.
   5. See drawings for mounting heights and details.

2.03 CHILDCARE ACCESSORIES

A. Diaper-Changing Station:
   1. Provided by Owner, installed by Contractor.
      a. See section 01 64 00.

B. Self Retracting Step Stools:
   1. Products: Step ‘n Wash LLC, model SNW-SS 975B. Floor-mounted with concealed gas cylinder for self-retracting up and down movement. www.stepnwash.com.
      a. Side supports (legs) constructed from 14-gauge, type 304 stainless steel . Steps shall be constructed from 16-gauge type 304 stainless steel and reinforced with 16-gauge stainless steel welded brackets.
      b. Marine-grade non-slip rubber tread and ANSI-compliant graphics with text in English, Spanish, and French.
      c. Load capacity of 800 lbs.

2.04 CUSTODIAL ACCESSORIES

A. Manufacturers: Subject to compliance with requirements, provide products from one of the following:
   1. American Specialties, Inc.
   2. Bobrick Washroom Equipment, Inc.
   3. Bradley Corporation.
   4. Or approved equal.

B. Paper Towel (Folded) Dispenser:
   1. Provided by Life Time vendor.

C. Foam Soap Dispenser: All locations except shower.
   1. Provided by Life Time vendor.

2.05 MOUNTING ACCESSORIES

A. Stainless Steel Screws:
   1. #10 1 3/4" length 18-8 Stainless Steel Screw.

B. Nylon Spacer
   1. 7/16" length plain round nylon spacer for #10 screw.

2.06 FABRICATION

A. Keys: Provide universal keys for internal access to accessories for servicing and resupplying. Provide minimum of 6 keys to Owner's representative.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install accessories per manufacturers' written instructions, using fasteners appropriate to substrate indicated and recommended by unit manufacturer. Install units level, plumb, and firmly anchored in locations and at heights indicated.

B. Install all accessories on surfaces which are waterproofed (tile walls in wet areas, see drawings) according to the waterproofing manufacturer's instructions. See Section 09 30 00 - Tiling.

C. Grab Bars: Install to withstand a downward load of at least 250 lbf (1112 N), when tested according to ASTM F446.

END OF SECTION

SECTION 10 28 19
GLASS SHOWER DOORS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Tempered Glass Shower Doors.
   2. Hardware.
   3. U-Channel.

1.02 RELATED SECTIONS

A. Section 01 33 00 - Submittal Procedures.

B. Section 01 40 00 - Quality Requirements.

C. Section 01 60 00 - Product Requirements.

D. Section 01 92 00 - Facility Operation and Maintenance.

E. Section 08 81 00 - Glazing.

F. Section 09 30 00 - Tiling.

1.03 SUBMITTALS

A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.

B. Shop Drawings: For shower compartments. Include plans, elevations, sections, details, and attachments to other work.

C. Samples for Verification: For the following products, unless otherwise indicated:
   1. Glass sample, prepared on 6-inch- (152-mm-) square of same thickness and material indicated for Work.
   2. Each type of hardware and accessory.

D. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

E. Operation and Maintenance Data: Submit O&M manuals according to the requirements of Section 01 92 00 - Facility Operation and Maintenance.

1.04 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Regulatory Requirements: Comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's "Americans with Disabilities Act (ADA) and Architectural Barriers Act (ABA) Accessibility Guidelines for Buildings and Facilities" and ICC/ANSI A117.1 for glass shower doors designated as accessible.

1.05 PROJECT CONDITIONS

A. Field Measurements: Verify actual locations of shower partitions, and other construction contiguous with glass shower doors by field measurements before fabrication.

PART 2 PRODUCTS

2.01 GLAZING

A. See Glass type G8, Section 08 81 00.

2.02 ACCESSORIES

A. Hardware and Accessories: Manufacturer's standard design, heavy-duty operating hardware and accessories.
   1. Material: Stainless steel.
   2. Hinges: Manufacturer's standard continuous, cam type that swings to a closed or partially open position.
      a. Manufacturer: C. R. Laurence Co., Vienna, Wall Mount Hinge, Cat. No. V1E037 (3 hinges per door). Finish: Satin Nickel.
   3. Door Pull: C. R. Laurence Co., Door Pull, Cat. No. BM8X8. Finish: Satin Nickel.
   4. Misc Brackets, fasteners:
      a. C.R. Laurence Co., Vienna Series. Finish to match Hinge. See drawings for number and location.

B. Anchorages and Fasteners: Manufacturer's standard exposed fasteners of stainless steel or chrome-plated steel or brass, finished to match the items they are securing, with theft-resistant-type heads.

PART 3 EXECUTION

3.01 INSTALLATION

A. General: Comply with manufacturer's written installation instructions. Install units rigid, straight, level, and plumb. Secure units in position with manufacturer's recommended anchoring devices.

3.02 ADJUSTING

A. Hardware Adjustment: Adjust and lubricate hardware according to hardware manufacturer's written instructions for proper operation. Set hinges on swinging doors to return doors to fully closed position.

END OF SECTION

SECTION 10 44 00
FIRE PROTECTION SPECIALTIES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Fire protection cabinets for fire extinguishers.
   2. Portable, hand-carried fire extinguishers and mounting brackets for fire extinguishers.

1.02 RELATED REQUIREMENTS

A. Section 01 33 00 - Submittal Procedures.

B. Section 01 40 00 - Quality Requirements.

C. Section 01 60 00 - Product Requirements.

D. Section 01 92 00 - Facility Operation and Maintenance.

E. Section 09 21 16 - Gypsum Board Assemblies.

F. Section 09 30 00 - Tiling.

G. Section 09 74 16 - Wood Veneer Wall Covering.

H. Section 09 75 00 - Interior Stone.

1.03 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings: For fire protection cabinets. Include plans, elevations, sections, details, and attachments to other work.

C. Operation and Maintenance Data: Submit O&M manuals according to the requirements of Section 01 92 00 - Facility Operation and Maintenance.

1.04 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. NFPA Compliance: Fabricate and label fire extinguishers to comply with NFPA 10, "Portable Fire Extinguishers."

C. Fire Extinguishers: Listed and labeled for type, rating, and classification by an independent testing agency acceptable to authorities having jurisdiction.

D. Coordinate type and capacity of fire extinguishers with fire protection cabinets to ensure fit and function.

E. Coordinate sizes and locations of fire protection cabinets with wall depths.

PART 2 PRODUCTS

2.01 FIRE PROTECTION CABINET

A. Standard Cabinet: Suitable for fire extinguishers, general areas.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. JL Industries, Inc., a division of Activar Construction Products Group: Academy Series with V Door and Safe-T-Lok opt.
      b. Larsen's Manufacturing Company: Architectural Series-AL with vertical duo door style and Larsen-Lok opt.
      c. Modern Metal Products, Division of Technico Inc: FSB Series.
      d. Approved substitution.
   2. Cabinet Material: Aluminum sheet.
   3. Cabinet Mounting:
      a. (FEC-1) Semi-recessed Cabinet: As indicated on drawings. Cabinet box partially recessed in walls of sufficient depth to suit style of trim indicated; with one-piece combination trim and

perimeter door frame overlapping surrounding wall surface with exposed trim face and wall return at outer edge (backbend). Provide where walls are of insufficient depth for recessed cabinets but are of sufficient depth to accommodate semi-recessed cabinet installation.
1) Square-Edge Trim: 1-1/4- to 1-1/2-inch backbend depth.

b. (FEC-2) Surface mounted: As indicated on drawings.
c. (FEC-3) Fully Recessed: As indicated on drawings. Metal trim as provided by manufacturer.

4. Cabinet Trim Material: Aluminum sheet.
5. Door Material: Aluminum sheet.
6. Door Style: Vertical duo panel with frame.
7. Door Glazing: Clear tempered glass.
8. Door Hardware: Manufacturer's standard door-operating hardware of proper type for cabinet type, trim style, and door material and style indicated.
9. Finishes: Aluminum Clear Anodic.

B. (FEC-4) Moisture and Chemical Resistant Fire Extinguisher Cabinet: Suitable for fire extinguishers, to be used in pool areas.
1. Products: Subject to compliance with requirements, provide one of the following:
a. Cato, Inc. Chief CHPCP-5.
b. JL Industries, Inc., a division of Activar Construction Products Group: ABS Plastic Indoor/Outdoor Cabinet.
c. Or approved equal.
2. Cabinet Material ABS Plastic.
3. Cabinet Mounting: Surface Mounted.
4. Door: Clear acrylic.
5. Door Hardware: Manfuacturer's standard corrosion resistant hardware of proper type for cabinet and door.
6. Color: White.

C. Accessories:
1. Mounting Bracket: Manufacturer's standard steel, designed to secure fire extinguisher to fire protection cabinet, of sizes required for types and capacities of fire extinguishers indicated, with plated or baked-enamel finish.
2. Door Lock: Cam lock that allows door to be opened during emergency by pulling sharply on door handle.
3. Identification: Lettering complying with authorities having jurisdiction for letter style, size, spacing, and location. Locate as directed by Architect.
a. Identify fire extinguisher in fire protection cabinet with the words "FIRE EXTINGUISHER".
1) Location: Applied to location indicated on Drawings.
2) Application Process: Decals.
3) Lettering Color: Red.
4) Orientation: Horizontal or as indicated on Drawings.

2.02 FABRICATION

A. Fire Protection Cabinets: Provide manufacturer's standard box (tub), with trim, frame, door, and hardware to suit cabinet type, trim style, and door style indicated. Miter and weld joints and grind smooth.

2.03 PORTABLE, HAND-CARRIED FIRE EXTINGUISHERS

A. General use ABC Fire Extinguishers: Multipurpose Dry-Chemical Type in Steel Container: UL-rated 3-A:40-B:C, 5 pound (2.5-kg) nominal capacity, with monoammonium phosphate-based dry chemical in enameled-steel container. Type, size, and capacity for each fire protection cabinet and mounting bracket indicated.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. JL. Industries, Inc.; a division of Activar Construction Products Group: Cosmic 5e

b. Kidde Residential and Commercial Division; Subsidiary of Kidde plc.: Pro 5MP
c. Kidde Residential and Commercial Division; Subsidiary of Kidde plc.: Excel XL10TC2.
d. Larsen's Manufacturing Company: MP5
e. Approved substitution.

2. Valves: Manufacturer's standard.
3. Handles and Levers: Manufacturer's standard stainless steel.
4. Instruction Labels: Include pictorial marking system complying with NFPA 10, Appendix B and bar coding for documenting fire extinguisher location, inspections, maintenance, and recharging.

B. Type "K" fire extinguishers for food service areas:
1. Manufacturers: UL rated for Class A and K fires. Subject to compliance with requirements, provide products by one of the following:
a. JL. Industries, Inc. a division of Activar Construction Products Group; Saturn 15
b. Kidde Residential and Commercial Division; Subsidiary of Kidde plc.: Six Liter Class K 25074
c. Larsen's Manufacturing Company: WC 2 1/2
2. Valves: Manufacturer's standard.
3. Handles and Levers: Manufacturer's standard stainless steel.
4. Instruction Labels: Include pictorial marking system complying with NFPA 10, Appendix B and bar coding for documenting fire extinguisher location, inspections, maintenance, and recharging.

2.04 MOUNTING BRACKETS

A. Mounting Brackets: Manufacturer's standard galvanized steel, designed to secure fire extinguisher to wall or structure, of sizes required for types and capacities of fire extinguishers indicated, with plated or baked-enamel finish.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Amerex Corporation. Trussville Alabama.
b. Ansul Incorporated; Tyco International Ltd. Sentry Brand.
c. Badger Fire Protection; a Kidde company.
d. Buckeye Fire Equipment Company. North Carolina.
e. L. Industries, Inc.; a division of Activar Construction Products Group.
f. Larsen's Manufacturing Company.
g. Potter Roemer LLC. Chicago area.
h. Approved substitution.

B. Identification: Lettering complying with authorities having jurisdiction for letter style, size, spacing, and location. Locate as indicated by Architect.
1. Identify bracket-mounted fire extinguishers with the words "FIRE EXTINGUISHER" in red letter decals applied to mounting surface.
a. Orientation: Horizontal.

PART 3 EXECUTION

3.01 INSTALLATION

A. Examine walls and partitions for suitable framing depth and blocking where semi-recessed cabinets will be installed and prepare recesses as required by type and size of cabinet and trim style.

B. Install fire protection cabinets in locations and at mounting heights indicated or, if not indicated, at heights acceptable to authorities having jurisdiction.

C. Fire Protection Cabinets: Fasten cabinets to structure, square and plumb.

D. Identification: Apply decals at locations indicated.

E. Adjust fire protection cabinet doors to operate easily without binding. Verify that integral locking devices operate properly.

F. Replace fire protection cabinets that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

G. Examine fire extinguishers for proper charging and tagging.
   1. Remove and replace damaged, defective, or undercharged fire extinguishers.

H. Install fire extinguishers and mounting brackets in locations indicated and in compliance with requirements of authorities having jurisdiction.
   1. Mounting Brackets: 40 inches above finished floor to top of fire extinguisher.

I. Mounting Brackets: Fasten mounting brackets to surfaces, square and plumb, at locations indicated.

END OF SECTION

SECTION 11 08 00
COMMISSIONING OF EQUIPMENT

PART 1 GENERAL

1.01 SUMMARY

A. This section includes specific requirements that apply to the implementation of the Commissioning Process and this Division Contractors' participation in this process. This section details the project specific equipment and systems that are included in the Commissioning Process. For general descriptions and responsibilities, refer to SECTION 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

1.02 RELATED DOCUMENTS

A. The Owner's Project Requirements (OPR) document.

B. The Basis of Design (BoD) document.

C. The Project Commissioning Plan (CxP) document.

D. ASHRAE Standard 202-2013 - Commissioning Process for Buildings and Systems.

E. LEED v4 for Building Design and Construction.

1.03 RELATED SECTIONS

A. SECTION 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS

B. SECTION 07 08 00 - COMMISSIONING OF THERMAL AND MOISTURE PROTECTION

C. SECTION 08 08 00 - COMMISSIONING OF OPENINGS

D. SECTION 13 08 00 - COMMISSIONING OF SPECIAL CONSTRUCTION

E. SECTION 14 08 00 - COMMISSIONING OF CONVEYING SYSTEMS

F. SECTION 21 08 00 - COMMISSIONING OF FIRE SUPPRESSION SYSTEMS

G. SECTION 22 08 00 - COMMISSIONING OF PLUMBING SYSTEMS

H. SECTION 23 08 00 - COMMISSIONING OF MECHANICAL SYSTEMS

I. SECTION 25 08 00 - COMMISSIONING OF INTEGRATED AUTOMATION SYSTEMS

J. SECTION 26 08 00 - COMMISSIONING OF ELECTRICAL SYSTEMS

K. SECTION 27 08 00 - COMMISSIONING OF COMMUNICATIONS SYSTEMS

L. SECTION 28 08 00 - COMMISSIONING OF SAFETY AND SECURITY SYSTEMS

M. SECTION 33 08 00 - COMMISSIONING OF UTILITIES

1.04 DEFINITIONS

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

1.05 RESPONSIBILITIES

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

PART 2 PRODUCTS

2.01 NO PRODUCTS SUPPLIED

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

B. Contractors and/or Vendors shall provide the specialty testing equipment necessary to fulfill the functional testing requirements, for the duration of the testing period.

PART 3 EXECUTION

3.01 GENERAL

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.02 MEETINGS

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.03 SYSTEM START-UP

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.04 PRE-FUNCTIONAL CHECKLISTS

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.05 FUNCTIONAL PERFORMANCE TESTING

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.06 TRAINING

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.07 SYSTEMS TO BE COMMISSIONED

A. GENERAL
   1. Commissioning specifications supplement the requirements of individual specifications sections but shall not be interpreted to replace or diminish the specified scope of any individual section.
   2. For all systems listed below, Division Contractor shall comply with all commissioning requirements specified.

B. APPLICABLE SYSTEMS
   1. Commercial Laundry Equipment – Checklist only

END OF SECTION

SECTION 11 21 73
COMMERCIAL LAUNDRY EQUIPMENT

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Commercial washers.
   2. Commercial dryers.
   3. Steel base.
   4. Lint filters.
   5. Drain Trough.
   6. Edge Gasket.

B. Contractor-Furnished Equipment: Washers, dryers and lint filters to be delivered to Project. Installer to provide proper connections and venting.

1.02 RELATED SECTIONS

A. Section 01 33 00 - Submittal Procedures.

B. Section 01 40 00 - Quality Requirements.

C. Section 01 60 00 - Product Requirements.

D. Section 01 92 00 - Facility Operations and Maintenance.

E. Section 11 08 00 - Commissioning of Equipment.

F. Section 22 40 00 - Plumbing Fixtures.

G. Section 26 27 17 - Equipment Wiring.

1.03 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00.

1.04 SUBMITTALS

A. Product Data including manufacturer's specification for installation. Provide data substantiating that products comply with requirements.

B. Shop Drawings: show equipment layout, drainage trough, base, curb details, and coordination with plumbing.

C. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Subject to compliance with requirements, provide and install the following:
   1. Electrolux:
      a. Or approved equal.
      b. Contact: David Selib; Laundrylux. 516-371-4400 dselib@laundrylux.com

2.02 EQUIPMENT

A. Dryers:
   1. Style: Commercial Tumble Dryer.
      a. Acceptable Product: Electrolux DE683

B. Washers:
   1. Style: Washer Extractor.
      a. Acceptable Product: Electrolux EUD-660 CV

b. One washer base per machine.
1) Steel base by Manufacturer.
2) Coordinate height with drain trough and curb.

C. Steel equipment base:
1. By Manufacturer, coordinate height with Drain Trough and curb.

D. Lint Filters:
1. Acceptable Product: Small Wonder OPL-202 with wall mount by Clean Cycle Systems.
a. Or approved equal.

E. Drain Trough:
1. Acceptable Product: Polypropylene Trough.
a. Height: Coordinate with washers, base, curb, plumbing and installation details to ensure proper drainage.
b. Sizing: See drawings for proposed sizing.
c. Drainage:
1) Trough to be configured for top gravity drain.
2) Coordinate location of drain apperatures with equipment layout.

2.03 ACCESSORIES

A. Edge gasket: Natural Elastic Abrasion Resistant Rubber. (gum rubber)
1. Temperature range: -45 to 200 deg F.
2. Tensile Strength >/= 2500 psi.
3. Thickness: 1/16" Min.
4. Width: See detail.
5. Color: White, Gray or Tan.

PART 3 EXECUTION

3.01 EXAMINATION

A. Field verify location and sizes of curbs, plumbing and electrical connections.

B. Ensure waterproofing has been installed and is in acceptable condition prior to installation.

3.02 COORDINATION

A. Coordinate locations of washer drains with curb, base, drain trough and floor drains to ensure proper functioning of equipment.

B. Ensure that electrical connections are well clear of plumbing connections and wet areas.

3.03 INSTALLATION

A. Install equipment according to Manufacturer's Instructions, details and approved shop drawings.

3.04 PROTECTION

A. Protect installed equipment from other construction activities.

3.05 TESTING

A. Test all equipment for proper functioning and according to Commissioning requirements, see 11 08 00.

3.06 OPERATIONS AND MAINTENANCE

A. Provide training and O&M materials as specified in Section 01 92 00.

END OF SECTION

SECTION 114000
FOODSERVICE EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes some or all:

1. Fabricated equipment.
2. Food waste machines.
3. Cooking equipment.
4. Refrigeration equipment.
5. Walk-in refrigeration equipment.
6. Powered food-preparation equipment.
7. Warewashing equipment.
8. Serving equipment.

B. Owner-Furnished Equipment: Where indicated, Owner will furnish and install owner supplied equipment.

C. Related Sections:

1. Division 21, 22, and 23 Sections for supply and exhaust fans; exhaust ductwork; service roughing- ins; drain traps; atmospheric vents; valves, pipes, and fittings; fire-extinguishing systems; and other materials required to complete foodservice equipment installation.
2. Division 26 Sections for connections to fire-alarm systems, wiring, disconnect switches, and other electrical materials required to complete foodservice equipment installation.

1.3 PROJECT DESCRIPTION

A. Scope of Work: work called out in FSEC plans and contract will be performed within the contract price. It is clearly understood and agreed that the FSEC shall provide all material, labor, trucking, hoisting, shop drawings, layout, equipment, supervision, insurance, applicable taxes, bonds, etc., necessary for the furnishing and installation of all specified work contained herein in accordance with the contract drawings, specifications, addenda and riders, all of which become part of this Contract. The scope of work shall include, but be limited to, all the Food Service Equipment work shown on the drawings and described in the following Specifications Section, except such work as may be specifically excluded.

B. Intent of Documents: The intent of the contract documents is to describe complete systems and items. Provide appurtenances and accessories specified in the specifications or indicated on the drawings required for a complete installation and safe functioning of equipment or systems.

C. The contract documents are complimentary, and what is required by one shall be as binding as if required by all. In the event that there are discrepancies in or between the documents, neither shall be interpreted as taking precedence over the other. Notify the Architect or Kitchen Designer of all discrepancies in writing. The Kitchen Designer or Architect will issue a written clarification.

D. Terms and Abbreviations: The following abbreviations are used on the drawings.

1. EC: Electrical Contractor
2. GC: General Contractor or other Prime Contractors
3. HVAC: Heating, Ventilation, Air Conditioning Contractor
4. ID: Interior Designer
5. KEC: Kitchen Equipment Contractor
6. MWC: Millwork Contractor
7. ONR: Owner
8. OPR: Operations and Engineering
9. PC: Plumbing Contractor
10. VDR: Vendor

E. Work by Owner and Under Other Contracts: During the course of the work, separate contracts may be let for other work. Coordinate work under the contract required for smooth completion of the work.

F. General construction coordination requirements under separate contract and not included in Kitchen Equipment Contractor (KEC) scope of work:

1. Coordination of furnishing of specialized fittings to installing trade for installation into work.
2. Furnishings including, tables, chairs, cash registers, point of sale systems, cashier stools, furniture are provided under separate contracts. Coordinate installation with kitchen equipment.
3. Miscellaneous equipment and systems including rolling stock, dispensing systems for juice, and soda, beverage conduit, cooking utensils, dishes, flatware, soap and chemical injection systems, except as specified.
4. Beverage line conduit or cable trays, including boring necessary holes.
5. Grout backfill around floor pans and sealing around floor pans and equipment.

G. HVAC coordination requirements under separate contract and not included in KEC scope of work:

1. Final duct connection, connecting duct work, controls and blowers to ventilation hoods.
2. Receiving, Hanging & leveling of all hoods, wall panels and controls.
3. Air balance testing.
4. HVAC services required for operation of equipment.

H. Plumbing coordination requirements under separate contract and not included in KEC scope of work:

1. Final connections and interconnections including traps, floor troughs, trench drains, drain lines, connection pipe, shut off valves, connection to equipment items.
2. Verify incoming hot water.
3. Interconnecting piping from booster to dishwasher.
4. Plumbing services required for operation of equipment. Including water Temperature, Pressure and hardness

I. Electrical coordination requirements under separate contract and not included in KEC scope of work:

1. Final connections and interconnections of equipment including external wiring, connecting conduit, and external connections to equipment.
2. Required electrical equipment shut off devices.
3. Installation of electrical control switches and starters not part of or attached to equipment.

4. Electrical services required for operation of equipment.

J. Use of Site: Limit use of site to extent required to perform work and to limits indicated on drawings.

1. Keep entrances clear and available.
2. Do no block entrances, fire exits or lanes, or delivery routes.
3. Do no use unauthorized areas for parking or storage of materials.
4. Schedule deliveries to minimize space and time requirements for storage of materials and equipment on site.
5. Immediately remove any crating or other debris resulting from installation of Food Service Equipment and dispose of in general contractor supplied dumpster

K. Noise Control: Minimize objectionable noise levels and notify Owner in advance of noisy operations.

1. The Owner reserves the right when necessary to require excessive noise transmitting procedures be stopped during certain periods of time.

L. Owner Occupancy

1. Full Owner Occupancy: The Owner will occupy site and existing building during entire construction period. Occupancy and placing of equipment during the work does not constitute acceptance of the work.

1.4 GENERAL CONDITIONS

A. The KEC represents that it is familiar with, and has expertise in the work of this Scope. The KEC further agrees that it will provide all work for the Scope as may be required to make a complete job of that which may not be fully defined in the Contract Documents.

B. The KEC has examined the site and the contract documents and reviewed with the Construction Manager the designated areas of access, delivery, and storage for the Contractor's use. The KEC agrees that such areas are satisfactory and sufficient for its needs in the prosecution of its work in the conformance with the terms of the contract. Any changes in such areas shall not be permitted without the approval of the FSEC, Construction Manager and Owner, which if approved, shall be at no additional cost.

C. All hoisting and hoisting requirements less than 35' for the KEC's materials and equipment are the KEC's responsibility. The KEC shall place its hoisting equipment in locations approved by the Construction Manager. Any separate hoist engines shall be relocated as required as the project progresses if required by the Construction Manager so as to avoid interference with work of other contractors.

D. Any temporary openings or leaveouts required for subsequent installation of KEC's work must be brought to the attention of the Construction Manager prior to the start of the pertinent work in the areas of the opening or leaveout needed. Failure to request access will result in the KEC assuming all costs involved in providing, rebuilding, and refinishing the required access.

E. The KEC will provide protection necessary to safeguard its own work, as well as the work of other trades, from damage by its own operations.

F. The KEC will visit and carefully examine the premises upon which the building is being erected and familiarize itself with the existing conditions and difficulties that may affect the execution of its work. The KEC is aware that its work is being performed adjacent to other ongoing work. The KEC agrees that it will take all necessary steps to avoid damage to new and existing construction. Any damage caused by the KEC will be repaired by the KEC at no additional cost.

G. All permits required for the KEC's work shall be procured and paid for the by KEC.

H. This KEC shall cooperate, as directed by the Construction Manager, with other contractors that shall be commencing operations on the site prior to this KEC's completion and demobilization.

I. The Construction Manager must approve all on-site material storage locations.

J. Should the KEC propose any design changes that might save in costs, he will submit his proposal, drawings, calculations, etc., for approval by the Kitchen Consultant. The KEC will assume all costs for reimbursing the Owner for all fees incurred by the Engineer of Record as a result of said changes.

1.5 PROJECT COORDINATION AND MEETINGS

A. Coordination of Work by the Kitchen Equipment Contractor: Coordinate scheduling of kitchen equipment, submittals, and specified kitchen equipment work to ensure efficient and orderly sequence of installation of interdependence.

1. Review kitchen designer's drawings for completeness and accuracy with equipment being furnished. Notify Owner or his agent in writing of changes required with copy to the kitchen designer.
2. Examine utility rough-ins in field prior to closing of walls and ceilings. Notify the Owner or his agent in writing of discrepancies.
3. Protect wall ends and columns during the installation of kitchen equipment work.

B. Prior to commencement of work, KEC to verify with GC that the installation conditions are acceptable and ready to receive kitchen equipment, including but not limited to:

1. Field measurement and verification of finished dimensions for placement of equipment and manufactured items. Coordinate requirements with affected trades for alternations necessary to accommodate equipment and manufactured items.
2. Verify physical space conditions are acceptable for installation of specified equipment.
3. Note obstructions; scribe and fit equipment to and around obstructions ensuring a sanitary, homogeneous installation.
4. Verify floor pans and walk-in depressions are correctly located and sized.
5. Verification that mechanical and electrical work complies with the drawings as closely as possible, including routing shown for pipes, ducts, and conduit.
6. Verification that openings receiving equipment including drilling of holes, installation of mechanical, plumbing, electrical, and refrigeration connections are ready to receive kitchen equipment work.
7. Verification that required concrete and masonry work required are ready for installation of kitchen equipment.
8. Verification of installation of beverage conduit and cable trays and coordination with owners beverage installer for a complete and sanitary install.

C. Meetings: Kitchen Equipment Contractor shall participate, virtual or in person, in meetings as required for coordination of kitchen equipment specified under this contract.

1.6 PROJECT PROCEDURES

A. Cutting and Patching: When the installation of kitchen equipment requires minor cutting and patching of existing work.

1. Submit written request in advance of cutting or altering structural or building enclosure elements.
2. Fit work tight to adjacent elements. Maintain integrity of wall, ceiling, or floor construction; completely seal voids.
3. Refinish surfaces to match adjacent finishes.
4. Restore to original or required fire and smoke ratings.

B. Protection of Work: Protect existing and new work and equipment from damage until the work is complete and materials and apparatus have been tested and accepted. Repair or replace at no expense to Owner, Architect, or Consultants.

C. Existing Conditions: Exercise care to prevent damage to existing work, equipment, fixtures, utilities, and similar items during construction period until final acceptance.

D. New Construction and Equipment: Protect work, equipment and materials in accordance with recommendations of manufacturer. Cover work, equipment, and materials to protect from dirt, construction dust, traffic, wear, and injury including damage from workmen; promptly repair damage to work of other trades, existing conduits, ducts, drains, sewers, pipes, utilities, and similar items resulting from installation procedures and methods at no expense to the Owner.

1.7 DEVIATION FROM THE CONTRACT DOCUMENTS

A. Design Criteria: Dimensions specified by kitchen designer for equipment, systems, and manufactured items, including mechanical and electrical connections are intended to establish general profiles and physical characteristics. Final drawings, dimensions and utility information are the responsibility of the KEC. Verify in accordance with specifications.

1.8 ACTION SUBMITTALS

A. Product Data: Manufacturer's technical specifications for each type of equipment.. Also include the following:

1. Manufacturer's model number.
2. Accessories and components that will be included for Project.
3. Utility service connections for water, drainage, power, and fuel; include roughing-in dimensions.

B. Shop Drawings: For fabricated equipment. Include plans, elevations, sections, roughing-in dimensions, fabrication details, utility service requirements, and attachments to other work.

1. KEC to submit digital , at minimum ¼" scale with horizontal and vertical control for:

    a. All utility services and points of connection to equipment.
    b. Slab depressions.
    c. Wall and partition locations
    d. Ventilation duct locations and air volumns
2. Submit within 4 weeks digital shop drawings at minimum 1/2" scale for fabricated equipment showing construction details, reinforcement, installation and relationship to adjoining and related work, attachment and anchorage if necessary
3. Submit within 4 weeks after award of contract a digital copy of specifications with specified model number, options, accessories, modifications and Utility requirements.
4. The above documents are not to be issued to the field until all drawings and manufacturer's data have been stamped approved by Architect and Kitchen Designer.
5. Purchasing and fabrication of equipment is not to be started until related submittals have been approved.
6. Upon receipt of approval of submittals provided to Architect for distribution.

C. Samples: Submit the following items as necessary:

1. Items requested by Owner and Architect, of adequate size and quantity for testing and review.
2. Include any costs of samples in contract sum.

D. Wiring Diagrams: Submit schedule showing proposed electrical characteristics of each piece of equipment and disconnect means provided.

1.9 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For foodservice equipment to include in operation, and maintenance manuals. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:

1. If requested, Provide maintenance data for each item of food service equipment for all equipment with a plumbing or electrical connection . At project closeout submit digital copies.
2. Submit as built shop drawings of each piece of custom equipment.
3. Provide name, telephone number of service company or manufacturers service contact for each piece of equipment for equipment requiring plumbing or electrical connnection, so service or spare parts can be readily obtained.
4. Kitchen Designer will maintain one identical file copy.

B. Test each heated, cooled, or mechanical operated fixture in accordance with industry standards and manufacturer's recommendations.

1.10 QUALITY ASSURANCE

A. Regulatory Requirements:

1. NSF Standards: Comply with applicable National Sanitation Foundations standards, or approved alternate, and recommended criteria. Provide each principal item of food service equipment with NSF *Seal of Approval*.
2. UL Labels: Provide UL Labels on prime electrical components of food service equipment, as applicable. Provide UL recognized marking on items with electrical components, signifying listing by UL, as applicable.
3. ANSI Standards: Comply with applicable ANSI standards for electric powered and gas burning appliances, for piping to compressed gas cylinders, and for plumbing fittings including vacuum breakers and air gaps to prevent siphonage in water piping.
4. NFPA Codes: Install food service equipment in accordance with National Fire Protection Codes (NFPA):

    a. NFPA 54 National Fuel Gas Code.
    b. NFPA 70 National Electrical Code.
    c. NFPA 96 Removal of Smoke and Grease Laden Vapors from Commercial Cooking Equipment.

5. ASME Boiler Code: Construct steam generating and closed steam heating equipment to comply with American Society of Mechanical Engineers (ASME) Boiler and Pressure Vessel Code; Section IV for units not exceeding 15 psi or 250 degrees F (121 degrees C), or Section I for higher pressure/temperature units.
6. Health Code Requirements: Comply with all requirements of the Health Department that has jurisdiction at the project.

B. Certification Labels: Provide equipment complying with standards and bearing appropriate certification labels:

1. AGA certification for all Gas connected equipment.
2. UL Standards: Electrical components with UL labels.
3. NSF Standards: Equipment and fabricated items with NSF labels.

C. All equipment shall be provided and installed in accordance with laws, ordinances, rules, codes and regulations of all authorities having jurisdiction.

D. Manufacturers' Qualifications: Firm regularly engaged in manufacturer of food service equipment and having minimum 5 years documented experience with types, capacities, and sizes required.

E. Installer's Qualifications: Experienced Installer having minimum 5 years documented experience with installation of food service similar in material, design, and extent.

F. Preinstallation Conference: Conduct conference with Project site staff.

1.11 QUALITY CONTROL

A. Control of Installation: Monitor quality control over manufacturers, fabricators, site conditions, and workmanship to protect work of specified quality

1. Comply with manufacturer's instructions.
2. Comply with specified standards for minimum quality requirements except when more stringent tolerances, codes, or specified requirements indicate higher standards or more precise workmanship.

B. References: Comply with references standards by date of issue current as of date of contract documents. In the event of conflict, request clarification prior to commencement of work.

1.12 MATERIALS AND EQUIPMENT

A. Products: Provide new materials, components, equipment, fixtures, and systems to form work. Use interchangeable components of the same manufacturer for similar components.

B. Transportation, Handling, Storage, and Protection: Transport, handle, store, and protect materials in accordance with manufacturer's instructions.

C. Product Options:

1. Referenced Standards: Any product or materials meeting standards or description.
2. Performance Characteristics: Products or materials stating minimum primary performance requirements, characteristics, or features necessary for the proper function and application of the item.
3. Proprietary items: Products or materials of named manufacturer and meeting specifications; no options or substitutions allowed.
4. Semi-proprietary Items: Products or materials of named manufacturers and meeting specifications; contractor's option of manufacturer.

1.13 DELIVERY, STORAGE, AND HANDLING

A. Deliver products to site in manufacturer's protective containers. Inspect containers and equipment promptly upon receipt for damage. Do not accept delivery of damaged items.

B. Verify all specified equipment is delivered and labeled for intended location using equipment numbering system indicated on drawings and in the specifications.

C. Store kitchen equipment in original containers under cover and provide protection to equipment.

D. Handle kitchen equipment carefully to avoid damage to components, enclosures, and finish. Do not install damaged equipment; replace and return damaged components to equipment manufacturer.

1.14 PROJECT CONDITIONS

A. Obtain final Architectural, Mechanical, Plumbing, Electrical, Structural and Interior Design Drawings prior to preparing submittals or beginning work.

B. Provide materials, equipment, components, and accessories new and of kinds specified and in undamaged condition when turned over to Owner. Provide workmanship of best quality by skilled craftsmen.

1. Provide appliances of rigid construction, free from objectionable vibrations, and quiet in operation.

C. Take field measurements to assure accurate fit of Fabricated equipment

D. Before beginning work review documents for conflicts with Food Service Equipment. Notify the Architect of any conflicts.

1.15 COORDINATION

A. Coordinate foodservice equipment layout and installation with other work, including layout and installation of lighting fixtures, HVAC equipment, and fire-suppression system components.

B. Coordinate locations and requirements of utility service connections.

C. Coordinate sizes, locations, and requirements of the following:

1. Overhead equipment supports.
2. Equipment bases.
3. Floor depressions.
4. Insulated floors.
5. Floor areas with positive slopes to drains.
6. Floor sinks and drains serving foodservice equipment.
7. Roof curbs, equipment supports, and penetrations.

1.16 WARRANTY

A. KEC shall be fully responsible for all warranties and/or guarantees required by the Specifications, or where applicable, shall share reasonability with the particular manufacturer co-signing the warranty. Any cost related to such warranties shall be included in the contract price. No portion of the work under this Contract shall be considered substantially complete until the applicable warranty and/or guarantee is delivered, in acceptable form, for that work, and all references to substantial completion for purposes of payment or warranty shall be likewise contingent on such delivery.

B. Any repairs, replacements, etc., to be made under the provisions of the aforementioned warranties and/or guarantee shall be made by the KEC at no additional cost to the Construction Manager within three (5) days' notice by the Construction Manager to remedy the defect.

C. Subsequent to the warranty/guarantee periods specified, it any of the defects previously warranted appear, the KEC shall be available for the consultation at any time without cost. He further agrees to remedy any such defect (if so required by the Construction Manager or Owner) at his actual certified cost of such repairs plus 15% overhead and profit.

D. The equipment furnished under this contract shall carry a parts replacement warranty for a period of (1) year from date of start-up of the equipment against defective materials and/or workmanship involved in the manufacture of the equipment and/or as offered by the respective equipment manufacturers. If any part or parts fail during warranty period, the KEC shall ship the parts at no charge to the Owner, providing the defective part is returned for inspection within (30) days from receipt of the replacement part.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Manufacturers: Provide specified equipment and components by one of the following:

.

1. Cutting Board: Mapletex, Richlite.White Poly
2. Door and Drawer Pulls: Component Hardware.
3. Door Hinges: Component Hardware..
4. Faucets: Fisher Manufacturing, T&S Brass.
5. Gas Hoses: Dormont or T&S Brass
6. Paint: Krylon, Rust-O-Leum.
7. Refrigeration System
8. Refrigeration Tubing Insulation: Armstrong, Armaflex.

B. Stainless Steel: Austenitic 18-8 Type 304, with a content of 18 percent to 20 percent chrome, 8 percent to 10.5 percent nickel and a maximum carbon content of 0.08, free from scale. Polish surfaces to #4 commercial finish, except where noted.

1. White Metal and Iron Pipe: The use of white metal and iron pipe in lieu of stainless steel is prohibited.

C. Galvanized Steel: Galvanize on eight percent (8%) copper bearing alloy sheet, with hot pure zinc galvanizing complying with ASTM A 525, G90 zinc coating, chemical treatment.

1. Welded Galvanized Steel: Clean seams and remove scale; finished with prime coat of aluminum paint.

D. Stainless Steel Pipe and Tubing: Seamless or welded, gauge specified in schedule, of true roundness complying with ASTM A 554, Type 304 with No. 4 polished finish.

1. Verify tubing is annealed, pickled, ground smooth, and finished to match adjacent work.
2. Welded Tubing: Heat treated and quenched to eliminate carbide precipitation's; drawn true to size and roundness and ground as required.
3. Exposed Tubing: Provide final grind of minimum of 180 grit emery.

E. Miscellaneous Structural Steel Shapes: For angles, band, channels or other structural shapes used for framing, provide uniform and ductile units, free of hard spots, runs, checks, or surface defects.

1. For galvanized or tinned shapes, provide hot dipped galvanized or tinned with fluxes removed. Remove excess spelter from galvanized shapes. Verify shapes are smooth and free from cold runs, blisters, uncoated or scaly patches.

F. Handles, Brackets, Locking Devices, and Hardware: Provide heavy satin finish chrome plated brass, stainless steel, or metallurgical composition of specified item.

G. Locks where specified: Provide extra heavy duty chrome plated cylinder lock for sliding and hinged doors, drawers, enclosed cabinets, refrigerators, storage bins. Master key kitchen locks for doors, drawers, storage bind, and similar equipment.

1. For multiple kitchens, provide each with separate master keying systems.

H. Sealant: ASTM C 920; Type S, Grade NS, Class 25, Use NT. Provide sealant meeting requirements of Food and Drug Administration Regulation 21 CFR 177.2600 when cured and washed in areas where in contact with food.

1. Color: Selected by Architect from standard colors.
2. Backer Rod: Closed cell polyethylene rod stock, larger than joint width.

I. Gaskets: Solid or hollow neoprene or PVC; light gray, minimum 40 Shore A hardness, self adhesive or prepared for either adhesive application or mechanical anchorage. Cellular materials are not permitted.

2.2 ELECTRICAL CHARACTERISTICS AND MOTORS

A. Electrical Requirement: Provide electrically operated equipment listed by the Underwriter's Laboratories, Inc.

B. Plugs:

1. Equip single phase electrical plug-in equipment with 3 wire cords. Supply 3 wire cap with equipment.
2. Equip 3 phase electrical plug in equipment with 4 wire cord. Supply 4 wire cap with equipment.

C. Ground Fault Receptacles: Locate receptacles to conform with National Electrical Code and local jurisdiction. For equipment requiring disconnects. Provide in accordance with the National Electrical Code. Refer to electrical drawings for disconnects. Coordinate providing disconnects with electrical work.

.

2.3 COLD STORAGE ROOMS

A. Panel Fabrication

1. Panels shall be pre-fabricated, sectionally constructed and designed for accurate assembly.
2. Panels shall be four inches and shall be completely filled with rigid 100% foamed-in-place Class I urethane between interior and exterior metal "skins" which have been die-formed and gauged for uniformity in size. Slab urethane, high-density rails or wood shall not be acceptable in any panel including doors, walls, floor, and ceiling.
3. The insulation shall have a 97% closed cell structure with an average in-place density of 2.2 lbs. per cubic foot, and a compression strength at yield point of 19 lbs. per square inch.
4. Panels shall be of tongue and groove design with foamed-in-place gaskets for a tight fit and maximum insulation.
5. Corner panels shall be 90 degree angles with coved interiors and actual 12" exterior horizontal measurements.

B. Floors: Unless otherwise specified.

1. Verify that building is transit level prior to installing walk-ins. Floorless on slab: insulation, vapor barrier and thermal break, and final floor finish by General Contractor.

C. Finish:

1. Interior wallsand exposed exterior Per spec. exterior stainless to be 22 gauge stainless steel. If required, Box to have 1/8" aluminum treadplate attached to panel skin and siliconed sealed at all edges as per drawings. Follow written specifications

D. Accessories:

1. 3" X 3" Stainless steel angle trim-10' long.

2. LED light fixtures,
3. Stainless steel closure panels.

E. Assembly of Panels:

1. This shall be accomplished by Posi-locs which shall be foamed-in-place and activated by a hex wrench. Access ports to the locking devices shall be covered by snap caps and shall be located on the interior of the walk-in.
2. N.S.F. listed gasket shall be foamed-in-place (not glued, stapled or nailed) to the male side of all panels, on both the interior and exterior. Gaskets shall be impervious to stains, greases, oils, and mildew.

F. Warranties:

1. Panels to be covered by a ten (10) year warranty.

G. Approvals:

1. Each panel shall have a thermal conductivity (k factor) of .121 BTU/hr./sq. ft. per degree Fahrenheit per inch; and an overall coefficient of heat transfer (u factor) of not more than .030.
2. Fire hazard classification according to ASTME-84 (UL723) shall be a flame spread rating of 25 or less with a certifying Underwriter Laboratory label attached to every panel showing the meeting of the fire code. Urethane panels shall be CFC free.
3. Smoke development rating to be 450 or less; with Factory Mutual approval; N.S.F. listed; and Toxicity rated and approved by U.S. Testing.

2.4 REFRIGERATION AND REFRIGERATION EQUIPMENT

A. When rack system is specified: Outdoor Refrigeration Rack System per specification as follows:

Shall be constructed of 14 gauge galvanized steel with lockable bi-parting doors. Entire frame shall be pre-assembled, welded, cleaned, and painted with a prime coat of DP epoxy-based paint and finished with one coat of Baja Beige polyurethane acrylic enamel.

1. MULTI-CIRCUITED CONDENSER will be sized to operate at an average differential of 20ºF over ambient temperature. Hot air discharge from condenser fans shall be vertical. Fan motors shall not be less than 3/4 H.P. and protected with a rain shield. A venturi contoured air scoop shall be provided for each fan to reduce air turbulence and fan loading. To reduce power consumption, fans shall be equipped with thermal sensing controls mounted inside the control panel designed to operate the minimum number of fans required for adequate air flow under varying ambient conditions. Fan blades shall not be less than 24" diameter and protected with a plastic coated fan guard.
2. Each condensing unit system shall be equipped with an ACCESSIBLE HERMETIC, scroll or DISCUS. Each system shall include dual pressure controls with stainless steel braided hoses (Super-hose), filter drier, sight glass, discharge and suction-line vibration eliminators, flooded head pressure controls and crankcase heater for low ambient control all of which shall be factory assembled and installed.
3. Each condensing unit system shall be equipped with a properly sized receiver tank with pump- down capacity large enough to accept the total liquid volume of refrigerant without exceeding 80 percent of its volumetric capacity. Each receiver shall be equipped with inlet and outlet isolation valves with service ports.
4. Refrigerant shall be current DOE requirement used for medium temperature systems and for low temperature systems.
5. ELECTRICAL CONTROL PANEL: The refrigeration system shall have an external factory-mounted and pre-wired (NEMA 3 EQV.) electrical control panel complete with an industrial grade interlocked main-fused disconnect with separate compressor and fan motor circuit breakers, contactors and defrost time clocks for single point power connection. Each internal wire shall be color-coded and numbered. The numbers of each individual wire shall

be noted on the wiring diagram. A wiring schematic photo-etched onto a .012 aluminum plate shall be permanently affixed inside of the control panel.

6. PRE-PIPING: All refrigerant lines shall be type "L" tubing and extended to one side of the package in a neat and orderly manner with ends of lines capped and identified by system using photo-etched tags. All tubing shall be securely supported and anchored with uni-struct channel and clamps with Neoprene Grommets. Suctions lines shall be wrapped and insulated to prevent condensate accumulation. All piping shall be pressure-tested at the factory with nitrogen at 150 psi for low side and 400 psi for high side. All systems shall be shipped from the factory with a 25 psi holding charge.
7. EVAPORATOR COILS**:** The evaporator coils as specified by the R-1 drawing shall include a compressor BTU matched low-profile end mount evaporator coil. Each evaporator coil shall include liquid-line sub-cooling circuit, thermostat, balanced port expansion valve and liquid- line solenoid valve all mounted and wired, as required, at the factory.
8. RATING PLATE IDENTIFICATION, WIRING SCHEMATIC AND NAMEPLATE: Rating plate identification made of aluminum plate shall be permanently affixed to the outside of the system and include the following information as per U.L. standard 303:

    a. System Model and Serial Number.
    b. Electrical power supply, minimum circuit ampacity and Maximum Fuse Size.
    c. Electrical data for Condensing Units, Evaporator Coils and Condenser Fan Motors.
    d. Individual System Identification and Horsepower.
    e. Type of Refrigerant.
    f. Control Number

        1) Wiring Schematic. A wiring schematic photo-etched onto .012 aluminum plates shall be permanently affixed inside the control panel.
        2) Nameplates. Separate nameplates photo-etched onto .012 aluminum plates shall be affixed toidenify condenser and fan motor circuit breakers, remote fan moto

    g. capacitors, thermal sensing fan cycle controls, and time clocks. These nameplate shall be located above or below each item inside the control panel.

9. INSTALLATION:

    a. Refrigeration Contractor: The installing Refrigeration Contractor shall obtain all permits, mount evaporator coils, provide and install refrigerant piping, fittings, hangers, support, hook-up and start-up as per manufacturers Preparation and Start-Up Procedure. The Preparation Start-Up Procedure should be filled out, signed and returned to Manufacturer within ten (10) days of start-up. All copper tubing shall be refrigerant grade type "L". Sil- fos 15 shall be used, not soft solder. After the system and unit cooler have been connected, the balance of the system shall be leak-tested with all valves open. The complete system shall be evacuated with a vacuum pump. Each system shall be charged with the refrigerant as specified in the Manufacturer Engineering Summary. The Contractor shall be responsible for test and adjustment of each condensing unit to make the total system operational.
    b. Electrical Contractor. Electrical Contractor (E.C.) shall provide main power for refrigeration package and all control and defrost wiring as called for in the Manufacturer wiring diagram. E.C. shall also connect drain-line heater in freezer. All electrical wiring installation shall be in accordance with the Manufacturer wiring diagram and local codes.
    c. General Contractor. The General Contractor shall provide the following:

        1) Verify all dimensions and coordinate with all other trades.
        2) Provide and prepare the pitch-pans and platform or rails as called for in the R-1 drawing.
        3) Complete weatherproofing around and under unit.
        4) On-site concrete coring for refrigeration piping.
        5) Crane or hoist services as required for placement of the refrigeration unit and/or other required materials.

d. Plumbing Contractor: shall provide type "L" copper drain-lines for walk-in refrigerator and freezer, pitched 1/4" per foot of run. Drain line shall be "P: trapped outside of refrigerated space to avoid entrance of warm, moist air or vermin. Contractor shall provide individual drain lines, with Electrical heat tape for each evaporator coil unless otherwise specified in the R-1 drawing. All plumbing installation shall be in accordance with local codes.

B. When non-rack system is specified:

1. Compressors: Heavy duty, noiseless unit with required starting switches and supplied by approved manufacturer. Provide complete with copper tubing dehydrated and sealed at time of installation with pressure switches, line dryers, dehydrators and sight glasses.

   a. Fully wrap and adequately support refrigerant lines extended from compressor locations to individual units. Individually run suction and pressure lines and individually wrapped with fire rated wrap.

2. Motors: Accessible hermetic type utilizing suction gas cooled motor principle with built-in thermal and electric overload protection in motor compressors. Supply each motor with thermal breaker switch installed.

   a. Provide motors with contactor's definite purpose type. Install contactors on surface free of excessive vibration in electrical enclosure on rack unit.

3. Refrigeration System: Balanced, remote, packaged, internally prewired, and pre-piped, pressure tested, and pressure sealed systems designed to accommodate specified refrigerated equipment requirements. Provide complete system including, but not limited to:

   a. Evaporator coil assemblies.
   b. Condensing unit assemblies,
   c. Motor starters.
   d. Refrigerant piping.
   e. Insulation
   f. Temperature controls
   g. Related fittings, gauges, valves, regulators, refrigerant, and oil requried for a complete operating system.

4. Evaporator Coil Assemblies: Provide coil, fan, drain pan, expansion valve, temperature control, heat exchanger, and standard components. Furnish coil units to equipment manufactures required for mounting in equipment during fabrication or installation.
5. Refrigeration Tubing: Provide Type L,AC hard draw degreased, sealed copper with horizontal runs sloped 1" per 20 feet toward refrigeration circuit or to local code. Support refrigerant piping with adjustable hangers spaced and adjusted to drop required. Where vertical runs of more than 5 feet occur in suction line, trap riser at bottom. Install piping so refrigerant or oil cannot drain back into coils from suction line.
6. Insulation: Insulate refrigerant lines with minimum ½" thick fire rated foam insulation for medium temperatures and ¾" thick fire rated foam insulation for low temperatures or equivalent cellular type insulation. Joints between section of insulation shall be glued and taped.

   a. Provide metal pip sleeves where piping passes through wall, ceiling, or floor. Fill space around tubing with mastic insulation compound.
   b. Utilize EPA and DOE approved refrigerant

7. Drain Line: Coordinate PC to supply Type L supported copper drain line from each coil outlet, 1" away from surfaces to a point 1" above floor sink where shown on rough-in plan provided under other work. Verify brass union and clean-out connection at coil outlet to allow repair, service, and verify replacement has been installed under other work.

a. Immediately trap drain lines above floor sink.
b. Paint exposed drain lines with 2 coats chrome paint.
c. Verify freezer drain line has been wrapped with continuous electrified heater tape provided by EC.

8. Valves: Provide approved standard weight valves suitable for service and purpose intended.

a. Expansion Valves: Installed in refrigeration liquid line where entering evaporator. Provide external equalizer expansion valves for coils fitted with refrigerant distributor.
b. Solenoid Valves: Provide line voltage, manual lift system type to operate at maximum 2 point pressure drop across valve; of full refrigerant line size, using silver solder connections as applicable.

1) For normally closed liquid line solenoid, provide with temperature controller for each coil on system.

9. Dehydrator or Dryer: Provide at compressor assembly. Install in liquid line.

10. Pressure: Pressurize systems to manufacturer requirements and local code. test for leaks.

a. Perform testing on insulated piping prior to application of insulation.
b. After testing, establish deep vacuum of 29 inches or 50 microns and hold for 24 hours minimum, with maximum decrease of 3 inches of vacuum. Assure evacuation time is adequate for removal of internal moisture.

2.5 FAUCETS, VALVES, FITTINGS, AND ACCESSORIES

A. Furnish faucets, rotary handle wastes, basket wastes, open wastes, and strainers for installation by others.

B. Faucets: For each sink, provide faucet with ball check to prevent cross flow of hot and cold water.
1. Specialized Faucets: Specified under item where intended for use.

C. Gas Fired Equipment: At initial installation, PC to provide gas fired equipment with proper gas pressure

D. Finished: For exposed to view accessories, PC to provide chrome plated piping, fittings, escutcheons, valves, supports, hangers, and similar accessories installed in conjunction with kitchen equipment. Accessories painted with dull aluminum spray paint are acceptable.

1. Exposed to view applies to piping from the point piping leaves the wall, ceiling, or floor construction to the point of final connection to kitchen equipment or fixtures.
2. Piping built into fixed counter with concealing doors is not considered exposed.

2.6 FABRICATION

A. Welding: Perform welding using electric fusion metal arc method. Carbon arc or gas welding is not permitted. Perform welding with welding rod of same composition as sheets or parts welded. Make welds complete, strong and ductile. Grind off excess metal from joints and finish smooth to match adjoining surface. Provide welds free of mechanical imperfections (gas holes, pits, runs, cracks, similar) and of same color as adjoining surfaces.

1. Weld joints in tops of fixtures, tables, drainboards, exposed shelving, sinks, and similar items. Continuously butt weld equipment construction of more than 1 piece of sheet metal. Grind welds smooth and polish.

2. Provide welded joints homogeneous with sheet metal. Where sheet sizes necessitate a joint, weld joint. Fabricate tops of fixtures in factory with welded joints to reduce field joints to a minimum. Where fixtures join, continuously weld top of fixture joints, except for field joints.

    a. Field Joints: Closely butt, pull together, field weld, grind and polish smooth.
    b. Tops of Fixtures: Fabricate to a maximum length with welded factory joints to bring fixtures to final position and reducing field joints to minimum. Where welds occur on surfaces and are not finished by grinding and polishing, factory coat welds and discolored areas with metallic base paint to prevent progressive corrosion to joints.

3. Soldering and brazing: Soldering and brazing stainless steel surfaces which can be welded is not acceptable.

B. Grinding, Polishing, and Finishing:

1. Grind welded exposed joints flush with adjoining material and neatly finish to harmonize with surrounding area. Where material is sunken or depressed by welding operation, grind depression and peen flush to adjoining surface. If necessary, again grind to eliminate low spots. Polish and buff ground surfaces to match adjoining surfaces consistent with good workmanship.

    a. Exercise care in grinding operations to avoid excessive heating of metal and metal discoloration.
    b. Remove grain or rough grinding by successive polishing operations.
    c. Verify texture of final polishing operation is uniform and smooth.
    d. Provide high grade finish for equipment

2. Butt Joints: Confirm code allowance requirements. Make butt joints and contact joints close fitting, not requiring solder as filler.

    a. Soldering where dependence is placed solely on soldering for strength and stability of joint or fixture is not permitted.
    b. Where brake bends occur, make free of under extrudence. Where brakework mars uniform appearance of material, remove marks by grinding, polishing, and finishing.
    c. Where sheared edges occur; make free of burrs, fins or irregular projections. Finish sheared edges.
    d. Where miters of bull nosed corners occur, neatly finish with under edge of material ground to uniform condition. Overlapping materials is not acceptable.

3. Provide equipment with quality finish, consistent with high grade manufacturing practices and free of sharp edges or corners.

    a. Exposed surfaces: Provide #4 finish. Exposed surface includes inside surface exposed to view when sliding or swinging door is opened. Finish underside of shelf equal to #180 ground finish. Final #4 finish is factory finish not finish furnished by mill. Indications of die markings not blending with final finish are not acceptable.

C. Corrosion Protection:

1. Where welding operation occurs on stainless steel, take measures to eliminate possibility of corrosion. Weld bolts and screws using industry standard process that eliminates possibility of carbide precipitation. Finish each welded joint in bright finish to eliminate progressive corrosion. Grind or coat underside of each weld to prevent possibility of

oxidation and progressive corrosion.

2. Welding performed by process which eliminates or reduces carbide precipitation in connection with bolts and screws need not be treated. Treat welded joints to prevent progressive corrosion.
3. Where welded framing, or galvanized or tinned angle or channel construction is specified, perform welding prior to hot galvanizing. If galvanized structural sections are used, treat welded joints with metallic coating to cover surfaces marred by welding and grinding operations. Clean iron or galvanized pipe and other parts and finish in the factory with minimum 2 coats of NSF approved gray spray.

D. Bolt Construction:

1. To the extent possible, provide exposed surfaces free of bolts, screws and rivet heads. Where bolts are used to fasten trim to paneling or body of warmers, cabinets, counters, similar items, and to fasten tops of counters, dish tables to top of framing, use concealed type bolts and screws
2. Where threads of bolts and screws occur on inside fixtures, are visible, or might come in contact with hands or wiping cloth, cap bolts and screw threads with lock washer and chrome plated brass or bronze acorn nut. Where screw threads are not visible or readily accessible, cap with standard lock washer and steel nut treated to prevent rusting or corroding.
3. Where bolts or screws are welded to underside of trim or tops, finish reverse side of weld uniform with adjoining surface of trim or top. Depressions are not acceptable.

E. Counter Legs: Provide heavy duty, stainless steel legs.

F. Leg bracing: Provide bracing from front to back, forming H frame. Construct from minimum 1-5/8 inch
o.d. x .083 inch stainless steel tubing except as noted. Run cross bracing horizontal and level between legs, approximately 10 inches above floor, unless otherwise specified. Completely weld joints around entire perimeter forming complete seal with welds ground and polished smooth to match adjacent work.

1. Rear Bracing: Interconnect H frames or, if required, provide rear single bracing for dish tables, space for bins, carts, or mobile equipment. Secure to adjacent legs with welded joints.

G. Leg Mountings: Where units are mounted on legs 14 inches or longer, provide underbracing.

1. Provide legs with sanitary type 12 gauge stainless steel inverted type channel braces full width of respective tops. Channel width: approximately 2-3/4 inches

   a. Vertical Channel legs: 1 inch with 7/8 inch wide flange; overall width of channel is 4-1/2 inch. Round ends of channel and fully enclose by welded stampings matching cross section of channel.
