   1. Structural Safety Factor: Allowable strength in tension, shear, and pullout force of components shall be at least four times the maximum seismic forces to which they will be subjected.

C. Channel Support System: MFMA-3, shop- or field-fabricated support assembly made of slotted steel channels with accessories for attachment to braced component at one end and to building structure at the other end and other matching components and with corrosion-resistant coating; and rated in tension, compression, and torsion forces.

D. Trapeze System:
   1. The hangers must be ASTM A36 all-thread rod.
   2. The threads must be roll formed.
   3. The pipes must be rigidly attached to the hanger rods.
   4. Provisions must be made to avoid impact with adjacent pipe, duct, equipment, or building structure, or to protect the pipe from such impact.

E. Restraint Cables: ASTM A 603 galvanized-steel cables with end connections made of steel assemblies with thimbles, brackets, swivel, and bolts designed for restraining cable service; and with a minimum of two clamping bolts for cable engagement.

F. Hanger Rod Stiffener: Reinforcing steel angle clamped to hanger rod.

G. Bushings for Floor-Mounted Equipment Anchor Bolts: Neoprene bushings designed for rigid equipment mountings, and matched to type and size of anchor bolts and studs.

H. Resilient Isolation Washers and Bushings: One-piece, molded, oil- and water-resistant neoprene, with a flat washer face.

I. Mechanical Anchor Bolts: Drilled-in and stud-wedge or female-wedge type in zinc-coated steel for interior applications and stainless steel for exterior applications. Select anchor bolts with strength required for anchor and as tested according to ASTM E 488. Minimum length of eight times diameter.

1.07 APPLICATIONS

A. Multiple Pipe Supports: Secure pipes to trapeze member with clamps approved for application.

B. Hanger Rod Stiffeners: Install hanger rod stiffeners where indicated or scheduled on Drawings to receive them and where required to prevent buckling of hanger rods due to seismic forces.

C. Strength of Support and Seismic-Restraint Assemblies: Where not indicated, select sizes of components so strength will be adequate to carry present and future static and seismic loads within specified loading limits.

1.08 SEISMIC-RESTRAINT DEVICE INSTALLATION

A. Equipment Restraints:
   1. Install resilient bolt isolation washers on equipment anchor bolts where clearance between anchor and adjacent surface exceeds 0.125 inches (3.2 mm).

B. Piping Restraints:
   1. Comply with requirements in MSS SP-127.
   2. Comply with requirements in NFPA 13 for fire protection systems.

3. Space lateral supports a maximum of 40 feet (12 m) o.c., and longitudinal supports a maximum of 80 feet (24 m) o.c.
4. Brace a change of direction longer than 12 feet (3.7 m).

C. Install cables so they do not bend across edges of adjacent equipment or building structure.

D. Install seismic-restraint devices using methods approved by the seismic bracing component manufacturer and the authority having jurisdiction.

E. Install bushing assemblies for anchor bolts for floor-mounted equipment, arranged to provide resilient media between anchor bolt and mounting hole in concrete base.

F. Attachment to Structure: If specific attachment is not indicated, anchor bracing to structure at flanges of beams, at upper truss chords of bar joists, or at concrete members.

G. Drilled-in Anchors:
1. Identify position of reinforcing steel and other embedded items prior to drilling holes for anchors. Do not damage existing reinforcing or embedded items during coring or drilling. Notify the structural engineer if reinforcing steel or other embedded items are encountered during drilling. Locate and avoid prestressed tendons, electrical and telecommunications conduit, and gas lines.
2. Do not drill holes in concrete or masonry until concrete, mortar, or grout has achieved full design strength.
3. Wedge Anchors: Protect threads from damage during anchor installation. Heavy-duty sleeve anchors shall be installed with sleeve fully engaged in the structural element to which anchor is to be fastened.
4. Set anchors to manufacturer's recommended torque, using a torque wrench.
5. Install zinc-coated steel anchors for interior and stainless steel anchors for exterior applications.

1.09 ACCOMMODATION OF DIFFERENTIAL SEISMIC MOTION

A. Install flexible connections in piping where they cross seismic joints, where adjacent sections or branches are supported by different structural elements, and where the connections terminate with connection to equipment that is anchored to a different structural element from the one supporting the connections as they approach equipment. Comply with requirements in Division 15 Section "Domestic Water Piping" for piping flexible connections.

1.10 SEISMIC-RESTRAINT DEVICE SCHEDULE

A. Provide seismic restraints in accordance with the requirements of the Title 24 Building Code for the following:
1. Mechanical and plumbing systems identified above with a Component Importance Factor of 1.0 and 1.5.
a. Exceptions: The provisions of this section do not cover elevator system piping, gas system piping. The piping considered in the section is assumed to be high-deformability piping. This implies pipes made from ductile materials that are joined by welding, brazing, or groove type couplings, similar to Victualic couplings, where the grooved in the pipe have been roll formed rather than cut. No seismic restraint is required for:
1) Piping supported by rod hangers.
(a) Single clevis supported pipe, all of the hangers in the piping run are 12 inches or less in length as measured from the top of pipe to the supporting structure.

(b) Trapeze supported pipe, all of the hangers in the piping run are 12 inches or less in length as measured from the top of trapeze bar to the supporting structure.
(c) Hangers must be detailed and constructed in order to avoid significant bending of the hanger and its attachments. Taken to mean must be “non-moment generating” or free swinging

2) HVAC ducts suspended from hangers that are 21 inches or less in length for the entire run of ductwork as measured from the supporting structure to the top of the trapeze bar supporting the ductwork.
(a) Hangers must be detailed and constructed in order to avoid significant bending of the hanger and its attachments. Taken to mean must be “non-moment generating” or free swinging

b. Exceptions Seismic Design Category D, E and F: No seismic restraint is required for:
1) Mechanical and plumbing components which have:
(a) A Component Importance Factor of 1.0.
(b) That have flexible connections between the components and all associated duct, piping, conduit.
(c) Are mounted at 4 feet or less above a floor level.
(d) Weight 400 lbs or less.
2) Mechanical and plumbing components which have:
(a) A Component Importance Factor of 1.0.
(b) That have flexible connections between the components and all associated duct, piping, conduit.
(c) Weight 20 lbs or less.
3) Mechanical and plumbing distribution systems which have:
(a) A Component Importance Factor of 1.0.
(b) That have flexible connections between the components and all associated duct, piping, conduit.
(c) Weight 5 lbs or less.
4) Mechanical and plumbing components which have a Component Importance Factor of 1.0.
(a) That have flexible connections between the components and all associated duct, piping, conduit.
(b) Are mounted at 4 feet or less above a floor level.
(c) Weight 400 lbs or less.
5) Single clevis supported pipe which have a Component Importance Factor of 1.5 and for which the nominal size is NPS 1 or less.
6) Single clevis supported pipe which have a Component Importance Factor of 1.0 and for which the nominal size is NPS 3 or less.
7) Ductwork which have a Component Importance Factor of 1.0 if the cross-sectional area is less than 6 square feet.

c. Exceptions Seismic Design Category D: No seismic restraint is required for:
1) Trapeze supported piping which have a Component Importance Factor of 1.5 and for which the nominal size is NPS 1 or less if:
(a) The trapeze bar is supported by 3/8-16 UNC, or larger, hanger rods.
(b) The maximum hanger spacing is 7 feet on center.
(c) The total weight supported by the trapeze bar is 4 lbs/ft or less.
2) Trapeze supported piping which have a Component Importance Factor of 1.0 and for which the nominal size is NPS 3 or less.
(a) The trapeze bar is supported by 1/2-13 UNC, or larger, hanger rods.

(b) The maximum hanger spacing is 10 feet on center.
(c) The total weight supported by the trapeze bar is 25 lbs/ft or less.

d. Exceptions Seismic Design Category E and F: No seismic restraint is required for:
1) Trapeze supported piping which have a Component Importance Factor of 1.5 and for which the nominal size is NPS 1 or less if:
(a) The trapeze bar is supported by 3/8-16 UNC, or larger, hanger rods.
(b) The maximum hanger spacing is 7 feet on center.
(c) The total weight supported by the trapeze bar is 4 lbs/ft or less.
2) Trapeze supported piping which have a Component Importance Factor of 1.0 and for which the nominal size is NPS 3 or less.
(a) The trapeze bar is supported by 1/2-13 UNC, or larger, hanger rods.
(b) The maximum hanger spacing is 10 feet on center.
(c) The total weight supported by the trapeze bar is 11 lbs/ft or less.

1.11 COMPONENT AMPLIFICATION AND RESPONSE MODIFICATION FACTORS (BASED UPON ASCE/SEI 7-05 MINIMUM DESIGN LOADS FOR BUILDINGS AND OTHER STRUCTURES FOR 20015 IBC TABLE 13.6-1

A.	MECHANICAL COMPONENT	B.	C.
D.	Air-Side HVAC - fans, air handling units, and other mechanical components with sheet metal framing.	E.	F.
G.	Wet-side HVAC - boilers, chillers, and other mechanical components constructed of ductile iron materials	H.	I.
J.	Pumps, compressors, and other vessels not supports on skirts.	K.	L.
M.	Skirt mounted pressure vessels.	N.	O.
P.	Communication, computers, instrumentation and controls.	Q.	R.
S.	Roof-mounted chimney, stacks, cooling towers braced below their center of gravity.	T.	U.
V.	Roof-mounted chimney, stacks, cooling towers braces above their center of gravity.	W.	X.
Y.	Other mechanical components.	Z.	AA.
BB.	Vibration isolated components	CC.	DD.
EE.	Components and systems isolated using neoprene elements and neoprene isolated floors with elastomeric snubbers or resilient perimeter stops.	FF.	GG.
HH.	Spring isolated components and systems and vibration isolated floors closely restrained with elastomeric snubbing devices or resilient perimeter stops.	II.	JJ.
KK.	Internally isolated components or systems.	LL.	MM.
NN.	Suspended vibration isolated equipment including in-line duct devices and suspended internally isolated components	OO.	PP.
QQ.	Distribution Systems	RR.	SS.
TT.	Piping in accordance with ASME B31, this includes in-line components, with joints made by welding or brazing.	UU.	VV.
WW.	Piping in accordance with ASME B31, this includes in-line components, constructed of high or limited deformability materials with joints made by threading, bonding, compression couplings, or grooved	XX.	YY.

	couplings.		
ZZ.	Piping and tubing not in accordance with ASME B31, this includes in-line components, constructed with high deformability materials with joints made by welding or brazing.	AAA.	BBB.
CCC.	Piping and tubing not in accordance with ASME B31, this includes in-line components, constructed of high or limited deformability materials with joints made by threading, bonding, compression couplings, or grooved couplings.	DDD.	EEE.
FFF.	Piping and tubing of low deformability materials, such as cast iron, glass, or non-ductile plastics.	GGG.	HHH.
III.	Ductwork, including in-line components, constructed of high deformability materials with joints made by welding or brazing.	JJJ.	KKK.
LLL.	Ductwork, including in-line components, constructed of high or limited deformability materials, with joints made by means other than welding or brazing.	MMM.	NNN.
OOO.	Ductwork constructed of low deformability materials such as cast iron, glass, or non-ductile plastics.	PPP.	QQQ.

1.12 FIELD QUALITY CONTROL

A. Perform tests and inspections.

B. Tests and Inspections:
   1. Provide evidence of recent calibration of test equipment by a testing agency acceptable to authorities having jurisdiction.
   2. Schedule test with Owner, through Architect, before connecting anchorage device to restrained component (unless post connection testing has been approved), and with at least seven days' advance notice.
   3. Obtain Architect's approval before transmitting test loads to structure. Provide temporary load-spreading members.
   4. Test at least four of each type and size of installed anchors and fasteners selected by Architect.
   5. Test to 90 percent of rated proof load of device.
   6. Measure isolator restraint clearance.
   7. Measure isolator deflection.
   8. If a device fails test, modify all installations of same type and retest until satisfactory results are achieved.

C. Remove and replace malfunctioning units and retest as specified above.

D. Prepare test and inspection reports.

1.13 ADJUSTING

A. Adjust isolators after piping system is at operating weight.

B. Adjust limit stops on restrained spring isolators to mount equipment at normal operating height. After equipment installation is complete, adjust limit stops so they are out of contact during normal operation.

C. Adjust active height of spring isolators.

D. Adjust restraints to permit free movement of equipment within normal mode of operation.

END OF SECTION

SECTION 22 05 53
IDENTIFICATION FOR PLUMBING

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Equipment labels.
   2. Pipe labels.

1.02 SUBMITTAL

A. Product Data: For each type of product indicated.

PART 2 PRODUCTS

2.01 EQUIPMENT LABELS

A. Labels for Outdoor Equipment:
   1. Lettering: Stenciled.
   2. Minimum Letter Size: 100 mm (4 inch).

B. Plastic Labels for Indoor Equipment:
   1. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/16 inch (1.6 mm) thick, and having predrilled holes for attachment hardware.
   2. Letter Color: Black.
   3. Background Color: White.
   4. Maximum Temperature: Able to withstand temperatures up to 160 deg F (71 deg C).
   5. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch (64 by 19 mm).
   6. Minimum Letter Size: 1/4 inch (6.4 mm) for name of units if viewing distance is less than 24 inches (600 mm), 1/2 inch (13 mm) for viewing distances up to 72 inches (1830 mm), and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
   7. Fasteners: Stainless-steel rivets or self-tapping screws.
   8. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

C. Label Content: Include equipment's Drawing designation or unique equipment number.

D. Equipment Label Schedule: For each item of equipment to be labeled, on 8-1/2-by-11-inch (A4) bond paper. Tabulate equipment identification number and identify Drawing numbers where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified. Equipment schedule shall be included in operation and maintenance data.

2.02 PIPE LABELS

A. General Requirements for Manufactured Pipe Labels: Preprinted, color-coded, with lettering indicating service, and showing flow direction.

B. Self-Adhesive Pipe Labels: Printed plastic with contact-type, permanent-adhesive backing.

C. Pipe Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings, pipe size, and an arrow indicating flow direction.
   1. Flow-Direction Arrows: Integral with piping system service lettering to accommodate both directions or as separate unit on each pipe label to indicate flow direction.
   2. Lettering Size: At least 1-1/4 inches (31 mm) high.

PART 3 EXECUTION

3.01 PREPARATION

A. Clean piping and equipment surfaces of substances that could impair bond of identification devices, including dirt, oil, grease, release agents, and incompatible primers, paints, and encapsulates.

3.02 EQUIPMENT LABEL INSTALLATION

A. Install or permanently fasten labels on each major item of mechanical equipment.

B. Locate equipment labels where accessible and visible.

3.03 PIPE LABEL INSTALLATION

A. Piping Color-Coding: Painting of piping is specified in Division 9 Section " Finishes."

B. Locate pipe labels where piping is located above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:
   1. Near each valve and control device.
   2. Near each branch connection, excluding short takeoffs for fixtures and terminal units. Where flow pattern is not obvious, mark each pipe at branch.
   3. Near penetrations through walls, floors, ceilings, and inaccessible enclosures.
   4. At access doors, manholes, and similar access points that permit view of concealed piping.
   5. Near major equipment items and other points of origination and termination.
   6. Spaced at maximum intervals of 20 feet (6 m) along each run.

C. Pipe Label Color Schedule (color schedule must be adjusted to meet local, State and National Codes if different from below):
   1. Domestic Water Piping (Cold, Hot, Recirculating Hot, Non-Potable, Irrigation): By Plumbing Contractor.
      a. Background Color: White.
      b. Letter Color: Black.
   2. Natural Gas Piping: By Plumbing Contractor.
      a. Background Color: White.
      b. Letter Color: Black.
   3. Heating Water Piping: By Heating/Boiler Contractor.
      a. Background Color: Yellow.
      b. Letter Color: Black.
   4. Core Loop Water Piping: By Heating/Boiler Contractor.
      a. Background Color: Yellow.
      b. Letter Color: Black.
   5. Low-Pressure Steam Piping (steam rooms in locker rooms): By Heating/Boiler Contractor.
      a. Background Color: White.
      b. Letter Color: Black.

END OF SECTION

SECTION 22 07 00
PLUMBING INSULATION

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Insulation Materials:
      a. Flexible elastomeric.
      b. Mineral fiber.
   2. Fire-rated insulation systems.
   3. Insulating cements.
   4. Adhesives.
   5. Sealants.
   6. Factory-applied jackets.
   7. Field-applied jackets.
   8. Tapes.
   9. Securements.

B. Related Sections:
   1. Division 22 Section "Domestic Water Piping" for piping.
   2. Division 22 Section "Storm Drainage Piping" for piping.

1.02 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings:
   1. Detail application of protective shields, saddles, and inserts at hangers for each type of insulation and hanger.
   2. Detail insulation application at elbows, fittings, flanges, valves, and specialties for each type of insulation.
   3. Detail application of field-applied jackets.
   4. Detail application at linkages of control devices.
   5. Detail field application for each equipment type.

1.03 QUALITY ASSURANCE

A. Fire-Test-Response Characteristics: Insulation and related materials shall have fire-test-response characteristics indicated, as determined by testing identical products per ASTM E 84, by a testing and inspecting agency acceptable to authorities having jurisdiction. Factory label insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with appropriate markings of applicable testing and inspecting agency.
   1. Insulation Installed Indoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.
   2. Insulation Installed Outdoors: Flame-spread index of 75 or less, and smoke-developed index of 150 or less.

PART 2 PRODUCTS

2.01 INSULATION MATERIALS

A. Comply with requirements in Part 3 schedule articles for where insulating materials shall be applied.

B. Products shall not contain asbestos, lead, mercury, or mercury compounds.

C. Products that come in contact with stainless steel shall have a leachable chloride content of less than 50 ppm when tested according to ASTM C 871.

D. Insulation materials for use on austenitic stainless steel shall be qualified as acceptable according to ASTM C 795.

E. Foam insulation materials shall not use CFC or HCFC blowing agents in the manufacturing process.

F. Flexible Elastomeric: Closed-cell, sponge- or expanded-rubber materials. Comply with ASTM C 534, Type I for tubular materials and Type II for sheet materials.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Aeroflex USA Inc.; Aerocel.
      b. Armacell LLC; AP Armaflex.

G. Mineral-Fiber Blanket Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 553, Type II and ASTM C 1290, Type III with factory-applied FSK jacket. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. CertainTeed Corp.; Duct Wrap.
      b. Johns Manville; Microlite.
      c. Knauf Insulation; Duct Wrap.

H. Mineral-Fiber, Preformed Pipe Insulation:
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Fibrex Insulations Inc.; Coreplus 1200.
      b. Johns Manville; Micro-Lok.
      c. Knauf Insulation; 1000 Pipe Insulation.
   2. Type I, 850 deg F (454 deg C) Materials: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 547, Type I, Grade A, with factory-applied ASJ. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article. Nominal density is 4 lb/cu. ft. (64-kg/cu. m) or more.
   3. Molded closed cell polyethylene foam insulation is not an approved equal.

I. Mineral-Fiber, Pipe and Tank Insulation: Mineral or glass fibers bonded with a thermosetting resin. Semirigid board material with factory-applied ASJ complying with ASTM C 1393, Type II or Type IIIA Category 2, or with properties similar to ASTM C 612, Type IB. Nominal density is 3 lb/cu. ft. (48-kg/cu. m) or more. Thermal conductivity (k-value) at 100 deg F (55 deg C) is 0.29 Btu x in./h x sq. ft. x deg F (0.042 W/m x K) or less. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. CertainTeed Corp.; CrimpWrap.
      b. Johns Manville; MicroFlex.
      c. Knauf Insulation; Pipe and Tank Insulation.

2.02 FIRE-RATED INSULATION SYSTEMS

A. Fire-Rated Blanket: High-temperature, flexible, blanket insulation with FSK jacket that is tested and certified to provide a 1-hour fire rating by a NRTL acceptable to authority having jurisdiction.
   1. Products: Subject to compliance with requirements, provide the following:
      a. 3M; Fire Barrier Wrap Products, Wrap 15A.

2.03 INSULATING CEMENTS

A. Mineral-Fiber, Hydraulic-Setting Insulating and Finishing Cement: Comply with ASTM C 449/C 449M.

1. Products: Subject to compliance with requirements, provide one of the following:
   a. Insulco, Division of MFS, Inc.; SmoothKote.
   b. P. K. Insulation Mfg. Co., Inc.; PK No. 127, and Quik-Cote.

2.04 ADHESIVES

A. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated, unless otherwise indicated.

B. Flexible Elastomeric Adhesive: Comply with MIL-A-24179A, Type II, Class I.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Aeroflex USA Inc.; Aeroseal.
      b. Armacell LCC; 520 Adhesive.
   2. For indoor applications, use adhesive that has a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

C. Mineral-Fiber Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Childers Products, Division of ITW; CP-82.
      b. Foster Products Corporation, H. B. Fuller Company; 85-20.
      c. ITW TACC, Division of Illinois Tool Works; S-90/80.
      d. Marathon Industries, Inc.; 225.
      e. Mon-Eco Industries, Inc.; 22-25.
   2. For indoor applications, use adhesive that has a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.05 SEALANTS

A. Joint Sealants:

B. FSK and Metal Jacket Flashing Sealants:
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Childers Products, Division of ITW; CP-76-8.
      b. Foster Products Corporation, H. B. Fuller Company; 95-44.
      c. Marathon Industries, Inc.; 405.
      d. Mon-Eco Industries, Inc.; 44-05.
      e. Vimasco Corporation; 750.
   2. Materials shall be compatible with insulation materials, jackets, and substrates.
   3. Fire- and water-resistant, flexible, elastomeric sealant.
   4. Service Temperature Range: Minus 40 to plus 250 deg F (Minus 40 to plus 121 deg C).
   5. Color: Aluminum.
   6. For indoor applications, use sealants that have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

C. ASJ Flashing Sealants, and Vinyl, PVDC, and PVC Jacket Flashing Sealants:
   1. Products: Subject to compliance with requirements, provide the following:
      a. Childers Products, Division of ITW; CP-76.
   2. Materials shall be compatible with insulation materials, jackets, and substrates.
   3. Fire- and water-resistant, flexible, elastomeric sealant.
   4. Service Temperature Range: Minus 40 to plus 250 deg F (Minus 40 to plus 121 deg C).
   5. Color: White.
   6. For indoor applications, use sealants that have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.06 FACTORY-APPLIED JACKETS

A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:
   1. ASJ: White, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C 1136, Type I.
   2. FSK Jacket: Aluminum-foil, fiberglass-reinforced scrim with kraft-paper backing; complying with ASTM C 1136, Type II.
      a. Products: Subject to compliance with requirements, provide the following:
         1) Dow Chemical Company (The); Saran 540 Vapor Retarder Film and Saran 560 Vapor Retarder Film.

2.07 FIELD-APPLIED JACKETS

A. Field-applied jackets shall comply with ASTM C 921, Type I, unless otherwise indicated.

B. PVC Jacket: High-impact-resistant, UV-resistant PVC complying with ASTM D 1784, Class 16354-C; thickness as scheduled; roll stock ready for shop or field cutting and forming. Thickness is indicated in field-applied jacket schedules.
   1. Products: Subject to compliance with requirements, provide the following:
      a. Johns Manville; Zeston.
   2. Adhesive: As recommended by jacket material manufacturer.
   3. Color: White.
   4. Factory-fabricated fitting covers to match jacket if available; otherwise, field fabricate.
      a. Shapes: 45- and 90-degree, short- and long-radius elbows, tees, valves, flanges, unions, reducers, end caps, soil-pipe hubs, traps, and mechanical joints.
   5. Factory-fabricated tank heads and tank side panels.

2.08 TAPES

A. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C 1136.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0835.
      b. Compac Corp.; 104 and 105.
      c. Ideal Tape Co., Inc., an American Biltrite Company; 428 AWF ASJ.
      d. Venture Tape; 1540 CW Plus, 1542 CW Plus, and 1542 CW Plus/SQ.
   2. Width: 3 inches (75 mm).
   3. Thickness: 11.5 mils (0.29 mm).
   4. Adhesion: 90 ounces force/inch (1.0 N/mm) in width.
   5. Elongation: 2 percent.
   6. Tensile Strength: 40 lbf/inch (7.2 N/mm) in width.
   7. ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.

B. FSK Tape: Foil-face, vapor-retarder tape matching factory-applied jacket with acrylic adhesive; complying with ASTM C 1136.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0827.
      b. Compac Corp.; 110 and 111.
      c. Ideal Tape Co., Inc., an American Biltrite Company; 491 AWF FSK.
      d. Venture Tape; 1525 CW, 1528 CW, and 1528 CW/SQ.
   2. Width: 3 inches (75 mm).
   3. Thickness: 6.5 mils (0.16 mm).
   4. Adhesion: 90 ounces force/inch (1.0 N/mm) in width.

5. Elongation: 2 percent.
6. Tensile Strength: 40 lbf/inch (7.2 N/mm) in width.
7. FSK Tape Disks and Squares: Precut disks or squares of FSK tape.

C. Aluminum-Foil Tape: Vapor-retarder tape with acrylic adhesive.
1. Products: Subject to compliance with requirements, provide one of the following:
a. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0800.
b. Compac Corp.; 120.
c. Ideal Tape Co., Inc., an American Biltrite Company; 488 AWF.
d. Venture Tape; 3520 CW.
2. Width: 2 inches (50 mm).
3. Thickness: 6 mils (0.15 mm).
4. Adhesion: 64 ounces force/inch (0.7 N/mm) in width.
5. Elongation: 500 percent.
6. Tensile Strength: 18 lbf/inch (3.3 N/mm) in width.

2.09 SECUREMENTS

A. Aluminum Bands: ASTM B 209 (ASTM B 209M), Alloy 3003, 3005, 3105, or 5005; Temper H-14, 0.020 inch (0.51 mm) thick, 1/2 inch (13 mm) wide with wing or closed seal.
1. Products: Subject to compliance with requirements, provide one of the following:
a. Childers Products; Bands.
b. PABCO Metals Corporation; Bands.
c. RPR Products, Inc.; Bands.

PART 3 EXECUTION

3.01 PREPARATION

A. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.

B. Mix insulating cements with clean potable water; if insulating cements are to be in contact with stainless-steel surfaces, use demineralized water.

3.02 GENERAL INSTALLATION REQUIREMENTS

A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of equipment, ducts and fittings, and piping including fittings, valves, and specialties.

B. Install insulation materials, forms, vapor barriers or retarders, jackets, and thicknesses required for each item of equipment, duct system, and pipe system as specified in insulation system schedules.

C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.

D. Install insulation with longitudinal seams at top and bottom of horizontal runs.

E. Install multiple layers of insulation with longitudinal and end seams staggered.

F. Do not weld brackets, clips, or other attachment devices to piping, fittings, and specialties.

G. Keep insulation materials dry during application and finishing.

H. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.

I. Install insulation with least number of joints practical.

J. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.
   1. Install insulation continuously through hangers and around anchor attachments.
   2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.
   3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
   4. Cover inserts with jacket material matching adjacent pipe insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.

K. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.

L. Install insulation with factory-applied jackets as follows:
   1. Draw jacket tight and smooth.
   2. Cover circumferential joints with 3-inch- (75-mm-) wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced 4 inches (100 mm) o.c.
   3. Overlap jacket longitudinal seams at least 1-1/2 inches (38 mm). Install insulation with longitudinal seams at bottom of pipe. Clean and dry surface to receive self-sealing lap. Staple laps with outward clinching staples along edge at 2 inches (50 mm) o.c.
      a. For below ambient services, apply vapor-barrier mastic over staples.
   4. Cover joints and seams with tape as recommended by insulation material manufacturer to maintain vapor seal.
   5. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at ends adjacent to duct and pipe flanges and fittings.

M. Cut insulation in a manner to avoid compressing insulation more than 75 percent of its nominal thickness.

N. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.

O. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches (100 mm) beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.

P. For above ambient services, do not install insulation to the following:
   1. Vibration-control devices.
   2. Testing agency labels and stamps.
   3. Nameplates and data plates.
   4. Manholes.
   5. Handholes.
   6. Cleanouts.

3.03 PENETRATIONS

A. Insulation Installation at Roof Penetrations: Install insulation continuously through roof penetrations.
   1. Seal penetrations with flashing sealant.

2. For applications requiring only indoor insulation, terminate insulation above roof surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
3. Extend jacket of outdoor insulation outside roof flashing at least 2 inches (50 mm) below top of roof flashing.
4. Seal jacket to roof flashing with flashing sealant.

B. Insulation Installation at Interior Wall and Partition Penetrations (That Are Not Fire Rated): Install insulation continuously through walls and partitions.

C. Insulation Installation at Fire-Rated Wall and Partition Penetrations: Install insulation continuously through penetrations of fire-rated walls and partitions. Terminate insulation at fire damper sleeves for fire-rated wall and partition penetrations. Externally insulate damper sleeves to match adjacent insulation and overlap duct insulation at least 2 inches (50 mm).
1. Comply with requirements in Division 7 Section "Through-Penetration Firestop Systems" for firestopping and fire-resistive joint sealers.

3.04 EQUIPMENT, TANK, AND VESSEL INSULATION INSTALLATION

A. Mineral Fiber, Pipe and Tank Insulation Installation for Tanks and Vessels: Secure insulation with adhesive and anchor pins and speed washers.
1. Apply adhesives according to manufacturer's recommended coverage rates per unit area, for 50 percent coverage of tank and vessel surfaces.
2. Groove and score insulation materials to fit as closely as possible to equipment, including contours. Bevel insulation edges for cylindrical surfaces for tight joints. Stagger end joints.
3. Install adhesively attached or self-sticking insulation hangers and speed washers on sides of tanks and vessels as follows:
   a. Do not weld anchor pins to ASME-labeled pressure vessels.
   b. Select insulation hangers and adhesive that are compatible with service temperature and with substrate.
   c. On tanks and vessels, maximum anchor-pin spacing is 3 inches (75 mm) from insulation end joints, and 16 inches (400 mm) o.c. in both directions.
   d. Do not overcompress insulation during installation.
   e. Cut and miter insulation segments to fit curved sides and domed heads of tanks and vessels.
   f. Impale insulation over anchor pins and attach speed washers.
   g. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.
4. Secure each layer of insulation with stainless-steel or aluminum bands. Select band material compatible with insulation materials.
5. Where insulation hangers on equipment and vessels are not permitted or practical and where insulation support rings are not provided, install a girdle network for securing insulation. Stretch prestressed aircraft cable around the diameter of vessel and make taut with clamps, turnbuckles, or breather springs. Place one circumferential girdle around equipment approximately 6 inches (150 mm) from each end. Install wire or cable between two circumferential girdles 12 inches (300 mm) o.c. Install a wire ring around each end and around outer periphery of center openings, and stretch prestressed aircraft cable radially from the wire ring to nearest circumferential girdle. Install additional circumferential girdles along the body of equipment or tank at a minimum spacing of 48 inches (1200 mm) o.c. Use this network for securing insulation with tie wire or bands.

6. Stagger joints between insulation layers at least 3 inches (75 mm).
7. Install insulation in removable segments on equipment access doors, manholes, handholes, and other elements that require frequent removal for service and inspection.
8. Bevel and seal insulation ends around manholes, handholes, ASME stamps, and nameplates.
9. For equipment with surface temperatures below ambient, apply mastic to open ends, joints, seams, breaks, and punctures in insulation.

B. Flexible Elastomeric Thermal Insulation Installation for Tanks and Vessels: Install insulation over entire surface of tanks and vessels.
1. Apply 100 percent coverage of adhesive to surface with manufacturer's recommended adhesive.
2. Seal longitudinal seams and end joints.

3.05 GENERAL PIPE INSULATION INSTALLATION

A. Requirements in this article generally apply to all insulation materials except where more specific requirements are specified in various pipe insulation material installation articles.

B. Insulation Installation on Fittings, Valves, Strainers, Flanges, and Unions:
1. Zeston plenum rated covers over 1 pound density microlite blanket and 18 gauge galvanized wire at all fittings.
2. Install insulation over fittings, valves, strainers, flanges, unions, and other specialties with continuous thermal and vapor-retarder integrity, unless otherwise indicated.
3. Insulate pipe elbows using preformed fitting insulation or mitered fittings made from same material and density as adjacent pipe insulation. Each piece shall be butted tightly against adjoining piece and bonded with adhesive. Fill joints, seams, voids, and irregular surfaces with insulating cement finished to a smooth, hard, and uniform contour that is uniform with adjoining pipe insulation.
4. Insulate tee fittings with preformed fitting insulation or sectional pipe insulation of same material and thickness as used for adjacent pipe. Cut sectional pipe insulation to fit. Butt each section closely to the next and hold in place with tie wire. Bond pieces with adhesive.
5. Insulate valves using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. For valves, insulate up to and including the bonnets, valve stuffing-box studs, bolts, and nuts. Fill joints, seams, and irregular surfaces with insulating cement.
6. Insulate strainers using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. Fill joints, seams, and irregular surfaces with insulating cement. Insulate strainers so strainer basket flange or plug can be easily removed and replaced without damaging the insulation and jacket. Provide a removable reusable insulation cover. For below ambient services, provide a design that maintains vapor barrier.
7. Insulate flanges and unions using a section of oversized preformed pipe insulation. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker.
8. Cover segmented insulated surfaces with a layer of finishing cement and coat with a mastic. Install vapor-barrier mastic for below ambient services and a breather mastic for above ambient services. Reinforce the mastic with fabric-reinforcing mesh. Trowel the mastic to a smooth and well-shaped contour.

9. For services not specified to receive a field-applied jacket except for flexible elastomeric and polyolefin, install fitted PVC cover over elbows, tees, strainers, valves, flanges, and unions. Terminate ends with PVC end caps. Tape PVC covers to adjoining insulation facing using PVC tape.
10. Stencil or label the outside insulation jacket of each union with the word "UNION." Match size and color of pipe labels.

C. Insulate instrument connections for thermometers, pressure gages, pressure temperature taps, test connections, flow meters, sensors, switches, and transmitters on insulated pipes, vessels, and equipment. Shape insulation at these connections by tapering it to and around the connection with insulating cement and finish with finishing cement, mastic, and flashing sealant.

3.06 FLEXIBLE ELASTOMERIC INSULATION INSTALLATION

A. Seal longitudinal seams and end joints with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

B. Insulation Installation on Pipe Flanges:
1. Install pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of sheet insulation of same thickness as pipe insulation.
4. Secure insulation to flanges and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

C. Insulation Installation on Pipe Fittings and Elbows:
1. Install mitered sections of pipe insulation.
2. Secure insulation materials and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

D. Insulation Installation on Valves and Pipe Specialties:
1. Install preformed valve covers manufactured of same material as pipe insulation when available.
2. When preformed valve covers are not available, install cut sections of pipe and sheet insulation to valve body. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
3. Install insulation to flanges as specified for flange insulation application.
4. Secure insulation to valves and specialties and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

3.07 MINERAL-FIBER INSULATION INSTALLATION

A. Insulation Installation on Straight Pipes and Tubes:
1. Secure each layer of preformed pipe insulation to pipe with wire or bands and tighten bands without deforming insulation materials.
2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
3. For insulation with factory-applied jackets on above ambient surfaces, secure laps with outward clinched staples at 6 inches (150 mm) o.c.
4. For insulation with factory-applied jackets on below ambient surfaces, do not staple longitudinal tabs but secure tabs with additional adhesive as recommended by insulation material manufacturer and seal with vapor-barrier mastic and flashing sealant.

B. Insulation Installation on Pipe Flanges:
   1. Install preformed pipe insulation to outer diameter of pipe flange.
   2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
   3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with mineral-fiber blanket insulation.
   4. Install jacket material with manufacturer's recommended adhesive, overlap seams at least 1 inch (25 mm), and seal joints with flashing sealant.

C. Insulation Installation on Pipe Fittings and Elbows:
   1. Install preformed sections of same material as straight segments of pipe insulation when available.
   2. When preformed insulation elbows and fittings are not available, install mitered sections of pipe insulation, to a thickness equal to adjoining pipe insulation. Secure insulation materials with wire or bands.

D. Insulation Installation on Valves and Pipe Specialties:
   1. Install preformed sections of same material as straight segments of pipe insulation when available.
   2. When preformed sections are not available, install mitered sections of pipe insulation to valve body.
   3. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
   4. Install insulation to flanges as specified for flange insulation application.

E. Blanket Insulation Installation on Ducts and Plenums: Secure with adhesive and insulation pins.
   1. Apply adhesives according to manufacturer's recommended coverage rates per unit area, for 50 percent coverage of duct and plenum surfaces.
   2. Apply adhesive to entire circumference of ducts and to all surfaces of fittings and transitions.
   3. Install either capacitor-discharge-weld pins and speed washers or cupped-head, capacitor-discharge-weld pins on sides and bottom of horizontal ducts and sides of vertical ducts as follows:
      a. On duct sides with dimensions 18 inches (450 mm) and smaller, place pins along longitudinal centerline of duct. Space 3 inches (75 mm) maximum from insulation end joints, and 16 inches (400 mm) o.c.
      b. On duct sides with dimensions larger than 18 inches (450 mm), place pins 16 inches (400 mm) o.c. each way, and 3 inches (75 mm) maximum from insulation joints. Install additional pins to hold insulation tightly against surface at cross bracing.
      c. Pins may be omitted from top surface of horizontal, rectangular ducts and plenums.
      d. Do not overcompress insulation during installation.
      e. Impale insulation over pins and attach speed washers.
      f. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.
   4. For ducts and plenums with surface temperatures below ambient, install a continuous unbroken vapor barrier. Create a facing lap for longitudinal seams and end joints with insulation by removing 2 inches (50 mm) from 1 edge and 1 end of insulation segment. Secure laps to adjacent insulation section with 1/2-inch (13-mm) outward-clinching staples, 1 inch (25 mm) o.c. Install vapor barrier consisting of factory- or field-applied jacket, adhesive, vapor-barrier mastic, and sealant at joints, seams, and protrusions.

a. Repair punctures, tears, and penetrations with tape or mastic to maintain vapor-barrier seal.
b. Install vapor stops for ductwork and plenums operating below 50 deg F (10 deg C) at 18-foot (5.5-m) intervals. Vapor stops shall consist of vapor-barrier mastic applied in a Z-shaped pattern over insulation face, along butt end of insulation, and over the surface. Cover insulation face and surface to be insulated a width equal to 2 times the insulation thickness but not less than 3 inches (75 mm).

5. Overlap unfaced blankets a minimum of 2 inches (50 mm) on longitudinal seams and end joints. At end joints, secure with steel bands spaced a maximum of 18 inches (450 mm) o.c.
6. Install insulation on rectangular duct elbows and transitions with a full insulation section for each surface. Install insulation on round and flat-oval duct elbows with individually mitered gores cut to fit the elbow.
7. Insulate duct stiffeners, hangers, and flanges that protrude beyond insulation surface with 6-inch- (150-mm-) wide strips of same material used to insulate duct. Secure on alternating sides of stiffener, hanger, and flange with pins spaced 6 inches (150 mm) o.c.

3.08 FIRE-RATED INSULATION SYSTEM INSTALLATION

A. Where fire-rated insulation system is indicated, secure system to ducts and duct hangers and supports to maintain a continuous fire rating.

B. Insulate duct access panels and doors to achieve same fire rating as duct.

C. Install firestopping at penetrations through fire-rated assemblies. Fire-stop systems are specified in Division 7 Section "Through-Penetration Firestop Systems."

D. Insulation shall be installed according to manufactures instructions, including banding, perimeter and longitudinal overlaps, and complete access panel insulation.

E. The Contractor must submit to the City or governing agency the proposed insulation system to be used, including all listings with code compliance and installation instructions.

3.09 FINISHES

A. Equipment, and Pipe Insulation with ASJ, Glass-Cloth, or Other Paintable Jacket Material: Paint jacket with paint system identified below and as specified in Division 9 Paints and Coatings Sections.
   1. Flat Acrylic Finish: Two finish coats over a primer that is compatible with jacket material and finish coat paint. Add fungicidal agent to render fabric mildew proof.
      a. Finish Coat Material: Interior, flat, latex-emulsion size.

B. Flexible Elastomeric Thermal Insulation: After adhesive has fully cured, apply two coats of insulation manufacturer's recommended protective coating.

C. Color: Final color as selected by Architect. Vary first and second coats to allow visual inspection of the completed Work.

3.10 EQUIPMENT INSULATION SCHEDULE

A. Insulation materials and thicknesses are identified below.

B. Insulate indoor and outdoor equipment in paragraphs below that is not factory insulated.

C. Heat-Exchanger (Water-to-Water shell and tube for Pool Water Heating Service) Insulation: Mineral-Fiber Pipe and Tank with ASJ: 2 inches (50 mm) thick.

D. Air Separator (boiler system) Insulation: Mineral-Fiber Pipe and Tank with ASJ: 2 inches (50 mm) thick.

3.11 PIPING INSULATION SCHEDULE, GENERAL

A. Acceptable preformed pipe and tubular insulation materials and thicknesses are identified for each piping system and pipe size range.

3.12 INDOOR PIPING INSULATION SCHEDULE

A. Insulation thickness must match values below at minimum and be increased to code required values if different than that stated.

B. Domestic Cold Water (1-1/4” dia. and smaller): Insulation shall be the following:
   1. Mineral-Fiber, Preformed Pipe Insulation with ASJ, Type I: 1/2 inch (13-mm) thick.

C. Domestic Cold Water (1-1/2” dia. and larger): Insulation shall be the following:
   1. Mineral-Fiber, Preformed Pipe Insulation with ASJ, Type I: 1 inch (13-mm) thick.

D. Domestic Hot Water (1-1/4” dia. and smaller): Insulation shall be the following:
   1. Mineral-Fiber, Preformed Pipe Insulation with ASJ, Type I: 1 inch (25-mm) thick.

E. Domestic Hot Water (1-1/2” dia. and larger): Insulation shall be the following:
   1. Mineral-Fiber, Preformed Pipe Insulation with ASJ, Type I: 1-1/2 inch (38-mm) thick.

F. Domestic Recirculated Hot Water (1-1/4” dia. and smaller): Insulation shall be the following:
   1. Mineral-Fiber, Preformed Pipe Insulation with ASJ, Type I: 1 inch (25-mm) thick.

G. Domestic Recirculated Hot Water (1-1/2” dia. and larger): Insulation shall be the following:
   1. Mineral-Fiber, Preformed Pipe Insulation with ASJ, Type I: 1-1/2 inch (38-mm) thick.

H. Stormwater (roof drain body and horizontal piping only): Insulation shall be the following:
   1. Mineral-Fiber, Preformed Pipe Insulation with ASJ, Type I: 1/2 inch (13-mm) thick.

I. Roof Drain: Insulation shall be the following:
   1. Mineral-Fiber, Preformed Pipe Insulation with ASJ, Type I: 1/2 inch (13-mm) thick.

J. Steamer Discharge Piping: Insulation shall be the following:
   1. Mineral-Fiber, Preformed Pipe Insulation with ASJ, Type I: 2-1/2 inch (38-mm) thick.

K. Heating-Hot-Water Supply and Return, 200 Deg F (93 Deg C) and below (1-1/4” dia. and smaller): Insulation shall be the following:
   1. Mineral-Fiber, Preformed Pipe Insulation with ASJ, Type I: 1-1/2 inch (25-mm) thick.

L. Heating-Hot-Water Supply and Return, 200 Deg F (93 Deg C) and below (1-1/2” dia. and larger): Insulation shall be the following:
   1. Mineral-Fiber, Preformed Pipe Insulation with ASJ, Type I: 2 inch (38-mm) thick.

M. Refrigerant Suction and Hot-Gas Piping: Flexible elastomeric, 1/2 inch (13-mm) thick.

N. Cooling Coil Condensate: Insulation shall be the following:
   1. Mineral-Fiber, Preformed Pipe Insulation with ASJ, Type I: 1/2 inch (13-mm) thick.

O. Vent Piping: The first 15' from the roof penetration shall be insulated with the following:
   1. Mineral-Fiber, Preformed Pipe Insulation with ASJ, Type I: 1/2 inch (13-mm) thick.

3.13 INDOOR, FIELD-APPLIED JACKET SCHEDULE

A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.

B. Piping (All fittings):
   1. PVC: 30 mils (0.8-mm) thick.

END OF SECTION

SECTION 22 08 00
COMMISSIONING OF PLUMBING SYSTEMS

PART 1 GENERAL

1.01 SUMMARY

A. This section includes specific requirements that apply to the implementation of the Commissioning Process and this Division Contractors' participation in this process. This section details the project specific equipment and systems that are included in the Commissioning Process. For general descriptions and responsibilities, refer to SECTION 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

1.02 RELATED DOCUMENTS

A. The Owner's Project Requirements (OPR) document.

B. The Basis of Design (BoD) document.

C. The Project Commissioning Plan (CxP) document.

D. ASHRAE Standard 202-2013 - Commissioning Process for Buildings and Systems.

E. LEED v4 for Building Design and Construction.

1.03 RELATED SECTIONS

A. SECTION 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS

B. SECTION 07 08 00 - COMMISSIONING OF THERMAL AND MOISTURE PROTECTION

C. SECTION 08 08 00 - COMMISSIONING OF OPENINGS

D. SECTION 11 08 00 - COMMISSIONING OF EQUIPMENT

E. SECTION 13 08 00 - COMMISSIONING OF SPECIAL CONSTRUCTION

F. SECTION 14 08 00 - COMMISSIONING OF CONVEYING SYSTEMS

G. SECTION 21 08 00 - COMMISSIONING OF FIRE SUPPRESSION SYSTEMS

H. SECTION 23 08 00 - COMMISSIONING OF MECHANICAL SYSTEMS

I. SECTION 25 08 00 - COMMISSIONING OF INTEGRATED AUTOMATION SYSTEMS

J. SECTION 26 08 00 - COMMISSIONING OF ELECTRICAL SYSTEMS

K. SECTION 27 08 00 - COMMISSIONING OF COMMUNICATIONS SYSTEMS

L. SECTION 28 08 00 - COMMISSIONING OF SAFETY AND SECURITY SYSTEMS

M. SECTION 33 08 00 - COMMISSIONING OF UTILITIES

1.04 DEFINITIONS

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

1.05 RESPONSIBILITIES

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

PART 2 PRODUCTS

2.01 NO PRODUCTS SUPPLIED

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

B. Contractors and/or Vendors shall provide the specialty testing equipment necessary to fulfill the functional testing requirements, for the duration of the testing period.

PART 3 EXECUTION

3.01 GENERAL

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.02 MEETINGS

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.03 SYSTEM START-UP

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.04 PRE-FUNCTIONAL CHECKLISTS

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.05 FUNCTIONAL PERFORMANCE TESTING

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.06 TRAINING

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.07 SYSTEMS TO BE COMMISSIONED

A. GENERAL
   1. Commissioning specifications supplement the requirements of individual specifications sections but shall not be interpreted to replace or diminish the specified scope of any individual section.
   2. For all systems listed below, Division Contractor shall comply with all commissioning requirements specified.

B. APPLICABLE SYSTEMS
   1. Meters and Gauges for Plumbing
   2. General-Duty Valves for Plumbing
   3. Hangers and Supports for Plumbing
   4. Identification for Plumbing
   5. Plumbing Insulation
   6. Domestic Water Piping
   7. Domestic Water Piping Specialties
   8. Domestic Water Pumps
   9. Facility Natural-Gas Piping
   10. Sump Pumps
   11. Water Softeners
   12. Gas-Fired Domestic Water Heaters
   13. Plumbing Fixtures
   14. Steam Room Generators
   15. Oil and Grease Interceptors

END OF SECTION

SECTION 22 11 13 - FACILITY WATER DISTRIBUTION PIPING

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes water-distribution piping and related components outside the building for water service and fire-service mains.

B. Related Sections and Documents:
   1. Section 312000 Earth Moving.
   2. Salt Lake City Public Utility Standards and Specifications.

1.2 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings: Pipe Materials, Valves, Detail precast concrete vault assemblies and indicate dimensions, method of field assembly, and components.

C. Operation and maintenance data.

1.3 QUALITY ASSURANCE

A. Regulatory Requirements:

   1. Comply with requirements of utility company supplying water. Include tapping of water mains and backflow prevention.
   2. Comply with standards of authorities having jurisdiction for potable-water-service piping, including materials, installation, testing, and disinfection.
   3. Comply with standards of authorities having jurisdiction for fire-suppression water-service piping, including materials, hose threads, installation, and testing.

B. Piping materials shall bear label, stamp, or other markings of specified testing agency.

C. Comply with ASTM F 645 for selection, design, and installation of thermoplastic water piping.

D. Comply with FMG's "Approval Guide" or UL's "Fire Protection Equipment Directory" for fire-service-main products.

E. NFPA Compliance: Comply with NFPA 24 for materials, installations, tests, flushing, and valve and hydrant supervision for fire-service-main piping for fire suppression.

1.4 PROJECT CONDITIONS

A. Interruption of Existing Water-Distribution Service: Do not interrupt service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary water-distribution service according to requirements indicated:

1. Notify Owner no fewer than two days in advance of proposed interruption of service.
2. Do not proceed with interruption of water-distribution service without Owner's written permission.

1.5 COORDINATION

A. Coordinate connection to water main with utility company.

PART 2 - PRODUCTS

2.1 PIPE AND FITTINGS

A. PVC, AWWA Pipe: AWWA C900, Class 200, with bell end with gasket and spigot end.

2.2 GATE VALVES

A. AWWA, Cast-Iron Gate Valves:

1. Nonrising-Stem, Resilient-Seated Gate Valves:

a. Description: Gray- or ductile-iron body and bonnet; with bronze or gray- or ductile-iron gate, resilient seats, bronze stem, and stem nut.

1) Standard: AWWA C509.
2) Minimum Pressure Rating: 200 psig.
3) End Connections: Mechanical joint.
4) Interior Coating: Complying with AWWA C550.

2.3 GATE VALVE ACCESSORIES AND SPECIALTIES

A. Tapping-Sleeve Assemblies:

1. Description: Sleeve and valve compatible with drilling machine.

a. Standard: MSS SP-60.
b. Tapping Sleeve: Cast- or ductile-iron or stainless-steel, two-piece bolted sleeve with flanged outlet for new branch connection. Include sleeve

matching size and type of pipe material being tapped and with recessed flange for branch valve.

c. Valve: AWWA, cast-iron, nonrising-stem, resilient-seated gate valve with one raised face flange mating tapping-sleeve flange.

B. Valve Boxes: Comply with AWWA M44 for cast-iron valve boxes. Include top section, adjustable extension of length required for depth of burial of valve, plug with lettering "WATER," and bottom section with base that fits over valve and with a barrel approximately 5 inches in diameter.

1. Operating Wrenches: Steel, tee-handle with one pointed end, stem of length to operate deepest buried valve, and socket matching valve operating nut.

2.4 WATER METERS

A. Water meters will be furnished by utility company.

2.5 CONCRETE METER VAULT

A. Description: Precast, reinforced-concrete vault, per APWA Plan 505.

2.6 FIRE HYDRANTS

A. Dry-Barrel Fire Hydrants:

1. Description: Freestanding, with one NPS 4-1/2 and two NPS 2-1/2 outlets, 5-1/4-inch main valve, drain valve, and NPS 6 mechanical-joint inlet. Include interior coating according to AWWA C550. Hydrant shall have cast-iron body, compression-type valve opening against pressure and closing with pressure.

a. Standard: AWWA C502.
b. Pressure Rating: 150 psig minimum.

PART 3 - EXECUTION

3.1 EARTHWORK

A. Refer to Division 31 Section "Earth Moving" for excavating, trenching, and backfilling.

3.2 PIPING APPLICATIONS

A. General: Use pipe, fittings, and joining methods for piping systems according to the following applications.

B. Transition couplings and special fittings with pressure ratings at least equal to piping pressure rating may be used, unless otherwise indicated.

C. Flanges, unions, and special fittings may be used, instead of joints indicated, on aboveground piping and piping in vaults.

3.3 VALVE APPLICATIONS

A. General Application: Use mechanical-joint-end valves for NPS 3 and larger underground installation. Use threaded- or flanged-end valves for installation in vaults. Use UL/FMG, nonrising-stem gate valves for installation with indicator posts. Use corporation valves and curb valves with ends compatible with piping, for NPS 2 and smaller installation.

B. Drawings indicate valve types to be used. Where specific valve types are not indicated, the following requirements apply:

1. Underground Valves, NPS 3 and Larger: AWWA, cast-iron, nonrising-stem, resilient-seated gate valves with valve box.
2. Underground Valves, NPS 4 and Larger, for Indicator Posts: UL/FMG, cast-iron, nonrising-stem gate valves with indicator post.

3.4 PIPING INSTALLATION

A. Water-Main Connection: Arrange with utility company for tap of size and in location indicated in water main.

B. Water-Main Connection: Tap water main according to requirements of water utility company and of size and in location indicated.

C. Make connections larger than NPS 2 with tapping machine according to the following:

1. Install tapping sleeve and tapping valve according to MSS SP-60.
2. Install tapping sleeve on pipe to be tapped. Position flanged outlet for gate valve.
3. Use tapping machine compatible with valve and tapping sleeve; cut hole in main. Remove tapping machine and connect water-service piping.
4. Install gate valve onto tapping sleeve. Comply with MSS SP-60. Install valve with stem pointing up and with valve box.

D. Comply with NFPA 24 for fire-service-main piping materials and installation.

E. Install ductile-iron, water-service piping according to AWWA C600 and AWWA M41.

F. Bury piping with depth of cover over top at least 60 inches, with top at least 12 inches below level of maximum frost penetration.

G. Extend water-service piping and connect to water-supply source and building-water-piping systems at outside face of building wall in locations and pipe sizes indicated.

1. Terminate water-service piping until building-water-piping systems are installed. Terminate piping with caps, plugs, or flanges as required for piping material. Make connections to building-water-piping systems when those systems are installed.

H. Install underground piping with restrained joints at horizontal and vertical changes in direction. Use restrained-joint piping, thrust blocks, anchors, tie-rods and clamps, and other supports.

3.5 ANCHORAGE INSTALLATION

A. Anchorage, General: Install water-distribution piping with restrained joints. Anchorages and restrained-joint types that may be used include the following:

1. Concrete thrust blocks.
2. Locking mechanical joints.
3. Set-screw mechanical retainer glands.
4. Bolted flanged joints.
5. Pipe clamps and tie rods.

B. Install anchorages for tees, plugs and caps, bends, crosses, valves, and hydrant branches.

C. Apply full coat of asphalt or other acceptable corrosion-resistant material to surfaces of installed ferrous anchorage devices.

3.6 VALVE INSTALLATION

A. AWWA Gate Valves: Comply with AWWA C600 and AWWA M44. Install each underground valve with stem pointing up and with valve box.

B. Corporation Valves and Curb Valves: Install each underground curb valve with head pointed up and with service box.

3.7 WATER METER INSTALLATION

A. Install water meters, piping, and specialties according to utility company's written instructions.

3.8 WATER METER BOX INSTALLATION

A. Install water meter boxes flush with surface.

3.9 FIRE HYDRANT INSTALLATION

A. General: Install each fire hydrant with separate gate valve in supply pipe, anchor with restrained joints or thrust blocks, and support in upright position.

B. AWWA Fire Hydrants: Comply with AWWA M17.

3.10 CONNECTIONS

A. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Connect water-distribution piping to existing water main using tapping sleeve and tapping valve.

C. Connect water-distribution piping to interior domestic water and fire-suppression piping.

3.11 FIELD QUALITY CONTROL

A. Piping Tests: Conduct piping tests before joints are covered and after concrete thrust blocks have hardened sufficiently. Fill pipeline 24 hours before testing and apply test pressure to stabilize system. Use only potable water. Complete tests in accordance with Provo City requirements.

B. Prepare reports of testing activities.

3.12 IDENTIFICATION

A. Install continuous underground detectable warning tape during backfilling of trench for underground water-distribution piping. Locate below finished grade, directly over piping. Underground warning tapes are specified in Division 31 Section "Earth Moving."

B. Permanently attach equipment nameplate or marker indicating plastic water-service piping, on main electrical meter panel. See Division 22 Section "Common Work Results for Plumbing" for identifying devices.

3.13 CLEANING

A. Clean and disinfect water-distribution piping as follows:

1. Purge new water-distribution piping systems and parts of existing systems that have been altered, extended, or repaired before use.
2. Use purging and disinfecting procedure prescribed by authorities having jurisdiction or, if method is not prescribed by authorities having jurisdiction, use procedure described in NFPA 24 for flushing of piping. Flush piping system with clean, potable water until dirty water does not appear at points of outlet.

3. Use purging and disinfecting procedure prescribed by authorities having jurisdiction or, if method is not prescribed by authorities having jurisdiction, use procedure described in AWWA C651 or do as follows:

    a. Fill system or part of system with water/chlorine solution containing at least 50 ppm of chlorine; isolate and allow to stand for 24 hours.
    b. Drain system or part of system of previous solution and refill with water/chlorine solution containing at least 200 ppm of chlorine; isolate and allow to stand for 3 hours.
    c. After standing time, flush system with clean, potable water until no chlorine remains in water coming from system.
    d. Submit water samples in sterile bottles to authorities having jurisdiction. Repeat procedure if biological examination shows evidence of contamination.

B. Prepare reports of purging and disinfecting activities.

END OF SECTION 221113

SECTION 22 11 16
DOMESTIC WATER PIPING

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Under-building slab and aboveground domestic water pipes, tubes, fittings, and specialties inside the building.
   2. Specialty valves.
   3. Transition fittings
   4. Dielectric fittings
   5. Flexible connectors.
   6. Water meter.

B. Related Section:
   1. Division 22 Section "Facility Water Distribution Piping" for water-service piping outside the building from source to the point where water-service piping enters the building.

1.02 QUALITY ASSURANCE

A. Piping materials shall bear label, stamp, or other markings of specified testing agency.

B. Comply with NSF 14/ANSI 14 for plastic, potable domestic water piping and components. Include marking "NSF-pw" on piping.

C. Comply with NSF 61 for potable domestic water piping and components.

D. All piping shall be tested for working pressure of 150 psi minimum and temperature of 210-degree Fahrenheit, as required by Minnesota code.

E. Water service line must be installed at least 10 feet horizontally from any manhole, catch basin, or any other potential source of contamination (see Minnesota Rules, part 4715 1710, subpart 3).

PART 2 PRODUCTS

2.01 PIPING MATERIALS

A. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube, fitting materials, and joining methods for specific services, service locations, and pipe sizes.

2.02 COPPER TUBE AND FITTINGS

A. Hard Copper Tube: ANSI H23.1, ASTM B 88, Type L (ASTM B 88M, Type B) and ASTM B 88, Type M (ASTM B 88M, Type C) water tube, drawn temper.

B. Soft Copper Tube: ANSI H23.1, ASTM B 88, Type K (ASTM B 88M, Type A) and ASTM B 88, Type L (ASTM B 88M, Type B) water tube, annealed temper.

C. Cast-Copper, Solder-Joint Fittings: ASME B16.18, pressure fittings.

D. Wrought-Copper, Solder-Joint Fittings: ANSI H23.1, ANSI B16.22, ANSI B1618, ASME B16.22, wrought-copper pressure fittings.

E. Bronze Flanges: ASTM B62, ASME B16.24, Class 150, with solder-joint ends.

F. Copper Unions:
   1. MSS SP-123.
   2. Cast-copper-alloy, hexagonal-stock body.
   3. Ball-and-socket, metal-to-metal seating surfaces.
   4. Solder-joint or threaded ends.

G. Copper Pressure-Seal-Joint Fittings:
   1. Fittings for NPS 2 (DN 50) and Smaller: ASME B16.51, wrought-copper fitting with EPDM-rubber, O-ring seal in each end.
   2. Fittings for NPS 2-1/2 to NPS 4 (DN 65 to DN 100): NSF/ANSI 372, cast-bronze or wrought-copper fitting with EPDM-rubber, O-ring seal in each end.

H. Copper Push-on-Joint Fittings:
   1. Cast-copper fitting complying with ASME B16.18 or wrought-copper fitting complying with ASME B 16.22.
   2. Stainless-steel teeth and EPDM-rubber, O-ring seal in each end instead of solder-joint ends.

2.03 DUCTILE-IRON PIPE AND FITTINGS WATER SERVICE THROUGH BUILDING FLOOR/WALL ONLY

A. Mechanical-Joint, Ductile-Iron Pipe:
   1. AWWA C151/A21.51, with mechanical-joint bell and plain spigot end unless grooved or flanged ends are indicated.
   2. ANSI A21.15 compliant.
   3. Glands, Gaskets, and Bolts: AWWA C111/A21.11, ductile- or gray-iron glands, rubber gaskets, and steel bolts.

B. Standard-Pattern, Mechanical-Joint Fittings:
   1. AWWA C110/A21.10, ductile or gray iron.
   2. ANSI A21.15 compliant.
   3. Glands, Gaskets, and Bolts: AWWA C111/A21.11, ductile- or gray-iron glands, rubber gaskets, and steel bolts.

C. Compact-Pattern, Mechanical-Joint Fittings:
   1. AWWA C153/A21.53, ductile iron.
   2. ANSI A21.15 compliant.
   3. Glands, Gaskets, and Bolts: AWWA C111/A21.11, ductile- or gray-iron glands, rubber gaskets, and steel bolts.

2.04 GALVANIZED-STEEL PIPE AND FITTINGS

A. Galvanized-Steel Pipe:
   1. ASTM A 53/A 53M, Type E, Grade B, Standard Weight.
   2. Include ends matching joining method.

B. Galvanized-Steel Pipe Nipples: ASTM A 733, made of ASTM A 53/A 53M or ASTM A 106/A 106M, Standard Weight, seamless steel pipe with threaded ends.

C. Galvanized, Gray-Iron Threaded Fittings: ASME B16.4, Class 125, standard pattern.

D. Malleable-Iron Unions:
   1. ASME B16.39, Class 150.
   2. Hexagonal-stock body.
   3. Ball-and-socket, metal-to-metal, bronze seating surface.
   4. Threaded ends.

E. Flanges: ASME B16.1, Class 125, cast iron.

2.05 ABS ACRYLONITILE BUTADIENE-STYRENE WATER SERVICE THROUGH BUILDING FLOOR/WALL ONLY

A. ABS piping: ANSI 72.3, ASTM D 2282, NSF14, CS254.

2.06 PVC PIPE AND FITTINGS WATER SERVICE THROUGH BUILDING FLOOR/WALL ONLY

A. PVC Pipe (Schedule 80): ANSI 72.2, ASTM D 1785, ASTM D 2241.

B. PVC Socket Fittings: ASTM D 2467 for Schedule 80.

C. PVC Schedule 80 Threaded Fittings: ASTM D 2464.

D. PVC piping and fittings shall also be compliant with ANSI B72.2, ASTM D2241, ASTM D1785, NSF14, CS256, CSA-B137.3

2.07 PIPING JOINING MATERIALS

A. Pipe-Flange Gasket Materials:
   1. AWWA C110/A21.10, rubber, flat face, 1/8 inch (3.2 mm) thick or ASME B16.21, nonmetallic and asbestos free unless otherwise indicated.
   2. Full-face or ring type unless otherwise indicated.

B. Metal, Pipe-Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.

C. Solder Filler Metals: ASTM B 32, lead-free alloys.

D. Flux: ASTM B 813, water flushable.

E. Brazing Filler Metals: AWS A5.8/A5.8M, BCuP Series, copper-phosphorus alloys for general-duty brazing unless otherwise indicated.

F. Solvent Cements for Joining CPVC Piping and Tubing: ASTM F 493 and ASTM D2846.
   1. CPVC solvent cement shall have a VOC content of 490 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
   2. Adhesive primer shall have a VOC content of 550 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
   3. Solvent cement and adhesive primer shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

G. Plastic, Pipe-Flange Gaskets, Bolts, and Nuts: Type and material recommended by piping system manufacturer unless otherwise indicated.

2.08 SPECIALTY VALVES

A. Comply with requirements in Division 22 Section "General-Duty Valves for Plumbing Piping" for general-duty metal valves.

B. Comply with requirements in Division 22 Section "Domestic Water Piping Specialties" for balancing valves, drain valves, backflow preventers, and vacuum breakers.

C. CPVC Union Ball Valves:
   1. Description:
      a. Standard: MSS SP-122.
      b. Pressure Rating: 125 psig at 73 deg F.
      c. Body Material: CPVC.
      d. Body Design: Union type.
      e. End Connections for Valves NPS 2 and Smaller: Detachable, socket.
      f. End Connections for Valves NPS 2-1/2 to NPS 4: Detachable, socket or Flanged.
      g. Ball: CPVC; full port.
      h. Seals: PTFE or EPDM-rubber O-rings.
      i. Handle: Tee shaped.

D. CPVC Ball Check Valves:

1. Description:
    a. Pressure Rating: 125 psig at 73 deg F.
    b. Body Material: CPVC.
    c. Body Design: Union-type ball check.
    d. End Connections for Valves NPS 2 and Smaller: Detachable, socket.
    e. End Connections for Valves NPS 2-1/2 to NPS 4: Detachable, socket or Flanged.
    f. Ball: CPVC.
    g. Seals: EPDM- or FKM-rubber O-rings.

E. CPVC Gate Valves:
1. Description:
    a. Pressure Rating: 125 psig at 73 deg F.
    b. Body Material: CPVC.
    c. Body Design: Nonrising stem.
    d. End Connections for Valves NPS 2 and Smaller: Socket.
    e. End Connections for Valves NPS 2-1/2 to NPS 4: Socket or Flanged.
    f. Gate and Stem: Plastic.
    g. Seals: EPDM rubber.
    h. Handle: Wheel.

F. PEX Ball Valves:
1. Description:
    a. Pressure Rating: 160 psig at 73 deg F.
    b. Body Material: C69300 Lead-free Brass
    c. Body Design: Two-piece
    d. End Connections for Valves NPS 2 and Smaller: ASTM F1960
    e. End Connections for Valves NPS 2-1/2 to NPS 4: Threaded, Sweat, or Flanged.
    f. Seals: EPDM
    g. Handle: Lever

2.09 TRANSITION FITTINGS

A. General Requirements:
1. Same size as pipes to be joined.
2. Pressure rating at least equal to pipes to be joined.
3. End connections compatible with pipes to be joined.

B. Fitting-Type Transition Couplings: Manufactured piping coupling or specified piping system fitting.

C. Plastic-to-Metal Transition Fittings:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following (Substitutions: See Section 01 6000 – Product Requirements):
    a. Charlotte Pipe and Foundry Company.
    b. Harvel Plastics, Inc.
    c. Spears Manufacturing Company.
    d. Uponor
2. Description:
    a. CPVC one-piece fitting with manufacturer's Schedule 80 equivalent dimensions.
    b. One end with threaded brass insert and one solvent-cement-socket or threaded end.

D. Plastic-to-Metal Transition Unions:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following (Substitutions: See Section 01 6000 – Product Requirements):

a. Colonial Engineering, Inc.
b. NIBCO Inc.
c. Spears Manufacturing Company.

2. Description:
a. CPVC four-part union.
b. Brass or stainless-steel threaded end.
c. Solvent-cement-joint or threaded plastic end.
d. Rubber O-ring.
e. Union nut.

2.10 DIELECTRIC FITTINGS

A. General Requirements: Assembly of copper alloy and ferrous materials or ferrous material body with separating nonconductive insulating material suitable for system fluid, pressure, and temperature.

B. Dielectric Unions:
1. Description:
a. Pressure Rating: 150 psig at 180 deg F.
b. End Connections: Solder-joint copper alloy and threaded ferrous.

C. Dielectric Flanges:
1. Description:
a. Factory-fabricated, bolted, companion-flange assembly.
b. Pressure Rating: 150 psig.
c. End Connections: Solder-joint copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.

D. Dielectric Couplings:
1. Description:
a. Galvanized-steel coupling.
b. Pressure Rating: 300 psig at 225 deg F.
c. End Connections: Female threaded.
d. Lining: Inert and noncorrosive, thermoplastic.

2.11 FLEXIBLE CONNECTORS

A. Bronze-Hose Flexible Connectors: Corrugated-bronze tubing with bronze wire-braid covering and ends brazed to inner tubing.
1. Working-Pressure Rating: Minimum 200 psig.
2. End Connections NPS 2 and Smaller: Threaded copper pipe or plain-end copper tube.
3. End Connections NPS 2-1/2 and Larger: Flanged copper alloy.

B. Stainless-Steel-Hose Flexible Connectors: Corrugated-stainless-steel tubing with stainless-steel wire-braid covering and ends welded to inner tubing.
1. Working-Pressure Rating: Minimum 200 psig.
2. End Connections NPS 2 and Smaller: Threaded steel-pipe nipple.
3. End Connections NPS 2-1/2 and Larger: Flanged steel nipple.

2.12 WATER METERS

A. Water meter shall be provided per city/state requirements.

PART 3 EXECUTION

3.01 EARTHWORK

A. Comply with requirements in Division 31 Section "Earth Moving" for excavating, trenching, and backfilling.

3.02 PIPING INSTALLATION

A. Drawing plans, schematics, and diagrams indicate general location and arrangement of domestic water piping. Indicated locations and arrangements are used to size pipe and calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.

B. Install copper tubing under building slab according to CDA's "Copper Tube Handbook."

C. Install ductile-iron piping under building slab with restrained joints according to AWWA C600 and AWWA M41.

D. Install shutoff valve, hose-end drain valve, strainer, pressure gage, and test tee with valve, inside the building at each domestic water service entrance. Comply with requirements in Division 22 Section "Meters and Gages for Plumbing Piping" for pressure gages and Division 22 Section "Domestic Water Piping Specialties" for drain valves and strainers.

E. Install shutoff valve immediately upstream of each dielectric fitting.

F. Install domestic water piping level and plumb.

G. Rough-in domestic water piping for water-meter installation according to utility company's requirements.

H. Install piping concealed from view and protected from physical contact by building occupants unless otherwise indicated and except in equipment rooms and service areas.

I. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

J. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal, and coordinate with other services occupying that space.

K. Install piping adjacent to equipment and specialties to allow service and maintenance.

L. Install piping to permit valve servicing.

M. Install nipples, unions, special fittings, and valves with pressure ratings the same as or higher than system pressure rating used in applications below unless otherwise indicated.

N. Install piping free of sags and bends.

O. Install fittings for changes in direction and branch connections.

P. Install unions in copper tubing at final connection to each piece of equipment, machine, and specialty.

Q. Install pressure gages on suction and discharge piping from each plumbing pump and packaged booster pump. Comply with requirements in Division 22 Section "Meters and Gages for Plumbing Piping" for pressure gages.

R. Install thermostats in hot-water circulation piping. Comply with requirements in Division 22 Section "Domestic Water Pumps" for thermostats.

S. Install thermometers on outlet piping from each water heater. Comply with requirements in Division 22 Section "Meters and Gages for Plumbing Piping" for thermometers.

T. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Division 22 Section "Common Work Results for Plumbing."

U. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Division 22 Section "Common Work Results for Plumbing."

V. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Division 22 Section "Common Work Results for Plumbing."

W. Fire stopping shall be provided to both be compatible with the pipe material used and meet the requirements of ASTM E 814 or ULC S115, “Fire Tests of Through-Penetration Firestops”. Pipe insulations or fire resistive coating shall be removed where the pipe passes through a fire stop and, if required by the firestop manufacturer, for 3 inches beyond the firestop outside of the fire barrier.

X. Domestic water piping shall not be installed near outdoor or combustion air intakes that are open to the space that may cause freezing of the domestic water piping.

3.03 JOINT CONSTRUCTION

A. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.

B. Remove scale, slag, dirt, and debris from inside and outside of pipes, tubes, and fittings before assembly.

C. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
   1. Apply appropriate tape or thread compound to external pipe threads.
   2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged.

D. Brazed Joints: Join copper tube and fittings according to CDA's "Copper Tube Handbook," "Brazed Joints" Chapter.

E. Soldered Joints: Apply ASTM B 813, water-flushable flux to end of tube. Join copper tube and fittings according to ASTM B 828 or CDA's "Copper Tube Handbook."

F. Pressure-Sealed Joints: Join copper tube and pressure-seal fittings with tools recommended by fitting manufacturer.

G. Copper-Tubing, Push-on Joints: Clean end of tube. Measure insertion depth with manufacturer's depth gage. Join copper tube and push-on-joint fittings by inserting tube to measured depth.

H. Flanged Joints: Select appropriate asbestos-free, nonmetallic gasket material in size, type, and thickness suitable for domestic water service. Join flanges with gasket and bolts according to ASME B31.9.

I. Joint Construction for Solvent-Cemented Plastic Piping: Clean and dry joining surfaces. Join pipe and fittings according to the following:
   1. Comply with ASTM F 402 for safe-handling practice of cleaners, primers, and solvent cements. Apply primer.
   2. CPVC Piping: Join according to ASTM D 2846/D 2846M Appendix.

J. Joints for PEX Piping: Join according to ASTM F 1960 and manufacturer’s instructions.

K. Dissimilar-Material Piping Joints: Make joints using adapters compatible with materials of both piping systems.

3.04 FUSION WELDING OF JOINTS

A. Install fittings and joints using socket-fusion, electrofusion, or butt-fusion as applicable for the fitting type. All fusion-well joints shall be made in accordance with the pipe and fitting manufacturer’s specifications and product standards.

B. Fusion-weld tooling, welding machines, and electrofusion devices shall be as specified by the pipe and fittings manufacturer.

C. Prior to joining, the pipe and fittings shall be prepared in accordance with F 2389 and the manufacturer’s specifications.

D. Joint preparation, setting and alignment, fusion process, cooling times and working pressure shall be in accordance with the pipe and fitting manufacturer’s specifications.

3.05 VALVE INSTALLATION

A. General-Duty Valves: Comply with requirements in Division 22 Section "General-Duty Valves for Plumbing Piping" for valve installations.

B. Install shutoff valve close to water main on each branch and riser serving plumbing fixtures or equipment, on each water supply to equipment, and on each water supply to plumbing fixtures that do not have supply stops. Use ball valves for piping NPS 2 and smaller. Use butterfly or gate valves for piping NPS 2-1/2 and larger.

C. Install drain valves for equipment at base of each water riser, at low points in horizontal piping, and where required to drain water piping. Drain valves are specified in Division 22 Section "Domestic Water Piping Specialties."
   1. Hose-End Drain Valves: At low points in water mains, risers, and branches.
   2. Stop-and-Waste Drain Valves: Instead of hose-end drain valves where indicated.

D. Install balancing valve in each hot-water circulation return branch and discharge side of each pump and circulator. Set balancing valves partly open to restrict but not stop flow. Use ball valves for piping NPS 2 and smaller and butterfly valves for piping NPS 2-1/2 and larger. Comply with requirements in Division 22 Section "Domestic Water Piping Specialties" for balancing valves.

3.06 TRANSITION FITTING INSTALLATION

A. Install transition couplings at joints of dissimilar piping.

B. Transition Fittings in Underground Domestic Water Piping:
   1. NPS 1-1/2 and Smaller: Fitting-type coupling.
   2. NPS 2 and Larger: Sleeve-type coupling.

C. Transition Fittings in Aboveground Domestic Water Piping NPS 2 and Smaller: Plastic-to-metal transition fittings or unions.

3.07 DIELECTRIC FITTING INSTALLATION

A. Install dielectric fittings in piping at connections of dissimilar metal piping and tubing.

B. Dielectric Fittings for NPS 2 and Smaller: Use dielectric couplings or unions.

C. Dielectric Fittings for NPS 2-1/2 to NPS 4: Use dielectric flanges.

D. Dielectric Fittings for NPS 5 to NPS 6: Use dielectric flange kits.

3.08 FLEXIBLE CONNECTOR INSTALLATION

A. Install flexible connectors in suction and discharge piping connections to each domestic water pump and in suction and discharge manifold connections to each domestic water booster pump.

B. Install bronze-hose flexible connectors in copper domestic water tubing.

C. Install stainless-steel-hose flexible connectors in steel domestic water piping.

3.09 WATER METER INSTALLATION

A. Rough-in domestic and irrigation water piping and install water meters according to utility company's requirements. This contractor shall coordinate with local city or utility and provide meters as required and is responsible for all associated costs.

B. Install water meters according to AWWA M6, utility company's requirements.

C. Install remote registration system according to standards of utility company and of authorities having jurisdiction.

3.10 HANGER AND SUPPORT INSTALLATION

A. Comply with requirements in Division 22 Section "Vibration and Seismic Controls for Plumbing Piping and Equipment" for seismic-restraint devices.

B. Comply with requirements in Division 22 Section "Hangers and Supports for Plumbing Piping and Equipment" for pipe hanger and support products and installation.
   1. Vertical Piping: MSS Type 8 or 42, clamps.
   2. Individual, Straight, Horizontal Piping Runs:
      a. 100 Feet and Less: MSS Type 1, adjustable, steel clevis hangers.
      b. Longer Than 100 Feet: MSS Type 43, adjustable roller hangers.
   3. Base of Vertical Piping: MSS Type 52, spring hangers.

C. Support vertical piping and tubing at base and at each floor.

D. Rod diameter may be reduced one size for double-rod hangers, to a minimum of 3/8 inch.

E. Install hangers for copper tubing with the following maximum horizontal spacing and minimum rod diameters and/or as indicated in local code whatever is LESS:
   1. NPS 3/4 and Smaller: 60 inches with 3/8-inch rod.
   2. NPS 1 and NPS 1-1/2: 72 inches with 3/8-inch rod.
   3. NPS 2: 96 inches with 3/8-inch rod.
   4. NPS 2-1/2: 108 inches with 1/2-inch rod.
   5. NPS 3 to NPS 5: 10 feet with 1/2-inch rod.
   6. NPS 6: 10 feet with 5/8-inch rod.

F. Install supports for vertical copper tubing every 10 feet.

G. Install hangers for steel piping with the following maximum horizontal spacing and minimum rod diameters and/or as indicated in local code whatever is LESS:
   1. NPS 1-1/4 and Smaller: 84 inches with 3/8-inch rod.
   2. NPS 1-1/2: 108 inches with 3/8-inch rod.
   3. NPS 2: 10 feet with 3/8-inch rod.
   4. NPS 2-1/2: 11 feet with 1/2-inch rod.
   5. NPS 3 and NPS 3-1/2: 12 feet with 1/2-inch rod.
   6. NPS 4 and NPS 5: 12 feet with 5/8-inch rod.
   7. NPS 6: 12 feet with 3/4-inch rod.

H. Install supports for vertical steel piping every 15 feet.

I. Install vinyl-coated hangers for CPVC piping with the following maximum horizontal spacing and minimum rod diameters:
   1. NPS 1 (DN 25) and Smaller: 36 inches (900 mm) with 3/8-inch (10-mm) rod.
   2. NPS 1-1/4 to NPS 2 (DN 32 to DN 50): 48 inches (1200 mm) with 3/8-inch (10-mm) rod.

3. NPS 2-1/2 to NPS 3-1/2 (DN 65 to DN 90): 48 inches (1200 mm) with 1/2-inch (13-mm) rod.
4. NPS 4 and NPS 5 (DN 100 and DN 125): 48 inches (1200 mm) with 5/8-inch (16-mm) rod.
5. NPS 6 (DN 150): 48 inches (1200 mm) with 3/4-inch (19-mm) rod.
6. NPS 8 (DN 200): 48 inches (1200 mm) with 7/8-inch (22-mm) rod.

J. Install supports for vertical CPVC piping every 60 inches (1500 mm) for NPS 1 (DN 25) and smaller, and every 72 inches (1800 mm) for NPS 1-1/4 (DN 32) and larger.

K. Install vinyl-coated hangers for PP-R piping with the following maximum horizontal spacing and minimum rod diameters and/or as indicated in local code whatever is LESS:
1. NPS 1 and Smaller: 32 inches with 3/8-inch rod.

L. Install hangers for vertical PP-R piping every 48 inches and/or as indicated in local code whatever is LESS.

M. Install hangers for PEX tubing with the following maximum horizontal spacing and minimum rod diameters:
1. NPS 1 (DN 25) and Smaller: 32 inches with 3/8-inch rod.
2. NPS 1-1/4 (DN 32) and Larger: 48 inches with 3/8-inch rod.
3. Note: When installed with a continuous support such as PEX-a Pipe Support:
4. NPS 3/4 (DN 20) and Smaller: 6 feet with 3/8-inch rod.
5. NPS 1 (DN 25) and Larger: 8 feet with 3/8-inch rod.

N. Support piping and tubing not listed in this article according to MSS SP-69 and manufacturer's written instructions.

3.11 CONNECTIONS

A. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping adjacent to equipment and machines to allow service and maintenance.

C. Connect domestic water piping to exterior water-service piping. Use transition fitting to join dissimilar piping materials.

D. Connect domestic water piping to water-service piping with shutoff valve; extend and connect to the following:
1. Domestic Water Booster Pumps: Cold-water suction and discharge piping.
2. Water Heaters: Cold-water inlet and hot-water outlet piping in sizes indicated, but not smaller than sizes of water heater connections.
3. Plumbing Fixtures: Cold- and hot-water supply piping in sizes indicated, but not smaller than required by plumbing code. Comply with requirements in Division 22 plumbing fixture Sections for connection sizes.
4. Equipment: Cold- and hot-water supply piping as indicated, but not smaller than equipment connections. Provide shutoff valve and union for each connection. Use flanges instead of unions for NPS 2-1/2 and larger.

3.12 IDENTIFICATION

A. Identify system components. Comply with requirements in Division 22 Section "Identification for Plumbing Piping and Equipment" for identification materials and installation.

B. Label pressure piping with system operating pressure.

3.13 FIELD QUALITY CONTROL

A. Perform tests and inspections.
1. Piping Inspections:

a. Do not enclose, cover, or put piping into operation until it has been inspected and approved by authorities having jurisdiction.
b. During installation, notify authorities having jurisdiction at least one day before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction:
1) Roughing-in Inspection: Arrange for inspection of piping before concealing or closing-in after roughing-in and before setting fixtures.
2) Final Inspection: Arrange final inspection for authorities having jurisdiction to observe tests specified below and to ensure compliance with requirements.
c. Reinspection: If authorities having jurisdiction find that piping will not pass tests or inspections, make required corrections and arrange for reinspection.
d. Reports: Prepare inspection reports and have them signed by authorities having jurisdiction.

2. Piping Tests:
a. Fill domestic water piping. Check components to determine that they are not air bound and that piping is full of water.
b. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired. If testing is performed in segments, submit a separate report for each test, complete with diagram of portion of piping tested.
c. Leave new, altered, extended, or replaced domestic water piping uncovered and unconcealed until it has been tested and approved. Expose work that was covered or concealed before it was tested.
d. Cap and subject piping to static water pressure of 50 psig above operating pressure, without exceeding pressure rating of piping system materials. Isolate test source and allow to stand for four hours. Leaks and loss in test pressure constitute defects that must be repaired.
e. Repair leaks and defects with new materials and retest piping or portion thereof until satisfactory results are obtained.
f. Prepare reports for tests and for corrective action required.

B. Domestic water piping will be considered defective if it does not pass tests and inspections.

C. Prepare test and inspection reports.

3.14 ADJUSTING

A. Perform the following adjustments before operation:
1. Close drain valves, hydrants, and hose bibbs.
2. Open shutoff valves to fully open position.
3. Open throttling valves to proper setting.
4. Adjust balancing valves in hot-water-circulation return piping to provide adequate flow.
a. Manually adjust ball-type balancing valves in hot-water-circulation return piping to provide hot-water flow in each branch.
b. Adjust calibrated balancing valves to flows indicated.
5. Remove plugs used during testing of piping and for temporary sealing of piping during installation.
6. Remove and clean strainer screens. Close drain valves and replace drain plugs.
7. Remove filter cartridges from housings and verify that cartridges are as specified for application where used and are clean and ready for use.
8. Check plumbing specialties and verify proper settings, adjustments, and operation.

3.15 CLEANING

A. Clean interior of domestic water piping system. Remove dirt and debris as work progresses.

B. Clean and disinfect potable domestic water piping as follows:
   1. Purge new piping and parts of existing piping that have been altered, extended, or repaired before using.
   2. Use purging and disinfecting procedures prescribed by authorities having jurisdiction; if methods are not prescribed, use procedures described in either AWWA C651 or AWWA C652 or follow procedures described below:
      a. Flush piping system with clean, potable water until dirty water does not appear at outlets.
      b. Fill and isolate system according to either of the following:
         1) Fill system or part thereof with water/chlorine solution with at least 50 ppm (50 mg/L) of chlorine. Isolate with valves and allow to stand for 24 hours.
         2) Fill system or part thereof with water/chlorine solution with at least 200 ppm (200 mg/L) of chlorine. Isolate and allow to stand for three hours.
      c. Flush system with clean, potable water until no chlorine is in water coming from system after the standing time.
      d. Repeat procedures if biological examination shows contamination.
      e. Submit water samples in sterile bottles to authorities having jurisdiction.

C. Prepare and submit reports of purging and disinfecting activities. Include copies of water-sample approvals from authorities having jurisdiction.

3.16 PIPING SCHEDULE

A. Transition and special fittings with pressure ratings at least equal to piping rating may be used in applications below unless otherwise indicated.

B. Flanges and unions may be used for aboveground piping joints unless otherwise indicated.

C. Under-building-slab, domestic water, building service piping, NPS 3 and smaller, shall be the following:
   1. Soft copper tube without joints, ABS and PVC.
   2. PEX tube, ASTM F877 or ASTM F1960 connections.

D. Under-building-slab, domestic water, building-service piping, NPS 4 and larger, shall be the following:
   1. Push-on-joint, ductile-iron pipe; standard- or compact- pattern push-on-joint fittings; and gasketed joints.

E. Aboveground domestic water piping, NPS 2-1/2 and smaller, shall be the following:
   1. Hard copper tube, ASTM B 88, Type L; cast- or wrought- copper solder-joint fittings; and brazed or soldered joints.
   2. Hard copper tube, ASTM B 88, Type L; copper pressure-seal-joint fittings; and pressure-sealed joints.
   3. CPVC, Schedule 40; socket fittings; and solvent-cemented joints.
   4. CPVC Tubing System: CPVC tube; CPVC socket fittings; and solvent-cemented joints. NPS 1-1/2 and NPS 2 CPVC pipe with CPVC socket fittings may be used instead of tubing.
   5. Polypropylene tube and fittings.
   6. PEX-a tube, NPS 3 and smaller; fittings for PEX tube; and ASTM F1960 joints.

F. Aboveground domestic water piping, NPS 3 to NPS 4, shall be the following:
   1. Hard copper tube, ASTM B 88, Type L; cast- or wrought- copper solder-joint fittings; and brazed or soldered joints.
   2. Hard copper tube, ASTM B 88, Type L; copper pressure-seal-joint fittings; and pressure-sealed joints.

3. CPVC, Schedule 80; socket fittings; and solvent-cemented joints.
4. Polypropylene tube and fittings.
5. PEX-a tube, NPS 3 and smaller, fittings for PEX tube; and ASTM F1960 joints.

G. Aboveground domestic water piping, NPS 5 and larger, shall be the following:
1. Hard copper tube, ASTM B 88, Type L; cast- or wrought- copper solder-joint fittings; and brazed or soldered joints.
2. CPVC, Schedule 80; socket fittings; and solvent-cemented joints.

H. Aboveground, combined domestic water-service and fire-service-main piping, NPS 6 to NPS 12 (DN 150 to (DN 300), shall be one of the following:
1. Plain-end, ductile-iron pipe; grooved-joint, ductile-iron-pipe appurtenances; and grooved joints.
2. Galvanized-steel pipe and nipples; galvanized, gray-iron threaded fittings; and threaded joints.

SECTION 22 40 00
PLUMBING FIXTURES

PART 1 GENERAL

1.01 CONDITIONS OF THE CONTRACT

A. Plumbing Contractor is responsible to furnish, install and execute all of the following work as required, specified and/or indicated on plan unless noted to be performed by another contractor.

1.02 SUMMARY

A. This Section includes the following:
   1. Plumbing Fixtures.

B. The Owner has chosen the fixtures listed below as prototype for all buildings. No substitutions will be considered.

1.03 DEFINITIONS

A. Accessible Fixture: Plumbing fixture that can be approached, entered, and used by people with disabilities.

B. Solid Surface: Nonporous, homogeneous, cast-polymer-plastic material with heat-, impact-, scratch-, and stain-resistance qualities.

1.04 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings: Diagram power, signal, and control wiring.

C. Operation and maintenance data.

1.05 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

B. NSF Standard: Comply with NSF 61, "Drinking Water System Components--Health Effects," for fixture materials that will be in contact with potable water.

C. Select combinations of fixtures and trim, faucets, fittings, and other components that are compatible.

PART 2 PRODUCTS

A. F-1 Lavatory, ADA:
   1. Kohler K-2882, ADA vitreous china lavatory for under counter mounting with under deck clamp assembly, overflow, basin size of 19-13/16"x15-5/8". Color shall be Biscuit. All hardware and trim for fixture to be furnished and installed by the Plumbing Contractor.
   2. Symmons #SLS-3510-0.5 lavatory faucet with washerless ceramic disc cartridge, polished chrome finish, deck plate, lever handle, 0.5 GPM aerator, no popup drain and open grid strainer.
   3. McGuire #155A polished chrome cast brass 1-1/4" tail piece, or approved equal.
   4. McGuire #8902C 1-1/4" cast brass P-trap with cleanout plug and polished chrome finish, or approved equal.
   5. McGuire #LFH2165CC sweat angle stop supply valves with compression discharge fitting for extension to the faucet, or approved equal.

6. Plumberex ‘Pro Extreme’ flexible white molded, closed cell PVC insulated waste and water supply piping covers complete with internal ribs, snap-lock fastening system and weep hole in base of trap. Supply valve cover shall be hinged for access, or approved equal.

B. F-1B Lavatory, ADA:
1. Kohler K-2882, ADA vitreous china lavatory for under counter mounting with under deck clamp assembly, overflow, basin size of 19-13/16"x15-5/8". Color shall be Biscuit. All hardware and trim for fixture to be furnished and installed by the Plumbing Contractor.
2. Sloan #EAF-250, battery powered, deck-mounted mid-body, lavatory sensor faucet with infrared sensor, 30 second time out, 0.5 gpm laminar flow, open grid strainer, and polished chrome finish.
3. McGuire #155A polished chrome cast brass 1-1/4" tail piece, or approved equal.
4. McGuire #8902C 1-1/4" cast brass P-trap with cleanout plug and polished chrome finish, or approved equal.
5. McGuire #LFH2165CC sweat angle stop supply valves with compression discharge fitting for extension to the faucet, or approved equal.
6. Plumberex ‘Pro Extreme’ flexible white molded, closed cell PVC insulated waste and water supply piping covers complete with internal ribs, snap-lock fastening system and weep hole in base of trap. Supply valve cover shall be hinged for access, or approved equal.

C. F-2 Drinking Fountain, ADA:
1. Most Dependable Fountains Model#480EZWM ADA compliant, single height textured sandstone wall mounted drinking fountain, domed grid strainer, 1-1/4" tail piece, and push button bubbler. Complies with NSF-61 lead free act.
2. Provide (2) Drinking Fountains – (1) to be mounted at ADA height 32” AFF and (1) Non-ADA height 40”. The drinking fountains should be 18” apart.
3. McGuire #8902C 1-1/4" cast brass P-trap with cleanout plug and polished chrome finish, or approved equal.
4. McGuire #LFH2165CC sweat angle stop supply valves with compression discharge fitting for extension to the faucet, or approved equal.

D. F-3 Water Closet, ADA:
1. Kohler #K-96057-96, ADA vitreous china floor set flush valve water closet with elongated bowl, siphon jet flushing, 2-1/4" passage way, 1-1/2" top spud. 18” fixture height. Color shall be Biscuit.
2. Sloan #8111-1.6G2 Optima Plus, battery powered, sensor operated, water closet flush valve, 1.6 gpf flush with chrome plating, metal cover, back check angle stop, top spud, adjustable tail piece, and vacuum breaker.
3. Kohler #K-4731-SC-96 solid plastic Biscuit color extra heavy duty toilet seat without cover, with open front and self sustaining check hinge.

E. F-4 Water Closet:
1. Kohler #K-96053-96 vitreous china floor set flush valve water closet with elongated bowl, siphon jet flushing, 2-1/8" passage way, 1-1/2" top spud. 15” fixture height. Color shall be Biscuit
2. Sloan #8111-1.6 G2 Optima Plus, battery powered, sensor operated, water closet flush valve, 1.6 gpf flush with chrome plating, metal cover, back check angle stop, top spud, adjustable tail piece, and vacuum breaker.
3. Kohler #K-4731-SC-96 solid plastic Biscuit color extra heavy duty toilet seat without cover, with open front and self sustaining check hinge.

F. F-6 Urinal:

1. Kohler #K-4991-ET-96, ADA vitreous china wall hung siphon jet 0.5 gpf urinal with 3/4" top spud inlet, 2" wall outlet and wall hangers. Color shall be Biscuit
2. Sloan #8186-1.0 G2 Optima Plus, battery powered, sensor operated, urinal flush valve, 1.0 gpf flush with chrome plating, metal cover, back check angle stop, adjustable tail piece, and vacuum breaker.

G. F-6A Urinal, ADA:
1. Kohler #K-4991-ET-96, ADA vitreous china wall hung siphon jet 0.5 gpf urinal with 3/4" top spud inlet, 2" wall outlet and wall hangers. Color shall be Biscuit
2. Sloan #8186-1.0 G2 Optima Plus, battery powered, sensor operated, urinal flush valve, 1.0 gpf flush with chrome plating, metal cover, back check angle stop, adjustable tail piece, and vacuum breaker.

H. F-7 Mop Sink:
1. Fiat #MSB-2424 molded stone mop service basin with 10" high walls complete with stainless steel strainer and drain for caulked connection.
2. Chicago #540-LD897SGC with check valves to prevent backflow, hot and cold wall mounted mixing faucet with vacuum breaker, spout with 3/4" hose threads, integral stop arms, chrome finish, and wall brace. NO EXCEPTIONS

I. F-8A Electric Water Cooler:
1. Elkay # EZSTL8C, Child dual height wall mounted electric water cooler complete with wall hanging bracket, stainless steel top, gray enclosure, push bar and bubbler assembly, cooling tank, dome grid strainer, hermetic compressor, condenser coil, evaporator, precooler, and shall be free from lead containing materials. Unit shall be designed for (1) water and waste connection.
2. McGuire #8902C 1-1/4" cast brass P-trap with cleanout plug and polished chrome finish, or approved equal.
3. McGuire #LFH2165CC sweat angle stop supply valves with compression discharge fitting for extension to the faucet, or approved equal.
4. Elkay #LKAPR-EZL apron for ADA compliance.

J. F-11A Sink:
1. Elkay #LR2219 single compartment self rimming stainless steel sink of seamlessly drawn 20 gauge type 302 stainless steel. The bowl shall be 7.5" deep, 1 3/4" radius corners, polished satin finish, heavy duty undercoating, recessed faucet deck with holes to match faucet, and 3 1/2" drain opening.
2. Kohler #K-30469-CP single side-lever faucet with pull-down sprayer, ceramic disc valve cartridge control, memory position valving, 8" gooseneck swivel/rigid spout with swing restriction pin and 1.5 gpm pull-down sprayer with adjustable spray pattern, 1/2" IPS shanks, integral check stops, brass construction, polished chrome finish.
3. Elkay #LK-35 basket strainer for 3 1/2" opening, strainer, neoprene stopper, and 1 1/2" cast brass tail piece.
4. Kohler #K-9000 chrome plated cast brass P-trap with cleanout plug.
5. McGuire #LFH2165CC sweat angle stop supply valves with compression discharge fitting for extension to the faucet, or approved equal.

K. F-12 Shower:
1. Moen #T8370+2328PF concealed, pressure balancing mixing valve with cast bronze body, Nonmetallic/nonferrous nylon replaceable cartridge, Chrome plated metal face plate, 14732 lever handle, temperature limit stops, color coded temperature scale, straight pattern threaded concealed check stops.
2. Bricor Elite Series B150CH-R shower head 1.25 gpm at measured water pressure, NO EXCEPTIONS

3. Note: Showerhead is specific to Life Time and Plumbing Contractor is to contact Bricor directly at (707) 782-0226 for showerhead. Plumbing Contractor is required to measure water pressure at each end of shower bays and provide information to Bricor and Life Time to ensure the head delivers 1.25 gpm at the measured water pressure at each shower.
4. Speakman Repair Part 25-0276-PC-P enlarged elbow with 54-0079 anchor plate and 48-0216-MO (4) screws.
5. Krage Manufacturing LLC, LTF - Aluminum Shower Valve insert/assembly for mason walls (NO EXCEPTIONS). Phone: 1-719-948-2002. Only PEX piping shall be used within assembly.

L. F-12A Shower, ADA:
1. Most Dependable Fountains Model#564SM, accessible shower, metered shower, foot spray, textured sandstone, push button operated, 1.5 gpm. Complies with NSF-61 lead free act.
2. BrassCraft #HSR17C sweat angle stop supply valves with compression discharge fitting for extension to the faucet, or approved equal.

M. F-12B Shower, ADA:
1. Kohler K-28209 two-port Digitally controlled thermostatic mixing valve, Antiscald protection, concealed provide with access panel, Prewired with two-prong plug for connection to 110 V AC receptacle. ASME A112.18.1/CSA B125.1, ASSE 1016/ASME A112.1016/CSA B125.16 and UL 1951 compliant. 5 year Warranty.
2. Kohler K-28214 digital shower interface, One touch control of temperature and flow. 1.75 gpm flow restrictor control, system warm-up and pause feature. Mounts on finished wall surface. Provide with 32ft. control cable. Architect to select color.
3. Kohler #K-13689, 10” round rain showerhead, 1.75 gpm, polished chrome finish, ceiling mounted, 3” chrome shower arm and chrome escutcheon.

N. F-13 Shower, ADA:
1. Moen #T8370+2328PF concealed pressure balancing mixing valve with cast bronze body, nonmetallic/nonferrous nylon replaceable cartridge, Chrome plated metal face plate, 14732 lever handle, temperature limit stops, color coded temperature scale, straight pattern threaded concealed check stops.
2. Delta RPW336HDF handheld shower assembly less head with: 36” stainless steel slide/grad bar with mounting screws and metal adjustable slide attachment. Refer to Architectural documents for mounting heights, 69” double spiral metal hand-shower hose; and 90° chrome-plated wall supply elbow with vacuum breaker, less shower head.
3. Speakman Repair Part 25-0276-PC-P enlarged elbow with 54-0079 anchor plate and 48-0216-MO (4) screws.
4. Bricor – Elite Series B150CH-HH hand held shower head 1.25 gpm at measured water pressure, NO EXCEPTIONS.
5. Note: Showerhead is specific to Life Time and Plumbing Contractor is to contact Bricor directly at (707) 782-0226 for showerhead. Plumbing Contractor is required to measure water pressure at each end of shower bays and provide information to Bricor and Life Time to ensure the head delivers 1.25 gpm at the measured water pressure at each shower. Refer to Architectural documents for mounting heights.
6. Krage Manufacturing LLC, LTF - Aluminum Shower Valve insert/assembly for mason walls (NO EXCEPTIONS). Phone: 1-719-948-2002. Only PEX piping shall be used within assembly.

O. F-13A Shower:

1. Moen #T8370+2328PF concealed pressure balancing mixing valve with cast bronze body, nonmetallic/nonferrous nylon replaceable cartridge, Chrome plated metal face plate, 14732 lever handle, temperature limit stops, color coded temperature scale, straight pattern threaded concealed check stops.
2. Delta U495D-60-PK stainless steel 60"-82" hose. Provide with chrome finish.
3. Delta RP61294PR hand shower mount. Provide with lumicoat chrome finish.
4. Speakman Repair Part 25-0276-PC-P enlarged elbow with 54-0079 anchor plate and 48-0216-MO (4) screws.
5. Bricor – Elite Series B150CH-HH hand held shower head 1.25 gpm at measured water pressure, NO EXCEPTIONS.
6. Note: Showerhead is specific to Life Time and Plumbing Contractor is to contact Bricor directly at (707) 782-0226 for showerhead. Plumbing Contractor is required to measure water pressure at each end of shower bays and provide information to Bricor and Life Time to ensure the head delivers 1.25 gpm at the measured water pressure at each shower. Maximum showerhead height is to be 48”.
7. Krage Manufacturing LLC, LTF - Aluminum Shower Valve insert/assembly for mason walls (NO EXCEPTIONS). Phone: 1-719-948-2002. Only PEX piping shall be used within assembly.

P. F-18 Electric Water Cooler with Bottle Filler, ADA:
1. Elkay EZH2O #EZSTL8WS, ADA dual wall mounted electric water cooler with sensor operated bottle filling station. Water cooler complete with wall hanging bracket, stainless steel top, gray enclosure, push bar on front, left, and right, bubbler assembly, cooling tank, dome grid strainer, hermetic compressor, condenser coil, evaporator, precooler, and shall be free from lead containing materials. Bottle filler shall be surface mounted with drain affixed to water cooler, anti-microbial plastic components, 1.5 gpm laminar flow, 30 second shutoff timer, and vandal-resistant bubbler. Mount bottle filler above non-ADA electric water cooler. Bottle filler shall not have a water filter or filter status light.
2. McGuire #8902C 1-1/4" cast brass P-trap with cleanout plug and polished chrome finish, or approved equal.
3. McGuire #LFH2165CC sweat angle stop supply valves with compression discharge fitting for extension to the faucet, or approved equal.
4. Elkay #LKAPR-EZL apron for ADA compliance.

Q. F-19 Emergency Eyewash Station
1. Stingray T2210 epoxy coated, pedestal eyewash station with integral emergency thermostatic mixing valve, stainless steel bowl, (2) aerated sprayers w/ dust covers, 1/2" NPT connections, push handle, 1-1/4” IPS drain connection, floor mounting flange, no filter, certified to meet ANSI Z358.1 requirements.

R. F-20 Emergency Eyewash/Shower:
1. Stingray T5510-EP epoxy coated floor mounted combination shower and eye/face wash system with stainless steel bow, First Air Red ABS shower head and spray heads w/ duct covers, positive hot water shutoff, 1” hot and cold water connection inlets with check valves, integrated emergency thermostatic mixing valve with capacity for 20 gpm flow, stainless steel pull rod with handle, 8” diameter anchored floor mounting base plate shall be certified to meet ANSI Z358.1 requirement.

PART 3 EXECUTION

3.01 INSTALLATION

A. Assemble plumbing fixtures, trim, fittings, and other components according to manufacturers' written instructions.

B. Install off-floor supports, affixed to building substrate, for wall-mounting fixtures.
   1. Use carrier supports with waste fitting and seal for back-outlet fixtures.
   2. Use carrier supports without waste fitting for fixtures with tubular waste piping.
   3. Use chair-type carrier supports with rectangular steel uprights for accessible fixtures.

C. Install back-outlet, wall-mounting fixtures onto waste fitting seals and attach to supports.

D. Install floor-mounting fixtures on closet flanges or other attachments to piping or building substrate.

E. Install wall-mounting fixtures with tubular waste piping attached to supports.

F. Install fixtures level and plumb according to roughing-in drawings.

G. Install water-supply piping with stop on each supply to each fixture to be connected to water distribution piping. Attach supplies to supports or substrate within pipe spaces behind fixtures. Install stops in locations where they can be easily reached for operation.

H. Install trap and tubular waste piping on drain outlet of each fixture to be directly connected to sanitary drainage system.

I. Install tubular waste piping on drain outlet of each fixture to be indirectly connected to drainage system.

J. Install flushometer valves for accessible water closets and urinals with handle mounted on wide side of compartment. Install other actuators in locations that are easy for people with disabilities to reach.

K. Install toilet seats on water closets.

L. Install faucet-spout fittings with specified flow rates and patterns in faucet spouts if faucets are not available with required rates and patterns. Include adapters if required.

M. Install water-supply flow-control fittings with specified flow rates in fixture supplies at stop valves.

N. Install faucet flow-control fittings with specified flow rates and patterns in faucet spouts if faucets are not available with required rates and patterns. Include adapters if required.

O. Install shower flow-control fittings with specified maximum flow rates in shower arms.

P. Install traps on fixture outlets.
   1. Exception: Omit trap on fixtures with integral traps.
   2. Exception: Omit trap on indirect wastes, unless otherwise indicated.

Q. Install escutcheons at piping wall and ceiling penetrations in exposed, finished locations and within cabinets and millwork. Use deep-pattern escutcheons if required to conceal protruding fittings. Escutcheons are specified in Division 22 Section "Common Work Results for Plumbing."

R. Seal joints between fixtures and walls, floors, and countertops using sanitary-type, one-part, mildew-resistant silicone sealant. Match sealant color to fixture color. Sealants are specified in Division 7 Section "Joint Sealants."

3.02 CONNECTIONS

A. Piping installation requirements are specified in other Division 22 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Connect fixtures with water supplies, stops, and risers, and with traps, soil, waste, and vent piping. Use size fittings required to match fixtures.

C. Ground equipment according to Division 26 Section "Grounding and Bonding."

D. Connect wiring according to Division 26 Section "Conductors and Cables."

3.03 FIELD QUALITY CONTROL

A. Verify that installed plumbing fixtures are categories and types specified for locations where installed.

B. Check that plumbing fixtures are complete with trim, faucets, fittings, and other specified components.

C. Inspect installed plumbing fixtures for damage. Replace damaged fixtures and components.

D. Test installed fixtures after water systems are pressurized for proper operation. Replace malfunctioning fixtures and components, then retest. Repeat procedure until units operate properly.

E. Install fresh batteries in sensor-operated mechanisms.

3.04 CLEANING & PROTECTION

A. After all fixtures have been set and ready for use and before the Plumbing Contractor leaves the job, he shall thoroughly clean all fixtures furnished and set by him, removing all plaster, stickers, rust stains and other foreign matter or discoloration on fixtures, leaving every part in an acceptable condition, ready for use.

B. It is the Plumbing Contractors responsibility to protect the floor drain strainers from grout and dirt during construction. Floor drain strainers shall be in new condition at the time of turning the building over to the owner, or new strainers will be required.

3.05 PROTECTION

A. Provide protective covering for installed fixtures and fittings.

B. Do not allow use of plumbing fixtures for temporary facilities unless approved in writing by Owner.

SECTION 22 11 19
DOMESTIC WATER PIPING SPECIALTIES

PART 1 GENERAL

1.01 CONDITIONS OF THE CONTRACT

A. Plumbing Contractor is responsible to furnish, install and execute all of the following work as required, specified and/or indicated on plan unless noted to be performed by another contractor.

1.02 SUMMARY

A. This Section includes the following domestic water piping specialties:
   1. Vacuum breakers.
   2. Backflow preventers.
   3. Water pressure-reducing valves.
   4. Balancing valves.
   5. Thermostatic mixing valves.
   6. Drain tempering valves.
   7. Strainers.
   8. Hose bibbs.
   9. Wall hydrants.
   10. Drain valves.
   11. Water hammer arresters.
   12. Trap-seal primer valves.

B. Related Section:
   1. Division 22 Section “Common Work Results for Plumbing” for joining materials, sleeves, escutcheons, grout, piping joint construction and other common requirements.

1.03 PERFORMANCE REQUIREMENTS

A. Minimum Working Pressure for Domestic Water Piping Specialties: 860 kPa 125 psig, unless otherwise indicated.

1.04 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Operation and maintenance data.

1.05 QUALITY ASSURANCE

A. NSF Compliance:
   1. Comply with NSF 61, "Drinking Water System Components - Health Effects; Sections 1 through 9."

PART 2 PRODUCTS

2.01 VACUUM BREAKERS

A. Pipe-Applied, Atmospheric-Type Vacuum Breakers:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. American Standard: Model HB-15755.
      b. Conbraco Industries, Inc.
      c. Watts Industries, Inc.; Water Products Div.
   2. Standard: ASSE 1001.
   3. Size: DN 8 to DN 80 NPS 1/4 to NPS 3, as required to match connected piping.

4. Body: Bronze.
5. Inlet and Outlet Connections: Threaded.
6. Finish: Chrome plated.

B. Hose-Connection Vacuum Breakers:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Conbraco Industries, Inc.
   b. Watts Industries, Inc.; Water Products Div.
   c. Woodford Manufacturing Company.
2. Standard: ASSE 1001.
3. Body: Bronze, nonremovable, with manual drain.
4. Outlet Connection: Garden-hose threaded complying with ASME B1.20.7.
5. Finish: Rough bronze.

2.02 BACKFLOW PREVENTERS

A. Reduced-Pressure-Principle Backflow Preventers (RPZ):
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Sizes NPS 1/2" – 2": Watts Industries, Inc.; Water Products Div.: Model LF919-QT.
   b. Sizes NPS 2-1/2" – 4": Watts Industries, Inc.; Water Products Div.: Model 957-NRS.
2. Standard: ASSE 1013.
3. Operation: Continuous-pressure applications.
4. Pressure Loss: 12 psig (83 kPa) maximum, through middle 1/3 of flow range.
5. Body: Bronze for NPS 2 (DN 50) and smaller; cast iron with interior lining complying with AWWA C550 or that is FDA approved for NPS 2-1/2 (DN 65) and larger.
6. End Connections: Threaded for NPS 2 (DN 50) and smaller; flanged for NPS 2-1/2 (DN 65) and larger.
7. Configuration: Designed for horizontal, straight through flow.
8. Accessories:
   a. Valves: Ball type with threaded ends on inlet and outlet of NPS 2 (DN 50) and smaller; outside screw and yoke gate-type with flanged ends on inlet and outlet of NPS 2-1/2 (DN 65) and larger.
   b. Air-Gap Fitting: ASME A112.1.2, matching backflow-preventer connection.
   c. Pressure Gauge: Install pressure gauge on inlet and outlet.

B. Double Check Valve Assembly Backflow Preventers (DCVA):
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Sizes NPS 1/2" – 2": Watts Industries, Inc.; Water Products Div.: Model LF719-QT.
   b. Sizes NPS 2-1/2" – 4": Watts Industries, Inc.; Water Products Div.: Model 757-NRS.
2. Standard: ASSE 1015.
3. Operation: Continuous-pressure, non-health hazard applications.
4. Body: Bronze for NPS 2 (DN 50) and smaller; cast iron with interior lining complying with AWWA C550 or that is FDA approved for NPS 2-1/2 (DN 65) and larger.
5. End Connections: Threaded for NPS 2 (DN 50) and smaller; flanged for NPS 2-1/2 (DN 65) and larger.
6. Configuration: Designed for horizontal or vertical, straight through flow.
7. Accessories:

a. Valves: Ball type with threaded ends on inlet and outlet of NPS 2 (DN 50) and smaller; outside screw and yoke gate-type with flanged ends on inlet and outlet of NPS 2-1/2 (DN 65) and larger.

C. Dual Check Valves
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Sizes NPS 1/2" – 1": Watts Industries, Inc.; Water Products Div.: Model Series 7
2. Standard: ANSI/ASSE 1024.
3. Body: Bronze with union on inlet.

D. Dual Check Valves (beverage)
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Sizes NPS 1/4" – 3/8": Watts Industries, Inc.; Water Products Div.: Model SD-3 with strainer.
2. Standard: ANSI/ASSE 1022.
3. Body: stainless steel with union on inlet.

E. High Pressure Hose Drop Backflow Preventers:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Sizes NPS 3/4" – 1": Watts Industries, Inc.; Water Products Div.: Model 912HP.
2. Operation: Protects agains backpressure and backsiphonage.
3. Pressure Loss: 10 psig (83 kPa) maximum, through middle 1/3 of flow range.
4. Body: ASTM B-584 bronze.
5. End Connections: Threaded.
6. Configuration: Designed for horizontal and vertical, straight through flow.
7. Accessories: Vent and drain.

F. Backflow-Preventer Test Kits:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Watts Industries, Inc.; Water Products Div.
2. Description: Factory calibrated, with gages, fittings, hoses, and carrying case with test-procedure instructions.

2.03 WATER PRESSURE-REDUCING VALVES

A. Water Regulators:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Watts Industries, Inc.; Water Products Div.
2. Standard: ASSE 1003.
3. Pressure Rating: Initial working pressure of 150 psig (1035 kPa).
4. Primary valve:
a. Model: Watts LFM115-74.
b. Size: NPS 3 (DN 80).
c. Design Flow Rate: 50 to 150 gpm (1.26 to 18.93 L/s).
d. Design Inlet Pressure: As indicated on plans.
e. Design Outlet Pressure Setting: As indicated on plans.

5. Body: Bronze with chrome-plated finish for NPS 2 (DN 50) and smaller; cast iron with interior lining complying with AWWA C550 or that is FDA approved for NPS 2-1/2 and NPS 3 (DN 65 and DN 80).
6. End Connections: Threaded for NPS 2 (DN 50) and smaller; flanged for NPS 2-1/2 and NPS 3 (DN 65 and DN 80).

B. Pool Fill Regulators:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Watts Industries, Inc.; Water Products Div.
2. Standard: ASSE 1003.
3. Pressure Rating: Maximum working pressure of 300 psi.
4. Primary Valve:
   a. Model: Watts LFN223B.
   b. Size: NPT 2-1/2"
   c. Adjustable Reduced Pressure Range of 25-75 psi.
   d. Design Inlet Pressure: As indicated on plans.
   e. Design Outlet Pressure Setting: As indicated on plans.
5. Body: Lead free cast copper silicon alloy.
6. End Connections: Threaded for NPT 2-1/2 (DN 80).

2.04 BALANCING VALVES

A. Thermostatic Circuit Balancing Valves:
1. Manufacturers:
   a. Circuit Solvers, by Therm Omega Tech, CSUAS-3/4-XXX-CV1, no exceptions.
2. Standards: NSF/ANSI 61 Certified, CA Health & Safety Code 116875.
3. Pressure Rating: 200-psig (2070 kPa).
4. Size: NPS 2 (DN 50) or smaller.
5. Body: 303 stainless steel.
6. Assembly components: Influent ball valve, 20 mesh stainless steel strainer, thermal modulating valve with integral union, check valve, and effluent ball valve. All components are lead free and 302 stainless steel construction.
7. Thermal modulating valve internal components: Valve plug, thermal actuator and carrier are 303 stainless steel, spring is 302 stainless steel.
8. End Connections: Threaded.

2.05 DRAIN TEMPERING VALVES

A. Thermostatic Drain Tempering Valves:
1. Manufacturers:
   a. DTV, by Therm Omega Tech, no exceptions.
2. Self-activated tempering valve for steam generators and dish machine drains to limit the drain effluent into the sanitary sewer system below the maximum allowable temperature of 140°F. Provide cold water connection with backflow protection and water hammer arrestor according to the manufactures installation instructions. The discharge temperature of the valve shall be set to 140°F.

2.06 THERMOSTATIC MIXING VALVES

A. Primary, Thermostatic, Water Mixing Valves:
1. Materials covered this Article are to be purchased direct from the supplier.
2. Manufacturers:
   a. Lawler - Neptune EMX 200-943040 Electronic Mixing Valve

3. The Plumbing Contractor shall pipe the valve according to the manufactures installation instructions. The discharge temperature of the valve shall be set to 120°F.

B. Point-of-Use, Thermostatic, Water Mixing Valves:
   1. Manufacturers:
      a. Lawler Model #TMM-1070, Part #87500.
   2. The Plumbing Contractor shall furnish and install point-of-use thermostatic mixing valves under each lavatory and hand sink in Childcare, Family Locker Room, Men's Locker Room, Women's Locker Room, pool toilets, Café, Bistro, Bar, and as shown on drawings. The Plumbing Contractor shall pipe the valve according to the manufactures installation instructions. The discharge temperature of the valve shall be set to 100°F.

2.07 STRAINERS FOR DOMESTIC WATER PIPING

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Crane Co.; Crane Valve Group; Crane Valves.
   2. Spence Strainers International.

B. Y-Pattern Strainers:
   1. Pressure Rating: 125 psig (860 kPa) minimum, unless otherwise indicated.
   2. Body: Bronze for NPS 2 (DN 50) and smaller; cast iron with interior lining complying with AWWA C550 or FDA-approved, epoxy coating and for NPS 2-1/2 (DN 65) and larger.
   3. End Connections: Threaded for NPS 2 (DN 50) and smaller; flanged for NPS 2-1/2 (DN 65) and larger.
   4. Screen: Stainless steel with round perforations, unless otherwise indicated.
   5. Perforation Size:
      a. Strainers NPS 2 (DN 50) and Smaller: 0.020 inch (0.51 mm).
      b. Strainers NPS 2-1/2 to NPS 4 (DN 65 to DN 100): 0.045 inch (1.14 mm).
      c. Strainers NPS 5 (DN 125) and Larger: 0.10 inch (2.54 mm).
   6. Drain: Pipe plug for NPS 2 (DN 50) and smaller and factory-installed, hose-end drain valve for NPS 2-1/2 (DN 65) and larger.
   7. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Crane Co.; Crane Valve Group; Crane Valves.
      b. Spence Strainers International.

2.08 INTERIOR WALL HYDRANTS (FINISHED AREAS)

A. Interior wall hydrants (HY-1):
   1. Manufacturers: Subject to compliance with requirements, provide Watts HY-330 or a comparable product by one of the following:
      a. Jay R. Smith Mfg. Co.
      b. Woodford Manufacturing Company
      c. Zurn Industries, LLC.
   2. Standard: ASME A112.18.1 for sediment faucets.
   3. Body Material: Stainless Steel.
   4. Seat: Bronze, replaceable.
   5. Supply Connections: NPS 3/4 (DN 20) threaded or solder-joint inlet.
   6. Outlet Connection: Garden-hose thread complying with ASME B1.20.7.
   7. Pressure Rating: 125 psig (860 kPa).
   8. Vacuum Breaker: Integral nonremovable, drainable, hose-connection vacuum breaker complying with ASSE 1052.

9. Finish for Finished Rooms: smooth Polished chrome plated finish, recessed head in stainless steel wall box with smooth polished chrome face and cover for narrow wall construction..
10. Operation for Finished Rooms: Operating key.
11. Include operating key with each operating-key hose bibb.
12. Mounting for Finished Rooms: Recessed, stainless steel wall box with chrome face/cover for narrow wall construction.

2.09 INTERIOR HOSE BIBBS (NON-FINISHED AREAS)

A. Hose Bibbs (HB-1):
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Woodford.
   b. Watts Industries, Inc.; Water Products Div.
2. Model:
   a. Interior non-public spaces: Woodford 26P.
3. Standard: ASME A112.18.1 for sediment faucets.
4. Body Material: Bronze.
5. Seat: Bronze, replaceable.
6. Supply Connections: NPS 3/4 (DN 20) threaded or solder-joint inlet.
7. Outlet Connection: Garden-hose thread complying with ASME B1.20.7.
8. Pressure Rating: 125 psig (860 kPa).
9. Vacuum Breaker: Integral nonremovable, drainable, hose-connection vacuum breaker complying with ASSE 1052.
10. Finish for Equipment Rooms and Service Areas: Rough bronze.
11. Operation for Equipment Rooms and Service Areas: Metal wheel handle.

2.10 EXTERIOR WALL HYDRANTS

A. Vacuum Breaker Wall Hydrants (HY-2):
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Woodford: Model B67.
   b. Wade: 8600
2. Standard: ASSE 1019, Type B.
3. Type: Freeze-resistant, automatic draining with integral air-inlet valve.
4. Classification: Type B, for automatic draining with hose removed or with hose attached and nozzle closed.
5. Pressure Rating: 125 psig (860 kPa).
6. Vacuum Breaker: NIDEL, integral nonremovable, drainable, hose-connection vacuum breaker complying with ASSE 1052.
7. Operation: Loose key.
8. Casing and Operating Rod: Of length required to match wall thickness. Include wall clamp.
9. Inlet: NPS 3/4 (DN 20).
10. Outlet: Concealed, with integral vacuum breaker and garden-hose thread complying with ASME B1.20.7.
11. Box: Deep, flush mounting with cover.
12. Box and Cover Finish: Polished nickel bronze.
13. Operating Keys(s): One with each wall hydrant.

2.11 ROOF HYDRANTS

A. Vacuum Breaker Wall Hydrants (HY-3):
   1. Manufacturers: Subject to compliance with requirements, provide Woodford Model SRH-MS or a comparable product by one of the following:
      a. Wade
      b. Jay R. Smith Mfg. Co.
      c. Zurn Industries, LLC.
   2. Standard: ASSE 1057.
   3. Type: Freeze-resistant, automatic draining with venturi action.
   4. Classification: Type B, for automatic draining with hose removed or with hose attached and nozzle closed.
   5. Pressure Rating: 100 psig (860 kPa).
   6. Vacuum Breaker: 50H-BR, drainable, hose-connection vacuum breaker complying with ASSE 1052. In event of failure, the vacum break it is to be replaced with like equal to ensure venturi action can still be preformed while vacum breaker is attatched.
   7. Operation: Loose key.
   8. Casing and Operating Rod: Of length required to match wall thickness. Include wall clamp.
   9. Inlet: NPS 3/4.

2.12 YARD HYDRANTS

A. Vacuum Breaker Yard Hydrants (HY-4):
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Woodford: Model Y95.
      b. Wade: 8602
   2. Standard: ASSE 1019, Type B.
   3. Type: Freeze-resistant with 4’ bury depth, with automatic drain down.
   4. Pressure Rating: 125 psig (860 kPa).
   5. Vacuum Breaker: Anti siphon NIDEL 34HW , integral nonremovable, drainable, hose-connection vacuum breaker complying with ASSE 1011.
   6. Operation: Loose key.
   7. Casing and Operating Rod: 3/8” galvanized steel pipe, 2’ minimum length required.
   8. Inlet: NPS 3/4 (DN 20).
   9. Outlet: Concealed, with integral vacuum breaker and garden-hose thread complying with ASME B1.20.7.
   10. Box: Deep, flush mounting with cover.
   11. Box and Cover Finish: Brass casting
   12. Operating Keys(s): One with each wall hydrant.

2.13 DRAIN VALVES

A. Ball-Valve-Type, Hose-End Drain Valves:
   1. Standard: MSS SP-110 for full-port, two-piece ball valves.
   2. Pressure Rating: 400-psig (2,758 kPa) minimum CWP.
   3. Size: NPS 3/4 (DN 20).
   4. Body: Copper alloy.
   5. Ball: Chrome-plated brass.
   6. Seats and Seals: Replaceable.
   7. Handle: Vinyl-covered steel.
   8. Inlet: Threaded or solder joint.

9. Outlet: Threaded, short nipple with garden-hose thread complying with ASME B1.20.7 and cap with brass chain.

2.14 WATER HAMMER ARRESTERS

A. Water Hammer Arresters:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Sioux Chief Manufacturing Company
      b. Precision Plumbing Products
   2. Standard: ASSE 1010 or PDI-WH 201.
   3. Type: Piston with EPDM O-rings.
   4. Size: ASSE 1010, Sizes AA and A through F or PDI-WH 201, Sizes A through F.

2.15 TRAP-SEAL PRIMER VALVES

A. Supply-Type, Trap-Seal Primer Valves:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Sioux Chief Manufacturing Company, Inc.: Model 695.
      b. Precision Plumbing Products: Model P2-500.
   2. Standard: ASSE 1018.
   3. Pressure Rating: 125 psig (860 kPa).
   4. Body: Bronze.
   5. Inlet and Outlet Connections: NPS 1/2 (DN 15) threaded, union, or solder joint.
   6. Gravity Drain Outlet Connection: NPS 1/2 (DN 15) threaded or solder joint.
   7. Finish: Chrome plated, or rough bronze for units used with pipe or tube that is not chrome finished.

B. Restrictor-Type (where allowed by code):
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. ProSet Trap Guard: Model TG
         1) The model number is the responsibility of the Contractor to fit installed drain.
         2) ProSet Trap Guard and four inch deep seal traps will be allowed instead of the trap primers noted above.

PART 3 EXECUTION

3.01 INSTALLATION

A. Refer to Division 22 Section "Common Work Results for Plumbing" for piping joining materials, joint construction, and basic installation requirements.

B. Install backflow preventers in each water supply to mechanical equipment and systems and to other equipment and water systems that may be sources of contamination including each lawn sprinkler service (except if meter is in outside vault), boiler system, domestic water service (except if meter is in outside vault), pool/whirlpool make-up water connection, steam generator and laundry equipment. Comply with authorities having jurisdiction.
   1. Locate backflow preventers in same room as connected equipment or system. Verify the specific location with the Owner.
   2. Install drain for backflow preventers with atmospheric-vent drain connection with air-gap fitting, fixed air-gap fitting, or equivalent positive pipe separation of at least two pipe diameters in drain piping and pipe to floor drain. Locate air-gap device attached to or under backflow preventer. Simple air breaks are not acceptable for this application.

3. Extend discharge piping from back flow preventer to floor drain with funnel mounted below unit.
4. Do not install bypass piping around backflow preventers.

C. Install water regulators at the main water service entering the building if the service pressure exceeds 80 PSI. Two (2) valves shall be provided piped in parallel with inlet and outlet shutoff valves and installed upstream of the RPZ. Install pressure gages on inlet and outlet.

D. Provide pressure reducing valve on any water connection to equipment that requires a water pressure less than the building service provides. See drawings for locations of Pressure Reducing Valves.

E. Install Circuit Solver balancing valves on each hot water supply branch line downstream of the last runout to a hot tap. No balancing necessary.

F. Install temperature-actuated water mixing valves with check stops or shutoff valves on inlets and with shutoff valve on outlet.
1. Install thermometers and water regulators if specified.
2. Install cabinet-type units recessed in or surface mounted on wall as specified.

G. Install Y-pattern strainers for water on supply side of each control valve, water pressure-reducing valve, and pump.

H. Install water hammer arresters in water piping according to PDI-WH 201.

I. Install supply-type, trap-seal primer valves with outlet piping pitched down toward drain trap a minimum of 1 percent, and connect to floor-drain body, trap, or inlet fitting. Adjust valve for proper flow.

J. Piping installation requirements are specified in other Division 22 Sections. Drawings indicate general arrangement of piping and specialties.

K. Equipment Nameplates and Signs: Install engraved plastic-laminate equipment nameplate or sign on or near each of the following:
1. Intermediate atmospheric-vent backflow preventers.
2. Reduced-pressure-principle backflow preventers.
3. Double-check backflow-prevention assemblies.
4. Water pressure-reducing valves.
5. Primary, thermostatic, water mixing valves.
6. Supply-type, trap-seal primer valves.

L. Distinguish among multiple units, inform operator of operational requirements, indicate safety and emergency precautions, and warn of hazards and improper operations, in addition to identifying unit. Nameplates and signs are specified in Division 22 Section "Identification For Plumbing."

M. All control valves not immediately in sight of fixtures and equipment controlled shall be provided with approved metal tags on which shall be stamped identifying description of equipment or piping controlled. Valve tags shall be color coded by adhesive backed labels.

N. Install Reverse Osmosis System per the manufactures specifications.

3.02 CONNECTIONS

A. Piping installation requirements are specified in other Division 22 Sections. Drawings indicate general arrangement of piping, fittings, and specialties. Mineral tanks must be piped in reverse return as shown and noted on plans.

B. Install piping adjacent to equipment to allow service and maintenance.

C. Make piping connections between water-softener-unit headers and dissimilar-metal water piping with dielectric fittings. Dielectric fittings are specified in Division 22 Section "Common Work Results for Plumbing."

D. Install shutoff valves and unions on raw-water inlet and soft-water outlet piping of each mineral tank, and on inlet and outlet headers.
   1. Metal general-duty valves are specified in Division 22 Section "General-Duty Valves For Plumbing."

E. Install drains as indirect wastes to spill into floor sink.

F. Ground equipment according to Division 26 Section "Grounding and Bonding."

G. Connect wiring according to Division 26 Section "Conductors and Cables."

3.03 FIELD QUALITY CONTROL

A. Perform the following tests and prepare test reports:
   1. Test each reduced-pressure-principle backflow preventer according to authorities having jurisdiction and the device's reference standard.

B. Remove and replace malfunctioning domestic water piping specialties and retest as specified above.

3.04 ADJUSTING

A. Set field-adjustable pressure set points of water pressure-reducing valves.

B. Set field-adjustable flow of balancing valves.

C. Set field-adjustable temperature set points of temperature-actuated water mixing valves.

END OF SECTION

SECTION 22 11 23
DOMESTIC WATER PUMPS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. In-line, sealless centrifugal pumps.

1.02 SUBMITTALS

A. Product Data: For each type of product indicated.

1.03 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. UL Compliance: Comply with UL 778 for motor-operated water pumps.

1.04 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.
   1. Product data
   2. Wiring Diagrams
   3. Warranty: Sample of warranty.

PART 2 PRODUCTS

2.01 IN-LINE, SEALLESS CENTRIFUGAL PUMPS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following (Substitutions: See Section 01 6000 – Product Requirements):
   1. Armstrong Pumps Inc.
   2. Bell & Gossett Domestic Pump; ITT Corporation.
   3. TACO Incorporated.
   4. Grundfos

B. Description: Factory-assembled and -tested, in-line, close-coupled, canned-motor, sealless, overhung-impeller centrifugal pumps, compliant with domestic water usage.

C. Pump Construction:
   1. Pump and Motor Assembly: Hermetically sealed, replaceable-cartridge type with motor and impeller on common shaft and designed for installation with pump and motor shaft horizontal.
   2. Casing: Bronze, with threaded or companion-flange connections.
   3. Impeller: Plastic.
   4. Motor: Single speed, unless otherwise indicated.

D. Capacities and Characteristics: See schedule on plans for size, capacity and accessories.

2.02 MOTORS

A. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Division 22 Section "Common Motor Requirements for Plumbing Equipment."
   1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
   2. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in Division 26 Sections.

2.03 CONTROLS

A. Thermostats: Electric; adjustable for control of hot-water circulation pump.
   1. Type: Water-immersion temperature sensor, for installation in piping.
   2. Range: 65 to 200 deg F.
   3. Enclosure: NEMA 250.
   4. Operation of Pump: On or off.
   5. Transformer: Provide if required.
   6. Power Requirement: 120 V, ac.
   7. Settings: Start pump at 105 deg F and stop pump at 120 deg F.

PART 3 EXECUTION

3.01 PUMP INSTALLATION

A. Comply with HI 1.4.

B. Install in-line, sealless centrifugal pumps with shaft horizontal unless otherwise indicated.

C. Install continuous-thread hanger rods of size required to support pump weight.
   1. Comply with requirements for vibration isolation devices specified in Division 22 Section "Vibration and Seismic Controls for Plumbing Piping and Equipment." Fabricate brackets or supports as required.
   2. Comply with requirements for hangers and supports specified in Division 22 Section "Hangers and Supports for Plumbing Piping and Equipment."

D. Install thermostats (aqua-stat) in hot-water return piping.

3.02 CONNECTIONS

A. Comply with requirements for piping specified in Division 22 Section "Domestic Water Piping." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping adjacent to pumps to allow service and maintenance.

C. Connect domestic water piping to pumps. Install suction and discharge piping equal to or greater than size of pump nozzles.
   1. Install flexible connectors adjacent to pumps in suction and discharge piping of the following pumps:
      a. Horizontally mounted, in-line, close-coupled centrifugal pumps.
      b. Comply with requirements for flexible connectors specified in Division 22 Section "Domestic Water Piping."
   2. Install shutoff valve and strainer on suction side of each pump, and check, shutoff, and throttling valves on discharge side of each pump. Install valves same size as connected piping. Comply with requirements for valves specified in Division 22 Section "General-Duty Valves for Plumbing Piping" and comply with requirements for strainers specified in Division 22 Section "Domestic Water Piping Specialties."

D. Comply with Division 26 Sections for electrical connections and wiring methods.

E. Connect thermostats (aqua-stat) or timers to pumps that they control.

3.03 ADJUSTING

A. Adjust domestic water pumps to function smoothly and lubricate as recommended by manufacturer.

B. Adjust initial temperature set points.

C. Set field-adjustable switches and circuit-breaker trip ranges as indicated.

END OF SECTION

SECTION 22 13 13 - FACILITY SANITARY SEWERS

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes gravity-flow, nonpressure sanitary sewerage outside the building, with the following components:

1. Cleanouts.
2. Precast concrete manholes.

B. Related Sections:
1. Mount Olympus Improvemenmt District Standards and Specifications.

1.2 PERFORMANCE REQUIREMENTS

A. Gravity-Flow, Nonpressure, Drainage-Piping Pressure Rating: 10-foot head of water.

1.3 SUBMITTALS

A. Shop Drawings: Pipe materials, manholes (include plan, sections, details and covers).

B. Coordination Drawings: Show pipe sizes, locations, and elevations.

C. Field quality-control test reports.

PART 2 - PRODUCTS

2.1 PIPING MATERIALS

A. Refer to Part 3 "Piping Applications" Article for applications of pipe, fitting, and joining materials.

2.2 PVC PIPE AND FITTINGS

A. PVC Sewer Pipe and Fittings, NPS 15 and Smaller: ASTM D 3034, SDR 35, with bell-and-spigot ends for gasketed joints with ASTM F 477, elastomeric seals.

2.3 NONPRESSURE-TYPE PIPE COUPLINGS

A. Comply with ASTM C 1173, elastomeric, sleeve-type, reducing or transition coupling, for joining underground nonpressure piping. Include ends of same sizes as piping to

be joined and corrosion-resistant-metal tension band and tightening mechanism on each end.

B. Sleeve Materials:

1. For Cast-Iron Soil Pipes: ASTM C 564, rubber.
2. For Plastic Pipes: ASTM F 477, elastomeric seal or ASTM D 5926, PVC.
3. For Dissimilar Pipes: ASTM D 5926, PVC or other material compatible with pipe materials being joined.

C. Unshielded, Flexible Couplings: Elastomeric sleeve with stainless-steel shear ring and corrosion-resistant-metal tension band and tightening mechanism on each end.

2.4 CLEANOUTS

A. Gray-Iron Cleanouts: ASME A112.36.2M, round, gray-iron housing with clamping device and round, secured, scoriated, gray-iron cover. Include gray-iron ferrule with inside calk or spigot connection and countersunk, tapered-thread, brass closure plug.

1. Top-Loading Classification: Light and Heavy duty.
2. Sewer Pipe Fitting and Riser to Cleanout: ASTM A 74, Service class, cast-iron soil pipe and fittings.

2.5 MANHOLES

A. Standard Precast Concrete Manholes: ASTM C 478, precast, reinforced concrete, of depth indicated, with provision for sealant joints.

1. Diameter: 48 inches minimum, unless otherwise indicated.
2. Ballast: Increase thickness of precast concrete sections or add concrete to base section, as required to prevent flotation.
3. Base Section: 6-inch minimum thickness for floor slab and 4-inch minimum thickness for walls and base riser section and having separate base slab or base section with integral floor.
4. Riser Sections: 4-inch minimum thickness, and of length to provide depth indicated.
5. Top Section: Eccentric-cone type, unless concentric-cone or flat-slab-top type is indicated. Top of cone of size that matches grade rings.
6. Joint Sealant: ASTM C 990, bitumen or butyl rubber.
7. Resilient Pipe Connectors: ASTM C 923, cast or fitted into manhole walls, for each pipe connection.
8. Steps: Individual FRP steps, wide enough to allow worker to place both feet on 1 step and designed to prevent lateral slippage off of step. Cast or anchor steps into sidewalls at 12- to 16-inch intervals. Omit steps if total depth from floor of manhole to finished grade is less than 60 inches.
9. Adjusting Rings: Interlocking rings with level or sloped edge in thickness and diameter matching manhole frame and cover. Include sealant recommended by ring manufacturer.

10. Grade Rings: Reinforced-concrete rings, 6- to 9-inch total thickness, to match diameter of manhole frame and cover.
11. Manhole Frames and Covers: Ferrous; 24-inch ID by 7- to 9-inch riser with 4-inch- minimum width flange and 26-inch- diameter cover. Include indented top design with lettering cast into cover, using wording equivalent to "SANITARY SEWER."

    a. Material: ASTM A 48/A 48M, Class 35 gray iron, unless otherwise indicated.

2.6 CONCRETE

A. General: Cast-in-place concrete according to ACI 318/318R, ACI 350R, and the following:

1. Cement: ASTM C 150, Type II.
2. Fine Aggregate: ASTM C 33, sand.
3. Coarse Aggregate: ASTM C 33, crushed gravel.
4. Water: Potable.

B. Portland Cement Design Mix: 4000 psi minimum, with 0.45 maximum water/cementitious materials ratio.

1. Reinforcement Fabric: ASTM A 185, steel, welded wire fabric, plain.
2. Reinforcement Bars: ASTM A 615/A 615M, Grade 60, deformed steel.

C. Manhole Channels and Benches: Factory or field formed from concrete. Portland cement design mix, 4000 psi minimum, with 0.45 maximum water/cementitious materials ratio. Include channels and benches in manholes.

1. Channels: Concrete invert, formed to same width as connected piping, with height of vertical sides to three-fourths of pipe diameter. Form curved channels with smooth, uniform radius and slope.

    a. Invert Slope: 2 percent through manhole.

2. Benches: Concrete, sloped to drain into channel.

    a. Slope: 8 percent.

PART 3 - EXECUTION

3.1 PIPING APPLICATIONS

A. Pipe couplings and fittings with pressure ratings at least equal to piping rating may be used in applications below, unless otherwise indicated.

1. Use nonpressure-type flexible couplings where required to join gravity-flow, nonpressure sewer piping, unless otherwise indicated.

    a. Unshielded flexible couplings for same or minor difference OD pipes.
    b. Unshielded, increaser/reducer-pattern, flexible couplings for pipes with different OD.
    c. Ring-type flexible couplings for piping of different sizes where annular space between smaller piping's OD and larger piping's ID permits installation.

B. Gravity-Flow, Nonpressure Sewer Piping: Use the following pipe materials for each size range:
    1. NPS 3 and NPS 4: NPS 4 PVC sewer pipe and fittings, gaskets, and gasketed joints.
    2. NPS 5 and NPS 6: NPS 6 PVC sewer pipe and fittings, gaskets, and gasketed joints.
    3. NPS 8 and NPS 10: PVC sewer pipe and fittings, gaskets, and gasketed joints.
    4. NPS 12 and NPS 15: PVC sewer pipe and fittings, gaskets, and gasketed joints.

3.2 PIPING INSTALLATION

A. General Locations and Arrangements: Drawing plans and details indicate general location and arrangement of underground sanitary sewerage piping. Location and arrangement of piping layout take design considerations into account. Install piping as indicated, to extent practical. Where specific installation is not indicated, follow piping manufacturer's written instructions.

B. Install piping beginning at low point, true to grades and alignment indicated with unbroken continuity of invert. Place bell ends of piping facing upstream. Install gaskets, seals, sleeves, and couplings according to manufacturer's written instructions for using lubricants, cements, and other installation requirements.

C. Install manholes for changes in direction, unless fittings are indicated. Use fittings for branch connections, unless direct tap into existing sewer is indicated.

D. Install proper size increasers, reducers, and couplings where different sizes or materials of pipes and fittings are connected. Reducing size of piping in direction of flow is prohibited.

E. Install gravity-flow, nonpressure, drainage piping according to the following:

    1. Install piping pitched down in direction of flow, at slope indicated.
    2. Install piping with 48-inch minimum cover.
    3. Install piping below frost line.
    4. Install PVC sewer piping according to ASTM D 2321 and ASTM F 1668.

F. Clear interior of piping and manholes of dirt and superfluous material as work progresses. Maintain swab or drag in piping and pull past each joint as it is completed. Place plug in end of incomplete piping at end of day and when work stops.

3.3 PIPE JOINT CONSTRUCTION

A. Where specific joint construction is not indicated, follow piping manufacturer's written instructions.

B. Join gravity-flow, nonpressure, drainage piping according to the following:
   1. Join PVC sewer piping according to ASTM D 2321 and ASTM D 3034 for elastomeric-gasket joints.
   2. Join dissimilar pipe materials with nonpressure-type, flexible couplings.

3.4 MANHOLE INSTALLATION

A. General: Install manholes complete with appurtenances and accessories indicated.

B. Install precast concrete manhole sections with sealants according to ASTM C 891.

C. Form continuous concrete channels and benches between inlets and outlet.

D. Set tops of frames and covers flush with finished surface of manholes that occur in pavements.

3.5 CLEANOUT INSTALLATION

A. Install cleanouts and riser extensions from sewer pipes to cleanouts at grade. Use cast-iron soil pipe fittings in sewer pipes at branches for cleanouts and cast-iron soil pipe for riser extensions to cleanouts. Install piping so cleanouts open in direction of flow in sewer pipe.

   1. Use light-duty, top-loading classification cleanouts in earth or unpaved foot-traffic areas.
   2. Use heavy-duty, top-loading classification cleanouts in vehicle-traffic service areas.

B. Set cleanout frames and covers in earth in cast-in-place-concrete block, 18 by 18 by 12 inches deep. Set with tops 1 inch above surrounding grade.

C. Set cleanout frames and covers in concrete pavement with tops flush with pavement surface.

3.6 CONNECTIONS

A. Make connections to existing piping and underground manholes in accordance with utility company standards.

3.7 FIELD QUALITY CONTROL

A. Inspect interior of piping to determine whether line displacement or other damage has occurred. Inspect after approximately 24 inches of backfill is in place, and again at completion of Project.

1. Submit separate report for each system inspection.
2. Defects requiring correction include the following:

a. Alignment: Less than full diameter of inside of pipe is visible between structures.
b. Deflection: Flexible piping with deflection that prevents passage of ball or cylinder of size not less than 92.5 percent of piping diameter.
c. Crushed, broken, cracked, or otherwise damaged piping.
d. Infiltration: Water leakage into piping.
e. Exfiltration: Water leakage from or around piping.

3. Replace defective piping using new materials, and repeat inspections until defects are within allowances specified.
4. Re-inspect and repeat procedure until results are satisfactory.

B. Test new piping systems, and parts of existing systems that have been altered, extended, or repaired, for leaks and defects.

1. Do not enclose, cover, or put into service before inspection and approval.
2. Test completed piping systems according to requirements of authorities having jurisdiction.
3. Schedule tests and inspections by authorities having jurisdiction with at least 24 hours' advance notice.
4. Submit separate report for each test.
5. Hydrostatic Tests: Test sanitary sewerage according to requirements of authorities having jurisdiction and the following:

a. Allowable leakage is maximum of 50 gal./inch of nominal pipe size per mile of pipe, during 24-hour period.
b. Close openings in system and fill with water.
c. Purge air and refill with water.
d. Disconnect water supply.
e. Test and inspect joints for leaks.
f. Option: Test ductile-iron piping according to AWWA C600, "Hydrostatic Testing" Section. Use test pressure of at least 10 psig.

6. Air Tests: Test sanitary sewerage according to requirements of authorities having jurisdiction, UNI-B-6, and the following:

a. Option: Test plastic gravity sewer piping according to ASTM F 1417.
b. Option: Test concrete gravity sewer piping according to ASTM C 924.

C. Leaks and loss in test pressure constitute defects that must be repaired.

D. Replace leaking piping using new materials, and repeat testing until leakage is within allowances specified.

END OF SECTION 221313

SECTION 22 13 16
SANITARY WASTE AND VENT PIPING

PART 1 GENERAL

1.01 SUMMARY

A. This Section includes the following soil and waste, sanitary drainage and vent piping inside the building:
   1. Pipe, tube, and fittings.
   2. Special pipe fittings.

B. Related Sections:
   1. Division 7 Section "Penetration Firestopping" for penetration firestopping installed in fire-resistance-rated walls, horizontal assemblies, and smoke barriers, with and without penetrating items

1.02 PERFORMANCE REQUIREMENTS

A. Components and installation shall be capable of withstanding the following minimum working pressure, unless otherwise indicated:
   1. Soil, Waste, and Vent Piping: 10-foot head of water.

1.03 QUALITY ASSURANCE

A. Piping materials shall bear label, stamp, or other markings of specified testing agency.

B. Comply with NSF 14, "Plastics Piping Systems Components and Related Materials," for plastic piping components. Include marking with "NSF-dwv" for plastic drain, waste, and vent piping; and "NSF-drain" for plastic drain piping.

PART 2 PRODUCTS

2.01 PIPING MATERIALS

A. Hub-and-Spigot, Cast-Iron Pipe and Fittings: ASTM A 74, Service class.
   1. Gaskets: ASTM C 564, rubber.

B. Hubless Cast-Iron Pipe and Fittings: ASTM A 888 or CISPI 301.
   1. Sovent Stack Fittings: ASME B16.45 or ASSE 1043, hubless, cast-iron aerator and deaerator drainage fittings.
   2. Shielded Couplings: ASTM C 1277 assembly of metal shield or housing, corrosion-resistant fasteners, and rubber sleeve with integral, center pipe stop.
      a. Standard, Shielded, Stainless-Steel Couplings: CISPI 310, with stainless-steel corrugated shield; stainless-steel bands and tightening devices; and ASTM C 564, rubber sleeve.
      b. Heavy-Duty, Shielded, Stainless-Steel Couplings: With stainless-steel shield, stainless-steel bands and tightening devices, and ASTM C 564, rubber sleeve.

C. Cellular-Core ABS Pipe: ASTM D 2661, Schedule 40, solid wall.
   1. ABS Socket Fittings: ASTM D 2661, made to ASTM D 3311, drain, waste, and vent patterns.
   2. Solvent Cement and Adhesive Primer:
      a. Use ABS solvent cement that has a VOC content of 325 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
      b. Use adhesive primer that has a VOC content of 550 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

D. Cellular-Core PVC Pipe: ASTM D 2665, solid-wall drain, waste, and vent.

1. PVC Socket Fittings: ASTM D 2665, socket type, made to ASTM D 3311, drain, waste, and vent patterns.
2. Solvent Cement and Adhesive Primer:
   a. Use PVC solvent cement that has a VOC content of 510 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
   b. Use adhesive primer that has a VOC content of 550 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

PART 3 EXECUTION

3.01 PIPING APPLICATIONS

A. Special pipe fittings with pressure ratings at least equal to piping pressure ratings may be used in applications below, unless otherwise indicated.

B. Flanges and unions may be used on aboveground pressure piping, unless otherwise indicated.

C. Underground, soil, waste, and vent piping NPS 4 and smaller shall be any of the following:
1. Service class, hub-and-spigot, cast-iron soil pipe and fittings; gaskets; and compression joints.
2. Hubless cast-iron soil pipe and fittings; standard, shielded, stainless-steel couplings; and hubless-coupling joints.
3. ABS pipe, ABS socket fittings, and solvent-cemented joints.
4. PVC pipe, PVC socket fittings, and solvent-cemented joints.

D. Underground, soil and waste Piping NPS 5 and larger shall be any of the following:
1. Service class, cast-iron soil pipe and fittings; gaskets; and compression joints.
2. Hubless cast-iron soil pipe and fittings; heavy-duty shielded, stainless-steel couplings; and hubless-coupling joints.
3. ABS pipe, ABS socket fittings, and solvent-cemented joints.
4. ABS pipe, ABS socket fittings, and solvent-cemented joints.
5. PVC pipe, PVC socket fittings, and solvent-cemented joints.

E. Aboveground, soil, waste, and vent piping NPS 4 and smaller shall be any of the following:
1. Service class, hub-and-spigot, cast-iron soil pipe and fittings; gaskets; and compression joints.
2. Hubless cast-iron soil pipe and fittings; standard, shielded, stainless-steel couplings; and hubless-coupling joints.
3. ABS pipe, ABS socket fittings, and solvent-cemented joints.
4. PVC pipe, PVC socket fittings, and solvent-cemented joints.

F. Aboveground, soil, waste, and vent piping NPS 5 and larger shall be any of the following:
1. Service class, cast-iron soil pipe and fittings; gaskets; and compression joints.
2. Hubless cast-iron soil pipe and fittings; heavy-duty shielded, stainless-steel couplings; and hubless-coupling joints.
3. ABS pipe, ABS socket fittings, and solvent-cemented joints.
4. PVC pipe, PVC socket fittings, and solvent-cemented joints.

3.02 PIPING INSTALLATION

A. Sanitary sewer piping outside the building is specified in Division 22 Section "Facility Sanitary Sewers."

B. Basic piping installation requirements are specified in Division 22 Section "Common Work Results for Plumbing."

C. Install cleanouts at grade and extend to where building sanitary drains connect to building sanitary sewers.

D. Install cast-iron soil piping according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook," Chapter IV, "Installation of Cast Iron Soil Pipe and Fittings."

E. Make changes in direction for soil and waste drainage and vent piping using appropriate branches, bends, and long-sweep bends. Sanitary tees and short-sweep 1/4 bends may be used on vertical stacks if change in direction of flow is from horizontal to vertical. Use long-turn, double Y-branch and 1/8-bend fittings if 2 fixtures are installed back to back or side by side with common drain pipe. Straight tees, elbows, and crosses may be used on vent lines. Do not change direction of flow more than 90 degrees. Use proper size of standard increasers and reducers if pipes of different sizes are connected. Reducing size of drainage piping in direction of flow is prohibited.

F. Lay buried building drainage piping beginning at low point of each system. Install true to grades and alignment indicated, with unbroken continuity of invert. Place hub ends of piping upstream. Install required gaskets according to manufacturer's written instructions for use of lubricants, cements, and other installation requirements. Maintain swab in piping and pull past each joint as completed.

G. Install soil and waste drainage and vent piping at the following minimum slopes, unless otherwise indicated:
   1. Building Sanitary Drain: 2 percent downward in direction of flow for piping NPS 3 and smaller; 1 percent downward in direction of flow for piping NPS 4 and larger.
   2. Horizontal Sanitary Drainage Piping: 2 percent downward in direction of flow for piping NPS 3 and smaller; 1 percent downward in direction of flow for piping NPS 34 and larger.
   3. Vent Piping: 1 percent down toward vertical fixture vent or toward vent stack.

H. Sleeves are not required for cast-iron soil piping passing through concrete slabs-on-grade if slab is without membrane waterproofing.

I. Install ABS soil and waste drainage and vent piping according to ASTM D 2661.

J. Install PVC soil and waste drainage and vent piping according to ASTM D 2665.

K. Install underground ABS and PVC soil and waste drainage piping according to ASTM D 2321.

L. Do not enclose, cover, or put piping into operation until it is inspected and approved by authorities having jurisdiction.

M. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Division 22 Section "Sleeves and Sleeve Seals for Plumbing Piping."

N. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Division 22 Section "Sleeves and Sleeve Seals for Plumbing Piping."

O. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Division 22 Section "Escutcheons for Plumbing Piping."

P. Above ground ABS or PVC horizontal or vertical lengths greater than 30 feet in total length must be installed according to IAPMO 5-2006 and 9-2006. Thermal expansion and contraction may be controlled by offsets, expansion joints or restraints. Offsets must be 24 inches using 45-degree fittings every 30 feet. A cleanout must be provided in a drainage pipe for each aggregate horizontal change of direction exceeding 135 degrees. Cleanouts and expansion joints must be installed in an accessible location.

Q. ABS or PVC may not be used if located above a ceiling that is considered a mechanical plenum.

3.03 JOINT CONSTRUCTION

A. Basic piping joint construction requirements are specified in Division 22 Section "Common Work Results for Plumbing."

B. Cast-Iron, Soil-Piping Joints: Make joints according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook," Chapter IV, "Installation of Cast Iron Soil Pipe and Fittings."
   1. Gasketed Joints: Make with rubber gasket matching class of pipe and fittings.
   2. Hubless Joints: Make with rubber gasket and sleeve or clamp.

C. PVC Nonpressure Piping Joints: Join piping according to ASTM D 2665.

3.04 VALVE INSTALLATION

A. General-duty valves are specified in Division 22 Section "General-Duty Valves for Plumbing Piping."

B. Shutoff Valves: Install shutoff valve on each sewage pump discharge.
   1. Use gate or full-port ball valve for piping NPS 2 and smaller.
   2. Use gate valve for piping NPS 2-1/2 and larger.

C. Check Valves: Install swing check valve, downstream from shutoff valve, on each sewage pump discharge.

D. Backwater Valves: Install backwater valves in piping subject to sewage backflow.
   1. Horizontal Piping: Horizontal backwater valves. Use normally closed type, unless otherwise indicated.
   2. Install backwater valves in accessible locations.
   3. Backwater valves are specified in Division 22 Section "Sanitary Waste Piping Specialties."

3.05 HANGER AND SUPPORT INSTALLATION

A. Pipe hangers and supports are specified in Division 22 Section "Hangers and Supports for Plumbing Piping and Equipment." Install the following:
   1. Vertical Piping: MSS Type 8 or Type 42, clamps.
   2. Individual, Straight, Horizontal Piping Runs: According to the following:
      a. 100 Feet and Less: MSS Type 1, adjustable, steel clevis hangers.
      b. Longer Than 100 Feet: MSS Type 43, adjustable roller hangers.
      c. Longer Than 100 Feet, if Indicated: MSS Type 49, spring cushion rolls.

B. Install supports according to Division 22 Section "Hangers and Supports for Plumbing Piping and Equipment."

C. Support vertical piping and tubing at base and at each floor.

D. Rod diameter may be reduced 1 size for double-rod hangers, with 3/8-inch minimum rods.

E. Install hangers for cast-iron soil piping with the following maximum horizontal spacing and minimum rod diameters:
   1. NPS 1-1/2 and NPS 2: 60 inches with 3/8-inch rod.
   2. NPS 3: 60 inches with 1/2-inch rod.
   3. NPS 4 and NPS 5: 60 inches with 5/8-inch rod.
   4. NPS 6: 60 inches with 3/4-inch rod.
   5. Spacing every other joint unless over 4 feet, then support each joint.
      a. Support adjacent to joint not to exceed 18 inches.
      b. Brace not to exceed 40-foot intervals to prevent horizontal movement.
      c. Support at each horizontal branch connection.

F. Install supports for vertical cast-iron soil piping every 15 feet.

G. Install hangers for steel piping with the following maximum horizontal spacing and minimum rod diameters:
   1. NPS 1-1/4: 84 inches with 3/8-inch rod.
   2. NPS 1-1/2: 108 inches with 3/8-inch rod.
   3. NPS 2: 10 feet with 3/8-inch rod.
   4. NPS 2-1/2: 11 feet with 1/2-inch rod.
   5. NPS 3: 12 feet with 1/2-inch rod.
   6. NPS 4 and NPS 5: 12 feet with 5/8-inch rod.
   7. NPS 6: 12 feet with 3/4-inch rod.

H. Install supports for vertical steel piping every 15 feet.

I. Install hangers for ABS and PVC piping with the following maximum horizontal spacing and minimum rod diameters:
   1. NPS 1-1/2 and NPS 2: 48 inches with 3/8-inch rod.
   2. NPS 3: 48 inches with 1/2-inch rod.
   3. NPS 4 and NPS 5: 48 inches with 5/8-inch rod.
   4. NPS 6: 48 inches with 3/4-inch rod.

J. Install supports for vertical ABS and PVC piping every 48 inches.

K. Support piping and tubing not listed above according to MSS SP-69 and manufacturer's written instructions.

3.06 CONNECTIONS

A. Connect soil and waste piping to exterior sanitary sewerage piping. Use transition fitting to join dissimilar piping materials.

B. Connect drainage and vent piping to the following:
   1. Plumbing Fixtures: Connect drainage piping in sizes indicated, but not smaller than required by plumbing code. Refer to Division 22 Section "Sanitary Waste Piping Specialties."
   2. Plumbing Fixtures and Equipment: Connect atmospheric vent piping in sizes indicated, but not smaller than required by authorities having jurisdiction.
   3. Plumbing Specialties: Connect drainage and vent piping in sizes indicated, but not smaller than required by plumbing code. Refer to Division 22 Section "Sanitary Waste Piping Specialties."
   4. Equipment: Connect drainage piping as indicated. Provide shutoff valve, if indicated, and union for each connection. Use flanges instead of unions for connections NPS 2-1/2 and larger.

3.07 FIELD QUALITY CONTROL

A. During installation, notify authorities having jurisdiction at least 24 hours before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction.
   1. Roughing-in Inspection: Arrange for inspection of piping before concealing or closing-in after roughing-in and before setting fixtures.
   2. Final Inspection: Arrange for final inspection by authorities having jurisdiction to observe tests specified below and to ensure compliance with requirements.

B. Reinspection: If authorities having jurisdiction find that piping will not pass test or inspection, make required corrections and arrange for reinspection.

C. Reports: Prepare inspection reports and have them signed by authorities having jurisdiction.

D. Test sanitary drainage and vent piping according to procedures of authorities having jurisdiction.

1. Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
2. Prepare reports for tests and required corrective action.

3.08 CLEANING

A. Clean interior of piping. Remove dirt and debris as work progresses.

B. Protect drains during remainder of construction period to avoid clogging with dirt and debris and to prevent damage from traffic and construction work.

C. Place plugs in ends of uncompleted piping at end of day and when work stops.

3.09 PROTECTION

A. Exposed ABS and PVC Piping: Protect plumbing vents exposed to sunlight with two coats of water-based latex paint.

END OF SECTION

SECTION 22 13 19
SANITARY WASTE PIPING SPECIALTIES

PART 1 GENERAL

1.01 SUMMARY

A. This Section includes the following sanitary drainage piping specialties:
   1. Cleanouts.
   2. Floor drains.
   3. Miscellaneous sanitary drainage piping specialties.

1.02 QUALITY ASSURANCE

A. Drainage piping specialties shall bear label, stamp, or other markings of specified testing agency.

PART 2 PRODUCTS

2.01 CLEANOUTS

A. Exposed Cleanouts (CO):
   1. Manufacturers: Subject to compliance with requirements, provide Josam 58510 or a comparable product by one of the following (Substitutions: See Section 01 6000 – Product Requirements):
      a. Josam Company; Josam Div.
      b. MIFAB, Inc.
      c. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
      d. Tyler Pipe; Wade Div.
      e. Watts Drainage Products Inc.
      f. Zurn Plumbing Products Group; Specification Drainage Operation.
   2. Standard: ASME A112.36.2M for cast iron for cleanout test tee.
   3. Size: Same as connected drainage piping
   4. Body Material: as required to match connected piping.
   5. Closure: Countersunk or raised-head, brass, cast-iron or plastic plug.
   6. Closure Plug Size: Same as or not more than one size smaller than cleanout size.

B. Floor Cleanouts (FCO):
   1. Manufacturer: Subject to compliance with requirements, provide Sioux Chief Manufacturing Company, Inc., Model #834 “Finish Line” adjustable cleanout or a comparable product by one of the following:
      a. Josam Company; Josam Div.
      b. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
      c. Watts Drainage Products Inc.
      d. Zurn Plumbing Products Group
   2. Standard: ASME A112.36.2M for adjustable housing cleanout.
   3. Size: Same as connected branch.
   4. Type: Adjustable housing.
   5. Body or Ferrule: to match piping.
   6. Clamping Device: Not required.
   7. Outlet Connection: Spigot or Threaded.
   8. Closure: Brass plug with straight threads and gasket, Cast-iron plug or Plastic plug to match body.
   9. Adjustable Housing Material: Cast iron or Plastic to match pipe with threads.
   10. Frame and Cover Material and Finish: Nickel-bronze

11. Frame and Cover Shape: Square.
12. Top Loading Classification: Medium Duty.
13. Riser: ASTM A 74, Service class, cast-iron drainage pipe fitting and riser to cleanout.

C. Wall Cleanouts (WCO):
1. Manufacturer: Subject to compliance with requirements, provide Josam 58790 or a comparable product by one of the following (Substitutions: See Section 01 6000 – Product Requirements):
   a. Josam Company; Josam Div.
   b. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
   c. Tyler Pipe; Wade Div.
   d. Watts Drainage Products Inc.
   e. Zurn Plumbing Products Group; Specification Drainage Operation.
   f. Standard: ASME A112.36.2M. Include wall access.
2. Size: Same as connected drainage piping.
3. Body: as required to match connected piping.
4. Closure: Countersunk or raised-head, plug.
5. Closure Plug Size: Same as or not more than one size smaller than cleanout size.
6. Wall Access: Round, flat, chrome-plated brass or stainless-steel cover plate with screw.

2.02 FLOOR DRAINS

A. Floor Drains (FD-1):
1. Manufacturer: Subject to compliance with requirements, provide Sioux Chief Manufacturing Company, Inc., Model #833 “Finish Line” adjustable floor drain:
   a. Josam Company; Josam Div.
   b. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
   c. Watts Drainage Products Inc.
   d. Zurn Plumbing Products Group
2. Standard: ASME A112.6.3.
3. Pattern: Floor drain. With Funnel where noted on plans.
4. Body Material: Ductile Iron.
5. Backwater Valve: Where indicated on plans.
6. Top or Strainer Material: Nickel bronze.
7. Top Shape: Square.

B. Area Drains (AD-1):
1. Manufacturer: Subject to compliance with requirements, provide Sioux Chief Manufacturing Company, Inc., Model #833 “Finish Line” adjustable floor drain:
   a. Josam Company; Josam Div.
   b. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
   c. Watts Drainage Products Inc.
   d. Zurn Plumbing Products Group
2. Standard: ASME A112.6.3.
3. Pattern: Floor drain.
4. Body Material: PVC.
5. Top or Strainer Finish: Nickel bronze.
6. Top Shape: Square.

2.03 FLOOR SINKS

A. Floor Sinks (FS-1):

1. Manufacturer: Subject to compliance with requirements, provide products by one of the following:
   a. Sioux Chief Manufacturing Company, Inc.
   b. Josam Company; Josam Div.
   c. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
   d. Watts Drainage Products Inc.
   e. Zurn Plumbing Products Group
2. Standard: ASME A112.6.3 With backwater valve where noted on plans.
3. Pattern: Deep basin drain with ½ grate.
4. Body Material: Cast iron with acid resistant porcelain enameled coated interior.
5. Strainer: Aluminum internal dome strainer.
6. Seepage Flange: Required.
7. Anchor Flange: Required.
8. Clamping Device: Required.
9. Outlet: Bottom.
10. Dimensions of Top or Strainer: 12x12

2.04 INTERIOR TRENCH DRAINS

A. See drawings for the pool trench drain system and requirements. The Plumbing Contractor in responsible for pool trench drain system.

B. Interior Pool Trench Drains (TD-1):
   1. Manufacturers: Zurn Industries, LLC
      a. Zurn Industries, LLC.: Model Z888-4-PVSS-BG (NO EXCEPTIONS)
   2. Grate and Frame: Heavy Duty Stainless Steel Frame.
   3. Body Material: high density polyethylene.
   4. Outlet: End.
   5. Fittings: Manufactured only.
   6. Provide Sioux Chief 875-4A cleanout bushing with 852-4PNQ adjustable cover with nickel bronze square top. Refer to detail on drawings.

C. Shower Area Trench Drains (TD-2):
   1. Manufacturers: Zurn
      a. Zurn ZS880 (NO EXCEPTIONS)
   2. Grate: Tile In-Lay Grate
   3. Body Material: Stainless steel
   4. Outlet: Bottom.

D. Whirlpool Suite Trench Drains (TD-3):
   1. Manufacturers: Zurn
      a. Zurn ZS880 (NO EXCEPTIONS)
   2. Grate: Tile In-Lay Grate
   3. Body Material: Stainless steel
   4. Outlet: Bottom.

2.05 MISCELLANEOUS SANITARY DRAINAGE PIPING SPECIALTIES

A. Open Drains:
   1. Description: Shop or field fabricate from ASTM A 74, Service class, hub-and-spigot, cast-iron, soil-pipe fittings. Include P-trap, hub-and-spigot riser section; and where required, increaser fitting joined with ASTM C 564, rubber gaskets.
   2. Size: Same as connected waste piping with increaser fitting of size indicated.

B. Deep-Seal Traps:
   1. Description: Cast-iron or bronze casting, with inlet and outlet matching connected piping and cleanout trap-seal primer valve connection.
   2. Size: Same as connected waste piping.
      a. NPS 2: 4-inch-minimum water seal.
      b. NPS 2-1/2 and Larger: 5-inch-minimum water seal.

C. Stack Flashing Fittings: Johnson Mansville
   1. Description: Counterflashing-type, cast-iron fitting, with bottom recess for terminating roof membrane, and with threaded or hub top for extending vent pipe.
   2. Size: Same as connected stack vent or vent stack.

D. Vent Caps:
   1. Description: Cast-iron body with threaded or hub inlet and vandal-proof design. Include vented hood and setscrews to secure to vent pipe.
   2. Size: Same as connected stack vent or vent stack.

E. Washer Drain Pan:
   1. Description: One-Piece moded fiberglass construction. Removable aluminum front threshold.
   2. Manufacturer: Subject to compliance with requirements, provide Mustee Model 98 Durapan or a comparable product by one of the following (Substitutions: See Section 01 6000 – Product Requirements):
      a. FloodSaver.
      b. Oatley.

PART 3 EXECUTION

3.01 INSTALLATION

A. Refer to Division 22 Section "Common Work Results for Plumbing" for piping joining materials, joint construction, and basic installation requirements.

B. Install cleanouts in aboveground piping and building drain piping according to the following, unless otherwise indicated:
   1. Size same as drainage piping up to NPS 4. Use NPS 4 for larger drainage piping unless larger cleanout is indicated.
   2. Locate at each change in direction of piping greater than 45 degrees.
   3. Locate at minimum intervals of 50 feet for piping NPS 4 and smaller and 100 feet for larger piping.
   4. Locate at base of each vertical soil and waste stack.

C. For floor cleanouts for piping below floors, install cleanout deck plates with top flush with finished floor.

D. For cleanouts located in concealed piping, install cleanout wall access covers, of types indicated, with frame and cover flush with finished wall.

E. Install floor drains at low points of surface areas to be drained. Set grates of drains flush with finished floor, unless otherwise indicated.
   1. Position floor drains for easy access and maintenance.
   2. Set floor drains below elevation of surrounding finished floor to allow floor drainage. Set with grates depressed according to the following drainage area radii:
      a. Radius, 30 Inches or Less: Equivalent to 1 percent slope, but not less than 1/4-inch total depression.
      b. Radius, 30 to 60 Inches: Equivalent to 1 percent slope.

c. Radius, 60 Inches or Larger: Equivalent to 1 percent slope, but not greater than 1-inch total depression.
d. Install floor-drain flashing collar or flange so no leakage occurs between drain and adjoining flooring. Maintain integrity of waterproof membranes where penetrated.

3. Install individual traps for floor drains connected to sanitary building drain, unless otherwise indicated.

F. Install flashing fittings on sanitary stack vents and vent stacks that extend through roof.

G. Install deep-seal traps on floor drains and other waste outlets, if indicated.

H. Install floor-drain, trap-seal primer fittings on inlet to floor drains that require trap-seal primer connection.
1. Exception: Fitting may be omitted if trap has trap-seal primer connection.
2. Size: Same as floor drain inlet.

I. Install sleeve flashing device with each riser and stack passing through floors with waterproof membrane.

J. Install traps on plumbing specialty drain outlets. Omit traps on indirect wastes unless trap is indicated.

K. Install washer drain pan under all washing machines. Pipe outlet to floor drain.

3.02 CONNECTIONS

A. Piping installation requirements are specified in other Division 22 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping adjacent to equipment to allow service and maintenance.

3.03 LABELING AND IDENTIFYING

A. Equipment Nameplates and Signs: Install engraved plastic-laminate equipment nameplate or sign on or near each grease interceptor.

3.04 PROTECTION

A. Protect drains during remainder of construction period to avoid clogging with dirt or debris and to prevent damage from traffic or construction work.

B. Place plugs in ends of uncompleted piping at end of each day or when work stops.

END OF SECTION

This page intentionally left blank

SECTION 22 13 23
SANITARY WASTE INTERCEPTORS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Grease interceptors.

1.02 ACTION SUBMITTALS

A. Shop Drawings: For each type and size of interceptor indicated.
   1. Include materials of construction, dimensions, rated capacities, retention capacities, location and size of each pipe connection, furnished specialties, and accessories.

B. Drainage piping specialties shall bear label, stamp, or other markings of specified testing agency.

PART 2 PRODUCTS

2.01 GREASE INTERCEPTORS

A. Grease Interceptors:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Schier Products Company.
      b. Zurn Industries, LLC.
   2. Standard: PDI G101 and ASME A112.14.3, for intercepting and retaining FOG from food-preparation wastewater.
   3. Cover: Heavy vehicle traffic, cast iron, manhole covers.
   4. Manhole cover: Bolt or locking with air tight gasket seal.
   5. Nameplate: Permanent 4” x 6” label with the words “grease interceptor”.
   6. Interceptors must meet the local codes and City/County ordinances.

PART 3 EXECUTION

3.01 EARTHWORK

A. Excavating, trenching, and backfilling are specified in Section 312000 "Earth Moving."

3.02 INSTALLATION

A. Equipment Mounting:
   1. Install grease interceptors grease-removal devices [and] solids interceptors on cast-in-place concrete equipment base(s).
   2. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete."

B. Install precast concrete interceptors according to ASTM C891.

C. Set interceptors level and plumb.

D. Install manhole risers from top of underground concrete interceptors to manholes and gratings at finished grade.

E. Set tops of manhole frames and covers flush with finished surface in pavements.
   1. Set tops [3 inches] above finish surface elsewhere unless otherwise indicated.

F. Set tops of grating frames and grates flush with finished surface.

G. Set [metal] [and] [plastic] interceptors level and plumb.

H. Set tops of metal interceptor covers flush with finished surface in pavements.
   1. Set tops [3 inches] above finish surface elsewhere unless otherwise indicated.

I. Install piping and oil storage tanks according to Section 231113 "Facility Fuel-Oil Piping."

J. Install grease interceptors, including trapping, venting, and flow-control fitting, according to authorities having jurisdiction and with clear space for servicing.
   1. Above-Floor Installation: Set unit with bottom resting on floor unless otherwise indicated.
   2. Flush with Floor Installation: Set unit and extension, if required, with cover flush with finished floor.
   3. Recessed Floor Installation: Set unit in receiver housing having bottom or cradle supports, with receiver housing cover flush with finished floor.
   4. Install cleanout immediately downstream from interceptors not having integral cleanout on outlet.

K. Install grease-removal devices on floor. Install trap, vent, and flow-control fitting according to authorities having jurisdiction.
   1. Install control panel adjacent to unit unless otherwise indicated.

L. Install oil interceptors, including trapping, venting, and flow-control fitting, according to authorities having jurisdiction and with clear space for servicing.
   1. Coordinate oil-interceptor storage tank and gravity drain with Section 231113 "Facility Fuel-Oil Piping."

M. Install solids interceptors with cleanout immediately downstream from interceptors that do not have integral cleanout on outlet.
   1. Install trap on interceptors that do not have integral trap and are connected to sanitary drainage and vent systems.

3.03 PIPING CONNECTIONS

A. Piping installation requirements are specified in Section 221316 "Sanitary Waste and Vent Piping." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Make piping connections between interceptors and piping systems.

3.04 IDENTIFICATION

A. Identification materials and installation are specified in Section 312000 "Earth Moving."
   1. Arrange for installation of green warning tapes directly over piping and at outside edges of underground interceptors.
   2. Use warning tapes or detectable warning tape over ferrous piping.
   3. Use detectable warning tape over nonferrous piping and over edges of underground structures.

B. Equipment Nameplates and Signs: Install engraved plastic-laminate equipment nameplate or sign on or near each of the following:
   1. Grease interceptors.
   2. Grease-removal devices.
   3. Oil interceptors.
   4. Solids interceptors.

3.05 PROTECTION

A. Protect sanitary waste interceptors from damage during construction period.

B. Repair damage to adjacent materials caused by sanitary waste interceptor installation.

END OF SECTION

SECTION 22 14 13
FACILITY STORM DRAINAGE PIPING

PART 1 GENERAL

1.01 SUMMARY

A. All plumbing shall be installed in accordance with Minnesota Plumbing code.

B. This Section includes the following storm drainage piping inside the building.
   1. Pipe, tube, and fittings.
   2. Special pipe fittings.

1.02 PERFORMANCE REQUIREMENTS

A. Components and installation shall be capable of withstanding the following minimum working pressure, unless otherwise indicated:
   1. Storm Drainage Piping: 10-foot head of water.

1.03 SUBMITTALS

A. Product Data: For each type indicated.

1.04 INFORMATIVE SUBMITTALS

A. Field quality-control inspection and test reports.

B. Laboratory Test Reports: For adhesives, indicating compliance with requirements for low-emitting materials.

1.05 QUALITY ASSURANCE

A. Piping materials shall bear label, stamp, or other markings of specified testing agency.

B. Comply with NSF 14, "Plastics Piping Systems Components and Related Materials," for plastic piping components. Include marking with "NSF-drain" for plastic drain piping.

PART 2 PRODUCTS

2.01 PIPING MATERIALS

A. Hub-and-Spigot, Cast-Iron Pipe and Fittings: ASTM A 74, Service class.
   1. Gaskets: ASTM C 564, rubber.

B. Hubless Cast-Iron Pipe and Fittings: CISPI 301.
   1. Shielded Couplings: ASTM C 1277 assembly of metal shield or housing, corrosion-resistant fasteners, and rubber sleeve with integral, center pipe stop.
      a. Standard, Shielded, Stainless-Steel Couplings: CISPI 310, with stainless-steel corrugated shield; stainless-steel bands and tightening devices; and ASTM C 564, rubber sleeve.
      b. Heavy-Duty, Shielded, Stainless-Steel Couplings: With stainless-steel shield, stainless-steel bands and tightening devices, and ASTM C 564, rubber sleeve.

C. PVC Pipe: ASTM D 2665, solid-wall drain, waste, and vent.
   1. PVC Socket Fittings: ASTM D 2665, made to ASTM D 3311, drain, waste, and vent patterns.
   2. Solvent Cement and Adhesive Primer:
      a. Use PVC solvent cement that has a VOC content of 510 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
      b. Use adhesive primer that has a VOC content of 550 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.02 ABS PIPE AND FITTINGS

A. ABS Pipe: ASTM D 2661, NSF14, CSA-B181.1, CS270, ASTM D 2661, Schedule 40, solid wall.

B. ABS Socket Fittings: made to ASTM D 3311, drain, waste, and vent patterns.

C. Solvent Cement and Adhesive Primer:
   1. ABS solvent cement shall have a VOC content of 325 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
   2. Solvent cement shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
   3. Use adhesive primer that has a VOC content of 550 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.03 PVC PIPE AND FITTINGS

A. PVC unthreaded Pipe: ASTM D 2665, NSF14, CSA-B181.2, CS272, ASTM D 2665, Schedule 40, solid-wall drain, waste, and vent.

B. PVC Socket Fittings: ASTM D 2665, socket type, made to ASTM D 3311, drain, waste, and vent patterns.

C. Solvent Cement and Adhesive Primer:
   1. Adhesive primer shall have a VOC content of 510 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
   2. Adhesive primer shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
   3. Use adhesive primer that has a VOC content of 550 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.04 SPECIALTY PIPE FITTINGS

A. Transition Couplings:
   1. General Requirements: Fitting or device for joining piping with small differences in OD's or of different materials. Include end connections same size as and compatible with pipes to be joined.
   2. Fitting-Type Transition Couplings: Manufactured piping coupling or specified piping system fitting.
   3. Unshielded, Nonpressure Transition Couplings:
      a. Manufacturers: Subject to compliance with requirements, provide products by one of the following (Substitutions: See Section 01 60 .00 – Product Requirements):
         1) Dallas Specialty & Mfg. Co.
         2) Fernco Inc.
         3) Mission Rubber Company; a division of MCP Industries, Inc.
         4) Plastic Oddities; a division of Diverse Corporate Technologies, Inc.
      b. Standard: ASTM C 1173.
      c. Description: Elastomeric, sleeve-type, reducing or transition pattern. Include shear ring and corrosion-resistant-metal tension band and tightening mechanism on each end.
      d. Sleeve Materials:
         1) For Cast-Iron Soil Pipes: ASTM C 564, rubber.
         2) For Plastic Pipes: ASTM F 477, elastomeric seal or ASTM D 5926, PVC.

3) For Dissimilar Pipes: ASTM D 5926, PVC or other material compatible with pipe materials being joined.

4. Shielded, Nonpressure Transition Couplings:
   a. Manufacturers: Subject to compliance with requirements, provide products by one of the following (Substitutions: See Section 01 60 .00 – Product Requirements):
      1) Cascade Waterworks Mfg. Co.
      2) Mission Rubber Company; a division of MCP Industries, Inc.
   b. Standard: ASTM C 1460.
   c. Description: Elastomeric or rubber sleeve with full-length, corrosion-resistant outer shield and corrosion-resistant-metal tension band and tightening mechanism on each end.

PART 3 EXECUTION

3.01 PIPING INSTALLATION

A. Storm sewer and drainage piping outside the building are specified in Division 33 Section "Storm Utility Drainage Piping."

B. Basic piping installation requirements are specified in Division 22 Section "Common Work Results for Plumbing."

C. Install cleanouts at grade and extend to where building storm drains connect to building storm sewers. Cleanouts are specified in Division 22 Section "Storm Drainage Piping Specialties."

D. Install cast-iron soil piping according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook," Chapter IV, "Installation of Cast Iron Soil Pipe and Fittings."

E. Make changes in direction for storm piping using appropriate branches, bends, and long-sweep bends. Do not change direction of flow more than 90 degrees. Use proper size of standard increasers and reducers if pipes of different sizes are connected. Reducing size of drainage piping in direction of flow is prohibited.

F. Lay buried building drain piping beginning at low point of each system. Install true to grades and alignment indicated, with unbroken continuity of invert. Place hub ends of piping upstream. Install required gaskets according to manufacturer's written instructions for use of lubricants, cements, and other installation requirements. Maintain swab in piping and pull past each joint as completed.

G. Install storm drainage piping at the following minimum slopes, unless otherwise indicated:
   1. Building Storm Drain: 1 percent downward in direction of flow for piping NPS 3 and smaller; 1 percent downward in direction of flow for piping NPS 4 and larger.

H. Sleeves are not required for cast-iron soil piping passing through concrete slabs-on-grade if slab is without membrane waterproofing.

I. Install ABS storm drainage piping according to ASTM D 2661.

J. Install PVC storm drainage piping according to ASTM D 2665.

K. Install underground ABS and PVC storm drainage piping according to ASTM D 2321.

L. Plumbing Specialties:
   1. Install backwater valves in storm drainage gravity-flow piping. Comply with requirements for backwater valves specified in Section 22 14 .23 "Storm Drainage Piping Specialties."
   2. Install cleanouts at grade and extend to where building storm drains connect to building storm sewers in storm drainage gravity-flow piping. Install cleanout fitting with closure plug inside the building in storm drainage force-main piping. Comply with requirements for cleanouts specified in Section 22 14 .23 "Storm Drainage Piping Specialties."

3. Install drains in storm drainage gravity-flow piping. Comply with requirements for drains specified in Section 22 14 .23 "Storm Drainage Piping Specialties."

M. Do not enclose, cover, or put piping into operation until it is inspected and approved by authorities having jurisdiction.

N. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Division 22 Section "Sleeves and Sleeve Seals for Plumbing Piping."

O. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Division 22 Section "Sleeves and Sleeve Seals for Plumbing Piping."

P. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Division 22 Section "Escutcheons for Plumbing Piping."

Q. In no case shall water from roof or the sump discharge be allowed to flow upon the public sidewalk, Minnesota Rules, part 1101.1.

R. Draintile material must meet Minnesota Rules, part 1101.5 and have proper drainage fittings. Verify that the draintile sump pump discharges into an approved point of disposal.

S. Above ground ABS or PVC horizontal or vertical lengths greater than 30 feet in total length must be installed according to IAPMO 5-2006 and 9-2006. Thermal expansion and contraction may be controlled by offsets, expansion joints or restraints. Offsets must be 24 inches using 45-degree fittings every 30 feet. A cleanout must be provided in a drainage pipe for each aggregate horizontal change of direction exceeding 135 degrees. Cleanouts and expansion joints must be installed in an accessible location.

T. ABS or PVC may not be used if located above a ceiling that is considered a mechanical plenum.

3.02 JOINT CONSTRUCTION

A. Basic piping joint construction requirements are specified in Division 22 Section "Common Work Results for Plumbing."

B. Hub-and-Spigot, Cast-Iron Soil Piping Gasketed Joints: Join according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for compression joints.

C. Hubless Cast-Iron Soil Piping Coupled Joints: Join according to CISPI 310 and CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for hubless-coupling joints.

D. Plastic, Nonpressure-Piping, Solvent-Cemented Joints: Clean and dry joining surfaces. Join pipe and fittings according to the following:
   1. Comply with ASTM F 402 for safe-handling practice of cleaners, primers, and solvent cements.
   2. ABS Piping: Join according to ASTM D 2235 and ASTM D 2661 Appendixes.
   3. PVC Piping: Join according to ASTM D 2855 and ASTM D 2665 Appendixes.

3.03 HANGER AND SUPPORT INSTALLATION

A. Pipe hangers and supports are specified in Division 22 Section "Hangers and Supports for Plumbing Piping and Equipment." Install the following:
   1. Vertical Piping: MSS Type 8 or Type 42, clamps.
   2. Individual, Straight, Horizontal Piping Runs: According to the following:
      a. 100 Feet and Less: MSS Type 1, adjustable, steel clevis hangers.
      b. Longer Than 100 Feet: MSS Type 43, adjustable roller hangers.
      c. Longer Than 100 Feet, if Indicated: MSS Type 49, spring cushion rolls.

3. Multiple, Straight, Horizontal Piping Runs 100 Feet or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze.
4. Base of Vertical Piping: MSS Type 52, spring hangers.

B. Install supports according to Division 22 Section "Hangers and Supports for Plumbing Piping and Equipment."

C. Support vertical piping and tubing at base and at each floor.

D. Rod diameter may be reduced 1 size for double-rod hangers, with 3/8-inch minimum rods.

E. Install hangers for cast-iron soil piping with the following maximum horizontal spacing and minimum rod diameters:
1. NPS 1-1/2 and NPS 2: 60 inches with 3/8-inch rod.
2. NPS 3: 60 inches with 1/2-inch rod.
3. NPS 4 and NPS 5: 60 inches with 5/8-inch rod.
4. NPS 6: 60 inches with 3/4-inch rod.
5. Spacing for 10-foot lengths may be increased to 10 feet. Spacing for fittings is limited to 60 inches.

F. Install supports for vertical cast-iron soil piping every 15 feet.

G. Install hangers for ABS and PVC piping with the following maximum horizontal spacing and minimum rod diameters:
1. NPS 1-1/2 and NPS 2: 32 inches with 3/8-inch rod.
2. NPS 3: 32 inches with 1/2-inch rod.
3. NPS 4 and NPS 5: 32 inches with 5/8-inch rod.
4. NPS 6: 32 inches with 3/4-inch rod.

H. Install supports for vertical ABS and PVC piping every 48 inches.

I. Support piping and tubing not listed above according to MSS SP-69 and manufacturer's written instructions.

3.04 CONNECTIONS

A. Connect interior storm drainage piping to exterior storm drainage piping. Use transition fitting to join dissimilar piping materials.

B. Connect storm drainage piping to roof drains and storm drainage specialties.

3.05 FIELD QUALITY CONTROL

A. During installation, notify authorities having jurisdiction at least 24 hours before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction.
1. Roughing-in Inspection: Arrange for inspection of piping before concealing or closing-in after roughing-in.
2. Final Inspection: Arrange for final inspection by authorities having jurisdiction to observe tests specified below and to ensure compliance with requirements.

B. Reinspection: If authorities having jurisdiction find that piping will not pass test or inspection, make required corrections and arrange for reinspection.

C. Reports: Prepare inspection reports and have them signed by authorities having jurisdiction.

D. Test storm drainage piping according to procedures of authorities having jurisdiction.

3.06 CLEANING

A. Clean interior of piping. Remove dirt and debris as work progresses.

B. Protect drains during remainder of construction period to avoid clogging with dirt and debris and to prevent damage from traffic and construction work.

C. Place plugs in ends of uncompleted piping at end of day and when work stops.

3.07 PIPING APPLICATIONS

A. Special pipe fittings with pressure ratings at least equal to piping pressure ratings may be used in applications below, unless otherwise indicated.

B. Underground storm drainage piping NPS 15 and smaller shall be any of the following:
   1. Service class, cast-iron soil pipe and fittings; gaskets; and gasketed joints.
   2. Hubless cast-iron soil pipe and fittings; standard, shielded, stainless-steel couplings; and coupled joints.
   3. ABS pipe, ABS socket fittings, and solvent-cemented joints.
   4. PVC pipe, PVC socket fittings, and solvent-cemented joints.

C. Aboveground storm drainage piping NPS 15 and smaller shall be any of the following:
   1. Service class, cast-iron soil pipe and fittings; gaskets; and gasketed joints.
   2. Hubless cast-iron soil pipe and fittings; standard, shielded, stainless-steel couplings; and coupled joints.
   3. ABS pipe, ABS socket fittings, and solvent-cemented joints.
   4. PVC pipe, PVC socket fittings, and solvent-cemented joints.

END OF SECTION

SECTION 22 14 20
SUBDRAINAGE

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Perforated-wall pipe and fittings.
   2. Geotextile filter fabrics.

1.02 ACTION SUBMITTALS

A. Product Data: For geotextile filter fabrics.

PART 2 PRODUCTS

2.01 PERFORATED-WALL PIPES AND FITTINGS

A. Perforated PE Pipe and Fittings: ASTM F 405 or AASHTO M 252, Type CP; corrugated, for coupled joints.

2.02 SOIL MATERIALS

A. Soil materials are specified in Section 02 30 .00 "Earthwork."

2.03 WATERPROOFING FELTS

A. Material: Comply with ASTM D 226, Type I, asphalt and/or ASTM D 227, coal-tar-saturated organic felt.

2.04 GEOTEXTILE FILTER FABRICS

A. Description: Fabric of PP or polyester fibers or combination of both, with flow rate range from 110 to 330 gpm/sq. ft. when tested according to ASTM D 4491.

B. Structure Type: Nonwoven, needle-punched continuous filament.
   1. Survivability: AASHTO M 288 Class 2.
   2. Styles: Flat and sock.

PART 3 EXECUTION

3.01 EARTHWORK

A. Excavating, trenching, and backfilling are specified in Section 31 23 .00 "Excavation and Fill."

3.02 FOUNDATION DRAINAGE INSTALLATION

A. Place impervious fill material on subgrade adjacent to bottom of footing after concrete footing forms have been removed. Place and compact impervious fill to dimensions indicated, but not less than 12 inches deep and 12 inches wide.

B. Lay flat-style geotextile filter fabric in trench and overlap trench sides.

C. Place supporting layer of drainage course over compacted subgrade and geotextile filter fabric, to compacted depth of not less than 6 inches.

D. Encase pipe with sock-style geotextile filter fabric before installing pipe. Connect sock sections with adhesive and/or tape.

E. Install drainage piping as indicated in Part 3 "Piping Installation" Article for foundation subdrainage.

F. Add drainage course to width of at least 6 inches on side away from wall and to top of pipe to perform tests.

G. After satisfactory testing, cover drainage piping to width of at least 12 inches on side away from footing and above top of pipe to within 12 inches of finish grade.

H. Install drainage course and wrap top of drainage course with flat-style geotextile filter fabric.

I. Place layer of flat-style geotextile filter fabric over top of drainage course, overlapping edges at least 6 inches.

J. Place backfill material over compacted drainage course. Place material in loose-depth layers not exceeding 6 inches. Thoroughly compact each layer. Final backfill to finish elevations and slope away from building.

3.03 UNDERSLAB DRAINAGE INSTALLATION

A. Excavate for underslab drainage system after subgrade material has been compacted but before drainage course has been placed. Include horizontal distance of at least 6 inches between drainage pipe and trench walls. Grade bottom of trench excavations to required slope, and compact to firm, solid bed for drainage system.

B. Lay flat-style geotextile filter fabric in trench and overlap trench sides.

C. Place supporting layer of drainage course over compacted subgrade and geotextile filter fabric, to compacted depth of not less than 6 inches.

D. Encase pipe with sock-style geotextile filter fabric before installing pipe. Connect sock sections with adhesive and/or tape.

E. Install drainage piping as indicated in Part 3 "Piping Installation" Article for underslab subdrainage.

F. Add drainage course to width of at least 6 inches on side away from wall and to top of pipe to perform tests.

G. After satisfactory testing, cover drainage piping with drainage course to elevation of bottom of slab, and compact and wrap top of drainage course with flat-style geotextile filter fabric.

3.04 PIPING INSTALLATION

A. Install piping beginning at low points of system, true to grades and alignment indicated, with unbroken continuity of invert. Bed piping with full bearing in filtering material. Install gaskets, seals, sleeves, and couplings according to manufacturer's written instructions and other requirements indicated.
   1. Foundation Subdrainage: Install piping level and with a minimum cover of 36 inches unless otherwise indicated.
   2. Underslab Subdrainage: Install piping level.
   3. Retaining-Wall Subdrainage: When water discharges at end of wall into stormwater piping system, install piping level and with a minimum cover of 36 inches unless otherwise indicated.
   4. Lay perforated pipe with perforations down.
   5. Excavate recesses in trench bottom for bell ends of pipe. Lay pipe with bells facing upslope and with spigot end entered fully into adjacent bell.

B. Use increasers, reducers, and couplings made for different sizes or materials of pipes and fittings being connected. Reduction of pipe size in direction of flow is prohibited.

C. Install thermoplastic piping according to ASTM D 2321.

3.05 PIPE JOINT CONSTRUCTION

A. Join perforated PE pipe and fittings with couplings according to ASTM D 3212 with loose banded, coupled, or push-on joints.

B. Special Pipe Couplings: Join piping made of different materials and dimensions with special couplings made for this application. Use couplings that are compatible with and fit materials and dimensions of both pipes.

3.06 BACKWATER VALVE INSTALLATION

A. Comply with requirements for backwater valves specified in Division 22 Section "Storm Drainage Piping Specialties."

B. Install horizontal backwater valves in header piping downstream from perforated subdrainage piping.

C. Install horizontal backwater valves in piping in manholes where indicated.

3.07 CLEANOUT INSTALLATION

A. Comply with requirements for cleanouts specified in Section 33 30 .00 "Storm Drainage Utilities."

B. Cleanouts for Foundation Subdrainage:
   1. Install cleanouts from piping to grade. Locate cleanouts at beginning of piping run and at changes in direction. Install fittings so cleanouts open in direction of flow in piping.
   2. In nonvehicular-traffic areas, use NPS 4PVC pipe and fittings for piping branch fittings and riser extensions to cleanout. Set top of cleanout 1 inch above grade.

C. Cleanouts for Underslab Subdrainage:
   1. Install cleanouts and riser extensions from piping to top of slab. Locate cleanouts at beginning of piping run and at changes in direction. Install fittings so cleanouts open in direction of flow in piping.
   2. Use NPS 4cast-iron soil pipe and fittings for piping branch fittings and riser extensions to cleanout flush with top of slab.

3.08 CONNECTIONS

A. Comply with requirements for piping specified in Section 33 30 .00 "Storm Drainage Utilities." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Connect low elevations of subdrainage system to building's solid-wall-piping storm drainage system.

C. Where required, connect low elevations of foundation and/or underslab subdrainage to stormwater sump pumps. Comply with requirements for sump pumps specified in Section 22 14 .29 "Sump Pumps."

3.09 FIELD QUALITY CONTROL

A. Tests and Inspections:
   1. After installing drainage course to top of piping, test drain piping with water to ensure free flow before backfilling.
   2. Remove obstructions, replace damaged components, and repeat test until results are satisfactory.

B. Drain piping will be considered defective if it does not pass tests and inspections.

C. Prepare test and inspection reports.

3.10 CLEANING

A. Clear interior of installed piping and structures of dirt and other superfluous material as work progresses. Maintain swab or drag in piping and pull past each joint as it is completed. Place plugs in ends of uncompleted pipe at end of each day or when work stops.

END OF SECTION

This page intentionally left blank

SECTION 22 14 23
STORM DRAINAGE PIPING SPECIALTIES

PART 1 GENERAL

1.01 SUMMARY

A. All plumbing shall be installed in accordance with Minnesota Plumbing Code.

B. Section Includes:
   1. Roof drains.
   2. Pool trench drains.
   3. Miscellaneous storm drainage piping specialties.
   4. Cleanouts.
   5. Backwater valves.

1.02 SUBMITTALS

A. Product Data: For each type of product indicated.

1.03 QUALITY ASSURANCE

A. Drainage piping specialties shall bear label, stamp, or other markings of specified testing agency.

PART 2 PRODUCTS

2.01 METAL ROOF DRAINS

A. Cast-Iron, General-Purpose Roof Drains (RD):
   1. Basis-of-Design Product: Subject to compliance with requirements, provide Zurn #Z-100 or a comparable product by one of the following:
      a. Zurn
      b. Josam
      c. Jay R Smith
      d. Wade
   2. Standard: ASME A112.6.4, for general-purpose roof drains.
   3. Body Material: Cast iron.
   4. Dimension of Body: Nominal 15-inch diameter.
   5. Combination Flashing Ring and Gravel Stop: Required.
   6. Flow-Control Weirs: Not required.
   7. Outlet: Bottom.
   8. Extension Collars: Only if required for installation.
   9. Underdeck Clamp: Required.
   10. Expansion Joint: Not required.
   11. Dome Material: Cast iron.
   12. Perforated Gravel Guard: Not required.
   13. Vandal-Proof Dome: Required.
   14. Water Dam: Not required.

B. Cast-Iron, Medium-Sump, General-Purpose Roof Drains (ORD):
   1. This product to be used only when overflow is located directly next to roof drain.
   2. Basis-of-Design Product: Subject to compliance with requirements, provide Zurn #Z-100-89 or a comparable product by one of the following:
      a. Zurn
      b. Josam
      c. Watts

d. Jay R Smith
e. Wade

3. Standard: ASME A112.6.4, for general-purpose roof drains.
4. Body Material: Cast iron.
5. Dimension of Body: Nominal 15-inch diameter.
6. Combination Flashing Ring and Gravel Stop: Required.
7. Flow-Control Weirs: Not required.
8. Outlet: Bottom.
9. Extension Collars: Only if required for installation.
10. Underdeck Clamp: Required.
11. Expansion Joint: Not required.
12. Dome Material: Cast iron.
13. Perforated Gravel Guard: Not required.
14. Vandal-Proof Dome: Required.
15. Water Dam: 2 inches high.

2.02 POOL TRENCH DRAINS

A. See drawings for the pool trench drain system and requirements. The Plumbing Contractor in responsible for pool trench drain system.

B. Exterior Pool Trench Drains (TD-1):
1. Manufacturers: Zurn Industries, LLC.: Model Z888-4-PVSS-BG. (No Exceptions)
2. Grate and Frame: Heavy Duty “HD” Stainless Steel Frame.
3. Body Material: high density polyethylene.
4. Outlet: End.
5. Fittings: Manufactured only.

2.03 POOL DECK AREA DRAINS

A. See drawings for the pool deck area drains and requirements. The Plumbing Contractor in responsible for pool drainage system.

B. Exterior Area Drains (in pavers) (AD-2):
1. Basis-of-Design Product: Subject to compliance with requirements, provide Zurn #Z-158-ZN or a comparable product by one of the following:
a. Josam
b. Watts
c. Jay R Smith
d. Wade
2. Grate and Frame: Polished nickel-bronze 10” square top POM-deck drain w/ heel proof grate and rotatable frame
3. Body Material: Cast iron.

C. Exterior Area Drains (in perimeter landscaping) (AD-3):
1. Basis-of-Design Product: Subject to compliance with requirements, provide Zurn #Z-125 or a comparable product by one of the following:
a. Josam
b. Watts
c. Jay R Smith
d. Wade
2. Grate and Frame: Epoxy coated cast.
3. Body Material: Epoxy coated cast iron.
4. Screen: Stainless Steel Mesh.

2.04 MISCELLANEOUS STORM DRAINAGE PIPING SPECIALTIES

A. Down Spout Nozzles:
   1. Basis-of-Design Product: Subject to compliance with requirements, provide Zurn #Z-199 or a comparable product by one of the following:
      a. Mifab
      b. Josam
      c. Watts
      d. Jay R Smith
      e. Wade
   2. Description: Bronze body with threaded inlet and bronze wall flange with mounting holes.
   3. Size: Same as connected conductor.

2.05 CLEANOUTS

A. Floor Cleanouts (CO):
   1. Standard: ASME A112.36.2M, for cleanouts.
   2. Manufacturers:
      a. Mifab
      b. Zurn
      c. Josam
      d. Watts
      e. Jay R Smith
      f. Wade
   3. Size: Same as connected branch.
   4. Type: Adjustable housing.
   5. Body or Ferrule Material: Same as pipe material.
   6. Clamping Device: Not required.
   7. Outlet Connection: Threaded.
   8. Closure: Cast-iron plug or Plastic plug.
   9. Adjustable Housing Material: Same as pipe material with threads.
   10. Frame and Cover Material and Finish: Nickel-bronze, copper alloy.
   11. Frame and Cover Shape: Square.
   12. Top-Loading Classification: Medium Duty.
   13. Riser: ASTM A 74, Service class, cast-iron drainage pipe fitting and riser to cleanout.

B. Wall Cleanouts (WCO):
   1. Standard: ASME A112.36.2M, for cleanouts. Include wall access.
   2. Manufacturers:
      a. Zurn
      b. Mifab
      c. Josam
      d. Watts
      e. Jay R Smith
      f. Wade
   3. Size: Same as connected drainage piping.
   4. Body Material: as required to match connected piping.
   5. Closure: as required to match connected piping.
   6. Closure Plug Size: Same as or not more than one size smaller than cleanout size.
   7. Wall Access: Round, flat, chrome-plated brass or stainless-steel cover plate with screw.

2.06

A. Backwater Valves:
   1. Basis-of-Design Product: Subject to compliance with requirements, provide Zurn #Z1090 or a comparable product by one of the following:
      a. Mifab
      b. Josam
      c. Watts
      d. Jay R Smith
      e. Wade
   2. Body Material: Dura-Coated cast iron with gasketed bolted cover.
   3. Inlet: no hub.
   4. Outlet: no hub.
   5. Flapper: automatic PVC with O-ring.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install roof drains at low points of roof areas according to roof membrane manufacturer's written installation instructions. Roofing materials are specified in Division 07 Sections.
   1. Install flashing collar or flange of roof drain to prevent leakage between drain and adjoining roofing. Maintain integrity of waterproof membranes where penetrated.
   2. Install expansion joints, if indicated, in roof drain outlets.
   3. Position roof drains for easy access and maintenance.

B. Install downspout nozzles at grade with top 18 inches above grade. Secure to building wall.

C. Install cleanouts in aboveground piping and building drain piping according to the following instructions unless otherwise indicated:
   1. Use cleanouts the same size as drainage piping up to NPS 4. Use NPS 4 for larger drainage piping unless larger cleanout is indicated.
   2. Locate cleanouts at each change in direction of piping greater than 45 degrees.
   3. Locate cleanouts at minimum intervals of 100feet for piping.
   4. Locate cleanouts at base of each vertical soil and waste stack.

D. For floor cleanouts for piping below floors, install cleanout deck plates with top flush with finished floor.

E. For cleanouts located in concealed piping, install cleanout wall access covers, of types indicated, with frame and cover flush with finished wall.

F. Install test tees in vertical conductors and near floor.

G. Install wall cleanouts in vertical conductors. Install access door in wall if indicated.

3.02 CONNECTIONS

A. Comply with requirements for piping specified in Division 22 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

3.03 PROTECTION

A. Protect drains during remainder of construction period to avoid clogging with dirt or debris and to prevent damage from traffic or construction work.

B. Place plugs in ends of uncompleted piping at end of each day or when work stops.

END OF SECTION

SECTION 22 14 29
SUMP PUMPS

PART 1 GENERAL

1.01 CONDITIONS OF THE CONTRACT

A. Plumbing Contractor is responsible to furnish, install and execute all of the following work as required, specified and/or indicated on plan unless noted to be performed by another contractor.

1.02 SUMMARY

A. Section Includes:
   1. Submersible sump pumps.
   2. Sump-pump basins and basin covers.

1.03 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Wiring Diagrams: For power, signal, and control wiring.

C. Operation and maintenance data.

1.04 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. UL Compliance: Comply with UL 778 for motor-operated water pumps.

PART 2 PRODUCTS

2.01 SUBMERSIBLE SUMP PUMPS

A. Submersible, Fixed-Position, Single-Seal Sump Pumps (Drain tile and deck drain):
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Zoeller Company.
   2. Description: Factory-assembled and -tested sump-pump unit.
   3. Pump Type: Submersible, end-suction, single-stage, close-coupled, overhung-impeller, centrifugal sump pump as defined in HI 1.1-1.2 and HI 1.3.
   4. Pump Casing: Non-corrosive engineered plastic, with strainer inlet, legs that elevate pump to permit flow into impeller, and vertical discharge for piping connection.
   5. Impeller: Statically and dynamically balanced, plastic design for clear wastewater handling, and keyed and secured to shaft.
   6. Pump and Motor Shaft: Stainless steel, with factory-sealed, grease-lubricated ball bearings.
   7. Seal: Mechanical.
   8. Capability: Pass 3/8 inch (9.5 mm) solids (sphere).
   9. Motor: Hermetically sealed, capacitor-start type; with built-in overload protection; lifting eye or lug; and three-conductor, waterproof power cable of length required and with grounding plug and cable-sealing assembly for connection at pump.
   10. Controls:
      a. Enclosure: NEMA 250, Type 1.
      b. Switch Type: Pedestal-mounted float switch with float rods and rod buttons.
      c. Float Guides: Pipe or other restraint for floats and rods in basins of depth greater than 60 inches (1500 mm).

d. High-Water Alarm: Cover-mounted, compression-probe alarm, with electric bell; 120-V ac, with transformer and contacts for remote alarm bell.

11. High Water Alarm:
    a. Manufacturer: SJE Rhombus
    b. Model: TA AB-01H
    c. Voltage:
        1) Primary: 120 VAC, 60 Hz, 2.4 watts max.
        2) Secondary: 9 VDC
    d. Battery Backup Power: 9 VDC
    e. Alarm Enclosure: Nema 1 plastic.
    f. Float Switch Connection Terminal:
        1) Float Switch: SJE SignalMaster control switch with mounting clamp.
        2) Cable: 15 feet, flexible 18 gauge, 2 conductor SJOW, water resistance.

2.02 SUMP-PUMP BASINS AND BASIN COVERS

A. Basins: Factory-fabricated, watertight, cylindrical, basin sump with top flange and sidewall openings for pipe connections.
    1. Material: Fiberglass.
    2. Reinforcement: Mounting plates for pumps, fittings, and accessories.
    3. Anchor Flange: Same material as or compatible with basin sump, cast in or attached to sump, in location and of size required to anchor basin in concrete slab.

B. Basin Covers: Fabricate metal cover with openings having gaskets, seals, and bushings; for access to pumps, pump shafts, control rods, discharge piping, vent connections, and power cables.
    1. Reinforcement: Steel or cast iron, capable of supporting foot traffic for basins installed in foot-traffic areas.

2.03 MOTORS

A. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Division 15 Section "Common Motor Requirements for Plumbing Equipment."
    1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
    2. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in Division 26 Sections.

B. Motors for submersible pumps shall be hermetically sealed.

PART 3 EXECUTION

3.01 EARTHWORK

A. Excavation and filling are specified in Division 2 Section "Earthwork."

3.02 INSTALLATION

A. Pump Installation Standard: Comply with ANSI HI 1.4 for installation of sump pumps.

3.03 BASINS

A. See plumbing drawings for basin sizes and locations.

END OF SECTION

SECTION 22 31 00
WATER SOFTENERS

PART 1 GENERAL

1.01 SUMMARY

A. This Section includes commercial water softeners.
   1. Chemicals.
   2. Water testing kits.

1.02 SUBMITTALS

A. Product Data: For each type of water softener and water testing kit indicated.

B. Shop Drawings: Include plans, elevations, sections, details, and connections to piping systems.
   1. Include wiring diagrams.

C. Field quality-control test reports.

D. Operation and Maintenance Data: For water softeners to include in emergency, operation, and maintenance manuals.

E. Warranty: Special warranty specified in this Section.

1.03 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

1.04 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of water softener that fail in materials or workmanship within specified warranty period.
   1. Water Softener, Warranty Period: Five years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 COMMERCIAL WATER SOFTENERS

A. Description: Factory-assembled, pressure-type water softener.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the manufacturers specified.
      a. Water Control Corporation
   2. Comply with NSF 61, "Drinking Water System Components--Health Effects."
   3. Model: Progressive/metered water softening system. See plumbing drawings.
   4. Configuration: Mineral tank(s) and [1] brine tank. See plumbing drawings.
   5. Mineral Tanks: Fiberglass, electric welded; pressure-vessel quality.
      a. Construction: Fiberglass reinforced polyester, reinforced with a continuous roving glass filament overwrap. Tanks shall have a molded polypropylene base for support. Non-ASME code.
      b. Pressure Rating: 1034 kPa (150 psig) minimum.
      c. Wetted Components: Suitable for water temperatures from 5 to at least 50 deg C (40 to at least 120 deg F).
      d. Freeboard: 50 percent minimum for backwash expansion above normal resin bed level.

e. Distribution System: Hub and lateral type distributor system with PVC riser; fabricated from PVC pipe and fittings with individual, fine-slotted, non-clogging PE strainers; arranged for even flow distribution through resin bed.
f. Provide pressure vacuum breaker on mineral tank as required by manufacturer.

6. Control: Fully automatic; factory mounted on unit and factory wired, electronic controller for programmable variable on demand mode which brings unit on and off depending on service flow.
   a. Control valves shall be of all brass construction, multi-port for maximum flow, and have 2” NPT inlet/outlet connections.
   b. Control valves shall be motor driven, mechanically activated design with five positions to accomplish the regeneration steps of backwash, brine and rinse, rapid rinse, brine refill, and service.
   c. Control valves shall be fitted with a brine injector assembly, and a self-adjusting backwash flow control.
   d. Control system will display status of each tank with respect to service and regeneration.
   e. Controller shall progressively bring additional units on and off-line, as needed, to maintain flow rates and reduce risk of channeling.
   f. Softening system shall include 2” meters located on the outlet side of each softener control.
   g. System shall be programmed so units are unable to regenerate simultaneously.
7. Brine Tank: Combination measuring and wet-salt storing system.
   a. Tank and Cover Material: Fiberglass, 3/16 inch thick; or molded PE, 3/8 inch thick.
   b. Brine Valve: Float operated and plastic fitted for automatic control of brine withdrawn and freshwater refill.
   c. Size: Large enough for at least two regenerations at full salting.
8. Warranty: 1 Year.

B. Capacity and Characteristics:
1. Service: Cold and hot water.
2. Continuous Service Flow Rate: 136 gallons per minute continuous at a 15 psi drop.
3. Peak Service Flow Rate: 182 gallons per minute peak at a 25 psi drop.
4. Minimum Service Flow Rate: 96 GPM at 7 psi drop.
5. Water Consumption: 40,000 gal./day.>
6. Water Demand: 24 hours/day.
7. Number of Mineral Tanks: Two.
8. Mineral Quantity, Each Tank: 10 cu. ft..
9. Mineral Exchange Capacity: 4000 grains/cu. ft. per lb of salt.
10. Manifold Pipe Size: 1-1/2.
11. Backwash to Drain Pipe Size: 1-1/2.
12. Electrical Characteristics:
    a. Volts: 120.
    b. Phases: 1.
    c. Hertz: 60.
13. Salt Capacity: 850 lb.

2.02 CHEMICALS

A. Mineral: High-capacity, sulfonated-polystyrene ion-exchange resin that is stable over entire pH range with good resistance to bead fracture from attrition or shock.

1. Exchange Capacity: 30,000 grains/cu. ft. of calcium carbonate of resin when regenerated with 15 lb (6.8 kg) of salt.

B. Salt for Brine Tanks: High-purity sodium chloride; free of dirt and foreign material. Rock and granulated forms are not acceptable.
   1. Form: Processed, food-grade salt pellets.

PART 3 EXECUTION

3.01 WATER SOFTENER INSTALLATION

A. Install commercial water softener equipment, level and plumb. Maintain manufacturer's recommended clearances. Arrange units so controls and devices that require servicing are accessible. Anchor mineral and brine tanks and floor-mounting accessories to substrate.

B. Install brine lines and fittings furnished by equipment manufacturer.

C. Field install mineral-tank distribution system and underbed for minerals and place specified mineral into mineral tanks as furnished by equipment manufacture.

D. Install flow meters furnished by equipment manufacture and install in copper piping to softener per manufacturer’s installation instructions.

E. Mount softener controller in accessible location for programming and monitoring system.

3.02 CONNECTIONS

A. Piping installation requirements are specified in other Division 22 Sections. Drawings indicate general arrangement of piping, fittings, and specialties. Mineral tanks must be piped in reverse return as shown and noted on plans.

B. Install piping adjacent to equipment to allow service and maintenance.

C. Make piping connections between water-softener-unit headers and dissimilar-metal water piping with dielectric fittings. Dielectric fittings are specified in Division 22 Section "Common Work for Plumbing."

D. Provide pressure vacuum breakers on each softener in copper piping to softener per manufacturer’s installation instructions.

E. Install shutoff valves and unions on raw-water inlet and soft-water outlet piping of each mineral tank, and on inlet and outlet headers.
   1. Metal general-duty valves are specified in Division 22 Section "General-Duty Valves For Plumbing."

F. Install drains as indirect wastes to spill into floor sink.

G. Ground equipment according to Division 26 Section "Grounding and Bonding."

H. Connect wiring according to Division 26 Section "Conductors and Cables."

3.03 FIELD QUALITY CONTROL

A. Perform the following field tests and inspections and prepare test reports:
   1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
   2. Operational Test: After electrical circuitry has been energized, start units to confirm proper unit operation.
   3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

B. Remove and replace malfunctioning water softeners that do not pass tests and inspections and retest as specified above.

3.04 STARTUP SERVICE

A. The Plumbing Contractor is responsible to complete and sign the “Request for start-up” checklist attached and return to Water Control Corporation.

B. The Plumbing Contractor is responsible to add water to brine tanks and fill with salt.
   1. Commercial Water Softeners: Plain salt pellets – 500 lbs

END OF SECTION

SECTION 22 33 00
ELECTRIC DOMESTIC WATER HEATERS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Thermostat-control, electric, tankless, domestic-water heaters.
   2. Domestic-water heater accessories.

1.02 SUBMITTALS

A. Product Data: For each type and size of domestic-water heater indicated.

1.03 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.
   1. Wiring Diagrams
   2. Warranty: Sample of special warranty.

1.04 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. ASME Compliance: Where ASME-code construction is indicated, fabricate and label commercial, domestic-water heater storage tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.

C. NSF Compliance: Fabricate and label equipment components that will be in contact with potable water to comply with NSF 61, "Drinking Water System Components - Health Effects."

1.05 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of electric, domestic-water heaters that fail in materials or workmanship within specified warranty period.
   1. Warranty Periods: From date of Substantial Completion.
      a. Electric, Tankless Domestic-Water Heaters: Five years.
      b. Compression Tanks: Five years.

PART 2 PRODUCTS

2.01 ELECTRIC, TANKLESS, DOMESTIC-WATER HEATERS

A. Thermostat-Control, Electric, Tankless, Domestic-Water Heaters:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following
      a. Chronomite Laboratories, Inc.
      b. Eemax, by Rheem
   2. Standard: UL 499 for electric, tankless, (domestic-water heater) heating appliance.
   3. Construction: Copper piping or tubing complying with NSF 61 Annex G barrier materials for potable water, without storage capacity.
      a. Connections: ASME B1.20.1 pipe thread.
      b. Pressure Rating: 150 psig.
      c. Heating Element: Resistance heating system.
      d. Temperature Control: Thermostat.
      e. Safety Control: High-temperature-limit cutoff device or system.
      f. Jacket: Aluminum or steel with enameled finish or plastic.

4. Support: Bracket for wall mounting.

2.02 DOMESTIC-WATER HEATER ACCESSORIES

A. Domestic-Water Compression Tanks:
   1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
      a. AMTROL Inc.
      b. Smith, A. O. Water Products Co.; a division of A. O. Smith Corporation.
      c. State Industries.
      d. Taco, Inc.
   2. Description: Steel pressure-rated tank constructed with welded joints and factory-installed butyl-rubber diaphragm. Include air precharge to minimum system-operating pressure at tank.
   3. Construction:
      a. Tappings: Factory-fabricated steel, welded to tank before testing and labeling. Include ASME B1.20.1 pipe thread.
      b. Interior Finish: Comply with NSF 61 barrier materials for potable-water tank linings, including extending finish into and through tank fittings and outlets.
      c. Air-Charging Valve: Factory installed.
   4. Capacity and Characteristics:
      a. See schedule on plans for size, capacities, dimensions, etc.

B. Drain Pans: Corrosion-resistant metal with raised edge. Comply with ANSI/CSA LC 3. Include dimensions not less than base of domestic-water heater, and include drain outlet not less than NPS 3/4 with ASME B1.20.1 pipe threads or with ASME B1.20.7 garden-hose threads.

C. Combination Temperature-and-Pressure Relief Valves: ASME rated and stamped. Include relieving capacity at least as great as heat input, and include pressure setting less than domestic-water heater working-pressure rating. Select relief valves with sensing element that extends into storage tank.

D. Pressure Relief Valves: ASME rated and stamped. Include pressure setting less than domestic-water heater working-pressure rating.

E. Vacuum Relief Valves: ANSI Z21.22/CSA 4.4.

F. Shock Absorbers: ASSE 1010 or PDI-WH 201, Size A water hammer arrester.

G. Domestic-Water Heater Stands: Manufacturer's factory-fabricated steel stand for floor mounting, capable of supporting domestic-water heater and water. Include dimension that will support bottom of domestic-water heater a minimum of 18 inches above the floor.

H. Domestic-Water Heater Mounting Brackets: Manufacturer's factory-fabricated steel bracket for wall mounting, capable of supporting domestic-water heater and water.

2.03 SOURCE QUALITY CONTROL

A. Factory Tests: Test and inspect domestic-water heaters specified to be ASME-code construction, according to ASME Boiler and Pressure Vessel Code.

B. Hydrostatically test domestic-water heaters to minimum of one and one-half times pressure rating before shipment.

C. Electric, domestic-water heaters will be considered defective if they do not pass tests and inspections. Comply with requirements in Division 01 Section "Quality Requirements" for retesting and reinspecting requirements and Division 01 Section "Execution" for requirements for correcting the Work.

D. Prepare test and inspection reports.

PART 3 EXECUTION

3.01 DOMESTIC-WATER HEATER INSTALLATION

A. Commercial, Electric, Domestic-Water Heater Mounting: Install commercial, electric, domestic-water heaters on concrete base. Comply with requirements for concrete bases specified in Division 03 Section "Cast-in-Place Concrete."
   1. Exception: Omit concrete bases for commercial, electric, domestic-water heaters if installation on stand, bracket, suspended platform, or directly on floor is indicated.
   2. Maintain manufacturer's recommended clearances.
   3. Arrange units so controls and devices that require servicing are accessible.
   4. Anchor domestic-water heaters per manufacturers instructions.

B. Install combination temperature-and-pressure relief valves in top portion of storage tanks. Use relief valves with sensing elements that extend into tanks. Extend commercial-water-heater relief-valve outlet, with drain piping same as domestic-water piping in continuous downward pitch, and discharge by positive air gap onto closest floor drain.

C. Install water-heater drain piping as indirect waste to spill by positive air gap into open drains or over floor drains. Install hose-end drain valves at low points in water piping for electric, domestic-water heaters that do not have tank drains. Comply with requirements for hose-end drain valves specified in Division 22 Section "Domestic Water Piping Specialties."

D. Fill electric, domestic-water heaters with water.

E. Charge domestic-water compression tanks with air.

3.02 CONNECTIONS

A. Comply with requirements for piping specified in Division 22 Section "Domestic Water Piping." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Where installing piping adjacent to electric, domestic-water heaters, allow space for service and maintenance of water heaters. Arrange piping for easy removal of domestic-water heaters.

3.03 IDENTIFICATION

A. Identify system components. Comply with requirements for identification specified in Division 22 Section "Identification for Plumbing Piping and Equipment."

3.04 FIELD QUALITY CONTROL

A. Perform tests and inspections.
   1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
   2. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
   3. Operational Test: After electrical circuitry has been energized, start units to confirm proper operation.
   4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

B. Electric, domestic-water heaters will be considered defective if they do not pass tests and inspections. Comply with requirements in Division 01 Section "Quality Requirements" for retesting and reinspecting requirements and Division 01 Section "Execution" for requirements for correcting the Work.

C. Prepare test and inspection reports.

SECTION 22 35 00
DOMESTIC HOT WATER HEAT EXCHANGERS

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

B. NSF 61 - Drinking Water System Components - Health Effects; 2023, with Errata.

C. UL 778 - Standard for Motor-Operated Water Pumps; Current Edition, Including All Revisions.

1.02 SUMMARY

A. This Section includes the following:
   1. Domestic hot water heat exchangers.
   2. Expansion Tanks.
   3. Heat-exchanger accessories.

B. Materials covered by this Section are to be purchased direct from the supplier unless noted otherwise (NO EXCEPTIONS). See General Provisions for Plumbing 22 01 00 Section for approved supplier/vendor list. This contractor shall review and adjust shop drawings as necessary, coordinate shipping dates, receive products on the job site, store the product until installation and shall install the product as if it had been purchased by the contractor.

1.03 SUBMITTALS

A. Product Data: For each type and size of heat exchanger indicated. Include rated capacities, operating characteristics, furnished specialties, and accessories.

B. Shop Drawings: Diagram power, signal, and control wiring.

C. Operation and maintenance data.

D. Warranty.

E. LEED Submittal:
   1. Product Data for Prerequisite EA 2: Documentation indicating that units comply with ASHRAE/IESNA 90.1, Section 7, "Service Water Heating."

1.04 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

B. ASME Compliance: Where ASME-code construction is indicated, fabricate and label commercial heat exchangers to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.

C. Comply with NSF 61, "Drinking Water System Components - Health Effects; Sections 1 through 9" for all components that will be in contact with potable water.

D. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1.

1.05 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of heat exchangers that fail in materials or workmanship within specified warranty period.
   1. Failures include, but are not limited to, the following:

a. Structural failures including storage tank and supports.
b. Faulty operation of controls.
c. Deterioration of metals, metal finishes, and other materials beyond normal use.

B. Warranty Period(s): From date of Substantial Completion:
1. Plate Domestic Water Heat Exchangers:
a. Heat Exchanger: 5 years
2. Service Policy: One year.

PART 2 PRODUCTS

2.01 PLATE DOMESTIC WATER HEAT EXCHANGERS

A. Brazed Plate Double Wall Heat Exchangers:
1. Manufacturers:
a. Aerco International, Inc.
2. Description: Packaged heat-exchanger, circulator pump, 3-way control valve, prewired controls, and specialties for heating domestic water with heating hot water in coil.
3. Flow Pattern: Standard-flow arrangement, with water from bottom of storage tank circulated across heat-exchanger and returned to tank. Include hot-water outlet located at top of tank and temperature sensor in tank.

B. Heat-Exchanger Coil: Counter-Flow, double-wall 316L stainless steel brazed plate with enhanced plates for improved heat transfer. ASME Section VIII, Div. 1 stamped and National Board Registered for 362 psi (2495.90 kPa) Maximum allowable working pressure.
1. The heat exchanger will be a vertical, double-wall, copper tube design utilizing counter flow paths for the potable water and the steam. The exchanger will be ASME stamped, section VIII and rated for 150 psi (1034.21 kPa) operating pressure at 250°F.
2. The heat exchanger will be mounted on a separate skid for field connection to the sidearm storage tank. Heat exchanger to tank piping will factory pre-assembled and shipped separately for field installation. All piping to and from the potable water side of the exchangers will be non-ferrous.
3. Potable water piping to the heat exchanger will include a bronze y-strainer with a blow down valve.
4. Potable water piping will include isolation valves to allow clean in place. Dedicated clean-in-place ball valves will be provided.
5. Potable water piping to the heat exchanger will include a bronze circulator properly sized for the heat transfer requirements and pressure drop through the factory pre-assembled piping.

C. Temperature Control: The storage will include an electronic operating thermostat with digital temperature readouts. BAS will be able to read sensed temperatures and temperature alarm status and over-write the operating set point to engage nighttime setback of stored water temperature if desired.
1. A protocol gateway for BacNet MSTP/IP will be provided.

D. Accessories
1. Bronze T & P relief valve, conforming to ANZI Z21.22, set at 150 PSIG/210°F
2. Y-strainers with blowdown valve for boiler water and domestic water.
3. Boiler water strainer differential pressure gauge.
4. Bronze ball type isolation valves
5. 3/4" Bronze domestic water drain valve.
6. Domestic water Air Vent rated for either 150 PSIG operation.

7. Support: Factory mounted on skids.

2.02 HEAT-EXCHANGER ACCESSORIES

A. Combination Temperature and Pressure Relief Valves: ASME rated and stamped and complying with ASME PTC 25.3. Include relieving capacity at least as great as heat input, and include pressure setting less than working-pressure rating of heat exchanger. Select relief valves with sensing element that extends into heat-exchanger storage tank.

B. Expansion Tanks:
   1. Manufacturers:
      a. Amtrol: Model ST-120V-C.
   2. Description: Precharged, bladder type, labeled for potable water.
   3. Capacity: 66 gallon (250 liters).

2.03 STORAGE TANK

A. The storage tank shall be ASME Section IV stamped and National Board Registered for a maximum allowable working pressure of 150 psi (1034.21 kPa) and pressure tested at 1-1/2 times working pressure.

B. All tank fittings shall be non-ferrous. Tank shall be equipped with a ball-type drain valve on the bottom head tank. Tank design will include a man way sized access to the tank interior. Tank will include a combination temperature and pressure relief valve.

C. The storage tank shall be an unlined pressure vessel constructed from phase-balanced austenitic and ferritic duplex steel with a chemical structure containing a minimum of 21% chromium to prevent corrosion and mill certified per ASTM A 923Methods A to ensure that the product is free of detrimental chemical precipitation that affects corrosion resistance. The material selected shall be tested and certified to pass stress chloride cracking test protocols as defined in ISO 3651-2and ASTM G123 - 00(2005) “Standard Test Method for Evaluating Stress-Corrosion Cracking of Stainless Alloys with Different Nickel Content in Boiling Acidified Sodium Chloride Solution.”

D. Waterside surfaces shall be welded internally utilizing joint designs to minimize volume of weld deposit and heat input. All heat affected zones (HAZ) shall be processed after welding to ensure the HAZ corrosion resistance is consistent with the mill condition base metal chemical composition. Weld procedures (amperage, volts, welding speed, filler metals and shielding gases) utilized shall result in a narrow range of austenite-ferrite microstructure content consistent with phase balanced objectives for welds, HAZ and the base metal.

E. All internal and external tank surfaces shall undergo full immersion passivation and pickling processing to meet critical temperature, duration and chemical concentration controls required to complete corrosion resistance restoration of pressure vessel surfaces. Other passivation and pickling methods are not accepted.

F. Materials shall meet ASME Section II material requirements and be accepted by NSF 61 for municipal potable water systems. Storage tank materials shall contain more than 80% post-consumer recycled materials and be 100% recyclable.

G. Water contacting tank surfaces will be non-porous and exhibit 0% water absorption.

H. Lined or plated storage tanks will not be acceptable.

I. The water heater will not require anode rods and none will be used. Tanks that employ either sacrificial or impressed current anodes will not be acceptable.

J. Insulation: Complying with ASHRAE/IESNA 90.1, unless otherwise indicated, and suitable for operating temperature. Surround entire storage tank and nozzle except connections and controls.

PART 3 EXECUTION

3.01 HEAT-EXCHANGER INSTALLATION

3.02 CONNECTIONS

A. Install piping adjacent to heat exchangers to allow service and maintenance. Arrange piping with unions for easy removal of heat exchangers.

B. Ground equipment according to Division 26 Section "Grounding and Bonding."

C. Connect wiring according to Division 26 Section "Conductors and Cables."

3.03 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect field-assembled components and equipment installation, including connections.

B. Perform the following field tests and inspections and prepare test reports:
   1. Leak Test: After installation, test for leaks. Repair leaks and retest until no leaks exist.
   2. Operational Test: After electrical circuitry has been energized, confirm proper operation of circulating pump and 3-way mixing valve.
   3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

END OF SECTION

SECTION 22 52 13
STEAM ROOM GENERATORS

PART 1 GENERAL

1.01 SUMMARY

A. This Section includes the following:
   1. Steam room generator.
   2. Steam room generator accessories.

1.02 SUBMITTALS

A. Product Data: For each type of indicated.

1.03 CLOSEOUT SUBMITTALS

A. Operation and maintenence data.
   1. Shop Drawings
   2. Wiring Diagrams.
   3. Warranty.

1.04 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

B. ASME Compliance: Where ASME-code construction is indicated, fabricate and label commercial heat exchangers to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.

C. Comply with NSF 61, "Drinking Water System Components - Health Effects; Sections 1 through 9" for all components that will be in contact with potable water.

1.05 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of steam generator that fail in materials or workmanship within specified warranty period.
   1. Failures include, but are not limited to, the following:
      a. Structural failures including storage tank and supports.
      b. Faulty operation of controls.
      c. Deterioration of metals, metal finishes, and other materials beyond normal use.
   2. Warranty Period(s): From date of Substantial Completion: One Year.

PART 2 PRODUCTS

2.01 STEAM ROOM GENERATOR

A. Circulating, Storage Heat Exchangers:
   1. Manufacturers:
      a. Lattner: Model BF-36 ASME.
   2. Description: Packaged, electric, horizontal steam generator. Each single unit factory mounted, installed, and piped on a single rack.
   3. Heating Element: 36 kw
   4. Power Requirement: 480 Volt, 3 phase power
   5. Reservoir: Carbon steel
   6. Accessories:
      a. Auto drain valve.

b. Timed automatic blow down.
c. Pressure switch.
d. Pressure limit switch.
e. Complete packaged controls.
f. Remote room sensor.
g. Low voltage temperature/time remote controller.
h. Water level probe and electric water solenoid valve.

7. Distribution Piping: Each unit shall have a NPS 1/2 (DN 15) make-up water pipe, complete with NPS 1-1/4 (DN 32) branch steam pipe to each steam room with a steam head.
8. Units shall be installed and piped as noted on the detail on the plan.

PART 3 EXECUTION

3.01 STEAM GENERATOR INSTALLATION

A. Install steam generators level and plumb, according to layout drawings, original design, and referenced standards. Maintain manufacturer's recommended clearances. Arrange units so controls and devices needing service are accessible.

B. Anchor steam generators to substrate.

C. Install makeup water, steam distribution piping and steam head for each steam generator. Steam distribution piping from each steam generator shall be NPS 1-1/4 (DN 32) branch steam pipe to each steam room. Plumbing Contractor shall install connect NPS 1/2 (DN 15) steam nozzle (furnished by equipment supplier) to NPS 1-1/4 (DN 32) branch pipe with bushing at wall in location shown on plan.

D. Install steam generator drain piping as indirect waste to spill by positive air gap into floor sink. Install hose-end drain valves at low points in water piping for steam generator that do not have tank drains. Refer to Division 22 Section "Plumbing Specialties" for hose-end drain valves.

E. Install NPS 1/2 (DN 15) male fitting in steam discharge line of each steam generator for owners in-scent injector.

F. Install aroma tank and pipe to male fitting in steam discharge line.

G. Fill steam generators with water.

3.02 CONNECTIONS

A. Install piping adjacent to steam generator to allow service and maintenance. Arrange piping for easy removal of steam generators.

B. Ground equipment according to Division 26 Section "Grounding and Bonding."

C. Connect wiring according to Division 26 Section "Conductors and Cables."

3.03 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect field-assembled components and equipment installation, including connections.

B. Perform the following field tests and inspections and prepare test reports:
1. Leak Test: After installation, test for leaks. Repair leaks and retest until no leaks exist.
2. Operational Test: After electrical circuitry has been energized, confirm proper operation.
3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

C. Remove and replace steam generators that do not pass tests and inspections and retest as specified above.

3.04 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain steam generators. Refer to Division 1 Section "Contract Closeout."

SECTION 23 01 00
GENERAL REQUIREMENTS FOR HVAC

PART 1 GENERAL

1.01 SCOPE

A. The work covered by this division of the specifications and accompanying drawings shall be included in one or multiple sub-contracts as coordinated with the General Contractor and shall encompass the following systems:
   1. Heating, Ventilation & Air Conditioning
   2. Temperature Control System.
   3. Refer to the following for additional requirements.
      a. Bidding Requirements, Contract Forms and conditions of the Contract (Division 0)
      b. General Requirements (Division 1)
      c. Geotechnical Investigation (Section 2010)

B. The Scope of Work for each of these systems shall be further defined within the limits of the appropriate section.

C. Sections numbered 23 01 00 thru 23 05 00 shall apply to any and all separate HVAC/Mechanical contracts as well as those sections and articles of particular concern.

1.02 INSPECTION OF SITE

A. Before submitting a proposal on the work contemplated in this Specification and accompanying drawings, each bidder shall examine the site and check as to the means of making connections to services and shall familiarize himself with the existing conditions and limitations. No extra charges or extension in schedule will be allowed because of the contractor' s misunderstanding as to the amount of work involved or lack of knowledge of any site conditions which may affect the work. Any apparent variance of the plan or specification from the existing conditions at the site shall be called to the attention of the Engineer during the bid period so clarification can be made by addendum.

1.03 FEES, PERMITS, TAXES AND INSPECTIONS

A. Regular inspections shall be requested by the contractor as required by regulations. Charges for the inspections by regulating agencies of installations or plans and specifications shall be paid by the contractor.

B. All permits, inspections and licenses shall be secured and paid for before actual work is started.

C. The contractor, after completion of work, shall furnish to the Owner a Certificate of Final Inspection and approval from the inspection bureau having jurisdiction.

D. State and Local Sales Tax. The Mechanical Contractor shall include all state and local sales tax in the bid. The contractor shall maintain accurate records of all taxes and furnish such records to the Owner upon request.

1.04 CODES AND STANDARDS

A. Contractor shall comply with all current ordinances, laws, regulations and codes applicable to the work involved. This does not relieve the contractor from furnishing and installing work shown or specified which may be beyond the requirements of such ordinances, laws, regulations and codes.

B. In case of difference between building codes, specifications, state laws, local ordinances, industry standards, and utility company regulations and the Contract Documents, the most stringent shall govern. The contractor shall promptly notify the Engineer in writing of such difference.

C. Non-Compliance: Should the contractor perform any work that does not comply with the requirements of the applicable building codes, state laws, local ordinances, industry standards and utility company regulations, he shall bear all costs arising in correcting the deficiencies.

D. Contractor shall initiate, maintain, and supervise all safety pre-cautions required for his work including regulations of the Occupational Safety and Health Administration (OSHA).

E. Concrete work. Comply with governing regulations.

1.05 DRAWINGS

A. The drawings are to scale as noted but the contractor shall refer to Architectural and structural Drawings for exact location of partitions, walls, beams, shafts, equipment, etc.

B. Each trade shall avail himself of drawings and specifications of all other trades and make an effort to coordinate his work with all other trades.

C. Each Contractor shall give careful consideration to the work of all other trades and all subsidiary contractors and organize the work so that it will not interfere with work of other trades. Consult the plumbing, sprinkling, heating, ventilating and electrical drawings and specifications for correlating information and the architectural and structural drawings for details, dimensions, foundations, structural elements, pits, etc. The Contractor shall verify all dimensions and conditions, and shall coordinate installation of equipment before fabricating ductwork, piping, etc.

1. Consideration has been given to such condition of limited space in the preparation of the drawings and the locations and dimensions of equipment have been selected accordingly. The contractor shall be warned that in certain instances, space may be limited to the extent that there may be only one arrangement of equipment or facilities which will allow installation of same.

D. Discrepancies discovered before or after work has started, shall be brought to the attention of the Engineer immediately and the Engineer reserves the right to require minor changes in the work to eliminate such discrepancies with no change in contract cost.

E. The piping and HVAC systems shall be installed substantially as shown on the drawings. The exact position and required offsets of each and every pipe and duct cannot be given by scaling the drawings but shall in every case be placed so as to avoid interference with other work. It is the Contractors responsibility to field measure piping and ductwork prior to fabrication to avoid conflict with structure, ceiling heights and other trades. Should it be necessary to make changes in the location of piping and ductwork for its proper installation and operation, or to avoid conflict with other trades, it shall be done by this Contractor without extra charge to the contract.

F. Piping in finished rooms shall be concealed in partitions, furred spaces or suspended ceilings. In unfinished rooms, piping shall be arranged to provide for a maximum of head room.

G. The plans and specifications are complementary and what is called for in either one shall be as binding as if called for in both.

H. Where a disagreement exists in the plans and specifications, the item or arrangement of better quality, greater quantity or higher cost, shall be included.

1.06 SYMBOLS AND ABBREVIATIONS

A. Refer to Symbols and Abbreviations listed on drawings. Other symbols are in common usage but if uncertainty exists regarding plan symbols or abbreviations they shall be brought to the attention of the Engineer for clarification.

B. Where the phrase starts “Provide----,” “provide” shall be construed to mean the same as “Furnish and install-----“.

1.07 PRIOR APPROVAL

A. Prior Approvals. The acceptance of materials and equipment shall be based on the following conditions:
   1. The contractor shall adhere rigidly to the specifications and shall use exact equipment specified or an approved substitution. Where the words “or equal”, or similar, are used in the specifications, other manufacturers will be considered for acceptance as substitutions; however, such requests must be submitted by a bidding contractor for review prior to bidding. If the contractor desires tentative acceptance of a brand of merchandise not specified, sufficient data shall be submitted to the Engineer for appraisal 240 hours before the time set for bides to be received. If any manufacturer or brands other than those specified, are acceptable to the Engineer, the Engineer will indicate before bids are received; however, such acceptance must still be obtained as described in the following. Equipment which is not specified, or is not approved by addendum will not be considered.

1.08 SHOP DRAWINGS

A. The quantity of Shop Drawings to be submitted shall be as noted in the General Conditions.

B. Shop Drawings shall be submitted by Specification section; all items in each section shall be one (1) bound submittal.

C. Shop Drawings shall be submitted electronically in PDF format. Utilize project document management site to post and manage submittals. Clearly make all submittals with flags or highlights to indicate exact products and options being supplied.

D. Engineer will review initial submittal and one resubmittal. If shop drawings are required to be submitted more than two times dues to Contractor not submitting proper documentation or products, Engineer shall charge Contractor for more time spent reviewing the additional submittals.

E. Acceptance of certain items of equipment, designated by the Engineer, will be based on the manufacturer’s shop drawings and pamphlets which shall be submitted to the Engineer. The contractor shall be prepared to submit samples of equipment or material for appraisal when requested by the Engineer. No materials or equipment shall be installed until the Engineer has given acceptance in writing.

F. The contractor shall supply other trades with approved detail drawings of furnished equipment in the event that equipment will affect the work of other contractors.

1.09 LUBRICATION

A. At the time of installation, and before any equipment is operated for either temporary conditions or performance tests, the Contractor shall properly lubricate all items as necessary according to the manufacturer's recommendations. Where special greases or oils are required, the contractor shall furnish to the Owner, at the time of Owner’s instruction, a one year's supply of such special lubricants.

1.10 TEMPORARY CONDITIONING

A. Refer to Division 1, Article 01 07 1 for basic requirements of temporary facilities and services. Information provided in Division 23 01 00, shall be considered supplemental to, but is not intended to prevail over that stated in Division 1.

B. During the construction of the building, prior to enclosure, each separate contractor shall provide all heat, fuel, and services necessary to protect all of his work and materials against injury from dampness and cold until the building has been enclosed. He shall provide approved temporary heating services, adequate and proper fuel, fires, enclosure, hay, etc. for the work of his trades, and shall have watchmen, as required, constantly in attendance when fires are burning. Salamander heaters in enclosed spaces will not be allowed.

C. The General Contractor shall enclose the building as promptly as possible. The building shall be considered enclosed when the roof is on and doorways, window openings and other openings are closed so as to provide a reasonable retention of heat.
   1. Once the building has been enclosed, the HVAC Contractor and Plumbing Contractor shall temporarily install approximately 3 roof-top units as designated by the Owner including gas pipe and duct work for use as temporary heat. The HVAC Contractor shall maintain protection with appropriate filters at the permanent heating/ventilating equipment until the time of turning the units and system over to the Owner. Air filters in temporary heat units shall be changed every two weeks until the spaces are finished. Filter media shall be installed on return air ducts and also changed every two weeks until the spaces are finished. Mechanical equipment installed prior to completion of the taping and sanding of gypsum walls and ceilings shall utilize the maximum amount of fresh air allowed by the particular unit. Any supply unit used for temporary heat shall have filter changes done as indicated above.

D. Once the equipment is in place and the facility is ready for temporary heating functions, the controls at the 3 units shall be installed in a temporary manner by the HVAC Contractor including furnishing of the stats (non-EMS sensors). The units shall not be connected to the EMS system, but shall instead cycle on the temporary stats until the time of turning the units and system over to the Owner.

E. Approximately 12 weeks prior to turning the facility over to the Owner for occupancy, the HVAC Equipment Supplier / Temperature Supplier shall start up all unit (including the 3 units that have been used for temporary heat) checking for proper operation and shall initiate the control system testing for all required sequences. The one year guarantee period shall commence from that date.

1.11 TRADE CONSIDERATIONS

A. Intra-Contract Boundaries:
   1. For plumbing equipment which is specified under separate sections the Plumbing Contractor will be required to furnish and install the necessary "P" traps, stop valves etc. including rough-in and final connections. Final quantity and rough-in locations for Bistro and Café equipment shall be installed according to Kitchen Equipment Supplier shop drawings.
   2. The Plumbing Contractor shall furnish and install copper p-traps and condensate piping to drip into roof drains for all the roof top units according to manufactures recommendations and local codes.
   3. Flues for gas fired appliances (cloth dryers, etc.) shall be installed by the HVAC Contractor including hook-up to the appliance.
   4. Venting and combustion air to boilers shall be by the HVAC Contractor.
   5. See Temperature Control plans for Trade responsibilities for install of the Temperature control equipment.
   6. Refer to the pool equipment documents for plumbing and ventilation connections required for the pool system. Coordinate during shop drawing preparation with the pool shop drawings to assure final connections of appropriate sizes and locations as required to support the pool system.

B. Electrical Service, Wiring and Connections:

1. The Electrical Contractor shall provide electrical service to all motors and other mechanical equipment (unless otherwise noted) in conformance with Division 26 of the specifications. The service to packaged equipment shall include power wiring, disconnect switch and the proper connection to the equipment and above items as required. The service to non-packaged equipment shall include power wiring, disconnect switch, motor starter (complete with thermal overload protection and auxiliary dry contacts) and the proper connection to the equipment and above items as required. In cases where mechanical equipment is specified to have single point power connections, and Mechanical Contractor furnishes and installs equipment of multiple connection points, the Mechanical Contractor shall be responsible for additional costs.
2. All wiring for the control of mechanical motors and equipment shall be furnished complete by the Mechanical Contractor including but not limited to wiring, conduit, devices and installation by a licensed Sub-contractor utilizing Electricians experienced in the types of systems to be installed. All work shall be installed in compliance with NEC regulations and shall be laid out in strict conformance with the wiring diagrams as provided by the manufacture of each section of equipment. It shall be the Mechanical Contractor's responsibility to coordinate all necessary wiring diagrams and shop drawings with the temperature control Sub-contractor for proper lay-out.
3. Where the Mechanical Contractor extends a circuit provided by the Electrical Contractor, all necessary circuit protection shall be provided by the Mechanical Contractor at points where conductor size is reduced or where the equipment requires special protection. Such circuit protection may be fuses of the cartridge type only. At least one spare fuse of each type must provided to the Owner.
4. If the Mechanical Contractor proposes to furnish equipment having electrical requirements different from that specified, it shall be the Mechanical Contractor's responsibility to make necessary additions or revisions to the circuit components, and to cover related costs.
5. Refer to motor schedule shown on electrical drawings for exact items furnished by Electrical Contractor and the number of contacts and items of control which Electrical Contractor will wire.
6. All factory wiring must be certified by an Independent Testing Lab to comply with N.E.C., ANSI, NFPA, and other regulatory agencies and carry a seal to this effect.

PART 2 PRODUCTS (NOT APPLICABLE)

PART 3 EXECUTION

3.01 RECORD DRAWING NOTES

A. The contractor shall record all changes and deviations from the Contract Drawings. Refer to Division 1 for specific requirements. Include the following as a minimum:
   1. Prepare Record Drawing changes for all mechanical work within the building that occurs during the progress of construction. Include such changes as:
      a. Addenda
      b. Change orders
      c. Value engineering

B. The Record Drawings shall be maintained at the job site and be subject to review by the owner or architect/engineer during the construction period. This record keeping requirement shall not be construed as authorization for the contractor to make changes in the layout without definite instructions by the architect/engineer in each case.

C. At the completion of the project, one (1) set of Record Drawings shall be delivered to the Architect/Engineer. This work shall be completed and accepted by the Architect/Engineer before approval of final payment.

3.02 OPERATING AND MAINTENANCE MANUAL(S)

A. The contractor shall collect, gather and assemble manuals, each to contain the installation details, instructions, schematics of actual equipment and operations directions supplied by the manufacturer with equipment for the equipment and materials furnished under Division 23. Provide complete listing of suppliers and distributors where replacement parts or maintenance services are available. Manuals shall be submitted in 3-ring binder format and organized according to specification section. Label cover of manuals with project name; date of completion; and mechanical contractor' s name, address, and telephone number. Final acceptance of the work will be withheld until such data has been presented complete to the engineer for transmission to the owner. The manual shall be prepared in time for engineer to review and for contractor to make corrections before owner instruction of operations and maintenance of equipment and systems is scheduled to begin. The manuals may be submitted as a PDF set in lieu of a paper set.

B. Manuals shall include, but not be limited to, the following:
   1. Copies of final Shop Drawings
   2. Copies of manufacturers’ warranties
   3. Copies of all test results
   4. Copies of all mechanical inspector’s reports
   5. Manufacturer’s operating instructions for equipment
   6. Manufacturer’s wiring and installation instructions for equipment.
   7. Equipment parts list based on each specification section.
   8. Local equipment supplies/rep’s names, addresses, and telephone numbers.
   9. Equipment manufacturers’ names, addresses, and telephone numbers.
   10. Subcontractors’ names, addresses, and telephone numbers
   11. Refer to individual sections in Division 23 for additional requirements

C. Cross out or delete all information shown on Shop Drawings and other literature definitely not applying to this particular project and its equipment installed.

D. Manuals that do not meet the foregoing criteria will be rejected and returned to the contractor for resubmittal.

3.03 FINAL OBSERVATION

A. A final observation of the mechanical systems by the Architect/Engineer will be conducted before the contract can be considered complete. The contractor shall inform the Engineer in writing when the mechanical installation is complete and ready for final observation. The Engineer shall visit the project and provide a list of items that need to be corrected or completed to achieve final completion. Should the Engineer attend the project to conduct the final observation and discovers that the work is not sufficiently complete to perform this task, then the contractor shall compensate the Engineer for his time. The contractor shall remain responsible for completing his work and requesting the Engineer to return for a final observation.

3.04 TESTS

A. The contractor shall test the equipment installed under this specification and shall demonstrate its proper operation to the engineer when requested by the engineer.

B. No equipment shall be tested, or operated for any purpose until it has been fully prepared and made ready for normal operation. Damage to equipment occasioned by improper or ill-timed operation or testing shall be made good, at the contractor’s expense, before final inspection and acceptance.

3.05 TRAINING

A. Contractor shall furnish, without additional expense to the owner, the services of competent instructions, who will give full instruction in the care, adjustment, and operation and maintenance of parts of the mechanical equipment to the owner's permanent employees who are to have charge of the equipment. Provide a minimum of one man-week (40 hours) of instruction for mechanical equipment. See individual sections for additional training requirements for special systems.

B. Each instructor shall be thoroughly familiar with all parts of the equipment on which instructions are to be given and shall be trained in operating theory as well as in practical operation and maintenance work. Factory trained instructors shall be employed where they are available. Instruction shall be given during regular work week and at a time just prior to the time the equipment is accepted and turned over to the owner for regular operation.

C. All training and operating instructions shall be audio and video recorded by the contractor and the recording media handed over to the owner.

D. Contractor shall submit to the Architect/Engineer, a letter, signed by the owner, stating that the instruction of operating personnel has been completed and is accepted by the owner.

3.06 MATERIAL AND WORKMANSHIP

A. All materials and equipment shall be new and best quality, of the type best suited for the purpose intended, conform to the requirements of local and state codes governing the work involved, and be made by nationally recognized and substantially established manufacturers. The type and weight of material shall conform to the requirements of the latest standard specifications of the ASTM for that particular material. The Engineer reserves the right to reject material or workmanship not in accordance with the Specifications, either before or after installation. Contractor will be held responsible for defects in the material and workmanship which may appear during guarantee period after the building has been accepted. Such defects must be repaired or defective material replaced by the contractor at no expense to the owner.

B. No asbestos, hazardous, or PCB containing materials of any type shall be used on this project.

C. All piping, ductwork and equipment in finished areas shall be furnished and installed to present a neat and clean appearance. All surfaces except pipe and duct that are to receive paint by General Contractor shall have a factory applied prime coat. All items that are to have finished paint by Mechanical Contractor shall have color selected by Architect/Engineer.

D. The contractor shall be responsible for the proper installation of all systems in this contract and shall guarantee to remedy free of charge any defects in workmanship and materials for a period of 12 months from substantial completion.

3.07 JOB SITE CONDITIONS

A. All construction debris generated by the furnishing and installing of mechanical equipment and systems shall be removed in a timely manner to prevent obstruction of other trades. Cartons, construction debris, piping, etc. shall be removed and the area brought to a "broom clean" finish.

B. Whenever permanent heating equipment is to be utilized for the temporary construction heating, it shall be maintained in a clean condition. The HVAC Contractor shall be responsible to check the unit at start-up and shall install all necessary filters. The General Contractor shall take normal precautions in job site cleanliness and the HVAC Contractor shall periodically inspect the equipment for accumulations of dust and debris. If it is determined that the General Contractor is not maintaining clean conditions throughout the site to the point of possible harm to the equipment, then the HVAC Contractor shall immediately contact the General Contractor and Architect/Engineer for resolution. The permanent heating equipment shall be turned off if resolution cannot be achieved.

C. At the completion of the work, this Contractor shall remove all rubbish caused by his work from the premises and shall thoroughly clean all equipment piping and ductwork that was installed as part of this contract.

3.08 CLOSEOUT ACTIVITIES

A. Refer to Division 1 specifications for closeout submittals and any demonstration and training requirements.

END OF SECTION

SECTION 23 01 30.51
HVAC AIR-DISTRIBUTION SYSTEM CLEANING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Cleaning of HVAC duct systems, equipment, and related components.

1.02 DEFINITIONS

A. HVAC System: For purposes of this section, the surfaces to be cleaned include all interior surfaces of the heating, air-conditioning and ventilation system from the points where the air enters the system to the points where the air is discharged from the system, including the inside of air distribution equipment, coils, and condensate drain pans; see NADCA ACR for more details.
   1. Above-ceiling plenum for supply air is not required to be cleaned.
   2. Above-ceiling plenum for return air is not required to be cleaned.
   3. Makeup air system is required to be cleaned.
   4. Exhaust-only system is required to be cleaned.

B. ACAC: American Council for Accredited Certification.

C. AIHA-LAP: American Industrial Hygiene Association Lab Accreditation Program

D. ASCS: Air systems cleaning specialist.

E. CESB: Council of Engineering and Scientific Specialty Boards.

F. CMI: Certified Microbial Investigator.

G. CMC: Certified Microbial Consultant

H. CMR: Certified Microbial Remediator.

I. CMRS: Certified Microbial Remediation Supervisor.

J. EMLAP: Environmental Microbiology Laboratory Accreditation Program.

K. IEP: Indoor Environmental Professional.

L. IICRC: Institute of Inspection, Cleaning, and Restoration Certification.

M. NADCA: National Air Duct Cleaners Association.

1.03 REFERENCE STANDARDS

A. NADCA ACR - The NADCA Standard for Assessment, Cleaning, and Restoration of HVAC System; 2021.

B. UL 181 - Standard for Factory-Made Air Ducts and Air Connectors; Current Edition, Including All Revisions.

C. UL 181A - Closure Systems for Use with Rigid Air Ducts; Current Edition, Including All Revisions.

1.04 SUBMITTALS

A. Project Closeout Report: Include field quality control reports, evidence of satisfactory cleaning, and documentation of items needing further repair.

1.05 QUALITY ASSURANCE

A. Cleaning Contractor Qualifications: Company specializing in the cleaning and restoration of HVAC systems as specified in this section.

1. ASCS Qualifications: A certified member of NADCA.
   a. Certification: Employ an ASCS certified by NADCA on a full-time basis.
   b. Supervisor Qualifications: Certified as an ASCS by NADCA.
2. IEP Qualifications: CMI who is certified by ACAC and accredited by CESB.
3. IEP Qualifications: CMC who is certified by ACAC and accredited by CESB.
4. CMR Qualifications: Certified by ACAC and accredited by CESB.
5. CMRS Qualifications: Certified by ACAC and accredited by CESB.

B. Testing and Inspection Agency Qualifications: Experienced in inspection and testing using methods defined in NADCA ACR.

PART 2 PRODUCTS

2.01 TOOLS AND EQUIPMENT

A. Vacuum Devices and Other Tools: Exceptionally clean, in good working order, and sealed when brought into the facility.

B. Vacuum Devices That Exhaust Air Inside Building, Including Hand-Held and Wet Vacuums: Equipped with HEPA filtration with 99.97 percent collection efficiency for minimum 0.3-micron size particles and DOP test number.

C. Vacuum Devices That Exhaust Air Outside Building, Including Truck- and Trailer-Mounted Types: Equipped with particulate collection including adequate filtration to contain debris removed from the HVAC system; exhausted in manner that prevents contaminant re-entry to building; compliant with applicable regulations as to outdoor environmental contamination.

2.02 SURFACE TREATMENTS

A. Anti-Microbial Materials: EPA registered specifically for use on non-porous HVAC system surfaces and applied per manufacturer's instructions.

2.03 HVAC CLEANING AGENTS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
   1. Apex Engineering Products Corporation.
   2. BBJ Environmental Solutions.
   3. Goodway Technologies Corporation.
   4. Nu-Calgon.
   5. QuestVapco Corporation.

B. Description:
   1. Formulated for each specific soiled coil condition that needs remedy.

2.04 ANTIMICROBIAL SURFACE TREATMENT

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. Bio-Cide International, Inc.
   2. Contec, Inc.
   3. Ecolab, Inc.

B. Description: Specific product selected shall be as recommended by the IEP based on the specific antimicrobial needs of the specific Project conditions.
   1. Formulated to kill and inhibit growth of microorganisms.
   2. EPA-registered for use in HVAC systems and for the specific application in which it will be used.

3. Have no residual action after drying, with zero VOC off-gassing.
4. OSHA compliant.
5. Treatment shall dry clear to allow continued visual observation of the treated surface.

PART 3 EXECUTION

3.01 PROJECT CONDITIONS

A. Comply with applicable federal, state, and local requirements.

B. Perform cleaning, inspection, and remediation in accordance with the recommendations of NADCA "Assessment, Cleaning and Restoration of HVAC Systems" (ACR) and as specified herein.

C. Where NADCA ACR uses the terms "recommended", "highly recommended", or "ideally" in regard to a certain procedure or activity, do that unless it is clearly inapplicable to the project.

D. Take precautions to prevent introduction of additional hazards into occupied spaces.

E. Obtain Owner's approval of proposed temporary locations for large equipment.

F. Designate a decontamination area and obtain Owner's approval.

G. When portions of the facility are to remain occupied or in operation during cleaning activities, provide adequate controls or containment to prevent access to spaces being cleaned by unauthorized persons and provide detailed instructions to Owner as to these controls or containment.

H. If unforeseen mold or other biological contamination is encountered, notify Architect immediately, identifying areas affected and extent and type of contamination.

3.02 EXAMINATION

A. Inspect the system as required to determine appropriate methods, tools, equipment, and protection.

B. Start of cleaning work constitutes acceptance of existing conditions.

C. When concealed spaces are later made accessible, examine and document interior conditions prior to beginning cleaning.

D. Document all instances of mold growth, rodent droppings, other biological hazards, and damaged system components.

3.03 PREPARATION

A. When cleaning work might adversely affect life safety systems, including fire and smoke detection, alarm, and control, coordinate scheduling and testing and inspection procedures with authorities having jurisdiction.

B. Ensure that electrical components that might be adversely affected by cleaning are de-energized, locked out, and protected prior to beginning work.

C. Air-Volume Control Devices: Mark the original position of dampers and other air-directional mechanical devices inside the HVAC system prior to starting cleaning.

D. Access to Concealed Spaces: Use existing service openings and make additional service openings as required to accomplish cleaning and inspection.
   1. Do not cut openings in non-HVAC components without obtaining the prior approval of Owner.
   2. Make new openings in HVAC components in accordance with NADCA Standard 05; do not compromise the structural integrity of the system.

3. Do not cut service openings into flexible duct; disconnect at ends for cleaning and inspection.

E. Ceiling Tile: Lay-in ceiling tile may be removed to gain access to HVAC systems during the cleaning process; protect tile from damage and reinstall upon completion; replace damaged tile.

3.04 CLEANING

A. Use any cleaning method recommended by NADCA ACR unless otherwise specified; do not use methods prohibited by NADCA ACR, or that will damage HVAC components or other work, or that will significantly alter the integrity of the system.
   1. Source-Removal Cleaning Methods:
      a. Use continuously operating vacuum-collection devices to keep each section being cleaned under negative pressure.
      b. Cleaning methods that require mechanical agitation devices to dislodge debris that is adhered to interior surfaces of HVAC system components shall be equipped to safely remove these devices. Cleaning methods shall not damage the integrity of HVAC system components or damage porous surface materials, such as duct and plenum liners.
   2. Cleaning Mineral-Fiber Insulation Components:
      a. Fibrous-glass thermal or acoustical insulation elements present in equipment or ductwork shall be thoroughly cleaned with HEPA vacuuming equipment while the HVAC system is under constant negative pressure and shall not be permitted to get wet according to NADCA ACR.
      b. Cleaning methods used shall not cause damage to fibrous-glass components and will render the system capable of passing the HVAC System Cleanliness Tests (see NADCA ACR).
      c. Fibrous materials that become wet shall be discarded and replaced.

B. Obtain Owner's approval before using wet cleaning methods; ensure that drainage is adequate before beginning.

C. Ducts: Mechanically clean all portions of ducts.

D. Hoses, Cables, and Extension Rods: Clean using suitable sanitary damp wipes at the time they are being removed or withdrawn from their normal position.

E. Registers, Diffusers, and Grilles: When removing, take care to prevent containment exposure due to accumulated debris.

F. Coils: Follow NADCA ACR completely including measuring static pressure drop before and after cleaning; do not remove refrigeration coils from system to clean; report coils that are permanently impacted.
   1. Type 1, or Type 1 and Type 2, cleaning methods shall be used to render the coil visibly clean and capable of passing coil cleaning verification.
   2. Coil drain pans shall be subject to NADCA ACR, "Non-Porous Surfaces Cleaning Verification." Ensure that condensate drain pans are operational.
   3. Electric-resistance coils shall be de-energized, locked out, and tagged before cleaning.
   4. Cleaning methods shall not cause any appreciable damage to, cause displacement of, inhibit heat transfer, or cause erosion of the coil surface or fins, and shall comply with coil manufacturer's written recommendations.
   5. Rinse thoroughly with clean water to remove any latent residues.

G. Collect debris removed during cleaning; ensure that debris is not dispersed outside the HVAC system during the cleaning process.

1. Particulate Collection: For particulate collection equipment, include adequate filtration to contain debris removed. Locate equipment downwind and away from all air intakes and other points of entry into the building.
2. HEPA filtration with 99.97 percent collection efficiency for particles sized 0.3 micrometer or larger shall be used where the particulate collection equipment is exhausting inside the building,

H. Store contaminated tools and equipment in polyethylene bags until cleaned in the designated decontamination area.

I. Control odors and mist vapors during the cleaning and restoration process.

J. System components shall be cleaned so that all HVAC system components are visibly clean. On completion, all components must be returned to those settings recorded just prior to cleaning operations.

3.05 REPAIR

A. Repair openings cut in the ventilation system so that they do not significantly alter the airflow or adversely impact the facility's indoor air quality.

B. At insulated ducts and components, accomplish repairs in such a manner as to achieve the equivalent thermal value.
1. Replace damaged insulation according to Section 23 0713 "Duct Insulation."

C. Reseal new openings in accordance with NADCA Standard 05.

D. Reseal rigid fiber glass duct systems using closure techniques that comply with UL 181 or UL 181A.

E. New closure materials, including insulation, shall match opened materials and shall have removable closure panels fitted with gaskets and fasteners.

F. When new openings are intended to be capable of being re-opened in the future, clearly mark them and report their locations to Owner in project report documents.

3.06 FIELD QUALITY CONTROL

A. Ensure that the following field quality control activities are completed prior to application of any treatments or coatings and prior to returning HVAC system to normal operation.

B. Visually inspect all portions of the cleaned components; if not visibly clean as defined in NADCA ACR, re-clean and reinspect.

C. Coils: Cleaning must restore the coil pressure drop to within 10 percent of the coil's original installed pressure drop; if original pressure drop is not known, coil will be considered clean if free of foreign matter and chemical residue based on visual inspection.

D. When directed, re-clean components until they pass.

E. Submit evidence that all portions of the system required to be cleaned have been cleaned satisfactorily.

F. Prepare a written cleanliness verification report.

3.07 ANTI-MICROBIAL TREATMENT

A. Apply antimicrobial agents and coatings if active fungal growth is determined by the IEP to be at Condition 2 or Condition 3 status according to IICRC S520, as analyzed by a laboratory accredited by AIHA-LAP with an EMLAP certificate, and with results interpreted by an IEP. Apply antimicrobial agents and coatings according to manufacturer's written recommendations and EPA registration listing after the removal of surface deposits and debris.

B. Apply anti-microbial agent after removal of surface deposits and debris.

C. Apply anti-microbial treatments and coatings in strict accordance with the manufacturer's written recommendations and EPA registration listing.

D. Spray coatings directly onto interior ductwork surfaces; do not "fog" into air stream.

3.08 ADJUSTING

A. After satisfactory completion of field quality control activities, restore adjustable devices to original settings, including, but not limited to, dampers, air directional devices, valves, fuses, and circuit breakers.

3.09 WASTE MANAGEMENT

A. Double-bag waste and debris in 6 mil, 0.006 inch (0.1524 mm) thick polyethylene plastic bags.

B. Dispose of debris off-site in accordance with applicable federal, state and local requirements.

END OF SECTION

SECTION 23 05 00
COMMON WORK RESULTS FOR HVAC

PART 1 GENERAL

1.01 SUMMARY

A. This Section includes the following:
   1. Piping materials and installation instructions common to most piping systems.
   2. Dielectric fittings.
   3. Mechanical sleeve seals.
   4. Sleeves.
   5. Escutcheons.
   6. Floor plates.
   7. Grout.
   8. Equipment installation requirements common to equipment sections.
   9. Concrete bases.
   10. Supports and anchorages.

B. Related Sections:
   1. Division 01 Section “Project Management and Coordination” for requirements related to each subcontractor’s responsibility to complete coordination drawings and submit.
   2. Division 01 Section “Closeout Submittals” for requirements related to each sub contractor’s responsibility to submit record drawing to the owner as part of the operation and maintenance data.

1.02 DEFINITIONS

A. Refer to General Conditions for additional definitions.

B. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct chases, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.

C. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.

D. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.

E. Concealed, Interior Installations: Concealed from view and protected from physical contact by building occupants. Examples include above ceilings and chases.

F. Concealed, Exterior Installations: Concealed from view and protected from weather conditions and physical contact by building occupants but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.

1.03 SUBMITTALS

A. Shop Drawings: CAD generated drawings and drawn to 1/8 inch equals 1 foot scale. The common/public areas and the entire mechanical room shall require CAD generated drawings and drawn to 1/4 inch equals 1 foot scale. The following components shall be noted on the drawing for the purpose of coordination with other trades and based on input from installers of the items involved:
   1. Duct layout indicating sizes.
   2. Elevations of top and bottom of ducts.
   3. Penetrations through fire-rated and other partitions.
   4. Equipment installation based on equipment being used on Project.

5. Duct accessories, including access doors and panels.

B. Welding certificates.

1.04 QUALITY ASSURANCE

A. Steel Support Welding: Qualify processes and operators according to AWS D1.1, "Structural Welding Code--Steel."

B. Steel Pipe Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."
   1. Comply with provisions in ASME B31 Series, "Code for Pressure Piping."
   2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.

C. Electrical Characteristics for HVAC Equipment: Equipment of higher electrical characteristics may be furnished provided such proposed equipment is approved in writing and connecting electrical services, circuit breakers, and conduit sizes are appropriately modified. If minimum energy ratings or efficiencies are specified, equipment shall comply with requirements.

1.05 COORDINATION

A. This Contractor shall coordinate with other trades in the installation of equipment, piping, conduit, and ductwork.

B. The HVAC/ Sheet-Metal Contractor shall initiate the coordination process by providing reproducible plan drawings showing ductwork and equipment. The HVAC/Sheet-Metal Contractor shall forward the drawings to the Piping Contractor, Fire Protection Contractor, and Electrical Contractor for inclusion of their systems work. The HVAC/Sheet-Metal Contractor shall be responsible for retrieving all drawings from necessary contractors and developing necessary drawings highlighting conflicting areas.

C. Following the completion of these drawings, an on-site coordination meeting shall be convened, and attended by all the above contractors, and the Mechanical and Electrical design Engineers for the purpose of review and coordination. This meeting allows the opportunity for all contractors to resolve coordination issues prior to the fabrication and installation of materials. Coordination meeting shall take place before any work is started. No additional cost to the project will be accepted for any coordination related items if this process is not adhered to.

1.06 PREFARICATION

A. If a contractor elects to prefabricate piping and ductwork, they are still obligated to abide by all requirements for cooperation with other trades. they shall not assume that his material will be installed first and other trades must follow.

B. If changes are made by the architect/engineer reasonably in advance of anticipated installation, the Owner shall not be penalized with added cost because materials were prefabricated in advance.

PART 2 PRODUCTS

2.01 PIPE, TUBE, AND FITTINGS

A. Refer to individual Division 23 piping Sections for pipe, tube, and fitting materials and joining methods.

B. Pipe Threads: ASME B1.20.1 for factory-threaded pipe and pipe fittings.

2.02 JOINING MATERIALS

A. Refer to individual Division 23 piping Sections for special joining materials not listed below.

B. Pipe-Flange Gasket Materials: ASME B16.21, nonmetallic, flat, asbestos-free, 1/8-inch maximum thickness unless thickness or specific material is indicated.

C. Plastic, Pipe-Flange Gasket, Bolts, and Nuts: Type and material recommended by piping system manufacturer, unless otherwise indicated.

D. Solder Filler Metals: ASTM B 32, lead-free alloys. Include water-flushable flux according to ASTM B 813.

E. Brazing Filler Metals: AWS A5.8, BCuP Series or BAg1, unless otherwise indicated.

F. Welding Filler Metals: Comply with AWS D10.12.

G. Solvent Cements for Joining Plastic Piping:
   1. CPVC Piping: ASTM F 493.
   2. PVC Piping: ASTM D 2564. Include primer according to ASTM F 656.

2.03 DIELECTRIC FITTINGS

A. Description: Combination fitting of copper alloy and ferrous materials with threaded, solder-joint, plain, or weld-neck end connections that match piping system materials.

B. Insulating Material: Suitable for system fluid, pressure, and temperature.

C. Dielectric Unions: Factory-fabricated, union assembly, for 250-psig minimum working pressure at 180 deg F.

D. Dielectric Flanges: Factory-fabricated, companion-flange assembly, for 150- or 300-psig minimum working pressure as required to suit system pressures.

E. Dielectric Couplings: Galvanized-steel coupling with inert and noncorrosive, thermoplastic lining; threaded ends; and 300-psig minimum working pressure at 225 deg F.

F. Dielectric Nipples: Electroplated steel nipple with inert and noncorrosive, thermoplastic lining; plain, threaded, or grooved ends; and 300-psig minimum working pressure at 225 deg F.

2.04 MECHANICAL SLEEVE SEALS

A. Description: Modular sealing element unit, designed for field assembly, to fill annular space between pipe and sleeve.

B. Sealing Elements: EPDM interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.

C. Pressure Plates: glass reinforced nylon or plastic Carbon steel. Include two for each sealing element.

D. Connecting Bolts and Nuts: Carbon steel with corrosion-resistant coating of length required to secure pressure plates to sealing elements. Include one for each sealing element.

2.05 SLEEVES

A. Galvanized-Steel Sheet: 0.0239-inch minimum thickness; round tube closed with welded longitudinal joint.

B. Steel Pipe: ASTM A 53, Type E, Grade B, Schedule 40, galvanized, plain ends.

C. Cast Iron: Cast or fabricated "wall pipe" equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop, unless otherwise indicated.

D. Stack Sleeve Fittings: Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring and bolts and nuts for membrane flashing.
   1. Underdeck Clamp: Clamping ring with set screws.

E. Molded PVC: Permanent, with nailing flange for attaching to wooden forms.

F. PVC Pipe: ASTM D 1785, Schedule 40.

G. Molded PE: Reusable, PE, tapered-cup shaped, and smooth-outer surface with nailing flange for attaching to wooden forms.

2.06 ESCUTCHEONS

A. Description: Manufactured wall and ceiling escutcheons and floor plates, with an ID to closely fit around pipe, tube, and insulation of insulated piping and an OD that completely covers opening.

B. One-Piece, Deep-Pattern Type: Deep-drawn, box-shaped brass with polished chrome-plated finish.

C. One-Piece, Cast-Brass Type: With set screw.
   1. Finish: Polished chrome-plated and rough brass.

D. Split-Casting, Cast-Brass Type: With concealed hinge and set screw.
   1. Finish: Polished chrome-plated and rough brass.

2.07 FLOOR PLATES

A. One-Piece Floor Plates: Cast-iron flange with holes for fasteners.

2.08 GROUT

A. Description: ASTM C 1107, Grade B, nonshrink and nonmetallic, dry hydraulic-cement grout.
   1. Characteristics: Post-hardening, volume-adjusting, nonstaining, noncorrosive, nongaseous, and recommended for interior and exterior applications.
   2. Design Mix: 5000-psi, 28-day compressive strength.
   3. Packaging: Premixed and factory packaged.

PART 3 EXECUTION

3.01 PIPING SYSTEMS - COMMON REQUIREMENTS

A. Install piping according to the following requirements and Division 23 Sections specifying piping systems.

B. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.

C. Install piping in concealed locations, unless otherwise indicated and except in equipment rooms and service areas.

D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

E. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.

F. Install piping to permit valve servicing.

G. Install piping at indicated slopes.

H. Install piping free of sags and bends.

I. Install fittings for changes in direction and branch connections.

J. Install piping to allow application of insulation.

K. Select system components with pressure rating equal to or greater than system operating pressure.

L. Verify final equipment locations for roughing-in.

M. Refer to equipment specifications in other Sections of these Specifications for roughing-in requirements.

3.02 PIPING JOINT CONSTRUCTION

A. Join pipe and fittings according to the following requirements and Division 23 Sections specifying piping systems.

B. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.

C. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.

D. Soldered Joints: Apply ASTM B 813, water-flushable flux, unless otherwise indicated, to tube end. Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook," using lead-free solder alloy complying with ASTM B 32.

E. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter, using copper-phosphorus brazing filler metal complying with AWS A5.8.

F. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
   1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
   2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

G. Welded Joints: Construct joints according to AWS D10.12, using qualified processes and welding operators according to Part 1 "Quality Assurance" Article.

H. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.

I. Plastic Piping Solvent-Cement Joints: Clean and dry joining surfaces. Join pipe and fittings according to the following:
   1. Comply with ASTM F 402, for safe-handling practice of cleaners, primers, and solvent cements.
   2. CPVC Piping: Join according to ASTM D 2846/D 2846M Appendix.
   3. PVC Pressure Piping: Join schedule number ASTM D 1785, PVC pipe and PVC socket fittings according to ASTM D 2672. Join other-than-schedule-number PVC pipe and socket fittings according to ASTM D 2855.
   4. PVC Nonpressure Piping: Join according to ASTM D 2855.

J. Plastic Pressure Piping Gasketed Joints: Join according to ASTM D 3139.

K. Plastic Nonpressure Piping Gasketed Joints: Join according to ASTM D 3212.

L. PE Piping Heat-Fusion Joints: Clean and dry joining surfaces by wiping with clean cloth or paper towels. Join according to ASTM D 2657.
   1. Plain-End Pipe and Fittings: Use butt fusion.
   2. Plain-End Pipe and Socket Fittings: Use socket fusion.

M. Fiberglass Bonded Joints: Prepare pipe ends and fittings, apply adhesive, and join according to pipe manufacturer's written instructions.

3.03 PIPING CONNECTIONS

A. Make connections according to the following, unless otherwise indicated:

1. Install unions, in piping NPS 2 and smaller, adjacent to each valve and at final connection to each piece of equipment.
2. Install flanges, in piping NPS 2-1/2 and larger, adjacent to flanged valves and at final connection to each piece of equipment.
3. Dry Piping Systems: Install dielectric unions and flanges to connect piping materials of dissimilar metals.
4. Wet Piping Systems: Install dielectric coupling and nipple fittings to connect piping materials of dissimilar metals.

3.04 EQUIPMENT INSTALLATION - COMMON REQUIREMENTS

A. Install equipment to allow maximum possible headroom unless specific mounting heights are not indicated.

B. Install equipment level and plumb, parallel and perpendicular to other building systems and components in exposed interior spaces, unless otherwise indicated.

C. Install HVAC equipment to facilitate service, maintenance, and repair or replacement of components. Connect equipment for ease of disconnecting, with minimum interference to other installations. Extend grease fittings to accessible locations.

D. Install equipment to allow right of way for piping installed at required slope.

3.05 CONCRETE BASES

A. Concrete Bases: Anchor equipment to concrete base according to equipment manufacturer's written instructions and according to seismic codes at Project.
   1. Construct concrete bases of dimensions indicated, but not less than 4 inches larger in both directions than supported unit.
   2. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of the base.
   3. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.
   4. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
   5. Install anchor bolts to elevations required for proper attachment to supported equipment.
   6. Install anchor bolts according to anchor-bolt manufacturer's written instructions.
   7. Use 3000-psi, 28-day compressive-strength concrete and reinforcement as specified in Division 03 Section "Cast-in-Place Concrete."

3.06 ERECTION OF METAL SUPPORTS AND ANCHORAGES

A. Refer to Division 05 Section "Metal Fabrications" for structural steel.

B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor HVAC materials and equipment.

C. Field Welding: Comply with AWS D1.1.

3.07 ERECTION OF WOOD SUPPORTS AND ANCHORAGES

A. Cut, fit, and place wood grounds, nailers, blocking, and anchorages to support, and anchor HVAC materials and equipment.

B. Select fastener sizes that will not penetrate members if opposite side will be exposed to view or will receive finish materials. Tighten connections between members. Install fasteners without splitting wood members.

C. Attach to substrates as required to support applied loads.

3.08 SLEEVE SEAL INSTALLATION

A. Install sleeve seals in sleeves in exterior concrete walls at water-service piping entries into building.

B. Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble sleeve seal components and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

3.09 SLEEVE INSTALLATION

A. General Requirements: Install sleeves for pipes and tubes passing through penetrations in floors, partitions, roofs, and walls.

B. Sleeves are not required for core-drilled holes.

C. Permanent sleeves are not required for holes formed by removable PE sleeves.

D. Cut sleeves to length for mounting flush with both surfaces unless otherwise indicated.

E. Install sleeves in new partitions, slabs, and walls as they are built.

F. For interior wall penetrations, seal annular space between sleeve and pipe or pipe insulation using joint sealants appropriate for size, depth, and location of joint. Comply with requirements for joint sealants in Division 07 Section "Joint Sealants."

G. For exterior wall penetrations above grade, seal annular space between sleeve and pipe using joint sealants appropriate for size, depth, and location of joint. Comply with requirements for joint sealants in Division 07 Section "Joint Sealants."

H. For exterior wall penetrations below grade, seal annular space between sleeve and pipe using sleeve seals.

I. Seal space outside of sleeves in concrete slabs and walls with grout.

J. Install sleeves that are large enough to provide 1/4-inch annular clear space between sleeve and pipe or pipe insulation unless otherwise indicated.

K. Install sleeve materials according to the following applications:
   1. Sleeves for Piping Passing through Concrete Floor Slabs: Molded PE.
   2. Sleeves for Piping Passing through Concrete Floor Slabs of Mechanical Equipment Areas or Other Wet Areas: Galvanized-steel pipe.
      a. Extend sleeves 2 inches above finished floor level.
      b. For pipes penetrating floors with membrane waterproofing, extend cast-iron sleeve fittings below floor slab as required to secure clamping ring if ring is specified. Secure flashing between clamping flanges. Install section of cast-iron soil pipe to extend sleeve to 2 inches above finished floor level. Comply with requirements for flashing in Division 07 Section "Sheet Metal Flashing and Trim."
   3. Sleeves for Piping Passing through Gypsum-Board Partitions:
      a. Galvanized-steel-pipe sleeves for pipes smaller than NPS 6.
      b. Galvanized-steel-sheet sleeves for pipes NPS 6 and larger.
      c. Exception: Sleeves are not required for water-supply tubes and waste pipes for individual plumbing fixtures if escutcheons will cover openings.
   4. Sleeves for Piping Passing through Concrete Roof Slabs: Galvanized-steel pipe.
   5. Sleeves for Piping Passing through Exterior Concrete Walls:
      a. Galvanized-steel-pipe sleeves for pipes smaller than NPS 6.
      b. Cast-iron wall-pipe sleeves for pipes NPS 6 and larger.

c. Install sleeves that are large enough to provide 1-inch annular clear space between sleeve and pipe or pipe insulation when sleeve seals are used.

6. Sleeves for Piping Passing through Interior Concrete Walls:
   a. Galvanized-steel-pipe sleeves for pipes smaller than NPS 6.
   b. Galvanized-steel-sheet sleeves for pipes NPS 6 and larger.

L. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Comply with requirements for firestop materials and installations in Division 07 Section "Penetration Firestopping."

3.10 ESCUTCHEON INSTALLATION

A. Install escutcheons for penetrations of walls, ceilings, and floors.

B. Install escutcheons with ID to closely fit around pipe, tube, and insulation of piping and with OD that completely covers opening.

C. Escutcheons for New Piping:
   1. Piping with Fitting or Sleeve Protruding from Wall: One piece, deep pattern.
   2. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One piece, cast brass with polished chrome-plated finish.
   3. Bare Piping at Ceiling Penetrations in Finished Spaces: One piece, cast brass with polished chrome-plated finish.
   4. Bare Piping in Unfinished Service Spaces: One piece, cast brass with polished chrome-plated finish.
   5. Bare Piping in Equipment Rooms: One piece, cast brass.
   6. Bare Piping at Floor Penetrations in Equipment Rooms: One-piece floor plate.

3.11 FLOOR PLATE INSTALLATION

A. Install floor plates for piping penetrations of equipment-room floors.

B. Install floor plates with ID to closely fit around pipe, tube, and insulation of piping and with OD that completely covers opening.
   1. New Piping: One-piece, floor-plate type.

3.12 GROUTING

A. Mix and install grout for HVAC equipment base bearing surfaces, pump and other equipment base plates, and anchors.

B. Clean surfaces that will come into contact with grout.

C. Provide forms as required for placement of grout.

D. Avoid air entrapment during placement of grout.

E. Place grout, completely filling equipment bases.

F. Place grout on concrete bases and provide smooth bearing surface for equipment.

G. Place grout around anchors.

H. Protect grout from disturbances during curing.

END OF SECTION

SECTION 23 05 13
COMMON MOTOR REQUIREMENTS FOR HVAC EQUIPMENT

PART 1 GENERAL

1.01 SECTION INCLUDES

A. General construction and requirements.

B. Single phase electric motors.

C. Three phase electric motors.

1.02 REFERENCE STANDARDS

A. ABMA STD 9 - Load Ratings and Fatigue Life for Ball Bearings; 2015 (Reaffirmed 2020).

B. IEEE 112 - IEEE Standard Test Procedure for Polyphase Induction Motors and Generators; 2017.

C. NEMA MG 00001 - Motors and Generators; 2024.

D. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

1.03 QUALITY ASSURANCE

A. Comply with NFPA 70.

B. Products Requiring Electrical Connection: Listed and classified by Underwriters Laboratories Inc. as suitable for the purpose specified and indicated.

C. Coordinate features of motors, installed units, and accessory devices to be compatible with the following:
   1. Motor controllers.
   2. Torque, speed, and horsepower requirements of the load.
   3. Ratings and characteristics of supply circuit and required control sequence.
   4. Ambient and environmental conditions of installation location.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Protect motors stored on site from weather and moisture by maintaining factory covers and suitable weather-proof covering.

PART 2 PRODUCTS

2.01 GENERAL CONSTRUCTION AND REQUIREMENTS

A. Comply with requirements in this section except when stricter requirements are specified in HVAC equipment schedules or other Sections.

B. Nominal Efficiency:
   1. Comply with ASHRAE 90.1, current version.

C. Construction:
   1. Open drip-proof type except where specifically noted otherwise.
   2. Design for continuous operation in 104 degrees F (40 degrees C) environment.
   3. Design for temperature rise in accordance with NEMA MG 00001 limits for insulation class, service factor, and motor enclosure type.
   4. Capacity and Torque Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, at installed altitude and environment, with indicated operating sequence, and without exceeding nameplate ratings or considering service factor.

D. Explosion-Proof Motors: UL approved and labelled for hazard classification, with over temperature protection.

E. Visible Nameplate: Indicating motor horsepower, voltage, phase, cycles, RPM, full load amps, locked rotor amps, frame size, manufacturer's name and model number, service factor, power factor.

F. Wiring Terminations:
   1. Provide terminal lugs to match branch circuit conductor quantities, sizes, and materials indicated. Enclose terminal lugs in terminal box sized to NFPA 70, threaded for conduit.
   2. For fractional horsepower motors where connection is made directly, provide threaded conduit connection in end frame.

2.02 SINGLE PHASE POWER - SPLIT PHASE MOTORS

A. Starting Torque: Less than 150 percent of full load torque.

B. Starting Current: Up to seven times full load current.

C. Breakdown Torque: Approximately 200 percent of full load torque.

D. Drip-proof Enclosure: Class A (50 degrees C temperature rise) insulation, NEMA Service Factor, prelubricated sleeve or ball bearings.

E. Enclosed Motors: Class A (50 degrees C temperature rise) insulation, 1.0 Service Factor, prelubricated ball bearings.

2.03 SINGLE PHASE POWER - PERMANENT-SPLIT CAPACITOR MOTORS

A. Starting Torque: Exceeding one fourth of full load torque.

B. Starting Current: Up to six times full load current.

C. Multiple Speed: Through tapped windings.

D. Open Drip-proof or Enclosed Air Over Enclosure: Class A (50 degrees C temperature rise) insulation, minimum 1.0 Service Factor, prelubricated sleeve or ball bearings, automatic reset overload protector.

2.04 SINGLE PHASE POWER - CAPACITOR START MOTORS

A. Starting Torque: Three times full load torque.

B. Starting Current: Less than five times full load current.

C. Pull-up Torque: Up to 350 percent of full load torque.

D. Breakdown Torque: Approximately 250 percent of full load torque.

E. Motors: Capacitor in series with starting winding; provide capacitor-start/capacitor-run motors with two capacitors in parallel with run capacitor remaining in circuit at operating speeds.

F. Drip-proof Enclosure: Class A (50 degrees C temperature rise) insulation, NEMA Service Factor, prelubricated sleeve bearings.

G. Enclosed Motors: Class A (50 degrees C temperature rise) insulation, 1.0 Service Factor, prelubricated ball bearings.

2.05 THREE PHASE POWER - SQUIRREL CAGE MOTORS

A. Starting Torque: Between 1 and 1-1/2 times full load torque.

B. Starting Current: Six times full load current.

C. Power Output, Locked Rotor Torque, Breakdown or Pull Out Torque: NEMA Design B characteristics.

D. Design, Construction, Testing, and Performance: Comply with NEMA MG 00001 for Design B motors.

E. Service Factor: 1.15.

F. Insulation System: NEMA Class F or better.

G. Testing Procedure: In accordance with IEEE 112. Load test motors to determine free from electrical or mechanical defects in compliance with performance data.

H. Motor Frames: NEMA Standard T-Frames of steel, aluminum, or cast iron with end brackets of cast iron or aluminum with steel inserts.

I. Thermistor System (Motor Frame Sizes 254T and Larger): Three PTC thermistors embedded in motor windings and epoxy encapsulated solid state control relay for wiring into motor starter; refer to Section 26 29 13.

J. Bearings: Grease lubricated anti-friction ball bearings with housings equipped with plugged provision for relubrication, rated for minimum ABMA STD 9, L-10 life of 20,000 hours. Calculate bearing load with NEMA minimum V-belt pulley with belt center line at end of NEMA standard shaft extension. Stamp bearing sizes on nameplate.

K. Sound Power Levels: To NEMA MG 00001.

L. Nominal Efficiency: As indicated at full load and rated voltage when tested in accordance with IEEE 112.

M. Nominal Power Factor: As indicated at full load and rated voltage when tested in accordance with IEEE 112.

N. Motors Used with Reduced-Voltage and Multispeed Controllers: Match wiring connection requirements for controller with required motor leads. Provide terminals in motor terminal box, suited to control method.

O. Motors Used with Variable Frequency Controllers: Ratings, characteristics, and features coordinated with and approved by controller manufacturer.
   1. Windings: Copper magnet wire with moisture-resistant insulation varnish, designed and tested to resist transient spikes, high frequencies, and short time rise pulses produced by pulse-width modulated inverters.
   2. Energy- and Premium-Efficient Motors: Class B temperature rise; Class F insulation.
   3. Inverter-Duty Motors: Class F temperature rise; Class H insulation.
   4. All motors shall be provided with manufacturer installed shaft grounding kit.

SECTION 23 05 16
EXPANSION FITTINGS AND LOOPS FOR HVAC PIPING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Flexible pipe connectors.

B. Expansion joints and compensators.

C. Pipe loops, offsets, and swing joints.

1.02 RELATED REQUIREMENTS

A. Section 23 21 13 - Hydronic Piping.

1.03 REFERENCE STANDARDS

A. ASTM A536 - Standard Specification for Ductile Iron Castings; 1984, with Editorial Revision (2019).

1.04 SUBMITTALS

A. Product Data:
   1. Flexible Pipe Connectors: Indicate maximum temperature and pressure rating, face-to-face length, live length, hose wall thickness, hose convolutions per foot (meter) and per assembly, fundamental frequency of assembly, braid structure, and total number of wires in braid.
   2. Expansion Joints: Indicate maximum temperature and pressure rating, and maximum expansion compensation.

B. Delegated-Design Submittal: For each anchor and alignment guide indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
   1. Design Calculations: Calculate requirements for thermal expansion of piping systems and for selecting and designing expansion joints, loops, and swing connections.
   2. Anchor Details: Detail fabrication of each anchor indicated. Show dimensions and methods of assembly and attachment to building structure.
   3. Alignment Guide Details: Detail field assembly and attachment to building structure.
   4. Schedule: Indicate type, manufacturer's number, size, material, pressure rating, end connections, and location for each expansion joint.

C. Manufacturer's Instructions: Indicate manufacturer's installation instructions, special procedures, and external controls.

D. Maintenance Data: Include adjustment instructions.

E. Project Record Documents: Record installed locations of flexible pipe connectors, expansion joints, anchors, and guides.

PART 2 PRODUCTS

2.01 FLEXIBLE PIPE CONNECTORS - STEEL PIPING

A. Inner Hose: Bronze.

B. Exterior Sleeve: Single braided, stainless steel.

C. Pressure Rating: 125 psi up to 12 inch (862 kPa up to 300 mm, DN).

D. Maximum Service Temperature: 450 degrees F (232 degrees C).

E. End Connections: Flanged.

F. Size: Use pipe sized units.

G. Maximum offset: 3/4 inch (20 mm) on each side of installed center line.

2.02 FLEXIBLE PIPE CONNECTORS - COPPER PIPING

A. Inner Hose: Bronze.

B. Exterior Sleeve: Braided bronze.

C. Pressure Rating: 125 psi up to 2 inch (862 kPa up to 50 mm, DN).

D. Maximum Service Temperature: 450 degrees F (232 degrees C).

E. End Connections: Flanged.

F. Size: Use pipe sized units.

G. Maximum offset: 3/4 inch (20 mm) on each side of installed center line.

H. Application: Copper piping.

2.03 EXPANSION JOINTS - METAL BELLOWS TYPE

A. Provide shroud to protect from external damage and allows for the application of external insulation.

B. Provide with tie rods to prevent over-compression or over-elongation.

C. Pressure Rating: 125 psi and 400 degrees F (862 kPa and 204 degrees C).

D. Maximum Compression: 1-3/4 inches (45 mm).

E. Maximum Extension: 1/4 inch (6 mm).

F. End Connections: Flanged.

G. Size: Use pipe sized units.

H. Application: Steel piping 2 inches (50 mm) and larger.

2.04 EXPANSION JOINTS - HOSE AND BRAID

A. Manufacturers:
   1. Flex-Hose Co. Inc; V-Loop: www.flexhose.com/#sle.
   2. Flex-Weld, Inc; Keflex Ke-Loop: www.kelcoind.com/#sle.
   3. The Metraflex Company; Metraloop: www.metraflex.com/#sle.
   4. Unisource Manufacturing, Inc; V-Loop: www.unisource-mfg.com/#sle.
   5. Substitutions: See Section 01 60 00 - Product Requirements.

B. Provide flexible loops with two flexible sections of hose and braid, two 90 degree elbows, and 180 degree return with support brackets and plugged drain port for steam service.

C. Maximum Allowable Motion: 2 inch (50.8 mm) in the x, y, and z planes with no thrust loads to the building structure

D. Maximum Working Pressure: 150 psi (1030 kPa) at 800 degrees F (426.7 degrees C).

E. Construction: Class 150, schedule 40, stainless steel hose and braid assembly with carbon steel fittings, including elbows and flanged end connections sized to match pipe segment
   1. Selected Product to Accommodate:
      a. Compression and Expansion Axial Deflection: +/- 6 inch (150 mm).
      b. Seismic Deflection: +/- 4 inch (100 mm)
      c. Angular Rotation: 15 degrees.

d. Force developed by 1.5 times specified maximum allowable operating pressure.

2. Provide necessary accessories including, but not limited to, swivel joints.

2.05 ACCESSORIES

A. Pipe Alignment Guides:
   1. Two piece welded steel with enamel paint, bolted, with spider to fit standard pipe, frame with four mounting holes, clearance for minimum 1 inch (25 mm) thick insulation, minimum 3 inches (75 mm) travel.

B. Pipe Anchors:
   1. Steel Shapes and Plates: ASTM A 36/A 36M.
   2. Bolts and Nuts: ASME B18.10 or ASTM A 183, steel hex head.
   3. Washers: ASTM F 844, steel, plain, flat washers.
   4. Mechanical Fasteners: Insert-wedge-type stud with expansion plug anchor for use in hardened portland cement concrete, with tension and shear capacities appropriate for application.
      a. Stud: Threaded, zinc-coated carbon steel.
      b. Expansion Plug: Zinc-coated steel.
      c. Washer and Nut: Zinc-coated steel.
   5. Chemical Fasteners: Insert-type-stud, bonding-system anchor for use with hardened portland cement concrete, with tension and shear capacities appropriate for application.
      a. Bonding Material: ASTM C 881/C 881M, Type IV, Grade 3, two-component epoxy resin suitable for surface temperature of hardened concrete where fastener is to be installed.
      b. Stud: ASTM A 307, zinc-coated carbon steel with continuous thread on stud unless otherwise indicated.
      c. Washer and Nut: Zinc-coated steel.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install alignment guides to guide expansion and to avoid end-loading and torsional stress.

C. Install one guide(s) on each side of pipe expansion loops. Locate guides at a distance of twice the amount of offset, from the center of the loop.

D. Locate guides on both sides of expansion joint, not more than four pipe diameters from expansion joint.

E. Attach guides to pipe and secure guides to building structure.

F. Anchor pipe to building structure where indicated. Provide pipe guides so movement is directed along axis of pipe only. Erect piping such that strain and weight is not on cast connections or apparatus.

G. Install anchors at locations to prevent stresses from exceeding those permitted by ASME B31.9 and to prevent transfer of loading and stresses to connected equipment.

H. Anchor Attachments:
   1. Anchor Attachment to Steel Pipe: Attach by welding. Comply with ASME B31.9 and ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."
   2. Anchor Attachment to Copper Tubing: Attach with pipe hangers. Use MSS SP-69, Type 24, U-bolts bolted to anchor.

I. Fabricate and install steel anchors by welding steel shapes, plates, and bars. Comply with ASME B31.9 and AWS D1.1/D1.1M.
   1. Anchor Attachment to Steel Structural Members: Attach by welding.
   2. Anchor Attachment to Concrete Structural Members: Attach by fasteners. Follow fastener manufacturer's written instructions.

END OF SECTION

SECTION 23 05 17
SLEEVES AND SLEEVE SEALS FOR HVAC PIPING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Pipe sleeves.

B. Pipe-sleeve seals.

1.02 RELATED REQUIREMENTS

A. Section 23 05 23 - General-Duty Valves for HVAC Piping.

B. Section 23 07 19 - HVAC Piping Insulation.

1.03 REFERENCE STANDARDS

A. ASTM C592 - Standard Specification for Mineral Fiber Blanket Insulation and Blanket-Type Pipe Insulation (Metal-Mesh Covered) (Industrial Type); 2022a.

B. ASTM E814 - Standard Test Method for Fire Tests of Penetration Firestop Systems; 2024.

1.04 SUBMITTALS

A. Shop Drawings: Indicate pipe materials used, jointing methods, supports, floor and wall penetration seals. Indicate installation, layout, weights, mounting and support details, and piping connections.

PART 2 PRODUCTS

2.01 PIPE SLEEVES

A. Vertical Piping:
   1. Sleeve Length: 1 inch (25 mm) above finished floor.
   2. Provide sealant for watertight joint.

B. Plastic or Sheet Metal: Pipe passing through interior walls, partitions, and floors, unless steel or brass sleeves are specified below.
   1. Plastic pipe within ceiling plenums shall meet ASTM E84 flame spread and smoke development.

C. Pipe Passing Through Below Grade Exterior Walls:
   1. Schedule 40 PVC.
   2. Provide watertight space with link rubber or modular seal between sleeve and pipe on both pipe ends.

D. Clearances:
   1. Provide allowance for insulated piping.
   2. Wall, Floor, Partitions, and Beam Flanges: 1 inch (25 mm) greater than external pipe diameter.
   3. All Rated Openings: Caulked tight with fire stopping material in compliance with ASTM E814 in accordance with Section 07 84 00 to prevent the spread of fire, smoke, and gases.

2.02 PIPE-SLEEVE SEALS

A. Manufacturers:
   1. Advance Products & Systems, LLC; Innerlynx: www.apsonline.com/#sle.
   2. American Polywater Corporation; PGKD Modular Seals: www.polywater-haufftechnik.com/#sle.

3. Flexicraft Industries; PipeSeal: www.flexicraft.com/#sle.
4. Garlock; LINK-SEAL: www.garlock.com.
5. Substitutions: See Section 01 60 00 - Product Requirements.

B. Modular Mechanical Sleeve-Seal:
1. Elastomer-based interlocking links continuously fill annular space between pipe and wall-sleeve, wall or casing opening.
2. Watertight seal between pipe and wall-sleeve, wall or casing opening.
3. Size and select seal component materials in accordance with service requirements.
4. Service Requirements:
a. Corrosion resistant.
b. Underground, buried, and high level of water-resistance.
5. EPDM seal element.
6. Reinforced nylon polymer pressure plates.
7. 316 stainless steel nuts and bolts.

C. Sealing Compounds:
1. Provide packing and sealing compound to fill pipe to sleeve thickness.
2. Combined packing and seal compound is to match partition fire-resistance hourly rating.

D. Wall Sleeve: PVC material with waterstop collar, and nailer end-caps.

PART 3 EXECUTION

3.01 INSTALLATION

A. Route piping in orderly manner, plumb and parallel to building structure. Maintain gradient.

B. Install piping to conserve building space, to not interfere with use of space and other work.

C. Install piping and pipe sleeves to allow for expansion and contraction without stressing pipe, joints, or connected equipment.

D. Provide sleeves when penetrating footings, floors, walls, and partitions. Seal pipe including sleeve penetrations to achieve fire resistance equivalent to fire separation required.
1. Underground Piping: Caulk pipe sleeve watertight or mechanically expandable chloroprene inserts with bitumen sealed metal components.
2. Aboveground Piping:
a. Pack solid using mineral fiber in compliance with ASTM C592.
b. Fill space with an elastomer caulk to a depth of 0.50 inch (15 mm) where penetrations occur between conditioned and unconditioned spaces.
3. All Rated Openings: Caulk tight with fire stopping material in compliance with ASTM E814 to prevent the spread of fire, smoke, and gases.
4. Caulk exterior wall sleeves watertight or mechanically expandable chloroprene inserts with mastic-sealed components.

E. Manufactured Sleeve-Seal Systems:
1. Install manufactured sleeve-seal systems in sleeves located in grade slabs and exterior concrete walls at piping entrances into building.
2. Provide sealing elements of the size, quantity, and type required for the piping and sleeve inner diameter or penetration diameter.
3. Locate piping in center of sleeve or penetration.
4. Install field assembled sleeve-seal system components in annular space between sleeve and piping.
5. Tighten bolting for a water-tight seal.

6. Install in accordance with manufacturer's recommendations.

F. When installing more than one piping system material, ensure system components are compatible and joined to ensure the integrity of the system. Provide necessary joining fittings. Ensure flanges, union, and couplings for servicing are consistently provided.

SECTION 23 05 19
METERS AND GAUGES FOR HVAC PIPING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Flow meters.

B. Electromagnetic flow meters.

C. Pressure gauges and pressure gauge taps.

D. Thermometers and thermometer wells.

E. Test plugs.

1.02 RELATED REQUIREMENTS

A. Section 23 21 13 - Hydronic Piping.

1.03 REFERENCE STANDARDS

A. ASME B40.100 - Pressure Gauges and Gauge Attachments; 2022.

B. ASME MFC-3M - Measurement of Fluid Flow in Pipes Using Orifice, Nozzle, and Venturi; 2004 (Reaffirmed 2017).

C. ASTM E1 - Standard Specification for ASTM Liquid-in-Glass Thermometers; 2014 (Reapproved 2020).

D. ASTM E77 - Standard Test Method for Inspection and Verification of Thermometers; 2014 (Reapproved 2021).

E. NEMA EN 10250 - Enclosures for Electrical Equipment (1000 Volts Maximum); 2024.

F. UL 393 - Indicating Pressure Gauges for Fire-Protection Service; Current Edition, Including All Revisions.

1.04 SUBMITTALS

A. Product Data: Provide list that indicates use, operating range, total range and location for manufactured components.

B. Operation and Maintenance Data.

PART 2 PRODUCTS

2.01 LIQUID FLOW METERS

A. Manufacturers:
   1. Dwyer Instruments, Inc: www.dwyer-inst.com/#sle.
   2. McCrometer: www.mccrometer.com/#sle.
   3. Veris Industries: www.veris.com/#sle.

B. Calibrated ASME MFC-3M Venturi orifice plate and flanges with valved taps, chart for conversion of differential pressure readings to flow rate, with pressure gauge in case.

C. Annular element flow stations with meter set.
   1. Measuring Station: Type 316 stainless steel pitot type flow element installed in threaded nipple pipe section, with safety shut-off valves and quick coupling connections, and permanent metal tag indicating design flow rate, reading for design flow rate, metered fluid, line size, station or location number.
      a. Pressure rating: 275 psi (1896 kPa).
      b. Maximum temperature: 400 degrees F (204 degrees C).

c. Accuracy: Plus 0.55 percent to minus 2.30 percent.

2.02 ELECTROMAGNETIC FLOW METERS

A. Manufacturers:
1. Badger Meter, Inc: www.badgermeter.com/#sle.
2. Foxboro, a brand of Schneider Electric: www.schneider-electric.us/#sle.
3. Onicon, Inc; FT-3000 Series: www.onicon.com/#sle.

B. Inline Type: Class 150 flanged with hard rubber liner, 1 inch (25 mm, DN) and larger.

C. Liquid Flow Capacity Range: As indicated on drawings.

D. Construction: Stainless steel or aluminum sensor with integral NEMA EN 10250 Type 4 or 4X stainless steel or aluminum enclosure to hold thermal mass sensor and circuits with numeric display for consumption reading.

E. Accuracy: 0.02 percent of value applied to manufacturer-specified velocity range.

F. Output: Two-wire, 0 to 10 VDC, non-loop powered.

G. Service Pressure and Temperature: Up to 400 psi (27.6 bar) and 15 to 250 degrees F (minus 9.4 to 125.6 degrees C) liquid side, 150 degrees F (65.5 degrees C) ambient.

2.03 PRESSURE GAUGES

A. Manufacturers:
1. Dwyer Instruments, Inc: www.dwyer-inst.com/#sle.
2. Moeller Instrument Company, Inc: www.moellerinstrument.com/#sle.
3. Omega Engineering, Inc: www.omega.com/#sle.
4. Watts Regulator Company; www.watts.com.
5. Weiss Instruments, Inc.; www.weissinstruments.com
6. Winters Instruments: www.winters.com/#sle.

B. Pressure Gauges: ASME B40.100, UL 393 drawn steel case, phosphor bronze bourdon tube, rotary brass movement, brass socket, with front recalibration adjustment, black scale on white background.
1. Case: Liquid-filled type(s); cast aluminum or drawn steel..
2. Size: 4-1/2 inch (115 mm) diameter.
3. Pressure-Element Assembly: Bourdon tube unless otherwise indicated.
4. ressure Connection: Brass, with NPS 1/4, ASME B1.20.1 pipe threads and bottom-outlet type unless back-outlet type is indicated.
5. Movement: Mechanical, with link to pressure element and connection to pointer.
6. Dial: Nonreflective aluminum with permanently etched scale markings graduated in psi and kPa.
7. Pointer: Dark-colored metal.
8. Window: Glass or acrylic plastic.
9. Ring: Stainless steel.
10. Mid-Scale Accuracy: One percent.
11. Scale: Psi and KPa.

2.04 PRESSURE GAUGE TAPPINGS

A. Gauge Cock: Tee or lever handle, brass for maximum 150 psi (1034 kPa).

B. Needle Valve: Brass, 1/4 inch (6 mm) NPT for minimum 150 psi (1034 kPa).

C. Pulsation Damper: Pressure snubber, brass with 1/4 inch (6 mm) connections.

D. Syphon: Steel, Schedule 40, 1/4 inch (6 mm) angle or straight pattern.

2.05 STEM TYPE THERMOMETERS

A. Manufacturers:
   1. Dwyer Instruments, Inc: www.dwyer-inst.com/#sle.
   2. Omega Engineering, Inc: www.omega.com/#sle.
   3. Weksler Glass Thermometer Corp: www.wekslerglass.com/#sle.
   4. Weiss Instruments, Inc.; www.weissinstruments.com
   5. Winters Instruments: www.winters.com/#sle.

B. Thermometers - Adjustable Angle: Red- or blue-appearing non-toxic liquid in glass; ASTM E1; lens front tube, cast aluminum case with enamel finish, cast aluminum adjustable joint with positive locking device; adjustable 360 degrees in horizontal plane, 180 degrees in vertical plane.
   1. Size: 9 inch (225 mm) scale.
   2. Window: Clear glass or acrylic plastic.
   3. Stem: Aluminum, brass or 304 stainless steel of length suitable for installation.
   4. Tube Background: Nonreflective aluminum with permanently etched scale markings.
   5. Connector: 1-1/4 inches, with ASME B1.1 screw threads.
   6. Accuracy: 2 percent, per ASTM E77.
   7. Calibration: Degrees F.

2.06 THERMOWELLS

A. Thermowells:
   1. Standard: ASME B40.200.
   2. Description: Pressure-tight, socket-type fitting made for insertion into piping tee fitting.
   3. Material for Use with Copper Tubing: CNR or CUNI.
   4. Material for Use with Steel Piping: CRES or CSA.
   5. Type: Stepped shank unless straight or tapered shank is indicated.
   6. External Threads: NPS 1/2, NPS 3/4, or NPS 1, ASME B1.20.1 pipe threads.
   7. Internal Threads: 1/2, 3/4, and 1 inch, with ASME B1.1 screw threads.
   8. Bore: Diameter required to match thermometer bulb or stem.
   9. Insertion Length: Length required to match thermometer bulb or stem.
   10. Lagging Extension: Include on thermowells for insulated piping and tubing.
   11. Bushings: For converting size of thermowell's internal screw thread to size of thermometer connection.

B. Heat-Transfer Medium: Mixture of graphite and glycerin.

2.07 TEST PLUGS

A. Test Plug: 1/4 inch (6 mm) or 1/2 inch (13 mm) brass fitting and cap for receiving 1/8 inch (3 mm) outside diameter pressure or temperature probe with neoprene core for temperatures up to 200 degrees F (93 degrees C).

B. Test Kit: Carrying case, internally padded and fitted containing one 2-1/2 inch (60 mm) diameter pressure gauges, one gauge adapters with 1/8 inch (3 mm) probes, two 1 inch (25 mm) dial thermometers.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install pressure gauges with pulsation dampers. Provide gauge cock to isolate each gauge. Provide siphon on gauges in steam systems. Extend nipples and siphons to allow clearance from insulation.

C. Install thermometers in piping systems in sockets in short couplings. Enlarge pipes smaller than 2-1/2 inch (60 mm) for installation of thermometer sockets. Ensure sockets allow clearance from insulation.

D. Install thermometer sockets adjacent to controls system thermostat, transmitter, or sensor sockets.

E. Fill thermowells with heat-transfer medium.

F. Install gauges and thermometers in locations where they are easily read from normal operating level. Install vertical to 45 degrees off vertical.

G. Adjust gauges and thermometers to final angle, clean windows and lenses, and calibrate to zero.

3.02 APPLICATION

A. Provide pressure gauges in the following locations:
1. On the branch piping to the expansion tank. +/-2% accuracy.
2. One pressure gauge per pump, installing taps before strainers, on suction diffuser, on discharge of pump, and at balancing valve/triple duty valve. Pipe to gauge.
3. On inlet and outlet piping to each boiler, chiller and cooling tower.
4. On inlet and outlet piping to each system-level hydronic coil.
5. Two inlets and two outlets of each hydronic heat exchanger.
6. Where indicated on drawings.

B. Provide thermometers in the following locations, with indicated scale ranges:
1. Two inlets and two outlets of each hydronic heat exchanger. Liquid-in-glass; 30°F to 240 deg. F.
2. On inlet and outlet piping to each system-level hydronic coil. Liquid-in-glass; 30°F to 240°F.
3. Inlet and outlet of each thermal-storage tank. Liquid-in-glass; 30°F to 240°F.
4. Where indicated on drawings.

C. Provide test plugs in the following locations:
1. On inlet and outlet piping to each zone-level hydronic coil.
2. Where indicated on drawings.

END OF SECTION

SECTION 23 05 23
GENERAL-DUTY VALVES FOR HVAC PIPING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Angle valves.
B. Globe valves.
C. Ball valves.
D. Butterfly valves.
E. Check valves.
F. Gate valves.
G. Plug valves.

1.02 RELATED REQUIREMENTS

A. Section 23 05 53 - Identification for HVAC Piping and Equipment.
B. Section 23 07 19 - HVAC Piping Insulation.
C. Section 23 21 13 - Hydronic Piping.

1.03 ABBREVIATIONS AND ACRONYMS

A. CWP: Cold working pressure.
B. EPDM: Ethylene propylene copolymer rubber.
C. NBR: Acrylonitrile-butadiene, Buna-N, or nitrile rubber.
D. NRS: Nonrising stem.
E. OS&Y: Outside screw and yoke.
F. PTFE: Polytetrafluoroethylene.
G. RS: Rising stem.
H. TFE: Tetrafluoroethylene.
I. WOG: Water, oil, and gas.

1.04 REFERENCE STANDARDS

A. ASME B1.20.1 - Pipe Threads, General Purpose, Inch; 2013 (Reaffirmed 2018).
B. ASME B16.1 - Gray Iron Pipe Flanges and Flanged Fittings: Classes 25, 125, and 250; 2020.
C. ASME B16.5 - Pipe Flanges and Flanged Fittings: NPS 1/2 through NPS 24 Metric/Inch Standard; 2020.
D. ASME B16.10 - Face-to-Face and End-to-End Dimensions of Valves; 2022, with Errata (2023).
E. ASME B16.18 - Cast Copper Alloy Solder Joint Pressure Fittings; 2021.
F. ASME B16.34 - Valves — Flanged, Threaded, and Welding End; 2020.
G. ASME B31.9 - Building Services Piping; 2020.
H. ASTM A126 - Standard Specification for Gray Iron Castings for Valves, Flanges, and Pipe Fittings; 2004 (Reapproved 2023).
I. ASTM A536 - Standard Specification for Ductile Iron Castings; 1984, with Editorial Revision (2019).

J. ASTM B62 - Standard Specification for Composition Bronze or Ounce Metal Castings; 2017.
K. AWWA C606 - Grooved and Shouldered Joints; 2022.
L. MSS SP-67 - Butterfly Valves; 2022.
M. MSS SP-68 - High Pressure Butterfly Valves with Offset Design; 2021.
N. MSS SP-70 - Gray Iron Gate Valves, Flanged and Threaded Ends; 2011.
O. MSS SP-71 - Gray Iron Swing Check Valves, Flanged and Threaded Ends; 2018.
P. MSS SP-72 - Ball Valves with Flanged or Butt-Welding Ends for General Service; 2010a.
Q. MSS SP-80 - Bronze Gate, Globe, Angle, and Check Valves; 2019.
R. MSS SP-110 - Ball Valves Threaded, Socket-Welding, Solder Joint, Grooved and Flared Ends; 2010, with Errata .

1.05 SUBMITTALS

A. Product Data: Provide data on valves including manufacturers catalog information. Submit performance ratings, rough-in details, weights, support requirements, and piping connections.
B. Operation and Maintenance Data: Include manufacturer's descriptive literature, operating instructions, maintenance and repair data, and parts listings.

PART 2 PRODUCTS

2.01 APPLICATIONS

A. See drawings for specific valve locations.
B. Listed pipe sizes shown using nominal pipe sizes (NPS) and nominal diameter (DN).
C. If valves with specified SWP classes or CWP ratings are not available, the same types of valves with higher SWP classes or CWP ratings may be substituted.
D. Provide the following valves for the applications if not indicated on drawings:
    1. Throttling (Hydronic): Butterfly and Ball
    2. Isolation (Shutoff): Butterfly, Gate, and Ball.
    3. Swing Check (Pump Outlet):
        a. Size 2 inch (50 mm, DN) and Smaller: Bronze with bronze disc.
        b. Size 2-1/2 inch (65 mm, DN) and Larger: Iron with lever and weight or lever and spring.
E. Substitutions of valves with higher CWP classes or WSP ratings for same valve types are permitted when specified CWP ratings or WSP classes are not available.
F. Required Valve End Connections for Non-Wafer Types:
    1. Steel Pipe:
        a. Size 2 inch (50 mm, DN) and Smaller: Threaded ends.
        b. Size 2-1/2 inch (65 mm, DN) and Larger: Grooved ends.
    2. Copper Tube:
        a. Size 2 inch (50 mm, DN) and Smaller: Threaded ends, except solder-joint valve-ends.
        b. Size 2-1/2 inch (65 mm, DN) and Larger: Grooved ends.
    3. Steam and Steam Condensate Pipe: Grooved ends not acceptable.
G. Heating Hot Water Valves:
    1. Size 2 inch (50 mm, DN) and Smaller, Bronze Valves:
        a. Threaded ends.

b. Ball: Full port, two piece, bronze trim.
c. Swing Check: Bronze disc, Class 125.

2. Size 2-1/2 inch (65 mm, DN) and Larger, Iron Valves:
   a. 2-1/2 inch (65 mm, DN) to 3 inch (75 mm, DN): Threaded ends.
   b. Ball: 2-1/2 inch (65 mm, DN) to 3 inch (75 mm, DN), Class 150.
   c. Single-Flange Butterfly: 4 inch (100 mm, DN) to 12 inch (300 mm, DN), stainless steel disc, EPDM seat, 200 CWP.
   d. Single-Flange Butterfly: 14 inch (350 mm, DN) to 24 inch (600 mm, DN), stainless steel disc, EPDM seat, 150 CWP.
   e. Grooved-End Butterfly: 2-1/2 inch (65 mm, DN) to 12 inch (300 mm, DN), 175 CWP.
   f. Butterfly: High performance, single flange, Class 150.
   g. Swing Check: Metal seats, Class 125.
   h. Swing Check: 2-1/2 inch (65 mm, DN) to 12 inch (300 mm, DN), lever and spring closure control, Class 125.
   i. Grooved-End Swing Check: 3 inch (80 mm, DN) to 12 inch (300 mm, DN), 300 CWP.
   j. Plate-Type Check: Single plate, metal seat, Class 125 .

2.02 GENERAL REQUIREMENTS

A. Valve Pressure and Temperature Ratings: No less than rating indicated; as required for system pressures and temperatures.

B. Valve Sizes: Match upstream piping unless otherwise indicated.

C. Valve Actuator Types:
   1. Gear Actuator: Quarter-turn valves 8 inch (200 mm, DN) and larger.
   2. Handwheel: Valves other than quarter-turn types.
   3. Hand Lever: Quarter-turn valves 6 inch (150 mm, DN) and smaller.

D. Valves in Insulated Piping: Provide 2 inch (50 mm, DN) stem extensions and the following features:
   1. Gate Valves: Rising stem.
   2. Ball Valves: Extended operating handle of non-thermal-conductive material, and protective sleeve that allows operation of valve without breaking the vapor seal or disturbing insulation.
   3. Butterfly Valves: Extended neck.
   4. Memory Stops: Fully adjustable after insulation is installed.

E. Memory Stops: Fully adjustable after insulation is installed.

F. Valve-End Connections:
   1. Threaded End Valves: ASME B1.20.1.
   2. Flanges on Iron Valves: ASME B16.1 for flanges on iron valves.
   3. Pipe Flanges and Flanged Fittings 1/2 inch (15 mm, DN) through 24 inch (600 mm, DN): ASME B16.5.
   4. Solder Joint Connections: ASME B16.18.
   5. Grooved End Connections: AWWA C606.

G. General ASME Compliance:
   1. Ferrous Valve Dimensions and Design Criteria: ASME B16.10 and ASME B16.34.
   2. Building Services Piping Valves: ASME B31.9.

H. Bronze Valves:
   1. Fabricate from dezincification resistant material.

2. Copper alloys containing more than 15 percent zinc are not permitted.

I. Manufacturers:
1. American Valve, Inc.
2. Apollo Valves.
3. Crane Co.; Crane Valve Group; Crane Valves.
4. Crane Co.; Crane Valve Group; Jenkins Valves.
5. Crane Co.; Crane Valve Group; Stockham Division.
6. FNW.
7. Hammond Valve.
8. Kitz Corporation.
9. Milwaukee Valve Company.
10. NIBCO INC.
11. Powell Valves.Watts Regulator Co.; a division of Watts Water Technologies, Inc.
12. Watts Regulator Co.; a division of Watts Water Technologies, Inc.

2.03 BRONZE, GLOBE VALVES

A. Ratings for Class 125 and Class 250:
1. Class 125:
a. WOG Rating: 200 psi (1,380 kPa).
b. WSP Rating: 125 psi (861.8 kPa), saturated.
2. Class 250: WOG Rating; 300 psi (2,070 kPa).
3. Comply with MSS SP-80, Type 1.
4. Body: ASTM B62, bronze with integral seat and screw-in bonnet.
5. End Connections: Threaded or solder.
6. Bonnet: NRS; Nonrising Stem.
7. Nonrising Stem: Bronze.
8. Disc: PTFE.
9. Packing: Asbestos free.
10. Handwheel Operator: Malleable Iron.

2.04 BRASS, BALL VALVES

A. Two Piece, Full Port with Stainless Steel Trim and Female Thread, Male thread, or Solder Connections:
1. Comply with MSS SP-110.
2. SWP Rating: 150 psi (1,035 kPa).
3. WOG Rating: 600 psi (4,140 kPa).
4. Vacuum Rating: 28.9 in-Hg (97.9 kPa).
5. Body: Forged brass.
6. Seats: PTFE.
7. Stem: Stainless Steel.
8. Ball: Chrome-plated brass.

2.05 BRONZE, BALL VALVES

A. General:
1. Fabricate from dezincification resistant material.
2. Copper alloys containing more than 15 percent zinc are not permitted.

B. Two Piece, Full Port with Bronze or Brass Trim:
1. Comply with MSS SP-110.

2. WSP Rating: 150 psi (1,035 kPa).
3. WOG Rating: 400 psi (2,758 kPa).
4. Body: Forged bronze or dezincified-brass alloy.
5. End Connections: Pipe thread or solder.
6. Seats: PTFE.
7. Stem: Bronze or brass.
8. Ball: Chrome plated brass.

2.06 IRON, BALL VALVES

A. Split Body, Full Port:
1. Comply with MSS SP-72.
2. CWP Rating: 200 psi (1380 kPa).
3. Body: ASTM A126, gray iron.
4. Ends: Flanged.
5. Seats: PTFE.
6. Stem: Stainless steel.
7. Ball: Stainless steel.

2.07 IRON, SINGLE FLANGE BUTTERFLY VALVES

A. Wafer and Lug Style:
1. Comply with MSS SP-67, Type I.
2. Wafer Style, CWP Ratings:
   a. Sizes 2 to 12 inch (50 to 300 mm, DN): 200 psi (1380 kPa).
   b. Sizes 14 to 24 inch (350 to 600 mm, DN): 150 psi (1034 kPa).
3. Body Material: ASTM A126 cast iron or ASTM A536 ductile iron.
4. Stem: One or two-piece stainless steel.
5. Seat: NBR.
6. Disc: Stainless steel.

2.08 IRON, GROOVED-END BUTTERFLY VALVES

A. CWP Rating: 175 psi (1200 kPa).
1. Comply with MSS SP-67, Type I.
2. Body: Coated ductile iron.
3. Stem: Two-piece stainless steel.
4. Disc: Coated ductile iron.
5. Disc Seal: EPDM.

2.09 HIGH-PERFORMANCE, SINGLE FLANGE BUTTERFLY VALVES

A. Lug type; Bidirectional dead end service without downstream flange:
1. Comply with MSS SP-68.
2. Class 150: CWP Rating: 285 psi (1,965 kPa) at 100 degrees F (38 degrees C).
3. Body: Provide carbon steel, cast iron, ductile Iron, or stainless steel.
4. Seat: Metal or reinforced PTFE.
5. Offset stem: Stainless steel.
6. Disc: Carbon steel.

2.10 BRASS, HORIZONTAL SWING CHECK VALVES

A. Threaded End-Connections:
1. Class 125: CWP Rating: 200 psi (1,380 kPa).
2. Body: Forged brass.

3. Disc: Forged brass.
4. Hinge-Pin, Screw, and Cap: Forged brass.

2.11 BRONZE, SWING CHECK VALVES

A. Class 125:
1. Pressure and Temperature Rating: MSS SP-80, Type 3.
2. Design: Y-pattern, horizontal or vertical flow.
3. WSP Rating: 200 psi (1,380 kPa).
4. Body: Bronze, ASTM B62.
5. End Connections: Threaded or soldered.
6. Disc: Bronze.

2.12 IRON, SWING CHECK VALVES WITH CLOSURE CONTROL

A. Class 125:
1. Comply with MSS SP-71, Type I.
2. Sizes 2-1/2 to 12 inch (65 to 300 mm, DN): CWP Rating; 200 psi (1,380 kPa).
3. Sizes 14 to 24 inch (350 to 600 mm, DN): CWP Rating; 150 psi (1,035 kPa).
4. Body Design: Clear or full waterway.
5. Body Material: ASTM A126, gray iron with bolted bonnet.
6. Ends: Flanged.
7. Trim: Bronze.
8. Gasket: Asbestos free.
9. Closer Control: Factory installed, exterior lever, and spring or weight.

2.13 IRON, GROOVED-END SWING CHECK VALVES

A. Class 300:
1. CWP Rating: 300 psi (2,070 kPa).
2. Body Material: ASTM A536, Grade 65-45-12 ductile iron.
3. Seal: EPDM or Nitrile.
4. Disc: Ductile iron.
5. Coating: Black, non-lead paint.

2.14 IRON, GATE VALVES

A. NRS:
1. Comply with MSS SP-70, Type I.
2. Class 125:
   a. Sizes 2-1/2 to 12 inch (65 to 300 mm, DN), CWP Rating; 200 psi (1,380 kPa).
   b. Sizes 14 to 24 inch (350 to 60 mm, DN), CWP Rating; 500 psi (3,450 kPa).
3. Body Material: Gray iron with bolted bonnet.
4. Ends: Flanged.
5. Trim: Bronze.
6. Disc: Solid wedge.
7. Packing and Gasket: Asbestos free.

PART 3 EXECUTION

3.01 EXAMINATION

A. Discard all packing materials and verify that valve interior, including threads and flanges, are completely clean without signs of damage or degradation that could result in leakage.

B. Verify valve parts to be fully operational in all positions from closed to fully open. Examine guides and seats made accessible by such operations.

C. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion.

D. Confirm gasket material to be suitable for the service, to be of correct size, and without defects that could compromise effectiveness.

E. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material.

F. Should valve is determined to be defective, replace with new valve. Do not attempt to repair defective valves.

3.02 INSTALLATION

A. Provide unions or flanges with valves to facilitate equipment removal and maintenance while maintaining system operation and full accessibility for servicing.

B. Locate valves for easy access. Provide separate valve support as required and locate valve with stem at or above center of piping, maintaining unimpeded stem movement.

C. Install valves in horizontal piping where practical, with stem at or above center of pipe.

D. Install valves in position to allow full stem movement.

E. Install swing check valves for proper direction of flow and in horizontal position with hinge pin level.

F. Install check valves where necessary to maintain direction of flow as follows:
   1. Swing Check: Install horizontal maintaining hinge pin level.
   2. Orient plate-type into horizontal or vertical position, between flanges.

3.03 ADJUSTING

A. Adjust or replace valve packing after piping systems have been tested and put into service but before final adjusting and balancing. Replace valves if persistent leaking occurs.

END OF SECTION

This page intentionally left blank

SECTION 23 05 29
HANGERS AND SUPPORTS FOR HVAC PIPING AND EQUIPMENT

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Support and attachment components.

B. Pipe insulation shields.

1.02 REFERENCE STANDARDS

A. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products; 2017.

B. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware; 2023.

C. ASTM A181/A181M - Standard Specification for Carbon Steel Forgings, for General-Purpose Piping; 2023.

D. ASTM A36/A36M - Standard Specification for Carbon Structural Steel; 2019.

E. ASTM A47/A47M - Standard Specification for Ferritic Malleable Iron Castings; 1999, with Editorial Revision (2022).

F. ASTM A283/A283M - Standard Specification for Low and Intermediate Tensile Strength Carbon Steel Plates; 2018.

G. ASTM A395/A395M - Standard Specification for Ferritic Ductile Iron Pressure-Retaining Castings for Use at Elevated Temperatures; 1999 (Reapproved 2022).

H. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process; 2023.

I. ASTM A1011/A1011M - Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength; 2023.

J. ASTM B633 - Standard Specification for Electrodeposited Coatings of Zinc on Iron and Steel; 2023.

K. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2024.

L. ASTM E96/E96M - Standard Test Methods for Gravimetric Determination of Water Vapor Transmission Rate of Materials; 2024a.

M. FM (AG) - FM Approval Guide; Current Edition.

N. MSS SP-58 - Pipe Hangers and Supports - Materials, Design, Manufacture, Selection, Application, and Installation; 2018, with Amendment (2019).

O. UL (DIR) - Online Certifications Directory; Current Edition.

P. UL 723 - Standard for Test for Surface Burning Characteristics of Building Materials; Current Edition, Including All Revisions.

PART 2 PRODUCTS

2.01 SUPPORT AND ATTACHMENT COMPONENTS

A. General Requirements:

1. Provide all required hangers, supports, anchors, fasteners, fittings, accessories, and hardware as necessary for the complete installation of plumbing work.
2. Provide products listed, classified, and labeled as suitable for the purpose intended, where applicable.
3. Where support and attachment component types and sizes are not indicated, select in accordance with manufacturer's application criteria as required for the load to be supported with a minimum safety factor of 1.15. Include consideration for vibration, equipment operation, and shock loads where applicable.
4. Steel Components: Use corrosion resistant materials suitable for the environment where installed.
    a. Zinc-Plated Steel: Electroplated in accordance with ASTM B633.
    b. Galvanized Steel: Hot-dip galvanized after fabrication in accordance with ASTM A123/A123M or ASTM A153/A153M.

B. Prefabricated Trapeze-Framed Metal Strut Systems:
1. Strut Channel or Bracket Material:
    a. Indoor Dry Locations: Use galvanized steel.
    b. Outdoor and Damp or Wet Indoor Locations: Use galvanized steel.
2. Minimum Channel Thickness: Steel sheet, 14 gauge, 0.0747 inch (1.90 mm).
3. Minimum Channel Dimensions: 1-5/8 inch (41 mm) width by 1-5/8 inch (41 mm) height.
4. Accessories: Provide bracket covers, clamps, fire-retarding brackets, j-hooks, protectors, and vibration dampeners.

C. Strut Channels:
1. ASTM A653/A653M galvanized steel bracket with clamps for surface mounting of piping or plumbing equipment support.
2. Channel or Bracket Kits: Include rods, brackets, end-fixed fittings, covers, clips, and other related hardware required to complete sectional trapeze section for piping or other support.

D. Channel Nuts:
1. Provide carbon steel channel nut with epoxy copper or zinc finish and long, regular, or short spring.

E. Hanger Rods:
1. Threaded zinc-plated steel unless otherwise indicated.
2. Minimum Size, Unless Otherwise Indicated or Required:
    a. Equipment Supports: 1/2 inch (13 mm) diameter.
    b. Piping up to 1 inch (25 mm, DN): 1/4 inch (6 mm) diameter.
    c. Piping larger than 1 inch (25 mm, DN): 3/8 inch (10 mm) diameter.
    d. Trapeze Support for Multiple Pipes: 3/8 inch (10 mm) diameter.

F. Cable Hanging System Kits:
1. Provide cable-wire in bulk or precut lengths with respective cable hangers as required to hold minimum weight of 120 lb (54.4 kg).

G. Thermal Insulated Pipe Supports:
1. General Requirements:
    a. Insulated pipe supports to be provided at hanger, support, and guide locations on pipe requiring insulation or additional support.
    b. Surface Burning Characteristics: Flame spread index/smoke developed index of 5/30, maximum, when tested in accordance with ASTM E84 or UL 723.

c. Pipe supports to be provided for nominally sized, 1/2 to 30 inch (15 to 750 mm, DN) iron pipes.
d. Insulation inserts to consist of rigid polyisocyanurate (urethane) insulation surrounded by a 360 degree, PVC jacketing.

2. PVC Jacket:
   a. Pipe insulation protection shields to be provided with a ball bearing hinge and locking seam.
   b. Moisture Vapor Transmission: 0.0071 perm inch (0.0092 ng/Pa s m), when tested in accordance with ASTM E96/E96M.
   c. Thickness: 60 mil (1.524 mm).
   d. PVC is not allowed within return air ceiling plenums.
3. Pipe insulation protection shields to be provided at the hanger points and guide locations on pipes requiring insulation as indicated on drawings.

H. Pipe Supports:
1. Material: ASTM A395/A395M ductile iron, ASTM A36/A36M carbon steel, ASTM A47/A47M malleable iron, ASTM A181/A181M forged steel, or ASTM A283/A283M steel.
2. Liquid Temperatures Up To 122 degrees F (50 degrees C):
   a. Overhead Support: MSS SP-58 Types 1, 3 through 12.
   b. Support From Below: MSS SP-58 Types 35 through 38.
3. Operating Temperatures from 122 to 446 degrees F (50 to 230 degrees C):
   a. Overhead Support: MSS SP-58 Type 1 or 3 through 12, with appropriate saddle of MSS SP-58 Type 40 for insulated pipe.

I. Roller Chairs:
1. MSS SP-58 type 43 based on required load, nonconductive and corrosion resistant.
2. Steel Yoke Type: MSS SP-58 type 44, vertically adjustable, nonconductive, and corrosion resistant.
3. Material: Zinc plated ASTM A36/A36M carbon steel or ASTM A47/A47M malleable iron.

J. Pipe Stanchions:
1. Material: Malleable iron, ASTM A47/A47M; or carbon steel, ASTM A36/A36M.
2. Provide coated or plated saddles to isolate steel hangers from dissimilar metal tube or pipe.
3. For pipe runs, use stanchions of same type and material where vertical adjustment is required for stationary pipe.

K. Beam Clamps:
1. MSS SP-58 types 19 through 23, 25 or 27 through 30 based on required load.
2. Beam C-Clamp: MSS SP-58 type 23, malleable iron and steel with plain, stainless steel, and zinc finish.
3. Small or Junior Beam Clamp: MSS SP-58 type 19, malleable iron with plain finish. For inverted usage provide manufacturer listed size(s).
4. Wide Mouth Beam Clamp: MSS SP-58 type 19, malleable iron with plain finish.
5. Centerload Beam Clamp with Extension Piece: MSS SP-58 type 30, malleable iron with plain finish.
6. FM (AG) and UL (DIR) Approved Beam Clamp: MSS SP-58 type 19, plain finish,
7. Provide clamps with hardened steel cup-point set screws and lock-nuts for anchoring in place.
8. Material: ASTM A395/A395M ductile iron, ASTM A36/A36M carbon steel, ASTM A47/A47M malleable iron, ASTM A181/A181M forged steel, or ASTM A283/A283M steel.

L. Riser Clamps:
   1. For insulated pipe runs, provide two bolt-type clamps designed for installation under insulation.
   2. MSS SP-58 type 1 or 8, carbon steel or steel with epoxy plated, plain, stainless steel, or zinc plated finish.
   3. Medium Split Horizontal Pipe Clamp: MSS SP-58 type 4, carbon steel or stainless steel with epoxy plated, plain, stainless steel, or zinc plated finish.
   4. Copper Tube Pipe Clamp: MSS SP-58 type 8, epoxy plated copper.
   5. UL (DIR) listed: Pipe sizes 1/2 to 8 inch (15 to 200 mm, DN).

M. U-Bolts:
   1. MSS SP-58 Type 24, carbon steel u-bolt for pipe support or anchoring.

N. Strut Clamps:
   1. Pipe Clamp: Two-piece rigid, universal, or outer diameter type, carbon steel with epoxy copper or zinc finish.
   2. Cushioned Pipe or Tubing Strut Clamp: Provide strut clamp with thermoplastic elastomer cushion having dielectric strength of 670 V/mil (26,398,000 V/m).

O. Insulation Clamps:
   1. Two bolt-type clamps designed for installation under insulation.
   2. Material: Carbon steel with epoxy copper or zinc finish.

P. Pipe Hangers:
   1. Split Ring Hangers:
      a. Provide hinged split ring and yoke roller hanger with epoxy copper or plain finish.
      b. Material: ASTM A47/A47M malleable iron or ASTM A36/A36M carbon steel.
      c. Provide hanger rod and nuts of the same type and material for a given pipe run.
      d. Provide coated or plated hangers to isolate steel hangers from dissimilar metal tube or pipe.
   2. Band Hangers, Adjustable:
      a. MSS SP-58 Type 7 or 9, Zinc-plated ASTM A1011/A1011M steel or ASTM A653/A653M carbon steel.
   3. J-Hangers, Adjustable:
      a. MSS SP-58 Type 5, Zinc-plated ASTM A1011/A1011M steel or ASTM A653/A653M carbon steel.
   4. Swivel Ring Hangers, Adjustable:
      a. MSS SP-58 Type 10, epoxy-painted, zinc-colored.
      b. Material: ASTM A395/A395M ductile iron, ASTM A36/A36M carbon steel, ASTM A47/A47M malleable iron, ASTM A181/A181M forged steel, or ASTM A283/A283M steel.
      c. FM (AG) and UL (DIR) listed for specific pipe size runs and loads.
   5. Clevis Hangers, Adjustable:
      a. Copper Tube: MSS SP-58 Type 1, epoxy-plated copper.
      b. Light-Duty: MSS SP-58 Type 1, zinc-colored, epoxy plated.
      c. Standard-Duty: MSS SP-58 Type 1, zinc-colored, epoxy plated.

Q. Dielectric Barriers: Provide between metallic supports and metallic piping and associated items of dissimilar type; acceptable dielectric barriers include rubber or plastic sheets or coatings attached securely to pipe or item.

R. Pipe Shields for Insulated Piping:

1. General Construction and Requirements:
    a. Surface Burning Characteristics: Comply with ASTM E84 or UL 723.
    b. Shields Material: UV-resistant polypropylene with glass fill.
    c. Maximum Insulated Pipe Outer Diameter: 12-5/8 inch (321 mm).
    d. Minimum Service Temperature: Minus 40 degrees F (Minus 40 degrees C).
    e. Maximum Service Temperature: 178 degrees F (81 degrees C).
    f. Pipe shields to be provided at hanger, support, and guide locations on pipe requiring insulation or additional support.

S. Anchors and Fasteners:
1. Unless otherwise indicated and where not otherwise restricted, use the anchor and fastener types indicated for the specified applications.

T. Pipe Installation Accessories:
1. Seismic Bracing Hardware:
    a. Cable Suspension Systems:
        1) Strut channel or bracket-fitted fitting with locking mechanism for pipe or equipment suspension using cable wires extended to surface-mounted end-fixing fittings.
        2) Provide cable wire and end-fixing as required to hold minimum weight of 120 lb (54.4 kg).
    b. Cable Sway Bracing Systems:
        1) Cable wire hanger with fix and release spring mechanism enclosed using zinc housing with 302 stainless steel components for pipe or equipment suspension to surface-mounted end-fixing fittings.
        2) Provide cable wire and end-fixing as required to hold minimum weight of 25 lb (11.3 kg).

PART 3 EXECUTION

3.01 INSTALLATION

A. Comply with MSS SP-69 and MSS SP-89. Install hangers, supports, clamps, and attachments to properly support piping from the building structure.

B. Install products in accordance with manufacturer's instructions.

C. Install hangers and supports complete with necessary attachments, inserts, bolts, rods, nuts, washers, and other accessories.

D. Install hangers and supports to allow controlled thermal and seismic movement of piping systems, to permit freedom of movement between pipe anchors, and to facilitate action of expansion joints, expansion loops, expansion bends, and similar units. Do not exceed pipe stress limits allowed by ASME B31.9 for building services piping.

E. Provide independent support from building structure. Do not provide support from piping, ductwork, conduit, or other systems.

F. Load Distribution: Install hangers and supports so that piping live and dead loads and stresses from movement will not be transmitted to connected equipment.

G. Pipe Slopes: Install hangers and supports to provide indicated pipe slopes and to not exceed maximum pipe deflections allowed by ASME B31.9 for building services piping.

H. Unless specifically indicated or approved by Architect, do not provide support from suspended ceiling support system or ceiling grid.

I. Unless specifically indicated or approved by Structural Engineer, do not provide support from roof deck.

J. Do not penetrate or otherwise notch or cut structural members without approval of Structural Engineer.

K. Provide thermal insulated pipe supports complete with hangers and accessories. Install thermal insulated pipe supports during the installation of the piping system.

L. Insulated Piping:
   1. Install hanger rods with enough adjustment to support piping before and after insulating.
   2. Piping Operating above Ambient Air Temperature: Clamps and hangers may project through insulation, with sealed ends of insulation butting up to clamps and hangers.
   3. Piping Operating below Ambient Air Temperature:
      a. Size hangers for outer circumference of pipe insulation.
      b. Use high density full circumference insulation inserts and full circumference shields at hangers supporting insulated piping 2” and larger.
      c. Use MSS MSS Type 39 carbon steel insulation saddle and insulation inserts to support piping 4” and larger. Use pipe roller supports for supporting saddles.
      d. Use plastic coated riser clamps for vertical pipe applications. Insulate the riser clamp and provide vapor barrier mastic to insulated clamp.
      e. Use plastic coated pipe clamps for pipe anchors, where anchors are indicated. Insulate the pipe and clamp and provide vapor barrier mastic to insulated clamp.
   4. Install MSS SP-58, Type 40 protective metal shield at each support.
      a. Shield Dimensions for Pipe: Not less than the following:
         1) NPS 1/2 to NPS 3: 12 inches long and 0.048 inch thick.
         2) NPS 4: 12 inches long and 0.06 inch thick.
         3) NPS 5 and NPS 6: 18 inches long and 0.06 inch thick.
         4) NPS 8 to NPS 14: 24 inches long and 0.075 inch thick.
         5) NPS 16 to NPS 24: 24 inches long and 0.105 inch thick.
   5. Pipes NPS 4 and Larger: Unless carbon steel saddle and rollers are provided, include wood or reinforced calcium-silicate-insulation inserts of length at least as long as protective shield.

M. Equipment Support and Attachment:
   1. Use metal fabricated supports or supports assembled from metal channel (strut) to support equipment as required.
   2. Use metal channel (strut) secured to studs to support equipment surface-mounted on hollow stud walls when wall strength is not sufficient to resist pull-out.
   3. Use metal channel (strut) to support surface-mounted equipment in wet or damp locations to provide space between equipment and mounting surface.
   4. Unless otherwise indicated, mount floor-mounted equipment on properly sized 4 inch (100 mm) high concrete pad constructed in accordance with Section 03 30 00.
   5. Securely fasten floor-mounted equipment. Do not install equipment such that it relies on its own weight for support.

N. Secure fasteners according to manufacturer's recommended torque settings.

O. Remove temporary supports.

3.02 ADJUSTING

A. Hanger Adjustments: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.

B. Trim excess length of continuous-thread hanger and support rods.

3.03 HANGER AND SUPPORT SCHEDULE

A. Specific hanger and support requirements are in Sections specifying piping systems and equipment.

B. Comply with MSS SP-69 for pipe-hanger selections and applications that are not specified in piping system Sections.

C. Use hangers and supports with galvanized metallic coatings for piping and equipment that will not have field-applied finish.

D. Use carbon-steel pipe hangers and supports and attachments for general service applications.

E. Use padded hangers for non-metallic piping.

F. Use thermal-hanger shield inserts for insulated piping and tubing.

G. Horizontal-Piping Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
   1. Adjustable, Steel Clevis Hangers (MSS Type 1): For suspension of noninsulated or insulated, stationary pipes NPS 1/2 to NPS 30.

H. Vertical-Piping Clamps: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
   1. Extension Pipe or Riser Clamps (MSS Type 8): For support of pipe risers NPS 3/4 to NPS 24.

I. Hanger-Rod Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
   1. Steel Turnbuckles (MSS Type 13): For adjustment up to 6 inches for heavy loads.

J. Saddles and Shields: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
   1. Steel-Pipe-Covering Protection Saddles (MSS Type 39): To fill interior voids with insulation that matches adjoining insulation.
   2. Protection Shields (MSS Type 40): Of length recommended in writing by manufacturer to prevent crushing insulation.
   3. Thermal-Hanger Shield Inserts: For supporting insulated pipe.

K. Spring Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
   1. Spring Cushions (MSS Type 48): For light loads if vertical movement does not exceed 1-1/4 inches.
   2. Spring-Cushion Roll Hangers (MSS Type 49): For equipping Type 41, roll hanger with springs.

L. Comply with MSS SP-69 for trapeze pipe-hanger selections and applications that are not specified in piping system Sections.

SECTION 23 05 48
VIBRATION AND SEISMIC CONTROLS FOR HVAC

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Vibration isolation requirements.

B. Seismic control requirements.
   1. Includes requirements for seismic qualification of equipment not specified in this section.

C. Vibration-isolated equipment support bases.

D. Vibration isolators.

E. External seismic snubber assemblies.

F. Seismic restraint systems.

G. Vibration-isolated and/or seismically engineered roof curbs.

H. In-curb sound attenuation treatment.

I. Vibration isolator system types.

J. Seismic isolator system types.

1.02 RELATED REQUIREMENTS

A. Section 23 05 29 - Hangers and Supports for HVAC Piping and Equipment.

1.03 DEFINITIONS

A. HVAC Component: Where referenced in this section in regards to seismic controls, applies to any portion of the HVAC system subject to seismic evaluation in accordance with applicable codes, including distributed systems (e.g., ductwork, piping).

B. Seismic Restraint: Structural members or assemblies of members or manufactured elements specifically designed and applied for transmitting seismic forces between components and the seismic force-resisting system of the structure.

C. Life Safety Systems:
   1. All systems involved with fire protection including sprinkler piping, fire pumps, jockey pumps, fire pump control panels, service water supply piping, water tanks, fire dampers and smoke exhaust systems.
   2. All systems involved with and/or connected to emergency power supply including all generators, transfer switches, transformers and all flowpaths to fire protection and/or emergency lighting systems.
   3. All medical and life support systems.
   4. All life safety equipment has an asterisk on the equipment schedule.

D. Positive Attachment:
   1. A positive attachment is defined as a cast-in anchor, a drill-in wedge anchor, a double sided beam clamp loaded perpendicular to a beam, or a welded or bolted connection to structure. Single sided "C" type beam clamps for support rods of overhead piping, ductwork, fire protection, electrical conduit, bus duct, or cable trays, or any other equipment are not acceptable on this project as seismic anchor points.

E. Transverse Bracing:
   1. Restraint(s) applied to limit motion perpendicular to the centerline of the pipe, duct or conduit.

2. Longitudinal Bracing:
    a. Restraint(s) applied to limit motion parallel to the centerline of the pipe, duct or conduit.

1.04 REFERENCE STANDARDS

A. ASCE 7 - Minimum Design Loads and Associated Criteria for Buildings and Other Structures; Most Recent Edition Cited by Referring Code or Reference Standard.

B. ASCE 19 - Structural Applications of Steel Cables for Buildings; 2016.

C. ASHRAE (HVACA) - ASHRAE Handbook - HVAC Applications; Most Recent Edition Cited by Referring Code or Reference Standard.

D. ASTM E90 - Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements; 2023.

E. FEMA 412 - Installing Seismic Restraints for Mechanical Equipment; 2014.

F. FEMA 413 - Installing Seismic Restraints for Electrical Equipment; 2004.

G. FEMA 414 - Installing Seismic Restraints for Duct and Pipe; 2004.

H. FEMA E-74 - Reducing the Risks of Nonstructural Earthquake Damage; 2012.

I. ICC (IBC) - International Building Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

J. ICC-ES AC156 - Acceptance Criteria for Seismic Certification by Shake-Table Testing of Nonstructural Components; 2010, with Editorial Revision (2020).

K. MFMA-4 - Metal Framing Standards Publication; 2004.

L. SMACNA (SRM) - Seismic Restraint Manual Guidelines for Mechanical Systems; 2024.

1.05 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
    1. Coordinate selection and arrangement of vibration isolation and/or seismic control components with the actual equipment to be installed.
    2. Coordinate the work with other trades to provide additional framing and materials required for installation.
    3. Coordinate compatibility of support and attachment components with mounting surfaces at the installed locations.
    4. Seismic Controls:
        a. Coordinate the arrangement of seismic restraints with piping, conduit, equipment, and other potential conflicts installed under other sections or by others.
        b. Coordinate the work with other trades to accommodate relative positioning of essential and nonessential components in consideration of seismic interaction.
    5. Notify Architect of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

B. Sequencing:
    1. Do not install products on or provide attachment to concrete surfaces until concrete has fully cured in accordance with Section 03 30 00.

1.06 SCOPE OF WORK

A. The work in this section includes, but is not limited to the following:
    1. Vibration isolation for piping, ductwork and equipment.
    2. Equipment isolation bases.

3. Flexible piping connections.
4. Resilient Pipe Anchors and Guides

B. The work in this section includes, but is not limited to the following for seismic:
1. Vibration isolation for piping, ductwork and equipment.
2. Equipment isolation bases.
3. Flexible piping connections.
4. Seismic restraints for isolated equipment.
5. Seismic restraints for non-isolated equipment.
6. Certification of seismic attachment of housekeeping pads.
7. Certification of seismic restraint designs and installation supervision.
8. All mechanical and electrical systems. Equipment buried underground is excluded but entry of services through the foundation wall is included. Equipment referred to below is typical. (Equipment not listed is still included in this specification).

AC Units	Chillers	Fans	Tanks
Air Distribution	Compressors	Generators	Transformers
Air Handling Units	Computer Room Units	Heat Exchangers	Unit Heaters
Air Separators	Condensers	Light Fixtures	Unit Substations
Battery Racks	Condensing Units	Motor Control Centers	VFD/VFC
Boilers	Conduit	Piping	Water Heaters
Bus Ducts	Cooling Towers	Pumps	
Cabinet Unit Heaters	Ductwork	Rooftop Units	
Cable Trays	Electrical Panels	Switch Gear	

1.07 SUBMITTALS

A. Design Documents: Prepare and submit all information required for plan review and permitting by authorities having jurisdiction, including but not limited to floor plans, details, and calculations.

B. Product Data: Provide manufacturer's standard catalog pages and data sheets for products, including materials, fabrication details, dimensions, and finishes.
1. Vibration Isolators: Include rated load capacities and deflections; include information on color coding or other identification methods for spring element load capacities.
2. Seismic Controls: Include seismic load capacities.

C. Shop Drawings - Vibration Isolation Systems:
1. Include dimensioned plan views and sections indicating proposed arrangement of vibration isolators; indicate equipment weights and static deflections.
2. Vibration-Isolated Equipment Support Bases: Include base weights, including concrete fill where applicable; indicate equipment mounting provisions.

D. Shop Drawings - Seismic Controls:
1. Include dimensioned plan views and sections indicating proposed HVAC component locations and distributed system routing, with locations and details of gravity supports and seismic restraints and associated attachments.
2. Identify mounting conditions required for equipment seismic qualification.
3. Identify anchor manufacturer, type, minimum embedment, minimum spacing, minimum member thickness, and minimum edge distance requirements.
4. Indicate proposed arrangement of distributed system trapeze support groupings.
5. Indicate proposed locations for distributed system flexible fittings and/or connections.

6. Indicate locations of seismic separations where applicable.
7. Include point load drawings indicating design loads transmitted to structure at each attachment location.

E. Seismic Design Data:
1. Compile information on project-specific characteristics of actual installed HVAC components necessary for determining seismic design forces required to design appropriate seismic controls, including but not limited to the following.
a. Component operating weight and center of gravity.
b. Component elevation in the building in relation to the roof elevation (z/h).
c. Component importance factor (Ip).
d. For distributed systems, component materials and connection methods.
e. Component amplification factor (ap) and component response modification factor (Rp), determined in accordance with ASCE 7 tables.
f. Applicability of overstrength factor (for certain anchorage in concrete and masonry).
g. Seismic restraint calculations must be provided for all connections of equipment to the structure. Calculations must be stamped by a registered professional engineer with at least five years of seismic design experience, licensed in the state of the job location.
h. All restraining devices shall have a preapproval number from California OSHPD or some other recognized government agency showing maximum restraint ratings. Preapprovals based on independent testing are preferred to preapprovals based on calculations. Where preapproved devices are not available, submittals based on independent testing are preferred. Calculations (including the combining of tensile and shear loadings) to support seismic restraint designs must be stamped by a registered professional engineer with at least five years of seismic design experience and licensed in the state of the job location. Testing and calculations must include both shear and tensile loads as well as one test or analysis at 45E to the weakest mode.
i. Analysis must indicate calculated dead loads, static seismic loads and capacity of materials utilized for connections to equipment and structure. Analysis must detail anchoring methods, bolt diameter, embedment and/or welded length. All seismic restraint devices shall be designed to accept, without failure, the forces detailed in section 1.06 acting through the equipment center of gravity. Overturning moments may exceed forces at ground level.
2. Include structural calculations, stamped or sealed by seismic controls designer, demonstrating suitability of seismic controls for seismic design forces.

F. Certification for seismically qualified equipment; identify basis for certification.

G. In-Curb Sound Attenuation Treatment: Provide acoustic test data indicating characteristics of sound absorption and transmission loss through testing in accordance with ASTM E90.

H. Evaluation Reports: For products specified as requiring evaluation and recognition by a qualified evaluation service, provide current evaluation reports.

I. Manufacturer's Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, and installation of product.

J. Evidence of qualifications for seismic controls designer.

K. Evidence of qualifications for manufacturer.

L. Manufacturer’s detailed field testing and inspection procedures.

M. Field quality control test reports.

1.08 QUALITY ASSURANCE

A. Comply with applicable building code.

B. Maintain at the project site a copy of each referenced document that prescribes execution requirements.

C. Seismic Controls Designer Qualifications: Registered professional engineer licensed in the State in which the Project is located and with minimum five years experience designing seismic restraints for nonstructural components.
   1. Designer may be employed by the manufacturer of the seismic restraint products.

D. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.

1.09 MANUFACTURER'S RESPONSIBILITY

A. Manufacturer of vibration isolation and seismic control equipment shall have the following responsibilities:
   1. Determine vibration isolation and locations as scheduled or specified.
   2. Provide seismic restraints and locations as scheduled or specified.
   3. Provide calculations and materials if required for restraint of unisolated equipment.
   4. Provide installation instructions, drawings and trained field supervision to insure proper installation and performance.

1.10 RELATED WORK

A. Housekeeping Pads:
   1. Housekeeping pad reinforcement and monolithic pad attachment to the structure details and design shall be prepared by the restraint vendor if not already indicated on the drawings.
   2. Housekeeping pads shall be coordinated with restraint vendor and sized to provide a minimum edge distance of ten (10) bolt diameters all around the outermost anchor bolt to allow development of full drill-in wedge anchor ratings. If cast-in anchors are to be used, the housekeeping pads shall be sized to accommodate the ACI requirements for bolt coverage and embedment.

B. Supplementary Support Steel:
   1. Contractor shall supply supplementary support steel for all equipment, piping, ductwork, etc. including roof mounted equipment, as required or specified.

C. Attachments:
   1. Contractor shall supply restraint attachment plates cast into housekeeping pads, concrete inserts, double sided beam clamps, etc. in accordance with the requirments of the vibration vendor's calculations.

1.11 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store products in accordance with manufacturer's instructions.

PART 2 PRODUCTS

2.01 VIBRATION ISOLATION REQUIREMENTS

A. Design and provide vibration isolation systems to reduce vibration transmission to supporting structure from vibration-producing HVAC equipment and/or HVAC connections to vibration-isolated equipment.

B. Comply with applicable general recommendations of ASHRAE (HVACA), where not in conflict with other specified requirements:

C. General Requirements:
   1. Select vibration isolators to provide required static deflection.
   2. Select vibration isolators for uniform deflection based on distributed operating weight of actual installed equipment.
   3. Select seismic type vibration isolators to comply with seismic design requirements, including conditions of equipment seismic certification where applicable.
   4. Select vibration isolators for outdoor equipment to comply with wind design requirements.
   5. Select vibration-isolated equipment support bases and associated vibration isolators to provide minimum 2-inch (50 mm) operating clearance beneath base unless otherwise indicated.

D. Equipment Isolation: As indicated on drawings.

E. Piping Isolation:
   1. Provide vibration isolators for piping supports:
      a. Located in equipment rooms.
      b. Located within 50 feet (15.2 m) of connected vibration-isolated equipment and pressure-regulating valve (PRV) stations.
      c. For piping over 2 inch (50 mm) located below or within 50 feet (15.2 m) of noise-sensitive areas indicated.
   2. Minimum Static Deflection:
      a. First Three Supports Closest to Isolated Equipment: Same as static deflection of equipment; maximum of 2 inch (50 mm) deflection required.
      b. Remainder of Supports: 0.75 inch (19 mm) deflection unless otherwise indicated.
   3. Suspended Piping, Nonseismic Applications: Use resilient material isolator hangers, spring isolator hangers, or combination resilient material/spring isolator hangers.
   4. Suspended Piping, Seismic Applications: Use seismic type resilient material isolator hangers, seismic type spring isolator hangers, or seismic type combination resilient material/spring isolator hangers.
   5. Floor-Mounted Piping, Nonseismic Applications: Use open (unhoused) spring isolators.
   6. Floor-Mounted Piping, Seismic Applications: Use seismic type restrained spring isolators.
   7. Use modular seal or approved resilient material where vibration-isolated piping penetrates building elements (e.g., walls, floors) arranged to prevent vibration transmission to structure.

F. Thrust Restraint Applications:
   1. Use thrust restraints to resist horizontal motion due to thrust for fan heads, suspended fans, and base-mounted and suspended air handling equipment operating at 2.0 inches wg (0.5 kPa) or greater total static pressure.
   2. Minimum Static Deflection: Same as static deflection of equipment.
   3. Limit lateral movement to 0.25 inch (6 mm) or less unless otherwise indicated.

2.02 SEISMIC CONTROL REQUIREMENTS

A. Design and provide HVAC component restraints, supports, and attachments suitable for seismic loads determined in accordance with applicable codes, as well as gravity and operating loads and other structural design considerations of the installed location. Consider wind loads for outdoor HVAC components.

B. Seismic Design Criteria: ICC (IBC).

1. Seismic Design Category: C.
2. Risk Category: _____.

C. Component Importance Factor (Ip): HVAC components essential to life safety to be assigned a component importance factor (Ip) of 1.5 as indicated or as required. This includes but is not limited to:
   1. HVAC components required to function for life safety purposes after an earthquake.
   2. HVAC components that support or otherwise contain hazardous substances.

D. Seismic Qualification of Equipment:
   1. Provide special certification for HVAC equipment furnished under other sections and assigned a component importance factor (Ip) of 1.5, certifying that equipment will remain operable following a design level earthquake.
   2. Seismic qualification to be by shake table testing in accordance with recognized testing standard procedure, such as ICC-ES AC156, acceptable to authorities having jurisdiction.
   3. Notify Architect and obtain direction where mounting restrictions required by conditions of seismic certification conflict with specified requirements.
   4. Seismically qualified equipment to be furnished with factory-installed labels referencing certificate of compliance and associated mounting restrictions.

E. Premanufactured Modular HVAC Equipment: Where not otherwise seismically qualified, premanufactured modules 6 feet (1.8 m) high and taller furnished under other sections to be designed in accordance with seismic provisions for nonbuilding structures.

F. Seismic Restraints:
   1. Provide seismic restraints for HVAC components except where exempt according to applicable codes and specified seismic design criteria, as approved by authorities having jurisdiction.
   2. Seismic Restraint Exemptions:
      a. Exemptions for Seismic Design Category C:
         1) HVAC components where either of the following apply:
            (a) The component importance factor (Ip) is 1.0 and the component is positively attached to the structure.
            (b) The component weighs 20 pounds (89 N) or less or, in the case of a distributed system, 5 pounds per foot (73 N/m) or less.
         2) HVAC piping with component importance factor (Ip) of 1.5 and nominal pipe size of 2 inch (50 mm) or less, where flexible connections, expansion loops, or other assemblies are provided between piping and associated components, and where piping is positively attached to the structure; exemption does not apply to piping constructed of low-deformability materials (e.g., cast iron, glass, nonductile plastics).
      b. Duct System Exemptions, All Seismic Design Categories:
         1) Duct systems not designed to carry toxic, highly toxic, or flammable gases and not used for smoke control with component importance factor (Ip) of 1.0, where flexible connections or other assemblies are provided between duct system and associated components, where duct system is positively attached to the structure, and where one of the following apply:
            (a) Trapeze supported duct with trapeze assemblies using 3/8 inch (10 mm) diameter rod hangers not exceeding 12 inches (305 mm) in length from support point connection to the supporting structure, and the total weight supported by any single trapeze is 100 pounds (445 N) or less.

(b) Trapeze supported duct with trapeze assemblies using 1/2 inch (13 mm) diameter rod hangers not exceeding 12 inches (305 mm) in length from support point connection to the supporting structure, and the total weight supported by any single trapeze is 200 pounds (890 N) or less.

(c) Trapeze supported duct with trapeze assemblies using 1/2 inch (13 mm) diameter rod hangers not exceeding 24 inches (610 mm) in length from support point connection to the supporting structure, and the total weight supported by any single trapeze is 100 pounds (445 N) or less.

(d) Hanger supported duct with individual rod hangers 3/8 inch (10 mm) or 1/2 inch (13 mm) in diameter not exceeding 12 inches (305 mm) in length from support point connection to the supporting structure, and the total weight supported by any single rod is 50 pounds (220 N) or less.

2) Duct systems not designed to carry toxic, highly toxic, or flammable gases and not used for smoke control, where there are provisions to avoid impact with other ducts or mechanical components or to protect ducts in the event of such impact, and where duct system is positively attached to the structure and has a cross sectional area of less than 6 square feet (0.557 sq m) and weighs 20 pounds per foot (292 N/m) or less.

c. HVAC Piping Exemptions, All Seismic Design Categories:

1) HVAC piping where flexible connections, expansion loops, or other assemblies are provided between piping and associated components, where piping is positively attached to the structure, and where one of the following apply:

(a) Trapeze supported piping weighing less than 10 pounds per foot (146 N/m), where all pipes supported meet size requirements for exemption as single pipes described under specific seismic design category exemptions above.

(b) Trapeze supported piping with trapeze assemblies using 3/8 inch (10 mm) diameter rod hangers not exceeding 12 inches (305 mm) in length from support point connection to the supporting structure, where all pipes supported have a component importance factor (Ip) of 1.0 and meet size requirements for exemption as single pipes described under specific seismic design category exemptions above, and where the total weight supported by any single trapeze is 100 pounds (445 N) or less.

(c) Trapeze supported piping with trapeze assemblies using 1/2 inch (13 mm) diameter rod hangers not exceeding 12 inches (305 mm) in length from support point connection to the supporting structure, where all pipes supported have a component importance factor (Ip) of 1.0 and meet size requirements for exemption as single pipes described under specific seismic design category exemptions above, and where the total weight supported by any single trapeze is 200 pounds (890 N) or less.

(d) Trapeze supported piping with trapeze assemblies using 1/2 inch (13 mm) diameter rod hangers not exceeding 24 inches (610 mm) in length from support point connection to the supporting structure, where all pipes supported have a component importance factor (Ip) of 1.0 and meet size requirements for exemption as single pipes described under specific seismic design category exemptions above, and where the total weight supported by any single trapeze is 100 pounds (445 N) or less.

(e) Hanger supported piping with individual rod hangers 3/8 inch (10 mm) or 1/2 inch (13 mm) in diameter not exceeding 12 inches (305 mm) in length from support point connection to the supporting structure, where pipe has a component importance factor (Ip) of 1.0 and meets size requirements for exemption as single pipes described under specific seismic design category exemptions above, and where the total weight supported by any single rod is 50 pounds (220 N) or less.

3. Seismic Restraint Exemptions:
   a. Exemptions for Seismic Design Category C:
      1) HVAC components with component importance factor (Ip) of 1.0.
      2) HVAC piping with component importance factor (Ip) of 1.5 and nominal pipe size of 2 inch (50 mm) or less; exemption does not apply to piping constructed of low-deformability materials (e.g., cast iron, glass, nonductile plastics).
   b. Ductwork Exemptions, All Seismic Design Categories:
      1) Ductwork not designed to carry toxic, highly toxic, or flammable gases and not used for smoke control where any of the following apply:
         (a) Trapeze supported ductwork weighing less than 10 pounds per foot (146 N/m).
         (b) Hanger supported ductwork where each hanger in the duct run is 12 inches (305 mm) or less in length from the duct support to the supporting structure; rod hangers, where used, to be equipped with swivels.
         (c) Ductwork having a cross sectional area of less than 6 square feet (0.557 sq m) or weighing 17 pounds per foot (248 N/m) or less, and where there are provisions to avoid impact with other ducts or mechanical components or to protect ducts in the event of such impact.
   c. HVAC Piping Exemptions, All Seismic Design Categories:
      1) Trapeze supported piping weighing less than 10 pounds per foot (146 N/m), where all pipes supported meet requirements for exemption as single pipes described under specific seismic design category exemptions above.
      2) Hanger supported piping where each hanger in the piping run is 12 inches (305 mm) or less in length from the pipe support to the supporting structure; rod hangers, where used, to be equipped with swivels.
4. Comply with applicable general recommendations of the following, where not in conflict with applicable codes, seismic design criteria, or other specified requirements:
   a. ASHRAE (HVACA).
   b. FEMA 412.
   c. FEMA 413.
   d. FEMA 414.
   e. FEMA E-74.
   f. SMACNA (SRM).
5. Seismic restraint capacities to be verified by a Nationally Recognized Testing Laboratory (NRTL) or certified by an independent third-party registered professional engineer acceptable to authorities having jurisdiction.
6. Seismic Type Vibration Isolators:
   a. Comply with seismic design requirements, including conditions of equipment seismic certification where applicable.
7. External Seismic Snubber Assemblies:
   a. Provide quantity and arrangement of external seismic snubber assemblies as required to restrain equipment in all directions (both lateral and vertical).

b. Do not use external seismic snubber assemblies that restrain equipment only in one or more lateral directions (but not vertical) except where uplift forces are zero or are addressed by other restraints.

8. Seismic Restraint Systems:
   a. Except where otherwise restricted, use of either cable or rigid restraints is permitted.
   b. Use only cable restraints to restrain vibration-isolated HVAC components, including distributed systems.
   c. Use only one restraint system type for a given HVAC component or distributed system (e.g., ductwork, piping) run; mixing of cable and rigid restraints on a given component/run is not permitted.
   d. Size restraint elements, including anchorage, to resist seismic loads as necessary to restrain HVAC component in all lateral directions; consider bracket geometry in anchor load calculations.
   e. Use rod stiffener clips to attach bracing to hanger rods as required to prevent rod buckling from vertical (upward) compressive load introduced by cable or rigid restraints loaded in tension, in excess of downward tensile load due to supported HVAC component weight.
   f. Select hanger rods and associated anchorage as required to accommodate vertical (downward) tensile load introduced by rigid restraints loaded in compression, in addition to downward tensile load due to supported HVAC component weight.
   g. Clevis hangers may only be used for attachment of transverse restraints; do not use for attachment of longitudinal restraints.
   h. Where seismic restraints are attached to clevis hangers, provide clevis bolt reinforcement accessory to prevent clevis hanger deformation.
   i. Do not introduce lateral loads on open bar joist chords or the weak axis of beams, or loads in any direction at other than panel points unless approved by project Structural Engineer of Record.
   j. Manufacturer's certified seismic restraint design may be submitted as an alternative to project-specific design and documentation, subject to approval of authorities having jurisdiction.
9. Ductwork Applications:
   a. Provide independent support and seismic restraint for in-line components (e.g., fans, heat exchangers, humidifiers) having an operating weight greater than 75 pounds (334 N).
   b. Positively attach appurtenances (e.g., dampers, louvers, diffusers) with mechanical fasteners.

G. Seismic Attachments:
1. Attachments to be bolted, welded, or otherwise positively fastened without consideration of frictional resistance produced by the effects of gravity.
2. Post-Installed Concrete and Masonry Anchors: Evaluated and recognized by ICC Evaluation Service, LLC (ICC-ES) or qualified evaluation service acceptable to authorities having jurisdiction for compliance with applicable building code, and qualified for seismic applications; concrete anchors to be qualified for installation in both cracked and uncracked concrete.
3. Do not use power-actuated fasteners.
4. Do not use friction clips (devices that rely on mechanically applied friction to resist loads). Beam clamps may be used for supporting sustained loads where provided with restraining straps.

5. Comply with anchor minimum embedment, minimum spacing, minimum member thickness, and minimum edge distance requirements.
6. Concrete Housekeeping Pads:
    a. Increase size of pad as required to comply with anchor requirements.
    b. Provide pad reinforcement and doweling to ensure integrity of pad and connection and to provide adequate load path from pad to supporting structure.

H. Seismic Interactions:
1. Include provisions to prevent seismic impact between HVAC components and other structural or nonstructural components.
2. Include provisions such that failure of a component, either essential or nonessential, does not cause the failure of an essential component.
3. Comply with minimum clearance requirements between HVAC equipment, distribution systems, and associated supports and fire protection sprinkler system drops and sprigs.

I. Seismic Relative Displacement Provisions:
1. Use suitable fittings or flexible connections to accommodate:
    a. Relative displacements at connections between components, including distributed systems (e.g., ductwork, piping); do not exceed load limits for equipment utility connections.
    b. Relative displacements between component supports attached to dissimilar parts of structure that may move differently during an earthquake.
    c. Design displacements at seismic separations.
    d. Anticipated drifts between floors.
2. Include provisions to prevent interruption of utility service due to seismic displacements.

2.03 VIBRATION-ISOLATED EQUIPMENT SUPPORT BASES

A. Manufacturers:
1. Vibration-Isolated Equipment Support Bases:
    a. Kinetics Noise Control, Inc: www.kineticsnoise.com/#sle.
    b. Mason Industries: www.mason-ind.com/#sle.
    c. Vibration Eliminator Company, Inc: www.veco-nyc.com/#sle.
    d. Vibro-Acoustics: www.vibro-acoustics.com/#sle.
2. Source Limitations: Furnish vibration-isolated equipment support bases and associated components and accessories produced by the same manufacturer as the vibration isolators and obtained from a single supplier.

B. Vibration-Isolated Structural Steel Bases:
1. Description: Engineered structural steel frames with integral mounting provisions for vibration isolators, sized and configured for mounting of equipment.
2. Centrifugal Fan Applications: Provide adjustable motor slide rails as required.
3. Maximum Deflection: 1 inch (25.4 mm).
4. Color code or otherwise identify springs to indicate load capacity.
5. Lateral Stability: Minimum lateral stiffness to vertical stiffness ratio of 0.8.
6. Select springs to provide designed deflection of not less than 50 percent of specified deflection.

C. Vibration-Isolated Concrete Inertia Bases:
1. Description: Concrete-filled engineered steel forms with integral mounting provisions for vibration isolators, sized and configured for mounting of equipment.
2. Minimum Base Depth: 6 inches (152 mm).

3. Minimum Base Mass (Including Concrete): 1.5 times weight of supported equipment.
4. Concrete Reinforcement: Welded or tied reinforcing bars running both ways in a single layer.
5. Concrete: Filled on site with minimum 3000 psi (20 mPa) concrete in accordance with Section 03 30 00.
6. Centrifugal Fan Applications: Provide adjustable motor slide rails as required.
7. Pump Applications: Size and configure bases for piping elbow supports as required.

2.04 VIBRATION ISOLATORS

A. Manufacturers:
   1. Vibration Isolators:
      a. Kinetics Noise Control, Inc: www.kineticsnoise.com/#sle.
      b. Mason Industries: www.mason-ind.com/#sle.
      c. Vibration Eliminator Company, Inc: www.veco-nyc.com/#sle.
      d. Vibro-Acoustics: www.vibro-acoustics.com/#sle.

B. General Requirements:
   1. Resilient Materials for Vibration Isolators: Oil, ozone, and oxidant resistant.
   2. Spring Elements for Spring Isolators:
      a. Color code or otherwise identify springs to indicate load capacity.
      b. Lateral Stability: Minimum lateral stiffness to vertical stiffness ratio of 0.8.
      c. Designed to operate in the linear portion of their load versus deflection curve over deflection range of not less than 50 percent above specified deflection.
      d. Designed to provide additional travel to solid of not less than 50 percent of rated deflection at rated load.
      e. Selected to provide designed deflection of not less than 75 percent of specified deflection.
      f. Selected to function without undue stress or overloading.
   3. Seismic Snubbing Elements for Seismic Isolators:
      a. Air Gap: Between 0.125 inches (3 mm) and 0.25 inches (6 mm) unless otherwise indicated.
      b. Points of Contact: Cushioned with resilient material, minimum 0.25 inch (6 mm) thick; capable of being visually inspected for damage and replaced.

C. Vibration Isolators for Nonseismic Applications:
   1. Resilient Material Isolator Pads:
      a. Description: Single or multiple layer pads utilizing elastomeric (e.g., neoprene, rubber) or fiberglass isolator material.
      b. Pad Thickness: As required for specified minimum static deflection; minimum 0.25 inch (6 mm) thickness.
      c. Multiple Layer Pads: Provide bonded, galvanized sheet metal separation plate between each layer.
   2. Resilient Material Isolator Mounts, Nonseismic:
      a. Description: Mounting assemblies for bolting equipment to supporting structure utilizing elastomeric (e.g., neoprene, rubber) or fiberglass isolator material; fail-safe type.
   3. Open (Unhoused) Spring Isolators:
      a. Description: Isolator assembly consisting of single or multiple free-standing, laterally stable steel spring(s) without a housing.

b. Bottom Load Plate: Nonskid, molded, elastomeric isolator material or steel with nonskid elastomeric isolator pad with provisions for bolting to supporting structure as required.
c. Furnished with integral leveling device for positioning and securing supported equipment.

4. Housed Spring Isolators:
   a. Description: Isolator assembly consisting of single or multiple free-standing, laterally stable steel spring(s) within a metal housing.
   b. Furnished with integral elastomeric snubbing elements, nonadjustable type, for limiting equipment movement and preventing metal-to-metal contact between housing elements.
   c. Bottom Load Plate: Steel with nonskid, elastomeric isolator pad with provisions for bolting to supporting structure as required.
   d. Furnished with integral leveling device for positioning and securing supported equipment.
5. Restrained Spring Isolators, Nonseismic:
   a. Description: Isolator assembly consisting of single or multiple free-standing, laterally stable steel spring(s) within a metal housing designed to prevent movement of supported equipment above an adjustable vertical limit stop.
   b. Bottom Load Plate: Steel with nonskid elastomeric isolator pad with provisions for bolting to supporting structure as required.
   c. Furnished with integral leveling device for positioning and securing supported equipment.
   d. Provides constant free and operating height.
6. Resilient Material Isolator Hangers, Nonseismic:
   a. Description: Isolator assembly designed for installation in hanger rod suspension system utilizing elastomeric (e.g., neoprene, rubber) or fiberglass isolator material for the lower hanger rod connection.
7. Spring Isolator Hangers, Nonseismic:
   a. Description: Isolator assembly designed for installation in hanger rod suspension system utilizing single or multiple free-standing, laterally stable steel spring(s) in series with an elastomeric element for the lower hanger rod connection.
   b. Designed to accommodate misalignment of bottom hanger rod up to 30 degrees (plus/minus 15 degrees) without short-circuiting of isolation.
8. Combination Resilient Material/Spring Isolator Hangers, Nonseismic:
   a. Description: Isolator assembly designed for installation in hanger rod suspension system utilizing single or multiple free-standing, laterally stable steel spring(s) for the lower hanger rod connection and elastomeric (e.g., neoprene, rubber) or fiberglass isolator material for the upper hanger rod connection.
   b. Designed to accommodate misalignment of bottom hanger rod up to 30 degrees (plus/minus 15 degrees) without short-circuiting of isolation.
9. Thrust Restraints:
   a. Description: Assembly utilizing free-standing, laterally stable steel spring designed for resisting horizontal motion due to thrust (e.g., air pressure from a fan), and intended for installation in pairs.

D. Vibration Isolators for Seismic Applications:
   1. Resilient Material Isolator Mounts, Seismic:

a. Description: Mounting assemblies for bolting equipment to supporting structure utilizing elastomeric (e.g., neoprene, rubber) isolator material; specifically designed and rated for seismic applications with integral snubbing in all directions.

2. Restrained Spring Isolators, Seismic:
   a. Description: Isolator assembly consisting of single or multiple free-standing, laterally stable steel spring(s) in series with elastomeric (e.g., neoprene, rubber) isolator material within a metal housing designed to prevent movement of supported equipment above an adjustable vertical limit stop; specifically designed and rated for seismic applications with integral snubbing in all directions.
   b. Bottom Load Plate: Steel with provisions for bolting to supporting structure as required.
   c. Furnished with integral leveling device for positioning and securing supported equipment.
   d. Provides constant free and operating height.
3. Resilient Material Isolator Hangers, Seismic:
   a. Description: Isolator assembly designed for installation in hanger rod suspension system utilizing elastomeric (e.g., neoprene, rubber) isolator material for the lower hanger rod connection; specifically designed and rated for seismic applications with vertical limit stop to prevent upward travel of hanger rod and cushion impact.
4. Spring Isolator Hangers, Seismic:
   a. Description: Isolator assembly designed for installation in hanger rod suspension system utilizing single or multiple free-standing, laterally stable steel spring(s) in series with an elastomeric element for the lower hanger rod connection; specifically designed and rated for seismic applications with vertical limit stop to prevent upward travel of hanger rod and cushion impact.
   b. Designed to accommodate misalignment of bottom hanger rod up to 30 degrees (plus/minus 15 degrees) without short-circuiting of isolation.
5. Combination Resilient Material/Spring Isolator Hangers, Seismic:
   a. Description: Isolator assembly designed for installation in hanger rod suspension system utilizing single or multiple free-standing, laterally stable steel spring(s) for the lower hanger rod connection and elastomeric (e.g., neoprene, rubber) isolator material for the upper hanger rod connection; specifically designed and rated for seismic applications with vertical limit stop to prevent upward travel of hanger rod and cushion impact.
   b. Designed to accommodate misalignment of bottom hanger rod up to 30 degrees (plus/minus 15 degrees) without short-circuiting of isolation.

2.05 EXTERNAL SEISMIC SNUBBER ASSEMBLIES

A. Manufacturers:
   1. External Seismic Snubber Assemblies:
      a. Kinetics Noise Control, Inc: www.kineticsnoise.com/#sle.
      b. Mason Industries: www.mason-ind.com/#sle.
      c. Vibration Eliminator Company, Inc: www.veco-nyc.com/#sle.
      d. Vibro-Acoustics: www.vibro-acoustics.com/#sle.
   2. Source Limitations: Furnish external seismic snubber assemblies and associated accessories produced by the same manufacturer as the vibration isolators and obtained from a single supplier.

B. Description: Steel snubbing assemblies designed for external attachment to both equipment and supporting structure that, as part of a complete system, restrain equipment motion in all directions during a seismic event while maintaining vibration isolation during normal operation.

C. Seismic Snubbing Elements:
   1. Air Gap: Between 0.125 inches (3 mm) and 0.25 inches (6 mm) unless otherwise indicated.
   2. Points of Contact: Cushioned with resilient material, minimum 0.25 inch (6 mm) thick; capable of being visually inspected for damage and replaced.

2.06 SEISMIC RESTRAINT SYSTEMS

A. Manufacturers:
   1. Seismic Restraint Systems:
      a. AFCON, a brand of Anvil International: www.anvilintl.com/#sle.
      b. Eaton Corporation: www.eaton.com/#sle.
      c. Kinetics Noise Control, Inc: www.kineticsnoise.com/#sle.
      d. Mason Industries: www.mason-ind.com/#sle.
      e. Vibro-Acoustics: www.vibro-acoustics.com/#sle.
   2. Source Limitations: Furnish seismic restraint system components and accessories produced by a single manufacturer and obtained from a single supplier.

B. Description: System components and accessories specifically designed for field assembly and attachment of seismic restraints.

C. Cable Restraints:
   1. Comply with ASCE 19.
   2. Cables: Pre-stretched, galvanized steel wire rope with certified break strength.
   3. Cable Connections: Use only swaged end fittings. Cable clips and wedge type end fittings are not permitted in accordance with ASCE 19.
   4. Use protective thimbles for cable loops where potential for cable damage exists.

D. Rigid Restraints: Use MFMA-4 steel channel (strut), steel angle, or steel pipe for structural element; suitable for both compressive and tensile design loads.

2.07 VIBRATION-ISOLATED AND/OR SEISMICALLY ENGINEERED ROOF CURBS

A. Manufacturers:
   1. Vibration-Isolated and/or Seismically Engineered Roof Curbs:
      a. Kinetics Noise Control, Inc: www.kineticsnoise.com/#sle.
      b. Mason Industries: www.mason-ind.com/#sle.
      c. Vibration Eliminator Company, Inc: www.veco-nyc.com/#sle.
      d. Vibro-Acoustics: www.vibro-acoustics.com/#sle.
   2. Source Limitations: Furnish vibration-isolated roof curbs and associated accessories produced by the same manufacturer as the vibration isolators and obtained from a single supplier.

B. Vibration Isolation Curbs:
   1. Nonseismic Curb Rail:
      a. Location: Between
      b. Construction: Aluminum.
      c. Integral vibration isolation to comply with requirements of this section.
      d. Weather exposed components consist of corrosion resistant materials.
   2. Nonseismic Curb:

a. Location: Between structure and rooftop equipment.
b. Construction: Aluminum.
c. Integral vibration isolation to comply with requirements of this section.
d. Weather exposed components consist of corrosion resistant materials.

3. Seismic Curb:
a. Location: Between structure and rooftop equipment.
b. Construction: Steel.
c. Integral vibration isolation to comply with requirements of this section.
d. Snubbers consist of minimum 0.25 inch (6 mm) thick resilient pads to avoid metal-to-metal contact without compromising vibration isolating capabilities.
e. Weather exposed components consist of corrosion resistant materials.

C. Seismic Type Nonisolated Curb and Fabricated Equipment Piers:
1. Location: Between structure and rooftop equipment.
2. Construction: Steel.
3. Weather exposed components consist of corrosion resistant materials.

2.08 VIBRATION ISOLATOR SYSTEM TYPES

A. Type "A":
1. Neoprene mountings shall have a minimum static deflection of 0.35”(9mm). All metal surfaces shall be neoprene covered and have friction pads both top and bottom. Bolt holes shall be provided on the bottom and a tapped hole and cap screw on top. Steel rails shall be used above the mountings under equipment such as small vent sets to compensate for the overhang. Mountings shall be type ND or rails type RND as manufactured by Mason Industries, Inc.

B. Type "B":
1. Spring isolators shall be free standing and laterally stable without any housing and complete with a molded neoprene cup or 1/4”(6mm) neoprene acoustical friction pad between the baseplate and the support. All mountings shall have leveling bolts that must be rigidly bolted to the equipment. Installed and operating heights shall be equal. The ratio of the spring diameter divided by the compressed spring height shall be no less than 0.8. Springs shall have a minimum additional travel to solid equal to 50% of the rated deflection. Submittals shall include spring diameters, deflection, compressed spring height and solid spring height. Mountings shall be type SLF, as manufactured by Mason Industries, Inc.

C. Type "C":
1. Multiple bellow air springs shall be manufactured with powder coated upper and lower steel sections connected by a replaceable, flexible Nylon reinforced Neoprene element to achieve a maximum natural frequency of 3 Hz. (We have found 3 Hz adequate when using air springs. Should the specifying engineer require a lower frequency, change the 3 Hz to the lower number). Burst pressure must be a minimum of 3 times the published maximum operating pressure. All air spring systems shall be equipped with 3 leveling valves connected to the building control air or a supplementary air supply to maintain elevation plus or minus 1/8”(3mm). An air filter and water separator shall be installed before the air distribution system to the leveling valves. Submittals shall include natural frequency, as well as load and damping tests, all as performed by an independent lab or acoustician. Air springs shall be type MT and leveling valves type LV as manufactured by Mason Industries, Inc.

D. Type "D":

1. Equipment with large variations in the operating and installed weight, such as chillers, boilers, etc., and equipment exposed to the wind such as cooling towers, roof mounted fans and roof mounted air handling equipment shall be mounted on spring mountings, as described in Engineering Specification B, including the neoprene acoustical pad within a rigid housing that includes vertical limit stops to prevent spring extension when weight is removed and temporary steel spacers between the upper and lower housings. Housings shall serve as blocking during erection. When the equipment is at full operating weight, the springs shall be adjusted to assume the weight and the spacers removed, without changing the installed and operating heights. All restraining bolts shall have large rubber grommets to provide cushioning in the vertical as well as horizontal modes. The hole through the bushing shall be a minimum of 0.75”(19mm) larger in diameter than the restraining bolt. Horizontal clearance on the sides between the spring assembly and the housing shall be a minimum of 0.5”(13mm) to avoid bumping and interfering with the spring action. Vertical limit stops shall be out of contact during normal operation. Cooling tower mounts are to be located between the supporting steel and the roof or the grillage and dunnage as shown on the drawings when there is no provision for direct mounting. Housings and springs shall be powder coated and hardware electro-galvanized. Mountings shall be SLR or SLRSO as manufactured by Mason Industries, Inc.

E. Type "E":
1. Equipment with large variations in the operating and installed weight, such as chillers, boilers, etc., and equipment exposed to the wind such as cooling towers, roof mounted fans and roof mounted air handling equipment shall be mounted on air springs, as described in Engineering Specification C, but within a rigid housing that includes vertical limit stops to prevent spring extension when weight is removed and temporary steel spacers between the upper and lower housings. Housings shall serve as blocking during erection. When the equipment is at full operating weight, the air springs shall be pressurized to take the weight so the spacers can be removed without changing the installed and operating heights. All restraining bolts shall have large rubber grommets to provide cushioning in the vertical as well as the horizontal modes. The hole through the bushing shall be a minimum of 0.75”(19mm) larger in diameter than the restraining bolt. Horizontal clearance between the air spring assembly and the housing shall be a minimum of 0.5”(13mm) to avoid bumping and interference with the air spring action. Vertical limit stops shall be out of contact during normal operation. Mountings and air spring parts shall be powder coated. Hardware electro-galvanized. Air spring systems shall be connected to the building control air or a supplementary air supply and equipped with three leveling valves to maintain level within plus or minus 0.125”(3mm). Cooling tower mounts are to be located between the supporting steel and the roof or the grillage and dunnage as shown on the drawings when there is no provision for direct mounting. Mountings shall be SLR-MT and leveling valves type LV as manufactured by Mason Industries, Inc.

F. Type "F":

1. Hangers shall consist of rigid steel frames containing minimum 11/4”(32mm) thick LDS Rubber elements at the top and a steel spring with general characteristics as in specification B seated in a steel washer reinforced LDS Rubber cup on the bottom. The LDS Rubber element and the cup shall have LDS Rubber bushings projecting through the steel box. In order to maintain stability the boxes shall not be articulated as clevis hangers nor the LDS Rubber element stacked on top of the spring. Spring diameters and hanger box lower hole sizes shall be large enough to permit the hanger rod to swing through a 30° arc from side to side before contacting the cup bushing and short circuiting the spring. Submittals shall include a hanger drawing showing the 30° capability. Hangers shall be type 30N as manufactured by Mason Industries, Inc.

G. Type "G":
   1. Hangers shall be as described in F, but they shall be precompressed and locked at the rated deflection by means of a steel precompression washer to keep the piping or equipment at a fixed elevation during installation. The hangers shall be designed with a release mechanism to free the spring after the installation is complete and the hanger is subjected to its full load. Deflection shall be clearly indicated by means of a scale. Submittals shall include a drawing of the hanger showing the 30° capability. Hangers shall be type PC30N as manufactured by Mason Industries, Inc.

H. Type "H":
   1. Hangers shall be manufactured with minimum characteristics as in Specification B, but without the LDS Rubber element. Springs are seated in a steel washer reinforced LDS Rubber cup that has a LDS Rubber bushing projecting through the bottom hole to prevent rod to hanger contact. Spring diameters and the lower hole sizes, shall be large enough to allow the hanger rod to swing through a 30° arc from side to side before contacting the cup bushing.
   2. If ducts are suspended by flat strap iron, the hanger assembly shall be modified by the manufacturer with an eye on top of the box and on the bottom of the spring hanger rod to allow for bolting to the hanger straps. Submittals on either of the above hangers shall include a scale drawing of the hanger showing the 30° capability. Hangers for rods shall be Type 30 or for straps W30 as manufactured by Mason Industries, Inc.

I. Type "I":
   1. When total air thrust exceeds 10% of the isolated weight, floor mounted or suspended air handling equipment shall be protected against excessive displacement by the use of horizontal thrust restraints. The restraint shall consist of a modified Specification B spring mounting. Restraint springs shall have the same deflection as the isolator springs. The assembly shall be preset at the factory and fine tuned in the field to allow for a maximum of 1/4”(6mm) movement from stop to maximum thrust. The assemblies shall be furnished with rod and angle brackets for attachment to both the equipment and duct work or the equipment and the structure. Restraints shall be attached at the center line of thrust and symmetrically on both sides of the unit. Horizontal thrust restraints shall be WB as manufactured by Mason Industries, Inc.

J. Type "J":

1. Vibration isolation manufacturer shall furnish integral structural steel bases. Rectangular bases are preferred for all equipment. Centrifugal refrigeration machines and pump bases may be T or L shaped. Pump bases for split case pumps shall be large enough to support suction and discharge elbows. All perimeter members shall be steel beams with a minimum depth equal to 1/10 of the longest dimension of the base. Base depth need not exceed 14”(356mm) provided that the deflection and misalignment is kept within acceptable limits as determined by the manufacturer. Height saving brackets shall be employed in all mounting locations to provide a base clearance of 1”(25mm). Bases shall be type WF as manufactured by Mason Industries, Inc.

K. Type "K":
1. Vibration isolation manufacturer shall provide steel members welded to height saving brackets to cradle equipment having legs or bases that do not require a complete supplementary base. Members shall have sufficient rigidity to prevent distortion of equipment. Inverted saddles shall be type ICS, as manufactured by Mason Industries, Inc.

L. Type "L":
1. Vibration isolation manufacturer shall furnish rectangular steel concrete pouring forms for floating concrete bases. Bases for split case pumps shall be large enough to provide support for suction and discharge elbows. Bases shall be a minimum of 1/12 of the longest dimension of the base but not less than 6”(152mm). The base depth need not exceed 12”(305mm) unless specifically recommended by the base manufacturer for mass or rigidity. Forms shall include minimum concrete reinforcing consisting of 1/2”(13mm) bars welded in place on 6”(152mm) centers running both ways in a layer 1 1/2”(38mm) above the bottom. Forms shall be furnished with steel templates to hold the anchor bolt sleeves and anchor bolts while concrete is being poured. Height saving brackets shall be employed in all mounting locations to maintain a 1”(25mm) clearance below the base. Wooden formed bases leaving a concrete rather then a steel finish are not acceptable. Base shall be type BMK or K as manufactured by Mason Industries, Inc.

M. Type "M":
1. Curb mounted rooftop equipment shall be mounted on vibration isolation bases that fit over the roof curb and under the isolated equipment. The extruded aluminum top member shall overlap the bottom to provide water runoff independent of the seal. Aluminum members shall house electro-galvanized or powder coated springs selected for 0.75”(19mm) minimum deflection. Travel to solid shall be 1.5”(38mm) minimum. Spring diameters shall be no less than 0.8 of the spring height at rated load. Wind resistance shall be provided by means of resilient snubbers in the corners with a minimum clearance of 1/4”(6mm) so as not to interfere with the spring action except in high winds. Manufacturer’s self adhering closed cell sponge gasketing must be used both above and below the base and a flexible EPDM duct like connection shall seal the outside perimeter. Foam or other sliding or shear seals are unacceptable in lieu of the EPDM ductlike closure. Submittals shall include spring deflections, spring diameters, compressed spring height and solid spring height as well as seal and wind resistance details. Curb mounted bases shall be Type CMAB as manufactured by Mason Industries, Inc.

N. Type "N":

1. Curb mounted rooftop equipment shall be mounted on spring isolation curbs. The lower member shall consist of a sheet metal Z section containing adjustable and removable steel springs that support the upper floating section. The upper frame must provide continuous support for the equipment and must be captive so as to resiliently resist wind forces. All directional neoprene snubber bushings shall be a minimum of 1/4”(6mm) thick. Steel springs shall be laterally stable and rest on 1/4”(6mm) thick neoprene acoustical pads. Hardware must be plated and the springs provided with a rust resistant finish. The curbs waterproofing shall consist of a continuous galvanized flexible counter flashing nailed over the lower curbs waterproofing and joined at the corners by EPDM bellows. All spring locations shall have access ports with removable waterproof covers. Lower curbs shall have provision for 2”(51mm) of insulation. Curb shall be type RSC as manufactured by Mason Industries, Inc.

O. Type "O":
1. Rubber expansion joints shall be peroxide cured EPDM throughout with Kevlar tire cord reinforcement. Substitutions must have certifiable equal or superior characteristics. The raised face rubber flanges must encase solid steel rings to prevent pull out. Flexible cable wire is not acceptable. Sizes 1 1/2” through 14”(40mm through 350mm) shall have a ductile iron external ring between the two spheres. Sizes 16” through 24” (400mm to 600mm) may be single sphere. Sizes 3/4” through 2”(19mm through 50mm) may have one sphere, bolted threaded flange assemblies and cable retention.
2. Minimum ratings through 14”(350mm) shall be 250psi at 170°F and 215psi at 250°F. (1.72MPa at 77°C and 1.48MPa at 121°C), 16”(400mm) through 24”(600mm) 180psi at 170°F and 150psi at 250°F. (1.24MPa at 77°C and 1.03 MPa at 121°C). Higher published rated connectors may be used where required.
3. Safety factors shall be a minimum of 3/1. All expansion joints must be factory tested to 150% of maximum pressure for 12 minutes before shipment.
4. The piping gap shall be equal to the length of the expansion joint under pressure. Control rods passing through 1/2”(13mm) thick Neoprene washer bushings large enough to take the thrust at 1000psi (0.7 kg/mm²) of surface area may be used on unanchored piping where the manufacturer determines the condition exceeds the expansion joint rating without them. Submittals shall include two test reports by independent consultants showing minimum reductions of 20 DB in vibration accelerations and 10 DB in sound pressure levels at typical blade passage frequencies on this or a similar product by the same manufacturer. All expansion joints shall be installed on the equipment side of the shut off valves. Expansion joints shall be SAFEFLEX SFDEJ, SFEJ, SFDCR or SFU and Control Rods CR as manufactured by Mason Industries, Inc.

P. Type "P":
1. Flexible stainless steel hoses with a safety factor of 4 shall be manufactured using type 304 stainless steel braided hose with one fixed and one floating raised face carbon steel plate flange. Sizes 2 1/2” (65mm) and smaller may have threaded nipples. Copper sweat ends, 4” (100mm) and smaller, may have SS (gas service) or Bronze (water service) bodies. Grooved ends may be used in sizes 2” (50mm) through 12” (300mm). Welding is not acceptable. Minimum lengths, minimum live lengths and minimum number of convolutions per foot to assure flexibility are as tabulated. Shorter lengths are not acceptable.

Pipe or Tubing Size (in) (mm)	Flanged Face to Face (in) (mm)	Flanged Live Length (in) (mm)	Threaded End to End (in) (mm)	Threaded Live Length (in) (mm)	Grooved Ends End to End (in) (mm)	Grooved Ends Live Length (in) (mm)	Copper Sweat Bronze End to End (in) (mm)	Copper Sweat Bronze Live Length (in) (mm)	Minimum Convolutions per (1000) (m)
1/2 15	–	–	24 600	19 3/4 501	–	–	18 457	14 1/4 362	92 302
3/4 20	–	–	24 600	19 3/4 501	–	–	18 457	13 3/4 349	80 262

14 350	36 900	32 5/8 816	–	–	–	–	–	–	18 59
16 400	36 900	32 5/8 816	–	–	–	–	–	–	16 52

2. Hoses shall be installed on the equipment side of the shut off valves horizontal and parallel to the equipment shafts wherever possible.
3. Submittals shall include original test data showing force/displacement, fittings, material, live lengths, number of corrugations per foot and safety factor at pressure ratings. Hoses shall be type BSS or CPSB as manufactured by Mason Industries, Inc.

Q. Type "Q":
1. Where pipes pass through structural openings, the space shall be sealed by a 2 piece clamp lined with 3/4”(19mm) thick Neoprene Sponge. Concrete or block shall be poured or built around the clamp or back packed with concrete. 10 Lb. density fibreglass with caulked ends will replace the sponge where temperatures exceed 225°F (107°C).
2. Seals shall be type SWS as manufactured by Mason Industries, Inc.

R. Type "R":
1. All-directional acoustical pipe anchors, consist of two sizes of steel tubing separated by a minimum 1/2”(13mm) thickness of 60 duro or softer LDS Rubber. Vertical restraint shall be provided by similar material arranged to prevent up or down vertical travel. Allowable loads on the isolation material shall not exceed 500 psi(3.45 N/mm²) and the design shall be balanced for equal resistance in any direction. All-directional anchors shall be type ADA as manufactured by Mason Industries, Inc.

S. Type "S":
1. Pipe guides shall consist of a telescopic arrangement of two sizes of steel tubing separated by a minimum 1/2”(13mm) thickness of 60 durometer or softer neoprene. The height of the guides shall be preset with a set screw to allow vertical motion due to pipe expansion or contraction. Guides shall be capable of ±15/8”(41mm) motion, or to meet location requirements. Pipe guides shall be type VSG as manufactured by Mason Industries, Inc.

T. Type "T":

1. The first four pipe hangers in the main lines near the mechanical equipment shall be as described in specification Type G. Hangers supporting piping 2”(50mm) and larger in all other locations throughout the building shall be isolated by hangers as described in specification F. Floor supported piping shall rest on isolators as described in specification D. Heat exchangers and expansion tanks are considered part of the piping run. The first four isolators from the isolated equipment shall have the same static deflection as specified for the mountings under the connected equipment. If piping is connected to equipment located in basements and hangs from ceilings under occupied spaces the first four hangers shall have 0.75”(19mm) deflection for pipe sizes up to and including 3”(75mm), 11/2”(38mm) deflection for pipe sizes over 3”(75mm) and up to and including 6”(150mm), and 2 1/2” (64mm) deflection thereafter. Where piping connects to mechanical equipment install specification O expansion joints or specification P stainless hoses if O is not suitable for the service. All piping passing through the equipment walls, floors or ceilings shall be protected against sound leakage by means of an acoustical seal, as described in Specification Q.

U. Type "U":
1. All vertical risers shall be supported by spring isolators designed to support the riser fille with water, if it is a water line. Assigned loads must be within the building design limits at the support points. Neutral central resilient anchors close to the center of the run shall direct movement up and down. The anchors shall be capable of holding an upward force equal to the water weight when the system is drained. If one level cannot accommodate this force, anchors can be located on 2 or 3 adjacent floors. Resilient guides shall be spaced and sized properly depending on the pipe diameter. Submittals must include the initial load, initial deflection, change in deflection, final load and change in load at all spring and anchor support locations, as well as guide spacing. The initial spring deflection shall be a minimum of 0.75”(19mm) or four times the thermal movement at the isolator location, whichever is greater. Calculations shall include pipe stress at end conditions and branch off locations and the manufacturer must include installation instructions. Submittal must be stamped and signed by a licensed professional engineer in the employ of the vibration vendor for at least 5 years. Proper provision shall be made for seismic protection in seismic zones. The isolator manufacturer shall be the same firm supplying the mechanical contract. Support spring mountings shall be Specification B, anchors Specification R, telescoping guides Specification S.

V. Type "V":
1. All air ducts with a cross section of 2ft²(0.19m²) or larger shall be isolated from the building structure by specification H hangers or B floor supports with a minimum deflection of 0.75”(19mm). Isolators shall continue for 50’(15m) from the equipment. If air velocity exceeds 1000 fpm(5.3mps), hangers or supports shall continue for an additional 50’(15m) or as shown on the drawings.

2.09 SIESMIC ISOLATOR SYSTEM TYPES

A. Type "1":
1. Two layers of 3/4" (19mm) thick neoprene pad consisting of 2" (50mm) square waffle modules separated horizontally by a 16 (1.5mm) gauge galvanized shim. Load distribution plates shall be used as required. Pads shall be Type Super "W" as manufactured by Mason Industries, Inc.

B. Type "2":

1. Bridge-bearing neoprene mountings shall have a minimum static deflection of 0.2" (5mm) and all directional seismic capability. The mount shall consist of a ductile iron casting containing two separated and opposing molded neoprene elements. The elements shall prevent the central threaded sleeve and attachment bolt from contacting the casting during normal operation. The shock absorbing neoprene materials shall be compounded to bridge-bearing specifications. Mountings shall have an Anchorage Preapproval "R" Number from OSHPD in the State of California verifying the maximum certified horizontal and vertical load ratings. Mountings shall be Type BR as manufactured by Mason Industries, Inc.

C. Type "3":
   1. Sheet metal panels shall be bolted to the walls or supporting structure by assemblies consisting of a neoprene bushing cushioned between 2 steel sleeves. The outer sleeve prevents the sheet metal from cutting into the neoprene. Enlarge panel holes as required. Neoprene elements pass over the bushing to cushion the back panel horizontally. A steel disc covers the inside neoprene element and the inner steel sleeve is elongated to act as a stop so tightening the anchor bolts does not interfere with panel isolation in 3 planes. Bushing assemblies can be applied to the ends of steel cross members where applicable. All neoprene shall be bridge bearing quality. Bushing assemblies shall be type PB as manufactured by Mason Industries, Inc.

D. Type "4":
   1. A one piece molded bridge bearing neoprene washer/bushing. The bushing shall surround the anchor bolt and have a flat washer face to avoid metal to metal contact. Neoprene bushings shall be type HG as manufactured by Mason Industries, Inc.

E. Type "5":
   1. Spring isolators shall be free standing and laterally stable without any housing and complete with a molded neoprene cup or 1/4" (6mm) neoprene acoustical friction pad between the baseplate and the support. All mountings shall have leveling bolts that must be rigidly bolted to the equipment. Spring diameters shall be no less than 0.8 of the compressed height of the spring at rated load. Springs shall have a minimum additional travel to solid equal to 50% of the rated deflection. Submittals shall include spring diameters, deflection, compressed spring height and solid spring height. Mountings shall be Type SLF as manufactured by Mason Industries, Inc.

F. Type "6":
   1. Restrained spring mountings shall have an SLF mounting as described in Specification 5, within a rigid housing that includes vertical limit stops to prevent spring extension when weight is removed. The housing shall serve as blocking during erection. A steel spacer shall be removed after adjustment. Installed and operating heights are equal. A minimum clearance of 1/2" (12mm) shall be maintained around restraining bolts and between the housing and the spring so as not to interfere with the spring action. Limit stops shall be out of contact during normal operation. Since housings will be bolted or welded in position there must be an internal isolation pad. Housing shall be designed to resist all seismic forces. Mountings shall have Anchorage Preapproval "R" Number from OSHPD in the state of California certifying the maximum certified horizontal and vertical load ratings. Mountings shall beType SLR as manufactured by Mason Industries, Inc.

G. Type "7":

1. Spring mountings as in specification 5 built into a ductile iron or steel housing to provide all directional seismic snubbing. The snubber shall be adjustable vertically and allow a maximum of 1/4" (6mm) travel in all directions before contacting the resilient snubbing collars. Mountings shall have an Anchorage Preapproval "R" number from OSHPD in the State of California verifying the maximum certified horizontal and vertical load ratings. Mountings shall be Type SSLFH as manufactured by Mason Industries, Inc.

H. Type "8":
1. Air Springs shall be manufactured with upper and lower steel sections connected by a replaceable flexible nylon reinforced neoprene element. Air spring configuration shall be multiple bellows to achieve a maximum natural frequency of 3 Hz. Air Springs shall be designed for a burst pressure that is a minimum of three times the published maximum operating pressure. All air spring systems shall be connected to either the building control air or a supplementary air supply and equipped with three leveling valves to maintain leveling within plus or minus 1/8" (3mm). Submittals shall include natural frequency, load and damping tests performed by an independent lab or acoustician. Air Springs shall be Type MT and leveling valves Type LV as manufactured by Mason Industries, Inc.

I. Type "9":
1. Restrained air spring mountings shall have an MT air spring as described in Specification 8, within a rigid housing that includes vertical limit stops to prevent air spring extension when weight is removed. The housing shall serve as blocking during erection. A steel spacer shall be removed after adjustment. Installed and operating heights are equal. A minimum clearance of 1/2" (12mm) shall be maintained around restraining bolts and between the housing and the air spring so as not to interfere with the air spring action. Limit stops shall be out of contact during normal operation. Housing shall be designed to resist all seismic forces. Mountings shall be Type SLR-MT as manufactured by Mason Industries, Inc.

J. Type "10":
1. Hangers shall consist of rigid steel frames containing minimum 1 1/4" (32mm) thick neoprene elements at the top and a steel spring with general characteristics as in specification 5 seated in a steel washer reinforced neoprene cup on the bottom. The neoprene element and the cup shall have neoprene bushings projecting through the steel box. To maintain stability the boxes shall not be articulated as clevis hangers nor the neoprene element stacked on top of the spring. Spring diameters and hanger box lower hole sizes shall be large enough to permit the hanger rod to swing through a 30 degree arc from side to side before contacting the rod bushing and short circuiting the spring. Submittals shall include a hanger drawing showing the 30 degree capability. Hangers shall be Type 30N as manufactured by Mason Industries, Inc.

K. Type "11":
1. Hangers shall be as described in 10, but they shall be precompressed and locked at the rated deflection by means of a resilient seismic upstop to keep the piping or equipment at a fixed elevation during installation. The hangers shall be designed with a release mechanism to free the spring after the installation is complete and the hanger is subjected to its full load. Deflection shall be clearly indicated by means of a scale. Submittals shall include a drawing of the hanger showing the 30 degree capability. Hangers shall be Type PC30N as manufactured by Mason Industries, Inc.

L. Type "12":

1. Seismic Cable Restraints shall consist of galvanized steel aircraft cables sized to resist seismic loads with a minimum safety factor of two and arranged to provide all-directional restraint. Cables must be prestretched to achieve a certified minimum modulus of elasticity. Cable end connections shall be steel assemblies that swivel to final installation angle and utilize two clamping bolts to provide proper cable engagement. Cables must not be allowed to bend across sharp edges. Cable assemblies shall have an Anchorage Preapproval "R" Number from OSHPD in the State of California verifying the maximum certified load ratings. Cable assemblies shall be Type SCB at the ceiling and at the clevis bolt, Type SCBH between the hanger rod nut and the clevis or Type SCBV if clamped to a beam all as manufactured by Mason Industries, Inc.

M. Type "13":
1. Seismic solid braces shall consist of steel angles or channels to resist seismic loads with a minimum safety factor of 2 and arranged to provide all directional restraint. Seismic solid brace end connectors shall be steel assemblies that swivel to the final installation angle and utilize two through bolts to provide proper attachment. Seismic solid brace assembly shall have anchorage preapproval "R" number from OSHPD in the state of California verifying the maximum certified load ratings. Solid seismic brace assemblies shall be Type SSB as manufactured by Mason Industries, Inc.

N. Type "14":
1. Steel angles, sized to prevent buckling, shall be clamped to pipe or equipment rods utilizing a minimum of three ductile iron clamps at each restraint location when required. Welding of support rods is not acceptable. Rod clamp assemblies shall have an Anchorage Preapproval "R" Number from OSHPD in the State of California. Rod clamp assemblies shall be Type SRC as manufactured by Mason Industries, Inc.

O. Type "15":
1. Pipe clevis cross bolt braces are required in all restraint locations. They shall be special purpose preformed channels deep enough to be held in place by bolts passing over the cross bolt. Clevis cross braces shall have an Anchorage Preapproval "R" Number from OSHPD in the State of California. Clevis cross brace shall be Type CCB as manufactured by Mason Industries, Inc.

P. Type "16":
1. All-directional seismic snubbers shall consist of interlocking steel members restrained by a one-piece molded neoprene bushing of bridge bearing neoprene. Bushing shall be replaceable and a minimum of 1/4" (6mm) thick. Rated loadings shall not exceed 1000 psi (.7kg/mm2). A minimum air gap of 1/8" (3mm) shall be incorporated in the snubber design in all directions before contact is made between the rigid and resilient surfaces. Snubber end caps shall be removable to allow inspection of internal clearances. Neoprene bushings shall be rotated to insure no short circuits exist before systems are activated. Snubbers shall have an Anchorage Preapproval "R" Number from OSHPD in the State of California verifying the maximum certified horizontal and vertical load ratings. Snubber shall be Type Z-1225 as manufactured by Mason Industries, Inc.

Q. Type "17":

1. All directional seismic snubbers shall consist of interlocking steel members restrained by shock absorbent rubber materials compounded to bridge bearing specifications. Elastomeric materials shall be replaceable and a minimum of 3/4" (19mm) thick. Rated loadings shall not exceed 1000 psi (.7kg/mm2). Snubbers shall be manufactured with an air gap between hard and resilient material of not less than 1/8" (3mm) nor more that 1/4" (6mm). Snubbers shall be installed with factory set clearances. The capacity of the seismic snubber at 3/8" (9mm) deflection shall be equal or greater than the load assigned to the mounting grouping controlled by the snubber multiplied by the applicable "G" force. Submittals shall include the load deflection curves up to 1/2" (12mm) deflection in the x, y and z planes. Snubbers shall have an anchorage preapproval "R" number from OSHPD in the state of California verifying the maximum certified horizontal and vertical load ratings. Snubbers shall be series Z-1011 as manufactured by Mason Industries, Inc.

R. Type "18":
   1. Stud wedge anchors shall be manufactured from full diameter wire, not from undersized wire that is "rolled up" to create the thread. The stud anchor shall also have a safety shoulder which fully supports the wedge ring under load. The stud anchors shall have an evaluation report number from the I.C.B.O Evaluation Service, Inc. verifying its allowable loads. Drill-in stud wedge anchors shall be Type SAS as manufactured by Mason Industries, Inc.

S. Type "19":
   1. Female wedge anchors are preferred in floor locations so isolators or equipment can be slid into place after the anchors are installed. Anchors shall be manufactured from full diameter wire, and shall have a safety shoulder to fully support the wedge ring under load. Female wedge anchors shall have an evaluation report number from the I.C.B.O Evaluation Service, Inc. verifying to its allowable loads. Drill-in female wedge anchors shall be Type SAB as manufactured by Mason Industries, Inc.

T. Type "20":
   1. Vibration isolation manufacturer shall furnish integral structural steel bases. Rectangular bases are preferred for all equipment. Centrifugal refrigeration machines and pump bases may be T or L shaped where space is a problem. Pump bases for split case pump shall include supports for suction and discharge elbows. All perimeter members shall be steel beams with a minimum depth equal to 1/10 of the longest dimension of the base. Base depth need not exceed 14" (350mm) provided that the deflection and misalignment is kept within acceptable limits as determined by the manufacturer. Height saving brackets shall be employed in all mounting locations to provide a base clearance of 1" (25mm). Bases shall be Type WF as manufactured by Mason Industries, Inc.

U. Type "21":
   1. Vibration isolation manufacturer shall furnish rectangular steel concrete pouring forms for floating and inertia foundations. Bases for split case pumps shall be large enough to provide for suction and discharge elbows. Bases shall be a minimum of 1/12 of the longest dimension of the base but not less than 6" (150mm). The base depth need not exceed 12" (300mm) unless specifically recommended by the base manufacturer for mass or rigidity. Forms shall include minimum concrete reinforcing consisting of 1/2" (12mm) bars welded in place on 6" (150mm) centers running both ways in a layer 1 1/2" (38mm) above the bottom. Forms shall be furnished with steel templates to hold the anchor bolts sleeves and anchors while concrete is being poured. Height saving brackets shall be employed in all mounting locations to maintain a 1" (25mm) clearance below the base. Wooden formed bases leaving a concrete rather then a steel finish are not acceptable. Base shall be Type BMK or K as manufactured by Mason Industries, Inc.

V. Type "22":
   1. Curb mounted rooftop equipment shall be mounted on spring isolation curbs. The lower member shall consist of a sheet metal Z section containing adjustable and removable steel springs that support the upper floating section. The upper frame must provide continuous support for the equipment and must be captive so as to resiliently resist wind and seismic forces. All directional neoprene snubber bushings shall be a minimum of 1/4" (6mm) thick. Steel springs shall be laterally stable and rest on 1/4" (6mm) thick neoprene acoustical pads. Hardware must be plated and the springs provided with a rust resistant finish. The curbs waterproofing shall consist of a continuous galvanized flexible counter flashing nailed over the lower curbs waterproofing and joined at the corners by EPDM bellows. All spring locations shall have access ports with removable waterproof covers. Lower curbs shall have provision for 2" (50mm) of insulation. The roof curbs shall be built to seismically contain the rooftop unit. The unit must be solidly fastened to the top floating rail, and the lower Z section anchored to the roof structure. Curb shall have anchorage preapproval "R" from OSHPD in the state of California attesting to the maximum certified horizontal and vertical load ratings. Curb shall be Type RSC as manufactured by Mason Industries, Inc.

W. Type "23":
   1. Flexible spherical expansion joints shall employ peroxide cured EPDM in the covers, liners and Kevlar7 tire cord frictioning. Any substitutions must have equal or superior physical and chemical characteristics. Solid steel rings shall be used within the raised face rubber flanged ends to prevent pullout. Flexible cable bead wire is not acceptable. Sizes 2" (50mm) and larger shall have two spheres reinforced with a ductile iron external ring between spheres. Flanges shall be split ductile iron or steel with hooked or similar interlocks. Sizes 16" (400mm) to 24" (600mm) may be single sphere. Sizes 3/4" (19mm) to 1 2" (38mm) may have threaded two piece bolted flange assemblies, one sphere and cable retention. Connectors shall be rated at 250 psi (1.72MPa) up to 170 degree F (77 degree C) with a uniform drop in allowable pressure to 215 psi (1.48MPa)at 250 degree F (121 degree C) and 150 psi (1.03 MPa) at 250 degree F (121 degree C).
   2. Expansion joints shall be installed in piping gaps equal to the length of the expansion joints under pressure. Control rods need only be used in unanchored piping locations where the manufacturer determines the installation exceeds the pressure requirement without control rods. If control rods are used, they must have 2" (12mm) thick Neoprene washer bushings large enough in diameter to take the thrust at 1000 psi (.7 kg/mm2) maximum on the washer area.
   3. Submittals shall include two test reports by independent consultants showing minimum reductions of 20 DB in vibration accelerations and 10 DB in sound pressure levels at typical blade passage frequencies on this or a similar product by the same manufacturer. All expansion joints shall be installed on the equipment side of the shut off valves. Expansion joints shall be SAFEFLEX SFDEJ, SFEJ, SFDCR or SFU and Control Rods CR as manufactured by Mason Industries, Inc.

X. Type "24":
   1. Flexible stainless steel hose shall have stainless steel braid and carbon steel fittings. Sizes 3" (75mm) and larger shall be flanged. Smaller sizes shall have male nipples. Minimum lengths shall be as tabulated:

FLANGED			MALE NIPPLES	
3x14	10x26		1/2x9	2x14
4x15	12x28		3/4x10	2-1/2x18

5x19	14x30		1x11	
6x20	16x32		1-1/4x12	
8x22			1-1/2x13	

2. Hoses shall be installed on the equipment side of the shut-off valves horizontally and parallel to the equipment shafts wherever possible. Hoses shall be Type BSS as manufactured by Mason Industries, Inc.

Y. Type "25":
1. All-directional acoustical pipe anchor, consisting of two sizes of steel tubing separated by a minimum 1/2" (12mm) thick 60 durometer neoprene. Vertical restraint shall be provided by similar material arranged to prevent vertical travel in either direction. Allowable loads on the isolation material should not exceed 500 psi (.35 kg/mm2) and the design shall be balanced for equal resistance in any direction. All-directional anchors shall be Type ADA as manufactured by Mason Industries, Inc.

Z. Type "26":
1. Pipe guides shall consist of a telescopic arrangement of two sizes of steel tubing separated by a minimum 1/2" (12mm) thickness of 60 durometer neoprene. The height of the guides shall be preset with a shear pin to allow vertical motion due to pipe expansion or contraction. Shear pin shall be removable and reinsertable to allow for selection of pipe movement. Guides shall be capable of +/- 1 5/8" (41mm) motion, or to meet location requirements. Pipe guides shall be Type VSG as manufactured by Mason Industries, Inc.

AA. Type "27":
1. Split Wall Seals consist of two bolted pipe halves with minimum 3/4" (19mm) thick neoprene sponge bonded to the inner faces. The seal shall be tightened around the pipe to eliminate clearance between the inner sponge face and the piping. Concrete may be packed around the seal to make it integral with the floor, wall or ceiling if the seal is not already in place around the pipe prior to the construction of the building member. Seals shall project a minimum of l" (25mm) past either face of the wall. Where temperatures exceed 240 degree F(115 degree C), 10# (4.5kg) density fiberglass may be used in lieu of the sponge. Seals shall be Type SWS as manufactured by Mason Industries, Inc.

BB. Type "28":
1. The horizontal thrust restraint shall consist of a spring element in series with a neoprene molded cup as described in specification 5 with the same deflection as specified for the mountings or hangers. The spring element shall be designed so it can be preset for thrust at the factory and adjusted in the field to allow for a maximum of 1/4" (6mm) movement at start and stop. The assembly shall be furnished with 1 rod and angle brackets for attachment to both the equipment and the duct work or the equipment and the structure. Horizontal restraints shall be attached at the centerline of thrust and symmetrical on either side of the unit. Horizontal thrust restraints shall be Type WBI/WBD as manufactured by Mason Industries, Inc.

CC. Type "29":
1. Housekeeping pad anchors shall consist of a ductile iron casting that is tapered and hexagonal, smaller at its base than at its top. The upper portion shall have holes for rebar to pass thru. The anchor shall be continuously threaded from top to bottom for the attachment of soleplates. Housekeeping pad anchors shall be attached to the structural slab using a stud wedge anchor. Housekeeping pad anchors shall be type HPA and stud wedge anchor shall be type SAS both as manufactured by Mason Industries, Inc.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as shown on the drawings.

B. Verify that mounting surfaces are ready to receive vibration isolation and/or seismic control components and associated attachments.

C. Verify that conditions are satisfactory for installation prior to starting work.

3.02 CODE-REQUIRED SPECIAL INSPECTIONS

A. Arrange work to accommodate tests and/or inspections performed by Special Inspection Agency employed by Owner or Architect in accordance with Section 01 45 33 and statement of special inspections as required by applicable building code.

B. Frequency of Special Inspections: Where special inspections are designated as continuous or periodic, arrange work accordingly.
   1. Continuous Special Inspections: Special Inspection Agency to be present in the area where the work is being performed and observe the work at all times the work is in progress.
   2. Periodic Special Inspections: Special Inspection Agency to be present in the area where work is being performed and observe the work part-time or intermittently and at the completion of the work.

C. Prior to starting work, Contractor to submit written statement of responsibility to authorities having jurisdiction and to Owner acknowledging awareness of special requirements contained in the statement of special inspections.

D. Special Inspection Agency services do not relieve Contractor from performing inspections and testing specified elsewhere.

3.03 VIBRATION ISOLATION GENERAL

A. All vibration isolators must be installed in strict accordance with the manufacturers written instructions and all certified submittal data.

B. Installation of vibration isolators must not cause any change of position of equipment, piping or duct work resulting in stresses or misalignment.

C. No rigid connections between equipment and the building structure shall be made that degrades the noise and vibration control system herein specified.

D. The contractor shall not install any equipment, piping, duct or conduit which makes rigid connections with the building unless isolation is not specified. “Building” includes, but is not limited to, slabs, beams, columns, studs and walls.

E. Coordinate work with other trades to avoid rigid contact with the building.

F. Any conflicts with other trades which will result in rigid contact with equipment or piping due to inadequate space or other unforeseen conditions should be brought to the architects/ engineers attention prior to installation. Corrective work necessitated by conflicts after installation shall be at the responsible contractors expense.

G. Bring to the architects/engineers attention any discrepancies between the specifications and the field conditions or changes required due to specific equipment selection, prior to installation. Corrective work necessitated by discrepancies after installation shall be at the responsible contractors expense.

H. Correct, at no additional cost, all installations which are deemed defective in workmanship and materials at the contractors expense.

I. Hand built elastomeric expansion joints may be used when pipe sizes exceed 24” (600mm) or specified movements exceed Type "O" vibration isolators capabilities.

J. Locate isolation hangers as near to the overhead support structure as possible.

K. Air handling equipment and centrifugal fans shall be protected against excessive displacement which results from high air thrust when thrust forces exceed 10% of the equipment weight. Horizontal thrust restraints shall be Type "I" restraints.

L. Rooftop equipment isolators must be bolted to the equipment and structure. Mountings must be designed to resist 100m/h (160 km/h) wind loads.

3.04 VIBRATION ISOLATION OF PIPING

A. Horizontal pipe shall be installed in accordance with Type "T" Horizontal Pipe Isolation.

B. Risers shall be installed in accordance with Type "U" Riser Isolation.

3.05 VIBRATION ISOLATION OF DUCTWORK

A. All duct runs shall be installed in accordance with Type "V" Duct Isolation.

3.06 SEISMIC GENERAL

A. All vibration isolators and seismic restraint systems must be installed in strict accordance with the manufacturers written instructions and all certified submittal data.

B. Installation of vibration isolators and seismic restraints must not cause any change of position of equipment, piping or duct work resulting in stresses or misalignment.

C. No rigid connections between equipment and the building structure shall be made that degrades the noise and vibration control system herein specified.

D. The contractor shall not install any equipment, piping, duct or conduit which makes rigid connections with the building unless isolation is not specified. "Building" includes, but is not limited to, slabs, beams, columns, studs and walls.

E. Coordinate work with other trades to avoid rigid contact with the building.

F. Any conflicts with other trades which will result in rigid contact with equipment or piping due to inadequate space or other unforeseen conditions should be brought to the architects/engineers attention prior to installation. Corrective work necessitated by conflicts after installation shall be at the responsible contractors expense.

G. Bring to the architects/engineers attention any discrepancies between the specifications and the field conditions or changes required due to specific equipment selection, prior to installation. Corrective work necessitated by discrepancies after installation shall be at the responsible contractors expense.

H. Correct, at no additional cost, all installations which are deemed defective in workmanship and materials at the contractors expense.

I. Overstressing of the building structure must not occur because of overhead support of equipment. Contractor must submit loads to the structural engineer of record for approval. Generally bracing may occur from:
   1. Flanges of structural beams.
   2. Upper truss cords in bar joist construction.
   3. Cast in place inserts or wedge type drill-in concrete anchors.

J. Specification 12 cable restraints shall be installed slightly slack to avoid short circuiting the isolated suspended equipment, piping or conduit.

K. Specification 12 cable assemblies are installed taut on non-isolated systems. Specification 13 seismic solid braces may be used in place of cables on rigidly attached systems only.

L. At locations where specification 12 or 13 restraints are located, the support rods must be braced when necessary to accept compressive loads with specification 14 braces.

M. At all locations where specification 12 or 13 restraints are attached to pipe clevis's, the clevis cross bolt must be reinforced with specification type 15 braces.

N. Drill-in concrete anchors for ceiling and wall installation shall be specification type 18, and specification type 19 female wedge type for floor mounted equipment.

O. Vibration isolation manufacturer shall furnish integral structural steel bases as required. Independent steel rails are not permitted on this project.

P. Hand built elastomeric expansion joints may be used when pipe sizes exceed 24" or specified movements exceed specification 23 capabilities.

Q. Where piping passes through walls, floors or ceilings the vibration isolation manufacturer shall provide specification 27 wall seals.

R. Air handling equipment and centrifugal fans shall be protected against excessive displacement which results from high air thrust in relation to the equipment weight. Horizontal thrust restraint shall be specification type 28 (see selection guide).

S. Locate isolation hangers as near to the overhead support structure as possible.

3.07 VIBRATION ISOLATON OF SIESMIC PIPING

A. Horizontal pipe isolation: The first three pipe hangers in the main lines near the mechanical equipment shall be as described in specification 11. Specification 11 hangers must also be used in all transverse braced isolated locations. Brace hanger rods with SRC clamps specification 14. Horizontal runs in all other locations throughout the building shall be isolated by hangers as described in specification 10. Floor supported piping shall rest on isolators as described in specification 6. Heat exchanger's and expansion tanks are considered part of the piping run. The first three isolators from the isolated equipment will have the same static deflection as specified for the mountings under the connected equipment. If piping is connected to equipment located in basements and hangs from ceilings under occupied spaces the first three hangers shall have 0.75" (19mm) deflection for pipe sizes up to and including 3" (75mm), 1 1/2" (38mm) deflection for pipe sizes up to and including 6" (150mm), and 2 1/2" (64mm) deflection thereafter. Hangers shall be located as close to the overhead structure as practical. Where piping connects to mechanical equipment install specification 23 expansion joints or specification 24 stainless hoses if 23 is not suitable for the service.

B. Riser isolation: Risers shall be suspended from specification 10 hangers or supported by specification 5 mountings, anchored with specification 25 anchors, and guided with specification 26 sliding guides. Steel springs shall be a minimum of 0.75" (19mm) except in those expansion locations where additional deflection is required to limit load changes to + 25% of the initial load. Submittals must include riser diagrams and calculations showing anticipated expansion and contraction at each support point, initial and final loads on the building structure, spring deflection changes and seismic loads. Submittal data shall include certification that the riser system has been examined for excessive stresses and that none will exist in the proposed design.

C. Seismic Restraint of Piping:
   1. Seismically restrain all piping listed as a, b or c below. Use specification 12 cables if isolated. Specification 12 or 13 restraints may be used on unisolated piping.

a. Fuel oil piping, gas piping, medical gas piping, and compressed air piping that is 1" (25mm) I.D. or larger.
b. Piping located in boiler rooms, mechanical equipment rooms, and refrigeration equipment rooms that is 1 1/4" (32mm) I.D. and larger.
c. All other piping 2 1/2" (64mm) diameter and larger.

2. Transverse piping restraints shall be at 40' (12m) maximum spacing for all pipe sizes, except where lesser spacing is required to limit anchorage loads.
3. Longitudinal restraints shall be at 80' (24m) maximum spacing for all pipe sizes, except where lesser spacing is required to limit anchorage loads.
4. Where thermal expansion is a consideration, guides and anchors may be used as transverse and longitudinal restraints provided they have a capacity equal to or greater than the restraint loads in addition to the loads induced by expansion or contraction.
5. For fuel oil and all gas piping transverse restraints must be at 20' (6m) maximum and longitudinal restraints at 40' (12m) maximum spacing.
6. Transverse restraint for one pipe section may also act as a longitudinal restraint for a pipe section of the same size connected perpendicular to it if the restraint is installed within 24" (600m) of the elbow or TEE or combined stresses are within allowable limits at longer distances.
7. Hold down clamps must be used to attach pipe to all trapeze members before applying restraints in a manner similar to clevis supports.
8. Branch lines may not be used to restrain main lines.
9. Cast iron pipe of all types, glass pipe and any other pipes joined with a four band shield and clamp assembly in Zones 2B, 3 and 4 shall be braced as in sections 3.02.C.2 and 3. For Zones 0, 1 and 2A, 2 band clamps may be used with reduced spacings of 1/2 of those listed in sections 3.02.C.2 and 3.

D.

1. All discharge runs for a distance of 50' (15m) from the connected equipment shall be isolated from the building structure by means of specification 10 hangers or specification 5 floor isolators. Spring deflection shall be a minimum of 0.75" (19mm).
2. All duct runs having air velocity of 1000 fpm (5 m/s)or more shall be isolated from the building structure by specification 11 hangers or 5 floor supports. Spring deflection shall be a minimum of 0.75" (19mm).

E. Seismic restraint of duct work:

1. Seismically restrain all duct work with specification 12 or 13 restraints as listed below:
   a. Restrain rectangular ducts with cross sectional area of 6 sq.ft. (.5 m2) or larger.
   b. Restrain round ducts with diameters of 28" (700mm) or larger.
   c. Restrain flat oval ducts the same as rectangular ducts of the same nominal size.
2. Transverse restraints shall occur at 30' (9mm) intervals or at both ends of the duct run if less than the specified interval. Transverse restraints shall be installed at each duct turn and at each end of a duct run.
3. Longitudinal restraints shall occur at 60' (18m) intervals with at least one restraint per duct run. Transverse restraints for one duct section may also act as a longitudinal restraint for a duct section connected perpendicular to it if the restraints are installed within 4' (1.2m) of the intersection of the ducts and if the restraints are sized for the larger duct. Duct joints shall conform to SMACNA duct construction standards.
4. The ductwork must be reinforced at the restraint locations. Reinforcement shall consist of an additional angle on top of the ductwork that is attached to the support hanger rods. Ductwork is to be attached to both upper angle and lower trapeze.

5. A group of ducts may be combined in a larger frame so that the combined weights and dimensions of the ducts are less than or equal to the maximum weight and dimensions of the duct for which bracing details are selected.
6. Walls, including gypsum board non bearing partitions, which have ducts running through them may replace a typical transverse brace. Provide channel framing around ducts and solid blocking between the duct and frame.

F. Seismic Restraint of Electrical Services:
1. All electrical conduit 2 1/2" (64mm) in diameter and larger shall be restrained with specification type 12 seismic cable restraints or specification type 13 for seismic solid brace restraints.
2. All electrical bus ducts, cable trays and ladder trays shall be restrained with specification type 12, seismic cable restraints or specification 13 seismic solid brace restraints.
3. Transverse restraints shall occur at 30' (9m) intervals or both ends if the electrical run is less than the specified interval. Transverse restraints shall be installed at each electrical services turn and at each end of the electric run.
4. Longitudinal restraints shall occur at 60' (9m) intervals with at least one restraint per electric run. Transverse restraints for one electric section may also act as a longitudinal restraint for a duct for an electric section connected perpendicular to it if the restraints are installed within 4' (1.2m) of the intersection of the electric run and if the restraints are sized for the larger electric run.
5. All rigid floor mounted equipment must have a resilient media between the equipment mounting hole and the anchor bolt. Anchor bolts shall be designed in accordance with section seismic forces. Neoprene bushings shall be specification type 4 and anchor bolts shall be specification type 18 or 19.
6. Wall mounted panels shall be mounted with specification type 3 bushings. Floor mounted panels shall be mounted on specification type 4 bushings. Anchor bolts shall be specification type 18 or 19.

G. All fire protection piping shall be braced in accordance with NFPA 13 and 14.

H. All mechanical equipment shall be vibration isolated and seismically restrained as per the schedules in part 4 of this specification.

I. All fire protection equipment is considered life safety equipment and shall be seismically restrained using the seismic force levels for life safety equipment in table 1.06-1. if higher levels are shown.

3.08 SEISMIC RESTRAINT EXCLUSIONS

A. Piping:
1. Gas piping less than 1" (25mm) inside diameter.
2. Piping in boiler and mechanical rooms less than 1 1/4" (32mm) inside diameter.
3. All other piping less than 2 1/2" (64mm) inside diameter.
4. All piping suspended by individual hangers 12" (300mm) or less as measured from the top of the pipe to the bottom of the support where the hanger is attached. However, if the 12" (300mm) limit is exceeded by any hanger in the run, seismic bracing is required for the run. The 12" (300mm) exemption applies for trapeze supported systems if the top of each item supported by the trapeze qualifies.

B. Ductwork:
1. Rectangular and square and ducts that are less than 6 square feet in cross sectional area.
2. Oval ducts that are less than 6 square feet (.5m2) in cross sectional area based on nominal size.

3. Round duct less than 28" (.5m2) in diameter.
4. All duct suspended by hangers 12" (300mm) or less in length as measured from the top of the duct to the point of attachment to the structure. Hangers must be attached within 2" (50mm) of the top of the duct with a minimum of two #10 sheet metal screws. If the 12" (300mm) limit is exceeded by any hanger in the run, seismic bracing is required for the run.

C. Electrical:
1. All conduit less than 2 1/2" (64mm) diameter suspended by individual hanger rods.
2. All conduits suspended by individual hangers 12" (300mm) or less as measured from the top of the conduit to the bottom of the support where the hanger is a attached. However, if the 12" (300mm) limit is exceeded by any hanger in the run, seismic bracing is required for the run. The 12" (300mm) exemption applies for trapeze supported systems if the top of each item supported by the trapeze qualifies.

D. Suspended equipment:
1. VAV boxes and fan powered equipment weighing less than 50 lbs. (23kg) and rigidly connected to the supply side of the duct system and supported with a minimum of 4 hanger rods.

3.09 INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. Install anchors and fasteners in accordance with ICC Evaluation Services, LLC (ICC-ES) evaluation report conditions of use where applicable.

C. Secure fasteners according to manufacturer's recommended torque settings.

D. Field-Welding (where approved by Architect): Comply with Section 05 50 00.

E. Install flexible piping connections to provide sufficient slack for vibration isolation and/or seismic relative displacements as indicated or as required.

F. Vibration Isolation Systems:
1. Vibration-Isolated Equipment Support Bases:
a. Provide specified minimum clearance beneath base.
2. Spring Isolators:
a. Position equipment at operating height; provide temporary blocking as required.
b. Lift equipment free of isolators prior to lateral repositioning to avoid damage to isolators.
c. Level equipment by adjusting isolators gradually in sequence to raise equipment uniformly such that excessive weight or stress is not placed on any single isolator.
3. Isolator Hangers:
a. Use precompressed isolator hangers where required to facilitate installation and prevent damage to equipment utility connection provisions.
b. Locate isolator hangers at top of hanger rods in accordance with manufacturer's instructions.
4. Thrust Restraints:
a. Adjust restraint movement under normal operating static pressure.
5. Clean debris from beneath vibration-isolated equipment that could cause short-circuiting of isolation.
6. Use elastomeric grommets for attachments where required to prevent short-circuiting of isolation.
7. Adjust isolators to be free of isolation short circuits during normal operation.

8. Do not overtighten fasteners such that resilient material isolator pads are compressed beyond manufacturer's maximum recommended deflection.

G. Seismic Controls:
   1. Provide specified snubbing element air gap; remove any factory-installed spacers, debris, or other obstructions.
   2. Use only specified components, anchorage, and hardware evaluated by seismic design. Comply with conditions of seismic certification where applicable.
   3. Where mounting hole diameter exceeds bolt diameter by more than 0.125 inch (3 mm), use epoxy grout, elastomeric grommet, or welded washer to reduce clearance to 0.125 inch (3 mm) or less.
   4. Equipment with Sheet Metal Housings:
      a. Use Belleville washers to distribute stress over a larger surface area of the sheet metal connection interface as approved by manufacturer.
      b. Attach additional steel as approved by manufacturer where required to transfer loads to structure.
      c. Where mounting surface is irregular, do not shim housing; reinforce housing with additional steel as approved by manufacturer.
   5. Concrete Housekeeping Pads:
      a. Size in accordance with seismic design to meet anchor requirements.
      b. Install pad reinforcement and doweling in accordance with seismic design to ensure integrity of pad and associated connection to slab.
   6. Seismic Restraint Systems:
      a. Do not attach seismic restraints and gravity supports to dissimilar parts of structure that may move differently during an earthquake.
      b. Install restraints within permissible angles in accordance with seismic design.
      c. Install cable restraints straight between component/run and structural attachment; do not bend around other nonstructural components or structural elements.
      d. Install cable restraints for vibration-isolated components slightly slack to prevent short-circuiting of isolation.
      e. Install hanger rod stiffeners where indicated using only specified clamps; do not weld stiffeners to hanger rod.

3.10 FIELD QUALITY CONTROL

A. Inspect vibration isolation and/or seismic control components for damage and defects.

B. Provide manufacturer representative or authorized technician services to assist with inspection and testing of vibration isolation systems and seismic controls. Submit a detailed copy of manufacturer recommended inspection, testing, and field report procedures.

C. Vibration Isolation Systems:
   1. Verify isolator static deflections.
   2. Verify required clearance beneath vibration-isolated equipment support bases.
   3. Verify vibration isolation performance during normal operation; investigate sources of isolation short circuits.

D. Seismic Controls:
   1. Verify snubbing element air gaps.

E. Correct deficiencies and replace damaged or defective vibration isolation and/or seismic control components.

F. Submit detailed reports indicating inspection and testing results and corrective actions taken.

3.11 ATTACHMENTS

A. Statement of special inspections.

END OF SECTION

SECTION 23 05 53
IDENTIFICATION FOR HVAC PIPING AND EQUIPMENT

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Nameplates.

B. Tags.

C. Adhesive-backed duct markers.

D. Pipe markers.

E. Ceiling tacks.

1.02 REFERENCE STANDARDS

A. ASME A13.1 - Scheme for the Identification of Piping Systems; 2023.

B. ASTM D709 - Standard Specification for Laminated Thermosetting Materials; 2017.

1.03 SUBMITTALS

A. Chart and Schedule: Submit valve chart and schedule, including valve tag number, location, function, and valve manufacturer's name and model number.

B. Product Data: Provide manufacturers catalog literature for each product required.

C. Project Record Documents: Record actual locations of tagged valves.

PART 2 PRODUCTS

2.01 IDENTIFICATION APPLICATIONS

A. Air Handling Units: Nameplates.

B. Air Terminal Units: Tags and ceiling tacks where located above lay-in ceiling

C. Automatic Controls: Tags. Key to control schematic.

D. Control Panels: Nameplates.

E. Dampers: Ceiling tacks, where located above lay-in ceiling.

F. Ductwork: Adhesive-backed duct markers.

G. Heat Transfer Equipment: Nameplates.

H. Instrumentation: Tags.

I. Major Control Components: Nameplates.

J. Piping: Pipe markers.

K. Pumps: Nameplates.

L. Relays: Tags.

M. Small-sized Equipment: Tags.

N. Tanks: Nameplates.

O. Thermostats: Tags.

P. Valves: Tags and ceiling tacks where located above lay-in ceiling.

Q. Water Treatment Devices: Nameplates.

2.02 NAMEPLATES

A. Material and Thickness: Aluminum, 0.032-inch, or anodized aluminum of same thickness.

B. Label Size: Not less than 2-1/2 inch x 3/4 inch.

C. Letter Color: Black.

D. Letter Height: 1/4 inch (6 mm).

E. Background Color: Aluminum.

F. Fasteners: Stainless-steel rivets and self-tapping screws.

G. Adhesive: Contact-type permanent adhesive, compatible with label and substrate.

2.03 TAGS

A. Material and Thickness: Laminated three-layer plastic with engraved letters on light contrasting background color. Comply with ASTM D709.

B. Label Size: Not less than 2-1/2 inch x 3/4 inch.

C. Letter Color: Black.

D. Letter Height: 1/4 inch (6 mm).

E. Background Color: White.

F. Fasteners: Stainless-steel rivets and self-tapping screws.

G. Adhesive: Contact-type permanent adhesive, compatible with label and substrate.

2.04 ADHESIVE-BACKED DUCT MARKERS

A. Material: High gloss acrylic adhesive-backed vinyl film 0.0032 inch (0.76 mm); printed with UV and chemical resistant inks.

B. Style: Individual Label.

C. Color: Refer to schedule at end of section..

D. Size: 2-1/4 inch x 16 inch.

E. Comply with ANSI/ASME A13.1.

2.05 PIPE MARKERS

A. Color: Comply with ASME A13.1.

B. Plastic Pipe Markers: Factory fabricated, flexible, semi- rigid plastic, preformed to fit around pipe or pipe covering; minimum information indicating flow direction arrow and identification of fluid being conveyed.

C. Plastic Tape Pipe Markers: Flexible, vinyl film tape with pressure-sensitive adhesive backing and printed markings.

D. Underground Plastic Pipe Markers: Bright-colored continuously printed plastic ribbon tape, minimum 6 inches (150 mm) wide by 4 mil, 0.004 inch (0.10 mm) thick, manufactured for direct burial service.

E. Color code: Refer to schedule at end of section.

2.06 CEILING TACKS

A. Description: Steel with 3/4 inch (20 mm) diameter color coded head.

B. Color code as follows:
   1. HVAC Equipment: Yellow.

2. Fire Dampers and Smoke Dampers: Red.
3. Heating/Cooling Valves: Blue.

PART 3 EXECUTION

3.01 PREPARATION

A. Degrease and clean surfaces to receive adhesive for identification materials.

3.02 INSTALLATION

A. Install nameplates with corrosive-resistant mechanical fasteners, or adhesive. Apply with sufficient adhesive to ensure permanent adhesion and seal with clear lacquer.

B. Install plastic tape pipe markers in accordance with manufacturer's instructions.

C. Install plastic tape pipe markers complete around pipe in accordance with manufacturer's instructions.

D. Install underground plastic pipe markers 6 to 8 inches (150 to 200 mm) below finished grade, directly above buried pipe.

E. Use tags on piping 3/4 inch (20 mm) diameter and smaller.
   1. Identify service, flow direction, and pressure.
   2. Install in clear view and align with axis of piping.
   3. Locate identification not to exceed 20 feet (6 m) on straight runs including risers and drops, adjacent to each valve and Tee, at each side of penetration of structure or enclosure, and at each obstruction.

F. Apply ASME A13.1 Pipe Marking Rules:
   1. Place pipe marker adjacent to changes in direction.
   2. Place pipe marker adjacent each valve port and flange end.
   3. Place pipe marker at bothes sides of floor or wall penetrations.
   4. Place pipe marker every 25 feet interval of straight run on congested areas.
   5. Place pipe marker every 50 feet interval on straight run on open areas.

G. Install ductwork with plastic nameplates. Identify with air handling unit identification number and area served. Locate identification at air handling unit, at each side of penetration of structure or enclosure, and at each obstruction.

H. Locate ceiling tacks to locate valves or dampers above lay-in panel ceilings. Locate in corner of panel closest to equipment.

3.03 SCHEDULE

A. Pipe-Label Color Schedule:

SYSTEM TYPE	BACKGROUND COLOR	LETTER COLOR	FLOW ARROW
Chilled-Water Supply	ANSI Z535.1 Safety-Green	White	Yes
Chilled-Water Return	ANSI Z535.1 Safety-Green	White	Yes
Glycol Chilled-Water Supply	ANSI Z535.1 Safety-Green	White	Yes
Glycol Chilled-Water Return	ANSI Z535.1 Safety-Green	White	Yes
Condenser-Water Supply	ANSI Z535.1 Safety-Green	White	Yes

Condenser-Water Return	ANSI Z535.1 Safety-Green	White	Yes
Geothermal-Water Supply	ANSI Z535.1 Safety-Green	White	Yes
Geothermal-Water Return	ANSI Z535.1 Safety-Green	White	Yes
Heating Water Supply	ANSI Z535.1 Safety-Green	White	Yes
Heating Water Return	ANSI Z535.1 Safety-Green	White	Yes
Glycol Heating Water Supply	ANSI Z535.1 Safety-Green	White	Yes
Glycol Heating Water Return	ANSI Z535.1 Safety-Green	White	Yes
Refrigerant-Liquid	ANSI Z535.1 Safety-Blue	White	No
Refrigerant-Suction	ANSI Z535.1 Safety-Blue	White	No
Low-Pressure Steam	ANSI Z535.1 Safety-Yellow	Black	Yes
Medium-Pressure Steam	ANSI Z535.1 Safety-Yellow	Black	Yes
High-Pressure Steam	ANSI Z535.1 Safety-Yellow	Black	Yes
Low-Pressure Steam Condensate	ANSI Z535.1 Safety-Yellow	Black	Yes
Medium-Pressure Steam Condensate	ANSI Z535.1 Safety-Yellow	Black	Yes
High-Pressure Steam Condensate	ANSI Z535.1 Safety-Yellow	Black	Yes
Low Pressure Natural Gas	ANSI Z535.1 Safety-Yellow	Black	Yes
2 PSI Pressure Natural Gas	ANSI Z535.1 Safety-Yellow	Black	Yes
5 PSI Pressure Natural Gas	ANSI Z535.1 Safety-Yellow	Black	Yes
10 PSI Pressure Natural Gas	ANSI Z535.1 Safety-Yellow	Black	Yes
Fuel Oil Supply	ANSI Z535.1 Safety-Yellow	Black	Yes
Fuel Oil Return	ANSI Z535.1 Safety-Yellow	Black	Yes
Propane	ANSI Z535.1 Safety-Yellow	Black	Yes
Toxic or Corrosive Fluids	ANSI Z535.1 Safety-Orange	Black	Yes
Flammable Fluids	ANSI Z535.1 Safety-Yellow	Black	Yes
Combustible Fluids	ANSI Z535.1 Safety-Brown	White	Yes
Potable Water	ANSI Z535.1 Safety-Green	White	Yes
Compressed Air	ANSI Z535.1 Safety-Blue	White	Yes

B. Duct Label Color Schedule:

SYSTEM TYPE	BACKGROUND COLOR	LETTER COLOR	FLOW ARROW
Supply Air	Blue	White	Yes
Return Air	Blue	White	Yes
Exhaust Air	Blue	White	Yes
Outside Air	Blue	White	Yes
Mixed Air	Blue	White	Yes
Relief	Blue	White	Yes
Flue Gas	Orange	Black	Yes
Combustion Air	Blue	White	Yes

END OF SECTION

This page intentionally left blank

SECTION 23 05 93
TESTING, ADJUSTING AND BALANCING

PART 1 GENERAL

1.01 CONDITIONS OF THE CONTRACT

A. The General and Supplementary General Conditions as previously detailed along with the general requirements listed in Division 1 shall apply to all work of this Division.

B. All work shall conform to the local Municipal Specifications where conflicts exist. Applicable CSA standards will prevail where ANSI or ASTM conflict with CSA standards.

C. HVAC Contractor is responsible to furnish, install and execute all of the following work as required, specified and/or indicated on plan unless noted to be performed by another contractor.

1.02 SUMMARY

A. Section Includes:
   1. Balancing Air Systems:
      a. Constant-volume air systems.
      b. Variable-air-volume systems.
   2. Balancing Hydronic Piping Systems:
      a. Constant-flow hydronic systems.
      b. Variable-flow hydronic systems.
      c. Domestic hot water circulating systems.

1.03 DEFINITIONS

A. AABC: Associated Air Balance Council.

B. NEBB: National Environmental Balancing Bureau.

C. TAB: Testing, adjusting, and balancing.

D. TABB: Testing, Adjusting, and Balancing Bureau.

E. TAB Specialist: An entity engaged to perform TAB Work.

1.04 SUBMITTALS

A. Strategies and Procedures Plan: Within 30 days of Contractor's Notice to Proceed, submit TAB strategies and step-by-step procedures as specified in "Preparation" Article.

B. Certified TAB reports.

1.05 QUALITY ASSURANCE

A. TAB Contractor Qualifications: Engage a TAB entity certified by AABC or NEBB.
   1. TAB Field Supervisor: Employee of the TAB contractor and certified by AABC or NEBB.
   2. TAB Technician: Employee of the TAB contractor and who is certified by AABC or NEBB as a TAB technician.

B. Certify TAB field data reports and perform the following:
   1. Review field data reports to validate accuracy of data and to prepare certified TAB reports.
   2. Certify that the TAB team complied with the approved TAB plan and the procedures specified and referenced in this Specification.

C. TAB Report Forms: Use standard TAB contractor's forms approved by Construction Manager.

D. Instrumentation Type, Quantity, Accuracy, and Calibration: As described in ASHRAE 111, Section 5, "Instrumentation."

1.06 TAB

A. TAB will be responsible to carry out the commissioning requirements specified in Section 23 09 99 and other sections referenced in Section 23 09 99, and specified in 26 09 95 and other sections referenced in 26 09 95.

PART 2 PRODUCTS (NOT APPLICABLE)

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine the Contract Documents to become familiar with Project requirements and to discover conditions in systems' designs that may preclude proper TAB of systems and equipment.

B. Examine systems for installed balancing devices, such as test ports, gage cocks, thermometer wells, flow-control devices, balancing valves and fittings, and manual volume dampers. Verify that locations of these balancing devices are accessible.

C. Examine the approved submittals for HVAC systems and equipment.

D. Examine ceiling plenums and underfloor air plenums used for supply, return, or relief air to verify that they meet the leakage class of connected ducts as specified in Division 23 Section "Metal Ducts" and are properly separated from adjacent areas. Verify that penetrations in plenum walls are sealed and fire-stopped if required.

E. Examine equipment performance data including fan and pump curves.
   1. Relate performance data to Project conditions and requirements, including system effects that can create undesired or unpredicted conditions that cause reduced capacities in all or part of a system.
   2. Calculate system-effect factors to reduce performance ratings of HVAC equipment when installed under conditions different from the conditions used to rate equipment performance. To calculate system effects for air systems, use tables and charts found in AMCA 201, "Fans and Systems," or in SMACNA's "HVAC Systems - Duct Design." Compare results with the design data and installed conditions.

F. Examine system and equipment installations and verify that field quality-control testing, cleaning, and adjusting specified in individual Sections have been performed.

G. Examine test reports specified in individual system and equipment Sections.

H. Examine HVAC equipment and filters and verify that bearings are greased, belts are aligned and tight, and equipment with functioning controls is ready for operation.

I. Examine terminal units, such as variable-air-volume boxes, and verify that they are accessible and their controls are connected and functioning.

J. Examine strainers. Verify that startup screens are replaced by permanent screens with indicated perforations.

K. Examine three-way valves for proper installation for their intended function of diverting or mixing fluid flows.

L. Examine heat-transfer coils for correct piping connections and for clean and straight fins.

M. Examine system pumps to ensure absence of entrained air in the suction piping.

N. Examine operating safety interlocks and controls on HVAC equipment.

O. Report deficiencies discovered before and during performance of TAB procedures. Observe and record system reactions to changes in conditions. Record default set points if different from indicated values.

3.02 PREPARATION

A. Prepare a TAB plan that includes strategies and step-by-step procedures.

B. Complete system-readiness checks and prepare reports. Verify the following:
   1. Permanent electrical-power wiring is complete.
   2. Hydronic systems are filled, clean, and free of air.
   3. Automatic temperature-control systems are operational.
   4. Equipment and duct access doors are securely closed.
   5. Balance, smoke, and fire dampers are open.
   6. Isolating and balancing valves are open and control valves are operational.
   7. Ceilings are installed in critical areas where air-pattern adjustments are required and access to balancing devices is provided.
   8. Windows and doors can be closed so indicated conditions for system operations can be met.

3.03 GENERAL PROCEDURES FOR TESTING AND BALANCING

A. Perform testing and balancing procedures on each system according to the procedures contained in AABC's "National Standards for Total System Balance" or NEBB's "Procedural Standards for Testing, Adjusting, and Balancing of Environmental Systems" and in this Section.

B. Cut insulation, ducts, pipes, and equipment cabinets for installation of test probes to the minimum extent necessary for TAB procedures.
   1. After testing and balancing, patch probe holes in ducts with same material and thickness as used to construct ducts.
   2. Install and join new insulation that matches removed materials. Restore insulation, coverings, vapor barrier, and finish according to Division 23 Section "HVAC Insulation."

C. Mark equipment and balancing devices, including damper-control positions, valve position indicators, fan-speed-control levers, and similar controls and devices, with paint or other suitable, permanent identification material to show final settings.

D. Take and report testing and balancing measurements in inch-pound (IP) units.

3.04 GENERAL PROCEDURES FOR BALANCING AIR SYSTEMS

A. Prepare test reports for both fans and outlets. Obtain manufacturer's outlet factors and recommended testing procedures. Crosscheck the summation of required outlet volumes with required fan volumes.

B. Prepare and submit digital copies of schematic diagrams of systems' "as-built" duct layouts.

C. For variable-air-volume systems, develop a plan to simulate diversity.

D. Determine the best locations in main and branch ducts for accurate duct-airflow measurements.

E. Check airflow patterns from the outdoor-air louvers and dampers and the return- and exhaust-air dampers through the supply-fan discharge and mixing dampers.

F. Locate start-stop and disconnect switches, electrical interlocks, and motor starters.

G. Verify that motor starters are equipped with properly sized thermal protection.

H. Check dampers for proper position to achieve desired airflow path.

I. Check for airflow blockages.

J. Check condensate drains for proper connections and functioning.

K. Check for proper sealing of air-handling-unit components.

L. Verify that air duct system is sealed as specified in Division 23 Section "Metal Ducts."

3.05 PROCEDURES FOR CONSTANT-VOLUME AIR SYSTEMS

A. Contractor shall obtain and review training materials produced by Lennox before balancing Lennox Roof Top Unit. This information can be provided by owner or Lennox.

B. Adjust fans to deliver total indicated airflows within the maximum allowable fan speed listed by fan manufacturer.
   1. Measure total airflow.
      a. Where sufficient space in ducts is unavailable for Pitot-tube traverse measurements, measure airflow at terminal outlets and inlets and calculate the total airflow.
   2. Measure fan static pressures as follows to determine actual static pressure:
      a. Measure outlet static pressure as far downstream from the fan as practical and upstream from restrictions in ducts such as elbows and transitions.
      b. Measure static pressure directly at the fan outlet or through the flexible connection.
      c. Measure inlet static pressure of single-inlet fans in the inlet duct as near the fan as possible, upstream from the flexible connection, and downstream from duct restrictions.
      d. Measure inlet static pressure of double-inlet fans through the wall of the plenum that houses the fan.
   3. Measure static pressure across each component that makes up an air-handling unit, rooftop unit, and other air-handling and -treating equipment.
      a. Report the cleanliness status of filters and the time static pressures are measured.
   4. Measure static pressures entering and leaving other devices, such as sound traps, heat-recovery equipment, and air washers, under final balanced conditions.
   5. Review Record Documents to determine variations in design static pressures versus actual static pressures. Calculate actual system-effect factors. Recommend adjustments to accommodate actual conditions.
   6. Obtain approval from Construction Manager for adjustment of fan speed higher or lower than indicated speed. Comply with requirements in Division 23 Sections for air-handling units for adjustment of fans, belts, and pulley sizes to achieve indicated air-handling-unit performance.
   7. Do not make fan-speed adjustments that result in motor overload. Consult equipment manufacturers about fan-speed safety factors. Modulate dampers and measure fan-motor amperage to ensure that no overload will occur. Measure amperage in full-cooling, full-heating, economizer, and any other operating mode to determine the maximum required brake horsepower.

C. Adjust volume dampers for main duct, submain ducts, and major branch ducts to indicated airflows within specified tolerances.
   1. Measure airflow of submain and branch ducts.
      a. Where sufficient space in submain and branch ducts is unavailable for Pitot-tube traverse measurements, measure airflow at terminal outlets and inlets and calculate the total airflow for that zone.
   2. Measure static pressure at a point downstream from the balancing damper, and adjust volume dampers until the proper static pressure is achieved.
   3. Remeasure each submain and branch duct after all have been adjusted. Continue to adjust submain and branch ducts to indicated airflows within specified tolerances.

D. Measure air outlets and inlets without making adjustments.
   1. Measure terminal outlets using a direct-reading hood or outlet manufacturer's written instructions and calculating factors.

E. Adjust air outlets and inlets for each space to indicated airflows within specified tolerances of indicated values. Make adjustments using branch volume dampers rather than extractors and the dampers at air terminals.
   1. Adjust each outlet in same room or space to within specified tolerances of indicated quantities without generating noise levels above the limitations prescribed by the Contract Documents.
   2. Adjust patterns of adjustable outlets for proper distribution without drafts.

3.06 PROCEDURES FOR VARIABLE-AIR-VOLUME SYSTEMS

A. Contractor shall obtain and review training materials produced by Lennox before balancing Lennox Roof Top Units. This information can be provided by owner or Lennox.

B. Compensating for Diversity: When the total airflow of all terminal units is more than the indicated airflow of the fan, place a selected number of terminal units at a minimum set-point airflow with the remainder at maximum airflow condition until the total airflow of the terminal units equals the indicated airflow of the fan. Select the reduced-airflow terminal units so they are distributed evenly among the branch ducts.

C. Pressure-Independent, Variable-Air-Volume Systems: After the fan systems have been adjusted, adjust the variable-air-volume systems as follows:
   1. Set outdoor-air dampers at minimum, and set return- and exhaust-air dampers at a position that simulates full-cooling load.
   2. Select the terminal unit that is most critical to the supply-fan airflow and static pressure. Measure static pressure. Adjust system static pressure so the entering static pressure for the critical terminal unit is not less than the sum of the terminal-unit manufacturer's recommended minimum inlet static pressure plus the static pressure needed to overcome terminal-unit discharge system losses.
   3. Measure total system airflow. Adjust to within indicated airflow.
   4. Set terminal units at maximum airflow and adjust controller or regulator to deliver the designed maximum airflow. Use terminal-unit manufacturer's written instructions to make this adjustment. When total airflow is correct, balance the air outlets downstream from terminal units the same as described for constant-volume air systems.
   5. Set terminal units at minimum airflow and adjust controller or regulator to deliver the designed minimum airflow. Check air outlets for a proportional reduction in airflow the same as described for constant-volume air systems.
      a. If air outlets are out of balance at minimum airflow, report the condition but leave outlets balanced for maximum airflow.
   6. Remeasure the return airflow to the fan while operating at maximum return airflow and minimum outdoor airflow.
      a. Adjust the fan and balance the return-air ducts and inlets the same as described for constant-volume air systems.
   7. Measure static pressure at the most critical terminal unit and adjust the static-pressure controller at the main supply-air sensing station to ensure that adequate static pressure is maintained at the most critical unit.
   8. Record final fan-performance data.

3.07 PROCEDURES FOR BUILDING PRESSURIZATION

A. After the entire building has been balanced the overall building pressurization should be measured. The building overall pressurization should be at a positive pressure of +0.03” wc.
   1. Building Pressure over 0.05” wc:
      a. Verify that the outdoor air dampers are operating properly and in the correct position.

1) Document outdoor air damper control signal form unitary controller and provide to controls contactor.

b. Verify exhaust fans are operating properly and balanced.
c. Verify the building doors are shut and operating in a normal mode.
d. Adjust energy recovery units to get the building pressurization within tolerance.

2. Building Pressure under 0.02” wc:
   a. Verify that the outdoor air dampers are operating properly and in the correct position
   b. Verify exhaust fans are operating properly and balanced
   c. Adjust energy recovery units to get the building pressurization within tolerance.

B. Once the building overall pressurization is when tolerance the BAS System should be calibrated to match the actual readings measured by the TAB contractor. This work should be conducted as a coordinated team effort with both contractors onsite.

C. Rooftop Unit Powered Exhaust:
   1. TAB shall measure return air static pressure and associated CFM of each installed rooftop unit. These measured values shall be compared against the manufacturers published power exhaust fan performance data.
   2. The Rooftop Unit Powered Exhaust shall be commanded to run when the Outside Air Damper position results in an outside airflow value 10% (adj) greater than the listed power exhaust fan performance to maintain positive buidling pressurization as defined above.

3.08 PRESSURE TESTING OF DUCTWORK

A. The balancing subcontractor shall be responsible for pressure test verification of the entire ventilation system for leakage. Supply all necessary equipment to pressure test duct work. Pressure testing shall take place during construction as required, in accordance with section 23 31 13.

B. Testing supply, return and exhaust duct work shall be done as follows: After the duct work is fabricated and installed, it shall be isolated in sections and tested for air tightness. The air pressure used for the test shall match that specified under section 23 31 13. The ductwork shall be tested to a pressure class A described per SMACNA. The ductwork shall be tested so that the sealing of the ductwork shall be a leakage class 6. This means that 6 CFM of leakage per 100 sq ft of duct surface is the maximum allowable threshold if tested at 1 inch test pressure. See additional duct sealing requirements in the latest edition SMACNA manual "HVAC Air Duct Leakage Test Manual." Do this prior to applying an thermal insulation. In testing for air tightness, the main trunk shall be first tested by blanking off all branch take-offs, then each branch shall be tested individually after main trunk is proven air tight. No equipment connections shall be made on ends of branches until after testing. Ends and other branches shall be blanked off with air tight seals taped in place or other approved methods. Soap solution brushed on shall be used where necessary to detect small leaks.

C. The balancing contractor performing the leakage testing shall utilize a small scale drawing to show which ductwork corresponds to the duct testing data. This drawings shall individually number each section of ductwork being tested and be included in the final duct pressure testing and balancing report.

D. Duct pressure testing report shall include the following information:
   1. The date of the test.
   2. The project name.
   3. A description of the duct being tested (identification of the duct from small scale plan as called out above), sealing classification and duct classification.
   4. The design and actual test static pressure.
   5. The design and actual leakage rating.

6. Calculation of the duct leakage rating.
7. If the duct passed or failed.
8. Description of the apparatus utilized during testing including orifice size, manufacturer and date calibrated.
9. The actual orifice pressure drop with the actual flow.
10. The name of the person performing the test and any witnesses.

3.09 GENERAL PROCEDURES FOR HYDRONIC SYSTEMS

A. Prepare test reports with pertinent design data, and number in sequence starting at pump to end of system. Check the sum of branch-circuit flows against the approved pump flow rate. Correct variations that exceed plus or minus 5 percent.

B. Prepare and submit digital copies of schematic diagrams of systems' "as-built" piping layouts.

C. Prepare hydronic systems for testing and balancing according to the following, in addition to the general preparation procedures specified above:
   1. Open all manual valves for maximum flow.
   2. Check liquid level in expansion tank.
   3. Check makeup water-station pressure gage for adequate pressure for highest vent.
   4. Check flow-control valves for specified sequence of operation, and set at indicated flow.
   5. Set differential-pressure control valves at the specified differential pressure. Do not set at fully closed position when pump is positive-displacement type unless several terminal valves are kept open.
   6. Set system controls so automatic valves are wide open to heat exchangers.
   7. Check pump-motor load. If motor is overloaded, throttle main flow-balancing device so motor nameplate rating is not exceeded.
   8. Check air vents for a forceful liquid flow exiting from vents when manually operated.

3.10 PROCEDURES FOR CONSTANT-FLOW HYDRONIC SYSTEMS

A. Measure water flow at pumps. Use the following procedures except for positive-displacement pumps:
   1. Verify impeller size by operating the pump with the discharge valve closed. Read pressure differential across the pump. Convert pressure to head and correct for differences in gage heights. Note the point on manufacturer's pump curve at zero flow and verify that the pump has the intended impeller size.
      a. If impeller sizes must be adjusted to achieve pump performance, obtain approval from Architect and comply with requirements in Division 23 Section "Hydronic Pumps."
   2. Check system resistance. With all valves open, read pressure differential across the pump and mark pump manufacturer's head-capacity curve. Adjust pump discharge valve until indicated water flow is achieved.
      a. Monitor motor performance during procedures and do not operate motors in overload conditions.
   3. Verify pump-motor brake horsepower. Calculate the intended brake horsepower for the system based on pump manufacturer's performance data. Compare calculated brake horsepower with nameplate data on the pump motor. Report conditions where actual amperage exceeds motor nameplate amperage.
   4. Report flow rates that are not within plus or minus 10 percent of design.

B. Measure flow at all automatic flow control valves to verify that valves are functioning as designed.

C. Measure flow at all pressure-independent characterized control valves, with valves in fully open position, to verify that valves are functioning as designed.

D. Set calibrated balancing valves, if installed, at calculated presettings.

E. Measure flow at all stations and adjust, where necessary, to obtain first balance.
   1. System components that have Cv rating or an accurately cataloged flow-pressure-drop relationship may be used as a flow-indicating device.

F. Measure flow at main balancing station and set main balancing device to achieve flow that is 5 percent greater than indicated flow.

G. Adjust balancing stations to within specified tolerances of indicated flow rate as follows:
   1. Determine the balancing station with the highest percentage over indicated flow.
   2. Adjust each station in turn, beginning with the station with the highest percentage over indicated flow and proceeding to the station with the lowest percentage over indicated flow.
   3. Record settings and mark balancing devices.

H. Measure pump flow rate and make final measurements of pump amperage, voltage, rpm, pump heads, and systems' pressures and temperatures including outdoor-air temperature.

I. Measure the differential-pressure-control-valve settings existing at the conclusion of balancing.

J. Check settings and operation of each safety valve. Record settings.

3.11 PROCEDURES FOR VARIABLE-FLOW HYDRONIC SYSTEMS

A. Balance systems with automatic two- and three-way control valves by setting systems at maximum flow through heat-exchange terminals and proceed as specified above for hydronic systems.

3.12 PROCEDURES FOR MOTORS

A. Motors, 1/2 HP and Larger: Test at final balanced conditions and record the following data:
   1. Manufacturer's name, model number, and serial number.
   2. Motor horsepower rating.
   3. Motor rpm.
   4. Efficiency rating.
   5. Nameplate and measured voltage, each phase.
   6. Nameplate and measured amperage, each phase.
   7. Starter thermal-protection-element rating.

B. Motors Driven by Variable-Frequency Controllers: Test for proper operation at speeds varying from minimum to maximum. Test the manual bypass of the controller to prove proper operation. Record observations including name of controller manufacturer, model number, serial number, and nameplate data.

3.13 PROCEDURES FOR BOILERS

A. Hydronic Boilers: Measure and record entering- and leaving-water temperatures and water flow.

3.14 PROCEDURES FOR HEAT-TRANSFER COILS

A. Measure, adjust, and record the following data for each water coil:
   1. Entering- and leaving-water temperature.
   2. Water flow rate.
   3. Water pressure drop.
   4. Dry-bulb temperature of entering and leaving air.
   5. Wet-bulb temperature of entering and leaving air for cooling coils.

6. Airflow.
7. Air pressure drop.

B. Measure, adjust, and record the following data for each electric heating coil:
1. Nameplate data.
2. Airflow.
3. Entering- and leaving-air temperature at full load.
4. Voltage and amperage input of each phase at full load and at each incremental stage.
5. Calculated kilowatt at full load.
6. Fuse or circuit-breaker rating for overload protection.

C. Measure, adjust, and record the following data for each refrigerant coil:
1. Dry-bulb temperature of entering and leaving air.
2. Wet-bulb temperature of entering and leaving air.
3. Airflow.
4. Air pressure drop.
5. Refrigerant suction pressure and temperature.

3.15 TOLERANCES

A. Set HVAC system's air flow rates and water flow rates within the following tolerances:
1. Supply, Return, and Exhaust Fans and Equipment with Fans: Plus or minus 10 percent.
2. Air Outlets and Inlets: Plus or minus 10 percent.
3. Heating-Water Flow Rate: Plus or minus 10 percent.
4. Cooling-Water Flow Rate: Plus or minus 10 percent.

3.16 REPORTING

A. Initial Construction-Phase Report: Based on examination of the Contract Documents as specified in "Examination" Article, prepare a report on the adequacy of design for systems' balancing devices. Recommend changes and additions to systems' balancing devices to facilitate proper performance measuring and balancing. Recommend changes and additions to HVAC systems and general construction to allow access for performance measuring and balancing devices.

B. Status Reports: Prepare biweekly progress reports to describe completed procedures, procedures in progress, and scheduled procedures. Include a list of deficiencies and problems found in systems being tested and balanced. Prepare a separate report for each system and each building floor for systems serving multiple floors.

3.17 FINAL REPORT

A. General: Prepare a certified written report; tabulate and divide the report into separate sections for tested systems and balanced systems.
1. Include a certification sheet at the front of the report's binder, signed and sealed by the certified testing and balancing engineer.
2. Include a list of instruments used for procedures, along with proof of calibration.

B. Final Report Contents: In addition to certified field-report data, include the following:
1. Pump curves.
2. Fan curves.
3. Manufacturers' test data.
4. Field test reports prepared by system and equipment installers.
5. Other information relative to equipment performance; do not include Shop Drawings and product data.

C. General Report Data: In addition to form titles and entries, include the following data:

1. Title page.
2. Name and address of the TAB contractor.
3. Project name.
4. Project location.
5. Architect's name and address.
6. Engineer's name and address.
7. Contractor's name and address.
8. Report date.
9. Signature of TAB supervisor who certifies the report.
10. Table of Contents with the total number of pages defined for each section of the report. Number each page in the report.
11. Summary of contents including the following:
    a. Indicated versus final performance.
    b. Notable characteristics of systems.
    c. Description of system operation sequence if it varies from the Contract Documents.
12. Nomenclature sheets for each item of equipment.
13. Data for terminal units, including manufacturer's name, type, size, and fittings.
14. Notes to explain why certain final data in the body of reports vary from indicated values.
15. Test conditions for fans and pump performance forms including the following:
    a. Settings for outdoor-, return-, and exhaust-air dampers.
    b. Conditions of filters.
    c. Cooling coil, wet- and dry-bulb conditions.
    d. Face and bypass damper settings at coils.
    e. Fan drive settings including settings and percentage of maximum pitch diameter.
    f. Inlet vane settings for variable-air-volume systems.
    g. Settings for supply-air, static-pressure controller.
    h. Other system operating conditions that affect performance.

D. System Diagrams: Include schematic layouts of air and hydronic distribution systems. Present each system with single-line diagram and include the following:
1. Quantities of outdoor, supply, return, and exhaust airflows.
2. Water and steam flow rates.
3. Duct, outlet, and inlet sizes.
4. Pipe and valve sizes and locations.
5. Terminal units.
6. Balancing stations.
7. Position of balancing devices.

END OF SECTION

SECTION 23 07 13
DUCT INSULATION

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Duct insulation.

B. Duct liner.

C. Weather barrier coatings.

D. Jacketing and accessories.

1.02 RELATED REQUIREMENTS

A. Section 23 05 53 - Identification for HVAC Piping and Equipment.

B. Section 23 31 00 - HVAC Ducts and Casings: Glass fiber ducts.

1.03 REFERENCE STANDARDS

A. ASTM B209/B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate; 2021a.

B. ASTM C518 - Standard Test Method for Steady-State Thermal Transmission Properties by Means of the Heat Flow Meter Apparatus; 2021.

C. ASTM C534/C534M - Standard Specification for Preformed Flexible Elastomeric Cellular Thermal Insulation in Sheet and Tubular Form; 2025.

D. ASTM C553 - Standard Specification for Mineral Fiber Blanket Thermal Insulation for Commercial and Industrial Applications; 2024.

E. ASTM C612 - Standard Specification for Mineral Fiber Block and Board Thermal Insulation; 2014 (Reapproved 2019).

F. ASTM C916 - Standard Specification for Adhesives for Duct Thermal Insulation; 2020.

G. ASTM C1071 - Standard Specification for Fibrous Glass Duct Lining Insulation (Thermal and Sound Absorbing Material); 2025.

H. ASTM C1338 - Standard Test Method for Determining Fungi Resistance of Insulation Materials and Facings; 2025.

I. ASTM C1371 - Standard Test Method for Determination of Emittance of Materials Near Room Temperature Using Portable Emissometers; 2015 (Reapproved 2022).

J. ASTM C1423 - Standard Guide for Selecting Jacketing Materials for Thermal Insulation; 2021.

K. ASTM C1775 - Standard Specification for Laminate Protective Jacket and Tape for Use Over Thermal Insulation for Outdoor Applications; 2022.

L. ASTM D5590 - Standard Test Method for Determining the Resistance of Paint Films and Related Coatings to Fungal Defacement by Accelerated Four-Week Agar Plate Assay; 2017 (Reapproved 2021).

M. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2024.

N. ASTM E96/E96M - Standard Test Methods for Gravimetric Determination of Water Vapor Transmission Rate of Materials; 2024a.

O. ASTM G21 - Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi; 2015, with Editorial Revision (2021).

P. SAE AMS3779 - Tape, Adhesive, Pressure-Sensitive Thermal Radiation Resistant, Aluminum Coated Glass Cloth; 2016b.

Q. SMACNA (DCS) - HVAC Duct Construction Standards Metal and Flexible; 2020.

R. UL 181A - Closure Systems for Use with Rigid Air Ducts; Current Edition, Including All Revisions.

S. UL 181B - Closure Systems for Use with Flexible Air Ducts and Air Connectors; Current Edition, Including All Revisions.

T. UL 723 - Standard for Test for Surface Burning Characteristics of Building Materials; Current Edition, Including All Revisions.

1.04 SUBMITTALS

A. Product Data: Provide product description, thermal characteristics, list of materials and thickness for each service, and locations.

B. Manufacturer's Instructions: Indicate installation procedures necessary to ensure acceptable workmanship and that installation standards will be achieved.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products of the type specified in this section with not less than three years of documented experience.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Accept materials on site in original factory packaging, labelled with manufacturer's identification, including product density and thickness.

B. Protect insulation from weather and construction traffic, dirt, water, chemical, and mechanical damage, by storing in original wrapping.

1.07 FIELD CONDITIONS

A. Maintain ambient temperatures and conditions required by manufacturers of adhesives, mastics, and insulation cements.

B. Maintain temperature during and after installation for minimum period of 24 hours.

PART 2 PRODUCTS

2.01 REGULATORY REQUIREMENTS

A. Surface Burning Characteristics: Flame spread index/Smoke developed index of 25/50, maximum, when tested in accordance with ASTM E84 or UL 723.

2.02 GLASS FIBER, FLEXIBLE

A. Manufacturer:
   1. CertainTeed Corporation: www.certainteed.com/#sle.
   2. Johns Manville: www.jm.com/#sle.
   3. JP Lamborn Co; Thermal Sleeve MT: www.jpflex.com/#sle.
   4. Knauf Insulation; Performance+ Duct Wrap: www.knaufinsulation.com/#sle.
   5. Owens Corning Corporation: www.ocbuildingspec.com/#sle.

B. Insulation: ASTM C553; flexible, noncombustible blanket.
   1. K (Ksi) value: 0.36 at 75 degrees F (0.052 at 24 degrees C), when tested in accordance with ASTM C518.
   2. Maximum Service Temperature: 1,200 degrees F (649 degrees C).
   3. Maximum Water Vapor Absorption: 5.0 percent by weight.

C. Vapor Barrier Jacket:

1. Kraft paper with glass fiber yarn and bonded to aluminized film.
2. Moisture Vapor Permeability: 0.02 perm inch (0.029 ng/(Pa s m)), when tested in accordance with ASTM E96/E96M.
3. Secure with pressure-sensitive tape.

D. Vapor Barrier Tape:
1. Kraft paper reinforced with glass fiber yarn and bonded to aluminized film, with pressure-sensitive rubber-based adhesive.

E. Indoor Vapor Barrier Mastic:
1. Vinyl emulsion type acrylic or mastic, compatible with insulation, black color.

F. Outdoor Vapor Barrier Mastic:
1. Vinyl emulsion type acrylic or mastic, compatible with insulation, black color.

G. Tie Wire: Annealed steel, 16 gauge, 0.0508 inch diameter (1.29 mm diameter).

2.03 GLASS FIBER, RIGID

A. Manufacturer:
1. CertainTeed Corporation: www.certainteed.com/#sle.
2. Johns Manville: www.jm.com/#sle.
3. Knauf Insulation: www.knaufinsulation.com/#sle.
4. Owens Corning Corporation; 700 Series FIBERGLAS Insulation: www.ocbuildingspec.com/#sle.

B. Insulation: ASTM C612; rigid, noncombustible blanket.
1. K (Ksi) Value: 0.24 at 75 degrees F (0.036 at 24 degrees C), when tested in accordance with ASTM C518.
2. Maximum Service Temperature: 450 degrees F (232 degrees C).
3. Maximum Water Vapor Absorption: 5.0 percent.
4. Maximum Density: 8.0 pcf (128 kg/cu m).

C. Vapor Barrier Jacket:
1. Kraft paper with glass fiber yarn and bonded to aluminized film.
2. Moisture Vapor Permeability: 0.02 perm inch (0.029 ng/(Pa s m)), when tested in accordance with ASTM E96/E96M.
3. Secure with pressure-sensitive tape.

D. Vapor Barrier Tape:
1. Kraft paper reinforced with glass fiber yarn and bonded to aluminized film, with pressure-sensitive rubber-based adhesive.

E. Indoor Vapor Barrier Finish:
1. Cloth: Untreated; 9 oz/sq yd (305 g/sq m) weight, glass fabric.
2. Vinyl emulsion type acrylic, compatible with insulation, black color.

2.04 FLEXIBLE ELASTOMERIC CELLULAR INSULATION

A. Manufacturers:
1. Aeroflex USA; AEROFLEX Breathe-EZ: www.aeroflexusa.com/#sle.
2. Armacell LLC; ArmaFlex Ultra with FlameDefense: www.armacell.us/#sle.
3. K-Flex USA LLC; Insul-Sheet: www.kflexusa.com/#sle.

B. Insulation: Preformed flexible elastomeric cellular rubber insulation complying with ASTM C534/C534M Grade 1, in sheet form.
1. Minimum Service Temperature: Minus 40 degrees F (Minus 40 degrees C).
2. Maximum Service Temperature: 180 degrees F (82 degrees C).

3. Connection: Waterproof vapor barrier adhesive.

C. Elastomeric Foam Adhesive: Air dried, contact adhesive, compatible with insulation.

D. Weather Barrier Coating: Air dried, contact adhesive, compatible with insulation and ASTM E84 compliant.

2.05 WEATHER BARRIER COATINGS

A. Weather-Resistive Barrier Coating: Fire-resistive, UV resistant, water-based mastic for use over closed cell polyethylene and polyurethane foam insulation; applied with glass fiber or synthetic reinforcing mesh.
   1. Surface Burning Characteristics: Flame spread index of 25 or less, smoke developed index of 450 or less, Class A, when tested in accordance with ASTM E84.
   2. Water Vapor Permeance: Greater than 1.0 perm (57 ng/(Pa s m)) in accordance with ASTM E96/E96M.
   3. Resistance to Fungal Growth: No growth when tested in accordance with ASTM D5590.
   4. Color: As selected by Architect.

2.06 JACKETING AND ACCESSORIES

A. Canvas Jacket: UL listed 6 oz/sq yd (220 g/sq m) plain weave cotton fabric treated with dilute fire-retardant lagging adhesive.
   1. Lagging Adhesive:
      a. Compatible with insulation.

B. Mineral Fiber (Outdoor) Jacket: Asphalt impregnated and coated sheet, 50 lb/square (2.45 kg/sq m).

C. Aluminum Jacket:
   1. Comply with ASTM B209/B209M, Temper H14, minimum thickness of 0.016 inch (0.41 mm) with factory-applied polyethylene and kraft paper moisture barrier on the inside surface.
   2. Thickness: 0.016 inch (0.40 mm) sheet.
   3. Finish: Smooth.
   4. Joining: Longitudinal slip joints and 2 inch (50 mm) laps.
   5. Fittings: 0.016 inch (0.40 mm) thick die-shaped fitting covers with factory-attached protective liner.
   6. Metal Jacket Bands: 3/8 inch (10 mm) wide; 0.015 inch (0.38 mm) thick aluminum.

D. Aluminum-Foil Laminate Jacket:
   1. Factory-applied, pressure sensitive adhesive jacketing on paper release liner.
   2. Finish: Aluminum smooth.
   3. Comply with ASTM C1775.

E. Aluminum-Foil Laminate Jacket:
   1. Factory-applied, pressure sensitive adhesive jacketing to comply with ASTM C1775.

F. Flexible Weather-Proofing Outdoor Jacket: Self-healing, field-applied outdoor cladding.
   1. Material: Aluminum foil/polymer laminate with rubberized asphalt layer and acrylic adhesive.
   2. Thickness: 34 mil, 0.034 inch (0.86 mm).
   3. Finish: Embossed.
   4. Color: Silver.
   5. Water Vapor Transmission: 0.002 perm inch (0.0029 ng/(Pa s m)), maximum, when tested in accordance with ASTM E96/E96M.
   6. Mold Resistance: Pass when tested in accordance with ASTM C1338.

7. Emissivity: 0.30 when tested in accordance with ASTM C1371.

G. Reinforced Tape:
1. FSK tape suitable for sealing seams between insulation, insulated elbows, and fittings resulting in a tight, smooth surface without wrinkles.
2. Comply with UL 723 or ASTM E84.
3. Moisture Vapor Permeability: 0.00 perm inch (0.00 ng/(Pa s m)), when tested in accordance with ASTM E96/E96M.
4. Finish: Match insulation.

H. Plain Foil Tape:
1. Aluminum foil with pressure-sensitive adhesive on paper release liner.
2. Finish: Plain foil.

I. UL181 Tape for Rigid and Flexible Ductwork:
1. Comply with UL 181A for rigid ductwork.
2. Comply with UL 181B for flexible ductwork.
3. Aluminum foil coated with pressure-sensitive adhesive on paper release liner.
4. Foil tape suitable for sealing seams between insulation, insulated elbows, and fittings resulting in a tight, smooth surface without wrinkles.
5. Finish: Printed with UL Listing for identification.

2.07 DUCT LINER

A. Manufacturers:
1. CertainTeed Corporation: www.certainteed.com/#sle.
2. Ductmate Industries, Inc, a DMI Company: www.ductmate.com/#sle.
3. Johns Manville: www.jm.com/#sle.
4. Owens Corning Corporation; QuietR Rotary Duct Insulation: www.ocbuildingspec.com/#sle.

B. Glass Fiber Insulation: Non-corrosive, incombustible glass fiber complying with ASTM C1071; flexible blanket, rigid board, and preformed round liner board; impregnated surface and edges coated with poly vinyl acetate polymer, acrylic polymer, or black composite.
1. Fungal Resistance: No growth when tested according to ASTM G21.
2. Apparent Thermal Conductivity: Maximum of 0.31 at 75 degrees F (0.045 at 24 degrees C).
3. Service Temperature: Up to 250 degrees F (121 degrees C).
4. Rated Velocity on Coated Air Side for Air Erosion: 5,000 fpm (25.4 m/s), minimum.
5. Minimum Noise Reduction Coefficients:
a. 1/2 inch (13 mm) Thickness: 0.30.
b. 1 inch (25 mm) Thickness: 0.45.
c. 1-1/2 inches (40 mm) Thickness: 0.60.
d. 2 inch (50 mm) Thickness: 0.70.

C. Adhesive: Waterproof, fire-retardant type, ASTM C916.

D. Liner Fasteners: Galvanized steel, self-adhesive pad with integral head.

PART 3 EXECUTION

3.01 EXAMINATION

A. Test ductwork for design pressure prior to applying insulation materials.

B. Verify that surfaces are clean, foreign material removed, and dry.

3.02 INSTALLATION

A. **PVC or ABS jacketing shall not be installed in return air plenums.**

B. Install in accordance with manufacturer's instructions.

C. Install in accordance with NAIMA National Insulation Standards.

D. Insulated Ducts Conveying Air Below Ambient Temperature:
   1. Provide insulation with vapor barrier jackets.
   2. Finish with tape and vapor barrier jacket.
   3. Continue insulation through walls, sleeves, hangers, and other duct penetrations.
   4. Insulate entire system, including fittings, joints, flanges, fire dampers, flexible connections, and expansion joints.

E. Insulated Ducts Conveying Air Above Ambient Temperature:
   1. Provide with or without standard vapor barrier jacket.
   2. Insulate fittings and joints. Where service access is required, bevel and seal ends of insulation.

F. Slope exterior ductwork to shed water.

G. External Duct Insulation Application:
   1. Secure insulation with vapor barrier with wires and seal jacket joints with vapor barrier adhesive or tape to match jacket.
   2. Secure insulation without vapor barrier with staples, tape, or wires.
   3. Install without sag on underside of duct. Use adhesive or mechanical fasteners where necessary to prevent sagging. Lift duct off trapeze hangers and insert spacers.
   4. Seal vapor barrier penetrations by mechanical fasteners with vapor barrier adhesive.
   5. Stop and point insulation around access doors and damper operators to allow operation without disturbing wrapping.

H. Duct and Plenum Liner Application:
   1. Adhere insulation with adhesive for 90 percent coverage.
   2. Secure insulation with mechanical liner fasteners. Refer to SMACNA (DCS) for spacing.
   3. Seal and smooth joints. Seal and coat transverse joints.
   4. Seal liner surface penetrations with adhesive.
   5. Duct dimensions indicated are net inside dimensions required for airflow. Increase duct size to allow for insulation thickness.

3.03 ITEMS NOT INSULATED.

A. Metal ducts with duct liner of sufficient thickness to comply with energy code and ASHRAE/IESNA 90.1.

B. Factory-insulated flexible ducts.

C. Factory-insulated plenums and casings.

D. Flexible connectors.

E. Vibration-control devices.

F. Factory-insulated access panels and doors.

G. Exposed indoor supply air ducts in conditioned space in area being served.

H. Exposed indoor return air duct in conditioned space in area being served.

3.04 PLENUMS AND DUCTS REQUIRING INSULATION:

A. Indoor, concealed supply and outdoor air.

B. Indoor, exposed supply and outdoor air.

C. Indoor, concealed return located in non-conditioned space.

D. Indoor, exposed return located in non-conditioned space.

3.05 DUCT INSULATION SCHEDULE

A. Supply-Air Duct Mains: R-6 Fibrous insulation liner on all supply duct mains. R-6 duct wrap with foil vapor barrier is an acceptable alternative to liner in non-exposed areas, although the first 15’ from the supply unit must be installed with duct liner.

B. Supply Air Branches (Round run out to each diffuser): R-6 wrap insulation with foil vapor barrier.

C. Supply ductwork located Outdoors: Double wall duct with R-12 Mineral-fiber blanket insulation between duct walls and solid NON-perforated inner duct.Exterior duct wall shall be aluminum with joints sealed water tight.

D. Outdoor-Air Duct Mains: R-8 Fibrous insulation liner on all. R-8 duct wrap with foil vapor barrier is an acceptable alternative to liner in non-exposed areas.

E. Return-Air Duct Mains: R-6 Fibrous insulation liner on the first 15’ of ductwork off the supply unit. All return air ducts located in shafts on outside walls must be wrapped with R-6 insulation within the shaft enclosure.

F. Exhaust ductwork: No duct liner allowed. R-6 insulation wrap with foil vapor barrier on the final 10’ thru roof or at connection to unit at roof, unless noted otherwise on plan.

G. Exhaust duct from locker room (EF-1,8,10,11) – No duct liner allowed. First 10’ from unit connection shall be wrapped with R-6 insulation.

H. Yoga Supply and Return Ducts (RTU-1): Two layers of R-4.2 wrap insulation with foil vapor barrier equaling R-8.4. Single layer of R-8 is not acceptable.

I. Type I, Commercial, Kitchen Hood Exhaust Duct and Plenum Insulation: Fire-rated blanket; thickness as required to achieve UL 1-1/2-hour fire rating for grease duct. 3M Fire barrier 615+ to meet NFPA 96, ASTM E-2336 or equal.

J. Category IV appliance venting, polypropylene and CPVC ducting located in plenums: Fire-rated blanket; thickness as required to achieve UL 1-1/2 fire rating. 3M Fire Barrier Plenum Wrap 5A+.

SECTION 23 07 16
HVAC EQUIPMENT INSULATION

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Equipment insulation.

B. Flexible removable and reusable blanket insulation.

C. Weather barrier coatings.

D. Jacketing and accessories.

E. Breeching insulation.

1.02 RELATED REQUIREMENTS

A. Section 23 05 53 - Identification for HVAC Piping and Equipment.

B. Section 23 21 13 - Hydronic Piping: Placement of hangers and hanger inserts.

C. Section 23 21 14 - Hydronic Specialties.

1.03 REFERENCE STANDARDS

A. ASTM B209/B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate; 2021a.

B. ASTM C177 - Standard Test Method for Steady-State Heat Flux Measurements and Thermal Transmission Properties by Means of the Guarded-Hot-Plate Apparatus; 2019, with Editorial Revision (2023).

C. ASTM C195 - Standard Specification for Mineral Fiber Thermal Insulating Cement; 2007 (Reapproved 2019).

D. ASTM C518 - Standard Test Method for Steady-State Thermal Transmission Properties by Means of the Heat Flow Meter Apparatus; 2021.

E. ASTM C534/C534M - Standard Specification for Preformed Flexible Elastomeric Cellular Thermal Insulation in Sheet and Tubular Form; 2025.

F. ASTM C552 - Standard Specification for Cellular Glass Thermal Insulation; 2022.

G. ASTM C553 - Standard Specification for Mineral Fiber Blanket Thermal Insulation for Commercial and Industrial Applications; 2024.

H. ASTM C592 - Standard Specification for Mineral Fiber Blanket Insulation and Blanket-Type Pipe Insulation (Metal-Mesh Covered) (Industrial Type); 2022a.

I. ASTM C612 - Standard Specification for Mineral Fiber Block and Board Thermal Insulation; 2014 (Reapproved 2019).

J. ASTM C1423 - Standard Guide for Selecting Jacketing Materials for Thermal Insulation; 2021.

K. ASTM C1775 - Standard Specification for Laminate Protective Jacket and Tape for Use Over Thermal Insulation for Outdoor Applications; 2022.

L. ASTM D5590 - Standard Test Method for Determining the Resistance of Paint Films and Related Coatings to Fungal Defacement by Accelerated Four-Week Agar Plate Assay; 2017 (Reapproved 2021).

M. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2024.

N. ASTM E96/E96M - Standard Test Methods for Gravimetric Determination of Water Vapor Transmission Rate of Materials; 2024a.

O. SAE AMS3779 - Tape, Adhesive, Pressure-Sensitive Thermal Radiation Resistant, Aluminum Coated Glass Cloth; 2016b.

P. UL 723 - Standard for Test for Surface Burning Characteristics of Building Materials; Current Edition, Including All Revisions.

1.04 SUBMITTALS

A. Product Data: Provide product description, thermal characteristics, list of materials and thickness for equipment scheduled.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with not less than three years of documented experience.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Accept materials on site in original factory packaging, labeled with manufacturer's identification, including product density and thickness.

B. Protect insulation from weather and construction traffic, dirt, water, chemical, and mechanical damage, by storing in original wrapping.

1.07 FIELD CONDITIONS

A. Maintain ambient temperatures and conditions required by manufacturers of adhesives, mastics, and insulation cements.

B. Maintain temperature during and after installation for minimum period of 24 hours.

PART 2 PRODUCTS

2.01 REGULATORY REQUIREMENTS

A. Surface Burning Characteristics: Flame spread index/Smoke developed index of 25/50, maximum, when tested in accordance with ASTM E84 or UL 723.

2.02 GLASS FIBER, FLEXIBLE

A. Manufacturers:
   1. CertainTeed Corporation: www.certainteed.com/#sle.
   2. Johns Manville Corporation: www.jm.com/#sle.
   3. Owens Corning Corporation: www.ocbuildingspec.com/#sle.

B. Insulation: ASTM C553; flexible, noncombustible.
   1. K (Ksi) Value: 0.36 at 75 degrees F (0.052 at 24 degrees C), when tested in accordance with ASTM C177 or ASTM C518.
   2. Maximum Service Temperature: 1,000 degrees F (538 degrees C).
   3. Maximum Water Vapor Absorption: 5.0 percent by weight.

C. Vapor Barrier Jacket: Kraft paper reinforced with glass fiber yarn and bonded to aluminized film.
   1. Moisture Vapor Permeability: 0.02 perm inch (0.029 ng/(Pa s m)), when tested in accordance with ASTM E96/E96M.
   2. Secure with self-sealing longitudinal laps and butt strips.

D. Tie Wire: 0.048 inch (1.22 mm) stainless steel with twisted ends on maximum 12 inch (300 mm) centers.

E. Vapor Barrier Lap Adhesive: Compatible with insulation.

F. Insulating Cement/Mastic: ASTM C195; hydraulic setting on mineral wool.

2.03 FLEXIBLE REMOVABLE AND REUSABLE BLANKET INSULATION

A. Description: Custom cut and fabricated, removable and reusable blanket insulation system, consisting of inner liner, insulation layer, outer protective jacket, and fastening system.

B. Provide insulation system based on surface temperature of piping, installed location of piping, and maximum safe-to-touch temperature of jacketing.

C. Performance Criteria:
   1. Safe-to-Touch Temperature of Jacketing: 140 degrees F (60 degrees C).

2.04 GLASS FIBER, RIGID

A. Manufacturer:
   1. CertainTeed Corporation: www.certainteed.com/#sle.
   2. Johns Manville Corporation: www.jm.com/#sle.
   3. Owens Corning Corporation: www.ocbuildingspec.com/#sle.

B. Insulation: ASTM C612 or ASTM C592; rigid, noncombustible.
   1. K (Ksi) Value: 0.25 at 75 degrees F (0.036 at 24 degrees C), when tested in accordance with ASTM C177 or ASTM C518.
   2. Maximum Service Temperature: 1,200 degrees F (649 degrees C).
   3. Maximum Water Vapor Absorption: 5.0 percent by weight.
   4. Maximum Density: 8.0 pcf (128 kg/cu m).

C. Aluminum-Foil Laminate Jacket:
   1. Factory-applied, pressure sensitive adhesive jacketing to comply with ASTM C1775.

D. Vapor Barrier Jacket:
   1. Kraft paper reinforced with glass fiber yarn and bonded to aluminized film.
   2. Moisture Vapor Permeability: 0.02 perm inch (0.029 ng/(Pa s m)), when tested in accordance with ASTM E96/E96M.
   3. Secure with self-sealing longitudinal laps and butt strips.

E. Facing: 1 inch (25 mm) galvanized steel hexagonal wire mesh stitched on one face of insulation.

F. Vapor Barrier Lap Adhesive: Compatible with insulation.

G. Insulating Cement/Mastic: ASTM C195; hydraulic setting on mineral wool.

2.05 CELLULAR GLASS

A. Pipe and Tubing Insulation: ASTM C552, Type II, Grade 6.
   1. K (Ksi) Value: 0.35 (0.050) at 100 degrees F (38 degrees C).
   2. Service Temperature Range: From 250 degrees F (121 degrees C) to 800 degrees F (427 degrees C).
   3. Water Vapor Permeability: 0.005 perm inch (0.007 ng/(Pa s m)) maximum per inch.
   4. Water Absorption: 0.5 percent by volume, maximum.
   5. Density: At least 6.12 pcf (98 kg/cu m), minimum.

B. Block Insulation: ASTM C552, Type I, Grade 6.
   1. K (Ksi) Value: 0.35 at 100 degrees F (0.050 at 38 degrees C).
   2. Service Temperature: 800 degrees F (427 degrees C), maximum.
   3. Water Vapor Permeability: 0.005 perm inch (0.007 ng/(Pa s m)) maximum per inch.
   4. Water Absorption: 0.5 percent by volume, maximum.
   5. Density: 6.12 pcf (98 kg/cu m), minimum.

2.06 FLEXIBLE ELASTOMERIC CELLULAR INSULATION

A. Manufacturer:
   1. Aeroflex USA; AEROFLEX EPDM Sheet/Roll: www.aeroflexusa.com/#sle.

B. Insulation: Preformed flexible elastomeric cellular rubber insulation complying with ASTM C534/C534M Grade 1, in sheet form.
   1. Minimum Service Temperature: Minus 40 degrees F (Minus 40 degrees C).
   2. Maximum Service Temperature: 220 degrees F (104 degrees C).
   3. Connection: Waterproof vapor barrier adhesive.

C. Elastomeric Foam Adhesive: Air dried, contact adhesive, compatible with insulation.

2.07 WEATHER BARRIER COATINGS

A. Weather-Resistive Barrier Coating: Fire-resistive, UV resistant, water-based mastic for use over closed cell polyethylene and polyurethane foam insulation; applied with glass fiber or synthetic reinforcing mesh.
   1. Surface Burning Characteristics: Flame spread index of 25 or less, smoke developed index of 450 or less, Class A, when tested in accordance with ASTM E84.
   2. Water Vapor Permeance: Greater than 1.0 perm (57 ng/(Pa s m)) in accordance with ASTM E96/E96M.
   3. Resistance to Fungal Growth: No growth when tested in accordance with ASTM D5590.
   4. Color: As selected by Architect.

2.08 JACKETING AND ACCESSORIES

A. PVC Plastic:
   1. Jacket: Sheet material, off-white color.
      a. Minimum Service Temperature: Minus 40 degrees F (Minus 40 degrees C).
      b. Maximum Service Temperature: 150 degrees F (66 degrees C).
      c. Moisture Vapor Permeability: 0.02 perm inch (0.029 ng/(Pa s m)), when tested in accordance with ASTM E96/E96M.
      d. Thickness: 10 mil, 0.010 inch (0.25 mm).
      e. Connections: Brush on welding adhesive.
   2. Covering Adhesive Mastic: Compatible with insulation.

B. Aluminum Jacket:
   1. Comply with ASTM B209/B209M, Temper H14, minimum thickness of 0.016 inch (0.41 mm) with factory-applied polyethylene and kraft paper moisture barrier on the inside surface.
   2. Thickness: 0.016 inch (0.40 mm) sheet.
   3. Finish: Smooth.
   4. Joining: Longitudinal slip joints and 2 inch (50 mm) laps.
   5. Fittings: 0.016 inch (0.40 mm) thick die-shaped fitting covers with factory-attached protective liner.
   6. Metal Jacket Bands: 3/8 inch (10 mm) wide; 0.015 inch (0.38 mm) thick aluminum.

C. Aluminum-Foil Laminate Jacket:
   1. Factory-applied, pressure sensitive adhesive jacketing on paper release liner.
   2. Finish: Aluminum smooth.
   3. Comply with ASTM C1775.

D. Aluminum-Foil Laminate Jacket:
   1. Factory-applied, pressure sensitive adhesive jacketing to comply with ASTM C1775.

E. Reinforced Tape:

1. FSK tape suitable for sealing seams in insulation, insulated pipe bends, and fittings resulting in a tight, smooth surface without wrinkles.
2. Comply with UL 723 or ASTM E84.
3. Moisture Vapor Permeability: 0.00 perm inch (0.00 ng/(Pa s m)), when tested in accordance with ASTM E96/E96M.
4. Finish: Match insulation.

F. Plain Foil Tape:
1. Aluminum foil with pressure-sensitive adhesive on paper release liner.
2. Finish: Plain foil.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that equipment has been tested before applying insulation materials.

B. Verify that surfaces are clean and dry, with foreign material removed.

3.02 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Factory Insulated Equipment: Do not insulate.

C. Exposed Equipment: Locate insulation and cover seams in least visible locations.

D. Apply insulation close to equipment by grooving, scoring, and beveling insulation. Fasten insulation to equipment with studs, pins, clips, adhesive, wires, or bands.

E. Fill joints, cracks, seams, and depressions with bedding compound to form smooth surface. On cold equipment, use vapor barrier cement.

F. Insulated equipment containing fluids below ambient temperature; insulate entire system.

G. Fiber glass insulated equipment containing fluids below ambient temperature; provide vapor barrier jackets, factory-applied or field-applied. Finish with glass cloth and vapor barrier adhesive.

H. For hot equipment containing fluids 140 degrees F (60 degrees C) or less, do not insulate flanges and unions, but bevel and seal ends of insulation.

I. For hot equipment containing fluids over 140 degrees F (60 degrees C), insulate flanges and unions with removable sections and jackets.

J. Fiber glass insulated equipment containing fluids above ambient temperature; provide standard jackets, with or without vapor barrier, factory-applied or field-applied. Finish with glass cloth and adhesive.

K. Inserts and Shields:
1. Application: Equipment 1-1/2 inches (40 mm) diameter or larger.
2. Shields: Galvanized steel between hangers and inserts.
3. Insert Location: Between support shield and equipment and under the finish jacket.
4. Insert Configuration: Minimum 6 inches (150 mm) long, of same thickness and contour as adjoining insulation; may be factory fabricated.
5. Insert Material: Hydrous calcium silicate insulation or other heavy density insulating material suitable for the planned temperature range.

L. Finish insulation at supports, protrusions, and interruptions.

M. Equipment in Mechanical Equipment Rooms or Finished Spaces: Finish with canvas jacket sized for finish painting.

N. Exterior Applications:
   1. Provide vapor barrier jacket or finish with glass mesh reinforced vapor barrier cement.
   2. Cover with aluminum.

O. Cover glass fiber insulation with metal mesh and finish with heavy coat of insulating cement.

P. Nameplates and ASME Stamps: Bevel and seal insulation around; do not insulate over.

Q. Equipment Requiring Access for Maintenance, Repair, or Cleaning: Install insulation so it can be easily removed and replaced without damage.

3.03 SCHEDULE

A. HVAC EQUIPMENT INSULATION SCHEDULE
   1. HVAC EQUIPMENT INSULATION SCHEDULE

HVAC EQUIPMENT	Insulation Types (1)	Density (lbs./cu ft.)	Insulation Thickness	Vapor Barrier Requirements (2)	Jacket Types (3)
AIR SEPERATOR, EXPANSION TANK, BUFFER TANK (100°F-140°F)	GF	3.5	1-1/2 INCH	YES	AP
AIR SEPERATOR, EXPANSION TANK, BUFFER TANK (ABOVE 140°F)	GF	3.5	2 INCH	YES	AP
HEATING WATER PUMPS	GF	3.5	2 INCH	YES	GC
HEAT EXCHANGER	GF	3.5	2 INCH	YES	GC
BOILER FEED WATERTANK, CONDENSATE TANK, DEAERATOR TANK (200°F-250°F OR 15 PSIG AND LESS)	GF	3.5	3 INCH	YES	GC
BOILER FEED WATERTANK, CONDENSATE TANK, DEAERATOR TANK (250°F-350°F OR 16 PSIG -125 PSIG)	GF	3.5	4-1/2 INCH	YES	GC
BOILER FEED WATERTANK, CONDENSATE TANK, DEAERATOR TANK (ABOVE 350°F OR ABOVE 125 PSIG)	GF	3.5	5 INCH	YES	GC
AIR SEPERATOR, EXPANSION TANK, BUFFER TANK (40°F-60°F)	GF	3.5	1-1/2 INCH	YES	AP

HVAC EQUIPMENT	Insulation Types (1)	Density (lbs./cu ft.)	Insulation Thickness	Vapor Barrier Requirements (2)	Jacket Types (3)
CHILLED WATER PUMPS	GF	3.5	1 INCH	YES	GC
CHILLER	GF	3.5	2 INCH	YES	GC

(1) Key to Insulation Materials:
GF = Glass or Mineral Fiber
CG = Cellular Glass
FE = Flexible Elastomeric Foam
PF = Closed Cell Phenolic Foam
CS = Calcium Silicate
HTGF = High Temperature Glass Fiber

(2) Key to Vapor Barrier Requirements:
Yes = Required
None = Not Required
SJ = Continuous sealed joints required

(3) Key to Jacket Requirements:
AP = All purpose foil, scrim, kraft paper jacket (white)
FSK = Foil, scrim, kraft paper jacket with foil finish
PVC = PVC Jacket
AL = Aluminum Jacket
SS = Stainless Steel Jacket
GC = Canvas or glass cloth

SECTION 23 82 39
ELECTRIC HEATERS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Cabinet unit heaters with centrifugal fans
   2. Electric-resistance heating coils.
   3. Radiant ceiling panel heaters.

1.02 ACTION SUBMITTALS

A. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories for each product indicated.

B. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   1. Plans, elevations, sections, and details.
   2. Location and size of each field connection.
   3. Equipment schedules to include rated capacities, furnished specialties, and accessories.

1.03 INFORMATIONAL SUBMITTALS

A. Field quality-control test reports.

1.04 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.05 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

B. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

C. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

PART 2 PRODUCTS

2.01 CABINET UNIT HEATERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

C. Subject to compliance with requirements, provide the product indicated on Drawings. Berko Electric Heating; FRC Series or a comparable product by one of the following:
   1. Berko Electric Heating; a division of Marley Engineered Products.
   2. Markel Products; a division of TPI Corporation.
   3. Marley Electric Heating; a division of Marley Engineered Products.
   4. QMark Electric Heating; a division of Marley Engineered Products.

D. Description: A factory-assembled and -tested unit complying with ARI 440.
   1. Comply with UL 2021.

E. Coil Section Insulation: Glass-fiber insulation; surfaces exposed to airstream shall be aluminum-foil facing to prevent erosion of glass fibers.
   1. Fire-Hazard Classification: Maximum flame-spread index of 25 and smoke-developed index of 50 when tested according to ASTM E 84.
   2. Adhesive: Comply with ASTM C 916 and with NFPA 90A or NFPA 90B.
   3. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

F. Cabinet: Steel with baked-enamel finish with manufacturer's standard paint, in color selected by Architect..

G. Electric-Resistance Heating Coil: Nickel-chromium heating wire, free from expansion noise and hum, mounted in ceramic inserts in a galvanized-steel housing; with fuses in terminal box for overcurrent protection and limit controls for high-temperature protection. Terminate elements in stainless-steel machine-staked terminals secured with stainless-steel hardware.

H. Fan and Motor Board: Removable.
   1. Fan: Forward curved, double width, centrifugal; directly connected to motor. Thermoplastic or painted-steel wheels, and aluminum, painted-steel, or galvanized-steel fan scrolls.
   2. Motor: Permanently lubricated, multispeed; resiliently mounted on motor board. Comply with requirements in Section 23 05 13 "Common Motor Requirements for HVAC."
   3. Wiring Terminations: Connect motor to chassis wiring with plug connection.

I. Basic Unit Controls:
   1. Control voltage transformer.
   2. Unit-mounted thermostat with the following features.
      a. Heat-off switch.
      b. Fan on-auto switch.
      c. Manual fan speed switch.
   3. Unit-mounted temperature sensor.
   4. Summer Fan Switch

J. Electrical Connection: Factory wire motors and controls for a single field connection.

2.02 TOE-SPACE UNIT HEATERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

C. Subject to compliance with requirements, provide the product indicated on Drawings. Berko Electric Heating; FRC Series or a comparable product by one of the following:
   1. Broan-NuTone, LLC.
   2. Berko Electric Heating; a division of Marley Engineered Products.
   3. Markel Products; a division of TPI Corporation.
   4. Marley Electric Heating; a division of Marley Engineered Products.
   5. QMark Electric Heating; a division of Marley Engineered Products.

D. Description: A factory-assembled and -tested unit complying with ARI 440.
   1. Comply with UL 2021.

E. Coil Section Insulation: Glass-fiber insulation; surfaces exposed to airstream shall be aluminum-foil facing to prevent erosion of glass fibers.

1. Fire-Hazard Classification: Maximum flame-spread index of 25 and smoke-developed index of 50 when tested according to ASTM E 84.
2. Adhesive: Comply with ASTM C 916 and with NFPA 90A or NFPA 90B.
3. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

F. Cabinet: Steel with baked-enamel finish with manufacturer's standard paint, in color selected by Architect..

G. Electric-Resistance Heating Coil: The heating element shall be of non-glowing design consisting of 80% nickel, 20% chromium resistance wire enclosed in a steel sheath to which steel plate fins are brazed. The element shall cover the entire air discharge area to ensure uniform heating of all discharge air. The wattage output of the unit shall be adjustable by removing a jumper wire.

H. Fan and Motor Board: Removable.
1. Fan: Forward curved, double width, centrifugal; directly connected to motor. Thermoplastic or painted-steel wheels, and aluminum, painted-steel, or galvanized-steel fan scrolls.
2. Motor: Permanently lubricated, multispeed; resiliently mounted on motor board. Comply with requirements in Section 23 05 13 "Common Motor Requirements for HVAC."
3. Wiring Terminations: Connect motor to chassis wiring with plug connection.

I. The fan motor shall be impedance protected and permanently lubricated. An optional single pole thermostat accessory shall be specified when the unit will not utilize a single pole wall thermostat. Note: Three conductor wire is required when a two pole thermostat is used. The over temperature protector shall be bi-metallic, snap-action type designed to shut off heater in the event of overheating. A pilot light shall be provided that will illuminate if the over temperature protector operates.

J. A thermal fuse shall provide secondary thermal cut-out for added safety.

K. Basic Unit Controls:
1. Control voltage transformer.
2. Unit-mounted thermostat with the following features.
   a. Heat-off switch.
   b. Fan on-auto switch.
   c. Manual fan speed switch.
3. Unit-mounted temperature sensor.

L. Electrical Connection: Factory wire motors and controls for a single field connection.

2.03 COILS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Greenheck
2. Chromalox, Inc.
3. INDEECO.

B. Testing Agency Listing and Labeling: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. Coil Assembly: Comply with UL 1995.

D. Heating Elements: Coiled resistance wire of 80 percent nickel and 20 percent chromium; surrounded by compacted magnesium-oxide powder in tubular-steel sheath; with spiral-wound, copper-plated, steel fins continuously brazed to sheath.

E. High-Temperature Coil Protection: Disk-type, automatically reset, thermal-cutout, safety device; serviceable through terminal box without removing heater from duct or casing.
   1. Secondary Protection: Load-carrying, manually reset or manually replaceable, thermal cutouts; factory wired in series with each heater stage.

F. Frames: Galvanized-steel channel frame, minimum 0.052-inch-thick for slip-in mounting.

G. Control Panel: Unit mounted with disconnecting means and overcurrent protection. Include the following controls:
   1. Magnetic contactor.
   2. Mercury contactor.
   3. Toggle switches; one per step.
   4. Step controller.
   5. Time-delay relay.
   6. Pilot lights; one per step.
   7. Airflow proving switch.

H. See DI series sheets for thermostat.

2.04 RADIANT CEILING PANEL HEATERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. QMARK

C. Description: A factory-assembled and -tested unit complying with ARI 440.
   1. Comply with UL 2021.

D. Coil Section Insulation: 25-mm (1” thick), 1 lb. high-temperature glass-fiber insulation separated from the inside panel by a dielectric insulation.
   1. Fire-Hazard Classification: Maximum flame-spread index of 25 and smoke-developed index of 50 when tested according to ASTM E 84.
   2. Adhesive: Comply with ASTM C 916 and with NFPA 90A or NFPA 90B.

E. Panel:
   1. Metal heating panel of 22 gauge galvanized steel front 24 gauge galvanized steel back. Sides overlap front and back panels riveted together.
   2. Mounting kit furnished with unit, field installed. Reference schedule for surface or recess mounting.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install unit heaters to comply with NFPA 90A.

B. Retain paragraph below if controls are provided by unit heater manufacturer. To comply with requirements of the Americans with Disabilities Act, verify mounting height with authorities having jurisdiction.

C. Install new filters in each fan-coil unit within two weeks of Substantial Completion.

D. Install piping adjacent to machine to allow service and maintenance.

E. Connect piping to cabinet unit heater's factory, hot-water piping package. Install the piping package if shipped loose.

F. Connect supply and return ducts to cabinet unit heaters with flexible duct connectors specified in Section 23 33 00 "Duct Accessories."

G. Comply with safety requirements in UL 1995.

H. Ground equipment according to Division 26 Section "Grounding and Bonding."

I. Connect wiring according to Division 26 Section "Conductors and Cables."

3.02 FIELD QUALITY CONTROL

A. Perform the following field tests and inspections and prepare test reports:
   1. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
   2. Operate electric heating elements through each stage to verify proper operation and electrical connections.
   3. Test and adjust controls and safety devices. Replace damaged and malfunctioning controls and equipment.

B. Remove and replace malfunctioning units and retest as specified above

END OF SECTION

This page intentionally left blank

SECTION 23 07 19
HVAC PIPING INSULATION

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Piping insulation.

B. Flexible removable and reusable blanket insulation.

C. Weather barrier coatings.

D. Jacketing and accessories.

E. Engineered wall outlet seals and refrigerant piping insulation protection.

1.02 RELATED REQUIREMENTS

A. Section 23 21 13 - Hydronic Piping: Placement of hangers and hanger inserts.

B. Section 23 22 13 - Steam and Condensate Heating Piping: Placement of hangers and hanger inserts.

1.03 REFERENCE STANDARDS

A. ASTM B117 - Standard Practice for Operating Salt Spray (Fog) Apparatus; 2019.

B. ASTM B209/B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate; 2021a.

C. ASTM C177 - Standard Test Method for Steady-State Heat Flux Measurements and Thermal Transmission Properties by Means of the Guarded-Hot-Plate Apparatus; 2019, with Editorial Revision (2023).

D. ASTM C195 - Standard Specification for Mineral Fiber Thermal Insulating Cement; 2007 (Reapproved 2019).

E. ASTM C449 - Standard Specification for Mineral Fiber Hydraulic-Setting Thermal Insulating and Finishing Cement; 2007 (Reapproved 2024).

F. ASTM C518 - Standard Test Method for Steady-State Thermal Transmission Properties by Means of the Heat Flow Meter Apparatus; 2021.

G. ASTM C534/C534M - Standard Specification for Preformed Flexible Elastomeric Cellular Thermal Insulation in Sheet and Tubular Form; 2025.

H. ASTM C547 - Standard Specification for Mineral Fiber Pipe Insulation; 2022a.

I. ASTM C552 - Standard Specification for Cellular Glass Thermal Insulation; 2022.

J. ASTM C553 - Standard Specification for Mineral Fiber Blanket Thermal Insulation for Commercial and Industrial Applications; 2024.

K. ASTM C795 - Standard Specification for Thermal Insulation for Use in Contact with Austenitic Stainless Steel; 2008 (Reapproved 2023).

L. ASTM C1136 - Standard Specification for Flexible, Low Permeance Vapor Retarders for Thermal Insulation; 2023.

M. ASTM C1775 - Standard Specification for Laminate Protective Jacket and Tape for Use Over Thermal Insulation for Outdoor Applications; 2022.

N. ASTM D412 - Standard Test Methods for Vulcanized Rubber and Thermoplastic Elastomers--Tension; 2016 (Reapproved 2021).

O. ASTM D570 - Standard Test Method for Water Absorption of Plastics; 2022.

P. ASTM D610 - Standard Practice for Evaluating Degree of Rusting on Painted Steel Surfaces; 2008 (Reapproved 2019).

Q. ASTM D5590 - Standard Test Method for Determining the Resistance of Paint Films and Related Coatings to Fungal Defacement by Accelerated Four-Week Agar Plate Assay; 2017 (Reapproved 2021).

R. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2024.

S. ASTM E96/E96M - Standard Test Methods for Gravimetric Determination of Water Vapor Transmission Rate of Materials; 2024a.

T. ASTM E283/E283M - Standard Test Method for Determining Rate of Air Leakage Through Exterior Windows, Skylights, Curtain Walls, and Doors Under Specified Pressure Differences Across the Specimen; 2019.

U. ASTM E331 - Standard Test Method for Water Penetration of Exterior Windows, Skylights, Doors, and Curtain Walls by Uniform Static Air Pressure Difference; 2000 (Reapproved 2023).

V. ASTM E2178 - Standard Test Method for Determining Air Leakage Rate and Calculation of Air Permeance of Building Materials; 2021a.

W. ASTM G21 - Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi; 2015, with Editorial Revision (2021).

X. ASTM G153 - Standard Practice for Operating Enclosed Carbon Arc Light Apparatus for Exposure of Nonmetallic Materials; 2013 (Reapproved 2021).

Y. UL 723 - Standard for Test for Surface Burning Characteristics of Building Materials; Current Edition, Including All Revisions.

1.04 SUBMITTALS

A. Product Data: Provide product description, thermal characteristics, list of materials and thickness for each service, and locations.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the Products specified in this section with not less than three years of documented experience.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Accept materials on site, labeled with manufacturer's identification, product density, and thickness.

1.07 FIELD CONDITIONS

A. Maintain ambient conditions required by manufacturers of each product.

B. Maintain temperature before, during, and after installation for minimum of 24 hours.

PART 2 PRODUCTS

2.01 REGULATORY REQUIREMENTS

A. Surface Burning Characteristics: Flame spread index/Smoke developed index of 25/50, maximum, when tested in accordance with ASTM E84 or UL 723.

2.02 GLASS FIBER, FLEXIBLE

A. Insulation: ASTM C553; flexible, noncombustible blanket.
   1. K (Ksi) Value: 0.36 at 75 degrees F (0.052 at 24 degrees C), when tested in accordance with ASTM C518.
   2. Maximum Service Temperature: 1,200 degrees F (649 degrees C).

3. Maximum Water Vapor Absorption: 5.0 percent by weight.

B. Aluminum-Foil Laminate Jacket:
1. Factory-applied, pressure sensitive adhesive jacketing to comply with ASTM C1775.

C. Vapor Barrier Jacket:
1. Kraft paper with glass fiber yarn and bonded to aluminized film.
2. Moisture Vapor Permeability: 0.02 perm inch (0.029 ng/(Pa s m)), when tested in accordance with ASTM E96/E96M.
3. Secure with pressure-sensitive tape.

D. Vapor Barrier Tape:
1. Kraft paper reinforced with glass fiber yarn and bonded to aluminized film with pressure-sensitive rubber-based adhesive.

E. Outdoor Vapor Barrier Mastic:
1. Vinyl emulsion type acrylic or mastic, compatible with insulation, black color.

F. Tie Wire: Annealed steel, 16 gauge, 0.0508 inch diameter (1.29 mm diameter).

2.03 GLASS FIBER, RIGID

A. Insulation: ASTM C547 and ASTM C795; rigid molded, noncombustible.
1. K (Ksi) Value: ASTM C177, 0.24 at 75 degrees F (0.035 at 24 degrees C).
2. Maximum Service Temperature: 850 degrees F (454 degrees C).
3. Maximum Moisture Absorption: 0.2 percent by volume.

B. Insulation: ASTM C547 and ASTM C795; rigid molded, noncombustible, with wicking material to transport condensed water to the outside of the system for evaporation to the atmosphere.
1. K (Ksi) Value: ASTM C177, 0.23 at 75 degrees F (0.034 at 24 degrees C).
2. Maximum Service Temperature: 220 degrees F (104 degrees C).
3. Maximum Moisture Absorption: 0.2 percent by volume.

C. Insulation: ASTM C547 and ASTM C795; semi-rigid, noncombustible, end grain adhered to jacket.
1. K (Ksi) Value: ASTM C177, 0.24 at 75 degrees F (0.035 at 24 degrees C).
2. Maximum Service Temperature: 650 degrees F (343 degrees C).
3. Maximum Moisture Absorption: 0.2 percent by volume.

D. Vapor Barrier Jacket: White kraft paper with glass fiber yarn, bonded to aluminized film; moisture vapor transmission when tested in accordance with ASTM E96/E96M of 0.02 perm-inches (0.029 ng/(Pa s m)).

E. Tie Wire: 0.048 inch (1.22 mm) stainless steel with twisted ends on maximum 12 inch (300 mm) centers.

F. Vapor Barrier Lap Adhesive: Compatible with insulation.

G. Insulating Cement/Mastic: ASTM C195; hydraulic setting on mineral wool.

H. Fibrous Glass Fabric:
1. Cloth: Untreated; 9 oz/sq yd (305 g/sq m) weight.
2. Blanket: 1.0 pcf (16 kg/cu m) density.
3. Weave: 5 by 5.

I. Indoor Vapor Barrier Finish:
1. Cloth: Untreated; 9 oz/sq yd (305 g/sq m) weight.
2. Vinyl emulsion type acrylic, compatible with insulation, black color.

J. Outdoor Vapor Barrier Mastic: Vinyl emulsion type acrylic or mastic, compatible with insulation, black color.

K. Insulating Cement: ASTM C449.

2.04 FLEXIBLE REMOVABLE AND REUSABLE BLANKET INSULATION

A. Description: Custom cut and fabricated, removable and reusable blanket insulation system, consisting of inner liner, insulation layer, outer protective jacket, and fastening system.

B. Provide insulation system based on surface temperature of piping, installed location of piping, and maximum safe-to-touch temperature of jacketing.

C. Performance Criteria:
1. Safe-to-Touch Temperature of Jacketing: 140 degrees F (60 degrees C).

2.05 CELLULAR GLASS

A. Pipe and Tubing Insulation: ASTM C552, Type II, Grade 6.
1. K (Ksi) Value: 0.35 (0.050) at 100 degrees F (38 degrees C).
2. Service Temperature Range: From 250 degrees F (121 degrees C) to 800 degrees F (427 degrees C).
3. Water Vapor Permeability: 0.005 perm inch (0.007 ng/(Pa s m)) maximum per inch.
4. Water Absorption: 0.5 percent by volume, maximum.
5. Density: A minimum of 6.12 pcf (98 kg/cu m).

B. Block Insulation: ASTM C552, Type I, Grade 6.
1. K (Ksi) Value: 0.35 (0.050) at 100 degrees F (38 degrees C).
2. Service Temperature: 800 degrees F (427 degrees C), maximum.
3. Water Vapor Permeability: 0.005 perm inch (0.007 ng/(Pa s m)) maximum per inch.
4. Water Absorption: 0.5 percent by volume, maximum.

2.06 FLEXIBLE ELASTOMERIC CELLULAR INSULATION

A. Insulation: Preformed flexible elastomeric cellular rubber insulation complying with ASTM C534/C534M Grade 1; use molded tubular material wherever possible.
1. Minimum Service Temperature: Minus 40 degrees F (Minus 40 degrees C).
2. Maximum Service Temperature: 180 degrees F (82 degrees C).
3. Connection: Waterproof vapor barrier adhesive.

B. Elastomeric Foam Adhesive: Air dried, contact adhesive, compatible with insulation.

C. Weather Barrier Coating: Air dried, contact adhesive, compatible with insulation and ASTM E84 compliant.

2.07 WEATHER BARRIER COATINGS

A. Weather-Resistive Barrier Coating: Fire-resistive, UV resistant, water-based mastic for use over closed cell polyethylene and polyurethane foam insulation; applied with glass fiber or synthetic reinforcing mesh.
1. Surface Burning Characteristics: Flame spread index of 25 or less, smoke developed index of 450 or less, Class A, when tested in accordance with ASTM E84.
2. Water Vapor Permeance: Greater than 1.0 perm (57 ng/(Pa s m)) in accordance with ASTM E96/E96M.
3. Resistance to Fungal Growth: No growth when tested in accordance with ASTM D5590.
4. Color: As selected by Architect.

2.08 JACKETING AND ACCESSORIES

A. PVC Plastic.

1. Jacket: One piece molded type fitting covers and sheet material, off-white color.
   a. Minimum Service Temperature: 0 degrees F (minus 18 degrees C).
   b. Maximum Service Temperature: 150 degrees F (66 degrees C).
   c. Moisture Vapor Permeability: 0.002 perm inch (0.0029 ng/(Pa s m)), maximum, when tested in accordance with ASTM E96/E96M.
   d. Thickness: 10 mil, 0.010 inch (0.25 mm).
   e. Connections: Brush on welding adhesive.
2. Covering Adhesive Mastic: Compatible with insulation.

B. Aluminum Jacket:
1. Comply with ASTM B209/B209M, Temper H14, minimum thickness of 0.016 inch (0.41 mm) with factory-applied polyethylene and kraft paper moisture barrier on the inside surface.
2. Thickness: 0.016 inch (0.40 mm) sheet.
3. Type: Factory-applied, self-adhesive jacketing.
4. Finish: Smooth.
5. Joining: Longitudinal slip joints and 2 inch (50 mm) laps.
6. Fittings: 0.016 inch (0.40 mm) thick die-shaped fitting covers with factory-attached protective liner.
7. Metal Jacket Bands: 3/8 inch (10 mm) wide; 0.015 inch (0.38 mm) thick aluminum.

C. Aluminum-Foil Laminate Jacket:
1. Manufacturers:
2. Factory-applied, pressure sensitive adhesive jacketing on paper release liner.
3. Finish: Aluminum smooth.
4. Comply with ASTM C1775.

D. Aluminum-Foil Laminate Jacket:
1. Factory-applied, pressure sensitive adhesive jacketing to comply with ASTM C1775.

2.09 ENGINEERED WALL OUTLET SEALS AND REFRIGERANT PIPING INSULATION PROTECTION

A. Basis of Design: Airex Manufacturing, Inc; www.airexmfg.com/#sle.
1. Pipe Penetration Wall Seal: Airex Titan Outlet.
2. Refrigeration Pipe Insulation Protection System: Airex E-Flex Guard.
3. Pipe Penetration Wall Seal and Insulation Protection System: Airex Pro-System Kit.

B. Pipe Penetration Wall Seal: Seals HVAC piping wall penetrations with compression gasket wall mounted rigid plastic outlet cover.
1. Wall Outlet Size, Stucco and Masonry Applications: 7-1/2 inch wide by 10 inch high (190.5 mm wide by 254 mm high).
   a. Elastomeric Sleeve Diameter: 1-11/16 inch (43 mm).
2. Wall Outlet Size, Siding and Compact Applications: 6-7/8 inch wide by 3-7/8 inch high (175 mm wide by 99 mm high).
   a. Elastomeric Sleeve Diameter: 1-11/16 inch (43 mm).
3. Outlet Cover Color: Gray.
4. Water Penetration: Comply with ASTM E331.
5. Air Leakage: Comply with ASTM E283/E283M.
6. Air Permeance: Comply with ASTM E2178.

C. Insulation Protection System: Refrigerant piping insulation PVC protective cover.
1. PVC Insulation Cover Color: Black with full-length velcro fastener.
2. Weatherization and Ultraviolet Exposure Protection: Comply with ASTM G153.

3. Water/Vapor Permeability: Comply with ASTM E96/E96M.
4. Anti-Fungal and Anti-Microbial Resistance: Comply with ASTM G21.
5. Flame Spread and Smoke Development Rating of 24/450: Comply with ASTM E84 or UL 723.
6. Carbon Arc Light Exposure: Comply with ASTM G153.
7. Tensile Strength After UV Exposure and Water Immersion: Comply with ASTM D412.
8. Water Absorption of Plastics: Comply with ASTM D570.
9. Adhesive free.

2.10 ACCESSORIES

A. General Requirements:
   1. Provide required accessories in accordance with and subject to the recommendations of the insulation manufacturer.
   2. Furnish compatible materials which do not contribute to corrosion, soften, or otherwise attack surfaces to which applied, in either the wet or dry state.
   3. Comply with ASTM C795 requirements for materials to be used on stainless steel surfaces.
   4. Supply materials that are asbestos free.

B. Corrosion Inhibitors:
   1. Corrosion Control Gel:
      a. Corrosion Protection: Comply with ASTM B117 and ASTM D610.

PART 3 EXECUTION

3.01 EXAMINATION

A. Test piping for design pressure, liquid tightness, and continuity prior to applying insulation materials.

B. Verify that surfaces are clean and dry, with foreign material removed.

3.02 INSTALLATION

A. **PVC or ABS Jacketing shall not be installed installed in return air plenums.**

B. Install in accordance with manufacturer's instructions.

C. Install in accordance with NAIMA National Insulation Standards.

D. Exposed Piping: Locate insulation and cover seams in least visible locations.

E. Insulated Pipes Conveying Fluids Below Ambient Temperature:
   1. Insulate entire system, including fittings, valves, unions, flanges, strainers, flexible connections, pump bodies, and expansion joints.

F. Glass Fiber Insulated Pipes Conveying Fluids Below Ambient Temperature:
   1. Provide vapor barrier jackets, factory-applied or field-applied; secure with self-sealing longitudinal laps and butt strips with pressure-sensitive adhesive. Secure with outward clinch expanding staples and vapor barrier mastic.
   2. Insulate fittings, joints, and valves with molded insulation of like material and thickness as adjacent pipe. Finish with glass cloth and vapor barrier adhesive or PVC fitting covers.

G. For hot piping conveying fluids 140 degrees F (60 degrees C) or less, do not insulate flanges and unions at equipment, but bevel and seal ends of insulation.

H. For hot piping conveying fluids over 140 degrees F (60 degrees C), insulate flanges and unions at equipment.

I. Glass Fiber Insulated Pipes Conveying Fluids Above Ambient Temperature:

1. Provide standard jackets, with or without vapor barrier, factory-applied, or field-applied. Secure with self-sealing longitudinal laps and butt strips with pressure-sensitive adhesive. Secure with outward clinch expanding staples.
2. Insulate fittings, joints, and valves with insulation of like material and thickness as adjoining pipe. Finish with glass cloth and adhesive or PVC fitting covers.

J. Inserts and Shields:
1. Application: Piping 1-1/2 inches (40 mm) diameter or larger.
2. Shields: Galvanized steel between pipe hangers or pipe hanger rolls and inserts.
3. Insert location: Between support shield and piping and under the finish jacket.
4. Insert Configuration: Minimum 6 inches (150 mm) long, of same thickness and contour as adjoining insulation; may be factory fabricated.
5. Insert Material: Hydrous calcium silicate insulation or other heavy density insulating material suitable for the planned temperature range.

K. Continue insulation through walls, sleeves, pipe hangers, and other pipe penetrations. Finish at supports, protrusions, and interruptions.

L. Pipe Exposed in Mechanical Equipment Rooms or Finished Spaces (less than 10 feet (3 meters) above finished floor): Finish with canvas jacket sized for finish painting.

M. Exterior Applications: Provide vapor barrier jacket. Insulate fittings, joints, and valves with insulation of like material and thickness as adjoining pipe, and finish with glass mesh reinforced vapor barrier cement. Cover with aluminum jacket with seams located on bottom side of horizontal piping. Provide two coats of UV-resistant finish for flexible elastomeric cellular insulation without jacketing.

N. Buried Piping: Provide factory-fabricated assembly with inner all-purpose service jacket with self-sealing lap, and asphalt impregnated open mesh glass fabric, with 1 mil, 0.001 inch (0.025 mm) thick aluminum foil sandwiched between three layers of bituminous compound; outer surface faced with polyester film.

O. Heat Traced Piping: Insulate fittings, joints, and valves with insulation of like material, thickness, and finish as adjoining pipe. Size large enough to enclose pipe and heat tracer. Cover with aluminum jacket with seams located on bottom side of horizontal piping.

3.03 HYDRONIC PIPING INSULATION

A. Piping Insulation Schedule

Hydronic Piping Systems	Insulation Types (1)	Density (lbs./cu ft.)	Insulation Thickness	Vapor Barrier Requirements (2)	Jacket Types (3)
HEATING WATER PIPING, UP TO 1-1/4” (100°F-140°F)	GF	3.5	1 INCH	YES	AP
HEATING WATER PIPING 1-1/2”AND LARGER (100°F-140°F)	GF	3.5	1-1/2 INCH	YES	AP
HEATING WATER PIPING, UP TO 1-1/4” (140°F-200°F)	GF	3.5	1-1/2 INCH	YES	AP
HEATING WATER PIPING 1-1/2”AND LARGER (140°F-200°F)	GF	3.5	2INCH	YES	AP

Hydronic Piping Systems	Insulation Types (1)	Density (lbs./cu ft.)	Insulation Thickness	Vapor Barrier Requirements (2)	Jacket Types (3)
STEAM AND CONDENSATE PIPING UPTO 3" (200°F-250°F OR 15 PSIG AND LESS)	GF	3.5	2-1/2 INCH	YES	AP
CORE LOOP AND CONDENSOR PIPING (60°F-100°F)	NONE	NONE	NONE	NONE	NONE
CHILLED WATER, GEOTHERMAL SUPPLY WATER, DARCY SUPPLY WATER PIPING UP TO 1-1/4” (40°F-60°F)	GF	3.5	1/2 INCH	YES	AP
CHILLED WATER, GEOTHERMAL SUPPLY WATER, DARCY SUPPLY WATER PIPING 1-1/2”AND LARGER (40°F-60°F)	GF	3.5	1INCH	YES	AP
CHILLED WATER, GEOTHERMAL RETURN WATER, DARCY RETURN WATER PIPING UP TO 6” (BELOW 40°F)	GF	3.5	1 INCH	YES	AP
CHILLED WATER, GEOTHERMAL RETURN WATER, DARCY RETURN WATER PIPING 8” AND LARGER (BELOW 40°F)	GF	3.5	1.5 INCH	YES	AP
COOLING CONDENSATE PIPING	GF	3.5	1/2 INCH	TES	AP
AIR SEPERATOR AND EXPANSION TANK	GF	3.5	2 INCH	Yes	AP
REFRIGERANT SUCTION PIPING	FE	-	1 INCH	NO	AL (EXTERIOR ONLY)
REFRIGERANT HOT GAS PIPING	NONE	-	-	NO	NONE
REFRIGERANT LIQUID PIPING	NONE	-	-	NO	NONE

(1) Key to Insulation Materials:
GF = Glass or Mineral Fiber
CG = Cellular Glass
FE = Flexible Elastomeric Foam

(3) Key to Jacket Requirements:
AP = All purpose foil, scrim, kraft paper jacket (white)
FSK = Foil, scrim, kraft paper jacket with foil

PF = Closed Cell Phenolic Foam
CS = Calcium Silicate
HTGF = High Temperature Glass Fiber
(2) Key to Vapor Barrier Requirements:
Yes = Required
None = Not Required
SJ = Continuous sealed joints required
finish
PVC = PVC Jacket
AL = Aluminum Jacket
SS = Stainless Steel Jacket
GC = Canvas or glass cloth

SECTION 23 08 00
COMMISSIONING OF MECHANICAL SYSTEMS

PART 1 GENERAL

1.01 SUMMARY

A. This section includes specific requirements that apply to the implementation of the Commissioning Process and this Division Contractors' participation in this process. This section details the project specific equipment and systems that are included in the Commissioning Process. For general descriptions and responsibilities, refer to SECTION 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

1.02 RELATED DOCUMENTS

A. The Owner's Project Requirements (OPR) document.

B. The Basis of Design (BoD) document.

C. The Project Commissioning Plan (CxP) document.

D. ASHRAE Standard 202-2013 - Commissioning Process for Buildings and Systems.

E. LEED v4 for Building Design and Construction.

1.03 RELATED SECTIONS

A. SECTION 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS

B. SECTION 07 08 00 - COMMISSIONING OF THERMAL AND MOISTURE PROTECTION

C. SECTION 08 08 00 - COMMISSIONING OF OPENINGS

D. SECTION 11 08 00 - COMMISSIONING OF EQUIPMENT

E. SECTION 13 08 00 - COMMISSIONING OF SPECIAL CONSTRUCTION

F. SECTION 14 08 00 - COMMISSIONING OF CONVEYING SYSTEMS

G. SECTION 21 08 00 - COMMISSIONING OF FIRE SUPPRESSION SYSTEMS

H. SECTION 22 08 00 - COMMISSIONING OF PLUMBING SYSTEMS

I. SECTION 25 08 00 - COMMISSIONING OF INTEGRATED AUTOMATION SYSTEMS

J. SECTION 26 08 00 - COMMISSIONING OF ELECTRICAL SYSTEMS

K. SECTION 27 08 00 - COMMISSIONING OF COMMUNICATIONS SYSTEMS

L. SECTION 28 08 00 - COMMISSIONING OF SAFETY AND SECURITY SYSTEMS

M. SECTION 33 08 00 - COMMISSIONING OF UTILITIES

1.04 DEFINITIONS

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

1.05 RESPONSIBILITIES

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

PART 2 PRODUCTS

2.01 NO PRODUCTS SUPPLIED

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

B. Contractors and/or Vendors shall provide the specialty testing equipment necessary to fulfill the functional testing requirements, for the duration of the testing period.

PART 3 EXECUTION

3.01 GENERAL

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.02 MEETINGS

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.03 SYSTEM START-UP

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.04 PRE-FUNCTIONAL CHECKLISTS

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.05 FUNCTIONAL PERFORMANCE TESTING

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.06 TRAINING

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.07 SYSTEMS TO BE COMMISSIONED

A. GENERAL
   1. Commissioning specifications supplement the requirements of individual specifications sections but shall not be interpreted to replace or diminish the specified scope of any individual section.
   2. For all systems listed below, Division Contractor shall comply with all commissioning requirements specified.

B. APPLICABLE SYSTEMS
   1. Testing Adjusting and Balancing
   2. Condensing Boilers
   3. Heat Exchangers
   4. Heating Water Piping
   5. Heating Water Pumps
   6. Energy Recovery Systems
   7. Packaged Rooftop Air Conditioning Units.
   8. Split-System Air-Conditioning Units
   9. Power Ventilators
   10. Water Treatment Systems
   11. General-Duty Valves for HVAC
   12. Hangers and Supports for HVAC
   13. Identification for HVAC
   14. HVAC Insulation
   15. Metal Ducts
   16. Nonmetal Ducts
   17. Duct Accessories

END OF SECTION

SECTION 23 09 34
VARIABLE-FREQUENCY MOTOR CONTROLLERS FOR HVAC

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Variable-frequency motor controllers for low-voltage (600 V and less) AC motor applications.

1.02 RELATED REQUIREMENTS

A. Section 23 05 29 - Hangers and Supports for HVAC Piping and Equipment.

B. Section 23 05 53 - Identification for HVAC Piping and Equipment: Identification products and requirements.

1.03 REFERENCE STANDARDS

A. IEC 60529 - Degrees of Protection Provided by Enclosures (IP Code); 1989 (Corrigendum 2019).

B. NEMA EN 10250 - Enclosures for Electrical Equipment (1000 Volts Maximum); 2024.

C. NEMA IA 10039 - Control Circuit and Pilot Devices; 2025.

D. NEMA IA 10030 - Industrial Control and Systems: Enclosures; 2024.

E. NEMA IS 10033 - Adjustable Speed Drives; 2020 (Reapproved 2025).

F. NEMA IS 10034 - Safety Standards for Construction and Guide for Selection, Installation and Operation of Adjustable Speed Drive Systems; 2022 (Reapproved 2025).

G. NEMA IS 10035 - Application Guide for AC Adjustable Speed Drive Systems; 2021 (Reaffirmed 2025).

H. NEMA ICS 61800-2 - Adjustable Speed Electrical Power Drive Systems, Part 2: General Requirements-Rating Specifications for Low Voltage Adjustable Frequency AC Power Drive Systems; 2005.

I. NEMA MG 00001 - Motors and Generators; 2024.

J. NETA ATS - Standard for Acceptance Testing Specifications for Electrical Power Equipment And Systems; 2025.

K. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

L. UL 508A - Industrial Control Panels; Current Edition, Including All Revisions.

M. UL 61800-5-1 - Standard for Adjustable Speed Electrical Power Drive Systems - Part 5-1: Safety Requirements – Electrical, Thermal, and Energy (Ed. 2); Current Edition, Including All Revisions.

1.04 DEFINITIONS

A. CE: Conformite Europeene (European Compliance).

B. CPT: Control power transformer.

C. DDC: Direct digital control.

D. EMI: Electromagnetic interference.

E. OCPD: Overcurrent protective device.

F. PID: Control action, proportional plus integral plus derivative.

G. RFI: Radio-frequency interference.

H. VFC: Variable-frequency motor controller.

1.05 SUBMITTALS

A. Product Data: Provide manufacturer's standard catalog pages and data sheets for motor controllers, enclosures, overcurrent protective devices, and other installed components and accessories.

B. Shop Drawings: For each VFC indicated, include dimensions, voltage, controller sizes, short circuit current ratings, conduit entry locations, conductor terminal information, required clearnaces and installed features and accessories.
   1. Include wiring diagrams showing factory and field connections.
   2. Identify mounting conditions required for equipment seismic qualification.

C. Specimen Warranty: Submit sample of manufacturer's warranty.

D. Manufacturer qualification statement.

E. Manufacturer's equipment seismic qualification certification.

F. Manufacturer's certification that products meet or exceed specified requirements.

G. Field quality control test reports.

H. Operation and Maintenance Data: Include detailed information on system operation, equipment programming and setup, replacement parts, and recommended maintenance procedures and intervals.

1.06 QUALITY ASSURANCE

A. Comply with requirements of NFPA 70.

B. Product Listing Organization Qualifications: Organization recognized by OSHA as Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Store in clean, dry space. Maintain factory wrapping or provide additional heavy canvas or heavy plastic cover to protect units from dirt, water, construction debris, and traffic.

B. Handle carefully in accordance with manufacturer's written instructions to avoid damage to internal components, enclosure, and finish.

1.08 FIELD CONDITIONS

A. Maintain field conditions within required service conditions during and after installation.

1.09 WARRANTY

A. Provide minimum five years from substantial completion manufacturer warranty covering repair or replacement due to defective materials or workmanship.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. ABB; Motion Business.

B. Danfoss.

2.02 VARIABLE-FREQUENCY MOTOR CONTROLLERS

A. Provide variable-frequency motor control system consisting of required controller assemblies, operator interfaces, control power transformers, instrumentation and control wiring, sensors, accessories, system programming, etc. as necessary for complete operating system.

B. Provide products listed, classified, and labeled as suitable for purpose intended.

C. Design and Rating: Match load type, such as fans, blowers, and pumps; and type of connection used between motor and load such as direct or through a power-transmission connection.

D. Output Rating: Three phase; 10 to 60 Hz, with voltage proportional to frequency throughout voltage range ; maximum voltage equals input voltage.

E. Variable-Frequency Motor Controller:
   1. Configuration: Packaged controller with across-the-line bypass.
   2. Power Conversion System: pulse-width-modulated inverter.
   3. Control Method: Vector; closed-loop, with feedback.
   4. Features:
      a. Factory built and tested in an enclosure.
      b. PID control.
      c. Integral disconnecting means.
      d. Overcurrent and overload protection.
      e. Listed and labeled by an NRTL as a complete unit.
      f. Listed and labeled by an NRTL acceptable to authorities having jurisdiction for integrated short-circuit current (withstand).
      g. Arranged to provide self-protection.
      h. Variable-speed control of one or more three-phase induction motors by adjusting output voltage and frequency.
      i. Communication Port: RS-232 port, USB 2.0 port, or equivalent connection capable of connecting a printer and a notebook computer..

F. Controller Assemblies: Comply with NEMA IS 10033, NEMA IS 10034, and NEMA ICS 61800-2; list and label as complying with UL 61800-5-1 or UL 508A as applicable.

G. Provide controllers selected for actual installed motors and coupled mechanical loads in accordance with NEMA IS 10035, NEMA MG 00001 Part 30, and recommendations of manufacturers of both controller and load, where not in conflict with specified requirements; considerations include, but are not limited to:
   1. Motor type (e.g., induction, reluctance, and permanent magnet); consider NEMA MG 00001 design letter or inverter duty rating for induction motors.
   2. Motor load type: Variable torque.
   3. Motor nameplate data.
   4. Requirements for speed control range, speed regulation, and braking.
   5. Motor suitability for bypass starting method, where applicable.

H. Devices on Load Side of Controller: Suitable for application across full controller output frequency range.

I. Operating Requirements:
   1. Input Voltage Tolerance: Plus 10 and minus 10 percent of VFC input voltage rating..
   2. Input AC Voltage Unbalance: Not exceeding 3 percent.
   3. Input Frequency Tolerance: Plus or minus 3 percent of VFC frequency rating..
   4. Efficiency: Minimum of 97 percent at full speed and load.
   5. Input Displacement Power Factor: Minimum of 98 percent under any speed or load range.

6. Short-Circuit Current (Withstand): Minimum of 10,000 A without fusing.
7. Ambient Temperature Rating: Not less than 32°F and not exceeding 104°F.
8. Humidity Rating: Less than 95 percent (noncondensing).
9. Altitude Rating: Not exceeding 3300 feet.
10. Vibration Withstand: Comply with NEMA ICS 61800-2.
11. Overload Rating:
    a. Variable Torque Loads: Minimum of 110 percent of nominal load for 60 seconds; and minimum of 135 percent of nominal load for 2 seconds.
12. Starting Torque: Minimum 100 percent of rated torque from 3 to 60 Hz.
13. Speed Regulation: Plus or minus 5 percent.
14. Output Carrier Frequency: Selectable; 0.5 to 15 kHz.
15. Stop Modes: Programmable; includes fast, free-wheel, and dc injection braking.

J. Power Conversion System: Microprocessor-based, pulse width modulation type, isolated from all power circuits.

K. Isolated Control Interface: Allows VFCs to follow remote-control signal over a minimum 40:1 speed range.
1. Signal: Electrical.

L. Internal Adjustability Capabilities:
1. Minimum Speed: 5 to 25 percent of maximum rpm.
2. Maximum Speed: 80 to 100 percent of maximum rpm.
3. Acceleration: 0.1 to 999.9 seconds.
4.
5. Current Limit: 30 to minimum of 150 percent of maximum rating.

M. Self-Protection and Reliability Features:
1. Surge Suppression: Factory installed as an integral part of the VFC, complying with UL 1449 SPD, Type 1 or Type 2.
2. Surge Suppression: Field-mounted surge suppressors complying with Section 264313 "Surge Protection for Low-Voltage Electrical Power Circuits," UL 1449 SPD, Type 2.
3. Loss of Input Signal Protection: Selectable response strategy, including speed default to a percent of the most recent speed, a preset speed, or stop; with alarm.
4. Under- and overvoltage trips.
5. Inverter overcurrent trips.
6. VFC and Motor-Overload/Overtemperature Protection: Microprocessor-based thermal protection system for monitoring VFCs and motor thermal characteristics, and for providing VFC overtemperature and motor-overload alarm and trip; settings selectable via the keypad.
7. Critical frequency rejection, with three selectable, adjustable deadbands.
8. Instantaneous line-to-line and line-to-ground overcurrent trips.
9. Loss-of-phase protection.
10. Reverse-phase protection.
11. Short-circuit protection.
12. Motor-overtemperature fault.

N. Automatic Reset/Restart: Attempt three restarts after drive fault or on return of power after an interruption and before shutting down for manual reset or fault correction; adjustable delay time between restart attempts.

O. Power-Interruption Protection: To prevent motor from re-energizing after a power interruption until motor has stopped, unless "Bidirectional Autospeed Search" feature is available and engaged.

P. Bidirectional Autospeed Search: Capable of starting VFC into rotating loads spinning in either direction and returning motor to set speed in proper direction, without causing damage to drive, motor, or load.

Q. Torque Boost: Automatically varies starting and continuous torque to at least 1.5 times the minimum torque to ensure high-starting torque and increased torque at slow speeds.

R. Motor Temperature Compensation at Slow Speeds: Adjustable current fall-back based on output frequency for temperature protection of self-cooled, fan-ventilated motors at slow speeds.

S. Integral Input Disconnecting Means and OCPD: UL 489, thermal-magnetic circuit breaker with pad-lockable, door-mounted handle mechanism.
   1. Disconnect Rating: Not less than 115 percent of VFC input current rating.
   2. Disconnect Rating: Not less than 115 percent of NFPA 70 motor full-load current rating or VFC input current rating, whichever is larger.
   3. Auxiliary Contacts: NO or NC, arranged to activate before switch blades open.
   4. Auxiliary contacts "a" and "b" arranged to activate with circuit-breaker handle.
   5. NC alarm contact that operates only when circuit breaker has tripped.

T. Control System:
   1. Provide microprocessor-based control system for automatic control, monitoring, and protection of motors. Include sensors, wiring, and connections necessary for functions and status/alarm indications specified.
   2. Provide integral operator interface for controller programming, display of status/alarm indications, fault reset, and local control functions including motor run/stop, motor forward/reverse selection, motor speed increase/decrease, and local/remote control selection.
   3. Panel-Mounted Operator Station: Manufacturer's standard front-accessible, sealed keypad and plain-English-language digital display; allows complete programming, program copying, operating, monitoring, and diagnostic capability.
      a. Keypad: In addition to required programming and control keys, include keys for HAND, OFF, and AUTO modes.
      b. Security Access: Provide electronic security access to controls through identification and password with at least one level of access: View only; view and operate; and view, operate, and service.
         1) Control Authority: Supports at least four conditions: Off, local manual control at VFC, local automatic control at VFC, and automatic control through a remote source.
   4. Indicating Devices: Digital display mounted flush in VFC door and connected to display VFC parameters including, but not limited to:
      a. Output frequency (Hz).
      b. Motor speed (rpm).
      c. Motor status (running, stop, fault).
      d. Motor torque (percent).
      e. Fault or alarming status (code).
      f. PID feedback signal (percent).
      g. DC-link voltage (V dc).

h. Set point frequency (Hz).
i. Motor output voltage (V ac).

5. Control Functions:
   a. Control Method: Selectable vector and scalar/volts per hertz unless otherwise indicated.
      1) Scalar/Volts per Hertz Control: Provide IR compensation for improved low-speed torque.
      2) Vector Control: Provide selectable autotuning function.
   b. Adjustable acceleration and deceleration time; linear and S-curve ramps; selectable coast to stop.
   c. Selectable braking control; DC injection or flux braking.
   d. Adjustable minimum/maximum speed limits.
   e. Adjustable pulse width modulation switching carrier frequency.
   f. Adjustable motor slip compensation.
   g. Selectable autorestart after noncritical fault; programmable number of time delay between restart attempts.
   h. PID Control: Provide integral PID controller employing differential feedback for closed-loop control in response to dual feedback signals. Allows for closed-loop control of fans and pumps for pressure, flow, or temperature regulation
      1) Number of Loops: One.
6. Status Indications:
   a. Power on.
   b. Motor run/stop status.
   c. Motor forward/reverse status.
   d. Local/remote control status.
   e. Output voltage.
   f. Output current.
   g. Output frequency.
   h. DC bus voltage.
   i. Motor speed.
7. Protective Functions/Alarm Indications:
   a. Overcurrent.
   b. Motor overload.
   c. Undervoltage.
   d. Overvoltage.
   e. Controller overtemperature.
   f. Input/output phase loss.
   g. Output short circuit protection.
   h. Output ground fault protection.
8. Electric Inputs:
   a. Digital Input(s): b. A minimum of six multifunction programmable digital inputs.
   b. Analog Input(s): A minimum of two programmable analog inputs: 4- to 20-mA dc .
9. Remote Signal Inputs: Capability to accept any of the following speed-setting input signals from the DDC system for HVAC or other control systems
   a. 0- to 10-V dc.
   b. 4- to 20-mA dc.
   c. tentiometer using up/down digital inputs.
   d. Fixed frequencies using digital inputs.

10. Outputs:
    a. Analog Output(s): A minimum of one programmable analog output signal(s) (4- to 20-mA dc), which can be configured for any of the following:.
        1) Output frequency (Hz).
        2) Output current (load).
        3) DC-link voltage (V dc).
        4) Motor torque (percent).
        5) Motor speed (rpm).
        6) Set point frequency (Hz).
11. Communications: Compatible with connected systems. Provide accessories necessary for proper interface.
    a. Communication Port: RS-232 port, USB 2.0 port, or equivalent connection capable of connecting a printer and a notebook computer.
12. Features:
    a. Password-protected security access.
    b. Event log.
13. Historical Logging Information and Displays:
    a. Real-time clock with current time and date.
    b. Running log of total power versus time.
    c. Total run time.
    d. Fault log, maintaining last four faults with time and date stamp for each.

U. Power Conditioning/Filtering:
1. Provide DC link choke or input/line reactor for each controller unless otherwise indicated or required.
2. Reactor Impedance: 3 percent, unless otherwise indicated or required.

V. Packaged Controllers: Controllers factory-mounted in separate enclosure with externally operable disconnect and specified accessories.
1. Disconnects: Disconnect switch type.
    a. Disconnect Switches: Fusible type or nonfusible type with separate input fuses.
    b. Provide externally operable handle with means for locking in OFF position. Provide safety interlock to prevent opening cover with disconnect in ON position with capability of overriding interlock for testing purposes.
    c. Provide auxiliary interlock for disconnection of external control power sources where applicable.
2. Provide door-mounted remote operator interface.

W. Service Conditions:
1. Provide controllers and associated components suitable for operation under following service conditions without derating:
    a. Altitude: Less than 3,300 feet (1,000 m).
    b. Ambient Temperature: Between 32 degrees F (0 degrees C) and 104 degrees F (40 degrees C).
2. Provide controllers and associated components suitable for operation at indicated ratings under service conditions at installed location.

X. Short Circuit Current Rating:
1. Provide line/input reactors where specified by manufacturer for required short circuit current rating.

Y. Conductor Terminations: Suitable for use with conductors to be installed.

Z. Enclosures:
1. Comply with NEMA IA 10030.
2. NEMA EN 10250 Environment Type or Equivalent IEC 60529 Rating: Unless otherwise indicated, as specified for following installation locations:
   a. Indoor Clean, Dry Locations: Type 1.
   b. Outdoor Locations: Type 3R.
   c. Kitchen Wash-Down Areas: Type 4X , stainless steel .
   d. Other Wet or Damp Indoor Locations: Type 4.
   e. Indoor Locations Subject to Dust, Falling Dirt, and Dripping Noncorrosive Liquids: Type 12.
   f. Hazardous/Classified Locations: Type 7/9, as required for classification of installed location.
3. Finish: Manufacturer's standard unless otherwise indicated.
4. Cooling Fan and Exhaust System: For NEMA 250, Type 1 ; UL 508 component recognized: Supply fan, with composite stainless steel intake and exhaust grills and filters; 120 -V ac; obtained from integral CPT.
5. Plenum Rating: UL 1995; NRTL certification label on enclosure, clearly identifying VFC as "Plenum Rated."
6. Enclosure Space Heaters:
   a. Provide in each controller enclosure installed outdoors and in unconditioned indoor spaces.
   b. Size according to manufacturer's recommendations for worst case ambient temperature to prevent condensation.
   c. Heater Control: Thermostat.
   d. Heater Power Source: Provide connection to transformer factory-installed in enclosure or suitable external branch circuit as indicated or as required.

2.03 ACCESSORIES

A. Auxiliary Contacts:
1. Comply with NEMA IA 10039.
2. Provide number and type of contacts indicated or required to perform necessary functions, including holding (seal-in) circuit and interlocking, plus one normally open (NO) and one normally closed (NC) spare contact for each bypass motor starter, minimum.

B. Pilot Devices:
1. Comply with NEMA IA 10039; heavy-duty type.
2. Pushbuttons: Unless otherwise indicated, provide momentary, nonilluminated type with flush button operator; normally open or normally closed as indicated or as required.
3. Selector Switches: Unless otherwise indicated, provide maintained, nonilluminated type with knob operator; number of switch positions as indicated or as required.
4. Indicating Lights: Push-to-test type unless otherwise indicated.
5. Provide LED lamp source for indicating lights and illuminated devices.

C. Control and Timing Relays:
1. Comply with NEMA IA 10039.
2. Provide number and type of relays indicated or required to perform necessary functions.
3. Timing Relays: Electronic.

D. Phase-Failure, Phase-Reversal, and Undervoltage and Overvoltage Relays: Solid-state sensing circuit with isolated output contacts for hard-wired connections. Provide adjustable undervoltage, overvoltage, and time-delay settings.

E. Control Power Transformers:
   1. Size to accommodate burden of contactor coil(s) and connected auxiliary devices.
   2. Include primary and secondary fuses.

F. Supplemental Digital Meters:
   1. Elapsed-time meter.
   2. Kilowatt meter.
   3. Kilowatt-hour meter.

G. Breather and drain assemblies, to maintain interior pressure and release condensation in NEMA 250, Type 4 enclosures installed outdoors or in unconditioned interior spaces subject to humidity and temperature swings.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. Install in accordance with NEMA IS 10034 and manufacturer's instructions.

C. Do not exceed manufacturer's recommended maximum cable length between controller and motor.

D. Arrange equipment to provide minimum clearances in accordance with manufacturer's instructions and NFPA 70.

E. Provide required support and attachment in accordance with Section 23 05 29.

F. Install controllers plumb and level.

G. Wall-Mounting Controllers: Install with tops at uniform height and with disconnect operating handles not higher than 79 inches above finished floor, unless otherwise indicated, and by bolting units to wall or mounting on lightweight structural-steel channels bolted to wall. For controllers not on walls, provide freestanding racks complying with Section 260529 "Hangers and Supports for Electrical Systems."

H. Roof-Mounting Controllers: Install VFC on roofs with tops at uniform height and with disconnect operating handles not higher than 79 inches above finished roof surface unless otherwise indicated, and by bolting units to curbs or mounting on freestanding, lightweight, structural-steel channels bolted to curbs. Seal roof penetrations after raceways are installed.

I. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.

J. Provide grounding and bonding in accordance with electrical specifications

K. Install field-installed devices, components, and accessories.

L. Install heaters in thermal-overload relays. Select heaters based on actual nameplate full-load amperes after motors are installed.

M. Install, connect, and fuse thermal-protector monitoring relays furnished with motor-driven equipment.

N. Provide fuses complying with electrical specifications for fusible switches as indicated. Install fuses in each fusibile-switch VFC.

O. Where accessories are not self-powered, provide control power source as indicated or as required to complete installation.

P. Set field-adjustable settings of controllers and associated components according to installed motor requirements, in accordance with recommendations of manufacturers of controller and load.

Q. Identify controllers in accordance with Section 23 05 53.

R. Comply with NECA 1.

3.02 CONTROL WIRING INSTALLATION

A. Install wiring between VFCs and remote devices and facility's central-control system.

B. Bundle, train, and support wiring in enclosures.

3.03 IDENTIFICATION

A. Identify VFCs, components, and control wiring. Comply with requirements for identification specified in 23 05 53.
   1. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs.
   2. Label each VFC with engraved nameplate.
   3. Label each enclosure-mounted control and pilot device.

3.04 FIELD QUALITY CONTROL

A. Provide services of manufacturer's authorized representative to observe installation and assist in inspection and testing. Include manufacturer's reports with submittals.

B. Inspect and test in accordance with NETA ATS, except Section 4.

C. Acceptance Testing Preparation:
   1. Test insulation resistance for each VFC element, bus, component, connecting supply, feeder, and control circuit.
   2. Test continuity of each circuit.

D. Tests and Inspections:
   1. Inspect VFC, wiring, components, connections, and equipment installation. Test and adjust controllers, components, and equipment.
   2. Test insulation resistance for each VFC element, component, connecting motor supply, feeder, and control circuits.
   3. Test continuity of each circuit.
   4. Verify that voltages at VFC locations are within 10 percent of motor nameplate rated voltages. If outside this range for any motor, notify Architect before starting the motor(s).
   5. Test each motor for proper phase rotation.
   6. Perform tests according to the Inspection and Test Procedures for Adjustable Speed Drives stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
   7. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
   8. Test and adjust controls, remote monitoring, and safeties. Replace damaged and malfunctioning controls and equipment.

E. VFCs will be considered defective if they do not pass tests and inspections.

F. Correct deficiencies and replace damaged or defective controllers or associated components.

G. Prepare test and inspection reports, including a certified report that identifies the VFC and describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations made after remedial action.

3.05 ADJUSTING

A. Adjust tightness of mechanical and electrical connections to manufacturer's recommended torque settings.

B. Program microprocessors for required operational sequences, status indications, alarms, event recording, and display features. Clear events memory after final acceptance testing and prior to Substantial Completion.

C. Set field-adjustable switches, auxiliary relays, time-delay relays, timers, and overload-relay pickup and trip ranges.

D. Adjust the trip settings of instantaneous-only circuit breakers and thermal-magnetic circuit breakers with adjustable, instantaneous trip elements. Initially adjust to 6 times the motor nameplate full-load amperes and attempt to start motors several times, allowing for motor cool-down between starts. If tripping occurs on motor inrush, adjust settings in increments until motors start without tripping. Do not exceed 8 times the motor full-load amperes (or 11 times for NEMA Premium Efficient motors if required). Where these maximum settings do not allow starting of a motor, notify Architect before increasing settings.

E. Set the taps on reduced-voltage autotransformer controllers.

F. Set field-adjustable circuit-breaker trip ranges

G. Set field-adjustable pressure switches.

3.06 CLEANING

A. Clean dirt and debris from controller enclosures and components according to manufacturer's instructions.

B. Repair scratched or marred exterior surfaces to match original factory finish.

3.07 CLOSEOUT ACTIVITIES

A. Demonstration: Demonstrate proper operation of controllers to Owner, and correct deficiencies or make adjustments as directed.

B. Training: Train Owner's personnel on operation, adjustment, and maintenance of controllers and associated devices.

1. Use operation and maintenance manual as training reference, supplemented with additional training materials as required.

3.08 PROTECTION

A. Protect installed controllers from subsequent construction operations.

END OF SECTION

This page intentionally left blank

SECTION 23 11 23
FACILITY NATURAL-GAS PIPING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Pipe, pipe fittings, valves, and connections for natural gas piping systems.

1.02 RELATED REQUIREMENTS

A. Section 23 05 16 - Expansion Fittings and Loops for HVAC Piping.

B. Section 23 05 53 - Identification for HVAC Piping and Equipment.

1.03 REFERENCE STANDARDS

A. ANSI LC 1/CSA 6.26 - Fuel Gas Piping Systems Using Corrugated Stainless Steel Tubing; 2019.

B. ANSI Z21.18/CSA 6.3 - Gas Appliance Pressure Regulators; 2019.

C. ANSI Z21.80/CSA 6.22 - Line Pressure Regulators; 2019.

D. ASME BPVC-IX - Boiler and Pressure Vessel Code, Section IX - Qualification Standard for Welding, Brazing, and Fusing Procedures; Welders; Brazers; and Welding, Brazing, and Fusing Operators; 2023, with Errata (2024).

E. ASME B16.3 - Malleable Iron Threaded Fittings: Classes 150 and 300; 2021.

F. ASME B16.22 - Wrought Copper and Copper Alloy Solder-Joint Pressure Fittings; 2021.

G. ASME B16.26 - Cast Copper Alloy Fittings for Flared Copper Tubes; 2024.

H. ASME B31.1 - Power Piping; 2024.

I. ASME B31.9 - Building Services Piping; 2020.

J. ASTM A47/A47M - Standard Specification for Ferritic Malleable Iron Castings; 1999, with Editorial Revision (2022).

K. ASTM A53/A53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless; 2022.

L. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products; 2017.

M. ASTM A234/A234M - Standard Specification for Piping Fittings of Wrought Carbon Steel and Alloy Steel for Moderate and High Temperature Service; 2023a.

N. ASTM B88 - Standard Specification for Seamless Copper Water Tube; 2022.

O. ASTM B88M - Standard Specification for Seamless Copper Water Tube (Metric); 2020.

P. ASTM B813 - Standard Specification for Liquid and Paste Fluxes for Soldering of Copper and Copper Alloy Tube; 2016.

Q. ASTM B828 - Standard Practice for Making Capillary Joints by Soldering of Copper and Copper Alloy Tube and Fittings; 2023.

R. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2024.

S. AWS A5.8M/A5.8 - Specification for Filler Metals for Brazing and Braze Welding; 2019.

T. AWWA C105/A21.5 - Polyethylene Encasement for Ductile-Iron Pipe Systems; 2018.

U. AWWA C606 - Grooved and Shouldered Joints; 2022.

V. ICC-ES AC01 - Acceptance Criteria for Expansion Anchors in Masonry Elements; 2018, with Editorial Revision (2020).

W. ICC-ES AC193 - Acceptance Criteria for Mechanical Anchors in Concrete Elements; 2017, with Editorial Revision (2020).

X. MSS SP-78 - Gray Iron Plug Valves, Flanged and Threaded Ends; 2011.

Y. MSS SP-110 - Ball Valves Threaded, Socket-Welding, Solder Joint, Grooved and Flared Ends; 2010, with Errata .

1.04 PERFORMANCE REQUIREMENTS

A. Minimum Operating-Pressure Ratings:
   1. Piping and Valves: 100 psig minimum unless otherwise indicated.
   2. Service Regulators: 65 psig minimum unless otherwise indicated.

B. Natural-Gas System Pressures within Buildings: Two pressure ranges. Primary pressure is more than 0.5 psig but not more than 5 psig, and is reduced to secondary pressure of 0.5 psig or less.

C. Siesmic Delegated Design: Design restraints and anchors for natural-gas piping and equipment, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

1.05 SUBMITTALS

A. Product Data: Provide data on pipe materials, pipe fittings, valves, and accessories. Provide manufacturers catalog information. Indicate valve data and ratings.

B. Welders' Certificates: Submit certification of welders' compliance with ASME BPVC-IX.

C. Shop Drawings: For non-penetrating rooftop supports, submit detailed layout developed for this project, with design calculations for loadings and spacings.

D. Sustainable Design Documentation: For soldered copper joints, submit installer's certification that the specified installation method and materials were used.

E. Project Record Documents: Record actual locations of valves.

F. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.
   1. Valve Repacking Kits: One for each type and size of valve.

G. Warranty: Sample of special warranty.

1.06 QUALITY ASSURANCE

A. Perform work in accordance with applicable codes.

B. Valves: Manufacturer's name and pressure rating marked on valve body.

C. Welding Materials and Procedures: Comply with ASME BPVC-IX and applicable state labor regulations.

D. Welder Qualifications: Certified in accordance with ASME BPVC-IX.
   1. Steel Support Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
   2. Pipe Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.

E. Identify pipe with marking including size, ASTM material classification, and ASTM specification.

F. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Accept valves on site in shipping containers with labeling in place. Inspect for damage.

B. Provide temporary protective coating on cast iron and steel valves.

C. Provide temporary end caps and closures on piping and fittings. Maintain in place until installation.

D. Protect piping systems from entry of foreign materials by temporary covers, completing sections of the work, and isolating parts of completed system.

1.08 FIELD CONDITIONS

A. Do not install underground piping when bedding is wet or frozen.

PART 2 PRODUCTS

2.01 NATURAL GAS PIPING, UNDERGROUND

A. Steel Pipe: ASTM A53/A53M, Grade B, Type F, Schedule 40 black.
   1. Fittings: ASTM A234/A234M, wrought steel welding type, with AWWA C105/A21.5.
   2. Joints: ASME B31.1, welded.
   3. Jacket: AWWA C105/A21.5 polyethylene jacket, or three-layer coating of epoxy, adhesive, and double layer, half-lapped 10 mil (0.25 mm) polyethylene tape.
      a. Joint Cover Kits: Epoxy paint, adhesive, and heat-shrink PE sleeves.

2.02 NATURAL GAS PIPING, ABOVE GRADE

A. Steel Pipe: ASTM A53/A53M, Schedule 40 black, Type E or S, Grade B.
   1. Fittings:
      a. ASME B16.3, malleable iron, or ASTM A234/A234M, wrought steel welding type.
      b. Cold Press Mechanical Joint Fittings: ASTM A 420 / ASME B16.3, performance criteria ANSI LC4/CSA 6.32.
   2. Joints: Threaded or welded to ASME B31.1.

B. Copper Tube: ASTM B88 (ASTM B88M), Type K (A) or L (B) annealed.
   1. Fittings: ASME B16.26, cast bronze.
   2. Joints: Flared Fittings. Comply with ASME B16.26 and SAE J513.
      a. Copper fittings with long nuts.
      b. Metal-to-metal compression seal without gasket.
      c. Dryseal threads complying with ASME B1.20.3.
   3. Joints: Copper Pressure-Seal-Joint.
      a. Fittings for NPS 2 (DN 50) and Smaller: Wrought-copper fitting with EPDM-rubber, O-ring seal in each end.
      b. Fittings for NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Cast-bronze or wrought-copper fitting with EPDM-rubber, O-ring seal in each end.

C. Flexible Gas Piping:
   1. Corrugated Stainless Steel Tubing: Comply with ANSI LC 1/CSA 6.26.
   2. Tubing: ASTM A 240/A 240M, corrugated, Series 300 stainless steel.
   3. Coating: Polyethylene with flame retardant. Comply with ASTM E84.
      a. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
         1) Flame-Spread Index: 25 or less.
         2) Smoke-Developed Index: 50 or less.

4. Fittings: Provided by piping system manufacturer. Copper-alloy mechanical fittings with ends made to fit and listed for use with corrugated stainless-steel tubing and capable of metal-to-metal seal without gaskets. Include brazing socket or threaded ends complying with ASME B1.20.1.
5. Striker Plates: Steel, designed to protect tubing from penetrations.
6. Manifolds: Malleable iron or steel with factory-applied protective coating. Threaded connections shall comply with ASME B1.20.1 for pipe inlet and corrugated tubing outlets.
7. Operating-Pressure Rating: 5 psig.
8. Manufacturers:
   a. Omega Flex, Inc.
   b. Parker Hannifin Corporation; Parflex Division.
   c. Titeflex.
   d. Tru-Flex Metal Hose Corp.

2.03 UNIONS AND COUPLINGS

A. Unions for Pipe Sizes 3 Inches (80 mm) and Under:
   1. Ferrous Pipe: ASME B16.39, Class 150 malleable iron threaded unions.
   2. Copper Tube and Pipe: Class 150 bronze unions with soldered joints.

B. Mechanical Couplings for Grooved and Shouldered Joints: Two or more curved housing segments with continuous key to engage pipe groove, circular C-profile gasket, and bolts to secure and compress gasket.
   1. Dimensions and Testing: In accordance with AWWA C606.
   2. Housing Material: Provide ASTM A47/A47M malleable iron or ductile iron, galvanized.
   3. Gasket Material: EPDM suitable for operating temperature range from minus 30 degrees F (minus 34 degrees C) to 230 degrees F (110 degrees C).
   4. Gasket Material: Nitrile rubber suitable for operating temperature range from minus 20 degrees F to 180 degrees F (minus 29 degrees C to 82 degrees C).
   5. Bolts and Nuts: Hot dipped galvanized or zinc-electroplated steel.
   6. When pipe is field grooved, provide coupling manufacturer's grooving tools.

C. Dielectric Connections: Union with galvanized or plated steel threaded end, copper solder end, water impervious isolation barrier.
   1. Minimum Operating-Pressure Rating: 150 psig.
   2. Combination fitting of copper alloy and ferrous materials.
   3. Insulating materials suitable for natural gas.
   4. Combination fitting of copper alloy and ferrous materials with threaded, brazed-joint, plain, or welded end connections that match piping system materials.

2.04 PIPE HANGERS AND SUPPORTS

A. Provide hangers and supports that comply with MSS SP-58.
   1. If type of hanger or support for a particular situation is not indicated, select appropriate type using MSS SP-58 recommendations.
   2. Overhead Supports: Individual steel rod hangers attached to structure or to trapeze hangers.
      a. Cold and Hot Pipe Sizes 6 Inches (150 mm) and Over: Double hangers.
   3. Trapeze Hangers: Welded steel channel frames attached to structure.
   4. Vertical Pipe Support: Steel riser clamp.
   5. Floor Supports: Concrete pier or steel pedestal with floor flange; fixture attachment.
   6. Rooftop Supports for Low-Slope Roofs: Steel pedestals with bases that rest on top of roofing membrane, not requiring any attachment to the roof structure and not penetrating the roofing assembly, with support fixtures as specified; and as follows:

a. Bases: High density polypropylene.
b. Base Sizes: As required to distribute load sufficiently to prevent indentation of roofing assembly.
c. Steel Components: Stainless steel, or carbon steel hot-dip galvanized after fabrication in accordance with ASTM A123/A123M.
d. Attachment/Support Fixtures: As recommended by manufacturer, same type as indicated for equivalent indoor hangers and supports; corrosion resistant material.
e. Height: Provide minimum clearance of 6 inches (150 mm) under pipe to top of roofing.

B. Hanger Fasteners: Attach hangers to structure using appropriate fasteners, as follows:
1. Concrete Wedge Expansion Anchors: Complying with ICC-ES AC193.
2. Masonry Wedge Expansion Anchors: Complying with ICC-ES AC01.
3. Other Types: As required.

2.05 BALL VALVES

A. Manufacturers:
1. Apollo Valves.
2. BrassCraft Manufacturing Company; a Masco company.
3. Conbraco Industries, Inc.; Apollo Div.
4. Grinnell Products.
5. Lyall, R. W. & Company, Inc.
6. McDonald, A. Y. Mfg. Co.
7. Milwaukee Valve Company.
8. Nibco, Inc.
9. Perfection Corporation; a subsidiary of American Meter Company.

B. Bronze Valves, NPS 3 and Smaller:
1. Construction: 2-piece.
2. Body: Bronze, complying with ASTM B584.
3. Ball: Chrome-plated bronze.
4. Stem: Bronze, blow-out proof.
5. Seats: Reinforced TFE.
6. Packing: Threaded-body packnut design with adjustable-stem packing.
7. Rating: 600 psig CWP.
8. Ends: Threaded complying with ASME B1.20.1, or flared complying with ASME B1.20.3.
9. Operator: Lever.
10. Listing: Listed and labeled by an NRTL acceptable to authorities having jurisdiction for valves 1 inch and smaller.
11. Service: Suitable for natural gas with "WOG" permanently marked on valve body.
12. Refer to "Piping Schedule" at end of section.

2.06 PLUG VALVES

A. Manufacturers:
1. AZ Valves USA.
2. Flowserve, Nordstrom.
3. Lee Brass Company..
4. McDonald, A. Y. Mfg. Co..

B. Bronze Valves, NPS 3 and Smaller:
1. Standards: MSS SP-78.
2. Body: Bronze, complying with ASTM B584.

3. Plug: Chrome-plated bronze.
4. Lubricated: Yes.
5. Packing: Teflow or Buna N.
6. Ends: Threaded complying with ASME B1.20.1.
7. Operator: Square head or lug type with lever operator.
8. Rating: Pressure class 125 psig.
9. Listing: Listed and labeled by an NRTL acceptable to authorities having jurisdiction for valves 1 inch and smaller.
10. Service: Suitable for natural gas.
11. Refer to "Piping Schedule" at end of section.

C. Iron Valves, NPS 4 and Larger:
1. Standards: ASME B16.1, B1610, A126, Class B, and MSS SP-78.
2. Body: Cast iron.
3. Plug: Gray iron.
4. Lubricated: Yes.
5. Cover Seal: Buna N.
6. Stem Seal: TFE.
7. Ends: Grooved or flanged complying with ASME B16.1/16.10.
8. Operator: Square head or lug type with locking wrench operator and stop collars.
9. Rating: Pressure class 125 psig.
10. Listing: Listed and labeled by an NRTL acceptable to authorities having jurisdiction for valves 1 inch and smaller.
11. Service: Suitable for natural gas.
12. Refer to "Piping Schedule" at end of section.

2.07 STRAINERS

A. Size 2 inch (50 mm) and Smaller:
1. Threaded brass body for 175 psi (1200 kPa) CWP, Y pattern with 40-mesh stainless steel perforated screen and 50-percent free area.
2. Class 150, threaded bronze body 300 psi (2070 kPa) CWP, Y pattern with 40-mesh stainless steel perforated screen 50-percent free area.

B. Size 1-1/2 inch (40 mm) to 4 inch (100 mm):
1. Class 125, flanged iron body, Y pattern with 40-mesh stainless steel perforated screen and 50-percent free area..

C. Size 5 inch (125 mm) and Larger:
1. Class 125, flanged iron body, basket pattern with 40-mesh stainless steel perforated screen and 50-percent free area..

2.08 LINE PRESSURE REGULATORS AND APPLIANCE REGULATORS INDICATORS

A. Manufacturers:
1. Actaris Metering Systems (A brand of ITT Controls).
2. American Meter Company.
3. Canadian Meter Company Inc.
4. Eaton Corporation; Controls Div.
5. Eclipse Combustion, Inc.
6. Fisher Control Valves and Regulators; Division of Emerson Process Management.
7. Harper Wyman Co.
8. Invensys.
9. Maxitrol Company.

10. Richards Industries; Jordan Valve Div.
11. SCP, Inc.

B. General Requirements:
1. Single stage and suitable for natural gas.
2. Steel jacket and corrosion-resistant components.
3. Elevation compensator.
4. End Connections: Threaded for regulators NPS 2 and smaller.

C. Compliance Requirements:
1. Appliance Regulator: ANSI Z21.18/CSA 6.3.
2. Line Pressure Regulator: ANSI Z21.80/CSA 6.22.

D. Construction:
1. Housing: Die-cast aluminum.
2. Seals: Nitrile rubber resistant to gas impurities, abrasion and deformation at the valve port.
3. Diaphragm Plate: Zinc-plated steel.
4. Springs: Zinc-plated steel; interchangeable.
5. Orifice: Aluminum; interchangeable.
6. Seal Plug: Ultraviolet-stabilized, mineral-filled nylon.
7. Single-port, self-contained regulator with orifice no larger than required at maximum pressure inlet, and no pressure sensing piping external to the regulator.
8. Pressure regulator shall maintain discharge pressure setting downstream, and not exceed 150 percent of design discharge pressure at shutoff.
9. Overpressure Protection Device: Factory mounted on pressure regulator.
10. Finish: Factory-applied minimum three-layer polyester and polyurethane paint finish.

E. Vent:
1. Appliance Regulator: Regulator may include vent limiting device, instead of vent connection, if approved by authorities having jurisdiction.
2. Line Pressure Regulator: Atmospheric Vent: Factory- or field-installed, stainless-steel screen in opening if not connected to vent piping.

F. Maximum Inlet Pressure:
1. Appliance Regulator: 2 psi (13.8 kPa).
2. Line Pressure Regulator: 2 psi (13.8 kPa).

G. Maximum Body Pressure: 10 psi (1000 mbar).

H. Output Pressure Range: 7 inch wc (17.4 mbar) to 14 inch wc (34.9 mbar).

2.09 PIPING SPECIALTIES

A. Appliance Flexible Connectors:
1. Indoor, Fixed-Appliance Flexible Connectors: Comply with ANSI Z21.24.
2. Indoor, Movable-Appliance Flexible Connectors: Comply with ANSI Z21.69.
3. Outdoor, Appliance Flexible Connectors: Comply with ANSI Z21.75.
4. Corrugated stainless-steel tubing with polymer coating.
5. Operating-Pressure Rating: 0.5 psig.
6. End Fittings: Zinc-coated steel.
7. Threaded Ends: Comply with ASME B1.20.1.
8. Maximum Length: 72 inches.

B. Quick-Disconnect Devices: Comply with ANSI Z21.41.
1. Copper-alloy convenience outlet and matching plug connector.
2. Nitrile seals.

3. Hand operated with automatic shutoff when disconnected.
4. For indoor or outdoor applications.
5. Adjustable, retractable restraining cable.

C. Weatherproof Vent Cap: Cast- or malleable-iron increaser fitting with corrosion-resistant wire screen, with free area at least equal to cross-sectional area of connecting pipe and threaded-end connection.

2.10 JOINING MATERIALS

A. Joint Compound and Tape: Suitable for natural gas.

B. Welding Filler Metals: Comply with AWS D10.12/D10.12M for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

C. Brazing Filler Metals: Alloy with melting point greater than 1000 deg F complying with AWS A5.8/A5.8M. Brazing alloys containing more than 0.05 percent phosphorus are prohibited.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that excavations are to required grade, dry, and not over-excavated.

3.02 PREPARATION

A. Ream pipe and tube ends. Remove burrs. Bevel plain end ferrous pipe.

B. Remove scale and dirt, on inside and outside, before assembly.

C. Prepare piping connections to equipment with flanges or unions.

3.03 INSTALLATION

A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements are used to size pipe and calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.

B. Arrange for pipe spaces, chases, slots, sleeves, and openings in building structure during progress of construction, to allow for mechanical installations.

C. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.

D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

E. Install in accordance with manufacturer's instructions.

F. Provide non-conducting dielectric connections wherever jointing dissimilar metals.

G. Verify final equipment locations for roughing-in.

H. Route piping in orderly manner and maintain gradient. Route parallel and perpendicular to walls.

I. At equipment connections, install natural-gas piping at uniform grade of 2 percent down toward drip and sediment traps.

J. Install piping to maintain headroom, conserve space, and not interfere with use of space.

K. Group piping whenever practical at common elevations.

L. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.

M. Connect branch piping from top or side of horizontal piping.

N. Comply with requirements in sections specifying gas-fired appliances and equipment for roughing-in requirements.

O. Install piping to allow for expansion and contraction without stressing pipe, joints, or connected equipment. Refer to Section 23 05 16.

P. Provide clearance in hangers and from structure and other equipment for installation of insulation and access to valves and fittings.

Q. Provide access where valves and fittings are not exposed.
   1. Coordinate size and location of access doors with Section 08 31 00.

R. Drips and Sediment Traps: Install drips at points where condensate may collect, including service-meter outlets. Locate where accessible to permit cleaning and emptying. Do not install where condensate is subject to freezing.

S. Construct drips and sediment traps using tee fitting with bottom outlet plugged or capped. Use nipple a minimum length of 3 pipe diameters, but not less than 3 inches long and same size as connected pipe. Install with space below bottom of drip to remove plug or cap.

T. Establish elevations of buried piping outside the building to ensure not less than 4 ft (1.2 m) of cover.

U. Install vent piping penetrating roofed areas to maintain integrity of roof assembly.

V. Extend relief vent connections for service regulators, line regulators, and overpressure protection devices to outdoors and terminate with weatherproof vent cap.

W. Do not use natural-gas piping as grounding electrode.

X. Where pipe support members are welded to structural building framing, scrape, brush clean, and apply one coat of zinc rich primer to welding.

Y. Provide support for utility meters in accordance with requirements of utility companies.

Z. Prepare exposed, unfinished pipe, fittings, supports, and accessories ready for finish painting.

AA. Install valves with stems upright or horizontal, not inverted.

BB. Pipe vents from gas pressure reducing valves to outdoors and terminate in weather proof hood.

CC. Copper Pipe and Tube: Make soldered joints in accordance with ASTM B828, using specified solder, and flux meeting ASTM B813.

DD. Sleeve pipes passing through partitions, walls and floors. Comply with requirements for sleeve seals specified in Division 23 Section "Common Work Results for HVAC."

EE. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Division 23 Section "Common Work Results for HVAC."

FF. Inserts:
   1. Provide inserts for placement in concrete formwork.
   2. Provide inserts for suspending hangers from reinforced concrete slabs and sides of reinforced concrete beams.
   3. Provide hooked rod to concrete reinforcement section for inserts carrying pipe over 4 inches (100 mm).
   4. Where concrete slabs form finished ceiling, locate inserts flush with slab surface.
   5. Where inserts are omitted, drill through concrete slab from below and provide through-bolt with recessed square steel plate and nut above slab.

GG. Pipe Hangers and Supports:
   1. Install in accordance with ASME B31.9.

2. Support horizontal piping as indicated.
3. Install hangers to provide minimum 1/2 inch (15 mm) space between finished covering and adjacent work.
4. Place hangers within 12 inches (300 mm) of each horizontal elbow.
5. Use hangers with 1-1/2 inch (40 mm) minimum vertical adjustment. Design hangers for pipe movement without disengagement of supported pipe.
6. Support vertical piping at every floor. Support riser piping independently of connected horizontal piping.
7. Where several pipes can be installed in parallel and at same elevation, provide multiple or trapeze hangers.
8. Provide copper plated hangers and supports for copper piping.
9. Prime coat exposed steel hangers and supports. Hangers and supports located in crawl spaces, pipe shafts, and suspended ceiling spaces are not considered exposed.
10. Provide hangers adjacent to motor driven equipment with vibration isolation; refer to Section 23 05 48.

HH. Steel Piping with Protective Coating:
1. Apply joint cover kits to pipe after joining to cover, seal, and protect joints.
2. Repair damage to PE coating on pipe as recommended in writing by protective coating manufacturer.
3. Replace pipe having damaged PE coating with new pipe.

II. Copper Tubing with Protective Coating:
1. Apply joint cover kits over tubing to cover, seal, and protect joints.
2. Repair damage to PE coating on pipe as recommended in writing by protective coating manufacturer.
3. Install fittings for changes in direction and branch connections.

3.04 APPLICATION

A. Install unions downstream of valves and at equipment or apparatus connections.

B. Install brass male adapters each side of valves in copper piped system. Solder adapters to pipe.

C. Install ball valves for shut-off and to isolate equipment, part of systems, or vertical risers.

D. Install ball valves for throttling, bypass, or manual flow control services.

E. Provide plug valves in natural gas systems for shut-off service.

F. Locate valves for easy access.

G. Install strainer on inlet of each line-pressure regulator and automatic or electrically operated valve.

H. Install manual gas shutoff valve for each gas appliance ahead of corrugated stainless-steel tubing or copper connector.

I. Install regulators and overpressure protection devices with maintenance access space adequate for servicing and testing.

3.05 JOINT CONSTRUCTION

A. Ream ends of pipes and tubes and remove burrs.

B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.

C. Threaded Joints:
1. Thread pipe with tapered pipe threads complying with ASME B1.20.1.

2. Cut threads full and clean using sharp dies.
3. Ream threaded pipe ends to remove burrs and restore full inside diameter of pipe.
4. Apply appropriate tape or thread compound to external pipe threads unless dryseal threading is specified.
5. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

D. Welded Joints:
1. Construct joints according to AWS D10.12/D10.12M, using qualified processes and welding operators.
2. Bevel plain ends of steel pipe.
3. Patch factory-applied protective coating as recommended by manufacturer at field welds and where damage to coating occurs during construction.

E. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter.

F. Flared Joints: Cut tubing with roll cutting tool. Flare tube end with tool to result in flare dimensions complying with SAE J513. Tighten finger tight, then use wrench. Do not overtighten.

3.06 SERVICE CONNECTIONS

A. Connect to utility's gas main according to utility's procedures and requirements.

B. Install natural-gas piping electrically continuous, and bonded to gas appliance equipment grounding conductor of the circuit powering the appliance according to NFPA 70.

C. Install piping adjacent to appliances to allow service and maintenance of appliances.

D. Connect piping to appliances using manual gas shutoff valves and unions. Install valve within 72 inches of each gas-fired appliance and equipment. Install union between valve and appliances or equipment.

3.07 LABELING AND IDENTIFYING

A. Comply with requirements in Division 23 Section "Identification for HVAC Piping and Equipment" for piping and valve identification.

B. Detectable Warning Tape: Acid- and alkali-resistant, PE film warning tape manufactured for marking and identifying underground utilities, a minimum of 6 inches wide and 4 mils thick, continuously inscribed with a description of utility, with metallic core encased in a protective jacket for corrosion protection, detectable by metal detector when tape is buried up to 30 inches deep; colored yellow.

C. Install detectable warning tape directly above gas piping, 12 inches below finished grade, except 6 inches below subgrade under pavements and slabs.

3.08 FIELD QUALITY CONTROL

A. Test, inspect, and purge natural gas according to local building codes and authorities having jurisdiction.

B. Natural-gas piping will be considered defective if it does not pass tests and inspections.

C. Prepare test and inspection reports.

3.09 SCHEDULES

A. Outdoor Piping:
1. Underground natural-gas piping shall be one of the following:

a. Steel pipe with wrought-steel fittings and welded joints. Coat pipe and fittings with protective coating for steel piping.
b. Annealed-temper copper tube with wrought-copper fittings and brazed joints. Coat pipe and fittings with protective coating for copper tubing.

2. Aboveground natural-gas piping shall be one of the following:
   a. Steel pipe with malleable-iron fittings and threaded joints.
   b. Steel pipe with wrought-steel fittings and welded joints.
   c. Annealed-temper copper tube with wrought-copper fittings and brazed joints.
3. Containment Conduit: Steel pipe with wrought-steel fittings and welded joints. Coat pipe and fittings with protective coating for steel piping.

B. Indoor Piping:
1. Aboveground, branch piping NPS 2 and smaller shall be one of the following:
   a. Steel pipe with malleable-iron fittings and threaded joints.
   b. Steel pipe with cold press metallic fittings.
2. Aboveground, interior natural-gas piping, NPS 2-1/2 and larger shall be the following:
   a. Steel pipe with wrought-steel fittings and welded joints.

C. Underground Gas Shutoff Valve:
1. Connections to Existing Gas Piping: Use valve and fitting assemblies made for tapping utility's gas mains and listed by an NRTL.
2. Underground: Bronze plug valves.

D. Aboveground Gas Shutoff Valve:
1. Valves for pipe sizes NPS 3 and smaller at service meter shall be one of the following:
   a. Two-piece, regular-port, bronze ball valves with bronze trim.
   b. Bronze plug valve.
2. Distribution piping valves for pipe sizes NPS 3 and smaller shall be one of the following:
   a. Two-piece, regular-port, bronze ball valves with bronze trim.
   b. Bronze plug valve.
3. Distribution piping valves for pipe sizes NPS 4 and larger shall be one of the following:
   a. Iron plug valve.

E. Pipe Hanger Spacing:
1. Comply with requirements for pipe hangers and supports specified in Division 23 Section "Hangers and Supports for HVAC Piping and Equipment."
2. Metal Piping:
   a. Pipe Size: 1/2 inches (15 mm) to 1 inches (25 mm):
      1) Maximum Hanger Spacing: 8 ft (2.4 m).
      2) Hanger Rod Diameter: 3/8 inches (9 mm).
   b. Pipe Size: 1-1/4 inches (32 mm) to 2 inches (50 mm):
      1) Maximum Hanger Spacing: 9 ft (2.7 m).
      2) Hanger Rod Diameter: 3/8 inch (9 mm).
   c. Pipe Size: 2-1/2 inches (65 mm) to 3 inches (75 mm):
      1) Maximum Hanger Spacing: 10 ft (3 m).
      2) Hanger Rod Diameter: 1/2 inch (13 mm).
   d. Pipe Size: 4 inches (100 mm) to 6 inches (150 mm):
      1) Maximum Hanger Spacing: 10 ft (3 m).
      2) Hanger Rod Diameter: 5/8 inch (15 mm).
   e. Pipe Size: 8 inches (200 mm) to 12 inches (300 mm):
      1) Maximum Hanger Spacing: 14 ft (4.25 m).
      2) Hanger Rod Diameter: 7/8 inch (22 mm).

f. Pipe Size: 14 inches and Over (350 mm and Over):
   1) Maximum Hanger Spacing: 20 ft (6 m).
   2) Hanger Rod Diameter: 1 inch (25 mm).

3. Corrugated Stainless-Steel Tubing:
   a. Pipe Size: NPS 3/8 inches (9 mm):
      1) Maximum Hanger Spacing: 4 feet (1.2 m)
      2) Hanger Rod Diameter: 3/8 inch (9 mm).
   b. Pipe Size: NPS 1/2 inches (13 mm):
      1) Maximum Hanger Spacing: 6 ft (1.8 m).
      2) Hanger Rod Diameter: 3/8 inch (9 mm).
   c. Pipe Size: NPS 3/4 inches (19 mm) and Larger:
      1) Maximum Hanger Spacing: 8 ft (2.4 m).
      2) Hanger Rod Diameter: 3/8 inch (9 mm).

SECTION 23 21 13
HYDRONIC PIPING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Hydronic system requirements.

B. Heating water piping, above grade.

C. Equipment drains and overflows.

D. Pipe hangers and supports.

E. Unions, flanges, mechanical couplings, and dielectric connections.

F. Valves:
   1. Ball valves.
   2. Butterfly valves.
   3. Check valves.
   4. Characterized control valves
   5. Pressure independent control valves and balancing valves.

G. Bypass Chemical Feeder

1.02 RELATED REQUIREMENTS

A. Section 23 05 16 - Expansion Fittings and Loops for HVAC Piping.

B. Section 23 05 23 - General-Duty Valves for HVAC Piping.

C. Section 23 0529 - Hangers and Supports for HVAC Piping and Equipment

D. Section 23 05 53 - Identification for HVAC Piping and Equipment.

E. Section 23 07 19 - HVAC Piping Insulation.

F. Section 23 21 14 - Hydronic Specialties.

1.03 REFERENCE STANDARDS

A. ANSI/FCI 70-2 - Control Valve Seat Leakage; 2021.

B. ASME BPVC-IX - Boiler and Pressure Vessel Code, Section IX - Qualification Standard for Welding, Brazing, and Fusing Procedures; Welders; Brazers; and Welding, Brazing, and Fusing Operators; 2023, with Errata (2024).

C. ASME B16.3 - Malleable Iron Threaded Fittings: Classes 150 and 300; 2021.

D. ASME B16.15 - Cast Copper Alloy Threaded Fittings: Classes 125 and 250; 2024.

E. ASME B16.18 - Cast Copper Alloy Solder Joint Pressure Fittings; 2021.

F. ASME B16.22 - Wrought Copper and Copper Alloy Solder-Joint Pressure Fittings; 2021.

G. ASME B16.34 - Valves — Flanged, Threaded, and Welding End; 2020.

H. ASME B31.9 - Building Services Piping; 2020.

I. ASTM A53/A53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless; 2022.

J. ASTM A106/A106M - Standard Specification for Seamless Carbon Steel Pipe for High-Temperature Service; 2019a.

K. ASTM A234/A234M - Standard Specification for Piping Fittings of Wrought Carbon Steel and Alloy Steel for Moderate and High Temperature Service; 2023a.

L. ASTM A536 - Standard Specification for Ductile Iron Castings; 1984, with Editorial Revision (2019).

M. ASTM B32 - Standard Specification for Solder Metal; 2020.

N. ASTM B88 - Standard Specification for Seamless Copper Water Tube; 2022.

O. ASTM B88M - Standard Specification for Seamless Copper Water Tube (Metric); 2020.

P. ASTM F708 - Standard Practice for Design and Installation of Rigid Pipe Hangers; 2024.

Q. ASTM F1476 - Standard Specification for Performance of Gasketed Mechanical Couplings for Use in Piping Applications; 2007 (Reapproved 2019).

R. ASTM F3226/F3226M - Standard Specification for Metallic Press-Connect Fittings for Piping and Tubing Systems; 2019 (Reaffirmed 2024).

S. AWS A5.8M/A5.8 - Specification for Filler Metals for Brazing and Braze Welding; 2019.

T. AWS D10.12M/D10.12 - Guide for Welding Mild Steel Pipe; 2000.

U. AWWA C606 - Grooved and Shouldered Joints; 2022.

V. IAPMO (UMC) - 2024 Uniform Mechanical Code; 2024.

W. ICC (IMC) - International Mechanical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

X. MSS SP-58 - Pipe Hangers and Supports - Materials, Design, Manufacture, Selection, Application, and Installation; 2018, with Amendment (2019).

1.04 SUBMITTALS

A. Welders Certificate: Include welders certification of compliance with ASME BPVC-IX.

B. Product Data:
   1. Include data on pipe materials, pipe fittings, valves, and accessories.
   2. Provide manufacturers catalog information.
   3. Show grooved joint couplings, fittings, valves, and specialties on drawings and product submittals, specifically identified with the manufacturer's style or series designation.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products of the type specified in this section, with minimum three years of documented experience.

B. Provide all grooved joint couplings, fittings, valves, specialties, and grooving tools from a single manufacturer.

C. Welder Qualifications: Certify in accordance with ASME BPVC-IX.
   1. Provide certificate of compliance from authority having jurisdiction, indicating approval of welders.

1.06 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.
   1. Product data
   2. Source quality-control reports
   3. Field quality-control reports.
   4. Warranty: Sample of special warranty.

PART 2 PRODUCTS

2.01 HYDRONIC SYSTEM REQUIREMENTS

A. Comply with ASME B31.9 and applicable federal, state, and local regulations.

B. Piping: Provide piping, fittings, hangers, and supports as required, as indicated, and as follows:
   1. Where more than one piping system material is specified, provide joining fittings that are compatible with piping materials and ensure that the integrity of the system is not jeopardized.
   2. Use non-conducting dielectric connections whenever jointing dissimilar metals.
   3. Grooved mechanical joints may be used in accessible locations only.
      a. Accessible locations include those exposed on interior of building, in pipe chases, and in mechanical rooms, aboveground outdoors, and as approved by Architect.
      b. Grooved mechanical connections and joints comply with AWWA C606.
         1) Ductile Iron: Comply with ASTM A536, Grade 65-45-12.
         2) Steel: Comply with ASTM A106/A106M, Grade B or ASTM A53/A53M.
      c. Use rigid joints unless otherwise indicated.
   4. Provide pipe hangers and supports in accordance with ASME B31.9 or MSS SP-58 unless indicated otherwise.

C. Pipe-to-Valve and Pipe-to-Equipment Connections: Use flanges or unions to allow disconnection of components for servicing; do not use direct welded, soldered, or threaded connections.

D. Valves: Provide valves where indicated:
   1. Provide drain valves where indicated and at main shut-off, low points of piping, bases of vertical risers, and at equipment. Use 3/4 inch (20 mm) ball valves with cap; pipe to nearest floor drain.
   2. Isolate equipment using butterfly valves with lug end flanges or grooved mechanical couplings.
   3. For throttling, bypass, or manual flow control services, use ball or butterfly valves.
   4. For shut-off and to isolate parts of systems or vertical risers, use ball or butterfly valves.

2.02 HEATING WATER PIPING, ABOVE GRADE

A. Steel Pipe: ASTM A53/A53M, Schedule 40, black, using one of the following joint types:
   1. Welded Joints: ASTM A234/A234M, wrought steel welding type fittings; AWS D10.12M/D10.12 welded.
   2. Threaded Joints: ASME B16.3, malleable iron fittings.
   3. Grooved Joints: AWWA C606 grooved pipe, fittings of same material, and mechanical couplings.
   4. Mechanical Press Sealed Fittings: ASTM F3226/F3226M, ICC (IMC), and IAPMO (UMC) approved, with EPDM seals.

B. Steel Pipe Sizes 12 Inches (305 mm) and Greater: ASTM A53/A53M, 3/8 inch (9.5 mm) wall, black, using one of the following joint types:
   1. Welded Joints: ASTM A234/A234M, wrought steel welding type fittings; AWS D10.12M/D10.12 welded.
   2. Grooved Joints: AWWA C606 grooved pipe, fittings of same material, and mechanical couplings.

C. Copper Tube: ASTM B88 (ASTM B88M), Type K (A), drawn, using one of the following joint types:
   1. Solder Joints: ASME B16.18 cast brass/bronze or ASME B16.22 solder wrought copper fittings.
      a. Solder: ASTM B32 lead-free solder, HB alloy (95-5 tin-antimony) or tin and silver.
      b. Braze: AWS A5.8M/A5.8 BCuP copper/silver alloy.
   2. Grooved Joints: AWWA C606 grooved tube, fittings of same material, and copper-tube-dimension mechanical couplings.

3. Tee Connections: Mechanically extracted collars with notched and dimpled branch tube.

2.03 EQUIPMENT DRAINS AND OVERFLOWS

A. Steel Pipe: ASTM A53/A53M, Schedule 40 galvanized; using one of the following joint types:
   1. Threaded Joints: Galvanized cast iron, or ASME B16.3 malleable iron fittings.

B. Copper Tube: ASTM B88 (ASTM B88M), Type K (A), drawn; using one of the following joint types:
   1. Solder Joints: ASME B16.18 cast brass/bronze or ASME B16.22 solder wrought copper fittings; ASTM B32 lead-free solder, HB alloy (95-5 tin-antimony) or tin and silver.

2.04 PIPE HANGERS AND SUPPORTS

A. Provide hangers and supports that comply with MSS SP-58.
   1. If type of hanger or support for a particular situation is not indicated, select appropriate type using MSS SP-58 recommendations.
   2. Hangers for Pipe Sizes 1/2 to 1-1/2 Inches (13 to 38 mm): Malleable iron, adjustable swivel, split ring.
   3. Hangers for Cold Pipe Sizes 2 Inches (50 mm) and Greater: Carbon steel, adjustable, clevis.
   4. Hangers for Hot Pipe Sizes 2 to 4 Inches (50 to 100 mm): Carbon steel, adjustable, clevis.
   5. Hangers for Hot Pipe Sizes 6 Inches (150 mm) and Greater: Adjustable steel yoke, cast iron roll, double hanger.
   6. Multiple or Trapeze Hangers: Steel channels with welded spacers and hanger rods.
   7. Multiple or Trapeze Hangers for Hot Pipe Sizes 6 Inches (150 mm) and Greater: Steel channels with welded spacers and hanger rods, cast iron roll.
   8. Wall Support for Pipe Sizes to 3 Inches (76 mm): Cast iron hook.
   9. Wall Support for Pipe Sizes 4 Inches (100 mm) and Greater: Welded steel bracket and wrought steel clamp.
   10. Wall Support for Hot Pipe Sizes 6 Inches (150 mm) and Greater: Welded steel bracket and wrought steel clamp with adjustable steel yoke and cast iron roll.
   11. Vertical Support: Steel riser clamp.
   12. Floor Support for Cold Pipe: Cast iron adjustable pipe saddle, lock nut, nipple, floor flange, and concrete pier or steel support.
   13. Floor Support for Hot Pipe Sizes to 4 Inches (100 mm): Cast iron adjustable pipe saddle, lock nut, nipple, floor flange, and concrete pier or steel support.
   14. Floor Support for Hot Pipe Sizes 6 Inches (150 mm) and Greater: Adjustable cast iron roll and stand, steel screws, and concrete pier or steel support.
   15. Copper Pipe Support: Carbon steel ring, adjustable, copper plated.
   16. Hanger Rods: Mild steel threaded both ends, threaded one end, or continuous threaded.
   17. Inserts: Malleable iron case of galvanized steel shell and expander plug for threaded connection with lateral adjustment, top slot for reinforcing rods, lugs for attaching to forms; size inserts to suit threaded hanger rods.

B. In grooved installations, use rigid couplings with offsetting angle-pattern bolt pads or with wedge-shaped grooves in header piping to permit support and hanging in accordance with ASME B31.9.

2.05 UNIONS, FLANGES, MECHANICAL COUPLINGS, AND DIELECTRIC CONNECTIONS

A. Mechanical Couplings for Grooved and Shouldered Joints: Two or more curved housing segments with continuous key to engage pipe groove, circular C-profile gasket, and bolts to secure and compress gasket.

1. Dimensions and Testing: In accordance with AWWA C606.
2. Mechanical Couplings: Comply with ASTM F1476.
3. Bolts and Nuts: Hot dipped galvanized or zinc-electroplated steel.
4. When pipe is field grooved, provide coupling manufacturer's grooving tools.

B. Dielectric Connections:
1. Flanges:
a. Dielectric flanges with same pressure ratings as standard flanges.
b. Water impervious insulation barrier capable of limiting galvanic current to 1 percent of short circuit current in a corresponding bimetallic joint.
c. Dry insulation barrier able to withstand 600-volt breakdown test.
d. Construct of galvanized steel with threaded end connections to match connecting piping.
e. Suitable for the required operating pressures and temperatures.
2. Unions:
a. 1/2 to 1 Inches (15 to 25 mm): Brass solder to galvanized FPT.
b. 1/2 to 2 Inches (15 to 50 mm): Brass solder to galvanized FPT.
c. 1/2 to 1 Inches (15 to 25 mm): Brass to galvanized FPT or FIP (Female Iron Pipe).
d. 3/4 to 1/2 Inch (20 to 15 mm) Reducer: Brass solder to galvanized FPT.
e. Service: 250 psi (1,723.6 kPa), minus 20 to 180 deg F (minus 28.9 to 82.2 deg F).

2.06 BALL VALVES

A. Up To and Including 2 Inches (50 mm):
1. Bronze two piece body, chrome plated brass ball, teflon seats and stuffing box ring, lever handle with balancing stops, joining ends compliant pipe materials.

B. Over 2 Inches (50 mm):
1. Ductile iron body, chrome plated stainless steel ball, teflon seat and stuffing box seals, lever handle or gear operated, grooved ends, rated to 800 psi (5515 kPa).

2.07 BUTTERFLY VALVES

A. Body: Cast or ductile iron with resilient replaceable EPDM seat, lug or grooved ends, extended neck.

B. Disc: Construct of aluminum bronze, chrome plated ductile iron, stainless steel, ductile iron with EPDM encapsulation, or Buna-N encapsulation.

C. Stem: Stainless steel with stem offset from the centerline to provide full 360-degree circumferential setting.

D. Operator: 10 position lever handle.

2.08 SWING CHECK VALVES

A. Up To and Including 2 Inches (50 mm):
1. Bronze body, bronze trim, bronze rotating swing disc, with composition disc, solder or threaded ends.

B. Over 2 Inches (50 mm):
1. Iron body, bronze trim, stainless steel, bronze, or bronze faced rotating swing disc, renewable disc and seat, flanged or grooved ends.

2.09 SPRING LOADED CHECK VALVES

A. Iron body, bronze trim, split plate, hinged with stainless steel spring, resilient seal bonded to body, wafer, or threaded lug ends.

2.10 CHARACTERIZED CONTROL VALVES

A. Manufacturers:
   1. Belimo

B. Control Valves: Factory-fabricated, characterized control valves (CCVs), designed to provide accurate flow control based on valve position and system demand. Valves shall be suitable for HVAC applications and meet the following criteria:
   1. Maintain proportional and linear flow control across full stroke of actuator.
   2. Characterized control to modulate flow from 0 to 100 percent, with an operating pressure differential range appropriate to system design.
   3. Provide ANSI/FCI 70-2 Class 4 shut-off on all sizes and serviceable.
   4. Provide valves for use with hydronic systems, including chilled water, hot water, and glycol mixtures, with the following characteristics:
      a. 2” NPS (50 DN) and Smaller: Bronze or brass body, stainless steel or brass trim, threaded or sweat connections.
      b. 2-1/2” NPS (65 DN) and Larger: Ductile iron body, stainless steel or brass trim, flanged or grooved end connections.
      c. Characterized Disc: Insert or internal component to ensure equal percentage or linear flow characteristics, depending on actuator signal.
      d. Pressure Rating: Minimum 250 psig working pressure.
      e. Temperature Rating: 32 to 250 degrees F (0 to 121 degrees C).
   5. Sizing: Line-size or as scheduled.
   6. End Connections and Adapters: Factory-compatible with ANSI standards; valves 8-inch (200 mm) and below to be provided with factory companion flanges or unions.

C. Electronic Actuators: Direct-mounted, self-calibrating type designed for minimum 60,000 full-stroke cycles at rated force.

D. Provide actuator with visible position indication. Fail positions on power failure to include in-place, open or closed as indicated in the controls specifications.
   1. Valves: Sized for maximum circuit flow rate and nominally, line-sized.
   2. Overload Protection: Electronic overload or digital rotation-sensing circuitry.
   3. Fail-Safe Operation: Mechanical, spring-return mechanism or capacitance return.
      a. Fail Position: Closed
   4. Power Requirements (Modulating): Maximum 10 VA at 24 VAC or 8 watts at 24 VDC.
   5. Power Requirements (Modulating): Maximum 10 VA at 24 VAC or 8 watts at 24 VDC.
   6. Proportional Signal: 0 to 10 VDC or 2 to 10 VDC or 4 to 20 mA, and 2 to 10 VDC position feedback signal.
   7. Provide plenum-rated actuators for service above ceilings to possess UL listings and approvals.
   8. Temperature Rating: 40 to 104 degrees F (4.5 to 40 degrees C).

2.11 PRESSURE INDEPENDENT CONTROL VALVES AND BALANCING VALVES

A. Manufacturers:
   1. Belimo.

B. Control Valves: Factory-fabricated pressure independent with internal differential pressure regulator (DPRV), which automatically adjusts to normal changes in system pressure and provides 100 percent control valve authority at all positions of the valve.
   1. Maintain proportional and linear flow coil characteristics.
   2. PICV to accurately control the flow from 0 to 100 percent full rated flow with an operating pressure differential range of 3 to 60 psig (21 to 414 kPa).

3. Provide ANSI/FCI 70-2 Class 4 shut-off on all sizes and field serviceable.
4. Provide control valve to incorporate control, balancing, and flow limiting. Hydronic system pressure independent control valve bodies to comply with ASME B16.34 or ASME B16.15 pressure and temperature class ratings based on the design operating temperature and 150 percent of the system design operating pressure and have the following characteristics:
    a. 2 NPS (50 DN) and Smaller: Class 150 bronze or brass body with union connections, stainless steel trim, stainless steel rising stem, stainless steel disc or ball, and screwed ends with backseating capacity repackable under pressure.
    b. 2-1/2 NPS (65 DN) and Larger: Class 125 iron or ductile iron body, stainless steel trim, stainless steel rising stem, stainless steel disc or ball, flanged ends with backseating capacity repackable under pressure.
    c. Pressure Control Seat: Brass construction with vulcanized EPDM.
    d. Sizing: Line-size.
    e. Fittings and Components: All fittings and components to meet ANSI standards and be compatible with readily available components. 8-inch (200 mm) valves and above to be provided with proper companion flanges.
    f. Close-Off (Differential) Pressure Rating: Combination of actuator, DPRV action, and trim to provide a minimum close-off pressure rating of 150 percent of total system (pump) head. Provide actuator from the same manufacturer as the pressure independent control valve.

C. Electronic Actuators: Direct-mounted, self-calibrating type designed for minimum 60,000 full-stroke cycles at rated force.

D. Provide actuator with visible position indication. Fail positions on power failure to include in-place, open or closed as indicated in the controls specifications.
1. Valves: Sized for maximum circuit flow rate and nominally, line-sized.
2. Overload Protection: Electronic overload or digital rotation-sensing circuitry.
3. Fail-Safe Operation: Mechanical, spring-return mechanism or capacitance return.
    a. Fail Position: Closed
4. Power Requirements (Two-Position Spring Return): 24 VAC.
5. Power Requirements (Modulating): Maximum 10 VA at 24 VAC or 8 watts at 24 VDC.
6. Proportional Signal: 0 to 10 VDC or 2 to 10 VDC or 4 to 20 mA, and 2 to 10 VDC position feedback signal.
7. Provide plenum-rated actuators for service above ceilings to possess UL listings and approvals.
8. Temperature Rating: 40 to 104 degrees F (4.5 to 40 degrees C).

2.12 BYPASS CHEMICAL FEEDER

A. Welded steel construction; 125-psig working pressure; 5-gal. capacity; with fill funnel and inlet, outlet, and drain valves.
1. Chemicals: Specially formulated, based on analysis of makeup water, to prevent accumulation of scale and corrosion in piping and connected equipment.

PART 3 EXECUTION

3.01 PREPARATION

A. Ream pipe and tube ends. Remove burrs. Bevel plain end ferrous pipe.

B. Prepare pipe for grooved mechanical joints as required by coupling manufacturer.

C. Remove scale and dirt on inside and outside before assembly.

D. Prepare piping connections to equipment using jointing system specified.

E. Keep open ends of pipe free from scale and dirt. Protect open ends with temporary plugs or caps.

F. After completion, fill, clean, and treat systems.

3.02 INSTALLATION

A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems.

B. Indicated piping locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations.

C. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.

D. Install piping in concealed locations, unless otherwise indicated and except in equipment rooms and service areas.

E. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

F. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.

G. Install in accordance with manufacturer's instructions.

H. Install piping to permit valve servicing.

I. Install piping to allow application of insulation.

J. Select system components with pressure rating equal to or greater than system operating pressure.

K. Install groups of pipes parallel to each other, spaced to permit applying insulation and servicing of valves.

L. Install drains, consisting of a tee fitting, NPS 3/4 ball valve, and short NPS 3/4 threaded nipple with cap, at low points in piping system mains and elsewhere as required for system drainage.

M. Route piping in orderly manner, parallel to building structure, and maintain gradient.

N. Install piping to conserve building space and to avoid interference with use of space.

O. Group piping whenever practical at common elevations.

P. Install piping at indicated slopes. Slope piping and arrange to drain at low points.

Q. Install piping at a uniform grade of 0.2 percent upward in direction of flow.

R. Install piping free of sags and bends.

S. Install fittings for changes in direction and branch connections.

T. Install branch connections to mains using tee fittings in main pipe, with the branch connected to the bottom of the main pipe. For up-feed risers, connect the branch to the top of the main pipe.

U. Install unions in piping, NPS 2 and smaller, adjacent to valves, at final connections of equipment, and elsewhere as indicated.

V. Install flanges in piping, NPS 2-1/2 and larger, at final connections of equipment and elsewhere as indicated.

W. Install strainers on inlet side of each control valve, pressure-reducing valve, solenoid valve, in-line pump, and elsewhere as indicated. Install NPS 3/4 nipple and ball valve in blowdown connection of strainers NPS 2 and larger. Match size of strainer blowoff connection for strainers smaller than NPS 2.

X. Install piping to allow for expansion and contraction without stressing pipe, joints, or connected equipment. See Section 23 05 16.
   1. Flexible couplings may be used in header piping to accommodate thermal growth, thermal contraction in lieu of expansion loops.

Y. Grooved Joints:
   1. Install in accordance with the manufacturer's latest published installation instructions.
   2. Gaskets to be suitable for the intended service, molded, and produced by the coupling manufacturer.

Z. Pipe Hangers and Supports:
   1. Install in accordance with ASME B31.9, ASTM F708, or MSS SP-58.
   2. Install hangers to provide minimum 1/2-inch (13 mm) space between finished covering and adjacent work.
   3. Place hangers within 12 inches (300 mm) of each horizontal elbow.
   4. Use hangers with 1-1/2 inches (38 mm) minimum vertical adjustment. Design hangers for pipe movement without disengagement of supported pipe.
   5. Support vertical piping at every other floor. Support riser piping independently of connected horizontal piping.
   6. Where several pipes can be installed in parallel and at same elevation, provide multiple or trapeze hangers.
   7. Provide copper plated hangers and supports for copper piping.
   8. Prime coat exposed steel hangers and supports. See Section 09 9123. Hangers and supports located in crawl spaces, pipe shafts, and suspended ceiling spaces are not considered exposed.

AA. Provide clearance in hangers and from structure and other equipment for installation of insulation and access to valves and fittings. See Section 23 07 19.

BB. Provide access where valves and fittings are not exposed.

CC. Where pipe support members are welded to structural building framing, scrape, brush clean, and apply one coat of zinc-rich primer to welds.

DD. Prepare unfinished pipe, fittings, supports, and accessories, ready for finish painting. See Section 09 91 23.

EE. Install valves with stems upright or horizontal, not inverted.

3.03 JOINT CONSTRUCTION

A. Soldered Joints: Apply ASTM B 813, water-flushable flux, unless otherwise indicated, to tube end. Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook," using lead-free solder alloy complying with ASTM B 32.

B. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter, using copper-phosphorus brazing filler metal complying with AWS A5.8.

C. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
   1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
   2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

D. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.

E. Grooved Joints: Assemble joints with coupling and gasket, lubricant, and bolts. Cut or roll grooves in ends of pipe based on pipe and coupling manufacturer's written instructions for pipe wall thickness. Use grooved-end fittings and rigid, grooved-end-pipe couplings.

F. Mechanically Formed, Copper-Tube-Outlet Joints: Use manufacturer-recommended tool and procedure, and brazed joints.

3.04 HYDRONIC SPECIALTIES INSTALLATION

A. Install manual air vents at high points in piping, at heat-transfer coils, and elsewhere as required for system air venting.

B. Install drain valve on air separators NPS 2 and larger.

C. Install bypass chemical feeder in minimum NPS 3/4 bypass line, from main with full-size, full-port, ball valve in the main between bypass connections. Install NPS 3/4 pipe from chemical feeder drain, to nearest equipment drain and include a full-size, full-port, ball valve.

3.05 TERMINAL EQUIPMENT CONNECTIONS

A. Sizes for supply and return piping connections shall be the same as or larger than equipment connections.

B. Install control valves in accessible locations close to connected equipment.

C. Install ports for pressure gages and thermometers at coil inlet and outlet connections according to Division 23 Section "Meters and Gages for HVAC Piping."

3.06 FIELD QUALITY CONTROL

A. Prepare hydronic piping for testing, according to ASME B31.9 and as follows:
   1. Leave joints, including welds, uninsulated and exposed for examination during test.
   2. Flush hydronic piping systems with clean water; then remove and clean or replace strainer screens.
   3. Use unheated water as a testing medium unless there is risk of damage due to freezing. Another liquid that is safe for workers and compatible with piping may be used.
   4. While filling system, use vents installed at high points of system to release air. Use drains installed at low points for complete draining of test liquid.
   5. Isolate equipment from piping. If a valve is used to isolate equipment, its closure shall be capable of sealing against test pressure without damage to valve. Install blinds in flanged joints to isolate equipment.
   6. Isolate expansion tanks and determine that hydronic system is full of water.
   7. Install safety valve, set at a pressure no more than one-third higher than test pressure, to protect against damage by expanding liquid or other source of overpressure during test.

B. Perform the following tests on hydronic piping:
   1. Subject piping system to hydrostatic test pressure that is not less than 1.5 times the system's working pressure. Test pressure shall not exceed maximum pressure for any vessel, pump, valve, or other component in system under test. Verify that stress due to pressure at bottom of vertical runs does not exceed 90 percent of specified minimum yield strength or 1.7 times "SE" value in Appendix A in ASME B31.9, "Building Services Piping."
   2. After hydrostatic test pressure has been applied for at least 10 minutes, examine piping, joints, and connections for leakage. Eliminate leaks by tightening, repairing, or replacing components, and repeat hydrostatic test until there are no leaks.
   3. Prepare written report of testing.

C. Perform the following before operating the system:
   1. Open manual valves fully.
   2. Inspect pumps for proper rotation.

3. Set makeup pressure-reducing valves for required system pressure.
4. Set temperature controls so all coils are calling for full flow.
5. Inspect and set operating temperatures of hydronic equipment, such as boilers, chillers, cooling towers, to specified values.
6. Verify lubrication of motors and bearings.

3.07 CHEMICAL TREATMENT

A. System Flushing and Fill:
   1. The Mechanical Contractor is responsible to flush, clean and fill the closed loop Hydronic system as noted below. In addition the Mechanical Contractor is responsible to coordinate the testing of the fill water and to install chemical additions as provided by LTF's water treatment Contractor, International Chemtex (contact Ron Phares 651-968-7768) prior to starting the boiler system.

B. Chemical Flushing:
   1. The system cleaner shall be 9320 by International Chemtex or approved equal.
   2. Drain the system after the required circulation period as quickly as possible, this will prevent settling of foulants. Run circulating pumps and flush with clean water until the discharge water is clear.
   3. When system water is clear, remove, clean and replace all strainers.

3.08 HANGER SCHEDULES

A. Hanger Spacing for Copper Tubing.
   1. 1/2 Inch (15 mm) and 3/4 inch (20 mm): Maximum span, 5 feet (1500 mm); minimum rod size, 1/4 inch (6 mm).
   2. 1 Inch (25 mm): Maximum span, 6 feet (1800 mm); minimum rod size, 1/4 inch (6 mm).
   3. 1-1/2 Inches (40 mm) and 2 Inches (50 mm): Maximum span, 8 feet (2400 mm); minimum rod size, 3/8 inch (9 mm).
   4. 2-1/2 Inches (65 mm): Maximum span, 9 feet (2700 mm); minimum rod size, 3/8 inch (9 mm).
   5. 3 Inches (80 mm): Maximum span, 10 feet (3.0 m); minimum rod size, 3/8 inch (9 mm).

B. Hanger Spacing for Steel Piping.
   1. 1/2 Inch (15 mm), 3/4 Inch (20 mm), and 1 Inch (25 mm): Maximum span, 7 feet (2100 mm); minimum rod size, 3/8 inch (9 mm).
   2. 1-1/4 Inches (32 mm): Maximum span, 8 feet (2400 mm); minimum rod size, 3/8 inch (9 mm).
   3. 1-1/2 Inches (40 mm): Maximum span, 9 feet (2700 mm); minimum rod size, 3/8 inch (9 mm).
   4. 2 Inches (50 mm): Maximum span, 10 feet (3.0 m); minimum rod size, 3/8 inch (9 mm).
   5. 2-1/2 Inches (65 mm): Maximum span, 11 feet (3.4 m); minimum rod size, 1/2 inch (13 mm).
   6. 3 Inches (80 mm): Maximum span, 12 feet (3.6 m); minimum rod size, 1/2 inch (13 mm).
   7. 4 Inches (100 mm): Maximum span, 14 feet (4.3 m); minimum rod size, 1/2 inch (13 mm).
   8. 6 Inches (150 mm): Maximum span, 17 feet (5.1 m); minimum rod size, 1/2 inch (13 mm).
   9. 8 Inches (200 mm): Maximum span, 19 feet (5.8 m); minimum rod size, 5/8 inch (16 mm).
   10. 10 Inches (250 mm): Maximum span, 20 feet (6.1 m); minimum rod size, 3/4 inch (19 mm).
   11. 12 Inches (300 mm): Maximum span, 23 feet (7.0 m); minimum rod size, 7/8 inch (22 mm).
   12. 14 Inches (350 mm): Maximum span, 25 feet (7.6 m); minimum rod size, 1 inch (25 mm).
   13. 16 Inches (400 mm): Maximum span, 27 feet (8.2 m); minimum rod size, 1 inch (25 mm).

14. 18 Inches (450 mm): Maximum span, 28 feet (8.5 m); minimum rod size, 1-1/4 inches (38 mm).
15. 20 Inches (500 mm): Maximum span, 30 feet (9.1 m); minimum rod size, 1-1/4 inches (38 mm).

C. Hanger Spacing for Plastic Piping.
1. 1/2 Inch (15 mm): Maximum span, 42 inches (1000 mm); minimum rod size, 1/4 inch (6 mm).
2. 3/4 Inch (20 mm): Maximum span, 45 inches (1100 mm); minimum rod size, 1/4 inch (6 mm).
3. 1 Inch (25 mm): Maximum span, 51 inches (1300 mm); minimum rod size, 1/4 inch (6 mm).
4. 1-1/4 Inches (32 mm): Maximum span, 57 inches (1400 mm); minimum rod size, 3/8 inch (9 mm).
5. 1-1/2 Inches (40 mm): Maximum span, 63 inches (1600 mm); minimum rod size, 3/8 inch (9 mm).
6. 2 Inches (50 mm): Maximum span, 69 inches (1700 mm); minimum rod size, 3/8 inch (9 mm).
7. 3 Inches (80 mm): Maximum span, 7 feet (2100 mm); minimum rod size, 3/8 inch (9 mm).

END OF SECTION

SECTION 23 21 14
HYDRONIC SPECIALTIES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Compression tanks.
B. Expansion tanks.
C. Air vents.
D. Air/dirt separators.
E. Hydraulic separators/buffer tanks.
F. Strainers.
G. Magnetic filters.
H. Suction diffusers.
I. Pump connectors.
J. Triple Duty Valves.
K. Pressure-temperature test plugs.
L. Calibrated balancing valves (circuit setters).
M. Automatic balancing/limiting valves.
N. Relief valves.
O. Pressure reducing valves.
P. Condensate acid neutralizer.

1.02 RELATED REQUIREMENTS

A. Section 23 21 13 - Hydronic Piping.

1.03 REFERENCE STANDARDS

A. ASME B16.1 - Gray Iron Pipe Flanges and Flanged Fittings: Classes 25, 125, and 250; 2020.
B. ASME B16.5 - Pipe Flanges and Flanged Fittings: NPS 1/2 through NPS 24 Metric/Inch Standard; 2020.
C. ASME B16.11 - Forged Fittings, Socket-Welding and Threaded; 2021.
D. ASME BPVC-VIII-1 - Boiler and Pressure Vessel Code, Section VIII, Division 1: Rules for Construction of Pressure Vessels; 2023, with Errata (2024).

1.04 SUBMITTALS

A. Product Data: Provide product data for manufactured products and assemblies required for this project.
    1. Product description, make/model, and dimensions.
    2. Component sizes, rough-in requirements, service sizes, and finishes.
    3. Rated capacities, operating characteristics, and furnished specialties and accessories.
    4. Flow and pressure drop curves based on manufacturer's testing for calibrated-orifice balancing valves and automatic flow-control valves.

1.05 CLOSEOUT SUBMITTALS

A. Maintenance Data: Include installation instructions, assembly views, lubrication instructions, and replacement parts list.

1.06 QUALITY ASSURANCE

A. ASME Compliance: Comply with ASME B31.9, "Building Services Piping," for materials, products, and installation. Safety valves and pressure vessels shall bear the appropriate ASME label. Fabricate and stamp air separators and expansion tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.

PART 2 PRODUCTS

2.01 COMPRESSION TANKS

A. Manufacturers:
   1. American Wheatley, a Company of Global Flow Products, LLC: www.americanwheatley.com/#sle.
   2. Amtrol Inc: www.amtrol.com/#sle.
   3. Bell & Gossett, a brand of Xylem, Inc: www.bellgossett.com/#sle.
   4. Taco, Inc: www.taco-hvac.com/#sle.

B. Construction: Closed, welded steel, tested, and stamped in accordance with ASME BPVC-VIII-1; cleaned, prime coated, and supplied with steel support saddles; with tappings for installation of accessories.
   1. Pressure Rating: 125 psi (860 kPa).

C. Gauge Glass Set: Brass compression stops, guard, and 3/4 inch (20 mm, DN) glass, maximum 24 inches (600 mm, DN) length, long enough to cover tank for 2 inches (50 mm, DN) above bottom to 2 inches (50 mm, DN) below top.

D. Tank Drain Fitting: Brass body, nonferrous internal parts; 125-psig working pressure and 240 deg F maximum operating temperature; constructed to admit air to compression tank, drain water, and close off system.

E. Air-Control and Drain Fitting: Include drain fitting and taps for pressure gage and air-charging fitting.

F. Support: Support vertical tanks with steel legs or base; support horizontal tanks with steel saddles.

G. Quality Control: Factory fabricate and test tank with taps and supports installed and labeled according to the ASME Boiler and Pressure Vessel Code, Section VIII, Division 1.

H. Automatic Cold Water Fill Assembly: Provide where shown on plan; pre-mixed glycol systems shall not have automatic cold water fill. Include pressure reducing valve, RPZ ,backflow preventer, test cocks, strainer, vacuum breaker, and valved by-pass.

2.02 EXPANSION TANKS

A. Manufacturers:
   1. American Wheatley, a company of Global Flow Products, LLC: www.americanwheatley.com/#sle.
   2. Amtrol Inc: www.amtrol.com/#sle.
   3. Calefactio Solutions, Inc.: www.calefactio.com/#sle
   4. Bell & Gossett, a brand of Xylem, Inc: www.bellgossett.com/#sle.
   5. Taco, Inc: www.taco-hvac.com/#sle.

B. Maximum Rated Working Pressure: 125 psi (860 kPa).

C. Maximum Allowable Service Temperature: 240 degrees F (115.6 degrees C).

D. Construction: Welded steel, tested and stamped in accordance with ASME BPVC-VIII-1; supplied with National Board Form U-1, adjustable flexible EPDM diaphragm or bladder seal (as scheduled on drawings) factory precharged to 50 psi (345 kPa), and steel support stand.

E. Automatic Cold Water Fill Assembly: Provide where shown on plan; pre-mixed glycol systems shall not have automatic cold water fill. Include pressure reducing valve, RPZ backflow preventer, test cocks, strainer, vacuum breaker, and valved by-pass.

F. Accessories: Provide air-charging fitting, bulls eye sight glass, pressure gauge, and tank drain ball valve.

2.03 AIR VENTS

A. Manufacturers:
1. Armstrong International, Inc: www.armstronginternational.com/#sle.
2. Bell & Gossett, a brand of Xylem, Inc: www.bellgossett.com/#sle.
3. Calefactio Solutions, Inc.: www.calefactio.com/#sle
4. Flamco: www.flamcogroup.us/#sle.
5. Taco, Inc: www.taco-hvac.com/#sle.

B. Manual Air Vent:
1. Body: Bronze.
2. Internal Parts: Nonferrous.
3. Operator: Screwdriver or thumbscrew.
4. Inlet Connection: NPS 1/2.
5. Discharge Connection: NPS 1/8.

C. Maximum Fluid Pressure: 150 psi (1,034 kPa).

D. Maximum Fluid Temperature: 250 degrees F (121.1 degrees C).

2.04 AIR/DIRT SEPARATORS

A. Coalescing Air/Dirt Separators:
1. Manufacturers:
a. Spirotherm, Inc: www.spirotherm.com/#sle.
2. Tank: Fabricated steel tank; tested and stamped in accordance with ASME BPVC-VIII-1 for maximum fluid service subject to application requirements and manufacturer's standard maximum operating conditions.
3. Coalescing Medium: Provide structured copper or stainless steel medium filling the entire vessel to suppress turbulence and provide air elimination efficiency of 100 percent free air, 100 percent entrained air, and 99.6 percent dissolved air at the installed location.
4. Air Vent: Integral float actuated air vent at top fitting of tank rated at 150 psi (1,034 kPa), threaded to top of separator.
5. End Connections: Class 150 flanged for 2-1/2 inch (65 mm, DN) and larger otherwise threaded.
6. Blowdown Connection: Threaded.
7. Size: As indicated on drawings.
8. Maximum Fluid Service Pressure: 150 psi (1,034 kPa).
9. Maximum Fluid Service Temperature: 250 degrees F (121.1 degrees C).
10. Centrifugal-style separators are not allowed.

2.05 HYDRAULIC SEPARATORS/BUFFER TANKS

A. Buffer Tanks:
1. Manufacturers:
a. American Wheatley, a company of Global Flow Products, LLC: www.americanwheatley.com/#sle.
b. Amtrol, Inc.: www.amtrol.com/#sle..
c. AO Smith: www.hotwater.com/#sle.

d. Calefactio Solutions, Inc.: www.calefactio.com/#sle
e. Lochinvar: www.lochinvar.com/#sle.
f. Taco, Inc.: www.taco-hvac.com/#sle.

2. Carbon-steel based, primer-base coated vertical-mounted buffer tank with flanged inlet-outlet pipe connections, and ASME BPVC-VIII-1 tested and stamped for maximum allowed operating pressure of 125 psi (861.8 kPa).
3. Flow Rate Capacity: As indicated on drawings.
4. Pipe Connections: Flanged.
5. Air Vent: Automatic.
6. Drain: Ball type drain valve.

B. Coalescing Hydraulic Separators:
1. Manufacturers:
a. Spirotherm, Inc.: www.spirotherm.com/#sle..
2. Tank: Fabricated steel tank; tested and stamped in accordance with ASME BPVC-VIII-1 for maximum fluid service subject to application requirements and manufacturer's standard maximum operating conditions.
3. Coalescing Medium: Provide structured copper or stainless steel medium filling the entire vessel to suppress turbulence and provide air elimination efficiency of 100 percent free air, 100 percent entrained air, and 99.6 percent dissolved air at the installed location.
4. Air Vent: Integral float actuated air vent at top fitting of tank rated at 150 psi (1,034 kPa), threaded to top of separator.
5. End Connections: Class 150 flanged for 2-1/2 inch (65 mm, DN) and larger otherwise threaded.
6. Blowdown Connection: Threaded.
7. Size: As indicated on drawings.
8. Maximum Fluid Service Pressure: 150 psi (1,034 kPa).
9. Maximum Fluid Service Temperature: 250 degrees F (121.1 degrees C).

2.06 STRAINERS

A. Manufacturers:
1. American Wheatley, a company of Global Flow Products, LLC: www.americanwheatley.com/#sle.
2. Armstrong International, Inc: www.armstronginternational.com/#sle.
3. The Metraflex Company: www.metraflex.com/#sle.
4. Watts Water Technologies: www.watts.com/#sle .

B. Size 2 inch (50 mm, DN) and Under:
1. Provide threaded for up to 175 psi (1,200 kPa) working pressure and up to 250 degrees F working temperature.
2. Body Material by Fluid Service:
a. Stainless Steel:
1) Steam: Up to 600 psi at 486 degrees F (4,136.8 kPa at 252.2 degrees C).
2) Liquids: Up to 1,440 psi at 100 degrees F (9,928.4 kPa at 37.8 degrees C).

C. Size 2-1/2 inch (65 mm, DN) and larger:
1. Provide flanged for up to 175 psi (1,200 kPa) working pressure and up to 250 degrees F working temperature.
2. Body Material by Fluid Service:
a. Stainless Steel:
1) Liquids: Up to 285 psi at 100 degrees F (1,965 kPa at 37.8 degrees C).

D. Body: Bolted cover and bottom drain connection.

E. Screen: Y-pattern strainer with 40-mesh stainless steel perforated screen.

F. Performance: Capable of 3/4-inch misalignment.

2.07 SUCTION DIFFUSERS

A. Manufacturers:
   1. American Wheatley, a company of Global Flow Products, LLC: www.americanwheatley.com/#sle.
   2. Armstrong Fluid Technologies: www.armstrongfluidtechnologies.com/#sle
   3. Bell & Gossett, a brand of Xylem, Inc: www.bellgossett.com/#sle.
   4. Grundfos Pumps Corporation: www.grundfos.com/#sle
   5. Taco, Inc.: www.taco-hvac.com/#sle.
   6. Victaulic Company of America: www.victaulic.com/#sle.

B. Description: Horizontally or vertically mounted angle-pattern fitting with integral-cast vanes, fine particle mesh screen and drain plug.

C. Body: Cast iron or ductile iron.

D. Connections: AMSE/ANSI Class 125 flanges,
   1. Inlet: Matches system pipe size.
   2. Outlet: Matches pump inlet size.

E. Pressure: 175 psi (1200 kPa) working pressure

F. Temperature: 250 degree F (120 degree C)

G. Strainer Mesh:
   1. Start-up: Disposable bronze 16-Mesh.
   2. Permanent: 304 stainless steel.

H. Cover: Removable cover plate with reusable EPDM o-ring.

I. Magnetic Filter: No.

2.08 PUMP CONNECTORS

A. Manufacturers:
   1. American Wheatley, a company of Global Flow Products, LLC: www.americanwheatley.com/#sle.
   2. Anvil International; AnviFlex: www.anvilintl.com/#sle.
   3. FNW: www.fnw.com/#sle.
   4. Mason Industries, Inc.: www.mason-ind.com/#sle
   5. The Metraflex Company: www.metraflex.com/#sle.

B. Flexible Connectors: Flanged, braided type, sized to match piping.
   1. Braid: 304 stainless steel braid and braid bands.
   2. Wetted components: 304 stainless steel hose.
   3. Maximum Operating Service: 150 psi (1030 kPa) at 240 degrees F (115.6 degrees C).
   4. Accommodate the Following:
      a. Length: 12 inche nominal, 9-3/4 inch live length.
      b. Maximum Lateral Offset: 1/8 inch (3 mm).
      c. Force developed by 1.5 times specified maximum allowable operating pressure.
   5. End Connections: Flanged carbon steel.
   6. Provide necessary accessories.

2.09 TRIPLE-DUTY VALVES

A. Manufacturers:
   1. American Wheatley, a company of Global Flow Products, LLC: www.americanwheatley.com/#sle.
   2. Anvil International: www.anvilintl.com/#sle.
   3. Bell & Gossett, a brand of Xylem, Inc.: www.bellgossett.com/#sle.
   4. Taco, Inc: www.taco-hvac.com/#sle.
   5. Victaulic Company of America: www.victaulic.com/#sle.

B. Class 125:
   1. Maximum Service Operation: 175 psi (1,200 kPa), 250 degrees F (121 degrees C).

C. Triple-Duty Globe Type: Flanged cast-iron angle pattern body with bolt-on bonnet, position indicator, non-slam check valve with spring-loaded bronze disc and seat, stainless steel stem, metering connectors, flow shutoff mechanism, adjustable flow handle, and integrated pressure and temperature ports.

2.10 PRESSURE-TEMPERATURE TEST PLUGS

A. Manufacturers:
   1. FNW: www.fnw.com/#sle.
   2. Peterson Equipment Company Inc: www.petesplug.com/#sle.
   3. Sisco Manufacturing Company Inc: www.siscomfg.com/#sle.

B. Construction: Brass body designed to receive temperature or pressure probe with removable protective cap, and Neoprene rated for minimum 200 degrees F (93 degrees C).

C. Application: Use extended length plugs to clear insulated piping.

2.11 CALIBRATED BALANCING VALVES (CIRCUIT SETTERS)

A. Manufacturers:
   1. Macon, a brand of Tunstall Corporation: www.tunstall-inc.com/#sle

B. Size 2 inch (50 mm, DN) and Smaller:
   1. Provide ball or globe style with flow balancing, shut-off capabilities, memory stops, and minimum of two metering ports and NPT threaded connections.
   2. Body: bronze or brass.
   3. Maximum Service Operation: 300 psi at 250 degrees F (2,068 kPa at 121.1 degrees C).

C. Size 2-1/2 inch (65 mm, DN) and Larger:
   1. Provide ball, globe, or butterfly style with flow balancing, shut-off capabilities, memory stops, and minimum of two metering ports and ANSI Class 125 flanged connections.
   2. Body: cast iron, carbon steel, or ductile iron.

D. Construction:
   1. Gaskets: EPDM.
   2. Seat Seal: PTFE
   3. Handwheel: Engineered plastic.
   4. Positive shutoff and memory stop.

2.12 AUTOMATIC BALANCING/LIMITING VALVES

A. Manufacturers:
   1. Armstrong International: www.armstronginternational.com/#sle.
   2. Bell & Gossett, a brand of Xylem, Inc: www.bellgossett.com/#sle.
   3. Griswold Controls LLC: www.griswoldcontrols.com/#sle.
   4. Hays Fluid Controls; Mesurflo Balancing Valve: www.haysfluidcontrols.com/#sle.

5. Nexus Valve, Inc: www.nexusvalve.com/#sle.
6. Taco Inc: www.taco-hvac.com/#sle.

B. Construction:
1. Brass, bronze, or iron body with union on inlet and outlet, temperature and pressure test plug on inlet and outlet with blowdown/backflush drain.
2. Built-in lug-type outlet butterfly valve with 2-position handle.

C. Calibration: Control flow within 10 percent of selected rating, over operating pressure range of 10 times minimum pressure required for control, minimum pressure 2 psi (13.7 kPa).

D. Control Mechanism: Provide stainless steel or nickel-plated, brass piston or regulator cup, operating against stainless steel helical or wave formed spring or elastomeric diaphragm and polyphenylsulfone orifice plate.

E. Size: As indicated on drawings.

F. Accessories: Provide hanging tag, inlet in-line strainer, outlet ball valve, and PT test plug extension.

2.13 RELIEF VALVES

A. Manufacturers:
1. American Wheatley, a company of Global Flow Products, LLC: www.americanwheatley.com/#sle.
2. Apollo Valves: www.apollovalves.com/#sle.
3. Armstrong International, Inc: www.armstronginternational.com/#sle.
4. Bell & Gossett, a brand of Xylem, Inc: www.bellgossett.com/#sle.
5. Calefactio Solutions, Inc.: www.calefactio.com/#sle.

B. Bronze body, teflon seat, stainless steel stem and springs, automatic, direct pressure actuated, capacities ASME certified and labelled.

2.14 PRESSURE REDUCING VALVES

A. Manufacturers:
1. American Wheatley, a company of Global Flow Products, LLC: www.americanwheatley.com/#sle.
2. Apollo Valves: www.apollovalves.com/#sle.
3. Armstrong International, Inc: www.armstronginternational.com/#sle.
4. Bell & Gossett, a brand of Xylem, Inc: www.bellgossett.com/#sle.
5. Taco, Inc: www.taco-hvac.com/#sle.

B. Operation: Automatically feeds make-up water to the hydronic system whenever pressure in the system drops below the pressure setting of the valve. Refer to Section 23 21 13.

C. Materials of Construction:
1. Valve Body: Constructed of bronze, cast iron, brass, or iron.
2. Internal Components: Construct of stainless steel or brass and engineered plastics or composition material.

D. Connections:
1. NPT threaded: 1/2 inch (15 mm, DN) or 3/4inch (20 mm, DN).

E. Provide integral check valve and strainer.

F. Maximum Inlet Pressure: 400 psi (2,758 kPa).

G. Maximum Fluid Temperature: 180 degrees F (82 degrees C).

H. Adjustable Pressure Range: From 10 to 45 psi (69 to 310.3 kPa), set to 25 psi (172 kPa).

2.15 CONDENSATE ACID NEUTRALIZER

A. Manufacturers:
   1. Calefactio Solutions, Inc.: calefactio.com
   2. JJM Alkaline Technologies; NBT-Series and NB-Series: jjmalkalinetech.com

B. Description: Neutralize acidity of condensate from condensate-producing equipment.

C. Tank: Corrosion-resistant materials, removable lid.

D. Medium: Refillable pH power pellets.

E. Connections: NPT inlet and outlet sized as required for connected capacity.

F. Pump: Integral, only when required per drawings.

PART 3 EXECUTION

3.01 VALVE APPLICATIONS

A. Install shutoff-duty valves at each branch connection to supply mains and at supply connection to each piece of equipment.

B. Install throttling-duty valves at each branch connection to return main.

C. Install calibrated balancing valves in the return pipe of each heating or cooling terminal where not using pressure independent control valves.

D. Install check valves at each pump discharge and elsewhere as required to control flow direction.

3.02 HYDRONIC SPECIALTY INSTALLATION

A. Install specialties in accordance with manufacturer's instructions.

B. Provide manual air vents at system high points, at heat-transfer coils, and as indicated on the drawings.

C. For automatic air vents in ceiling spaces or other concealed locations, provide vent tubing to nearest drain.

D. Provide air separator on suction side of system circulation pump and connect to expansion tank.

E. Provide valved drain and hose connection on strainer blowdown and dirt separator connections.

F. Provide pump suction fitting on suction side of base-mounted centrifugal pumps where indicated. Remove temporary strainers after cleaning systems.

G. Provide combination pump discharge valve on discharge side of base mounted centrifugal pumps where indicated.

H. Support pump fittings with floor-mounted pipe and flange supports.

I. Provide relief valves on pressure tanks, low-pressure side of reducing valves, heat exchangers, and expansion tanks, hot water generators, and elsewhere as required by ASME Boiler and Pressure Vessel Code.

J. Select system relief valve capacity so that it is greater than make-up pressure reducing valve capacity. Select equipment relief valve capacity to exceed rating of connected equipment.

K. Pipe relief valve outlet to nearest floor drain or as indicated on the drawings. Where discharge may exceed 140 degrees F provide drain tempering valve. Comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1, for installation requirements.

L. Where one line vents several relief valves, make cross-sectional area equal to sum of individual vent areas.

M. Install pressure-reducing valves at makeup-water connections, including glycol fill lines, to regulate system fill pressure.

N. Install control valves and flow meters with manufacturer recommended minimum straight pipe upstream and downstream without fittings, valves or obstructions.

O. Where pressure independent control valves are specified but size or flow exceed manufacturer products, inline flow meter paired with pressure dependent control valve shall be used.

P. Install full-size bypass piping with ball valve or butterfly valve, depending on pipe size, around flow meters for serving flow meter.

Q. Install floor-set equipment on four-inch concrete housekeeping pads, or as indicated on the drawings.

R. Install condensate neutralizers on boilers and where shown on drawings.

SECTION 23 21 23
HYDRONIC PUMPS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. In-line pumps.

B. End-suction pumps.

1.02 RELATED REQUIREMENTS

A. Section 23 05 13 - Common Motor Requirements for HVAC Equipment.

B. Section 23 07 16 - HVAC Equipment Insulation.

C. Section 23 07 19 - HVAC Piping Insulation.

D. Section 23 09 34 - Variable-Frequency Motor Controllers for HVAC.

E. Section 23 21 13 - Hydronic Piping.

F. Section 23 21 14 - Hydronic Specialties.

1.03 REFERENCE STANDARDS

A. ASHRAE Std 135 - A Data Communication Protocol for Building Automation and Control Networks; 2024.

B. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

C. UL 778 - Standard for Motor-Operated Water Pumps; Current Edition, Including All Revisions.

1.04 SUBMITTALS

A. Product Data: Provide certified pump curves showing performance characteristics with pump and system operating point plotted. Include NPSH curve when applicable. Include electrical characteristics and connection requirements.

1.05 CLOSEOUT SUBMITTALS

A. Millwright's Certificate: Certify that base mounted pumps have been aligned.

B. Manufacturer's Installation Instructions: Indicate hanging and support requirements and recommendations.

C. Operation and Maintenance Data: Include installation instructions, assembly views, lubrication instructions, and replacement parts list.

D. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.

1.06 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacture, assembly, and field performance of pumps, with minimum three years of documented experience.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Armstrong Fluid Technology, Inc: www.armstrongfluidtechnology.com/#sle.

B. Bell & Gossett, a Xylem Inc. brand: www.bellgossett.com/#sle.

C. EBARA Pumps Americas Corporation: www.pumpsebara.com

D. Grundfos Pumps Corporation: www.grundfos.com/#sle.

E. Taco Comfort Solutions: www.tacocomfort.com.

2.02 GENERAL

A. Provide pumps that operate at specified system fluid temperatures without vapor binding and cavitation, are non-overloading in parallel or individual operation, and operate within 25 percent of midpoint of published maximum efficiency curve.

B. Minimum Quality Standard: UL 778.

C. Base Mounted Pumps: Aligned by qualified millwright.

D. Electrical Requirements:
   1. Listed and classified by UL or testing agency acceptable to authority having jurisdiction as suitable for the purpose specified and indicated.
   2. Variable Frequency Drives (VFDs): Provide in accordance with Section 23 09 34, except for integral-VFDs.

2.03 IN-LINE PUMPS

A. Closed-Coupled, Single-Stage Pump: Vertical pump with radially-split casing; rated for discharge pressures up to 175 psi (1200 kPa).

B. Split-Coupled, Single-Stage Pump: Vertical pump with radially-split casing; rated for discharge pressures up to 175 psi (1200 kPa).

C. Split-Coupled, Multi-Stage: Vertical pump with radially-split casing, integral controls, bottom mount suction, and discharge pipe connections with gauge ports rated for discharge pressures up to 580 psi (3999 kPa).

D. Casing: Cast iron with seal flush connection, flanged suction, and discharge ports with gauge port and drain plug.

E. Impeller: Stainless steel, fully enclosed, keyed directly to motor shaft or extension.

F. Shaft: Stainless steel with stainless steel impeller cap screw or nut and stainless steel sleeve.

G. Seal: Mechanical seal, 225 degrees F (107 degrees C) maximum continuous duty temperature.

H. Performance: As indicated on drawings.

I. Electrical:
   1. Motor: Electronically computated motor (ECM), 1,750 rpm, open drip-proof (ODP); see Section 23 05 13.
   2. Integral Controls:
      a. BAS, SCADA, or Other Integrated Automation Link: BACnet MS/TP in accordance with ASHRAE Std 135.
      b. Pump curves for fixed speed, proportional control, and constant pressure with selector knob.
      c. Status/fault indicators.
      d. Control mode button.
      e. Numeric display.

2.04 END-SUCTION PUMPS

A. Split-Coupled Pump: Base-mounted, single-stage pump with horizontal shaft and radially-split casing rated for discharge pressures up to 175 psi (1200 kPa).

B. Close-Coupled Pump: Base-mounted, single-stage pump with horizontal shaft and radially-split casing rated for discharge pressures up to 360 psi (2482 kPa).

C. Casing: Cast iron or ductile iron with renewable bronze casing wearing rings, seal flush connection, drain plug, flanged suction, and discharge flanged connections with gauge ports.

D. Impeller: Stainless steel, balanced, fully enclosed, keyed to shaft.

E. Bearings: Permanently lubricated roller or ball bearings.

F. Shaft: Alloy steel with copper, bronze, or stainless steel shaft sleeve.

G. Seal: Mechanical, 225 degrees F (107 degrees C) maximum continuous duty temperature.

H. Drive: Flexible coupling with coupling guard.

I. Baseplate: Cast iron or fabricated steel with integral drain rim.

J. Performance: As indicated on drawings.

K. Electrical:
   1. Motor: 1,750 rpm, total-enclosed, fan-cooled (TEFC); see Section 23 05 13.
   2. Wiring Terminations: Provide terminal lugs to match branch circuit conductor quantities, sizes, and materials indicated. Enclose terminal lugs in terminal box sized to NFPA 70.

PART 3 EXECUTION

3.01 PREPARATION

A. Verify that electric power is available and of the correct characteristics.

3.02 INSTALLATION

A. Comply with HI 1.4.

B. Install in accordance with manufacturer's instructions.

C. Provide access space around pumps for service. Provide no less than minimum space recommended by manufacturer.

D. Support piping adjacent to pump such that no weight is carried on pump casings. For base-mounted pumps, provide supports under elbows on pump suction and discharge lines.

E. Independently support inline pumps and piping so weight of piping is not supported by pumps and weight of pumps is not supported by piping.

F. Suspend inline pumps from wall brackets and continuous-thread hanger rods with spring hangers of sufficient size to support pump weight. Vibration isolation devices are specified in Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment." Fabricate brackets or supports as required. Hanger and support materials are specified in Division 23 Section "Hangers and Supports for HVAC Piping and Equipment."

G. Provide line sized shut-off valve and suction diffuser on pump inlet, and line sized triple duty valve or shut-off valve with check valve and calibrated balancing valve on pump discharge.

H. Install flexible connectors on suction and discharge sides of base-mounted pumps between pump casing and valves.

I. Provide air cock and drain connection on horizontal pump casings.

J. Install pressure gages on pump suction and discharge, at integral pressure-gage tapping, or install single gage with multiple input selector valve.

K. Provide drains for bases and seals, piped to and discharging into floor drains.

L. Check, align, and certify alignment of base-mounted pumps prior to start-up.

M. Install base-mounted pumps on concrete housekeeping base, with anchor bolts, set and level, and grout in place.

N. Controls: Interface each pump starter or VFD with building automation system..

SECTION 23 31 00
HVAC DUCTS AND CASINGS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Metal ducts.

B. Flexible ducts.

C. Nonmetal ducts.

D. Air plenums and casings.

E. Ducts for kitchen exhaust applications.

1.02 RELATED REQUIREMENTS

A. Section 23 01 30.51 - HVAC Air-Distribution System Cleaning: Post install duct cleaning.

B. Section 23 07 13 - Duct Insulation: External insulation and duct liner.

C. Section 23 33 00 - Air Duct Accessories.

D. Section 23 36 00 - Air Terminal Units.

E. Section 23 37 00 - Air Outlets and Inlets: Fabric air distribution devices.

1.03 REFERENCE STANDARDS

A. ASHRAE (FUND) - ASHRAE Handbook - Fundamentals; Most Recent Edition Cited by Referring Code or Reference Standard.

B. ASTM A36/A36M - Standard Specification for Carbon Structural Steel; 2019.

C. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process; 2023.

D. ASTM A666/A666M - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar; 2024.

E. ASTM B209/B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate; 2021a.

F. ASTM C177 - Standard Test Method for Steady-State Heat Flux Measurements and Thermal Transmission Properties by Means of the Guarded-Hot-Plate Apparatus; 2019, with Editorial Revision (2023).

G. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2024.

H. ASTM E119 - Standard Test Methods for Fire Tests of Building Construction and Materials; 2022.

I. ASTM E814 - Standard Test Method for Fire Tests of Penetration Firestop Systems; 2024.

J. ASTM E2336 - Standard Test Methods for Fire Resistive Grease Duct Enclosure Systems; 2020.

K. ICC-ES AC01 - Acceptance Criteria for Expansion Anchors in Masonry Elements; 2018, with Editorial Revision (2020).

L. ICC-ES AC193 - Acceptance Criteria for Mechanical Anchors in Concrete Elements; 2017, with Editorial Revision (2020).

M. NFPA 90A - Standard for the Installation of Air-Conditioning and Ventilating Systems; 2024.

N. NFPA 90B - Standard for the Installation of Warm Air Heating and Air-Conditioning Systems; 2024.

O. NFPA 96 - Standard for Ventilation Control and Fire Protection of Commercial Cooking Operations; 2024.

P. SMACNA (DCS) - HVAC Duct Construction Standards Metal and Flexible; 2020.

Q. SMACNA (KVS) - Kitchen Ventilation Systems and Food Service Equipment Fabrication and Installation Guidelines; 2001.

R. SMACNA (LEAK) - HVAC Air Duct Leakage Test Manual; 2012.

S. UL 181 - Standard for Factory-Made Air Ducts and Air Connectors; Current Edition, Including All Revisions.

T. UL 1479 - Standard for Fire Tests of Penetration Firestops; Current Edition, Including All Revisions.

U. UL 1978 - Grease Ducts; Current Edition, Including All Revisions.

V. UL 2221 - Tests of Fire Resistive Grease Duct Enclosure Assemblies; Current Edition, Including All Revisions.

1.04 SUBMITTALS

A. Product Data: Provide data for duct materials.

B. Shop Drawings: Indicate duct fitting types, gauges, sizes, welds, and configuration.

C. Manufacturer's Certificate: Certify that installation of glass fiber ductwork meets or exceed specified requirements.

D. Test Reports: Indicate pressure tests performed. Include date, section tested, test pressure, and leakage rate per appropriate seal class, following SMACNA (LEAK).

E. Manufacturer's Installation Instructions: Indicate special procedures for glass fiber ducts.

F. Project Record Documents: Record actual locations of ducts and duct fittings. Record changes in fitting location and type. Show additional fittings used.

1.05 QUALITY ASSURANCE

A. Installer Qualifications: Company specializing in performing the type of work specified in this section, with minimum three years of documented experience.

1.06 FIELD CONDITIONS

A. Do not install duct sealants when temperatures are less than those recommended by sealant manufacturers.

B. Maintain temperatures within acceptable range during and after installation of duct sealants.

PART 2 PRODUCTS

2.01 GENERAL REQUIREMENTS

A. Provide UL Class 1 ductwork, fittings, hangers, supports, and appurtenances in accordance with NFPA 90A and SMACNA (DCS) guidelines unless stated otherwise.

B. Provide metal duct unless otherwise indicated. Fibrous glass duct can be substituted at the Contractor's option.

C. Duct Shape and Material in accordance with Allowed Static Pressure Range:
   1. Round: Plus or minus 2 in-wc (500 Pa) of galvanized steel.
   2. Rectangular: Plus or minus 4 in-wc (995 Pa) of galvanized steel.
   3. Flat Oval: Plus 2 in-wc (500 Pa) of galvanized steel.

4. Fibrous Glass Duct-board: Plus or minus 2 in-wc (500 Pa).
5. Flexible Duct (Fabric and wire): Plus or minus 1/2 in-wc (125 Pa); see Section 23 37 00.

D. Duct Sealing and Leakage in accordance with Static Pressure Class:
1. Duct Pressure Class and Material for Common Mechanical Ventilation Applications:
   a. Supply Air:
      1) Air Handling Units: 3 in-wc (750 Pa) pressure class, galvanized steel.
      2) Fan Coil Units: 1 in-wc (250 Pa) pressure class, galvanized steel.
      3) Heat Pumps: 1 in-wc (250 Pa) pressure class, galvanized steel.
      4) Rooftop Units: 3 in-wc (750 Pa) pressure class, galvanized steel.
      5) Self-Contained Units: 1 in-wc (250 Pa) pressure class, galvanized steel.
      6) Terminal Units: 1 in-wc (250 Pa) pressure class, galvanized steel.
   b. Outside Air Intake: 1 in-wc (250 Pa) pressure class, galvanized steel.
   c. Return Air:
      1) Air Handling Units: 2 in-wc (500 Pa) pressure class, galvanized steel
      2) Fan Coil Units: 1 in-wc (250 Pa) pressure class, galvanized steel
      3) Heat Pumps: 1 in-wc (250 Pa) pressure class, galvanized steel
      4) Rooftop Units: 2 in-wc (500 Pa) pressure class, galvanized steel
      5) Self-Contained Units: 1 in-wc (250 Pa) pressure class, galvanized steel
      6) Terminal Units: 1 in-wc (250 Pa) pressure class, galvanized steel
   d. Relief Air: 1/2 in-wc (125 Pa) pressure class, galvanized steel.
   e. Exhaust Air:
      1) Dishwasher Exhaust: 1 in-wc (250 Pa) pressure class, aluminum.
      2) General Exhaust: 1 in-wc (250 Pa) pressure class, galvanized steel.
      3) Grease Exhaust: 3 in-wc (750 Pa) pressure class, 16-ga welded steel.
   f. Heating or Combustion Air: 1 in-wc (250 Pa) pressure class, galvanized steel.
   g. Transfer Air and Sound Booths: 1/2 in-wc (125 Pa) pressure class, galvanized steel, fibrous glass liner.
2. Seal Class Definitions:
   a. Class C: Apply sealing of traverse joints only.
   b. Class B: Apply sealing of traverse joints and longitudinal seams.
   c. Class A: Apply sealing of transverse joints, longitudinal seams, and duct wall penetrations.
3. Low Pressure Service: 1/2 in-wc (125 Pa) to 1 in-wc (250 Pa)
   a. Seal: Class A
   b. Leakage:
      1) Rectangular: Class 6, rate according to Table 1 (Table 2) below.
      2) Round: Class 3, rate according to Table 1 (Table 2) below.
4. Low Pressure Service: 2 in-wc (500 Pa):
   a. Seal: Class A
   b. Leakage:
      1) Rectangular: Class 6, rate according to Table 1 (Table 2) below.
      2) Round: Class 3, rate according to Table 1 (Table 2) below.
5. Medium Pressure Service: 3 in-wc (750 Pa) to 4 in-wc (1000 Pa):
   a. Seal: Class A
   b. Leakage:
      1) Rectangular: Class 3, rate according to Table 1 (Table 2) below.
      2) Round: Class 3, rate according to Table 1 (Table 2) below.

E. Duct Fabrication Requirements:

1. Duct and Fitting Fabrication and Support: SMACNA (DCS) including specifics for continuously welded round and oval duct fittings.
2. No variation of duct configuration or size permitted except by written permission and approval from the engineer of record.
3. Use reinforced and sealed sheet-metal materials at recommended gauges for indicated operating pressures or pressure class.
4. Construct tees, bends, and elbows with radius of not less than 1-1/2 times width of duct on centerline. Where not possible and where rectangular elbows must be used, provide airfoil turning vanes of perforated metal with glass fiber insulation.
5. Provide turning vanes of perforated metal with glass fiber insulation when acoustical lining is indicated.
6. Increase duct sizes gradually, not exceeding 15 degrees divergence wherever possible; maximum 30 degrees divergence upstream of equipment and 45 degrees convergence downstream.
7. Provide turning vanes of perforated metal with glass fiber insulation when an acoustical lining is required.
8. Where ducts are connected to exterior wall louvers and duct outlet is smaller than louver frame, provide blank-out panels sealing louver area around duct. Use same material as duct, painted black on exterior side; seal to louver frame and duct.
9. Exposed single-walled spiral ducts shall use "Sheet Metal Connectors, Inc." seals with E-Z Flange and barrel clamps, sizes 6"-96" diameter. Mastic, caulking and mudding are not approved equals to E-Z Flanges.
    a. Alternative to Sheet Metal Connectors is using "Aeroseal" injected inside ducts to seal entire system.
10. Rectangular ducts with flanges using TDC/TDF corners shall be properly sealed with no gaps.

2.02 METAL DUCTS

A. Material Requirements:
    1. Galvanized Steel: Hot-dipped galvanized steel sheet, ASTM A653/A653M FS Type B, with G60/Z180 coating.
    2. Aluminum: ASTM B209/B209M, aluminum sheet, alloy 3003-H14.
    3. Stainless Steel: ASTM A666, Type 304 or 316/316L depending on system.

B. Metal Duct Coating Requirements:
    1. Antimicrobial Coating: Factory- or field-applied in accordance with manufacturer's instructions.
    2. Specialty Coatings for Metal Ducts: Field-applied in accordance with manufacturer's instructions.
        a. Application: Sealing.
        b. Description: Stable, non-toxic, non-flammable emulsion of water and vinyl acetate polymer aerosolized into 4-10 micron particles distributed under pressure througout the inside of the duct system.
        c. Performance:
            1) Temperature: -20°F to 480°F
            2) Pressure: up to SMACNA Class 10 in-wg.
            3) VOC: <0.5 mg/cu-m
            4) Resistant to mold and mildew formation
        d. Manufacturers:
            1) Aeroseal, LLC; aeroseal Duct: aeroseal.com.

C. Rectangular Metal Duct:

1. Rectangular Double Wall Insulated: Rectangular spiral lock seam duct with aluminum outer wall, solid aluminum inner wall; fitting with the solid inner wall.
    a. Insulation:
        1) Thickness: As required for R-Value (see 23 07 13)
        2) Material: Fiberglass.
    b. Manufacturers:
        1) Sheet Metal Connectors, Inc.: www.smcduct.com
        2) McGill Airflow, LLC: www.mcgillairflow.com

D. Flat-Oval Metal Ducts:
1. Flat-Oval Single Wall Duct: Machine made from a round spiral lock seam duct.
    a. Fittings: Manufacture at least two gauges heavier metal than the duct.
    b. Provide duct material, gauges, reinforcing, and sealing for operating pressures indicated.

E. Round Metal Ducts:
1. Round Single Wall Duct: Round spirlock seam duct with galvanized steel outer wall.
    a. Manufacturers:
        1) EHG, a DMI Company: www.ehgduct.com
        2) Elgen Manufacturing Company, Inc; Snap Lock Pipes and Fittings: www.elgenmfg.com
        3) Lindab, Inc.: www.lindab.com
        4) Linx Industries, Inc, a DMI Company: www.li-hvac.com
        5) McGill Airflow, LLC: www.mcgillairflow.com
        6) MKT Metal Manufacturing: www.mktduct.com
        7) Nordfab Ducting: www.nordfabductwork.com
        8) SEMCO Incorporated: www.semcohvac.com
        9) Sheet Metal Connectors, Inc.: www.smcduct.com
        10) Spiral Manufacturing Co, Inc.: www.spiralmfg.com
2. Round Double Wall Insulated Duct: Round spiral lock seam duct with galvanized steel outer wall, perforated galvanized steel inner wall; fitting with the solid inner wall.
    a. Insulation:
        1) Thickness: As required for R-Value (see 23 07 13)
        2) Material: Fiberglass.
    b. Manufacturers:
        1) Sheet Metal Connectors, Inc.: www.smcduct.com
        2) McGill Airflow, LLC: www.mcgillairflow.com
3. Round Connection System: Interlocking duct connection system in accordance with SMACNA (DCS).

F. Connectors, Fittings, Sealants, and Miscellaneous:
1. Fittings: Manufacture with solid inner wall of perforated galvanized steel.
2. Rectangular Duct Construction:
    a. General Fabrication Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" based on indicated static-pressure class unless otherwise indicated.
    b. Transverse Joints: Select joint types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 1-4, "Transverse (Girth) Joints," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

c. Longitudinal Seams: Select seam types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 1-5, "Longitudinal Seams - Rectangular Ducts," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
d. Elbows, Transitions, Offsets, Branch Connections, and Other Duct Construction: Select types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 2, "Fittings and Other Construction," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

3. Round Duct Construction:
   a. Transverse Joints: Select joint types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-2, "Transverse Joints - Round Duct," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
      1) Transverse Joints in Ducts Larger Than 60 Inches in Diameter: Flanged.
   b. Longitudinal Seams: Select seam types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-1, "Seams - Round Duct and Fittings," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
      1) Fabricate round ducts larger Than 90 inches in diameter with butt-welded longitudinal seams.
   c. Tees and Laterals: Select types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-4, "90 Degree Tees and Laterals," and Figure 3-5, "Conical Tees," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
4. Joint Sealers and Sealants: Non-hardening, water resistant, mildew and mold resistant.
   a. Type: Heavy mastic or liquid used alone or with tape, suitable for joint configuration and compatible with substrates, and recommended by manufacturer for pressure class of ducts.
   b. VOC Content: Not more than 250 g/L, excluding water.
   c. Surface Burning Characteristics: Flame spread index of zero and smoke developed index of zero, when tested in accordance with ASTM E84.
   d. Two-Part Tape Sealing System:
      1) Tape: Woven cotton fiber impregnated with mineral gypsum and modified acrylic/silicone activator to react exothermically with tape to form hard, durable, airtight seal.
      2) Tape Width: 3 inches.
      3) Sealant: Modified styrene acrylic.
      4) Water resistant.
      5) Mold and mildew resistant.
      6) Maximum Static-Pressure Class: 10-inch wg, positive and negative.
      7) Service: Indoor and outdoor.
      8) Service Temperature: Minus 40 to plus 200 deg F.
      9) Substrate: Compatible with galvanized sheet steel (both PVC coated and bare), stainless steel, or aluminum.

e. Water-Based Joint and Seam Sealant:
   1) Application Method: Brush on.
   2) Solids Content: Minimum 65 percent.
   3) Shore A Hardness: Minimum 20.
   4) Water resistant.
   5) Mold and mildew resistant.
   6) VOC: Maximum 75 g/L (less water).
   7) Maximum Static-Pressure Class: 10-inch wg, positive and negative.
   8) Service: Indoor or outdoor.
   9) Substrate: Compatible with galvanized sheet steel (both PVC coated and bare), stainless steel, or aluminum sheets.

5. Flanged Joint Sealant:
   a. Comply with ASTM C 920.
   b. General: Single-component, acid-curing, silicone, elastomeric.
   c. Type: S.
   d. Grade: NS.
   e. Class: 25.
   f. Use: O.
6. Gasket Tape:
   a. Provide butyl rubber gasket tape for a flexible seal between transfer duct connector (TDC), transverse duct flange (TDF), applied flange connections, and angle ring connections.
7. Round Duct Joint O-Ring Seals:
   a. Seal shall provide maximum leakage class of 3 cfm/100 sq. ft. at 1-inch wg and shall be rated for 10-inch wg static-pressure class, positive or negative.
   b. EPDM O-ring to seal in concave bead in coupling or fitting spigot.

2.03 HANGERS AND SUPPORTS

A. Hanger Rod:
   1. Noncorrosive Environment: ASTM A36/A36M; steel, galvanized; threaded both ends, threaded one end, or continuously threaded.
   2. Corrosive Environemnt: ASTM A36/A36M; steel, electrogalvanized, painted with zinc-chomate primary after installation; threaded both ends, threaded one end, or continuously threaded.

B. Straps/Rod Sizes: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 4-1, "Rectangular Duct Hangers Minimum Size," and Table 4-2, "Minimum Hanger Sizes for Round Duct."

C. Cables:
   1. Steel Cables for Galvanized-Steel Ducts: Galvanized steel complying with ASTM A 603.
   2. Steel Cables for Stainless-Steel Ducts: Stainless steel complying with ASTM A 492.
   3. Steel Cable End Connections: Cadmium-plated steel assemblies with brackets, swivel, and bolts designed for duct hanger service; with an automatic-locking and clamping device.

D. Trapeze and Riser Supports:
   1. Supports for Galvanized-Steel Ducts: Galvanized-steel shapes and plates.

E. Fasteners:
   1. Hanger Fasteners: Attach hangers to structure using appropriate fasteners as follows:
      a. Concrete Wedge Expansion Anchors: Complying with ICC-ES AC193.

b. Masonry Wedge Expansion Anchors: Complying with ICC-ES AC01.
c. Beam clamps.
2. Duct Attachments: Sheet metal screws, blind rivets, or self-tapping metal screws; compatible with duct materials.

2.04 FLEXIBLE DUCTS

A. Flexible Ducts: UL 181, Class 1, mechanically fastened and rolled using galvanized steel to form spiral helix.
1. Insulation: R6 insulation with metalized polyester jacket reinforced with fiberglass scrim.
2. Pressure Rating: 10 in-wc (2.50 kPa) positive, 5 in-wc (1.25 kPa) negative up to 16-inch diameter, and 1 in-wc (0.25 kPa) negative for 18-inch through 20-inch diameter.
3. Maximum Velocity: 4000 fpm (20.3 m/sec).
4. Temperature Range: Minus 20 degrees F to 250 degrees F (Minus 28 degrees C to 121 degrees C).
5. Complies with ASTM E84 for flame spread and smoke development.
6. Manufacturers:
a. Flexmaster USA, a brand of Masterduct, Inc; Type 1M: www.flexmasterusa.com.
b. McGill Airflow, LLC; www.mcgillairflow.com.
c. Ward Industries, Inc., a division of Hart & Cooley, Inc.: hcflexduct.com.

2.05 NON-METAL DUCTS

A. Phenolic Ducts:
1. Duct Panel Core: Phenolic Foam Duct
a. Closed cell rigid thermoset phenolic resin material available in R-values up to R-28.
b. Maximum Temperatures: 185°F inside duct or ambient.
c. Maximum Thermal Conductivity: 0.146 Btu-in/hr-sq.ft-°F at 75°F mean temperature.
d. Manufactured with a blowing agent that has zero ozone depletion potential (ODP) and low global warming potential (GWP).
2. Application: Outdoor use.
3. Thermal Resistance: Preinsulated, nonfiborous.
a. R-Value: R-12
4. Static Pressure Construction:
a. Positive: 10 in-wc (2488.4 Pa).
b. Negative: 10 in-wc (2488.4 Pa).
5. Interior Wall:
a. Aluminum.
6. Exterior Cladding:
a. Aluminum: 0.040" Kynar 500 Pre-Finish embossed aluminum.
b. Finish: Mill.
7. Manufacturers:
a. Kingspan Insulation LLC; The Kingspan KoolDuct System: www.kingspaninsulation.us.
b. Thermaduct, LLC; Thermaround Outdoor Ductwork: www.thermaduct.com.

B. Fabric Ducts:
1. Manufacturers:
a. DuctSox Corporation: www.ductsox.com
2. Textile Construction: Filament/filament twill polyester treated with a machine washable anti-microbial agent by the fabric manufacturer, fire retardant in accordance with UL 2518.
a. Textile system to be constructed in modular lengths (zippered).

3. Air Permeability: Dependent on duct material.
    a. The air permeability of the fabric shall not be created by perforating the fabric.
    b. The air permeability must be confirmed be third party testing to eliminate the formation of condensate on the fabric.
4. Performance:
    a. Pressure: 0.25 in-wg to 3 in-wg (62.5 Pa to 750 Pa)
    b. Temperature: 0°F to 180°F (-17.8°C to 82°C)
    c. System overall design; diameter, length, airflow, operating static pressure and dispersion shall be designed or approved by the manufacturer.
    d. Use textile air dispersion systems only for positive pressure air distribution components of the mechanical ventilation system.
5. Suspension: As indicated on drawings, either by tension cable or U-track, with quantity of cables/tracks determined by duct size.
6. Integrated air dispersion as identified on drawings shall be specified and approved by manufacturer.
7. Options/Fittings: As identified on drawings.
8. Warranty: 10 years.

2.06 AIR PLENUMS AND CASINGS

A. Fabricate in accordance with SMACNA (DCS) for indicated operating pressures indicated.

B. Minimum Fabrication Requirements:
1. Fabricate acoustic plenum or casing with reinforcing turned inward.
2. Provide 16-gauge, 0.059-inch (1.52 mm) sheet steel back facing and 22-gauge, 0.029-inch (0.76 mm) perforated sheet steel front facing with 3/32 inch (2.4 mm) diameter holes on 5/32 inch (4 mm) centers.
3. Construct panels 3 inches (75 mm) thick, packed with 4.5 pcf (72 kg/cu m) minimum glass fiber insulation media, on inverted channel of 16-gauge, 0.059-inch (1.52 mm) sheet steel.
4. Mount floor-mounted plenum or casings on 4-inch (100 mm) high concrete curbs. At floor, rivet panels on 8-inch (200 mm) centers to angles. Where floors are acoustically insulated, provide liner of galvanized 18-gauge, 0.052-inch (1.31 mm) expanded metal mesh supported at 12-inch (300 mm) centers, turned up 12 inches (300 mm) at sides with sheet metal shields.

C. Access Doors:
1. Install hinged access doors where indicated or required for access to equipment for cleaning and inspection.
2. Reinforce door frames with steel angles tied to horizontal and vertical plenum supporting angles.
3. Provide clear wire glass observation ports, minimum 6 by 6 inch (150 by 150 mm) size.

D. Thermal Panels:
1. Material: Steel-faced composite panel with noncombustible structural high density mineral fiber core for plenum fabrication.
    a. Facing: Galvanized steel (G90), 24 gauge, 0.0275 inch (0.701 mm).
    b. Finish: Unpainted.
    c. Core: Mineral wool board.
    d. Structural: Nonload bearing.
2. R-Value: 12 when tested in accordance with ASTM C177.

E. Fire-Rated Metal Panels:
1. Fire Rating: 60 minutes when tested in accordance with ASTM E119.

2. Material: Steel-faced composite panel with noncombustible structural high density mineral fiber core, UL or ETL labeled, nonload bearing fire separations.
   a. Facing: Galvanized steel (G90), 24 gauge (0.0275 inch) (0.701 mm).
   b. Finish: Unpainted.
   c. Core: Mineral wool board.
   d. Structural: Nonload bearing.

2.07 DUCTS FOR KITCHEN EXHAUST APPLICATIONS

A. Provide ductwork, fittings, and appurtenances in accordance with NFPA 96, SMACNA (KVS), UL 1978, and UL 2221 requirements and guidelines.

B. Class 1 duct for air with gas and grease particle exhaust at an air velocity of 1,500 to 2,500 fpm (7.6 to 12.7 m/s).

C. Where ducts are not self-draining back to equipment, provide low-point drain pocket with the copper drain pipe to a sanitary sewer.

D. Design, fabricate, and install liquidtight preventing exhaust leakage into building.

E. Dishwasher Exhaust Duct:
   1. Duct: 1 in-wc (250 Pa) pressure class aluminum.
   2. Fabricate using single wall, 20-gauge, 0.032-inch type 3003-H14 aluminum sheet.
   3. Seal all joints water tight during installation.

F. Kitchen Hood and Grease Exhaust Duct:
   1. Fabricate in accordance with ductwork manufacturer's instructions, SMACNA (DCS), SMACNA (KVS), and NFPA 96.
   2. Zero Clearance, 2-Hour Fire-Rated, Rectangular, Grease Duct:
      a. Listed when tested in accordance with UL 1978 and ASTM E2336.
      b. Construct of 16-gauge, 0.059-inch (1.52 mm) sheet steel using continuous external welded joints in rectangular sections.
      c. Liquidtight with continuous external weld for seams and joints.
      d. Slope at 1/4 inch/foot back to hood for drainage.
      e. Where ducts are not self-draining back to equipment, provide low-point drain pocket with copper drain pipe to sanitary sewer.
      f. Through-penetration firestop listed to UL 1479 or ASTM E814.
      g. Wrap with grease fire wrap to achieve 2-hour fire rating.
   3. Grease Exhaust Duct Access Doors:
      a. Listed when tested in accordance with UL 1978.
      b. Install hinged access doors where indicated or required for access for cleaning and inspection of duct.
      c. Reinforce door frames with steel angles tied to horizontal and vertical plenum supporting angles.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install, support, and seal ducts in accordance with SMACNA (DCS).

B. Install products following the manufacturer's instructions.

C. Comply with safety standards NFPA 90A and NFPA 90B.

D. During construction, provide temporary closures of metal or taped polyethylene on open ductwork to prevent construction dust from entering the ductwork system.

E. Increase duct sizes gradually, not exceeding 15 degrees divergence wherever possible; maximum 30 degrees divergence upstream of equipment and 45 degrees convergence downstream.

F. Flexible Ducts: Connect to metal ducts per Air Diffusion Council installation standards with 2-inch bead collars and draw band with sealant..

G. Install flexible ducts with turn-radius of 1.5x utilizing rigid elbow supports.

H. Flexible ducts shall be limited to 4 feet maximum length and shall be limited to the following locations, unless noted otherwise on drawings:
   1. Supply air ductwork at diffuser, register and grille connections.
   2. Return air ductwork at grille conenctions above accessible ceilings for directly-ducted systems (except where prohibited). Transfers and plenum return systems shall not use flexible ducts.
   3. Flexible duct is not permitted for use for exhaust duct connections to grilles and equipment.

I. Kitchen Range Hoods: Install when provided by food service then fit-out with respective ductwork and accessories to interconnect exhaust system.

J. Kitchen Hood Exhaust: Provide residue traps at the base of vertical risers with provisions for the cleanout.

K. Duct sizes indicated are precise inside dimensions. For lined ducts, maintain sizes inside lining.

L. Provide openings in ductwork as indicated to accommodate thermometers and controllers. Provide pilot tube openings as indicated for testing of systems, complete with metal can with spring device or screw to insure against air leakage. For openings, insulate ductwork and install insulation material inside a metal ring.

M. Locate ducts with sufficient space around equipment to allow normal operating and maintenance activities.

N. Use double nuts and lock washers on threaded rod supports.

O. At exterior wall louvers, seal duct to louver frame and install blank-out panels.

P. Louver Fit-out:
   1. Provide blank-out panels sealing available area of wall-mounted exterior-faced louver when connected ductwork is smaller than actual louver free area, and duct outlet is smaller than the louver frame.
   2. Use the same duct material painted black on the exterior side, then seal louver frame and duct.

Q. Fire Partitions: Provide firestopping sealing.

R. Duct Accessories, Terminal Units, Inlets, and Outlets: Interconnect as indicated in Sections 23 33 00, 23 36 00, and 23 37 00.

S. Duct Insulation: Provide duct insulation. See Section 23 07 13.

T. Painting: Provide surface finish as indicated on drawings.

3.02 INSTALLATION OF EXPOSED DUCTWORK

A. Protect ducts exposed in finished spaces from being dented, scratched, or damaged.

B. Duct sealants shall not be silicone based to allow painting of all surfaces.

C. Trim duct sealants flush with metal. Create a smooth and uniform exposed bead. Do not use two-part tape sealing system.

D. Maintain consistency, symmetry, and uniformity in the arrangement and fabrication of fittings, hangers and supports, duct accessories, and air outlets.

E. Repair or replace damaged sections and finished work that does not comply with these requirements.

F. Install fabric duct suspension system in accordance with the requirements of the manufacturer. Instructions for installation shall be provided by the manufacturer with product.
   1. Do not install fabric duct until space post-construction cleaning is complete. If fabric duct systems become soiled during installation, they should be removed and cleaned following the manufacturers standard terms of laundry.

3.03 DUCT SEALING

A. Seal ducts for duct static-pressure, seal classes, and leakage classes specified in "Duct Schedule" Article according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

B. Leakage Test:
   1. Comply with SMACNA's "HVAC Air Duct Leakage Test Manual." Submit a test report for each test.
   2. Test the following systems:
      a. Supply ducts on VAV systems greater than 10,000 CFM: Test representative duct sections selected by building owner or designated representative of building owner from sections installed, totaling no less than 25 percent of total installed duct area for each air handler. Air handlers to be tested include RTU/AHU-XX.
      b. Exhaust ducts on locker room ERU systems: Test representative duct sections selected by building owner or designated representative of building owner from sections installed, totaling no less than 25 percent of total installed duct area for each air handler. Air handlers to be tested include ERU-XX.
   3. Leak test each section of duct within a concealed shaft.
   4. Disassemble, reassemble, and seal segments of systems to accommodate leakage testing and for compliance with test requirements.
   5. Test for leaks before applying external insulation.
   6. Conduct test at static pressures equal to maximum design pressure of system or section being tested. If static pressure classes are not indicated, test system at maximum system design pressure. Do not pressurize systems above maximum design operating pressure.
   7. Give seven days' advance notice for testing.

C. Maximum Allowable Leakage: Comply with requirements for leakage class 3 for ducts with a duct pressure classification greater than 2-inches, and for leakage class 6 for ducts with duct pressure classification 2-inches or less.

3.04 HANGER AND SUPPORT INSTALLATION

A. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 4, "Hangers and Supports."

B. Building Attachments: Concrete inserts, powder-actuated fasteners, or structural-steel fasteners appropriate for construction materials to which hangers are being attached.
   1. Where practical, install concrete inserts before placing concrete.
   2. Install powder-actuated concrete fasteners after concrete is placed and completely cured.
   3. Use powder-actuated concrete fasteners for standard-weight aggregate concretes or for slabs more than 4 inches thick.
   4. Do not use powder-actuated concrete fasteners for lightweight-aggregate concretes or for slabs less than 4 inches thick.

5. Do not use powder-actuated concrete fasteners for seismic restraints.

C. Hanger Spacing: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 4-1, "Rectangular Duct Hangers Minimum Size," and Table 4-2, "Minimum Hanger Sizes for Round Duct," for maximum hanger spacing; install hangers and supports within 24 inches of each elbow and within 48 inches of each branch intersection.

D. Hangers Exposed to View: Threaded rod and angle or channel supports.

E. Support vertical ducts with steel angles or channel secured to the sides of the duct with welds, bolts, sheet metal screws, or blind rivets; support at each floor and at a maximum intervals of 16 feet.

F. Install upper attachments to structures. Select and size upper attachments with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

3.05 FITTING INSTALLATION

A. Elbow Configuration:
   1. Rectangular Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-2, "Rectangular Elbows."
      a. Velocity 1000 fpm or Lower:
         1) Radius Type RE 1 with minimum 0.5 radius-to-diameter ratio.
         2) Mitered Type RE 4 without vanes.
      b. Velocity 1000 to 1500 fpm:
         1) Radius Type RE 1 with minimum 1.0 radius-to-diameter ratio.
         2) Radius Type RE 3 with minimum 0.5 radius-to-diameter ratio and two vanes.
         3) Mitered Type RE 2 with vanes complying with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-3, "Vanes and Vane Runners," and Figure 2-4, "Vane Support in Elbows."
      c. Velocity 1500 fpm or Higher:
         1) Radius Type RE 1 with minimum 1.5 radius-to-diameter ratio.
         2) Radius Type RE 3 with minimum 1.0 radius-to-diameter ratio and two vanes.
         3) Mitered Type RE 2 with vanes complying with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-3, "Vanes and Vane Runners," and Figure 2-4, "Vane Support in Elbows."
   2. Rectangular Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-2, "Rectangular Elbows."
      a. Radius Type RE 1 with minimum 1.5 radius-to-diameter ratio.
      b. Radius Type RE 3 with minimum 1.0 radius-to-diameter ratio and two vanes.
      c. Mitered Type RE 2 with vanes complying with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-3, "Vanes and Vane Runners," and Figure 2-4, "Vane Support in Elbows."
   3. Round Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-3, "Round Duct Elbows."
      a. Minimum Radius-to-Diameter Ratio and Elbow Segments: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 3-1, "Mitered Elbows." Elbows with less than 90-degree change of direction have proportionately fewer segments.
         1) Velocity 1000 fpm or Lower: 0.5 radius-to-diameter ratio and three segments for 90-degree elbow.
         2) Velocity 1000 to 1500 fpm: 1.0 radius-to-diameter ratio and four segments for 90-degree elbow.

3) Velocity 1500 fpm or Higher: 1.5 radius-to-diameter ratio and five segments for 90-degree elbow. Radius-to Diameter Ratio: 1.5.

b. Round Elbows, 12 Inches and Smaller in Diameter: Stamped or pleated.
c. Round Elbows, 14 Inches and Larger in Diameter: Standing seam.
d. Long Sweep Elbows: Utilize for dryer exhaust, bath fan exhaust and kitchen hood exhaust.

B. Branch Configuration:
1. Rectangular Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-6, "Branch Connections."
a. Rectangular Main to Rectangular Branch: 45-degree entry.
b. Rectangular Main to Round Branch: Spin in.
2. Round: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-4, "90 Degree Tees and Laterals," and Figure 3-5, "Conical Tees."
a. Velocity 1000 fpm or Lower: 90-degree tap.
b. Velocity 1000 to 1500 fpm: Conical tap.
c. Velocity 1500 fpm or Higher: 45-degree lateral.

3.06 CONNECTIONS

A. Make connections to equipment with flexible connectors complying with Division 23 Section "Air Duct Accessories."

B. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for branch, outlet and inlet, and terminal unit connections.

3.07 DUCT SCHEDULE

A. Aluminum sheet:
1. Pool Equipment Room (RTU-8, EF-6), Supply, Return and Exhaust.
2. Locker Room Exhaust (EF-1,8,10,11)
3. Dryer exhaust: Flanged and gasketed joints or pop riveted joints with no sheet metal screws extending into ductwork.
4. Dishwasher Exhast (EF-4): All seams shall be sealed waterright.
5. All ducts passing through pool, pool equipment and other corrosive environments shall be aluminum sheet.

B. Exterior duct shall be one of the following:
1. One of the listed phenolic ducts:
a. Minimum insulation: R-12
b. Metal exterior cladding: minimum thickness of 0.040” (18 gauge)
2. Double wall with solid non-perforated aluminum inner liner:
a. Minimum insulation: R-12 insulation liner between duct walls.
b. Exterior duct skin shall be aluminum with all joints sealed water tight.

C. Grease duct from kitchen hood to exhaust fan shall be 16 gauge welded class 1 grease duct with (2) 1-1/2" layers of 3M 615+ grease duct wrap for 2 hour shaft rating. Continue firewrap over top of hood as required per local codes. No dampers, turning vanes, or obstructions of any kind shall be in airstream. Contractor shall install code required access panels for cleaning duct at all elbows and where required by code.

END OF SECTION

SECTION 23 33 00
AIR DUCT ACCESSORIES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Air turning vanes/extractors.

B. Backdraft dampers.

C. Barometric pressure relief dampers.

D. Combination fire and smoke dampers.

E. Duct access doors.

F. Duct test holes.

G. Fire dampers.

H. Flexible duct connectors.

I. Smoke dampers.

J. Volume control dampers.
   1. Manual volume dampers.
   2. Automatic balancing dampers
   3. Remote damper operators.
   4. Iris dampers.

K. Wall Caps

L. Miscellaneous Products:
   1. Fire-rated enclosures.
   2. Duct opening closure film.

1.02 RELATED REQUIREMENTS

A. Section 23 31 00 - HVAC Ducts and Casings.

B. Section 23 36 00 - Air Terminal Units: Pressure regulating damper assemblies.

1.03 REFERENCE STANDARDS

A. AMCA 500-D - Laboratory Methods of Testing Dampers for Rating; 2018.

B. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2024.

C. NFPA 90A - Standard for the Installation of Air-Conditioning and Ventilating Systems; 2024.

D. NFPA 92 - Standard for Smoke Control Systems; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

E. NFPA 96 - Standard for Ventilation Control and Fire Protection of Commercial Cooking Operations; 2024.

F. SMACNA (DCS) - HVAC Duct Construction Standards Metal and Flexible; 2020.

G. UL 33 - Safety Heat Responsive Links for Fire-Protection Service; Current Edition, Including All Revisions.

H. UL 94 - Tests for Flammability of Plastic Materials for Parts in Devices and Appliances; Current Edition, Including All Revisions.

I. UL 181 - Standard for Factory-Made Air Ducts and Air Connectors; Current Edition, Including All Revisions.

J. UL 555 - Standard for Fire Dampers; Current Edition, Including All Revisions.

K. UL 555S - Standard for Smoke Dampers; Current Edition, Including All Revisions.

L. UL 723 - Standard for Test for Surface Burning Characteristics of Building Materials; Current Edition, Including All Revisions.

M. UL 2043 - Fire Test for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air-Handling Spaces; Current Edition, Including All Revisions.

1.04 SUBMITTALS

A. Product Data: Provide for shop-fabricated assemblies including rated capacities, furnished specialties, and accessories for each type of product. Include electrical characteristics, connection requirements and wiring diagrams.

B. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.

C. Manufacturer's Installation Instructions: Provide instructions for fire dampers.

D. Project Record Drawings: Record actual locations of access doors and test holes.

1.05 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.
   1. Product data
   2. Product certificates
   3. Field quality-control test reports.
   4. Wiring Diagrams.
   5. Warranty: Sample of warranty.

PART 2 PRODUCTS

2.01 AIR TURNING VANES/EXTRACTORS

A. Manufacturers:
   1. Tuttle and Bailey; Ductturns

B. Multi-blade device with push on rail and hollow turning vanes with snap-lock eliminating peening and welding; construction matching duct material.

2.02 BACKDRAFT DAMPERS

A. Manufacturers:
   1. Greenheck Fan Corporation; EM-Series: www.greenheck.com
   2. Nailor Industries, Inc: www.nailor.com
   3. Pottorff: www.pottorff.com
   4. Ruskin Company: www.ruskin.com.

B. Mounting Orientation: As indicated on the drawings.

C. Construction:
   1. Frame: 0.125 in. extruded aluminum (6063T5) frame with screwed corners.
   2. Blades: Damper blades shall be 0.070 in. extruded aluminum (6063T5).
   3. Blade Edge Seals: Vinyl mechanically fastened to each blade.
   4. Linkage: On blade, plated steel material.
   5. Axles: Aluminum.
   6. Bearings: Synthetic (acetal) sleeve.
   7. Finish: Mill.

D. Performance:
   1. Leakage:
      a. Maximum of 10 cfm at 1" w.g. tested in accordance with AMCA 500-D.
      b. Maximum of 8.9 cfm/sq.ft. at 1" w.g. with a width of height of 24 inch or greater, tested in accordance with AMCA 500-D.
   2. Differential Pressure: Maximum rating of 4" w.g. or 10" w.g. depending on duct system classification.
   3. Velocity: Maximum rating of 3500 fpm (18 m/s).

2.03 BAROMETRIC PRESSURE RELIEF DAMPER

A. Manufacturers:
   1. Greenheck Fan Corporation; BR-Series: www.greenheck.com.
   2. Nailor Industries, Inc: www.nailor.com.
   3. Pottorff: www.pottorff.com.
   4. Ruskin Company: www.ruskin.com.

B. Damper provides pressure relief at differential pressure set points. Blades begin to open in parallel action when start-to-open pressure relief point is reached. Damper continues to open as pressure differential increases. Blades fully open once full-open pressure differential is reached.

C. Mounting Orientation: As indicated on drawings.

D. Construction:
   1. Frame Construction: 16-gauge galvanized steel, extruded aluminum, or stainless steel matching duct material.
   2. Blade: Use aluminum, galvanized steel, or stainless steel matching frame material.
   3. Blade Stops: Each blade stop (at top and bottom of damper frame) shall occupy no more than 3-1/2 in. of the damper opening area to allow for maximum free area and to minimize pressure loss across the damper.
   4. Seals: TPE blade edge, EPDM jamb.
   5. Linkage: External steel tie bars.
   6. Axles: Use galvanized steel or stainless steel.
   7. Bearings: Use stainless steel or synthetic.

E. Differential Pressure Rating Maximum: 2 in-wc (498 Pa). Full-open set point is adjustable.

F. Start-to-Open Pressure: 0.05 in-wc (12.4 Pa). Start-to-open set point is adjustable.

G. Velocity Rating: Rated for 2,000 fpm (10.2 m/sec).

H. Pressure Opening Mechanism: Use blade-mounted counterbalance weight. Adjustable in field.

2.04 COMBINATION FIRE AND SMOKE DAMPERS

A. Manufacturers:
   1. AireTechnologies, Inc, a DMI Company: www.airetechnologies.com.
   2. Greenheck Fan Corporation: wwww.greenheck.com.
   3. Nailor Industries, Inc: www.nailor.com/#
   4. Pottorff: www.pottorff.com.
   5. Ruskin Company: www.ruskin.com.

B. Type: Dynamic, rated and labeled in accordance with NFPA 90A, UL 555, UL 555S by an NRTL.

C. Performance:
   1. Fire Rating:

a. 1-1/2 hours for less than 3-hour assemblies.
b. 3 hours for greater than 3-hour assemblies.
2. Maximum Velocity: 2000 fpm (10.2 m/s).
3. Maximum Pressure: 4" .w.g (1 kPa).
4. Leakage Class I.
5. Maximum Temperature: 250 deg. F (121 deg. C).

D. Provide factory sleeve and collar for each damper.

E. Multiple Blade Dampers: Fabricate with 16 gauge, 0.0598 inch (1.52 mm) galvanized steel frame and blades, oil-impregnated bronze or stainless steel sleeve bearings and plated steel axles, stainless steel jamb seals, 1/8 by 1/2 inch (3.2 by 12.7 mm) plated steel concealed linkage, stainless steel closure spring, blade stops, and lock, and 1/2 inch (12.7 mm) actuator shaft.

F. Operators: UL listed and labeled; spring-return, electric-type suitable for 120 volts, single phase, 60 Hz. Locate damper operator on exterior of duct and link to damper operating shaft.

G. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in 23 05 13 - Common Motor Requirements for HVAC Equipment.
1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
2. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in Division 26 Sections.
3. Permanent-Split-Capacitor or Shaded-Pole Motors: With oil-immersed and sealed gear trains.
4. Spring-Return Motors: Equip with an integral spiral-spring mechanism where indicated. Enclose entire spring mechanism in a removable housing designed for service or adjustments. Size for running torque rating of 150 in. x lbf (17 N x m) and breakaway torque rating of 150 in. x lbf (17 N x m).
5. Outdoor Motors and Motors in Outdoor-Air Intakes: Equip with O-ring gaskets designed to make motors weatherproof. Equip motors with internal heaters to permit normal operation at minus 40 deg F (minus 40 deg C).
6. Nonspring-Return Motors: For dampers larger than 25 sq. ft. (2.3 sq. m), size motor for running torque rating of 150 in. x lbf (17 N x m) and breakaway torque rating of 300 in. x lbf (34 N x m).

H. Electro Thermal Link: Fusible link melting at 165 degrees F (74 degrees C); 120 volts, single phase, 60 Hz; UL listed and labeled.

I. Smoke detector furnished and wired Division 26.

J. Accessories:
1. Dual auxiliary switches for position indication.
2. Momentary test and reset switches, damper remote mounted.

2.05 DUCT ACCESS DOORS

A. Manufacturers:
1. Acudor Products Inc, a Division of Nelson Industrial Inc: www.acudor.com.
2. Ductmate Industries, Inc, a DMI Company: www.ductmate.com.
3. Greenheck Fan Corporation: www.greenheck.com
4. Nailor Industries, Inc: www.nailor.com.
5. Ruskin Company: www.ruskin.com.
6. SEMCO LLC: www.semcohvac.com.

B. Fabrication in accordance with SMACNA (DCS). Rigid and close fitting of galvanized steel with sealing gaskets and quick-fastening locking devices. For insulated ducts, install minimum 1-inch (25 mm) thick insulation with sheet metal cover.

C. Door:
   1. Double wall, rectangular.
   2. Galvanized sheet metal with insulation fill and thickness as indicated for duct pressure class.
   3. Vision panel.
   4. Hinges and Latches: 1-by-1-inch butt or piano hinge and cam latches.
   5. Fabricate doors airtight and suitable for duct pressure class.

D. Quantity of Hinges and Locks:
   1. Less Than 12 inches (300 mm) Square: No hinges and two sash locks
   2. Up to 18 inches (450 mm) Square: Two hinges and two sash locks..
   3. Up to 24 by 48 inches (600 by 1200 mm): Three hinges and two compression latches with outside and inside handles.
   4. Larger Sizes: Four hinges and two compression latches with outside and inside handles..
   5. High Temperature Duct Access Doors:
      a. Comply with NFPA 96.

2.06 DUCT TEST HOLES

A. Temporary Test Holes: Cut or drill in ducts as required. Cap with neat patches, neoprene plugs, threaded plugs, or threaded or twist-on metal caps.

2.07 FIRE DAMPERS

A. Manufacturers:
   1. AireTechnologies, Inc, a DMI Company: www.airetechnologies.com.
   2. Greenheck Fan Corporation: www.greenheck.com.
   3. Nailor Industries, Inc: www.nailor.com/#sle.
   4. Pottorff: www.pottorff.com.
   5. Ruskin Company: www.ruskin.com

B. Type: Dynamic, rated and labeled in accordance with NFPA 90A and UL 555.

C. Performance:
   1. Fire Rating:
      a. 1-1/2 hours for less than 3-hour assemblies.
      b. 3 hours for greater than 3-hour assemblies.
   2. Velocity: 4000 fpm vertical, 2000 fpm horizontal
   3. Maximum Pressure: 4" w.g. (1 kPa)

D. Curtain Type Dampers: Galvanized steel with interlocking blades. Provide stainless steel closure springs and latches for horizontal installations or closure under air flow conditions. Configure with blades out of air stream.

E. Fusible Links: UL 33, separate at 165 degrees F (73.8 degrees C) with adjustable link straps for combination fire/balancing dampers.

F. Frame: Type B, curtain type with blades outside airstream; fabricated with roll-formed, 0.034-inch- thick galvanized steel; with mitered and interlocking corners.

G. Sleeve: Factory installed, galvanized sheet steel.
   1. Minimum Thickness: 0.052 or 0.138-inch-thick, as indicated, and of length to suit application.

2. Exception: Omit sleeve where damper-frame width permits direct attachment of perimeter mounting angles on each side of wall or floor; thickness of damper frame must comply with sleeve requirements.

H. Mounting Orientation: Vertical or horizontal as indicated.

I. Blades: Roll-formed, interlocking, 0.034-inch- thick, galvanized sheet steel. In place of interlocking blades, use full-length, 0.034-inch- thick, galvanized-steel blade connectors.

2.08 FLEXIBLE DUCT CONNECTORS

A. Manufacturers:
1. Johns-Manville
2. Carlisle HVAC Products; Dynair Connector Plus G90 Steel Offset Seam Neoprene Fabric: www.carlislehvac.com.
3. Ductmate Industries, Inc, a DMI Company: www.ductmate.com.
4. Elgen Manufacturing Company, Inc: www.elgenmfg.com.

B. Fabricate in accordance with SMACNA (DCS) and as indicated.

C. General Indoor Use Flexible Connections: Fabric crimped into metal edging strip.
1. Fabric: UL listed fire-retardant neoprene coated woven glass fiber fabric to NFPA 90A, minimum density 30 oz/sq yd (1.0 kg/sq m).
a. Net Fabric Width: Approximately 2 inches (50 mm) wide.
2. Metal: 3 inches (75 mm) wide, 24 gauge, 0.0239 inch (0.61 mm) thick galvanized steel.
3. Coatings and Adhesives: Comply with UL 181, Class I.

2.09 SMOKE DAMPERS

A. Manufacturers:
1. AireTechnologies, Inc, a DMI Company: www.airetechnologies.com.
2. Greenheck Fan Corporation: www.greenheck.com.
3. Nailor Industries, Inc: www.nailor.com.
4. Pottorff: www.pottorff.com.
5. Ruskin Company: www.ruskin.com.

B. Fabricate in accordance with NFPA 90A and UL 555S, and as indicated.

C. Dampers: UL Class 1 airfoil blade type smoke damper, normally open automatically operated by electric actuator.

D. Operators: UL listed and labeled; spring-return, electric-type suitable for 120 volts, single phase, 60 Hz. Locate damper operator on exterior of duct and link to damper operating shaft.

E. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in 23 05 13 - Common Motor Requirements for HVAC Equipment.
1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
2. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in Division 26 Sections.
3. Permanent-Split-Capacitor or Shaded-Pole Motors: With oil-immersed and sealed gear trains.
4. Spring-Return Motors: Equip with an integral spiral-spring mechanism where indicated. Enclose entire spring mechanism in a removable housing designed for service or adjustments. Size for running torque rating of 150 in. x lbf (17 N x m) and breakaway torque rating of 150 in. x lbf (17 N x m).

5. Outdoor Motors and Motors in Outdoor-Air Intakes: Equip with O-ring gaskets designed to make motors weatherproof. Equip motors with internal heaters to permit normal operation at minus 40 deg F (minus 40 deg C).
6. Nonspring-Return Motors: For dampers larger than 25 sq. ft. (2.3 sq. m), size motor for running torque rating of 150 in. x lbf (17 N x m) and breakaway torque rating of 300 in. x lbf (34 N x m).

F. Electro Thermal Link: Fusible link melting at 165 degrees F (74 degrees C); 120 volts, single phase, 60 Hz; UL listed and labeled.

G. Smoke detector furnished and wired Division 26.

H. Accessories:
1. Dual auxiliary switches for position indication.
2. Momentary test and reset switches, damper remote mounted.

2.10 VOLUME CONTROL DAMPERS

A. Manufacturers (unless noted otherwise in each subsection):
1. AireTechnologies, Inc, a DMI Company: www.airetechnologies.com.
2. Louvers & Dampers, Inc, a brand of Mestek, Inc: www.louvers-dampers.com.
3. MKT Metal Manufacturing: www.mktduct.com.
4. Greenheck Fan Corporation: www.greenheck.com
5. Nailor Industries, Inc: www.nailor.com.
6. Pottorff: www.pottorff.com.
7. Ruskin Company: www.ruskin.com.
8. United Enertech: www.unitedenertech.com.

B. Fabricate in accordance with SMACNA (DCS) and as indicated.

C. Splitter Dampers:
1. Material: Same gauge as duct to 24 inches (600 mm) size in either direction, and two gauges heavier for sizes over 24 inches (600 mm).
2. Blade: Fabricate of single thickness sheet metal to streamline shape, secured with continuous hinge or rod.
3. Operator: Minimum 1/4 inch (6 mm) diameter rod in self aligning, universal joint action, flanged bushing with set screw.

D. Single Blade Dampers:
1. Fabricate for duct sizes up to 6 by 30 inch (150 by 760 mm).
2. Blade: 24 gauge, 0.0239 inch (0.61 mm), minimum.

E. Multi-Blade Damper: Fabricate consisting of opposed blades with maximum blade sizes 8 by 72 inches (200 by 1825 mm). Assemble center- and edge-crimped blades in prime-coated or galvanized-channel frame with suitable hardware.
1. Blade: 18 gauge, 0.0478 inch (1.21 mm), minimum.

F. End Bearings: Except in round ducts 12 inches (300 mm) and smaller, provide end bearings. On multiple blade dampers, provide oil-impregnated nylon, thermoplastic elastomer, or sintered bronze bearings.

G. Quadrants:
1. Provide locking, indicating quadrant regulators on single and multi-blade dampers.
2. On insulated ducts mount quadrant regulators on stand-off mounting brackets, bases, or adapters.
3. Where rod lengths exceed 30 inches (750 mm) provide regulator at both ends.

H. Automatic Balancing Dampers:

1. General Requirements:
    a. Provide bi-directional, air balancing regulator for pressure independent air volume control.
    b. Complies with UL 2043 for heat and smoke release.
    c. Complies with AMCA 500-D for the allowable leakage rates.
    d. Airflow regulator to be field adjustable.
2. Construction:
    a. Frame: Thermoplastic resin in compliance with UL 94.
    b. Blade: Thermoplastic resin in compliance with UL 94.
    c. Bearings: Hydraulic blade dampener.
    d. Outer Seal: Removable rubber gasket-type around circumference of damper.
    e. Spring: Stainless steel leaf-type.
    f. Temperature Range: 25 to 150 degrees F (Minus 4 to 65 degrees C) .
    g. Operating Range: 0.2 to 2 in-wc (50 to 498 Pa).
    h. Airflow Range: 25 cfm to 450 cfm across sizes 4" to 8".
3. Accessories:
    a. Provide with rectangular to round transitions where fully ducted.
    b. Include access hatch in duct for access to adjustment for balancing.
4. Manufacturers:
    a. Automatic Airflow Balancing, a brand of Metal Industries Inc: www.airflowbalancing.com.
    b. Greenheck Fan Corporation; ABD (basis of design): www.greenheck.com
    c. Ruskin Company: www.ruskin.com.
    d. United Enertech: www.unitedenertech.com.
    e. Substitutions: See Section 01 60 00 - Product Requirements.

I. Remote Damper Operators:
1. Description: Manual, worm-gear driven, cable actuated volume damper controller with ceiling operator. Damper operator mounts to damper shaft secured to duct.
2. Mounting: Universal accommodating damper shaft sizes from 1/4" to 3/8" square, or 1/4" to 1/2" round.
3. Cable: 1/4" plated steel rotary cable.
4. Ceiling Operator: Metal mounting bracket securing the 1/4" diameter brass plated steel rotary cable in a ceiling opening. Cable driven by 1/4" hex nut driver.
    a. Include nylon cap to seal the ceiling access hole.
5. Manufacturers:
    a. Greenheck Fan Corporation: www.greenheck.com
    b. Metropolitan Air Technologies; RT-WGA with RT-CCM (basis of design): metair
    c. Young Regulator Company: youngregulator.com.

J. Iris Dampers:
1. Description: Manually adjusted damper comprising of blades providing circular free area at the center of the damper, integral pressure ports, and adjustment knob.
2. Construction:
    a. Material: 22 ga. galvanized steel or 316 stainless steel depending on duct material.
    b. Connections: Beaded and EPDM gasketed.
    c. Pressure taps across damper for precise airflow measurement with manufacturer's tables/charts.
3. Performance:
    a. Controllability: +/- 5 percent of design flow.

b. Leakage: Not exceed 6 cfm.

4. Manufacturers:
   a. Continental Fan; IRIS-Series (basis of design): continentalfan.com.
   b. Ruskin Company: www.ruskin.com.
   c. United Enertech: www.unitedenertech.com.
   d. Substitutions: See Section 01 6000-Product Requirements.

2.11 WALL CAPS

A. Hooded Wall Caps:
   1. Manufacturers:
      a. Air King.
      b. Broan.
      c. Famco.
      d. NuTone.
      e. Vent-A-Hood.
   2. Material: Galvanized metal prepared for field painting in accordance with ASTM D6386.
   3. Mounting: 1-1/4” attachment collar
   4. Accessories:
      a. Backdraft damper.
      b. Bird screen (non-dryer applications)

B. Louvered Wall Caps:
   1. Manufacturers:
      a. XVentBox: www.xventbox.com
   2. Construction:
      a. Material: Thermal plastic in compliance with ASTM E84, UL 723, and UL 94.
      b. Monolithic box cavity.
      c. Removable front louver.
      d. Duct Connections: As indicated on drawings for sizes and quantities.
   3. Installation style to match wall construction.
   4. Accessories:
      a. Backdraft dampers.

2.12 MISCELLANEOUS PRODUCTS

A. Fire-Rated Enclosures:
   1. Provide as required to preserve fire resistance rating of building elements.

B. Duct Opening Closure Film: Mold-resistant, self-adhesive film to keep debris out of ducts during construction.
   1. Thickness: 2 mils (0.6 mm).
   2. High tack water based adhesive.
   3. UV stable light blue color.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install accessories in accordance with manufacturer's instructions, NFPA 90A, and follow SMACNA (DCS). See Section 23 31 00 for duct construction and pressure class.

B. Install duct accessories of materials suited to duct materials; use galvanized-steel accessories in galvanized-steel and fibrous-glass ducts, stainless-steel accessories in stainless-steel ducts, and aluminum accessories in aluminum ducts.

C. Provide backdraft dampers or motorized dampers on exhaust fans or exhaust ducts nearest to outside where indicated on drawings.

D. Provide duct access doors for inspection and cleaning before and after filters, coils, fans, automatic dampers, at fire dampers, combination fire and smoke dampers, at louver plenums, and elsewhere as indicated. Provide for cleaning kitchen exhaust ducts in accordance with NFPA 96. Provide minimum 8 by 8 inch (200 by 200 mm) size access door for hand and shoulder access, or as indicated on drawings. Review locations prior to fabrication.

E. Provide duct test holes where required for testing and balancing purposes.

F. Provide fire dampers, combination fire and smoke dampers, and smoke dampers at locations indicated, where ducts and outlets pass through fire-rated components, and where required by authorities having jurisdiction. Install with required perimeter mounting angles, sleeves, breakaway duct connections, corrosion resistant springs, bearings, bushings and hinges.

G. Install smoke dampers and combination smoke and fire dampers in accordance with NFPA 92.

H. Demonstrate re-setting of fire dampers to Owner's representative.

I. At fans and motorized equipment associated with ducts, provide flexible duct connections immediately adjacent to the equipment.

J. At equipment supported by vibration isolators, provide flexible duct connections immediately adjacent to the equipment.

K. Connect terminal units to supply ducts directly. Do not use flexible ducts to change directions.

L. Connect diffusers to ducts with maximum 48-inch lengths of flexible duct clamped or strapped in place.

M. Connect flexible ducts to metal ducts with liquid adhesive plus tape.

N. Provide balancing dampers at points on supply, return, and exhaust systems where branches are taken from larger ducts as required for air balancing. Install minimum two duct widths from duct take-off. Where dampers are installed in ducts having duct liner, install dampers with hat channels of same depth as liner, and terminate liner with nosing at hat channel.

O. Set dampers to fully open position before testing, adjusting, and balancing.

P. Use splitter dampers only where indicated.

Q. Provide balancing dampers on high velocity systems where indicated.

R. Seal open ends of all supply, return, exhaust, outdoor air, combustion air, vents, etc. and equipment connections with UV resistant blue adhesive film at all times, including stored items and installed items.

3.02 FIELD QUALITY CONTROL

A. Tests and Inspections:
   1. Operate dampers to verify full range of movement.
   2. Inspect locations of access doors and verify that purpose of access door can be performed.
   3. Operate fire and fire/smoke dampers to verify full range of movement and verify that proper heat-response device is installed.
   4. Inspect turning vanes for proper and secure installation.
   5. Operate remote damper operators to verify full range of movement of operator and damper.

6. Mark manual volume dampers with 12" long red tape prior to balancing for easy identification.

END OF SECTION

This page intentionally left blank

SECTION 23 34 23
HVAC POWER VENTILATORS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Roof exhausters.

B. Powered roof ventilators.

C. Ceiling exhaust fans.

D. Inline centrifugal fans and blowers.

E. Kitchen Type I hood roof exhausters.

1.02 RELATED REQUIREMENTS

A. Section 23 05 13 - Common Motor Requirements for HVAC Equipment.

B. Section 23 05 48 - Vibration and Seismic Controls for HVAC.

C. Section 23 31 00 - HVAC Ducts and Casings.

D. Section 23 33 00 - Air Duct Accessories.

1.03 REFERENCE STANDARDS

A. AMCA (DIR) - (Directory of) Products Licensed Under AMCA International Certified Ratings Program; 2015.

B. AMCA 99 - Standards Handbook; 2025.

C. AMCA 204 - Balance Quality and Vibration Levels for Fans; 2020.

D. AMCA 210 - Laboratory Methods of Testing Fans for Certified Aerodynamic Performance Rating; 2016, with Errata (2018).

E. AMCA 300 - Reverberation Room Methods of Sound Testing of Fans; 2024.

F. AMCA 301 - Methods for Calculating Fan Sound Ratings from Laboratory Test Data; 2022.

G. NEMA EN 10250 - Enclosures for Electrical Equipment (1000 Volts Maximum); 2024.

H. NFPA 96 - Standard for Ventilation Control and Fire Protection of Commercial Cooking Operations; 2024.

I. UL 705 - Power Ventilators; Current Edition, Including All Revisions.

J. UL 762 - Outline of Investigation for Power Roof Ventilators for Restaurant Exhaust Appliances; Current Edition, Including All Revisions.

1.04 SUBMITTALS

A. Product Data: Provide data on fans and accessories, including fan curves with specified operating point plotted, power, rpm, sound power levels at rated capacity, and electrical characteristics and connection requirements.

B. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.

1.05 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.
   1. Product data
   2. Product certificates

3. Wiring diagrams
4. Warranty: Sample of warranty.
5. Field quality-control test reports.

1.06 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

B. NEMA Compliance: Motors and electrical accessories shall comply with NEMA standards.

C. UL Standard: Power ventilators shall comply with UL 705.

PART 2 PRODUCTS

2.01 POWER VENTILATORS - GENERAL

A. Static and Dynamically Balanced: Comply with AMCA 204.

B. Performance Ratings: Comply with AMCA 210, bearing certified rating seal.

C. Sound Ratings: Comply with AMCA 301, tested to AMCA 300, bearing certified sound ratings seal.

D. Fabrication: Comply with AMCA 99.

E. UL Compliance: UL 705, listed, labeled, designed, manufactured, and tested.

F. Electrical Components: Listed and classified by Underwriters Laboratories Inc. as suitable for the purpose specified and indicated.

G. Enclosed Safety Switches: Comply with NEMA EN 10250.

H. Kitchen Type I Hood Exhaust Fans: Comply with requirements of NFPA 96 and UL 762 (UL 705 - supplement SC - restaurant exhaust).

2.02 POWERED ROOF VENTILATORS

A. Manufacturers:
   1. Greenheck Fan Corporation: www.greenheck.com.
   2. Plastec

B. Fan Unit: V-belt or direct driven as indicated on drawings, with removable spun aluminum housing; resilient mounted motor; aluminum wire birdscreen; square base to suit roof curb with continuous curb gaskets.

C. Roof Curb: 24 inch (600 mm) high self-flashing of galvanized steel with continuously welded seams, insulation and curb bottom, hinged curb adapter, and factory installed nailer strip.

D. Fan Wheels
   1. Greenheck: Aluminum hub and wheel with backward-inclined blades.
   2. Plastec: Forward-curved type and constructed of uniformly molded polypropylene blades. Wheel shall be both electronically and dynamically balanced. Fan wheel shall be supplied with a motor shaft bushing and hubcap made of polypropylene to protect shaft end.

E. Disconnect Switch: Factory wired, nonfusible, in housing for thermal overload protected motor.

F. Damper: As indicated on drawings.

G. Sheaves: Cast iron or steel, dynamically balanced, bored to fit shafts and keyed; variable and adjustable pitch motor sheave selected so required rpm gets attained with sheaves set at mid-position; fan shaft with self-aligning pre-lubricated ball bearings.

H. Options/Accessories:

1. Hinge Kit:
    a. Hinges and restraint cables mounted to base sleeve.

I. Performance Ratings: As indicated on drawings.

2.03 CEILING EXHAUST FANS

A. Manufacturers:
1. Greenheck

B. Centrifugal Fan Unit: Direct driven with galvanized steel housing lined with acoustic insulation, resiliently mounted motor, gravity backdraft damper in discharge.

C. Fan Wheel: Centrifugal wheels directly mounted on motor shaft. Fan shrouds, motor, and fan wheel shall be removable for service.

D. Electrical Requirements:
1. Junction box for electrical connection on housing and receptacle for motor plug-in.
2. Disconnect Switch: Plug-style for thermal overload protected motor.

E. Grille: Aluminum with baked white enamel finish.

F. Sheaves: Cast iron or steel, dynamically balanced, bored to fit shafts and keyed; variable and adjustable pitch motor sheaves selected so required rpm is reached with sheaves set at mid-position; fan shaft with self-aligning pre-lubricated ball bearings.

G. Performance Ratings: As indicated on drawings.

H. Accessories:
1. Companion Flanges: For outlet duct connection.
2. Wall cap, as indicated on drawings.

2.04 INLINE CENTRIFUGAL FANS AND BLOWERS

A. Manufacturers:
1. Greenheck
2. Plastec

B. Description:
1. Greenheck: In-line, belt-driven centrifugal fans consisting of housing, wheel, outlet guide vanes, fan shaft, bearings, motor and disconnect switch, drive assembly, mounting brackets, and accessories.
2. Plastec: In-line, direct-driven corrosive air application centrifugal fans consisting of housing, wheel, outlet guide vanes, fan shaft, bearings, motor and disconnect switch, drive assembly, mounting brackets, and accessories.

C. Housing:
1. Greenheck: Split, spun aluminum with aluminum straightening vanes, inlet and outlet flanges, and support bracket adaptable to floor, side wall, or ceiling mounting.
2. Plastec: Constructed of strong high-density UV treated polypropylene for corrosion resistance. Housing shall be made of on single piece to completely avoid leaks. Split molded housing is not allowed.

D. Fan Wheels:
1. Greenheck: Aluminum, airfoil blades welded to aluminum hub.
2. Plastec: Forward-curved type and constructed of uniformly molded polypropylene blades. Wheel shall be both electronically and dynamically balanced. Fan wheel shall be supplied with a motor shaft bushing and hubcap made of polypropylene to protect shaft end.

E. Sheaves: Cast iron or steel, dynamically balanced, bored to fit shafts and keyed; variable and adjustable pitch motor sheaves selected so required rpm gets reached with sheaves set at mid-position; fan shaft with self-aligning prelubricated ball bearings.

F. Performance Ratings: As indicated on drawings.

G. Accessories: As indicated on drawings.

2.05 KITCHEN TYPE I HOOD ROOF EXHAUSTERS

A. Manufacturers:
   1. Greenheck

B. Direct- and Belt- Drive Fan:
   1. Fan Wheel:
      a. Type: Non-overloading, backward inclined centrifugal.
      b. Material: Aluminum, statically and dynamically balanced.
   2. Housing:
      a. Construct of heavy gauge aluminum including curb cap, windband, and motor compartment.
      b. Rigid internal support structure.
      c. One-piece fabricated or fully welded curb-cap base to windband for leak proof construction.
      d. Construct drive frame assembly of heavy gauge steel, mounted on vibration isolators.
      e. Provide breather tube for fresh air motor cooling and wiring.

C. Shafts and Bearings:
   1. Fan Shaft:
      a. Ground and polished steel with anti-corrosive coating.
      b. First critical speed at least 25 percent over maximum cataloged operating speed.
   2. Bearings:
      a. Permanently sealed or pillow block type.
      b. Minimum L10 life in excess of 100,000 hours (equivalent to L50 average life of 500,000 hours), at maximum cataloged operating speed.
      c. 100 percent factory tested.

D. Drive Assembly:
   1. Belts, pulleys, and keys oversized for a minimum of 150 percent of driven horsepower.
   2. Belts: Static free and oil resistant.
   3. Fully machined cast iron type, keyed and securely attached to the wheel and motor shafts.
   4. Motor pulley adjustable for final system balancing.
   5. Readily accessible for maintenance.

E. Disconnect Switches:
   1. Factory mounted and wired.
   2. Environment Type per NEMA EN 10250: Unless otherwise indicated, as specified for the following installation locations:
      a. Outdoor Locations: Type 3R.
   3. Finish for Painted Steel Enclosures: Provide factory-applied gray unless otherwise indicated.
   4. Positive electrical shutoff.
   5. Wired from fan motor to junction box installed within motor compartment.

F. Roof Curb: 24 inch (600 mm) high self-flashing of galvanized steel with continuously welded seams, built-in cant strips, insulation and curb bottom, curb bottom, ventilated double wall, and factory installed nailer strip. Fan discharge shall be minimum 40" from any roof surface, adjust curb height as necessary.

G. Drain Trough: Allows for single-point drainage of water, grease, and other residues.

H. Options/Accessories:
   1. Automatic Belt Tensioner: Automatic device that adjusts for correct belt tension for single drives.
   2. Clean Out Port: Removable grease repellent compression rubber plug allows access for cleaning wheel through windband.
   3. Roof Curb Extension: Vented curb extension where required for compliance with minimum clearances required by NFPA 96.
   4. Grease Trap:
      a. Container system to collect grease residue.
   5. Hinge Kit:
      a. Hinges and restraint cables mounted to base sleeve.
   6. Heat Baffle: Prevents heat from radiating into motor compartment.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Secure roof exhausters with cadmium plated steel lag screws to roof curb.

C. Extend ducts to roof exhausters into roof curb. Counterflash duct to roof opening.

D. Hung Cabinet Fans:
   1. Install fans with resilient mountings and flexible electrical leads, see Section 23 05 48.
   2. Suspend units from structure; use steel wire or metal straps.

E. Provide sheaves required for final air balance.

F. Install backdraft or motorized dampers on inlet to roof and wall exhausters, as indicated on drawings.

G. Install units with clearances for service and maintenance.

H. Label units according to requirements specified in 23 05 53 - Identification for HVAC Piping and Equipment.

3.02 CONNECTIONS

A. Duct installation and connection requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of ducts and duct accessories. Make final duct connections with flexible connectors. Flexible connectors are specified in 23 33 00 - Air Duct Accessories.

B. Install ducts adjacent to power ventilators to allow service and maintenance.

C. Ground equipment according to Division 26.

D. Connect wiring according to Division 26.

3.03 FIELD QUALITY CONTROL

A. Perform the following field tests and inspections and prepare test reports:
   1. Verify that shipping, blocking, and bracing are removed.

2. Verify that unit is secure on mountings and supporting devices and that connections to ducts and electrical components are complete. Verify that proper thermal-overload protection is installed in motors, starters, and disconnect switches.
3. Verify that cleaning and adjusting are complete.
4. Disconnect fan drive from motor, verify proper motor rotation direction, and verify fan wheel free rotation and smooth bearing operation. Reconnect fan drive system, align and adjust belts, and install belt guards.
5. Adjust belt tension.
6. Adjust damper linkages for proper damper operation.
7. Verify lubrication for bearings and other moving parts.
8. Verify that manual and automatic volume control and fire and smoke dampers in connected ductwork systems are in fully open position.
9. Disable automatic temperature-control operators, energize motor and adjust fan to indicated rpm, and measure and record motor voltage and amperage.
10. Shut unit down and reconnect automatic temperature-control operators.
11. Remove and replace malfunctioning units and retest as specified above.

B. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

3.04 ADJUSTING

A. Adjust damper linkages for proper damper operation.

B. Adjust belt tension.

C. Comply with requirements in 23 05 93 - Testing, Adjusting, and Balancing for HVAC for testing, adjusting, and balancing procedures.

D. Replace fan and motor pulleys as required to achieve design airflow.

E. Lubricate bearings where required.

END OF SECTION

SECTION 23 35 01
DRYER-VENT EXHAUST COLLECTION SYSTEMS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Laundry exhaust systems.

B. Accessories.
   1. Central lint collectors.

1.02 RELATED REQUIREMENTS

A. Section 26 05 83 - Wiring Connections: Electrical characteristics and wiring connections.

1.03 REFERENCE STANDARDS

A. AMCA 99 - Standards Handbook; 2025.

B. ANSI Z223.1 - National Fuel Gas Code; 2024.

C. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

D. NFPA 82 - Standard on Incinerators and Waste and Linen Handling Systems and Equipment; 2024.

E. SMACNA (DCS) - HVAC Duct Construction Standards Metal and Flexible; 2020.

F. UL 378 - Standard for Draft Equipment; Current Edition, Including All Revisions.

G. UL 705 - Power Ventilators; Current Edition, Including All Revisions.

1.04 SUBMITTALS

A. Product Data: Provide data indicating system components such as clothes dryer boosters, supply fans, dampers, controls, and factory-built chimneys. Also include dimensional details of components and flue caps, dimensions, weights, electrical characteristics, and connection requirements.

B. Shop Drawings: Indicate general construction, dimensions, weights, support, and layout of breechings and ductwork. Submit layout drawings indicating plan view and elevations where factory-built units are used.

C. Manufacturer's Instructions: Include installation instructions and indicate assembly, support details, and connection requirements.

1.05 QUALITY ASSURANCE

A. All equipment and accessories to be the product of a manufacturer regularly engaged in its manufacture and shall be of a standard catalog product.

B. Mechanical Venting System guaranteed to operate satisfactory and efficiently without objectionable exhaust or odor.

C. Scheduled equipment performance is minimum capacity required.

D. Scheduled electrical capacity shall be considered as maximum available.

E. Equipment to be manufactured at ISO 9001 certified plant.

PART 2 PRODUCTS

2.01 GENERAL REQUIREMENTS

A. Regulatory Requirements:

1. Comply with ANSI Z223.1.
2. Products Requiring Electrical Connection: Listed and classified by Underwriters Laboratories Inc. as suitable for the purpose specified and indicated.

2.02 LAUNDRY EXHAUST SYSTEMS

A. Manufacturers:
   1. ENERVEX, Inc.: enervex.com.

B. Fabrication: Direct-drive, backward-curved fan enclosed in galvanized steel housing.

C. Comply with AMCA 99, UL 378, and UL 705.

D. Maximum Fan Temperature Rating: 575 degrees F (300 degrees C) of exhaust gas.

E. Accessories:
   1. Pressure controller.
      a. Modulating fan control maintaining constant duct pressure between 0.0-in.w.g. and 0.6-in-w.g. with tolerance of 0.01-in-w.g.
      b. Potentiometer to set the required duct pressure and a LCD-panel to display the value. The LCD-panel must also be able to show the actual duct pressure.
      c. Electrical terminals monitored constantly via LED-diodes for verification of proper operation.
      d. LED-diodes to verify ventilator operation and cycling.
      e. LED-diode to indicate alarm.
      f. Safety function to shut down dryer in case of insufficient duct pressure or ventilator failure and indicate this with a visual alarm.
   2. Current sensing relay.

F. Electrical Characteristics: As indicated on drawings.
   1. Wiring Terminations: Provide terminal lugs to match branch circuit conductor quantities, sizes, and materials indicated. Enclose terminal lugs in terminal box sized to NFPA 70.

2.03 ACCESSORIES

A. Central Lint Collector:
   1. Construction: Fiberglass housing with removable reinforced vinyl holding bag; wall, floor or ceiling mount; supplied with mounting brackets/legs.
   2. Products:
      a. Clean Cycle Solutions; "Small Wonder" OPL-200/300 Series: www.cleancyclesystems.com

B. Support plates and rings.

C. Cleanout access at shaft base.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install dryer vent stacks, breechings, and ductwork with minimum of joints. Align accurately at connections with smooth internal surfaces.

C. Rigidly support shafts, stacks, and ductwork from building structure with suitable ties, braces, hangers, and anchors to hold shape and prevent buckling. Support vertical breechings, chimneys, and stacks at 12 foot (4 m) spacing, to adjacent structural surfaces, or at floor penetrations. Refer to SMACNA (DCS) for equivalent duct support configuration and size.

D. Coordinate installation of dampers and induced draft fans; see Section 26 05 83.

E. Maintain UL listed minimum clearances from combustibles. Assemble pipe and accessories as required for complete installation.

F. Assemble and install stack sections in accordance with NFPA 82, industry practices, and complying with UL listing. Join sections with acid-resistant joint cement. Connect base section to foundation using anchor lugs.

G. Level and plumb stacks.

H. Clean breechings, chimneys, and stacks during installation, removing dust and debris.

I. At appliances, provide slip joints permitting removal of appliances without removing or dismantling breechings, breeching insulation, chimneys, or stacks.

3.02 OPERATING TESTS, START-UP AND ON-SITE SERVICES

A. System vendor’s service organization shall employ senior service technicians having experience in all aspects of troubleshooting, corrective service and preventative maintenance and O&M reporting.

B. After installation is completed test the operation of the Mechanical Dryer Venting System.

END OF SECTION

SECTION 23 36 00
AIR TERMINAL UNITS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Shutoff, single-duct air terminal units.

1.02 SUBMITTALS

A. Product Data: For each type of product indicated.

1.03 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.
   1. Product data
   2. Wiring Diagrams
   3. Source quality-control reports
   4. Field quality-control reports.

1.04 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1-2004, Section 5 - "Systems and Equipment" and Section 7 - "Construction and System Start-Up."

PART 2 PRODUCTS

2.01 SHUTOFF, SINGLE-DUCT AIR TERMINAL UNITS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Price Industries Model #SDV
   2. Titus Model #DESV
   3. Nailor 3000 Series

B. Configuration: Volume-damper assembly inside unit casing with control components inside a protective metal shroud.

C. Casing: 0.034-inch steel, single wall, fiber free foam.
   1. Casing Lining: Adhesive attached, 3/4-inch thick, coated, fiber free polymer foam duct liner complying with ASTM C 665, and having a maximum flame-spread index of 25 and a maximum smoke-developed index of 50, for both insulation and adhesive, when tested according to ASTM E 84.
      a. Liner – Fiber free polymer foam with sealed edges, model no. FF.
   2. Air Inlet: Round stub connection or S-slip and drive connections for duct attachment.
   3. Air Outlet: S-slip and drive connections.
   4. Access: Removable panels for access to parts requiring service, adjustment, or maintenance; with airtight gasket.

D. Volume Damper: Galvanized steel with peripheral gasket and self-lubricating bearings.
   1. Maximum Damper Leakage: ARI 880 rated, 2 percent of nominal airflow at 3-inch wg inlet static pressure.
   2. Damper Position: Normally open or last position.

E. Electric-Resistance Heating Coils: Nickel-chromium heating wire, free of expansion noise and hum, mounted in ceramic inserts in a galvanized-steel housing; with primary automatic, and secondary manual, reset thermal cutouts. Terminate elements in stainless-steel, machine-staked terminals secured with stainless-steel hardware.
   1. Control: Proportional SCR controller.
   2. Access door interlocked disconnect switch.
   3. Downstream air temperature sensor with local connection to override discharge-air temperature to not exceed a maximum temperature set point (adjustable.)
   4. Nickel chrome 80/20 heating elements.
   5. Airflow switch for proof of airflow.
   6. Fuses in terminal box for overcurrent protection (for coils more than 48 A).

F. Direct Digital Controls: Bidirectional damper operators and microprocessor-based controller and room sensor. Control devices shall be compatible with temperature controls specified in Division 23 Section "Instrumentation and Control for HVAC" and shall have the following features:
   1. Damper Actuator: 24 V, powered closed, spring return open or retain last position.
   2. Terminal Unit Controller: Pressure-independent, variable-air-volume controller with electronic airflow transducer with multipoint velocity sensor at air inlet, factory calibrated to minimum and maximum air volumes, and having the following features:
      a. Occupied and unoccupied operating mode.
      b. Remote reset of airflow or temperature set points.
      c. Adjusting and monitoring with portable terminal.
      d. Communication with temperature-control system specified in Division 23 Section "Instrumentation and Control for HVAC."
   3. Room Sensor: Wall mounted, with temperature set-point adjustment and access for connection of portable operator terminal.
      a. Mother's, Infants, and other rooms as shown on plan - adjustable sensor with LCD display and temperature set-point adjustment.
      b. All other spaces - non-adjustable sensor without display.

2.02 HANGERS AND SUPPORTS

A. Hanger Rods: Cadmium-plated steel rods and nuts.

B. Steel Cables: Galvanized steel complying with ASTM A 603.

C. Steel Cable End Connections: Cadmium-plated steel assemblies with brackets, swivel, and bolts designed for duct hanger service; with an automatic-locking and clamping device.

D. Air Terminal Unit Attachments: Sheet metal screws, blind rivets, or self-tapping metal screws; compatible with duct materials.

E. Trapeze and Riser Supports: Steel shapes and plates for units with steel casings; aluminum for units with aluminum casings.

2.03 SOURCE QUALITY CONTROL

A. Factory Tests: Test assembled air terminal units according to ARI 880.
   1. Label each air terminal unit with plan number, nominal airflow, maximum and minimum factory-set airflows, and ARI certification seal.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install air terminal units according to NFPA 90A, "Standard for the Installation of Air Conditioning and Ventilating Systems."

B. Install air terminal units level and plumb. Maintain sufficient clearance for normal service and maintenance.

C. Install wall-mounted thermostats.

3.02 HANGER AND SUPPORT INSTALLATION

A. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 4, "Hangers and Supports."

B. Building Attachments: Concrete inserts, powder-actuated fasteners, or structural-steel fasteners appropriate for construction materials to which hangers are being attached.
   1. Where practical, install concrete inserts before placing concrete.
   2. Install powder-actuated concrete fasteners after concrete is placed and completely cured.
   3. Use powder-actuated concrete fasteners for standard-weight aggregate concretes and for slabs more than 4 inches thick.
   4. Do not use powder-actuated concrete fasteners for lightweight-aggregate concretes and for slabs less than 4 inches thick.

C. Hangers Exposed to View: Threaded rod and angle or channel supports.

D. Install upper attachments to structures. Select and size upper attachments with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

3.03 IDENTIFICATION

A. Label each air terminal unit with plan number, nominal airflow, and maximum and minimum factory-set airflows. Comply with requirements in Division 23 Section "Identification for HVAC Piping and Equipment" for equipment labels and warning signs and labels.

3.04 FIELD QUALITY CONTROL

A. Perform tests and inspections.
   1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

B. Tests and Inspections:
   1. After installing air terminal units and after electrical circuitry has been energized, test for compliance with requirements.
   2. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
   3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

C. Air terminal unit will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

3.05 STARTUP SERVICE

A. Perform startup service.
   1. Complete installation and startup checks according to manufacturer's written instructions.
   2. Verify that inlet duct connections are as recommended by air terminal unit manufacturer to achieve proper performance.
   3. Verify that controls and control enclosure are accessible.
   4. Verify that control connections are complete.
   5. Verify that nameplate and identification tag are visible.
   6. Verify that controls respond to inputs as specified.

3.06 DEMONSTRATION

A. Train Owner's maintenance personnel to adjust, operate, and maintain air terminal units.

END OF SECTION

SECTION 23 37 13
DIFFUSERS, REGISTERS, GRILLES AND LOUVERS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Diffusers.
   2. Registers.
   3. Grilles.
   4. Louvers.

B. Related Sections:
   1. Division 23 Section "Duct Accessories" for fire and smoke dampers and volume-control dampers not integral to diffusers, registers, and grilles.

1.02 SUBMITTALS

A. Product Data: For each type of product indicated, include the following:
   1. Data Sheet: Indicate materials of construction, finish, and mounting details; and performance data including throw and drop, static-pressure drop, and noise ratings.
   2. Diffuser, Register, and Grille Schedule: Indicate drawing designation, room location, quantity, model number, size, and accessories furnished.
   3. For louvers and accessories: Include plans, elevations, sections, details, and attachments to other work. Show frame profiles and blade profiles, angles, and spacing.
   4. Color chart.

PART 2 PRODUCTS

2.01 DIFFUSERS, REGISTERS AND GRILLES

A. Diffuser, Registers and Grilles:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Price Industries.
      b. Krueger.
      c. Titus.

B. Adjustable square ceiling diffusers shall be Price Industries of sizes indicated on the drawings and types as specified in the schedule or notes on the drawings.

C. Exhaust registers in the locker rooms shall be aluminum to prevent corrosion.

D. Exhaust registers and all components in the pool area shall be stainless steel to prevent corrosion.

E. Accessories:
   1. Return Air Canopy:
      a. Manufacturer:
         1) Price Industries; RAC
      b. Description: Lightweight canopy of sound absorbing materials positioned directly above a return grille preventing the transfer of occupant noise into the plenum, and preventing plenum noise from flanking through the grille.
      c. General Requirements:
         1) Airstream surfaces installed in return air plenum to comply with requirements in ASHRAE Std 62.1.

d. Materials:
   1) 24-gauge solid steel casing.
   2) Fiber-free foam liner per UL 181 and ASTM C1071.
e. Locations:
   1) Where indic

2.02 LOUVERS

A. Louvers:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Greenheck.
      b. Pottorff.
      c. Louvers & Dampers, Inc.

B. Construction:
   1. Channel Frame: 0.81-inch (20.5-mm) extruded aluminum.
   2. Blades: 4-inch (100-mm) deep.
   3. Screen: 1/2-inch (12.7-mm) mesh.
   4. Sill extension: 4-inch (100-mm) where required.
   5. Finish: To be verified by Architect prior to ordering.

2.03 SOURCE QUALITY CONTROL

A. Verification of Performance: Rate diffusers, registers, and grilles according to ASHRAE 70, "Method of Testing for Rating the Performance of Air Outlets and Inlets."

PART 3 EXECUTION

3.01 DIFFUSERS, REGISTERS AND GRILLES INSTALLATION

A. Install diffusers, registers, and grilles level and plumb.

B. Ceiling-Mounted Outlets and Inlets: Drawings indicate general arrangement of ducts, fittings, and accessories. Air outlet and inlet locations have been indicated to achieve design requirements for air volume, noise criteria, airflow pattern, throw, and pressure drop. Make final locations where indicated, as much as practical. For units installed in lay-in ceiling panels, locate units in the center of panel. Where architectural features or other items conflict with installation, notify Architect for a determination of final location.

C. Install diffusers, registers, and grilles with airtight connections to ducts and to allow service and maintenance of dampers, air extractors, and fire dampers.

3.02 LOUVER INSTALLATION

A. Locate and place louvers and vents level, plumb, and at indicated alignment with adjacent work.

B. Use concealed anchorages where possible. Provide brass or lead washers fitted to screws where required to protect metal surfaces and to make a weather tight connection.

C. Provide perimeter reveals and openings of uniform width for sealants and joint fillers, as indicated.

D. Repair damaged finishes so no evidence remains of corrective work. Return items that cannot be refinished in the field to the factory and refinish entire unit or provide new units.

E. Protect galvanized and nonferrous-metal surfaces that will be in contact with concrete, masonry, or dissimilar metals from corrosion and galvanic action by applying a heavy coating of bituminous paint.

3.03 ADJUSTING

A. After installation, adjust diffusers, registers, and grilles to air patterns indicated, or as directed, before starting air balancing.

END OF SECTION

This page intentionally left blank

SECTION 23 51 00
BREECHINGS, CHIMNEYS AND STACKS

PART 1 GENERAL

1.01 SUMMARY

A. This Section includes the following:
   1. Listed double-wall vents.
   2. Positive pressure vents

1.02 SUBMITTALS

A. Product Data: For the following:
   1. Special gas vents.
   2. Positive pressure vents

B. Warranties: Special warranties specified in this Section.

C. Shop Drawings: For vents, breechings, chimneys, and stacks. Include plans, elevations, sections, details, and attachments to other work.
   1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, methods of field assembly, components, hangers and seismic restraints, and location and size of each field connection.
   2. For installed products indicated to comply with design loads, include calculations required for selecting seismic restraints and structural analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

D. Warranty: Special warranty specified in this Section.

1.03 QUALITY ASSURANCE

A. Source Limitations: Obtain listed system components through one source from a single manufacturer.

B. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code--Steel," for hangers and supports and AWS D9.1/D9.1M, "Sheet Metal Welding Code," for shop and field welding of joints and seams in vents, breechings, and stacks.

C. Certified Sizing Calculations: Manufacturer shall certify venting system sizing calculations.

1.04 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of venting system that fail in materials or workmanship within specified warranty period. Failures include, but are not limited to, structural failures caused by expansion and contraction.

B. Warranty Period: 10 years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 LISTED SPECIAL GAS VENT

A. Available Manufacturers:
   1. Heat-Fab Inc.
   2. Jeremias

B. Description: Double-wall metal vents tested according to UL 103 and rated for 1000 deg F (537 deg C) continuously, 1400 deg F intermittent, with positive or negative flue pressure complying with NFPA 211 and suitable for condensing-gas appliances.

C. Construction: Inner shell and outer jacket separated by at least a 1/2-inch (13-mm) airspace.

D. Inner Shell: ASTM A 959, Type 29-4C stainless steel.

E. Outer Jacket: 430 stainless steel.

F. Accessories: Tees, elbows, increasers, draft-hood connectors, terminations, adjustable roof flashings, storm collars, support assemblies, thimbles, firestop spacers, and fasteners; fabricated from similar materials and designs as vent-pipe straight sections; all listed for same assembly.
   1. Termination: Round chimney top designed to exclude 98 percent of rainfall.

2.02 POSITIVE PRESSURE VENTS

A. The vent shall be of the single wall, factory-built type, designed for use in conjunction with Category II, or IV condensing gas fired appliances, condensing oil fired appliances or as specified by the heating equipment manufacturer.

B. All products furnished under this Section shall conform to the requirements of The National Fuel Gas Code, ANSI Z223.1/NFPA-54 where applicable and shall comply with and be listed to UL-1738, the US Standard for Venting Systems for Gas-Burning Appliances, Categories II, III, and IV and ULC-S636-95, the Canadian Standard for Type BH gas vent systems. These requirements cover venting systems intended for venting Category II or IV gas-burning appliances as defined by the Standard for Gas-Fired Central Furnaces (except Direct-Vent Central Furnaces), ANSI Z21.47 and the National Fuel Gas Code, NFPA 54. Venting systems covered by these requirements are intended to be used with Category II, III, and IV appliances that have been installed in accordance with NFPA 54, and with codes such as the BOCA National Mechanical Code, the Standard Mechanical Code, the Uniform Mechanical Code, and local codes. Components coming in direct contact with products of combustion shall carry the appropriate UL/cUL labels
   1. Available Manufacturers:
   2. InnoFlue by Centrotherm

C. Maximum continuous flue gas temperature shall not exceed 230 degrees F (110 degrees C).

D. Vent shall be listed for a maximum positive pressure rating of 20” w.c.

E. The vent system shall be continuous from the appliance’s flue outlet to the vent termination outside the building. All systems components shall be UL/cUL listed and supplied by the same manufacturer.

F. The vent shall be constructed from Flame Resistant Polypropylene, with a min. wall thickness of:

Diameter		Wall thickness extruded pipes			
Diameter (mm)	diameter (inch)	min (mm)	max (mm)	min (inch)	max (inch)
DN 60	2"	1.7	2.2	0.0669	0.0866
DN 80	3"	1.8	2.4	0.0709	0.0945
DN 110	4"	2.4	3.2	0.0945	0.1260
DN 125	5"	2.7	3.7	0.1063	0.1457
DN 160	6"	2.9	4.5	0.1142	0.1772
DN 200	8"	3.5	4.5	0.1378	0.1772
DN 250	10"	3.3	4.7	0.1299	0.1850
DN 315	12"	4.2	5.8	0.1654	0.2283

G. All systems components such as vent supports, roof or wall penetrations, terminations, appliance connectors and drain fittings required to install the vent system shall be UL/cUL listed and provided by the vent manufacturer.

H. All systems components shall include a factory- installed gasket in their female-end to render the vent air and watertight when the male/female ends are pushed together as per manufacturer's instructions. Vent systems requiring field installed sealants or compounds shall not be acceptable.

I. Vent layout shall be designed and installed in compliance with manufacturer's installation instructions and all applicable local codes.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine areas and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION OF LISTED VENTS AND CHIMNEYS

A. Locate to comply with minimum clearances from combustibles and minimum termination heights according to product listing or NFPA 211, whichever is most stringent. The height of flue shall be a minimum of 6' above the roof level on which it is located.

B. Seal between sections of positive-pressure vents according to manufacturer's written installation instructions, using sealants recommended by manufacturer.

C. Support vents at intervals recommended by manufacturer to support weight of vents and all accessories, without exceeding appliance loading.

D. Slope breechings down in direction of appliance, with condensate drain connection at lowest point piped to nearest drain.

E. Connect base section to foundation using anchor lugs of size and number recommended by manufacturer.

F. Join sections with acid-resistant joint cement to provide continuous joint and smooth interior finish.

G. Erect stacks plumb to finished tolerance of no more than 1 inch (25 mm) out of plumb from top to bottom.

H. The vent system must conform with all manufacturer's recommendations and shall utilize UL listed stainless steel AL-29-4C Positive Pressure. The vent must be sized in accordance with the boiler manufacturer's recommendations.

3.03 CLEANING

A. After completing system installation, including outlet fittings and devices, inspect exposed finish. Remove burrs, dirt, and construction debris and repair damaged finishes.

B. Clean breechings internally, during and after installation, to remove dust and debris. Clean external surfaces to remove welding slag and mill film. Grind welds smooth and apply touchup finish to match factory or shop finish.

C. Provide temporary closures at ends of breechings, chimneys, and stacks that are not completed or connected to equipment.

END OF SECTION

SECTION 23 52 16
CONDENSING BOILERS

PART 1 GENERAL

1.01 SUMMARY

A. This Section includes packaged, factory-fabricated and -assembled, gas-fired, fire-tube condensing boilers, trim, and accessories for generating hot water.

1.02 SUBMITTALS

A. Product Data: Include performance data, operating characteristics, furnished specialties, and accessories.

B. Shop Drawings: For boilers, boiler trim, and accessories. Include plans, elevations, sections, details, and attachments to other work.
   1. Wiring Diagrams: Power, signal, and control wiring.

1.03 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

B. ASME Compliance: Fabricate and label boilers to comply with ASME Boiler and Pressure Vessel Code.

C. UL Compliance: Test boilers for compliance with UL 795, "Commercial-Industrial Gas Heating Equipment." Boilers shall be listed and labeled by a testing agency acceptable to authorities having jurisdiction.

1.04 WARRANTY

A. Warranty: The boiler manufacturer shall warrant each boiler, including boiler, trim, boiler control system, and all related components and accessories against defects in workmanship and material for a period of 18 months from date of shipment or 12 months from date of installation, whichever comes first. Heat exchanger shall be warranted for a period of ten (10) years non-prorated from date of shipment.

1.05 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.
   1. Product data
   2. Product certificates
   3. Wiring Diagrams
   4. Source quality-control reports
   5. Warranty: Sample of special warranty

PART 2 PRODUCTS

2.01 BOILER

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. RIELLO: Model# AR

B. Description:
   1. Each boiler shall be completed with all components and accessories necessary for a complete and operable boiler as hereinafter specified. Each boiler shall be assembled with required wiring and piping as a self-contained unit.

2. The boiler shall be gas fired floor standing condensing boiler with multiple stainless steel(AISI 316L) watertube heat exchangers for redundancy. Each 500 MBH module is fully independent and “stand alone” thus allowing boiler operation even if an adjacent module is turned off.
3. The boiler shall be designed for a minimum of 20:1 turn down on AR2000 with constant CO2 over the turn down range.
4. The boiler will use a direct ignition system. The design shall provide quite burner ignition and operation. The burner shall be pre-mix radial type and fire in 360 degrees vertical pattern.

C. Performance:
1. The boiler shall be ETL certified as a condensing boiler. The boiler shall operate with natural gas or propane and have an ETL certified input rating as noted on the drawings, and shall be listed with AHRI and shall have a minimum thermal efficiency rating of 96.1% at rated input..
2. The boiler shall be designed for a minimum of 20:1 turn down on AR2000 with constant CO2 over the turn down range.

D. Heat exchanger construction:
1. The water tube (AISI 316L) stainless steel heat exchangers shall be inspected and tested to ASME Section IV requirements and shall bear the ASME section IV seal of approval..
2. The heat exchangers shall have welded construction (no gaskets) consisting of two pipes working in parallel. Each pipe shall have three welded joints. The heat exchanger shall be a fully condensing cylindrical counter-flow water tube design with AISI stainless steel tubes and headers.
3. Each 500 MBH module shall be fully independent and “stand alone” with maximum working pressure of 80 psig (550 kPa).
4. The individual modules shall be removable from the boiler while the remainder of the modules, on other rows, within the boiler remain firing. The removal and replacement of such heat exchanger shall not require welding or hoisting equipment.
5. The boiler shall be capable of operating with a minimum outlet water temperature of 68 ºF.
6. Each heat exchanger shall be accessible for visual inspection and cleaning of all internal fire side surfaces.
7. The boiler shall be equipped with an ASME certified pressure relief valve on each row; for models AR each heat exchanger shall be furnished with one pressure relief valve.
8. Each heat exchanger shall be equipped with a dedicated water pump, flow meter, condensate trap and drain valve.
9. The heating surface of each module shall be 43 SQ.FT/ 500,000BTU.

E. Burner:
1. The burner shall be a premix burner with a stainless steel knitted metal fiber construction.
2. The burner shall not produce more than 0.04% of Carbon monoxide (CO) at all firing rates.
3. The burner shall be certified for Oxides of Nitrogen (NOx) of 9 ppm corrected to 3% oxygen.
4. Air/Gas ratio control gas valve shall operate on the principle of negative pressure and modulate to maintain combustion characteristics across the full operating range, which shall provide safe operation even in the case of blocked air intake.

F. Controls:
1. The boiler shall have a touchscreen display located outside the front panel and a service screen located inside the front panel.

2. The outer display shall have a 7” color touchscreen and shall provide full diagnostics including real time data logging.
3. The control shall display the amount of water flow going through each module.
4. The control shall be capable of lead/lag sequencing up to eight 8 boilers in “Cascade”.
5. The control must display any error codes whether automatically reset or manually reset.
6. The boiler shall be provided as a standard with ModBus RS485 communication capabilities.
7. Optional protocol converter for ModBus Lonworks, N2, BacNet MS/TP or BacNet IP shall be available as an optional accessory.
8. The boiler control system shall be capable of accepting 0-10VDC remote external analog signal to control the temperature set point.
9. The control system shall be capable of resetting the set point based on outdoor air temperature with the optional outside air temperature sensor (field installed).
10. The control shall monitor flue gas temperature and stop the boiler if the temperature is excessive.
11. The boiler safety control shall be furnished with controls for low gas pressure and high gas pressure, water pressure and low water cut off. Each module within the boiler shall be furnished with the following safety control devices which if in alarm shall not affect the normal operation of other modules within the boiler, blocked flue, blocked condensate, water temperature high limit, stack limit, water flow meter and temperature rise limiter.
12. The control shall graphically show the firing rate of each module in the boiler and each boiler in the cascade.
13. The boiler control software shall have the capability to be upgraded via USB stick.
14. The control shall be capable of switching its mode to operate from an internal setpoint if its external control signal is lost.
15. The boiler shall display service reminder notifications.

G. Casing: The frame shall be made of extruded aluminum alloy (EN AW-6060) and finished with a baked enamel powder coat (RAL7016). The panels shall be made of 18 and 22 gauge carbon steel and finished with a baked enamel powder coat (RAL9006).

H. Characteristics and Capacities:
1. Heating Medium: Hot water.
2. Energy Input: 100 – 2,000 MBh (586 kW).
3. Heating Output: 1,921 MBh (540 kW).
4. Gas Inlet Pressure: 6.5” W.C (13.8 kPa).

I. Electrical Characteristics:
1. See drawings for model selection.

2.02 TRIM

A. Include devices sized to comply with ANSI B31.9, "Building Services Piping."

B. Safety Relief Valve: ASME rated.

C. Boiler Air Vent: Automatic.

D. Drain Valve: Minimum NPS 3/4 (DN 20) hose-end gate valve.

E. Remote Contacts:
1. Accepts enable / disable signal from BAS.
2. Accepts 0-10vDC signal from BAS for temperature setpoint.
3. Contacts for Boiler Fault.
4. Boiler shall be supplied with a gateway for communicating with BAS via Modbus, BacNet, N2.

2.03 ELECTRICAL POWER

A. Controllers, Electrical Devices, and Wiring: Electrical devices and connections are specified in Division 26 Sections.

B. Single-Point Field Power Connection: Factory-installed and -wired switches, motor controllers, transformers, and other electrical devices necessary shall provide a single-point field power connection to boiler.

2.04 VENTING

A. HVAC Contractor shall furnish and install venting, complete UL approved double wall positive pressure venting system, ASTM A 959, Type AL29-4C stainless steel double wall pipe, vent terminal, thimble, indoor plate, vent adapter, condensate trap and dilution tank, and sealant.
   1. Innoflue by Centrotherm shall be an approved alternate to AL29-4C venting.

B. Combustion-Air Intake: Complete system, pipe, vent terminal with screen, inlet air coupling, and sealant. Inlet screen to be no less than 1” mesh.

C. Boiler Venting Guideline must be followed.

D. Installing contractor must develop and detailed and fully dimensioned sketch of each boiler venting route from outlet of boiler to final termination. Once the installation drawing is approved by the installing contractor, venting will be ordered.

2.05 SOURCE QUALITY CONTROL

A. Test and inspect factory-assembled boilers, before shipping, according to ASME Boiler and Pressure Vessel Code.

PART 3 EXECUTION

3.01 BOILER INSTALLATION

A. Installation shall be performed by the contractor in accordance with the requirements of the applicable codes and manufacturer’s instructions. Contractor shall review the boiler and installation for compliance with requirements and/or issues that may affect boiler performance. Installation should not proceed until unsatisfactory conditions have been corrected.

B. Install boilers level on concrete base at a height above the floor as required by boiler manufacturer’s recommendation for proper condensate drainage and boiler operation. Concrete base is specified in Division 23 Section “Common Work Results for HVAC”, and concrete materials and installation requirements are specified in Division 03.

C. Vibration Isolation: Elastomeric isolation pads with a minimum static deflection of 0.25 inch.

D. Install gas-fired boilers according to NFPA 54 and ANSI Z223.1.

E. Assemble and install boiler trim.

F. Install electrical devices furnished with boiler but not specified to be factory mounted.

G. Install control wiring to field-mounted electrical devices.

3.02 CONNECTIONS

A. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping above boiler to allow required clearances for service and maintenance.

C. Check manufacturer’s installation manual for clearance dimensions and install piping adjacent to boiler to allow service and maintenance.

D. Connect hot-water piping to supply- and return-boiler tappings with shutoff valve and union or flange at each connection.

E. Install piping from condensate drain connection to nearest floor drain. Piping shall be at least full size of connection and adhere to proper codes for neutralization. Provide an isolation valve if required. Use PVC, CPVC, stainless steel, aluminum or polypropylene for condensate drain piping. DO NOT use carbon or copper components.

F. Install piping from safety relief valve common piping at bottom of boiler to nearest floor drain.

G. Connect gas piping to boiler gas train inlet with unions. Piping shall be at least full size of gas train connection. Provide gas pressure regulator if necessary.

H. Flush & clean boiler upon completion of installation in accordance with manufacturer’s instructions. Boiler must be isolated when any cleaning or testing of the system piping is being performed.

I. Boiler Venting
   1. Install flue venting and combustion-air intake according to manufacturers recommendations.

J. Install electrical devices furnished with boiler but not specified to be factory mounted.

K. Install control wiring to field-mounted electrical devices.

L. Ground equipment according to Division 26 Section "Grounding and Bonding."

M. Connect wiring according to Division 26 Section "Conductors and Cables."

3.03 FIELD QUALITY CONTROL

A. Perform tests and inspections and prepare test reports.
   1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

B. Tests and Inspections:
   1. Perform installation and startup checks according to manufacturer's written instructions.
   2. Leak Test: Hydrostatic test. Repair leaks and retest until no leaks exist.
   3. Operational Test: Start units to confirm proper motor rotation and unit operation. Adjust air-fuel ratio and combustion.
   4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
      a. Check and adjust initial operating set points and high- and low-limit safety set points of fuel supply, water level, and water temperature.
      b. Set field-adjustable switches and circuit-breaker trip ranges as indicated.

C. Remove and replace malfunctioning units and retest as specified above.

END OF SECTION

SECTION 23 57 00
HYDRONIC HEAT EXCHANGERS

PART 1 GENERAL

1.01 SUMMARY

A. This Section includes plate and frame heat exchangers.

1.02 SUBMITTALS

A. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories.

1.03 QUALITY ASSURANCE

A. ASME Compliance: Fabricate and label heat exchangers to comply with ASME Boiler and Pressure Vessel Code: Section VIII, "Pressure Vessels," Division 1.

PART 2 PRODUCTS

2.01 GASKETED - SINGLE WALL PLATE HEAT EXCHANGERS

A. Manufacturers:
   1. Taco

B. Configuration: Freestanding assembly consisting of frame support, top and bottom carrying and guide bars, fixed and movable end plates, tie rods, individually removable plates, and one-piece gaskets.

C. Construction: Fabricate and label heat exchangers to comply with ASME Boiler and Pressure Vessel Code, Section VIII, "Pressure Vessels," Division 1.

D. Frame:
   1. Capacity to accommodate 20 percent additional plates
   2. Painted carbon steel with provisions for anchoring to support.

E. Top and Bottom Carrying and Guide Bars: Painted stainless steel.
   1. Fabricate attachment of heat-exchanger carrying and guide bars with reinforcement strong enough to resist heat-exchanger movement during seismic event when heat-exchanger carrying and guide bars are anchored to building structure.

F. End-Plate Material: Painted stainless steel.

G. Tie Rods and Nuts: Steel or stainless steel.

H. Plate Materials: 0.024 inch thick before stamping; Titanium.

I. Gasket Materials: Nitrile rubber.

J. Piping Connections:
   1. NPS 2 and smaller: Threaded ends according to ASME B1.20.1.
   2. NPS 2-1/2 and larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges and according to ASME B16.24 for copper and copper-alloy flanges

K. Enclose plates in solid aluminum removable shroud.

PART 3 EXECUTION

3.01 HEAT-EXCHANGER INSTALLATION

A. The Boiler Contractor shall furnish and install the pool heat exchangers per the manufacturers recommendations and according to details on plan. The Pool Contractor will make connections on the pool water side of heat exchanger.

3.02 CONNECTIONS

A. Install shutoff valves at heat-exchanger inlet and outlet connections.

B. Install relief valves on heat-exchanger heated-fluid connection and install pipe relief valves, full size of valve connection, to floor drain.

C. Install hose end valve to drain shell.

D. Pool Contractor will make connections on the pool water side of the heat exchanger.

E. Pool Contractor to provide and install 12 inch long stainless steel piping from the connection to the heat exchanger before switching to schedule 80 PVC piping. Pool Contractor must also remove any brass plugs from heat exchanger and install a stainless steel plug.

END OF SECTION

SECTION 23 74 16
PACKAGED, OUTDOOR, AIR-HANDLING UNITS

PART 1 GENERAL

1.01 SUMMARY

A. This Section includes packaged rooftop units and make-up air units with the following components and accessories:
   1. Direct-expansion cooling.
   2. Gas furnace.
   3. Economizer outdoor- and return-air damper section.
   4. Integral, space temperature controls.
   5. Roof curbs.

1.02 SUBMITTALS

A. Product Data: Include manufacturer's technical data for each RTU, including rated capacities, dimensions, required clearances, characteristics, furnished specialties, and accessories.

B. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   1. Wiring Diagrams: Power, signal, and control wiring.

C. Field quality-control test reports.

D. Operation and maintenance data.

E. Warranty.

1.03 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements listed below.

B. ARI Compliance:
   1. Comply with ARI 210/240 and ARI 340/360 for testing and rating energy efficiencies for RTUs.
   2. Comply with ARI 270 for testing and rating sound performance for RTUs.

C. UL Compliance: Comply with UL 1995.

D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

E. ASHRAE Compliance:
   1. Comply with ASHRAE 15 for refrigerant system safety.
   2. Comply with ASHRAE 33 for methods of testing cooling and heating coils.
   3. Comply with applicable requirements in ASHRAE 62.1-2004, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

F. ASHRAE/IESNA 90.1-2004 Compliance: Applicable requirements in ASHRAE/IESNA 90.1-2004, Section 6 - "Heating, Ventilating, and Air-Conditioning."

1.04 DELIVERY, STORAGE, AND HANDLING

A. Unit shall be shipped with doors bolted shut and outside air hood closed to prevent damage during transport and thereafter while in storage awaiting installation.

B. Follow Installation, Operation and Maintenance manual instructions for rigging, moving, and unloading the unit at its final location.

C. Unit shall be stored in a clean, dry place protected from construction traffic in accordance with the Installation, Operation and Maintenance manual.

1.05 WARRANTY

A. General Warranty: The manufacturer shall submit a written warranty agreeing to repair or replace components that fail in materials or workmanship within the specified warranty period.
   1. Provide manufacturer's parts warranty on the entire unit and all components contained within for one (1) year. The warranty period shall begin at substantial completion.

B. Special Warranty: The manufacturer shall submit a written warranty agreeing to repair or replace components that fail in materials or workmanship within the specified warranty period.
   1. Compressors: Five (5) years non-prorated warranty shall be provided for the compressors. The warranty period shall begin at substantial completion.
   2. Gas Furnace: Ten (10) years non-prorated warranty shall be provided for all gas furnace heat exchangers. The warranty period shall begin at substantial completion.
   3. Solid-State Ignition Modules: Three (3) years non-prorated warranty shall be provided for all solid-state ignition modules. The warranty period shall begin at substantial completion.
   4. Control Boards: Three (3) years non-prorated warranty shall be provided for all unit control boards. The warranty period shall begin at substantial completion.
   5. Variable Frequency Drives: Five (5) years non-prorated warranty shall be provided all variable frequency drives. The warranty period shall begin at substantial completion.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements called for in the schedules located on the plans.
   1. Single Zone: Lennox Industries
   2. Variable Air Volume: Daikin Applied

2.02 CASINGS

A. General Fabrication Requirements for Casings: Formed and reinforced double-wall insulated panels, fabricated to allow removal for access to internal parts and components, with joints between sections sealed.

B. Exterior Casing Material: Galvanized steel with factory-painted finish, with pitched roof panels and knockouts with grommet seals for electrical and piping connections and lifting lugs.
   1. Exterior Casing Thickness: 0.0626 inch (1.6 mm) thick.

C. Inner Casing Fabrication Requirements:
   1. Inside Casing: Galvanized steel, 0.028 inch (0.7 mm) thick, perforated 40 percent free area.

D. Casing Insulation and Adhesive: Comply with NFPA 90A or NFPA 90B.
   1. Materials: ASTM C 1071, Type I.
   2. Thickness: 1 inch (25 mm).
   3. Liner materials shall have air-stream surface coated with an erosion- and temperature-resistant coating or faced with a plain or coated fibrous mat or fabric.
   4. Liner Adhesive: Comply with ASTM C 916, Type I.

E. Condensate Drain Pans: Formed sections of galvanized-steel sheet, a minimum of 2 inches (50 mm) deep, and complying with ASHRAE 62.1-2004.

1. Double-Wall Construction: Fill space between walls with foam insulation and seal moisture tight.
2. Drain Connections: Threaded nipple.
3. Pan-Top Surface Coating: Corrosion-resistant compound.

F. Airstreams Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1-2007.
1. Pan-Top Surface Coating: Corrosion-resistant compound.

G. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1-2004.

2.03 FANS

A. Belt-Driven Supply-Air Fans: Double width, forward curved, centrifugal; with permanently lubricated, single-speed motor installed on an adjustable fan base resiliently mounted in the casing. Aluminum or painted-steel wheels, and galvanized- or painted-steel fan scrolls.

B. Condenser-Coil Fan: Propeller, mounted on shaft of permanently lubricated motor.

C. Relief-Air Fan: Forward curved, shaft mounted on permanently lubricated motor.

D. Seismic Fabrication Requirements: Fabricate fan section, internal mounting frame and attachment to fans, fan housings, motors, casings, accessories, and other fan section components with reinforcement strong enough to withstand seismic forces defined in 23 Section "Seismic Controls For HVAC" when fan-mounted frame and RTU-mounted frame are anchored to building structure.

E. Fan Motor: Comply with requirements in Division 23 Section "Common Motor Requirements For HVAC."

2.04 COILS

A. Supply-Air Refrigerant Coil:
1. Aluminum-plate fin and seamless internally grooved copper tube in steel casing with equalizing-type vertical distributor.
2. Coil Split: Interlaced.
3. Condensate Drain Pan: Galvanized steel with corrosion-resistant coating formed with pitch and drain connections complying with ASHRAE 62.1-2007.
4. Condensate Drain Pan: Galvanized steel with corrosion-resistant coating formed with pitch and drain connections complying with ASHRAE 62.1-2004.

B. Outdoor-Air Refrigerant Coil:
1. Aluminum-plate fin and seamless internally grooved copper tube in steel casing with equalizing-type vertical distributor.

C. Hot-Gas Reheat Refrigerant Coil:
1. Aluminum-plate fin and seamless internally grooved copper tube in steel casing with equalizing-type vertical distributor.
2. Polymer strip shall prevent all coper coil from contacting steel coil frame or condensate pan.

2.05 REFRIGERANT CIRCUIT COMPONENTS

A. Number of Refrigerant Circuits: Refer to Schedule.

B. Compressor: Hermetic, scroll, mounted on vibration isolators; with internal overcurrent and high-temperature protection, internal pressure relief.

C. Refrigeration Specialties:

1. Refrigerant: R-454B
2. Expansion valve with replaceable thermostatic element.
3. Refrigerant filter/dryer.
4. Manual-reset high-pressure safety switch.
5. Automatic-reset low-pressure safety switch.
6. Minimum off-time relay.
7. Automatic-reset compressor motor thermal overload.
8. Brass service valves installed in compressor suction and liquid lines.
9. Low-ambient kit high-pressure sensor.
10. Hot-gas reheat solenoid valve with a replaceable magnetic coil.
11. Hot-gas bypass solenoid valve with a replaceable magnetic coil.

2.06 AIR FILTRATION

A. Minimum arrestance according to ASHRAE 52.1, and a minimum efficiency reporting value (MERV) according to ASHRAE 52.2.
   1. Pleated: Minimum 90 percent arrestance, and MERV 13.

2.07 GAS FURNACE

A. Description: Factory assembled, piped, and wired; complying with ANSI Z21.47 and NFPA 54.
   1. CSA Approval: Designed and certified by and bearing label of CSA.

B. Burners: Stainless steel.
   1. Fuel: Natural gas.
   2. Ignition: Electronically controlled electric spark or hot-surface igniter with flame sensor.
   3. High-Altitude Model for Project elevations more than 2000 feet (610 m) above sea level.

C. Heat-Exchanger and Drain Pan: Stainless steel.

D. Venting: Gravity vented.

E. Safety Controls:
   1. Gas Control Valve: Modulating.
   2. Gas Train: Single-body, regulated, redundant, 24-V ac gas valve assembly containing pilot solenoid valve, pilot filter, pressure regulator, pilot shutoff, and manual shutoff.

2.08 DAMPERS

A. Outdoor- and Return-Air Mixing Dampers: Parallel- or opposed-blade galvanized-steel dampers mechanically fastened to cadmium plated for galvanized-steel operating rod in reinforced cabinet. Connect operating rods with common linkage and interconnect linkages so dampers operate simultaneously.
   1. Damper Motor: Modulating with adjustable minimum position.
   2. Relief-Air Damper: Gravity actuated or motorized, as required by ASHRAE/IESNA 90.1-2004, with bird screen and hood.

2.09 ELECTRICAL POWER CONNECTION

A. Provide for single connection of power to unit with unit-mounted disconnect switch accessible from outside unit and control-circuit transformer with built-in overcurrent protection.

2.10 CONTROLS

A. Manufacturer shall provide a programmable digital control system for each unit. A user terminal with digital display shall provide capability of monitoring operation and changing setpoints through an integral keypad. The user terminal shall be unit mounted. The manufacturer shall program the sequence of operation as specified in this section.

1. All unit controls shall be hardwired, wireless controls are not permitted.
2. Basic Unit Controls:
    a. Wall-Mounted combination thermostat/humidistat sensor with the following features:
    b. Heat-cool-off switch.
    c. Fan on-auto switch.
    d. Fan-speed switch.
    e. Automatic changeover.
    f. Adjustable deadband.
    g. Data entry and access port to input temperature and humidity set points, occupied and unoccupied periods, and output room temperature and humidity, supply air temperature, operating mode, and status.

B. The unit mounted controller shall communicate with the Building Automation System through factory provided BACnet interface. The BACnet interface shall include a interface relay for scheduled operation. The BACnet interface shall have the following features:
1. Adjusting set points.
2. Monitoring supply fan start, stop and operation.
3. Inquiring data to include outdoor-air damper position, supply and room air temperature.
4. Monitoring occupied and unoccupied operations.

C. Additional Monitoring:
1. Constant and variable motor loads.
2. Variable frequency drive operation.
3. Economizer cycle.
4. Cooling load.
5. Air distribution static pressure and ventilation air volumes (VAV units).

D. Alarm Indication: The BACnet interface shall include an interface relay to provide indication of fault and store diagnostic code information to the BAS.

E. Provide return air mounted Carbon Dioxide (CO2) detector as noted in schedule to control outdoor air damper.

F. Provide dehumidification control on units as noted in schedule on plan.

G. Provide discharge air sensor and pressure transducer for VAV operation as noted on plan and in schedules.

2.11 ACCESSORIES

A. Electric heater with integral thermostat maintains minimum 50 deg F (10 deg C) temperature in gas burner compartment.

B. Duplex, 115-V, ground-fault-interrupter outlet with 15-A overcurrent protection. Include transformer if required. Outlet shall be energized even if the unit main disconnect is open.

C. Filter differential pressure switch with sensor tubing on either side of filter. Set for final filter pressure loss.

D. Hail guards of galvanized steel, painted to match casing.

2.12 ROOF CURBS

A. Materials: Galvanized steel with corrosion-protection coating, watertight gaskets, and factory-installed wood nailer; complying with NRCA standards.
1. Curb Insulation and Adhesive: Comply with NFPA 90A or NFPA 90B.
    a. Materials: ASTM C 1071, Type I or II.

b. Thickness: 2 inches (50 mm).

2. Application: Factory applied with adhesive and mechanical fasteners to the internal surface of curb.
   a. Liner Adhesive: Comply with ASTM C 916, Type I.
   b. Mechanical Fasteners: Galvanized steel, suitable for adhesive attachment, mechanical attachment, or welding attachment to duct without damaging liner when applied as recommended by manufacturer and without causing leakage in cabinet.
   c. Liner materials applied in this location shall have air-stream surface coated with a temperature-resistant coating or faced with a plain or coated fibrous mat or fabric depending on service air velocity.
   d. Liner Adhesive: Comply with ASTM C 916, Type I.

B. Curb Height: 18 inches.

C. Wind and Seismic Restraints: Metal brackets (Hurricane Clips) compatible with the curb and casing, painted to match RTU, used to anchor unit to the curb, and designed for loads at Project site. Comply with requirements in Division 23 Section "Seismic Control For HVAC" for wind-load requirements.

PART 3 EXECUTION

3.01 INSTALLATION

A. Roof Curb: HVAC Contractor shall Install RTUs on curbs and coordinate roof penetrations and flashing with roof construction specified in Division 7 Section "Roof Accessories." Secure RTUs to upper curb rail, and secure curb base to roof framing or concrete base with anchor bolts.
   1. HVAC Contractor must shim all roof curbs level and plumb prior to equipment installation. HVAC Contractor will be responsible for cost associated with equipment removal as necessary to make roof curbs plumb and level.

B. Plumbing Contractor shall install condensate drain, minimum connection size, with trap and indirect connection to nearest roof drain or area drain.

C. Install piping adjacent to RTUs to allow service and maintenance.

D. Duct installation requirements are specified in other Division 23 Sections. Drawings indicate the general arrangement of ducts. The following are specific connection requirements:
   1. Install ducts to termination at top of roof curb.
   2. Remove roof decking only as required for passage of ducts. Do not cut out decking under entire roof curb.
   3. Connect supply ducts to RTUs with flexible duct connectors specified in Division 23 Section "Duct Accessories."
   4. Install return-air duct continuously through roof structure.
   5. Install normal-weight, 3000-psi 20.7-MPa, compressive strength (28-day) concrete mix inside roof curb, 4 inches (100 mm)thick. Concrete, formwork, and reinforcement are specified in Division 3.

E. HVAC Contractors start up representative shall coordinate a review of the RTUs setup configurations with the Automation Contractor prior to the configuration of the units.

3.02 STARTUP SERVICE

A. The HVAC Contractor shall be responsible to provide final start-up of equipment. The HVAC contractor shall contract with the manufacturer to provide final start-up of the equipment. The HVAC Contractor shall acquire and complete the manufacturers "Request for start-up" checklist.

3.03 CLEANING AND ADJUSTING

A. After completing system installation and after final start-up, the HVAC Contractor shall furnish and install new filters one week prior to the grand opening.

SECTION 23 81 26
SPLIT-SYSTEM AIR-CONDITIONING UNITS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes split-system air-conditioning and heat-pump units consisting of separate evaporator-fan and compressor-condenser components.

1.02 SUBMITTALS

A. Product Data:
   1. Evaporator-fan components.
   2. Condensing unit components.
   3. Refrigeration piping line set.
   4. System controls.

1.03 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. ASHRAE Compliance:
   1. Fabricate and label refrigeration system to comply with ASHRAE 15, "Safety Standard for Refrigeration Systems."
   2. Applicable requirements in ASHRAE 62.1-2007, Section 4 - "Outdoor Air Quality," Section 5 - "Systems and Equipment," Section 6 - " Procedures," and Section 7 - "Construction and System Start-Up."

C. ASHRAE/IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1-2004.

1.04 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of split-system air-conditioning units that fail in materials or workmanship within specified warranty period.
   1. Compressor: Five year(s) from date of Substantial Completion.
   2. Other Parts: One year(s) from date of Substantial Completion.

1.05 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.
   1. Product data
   2. Product certificates
   3. Wiring Diagrams
   4. Field quality-control reports.
   5. Warranty: Sample of special warranty

PART 2 PRODUCTS

2.01 SPLIT SYSTEMS

A. Manufacturers
   1. Manufacturers: Subject to compliance with requirements, provide products by the following:
      a. Samsung
      b. Daikin
      c. Lennox

B. Evaporator-Fan Unit:

1. Concealed Unit Chassis: Galvanized steel with flanged edges, removable panels for servicing, and insulation on back of panel.
    a. Insulation: Faced, glass-fiber duct liner.
    b. Drain Pans: Galvanized steel, with connection for drain; insulated.
2. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins, complying with ARI 210/240, and with thermal-expansion valve.
3. Evaporator Fan: Forward-curved, double-width wheel of galvanized steel; directly connected to motor.
4. Fan Motor: Multi-speed.
5. Filters: 1 inch (25 mm) thick, in fiberboard frames.
6. Condensate Drain Pans:
    a. Fabricated with one percent slope in at least two planes to collect condensate from cooling coils (including coil piping connections, coil headers, and return bends) and humidifiers, and to direct water toward drain connection.
        1) Double-wall, galvanized-steel sheet with space between walls filled with foam insulation and moisture-tight steel.
7. Drain Connection: Located at lowest point of pan and sized to prevent overflow. Terminate with threaded nipple on one end of pan.
    a. Minimum Connection Size: NPS 1 (DN 25).
    b. Provide unit with manufacturers condensate pump.
    c. Pan-Top Surface Coating: Asphaltic waterproofing compound.
    d. Units with stacked coils shall have an intermediate drain pan to collect condensate from top coil.

C. Air-Cooling, Compressor-Condenser Unit:
1. Casing steel, finished with baked enamel, with removable panels for access to controls, weep holes for water drainage, and mounting holes in base. Provide brass service valves, fittings, and gage ports on exterior of casing.
2. Compressor: Hermetically sealed scroll type with crankcase heater and mounted on vibration isolation. Compressor motor shall have thermal- and current-sensitive overload devices, start capacitor, relay, and contactor.
3. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins, complying with ARI 210/240, and with liquid subcooler.
4. Heat Pump Components: Reversing valve and low-temperature air cut-off thermostat.
5. Fan: Aluminum-propeller type, directly connected to motor.
6. Motor: Permanently lubricated, with integral thermal-overload protection.
7. Low Ambient Kit: Permits operation down to 35 deg F (7 deg C).

D. Accessories:
1. Thermostat: Low voltage with subbase to control compressor and evaporator fan.
2. Refrigerant Line Kits: Soft-annealed copper suction and liquid lines factory cleaned, dried, pressurized, and sealed; factory-insulated suction line with flared fittings at both ends.
    a. Minimum Insulation Thickness: 1/2 inch (13 mm) thick.
    b. Exterior Protective Jacketing: 0.016-inch thick aluminum cladding in accordance with ASTM C 1729.

2.02 COLD SPA SPLIT SYSTEM

A. Manufacturers: Subject to compliance with requirements, provide products by the following:
1. Aqua Logic
2. American Chillers

B. Evaporator-Heat Exchanger:

1. Packaged shell-and-tube heat exchanger mounted on factory vertical stand, pre-wired digital temperature controller and flow switch and pre-plumbed piping connections.

C. Air-Cooling, Compressor-Condenser Unit:
1. Casing steel, finished with baked enamel, with removable panels for access to controls, weep holes for water drainage, and mounting holes in base. Provide brass service valves, fittings, and gage ports on exterior of casing.
2. Compressor: Hermetically sealed scroll type with crankcase heater and mounted on vibration isolation. Compressor motor shall have thermal- and current-sensitive overload devices, start capacitor, relay, and contactor.
3. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins, complying with ARI 210/240, and with liquid subcooler.
4. Heat Pump Components: Reversing valve and low-temperature air cut-off thermostat.
5. Fan: Aluminum-propeller type, directly connected to motor.
6. Motor: Permanently lubricated, with integral thermal-overload protection.
7. Low Ambient Kit: Permits operation down to 0°F.

D. Accessories:
1. Pre-programmed digital single stage temperature controller with LED display.
2. Water flow switch, shipped loose with unit.
3. Refrigerant Line Kits: Soft-annealed copper suction and liquid lines factory cleaned, dried, pressurized, and sealed; factory-insulated suction line with flared fittings at both ends.
   a. Minimum Insulation Thickness: 1/2 inch (13 mm) thick.
   b. Exterior Protective Jacketing: 0.016-inch thick aluminum cladding in accordance with ASTM C 1729.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install units level and plumb.

B. Install evaporator-fan components using manufacturer's standard mounting devices securely fastened to building structure.

C. Install compressor-condenser components on angle iron frame securely attached to building wall.

D. Install and connect pre-charged refrigerant tubing to component's quick-connect fittings. Install tubing to allow access to unit.

3.02 CONNECTIONS

A. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Where piping is installed adjacent to unit, allow space for service and maintenance of unit.

C. Duct Connections: Duct installation requirements are specified in Division 23 Section "Metal Ducts" Drawings indicate the general arrangement of ducts. Connect supply and return ducts to split-system air-conditioning units with flexible duct connectors. Flexible duct connectors are specified in Division 23 Section "Air Duct Accessories."

3.03 FIELD QUALITY CONTROL

A. Perform tests and inspections.
1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

B. Tests and Inspections
   1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
   2. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation. Remove malfunctioning units, replace with new components, and retest.
   3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

END OF SECTION

SECTION 23 82 19
FAN COIL UNITS

PART 1 GENERAL

1.01 SUMMARY

A. This Section includes fan-coil units and accessories.

1.02 ACTION SUBMITTALS

A. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories.

B. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   1. Wiring Diagrams: Power, signal, and control wiring.

1.03 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

1.04 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.
   1. Product data
   2. Product certificates
   3. Wiring Diagrams
   4. Field quality-control reports.
   5. Warranty: Sample of special warranty

PART 2 PRODUCTS

2.01 DUCTED FAN-COIL UNITS

A. Manufacturers: Subject to compliance with requirements, provide products by the following:
   1. Daikin
   2. Lennox
   3. Samsung

B. Evaporator-Fan Unit:
   1. Concealed-Unit Chassis: Self-contained, packaged, factory assembled, pre-wired unit consisting of cabinet, supply fan, heating and cooling elements, controls, and accessories; wired for single power connection with control transformer.
   2. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins, complying with ARI 210/240, and with thermal-expansion valve.
   3. Evaporator Fan: Forward-curved, double-width wheel of galvanized steel; directly connected to motor.
   4. Fan Motor: Multi-speed.
   5. Condensate Drain Pans:
      a. Fabricated with one percent slope in at least two planes to collect condensate from cooling coils (including coil piping connections, coil headers, and return bends) and humidifiers, and to direct water toward drain connection.
      b. Double-wall, galvanized-steel sheet with space between walls filled with foam insulation and moisture-tight steel.

6. Drain Connection: Located at lowest point of pan and sized to prevent overflow. Terminate with threaded nipple on one end of pan.
    a. Minimum Connection Size: NPS 1-1/4" (DN 25).
    b. Provide unit with manufacturers condensate pump.

C. Air-Cooling, Compressor-Condenser Unit:
1. Casing steel, finished with baked enamel, with removable panels for access to controls, weep holes for water drainage, and mounting holes in base. Provide brass service valves, fittings, and gage ports on exterior of casing.
2. Compressor: Hermetically sealed scroll type with crankcase heater and mounted on vibration isolation. Compressor motor shall have thermal- and current-sensitive overload devices, start capacitor, relay, and contactor.
3. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins, complying with ARI 210/240, and with liquid subcooler.
4. Heat Pump Components: Reversing valve and low-temperature air cut-off thermostat.
5. Fan: Aluminum-propeller type, directly connected to motor.
6. Motor: Permanently lubricated, with integral thermal-overload protection.
7. Low Ambient Kit: Permits operation down to 0°F.

D. Accessories:
1. Controller: Wired remote controller with digital display, field mounted to side of unit.
2. Remote sensor kit with 40ft plenum rated control cable.
3. Refrigerant Line Kits: Soft-annealed copper suction and liquid lines factory cleaned, dried, pressurized, and sealed; factory-insulated suction line with flared fittings at both ends.
    a. Minimum Insulation Thickness: 1/2 inch (13 mm) thick.
    b. Exterior Protective Jacketing: 0.016-inch thick aluminum cladding in accordance with ASTM C 1729.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install units level and plumb.

B. Install evaporator-fan components using manufacturer's standard mounting devices securely fastened to building structure.

C. Install compressor-condenser components on angle iron frame securely attached to building wall.

D. Install and connect pre-charged refrigerant tubing to component's quick-connect fittings. Install tubing to allow access to unit.

3.02 CONNECTIONS

A. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Where piping is installed adjacent to unit, allow space for service and maintenance of unit.

C. Duct Connections: Duct installation requirements are specified in Division 23 Section "Metal Ducts" Drawings indicate the general arrangement of ducts. Connect supply and return ducts to split-system air-conditioning units with flexible duct connectors. Flexible duct connectors are specified in Division 23 Section "Air Duct Accessories."

3.03 FIELD QUALITY CONTROL

A. Perform tests and inspections.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

B. Tests and Inspections
   1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
   2. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation. Remove malfunctioning units, replace with new components, and retest.
   3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

SECTION 23 83 16.02
RADIANT-HEATING (SNOW & ICE MELT) HYDRONIC PIPING

PART 1 GENERAL

1.01 SUMMARY

A. Snow and ice melting systems (SIM), where shown on the Drawings and Schedules, shall be hydronic, and shall include the following:
   1. Crosslinked polyethylene (PEXa) piping.
   2. Distribution manifold(s) with balancing and flow control valves where required.
   3. Pipe-to-manifold compression nut fittings.
   4. Cold-expansion and compression-sleeve fittings.
   5. Pipe fasteners as approved by the manufacturer of the SIM PEXa piping.
   6. Controls.
   7. Supervision and field engineering required for the complete and proper function of the system.

1.02 REFERENCES

A. Publications listed here are part of this specification to the extent they are referenced. Where no specific edition of the standard or publication is identified, the current edition shall apply.

B. ASTM – American Society for Testing and Materials
   1. ASTM E84 – Standard Test Method for Surface Burning Characteristics of Building Materials.
   2. ASTM F876 – Standard Specification for Crosslinked Polyethylene (PEX) Tubing.
   3. ASTM F877 – Standard Specification for Crosslinked Polyethylene (PEX) Plastic Hot- and Cold-Water Distribution Systems.
   4. ASTM F2080 – Standard Specification for Cold-Expansion Fittings With Metal Compression-Sleeves for Crosslinked Polyethylene (PEX) Pipe.

C. CSA – Canadian Standards Association
   1. CSA B137.5 – Crosslinked Polyethylene (PEX) Tubing Systems for Pressure Applications.
   2. CSA B214 – Installation Code for Hydronic Heating Systems.

D. DIN – German Institute for Standardization (Deutsches Institut für Normung)
   1. DIN 4726 – Plastic Piping Used in Warm Water Floor Heating (Warmwasser-Fußbodenheizungen und Heizkörperanbindungen - Rohrleitungen aus Kunststoffen).

E. ICC – International Code Council

F. ISO – International Organization for Standardization
   1. ISO 9001 – Quality Management Systems – Requirements.

G. ULC – Underwriters' Laboratories of Canada
   1. CAN/ULC S102.2 – Surface Burning Characteristics of Flooring, Floor Covering and Miscellaneous Materials.
   2. CAN/ULC S101, Standard Methods of Fire Endurance Tests of Building Construction and Materials.

H. PPI – Plastic Pipe Institute
   1. PPI TR-3– Policies and Procedures for Developing Hydrostatic Design Basis (HDB), Pressure Design Basis (PDB), Strength Design Basis (SDB), and Minimum Required Strength (MRS) Ratings for Thermoplastic Piping Materials or Pipe.

1.03 DEFINITIONS

A. Crosslinked polyethylene, commonly abbreviated PEX, is made from high density polyethylene (HDPE). Crosslinking is accomplished during manufacturing. Crosslinking enhances the physical & mechanical properties of the polymer. The high-temperature properties are improved. Chemical resistance is enhanced by resisting dissolution. Low temperature properties are also improved; its impact and tensile strength, scratch resistance, and resistance to brittle fracture are enhanced. The required degree of crosslinking, according to ASTM Standard F876-07, is between 70 - 89%. This specification requires PEX to be designated as PEXa and be manufactured by the high-pressure peroxide method.

1.04 SUBMITTALS

A. Product Data: Submit manufacturer's Technical Manual, submittal forms, catalog cuts, brochures, specifications, and installation instructions. Submit data in sufficient detail to indicate compliance with the contract documents.
   1. Submit manufacturer's instructions for installation.
   2. Submit data for equipment, fittings, fasteners and associated items necessary for the installation of the piping and manifolds.

B. Submit computer-generated SIM system design indicating heat flux, pipe sizing, spacing, flow rates and temperatures. SIM design calculations shall be performed on pipe manufacturer’s software.

C. Drawings: Provide plans drawn to scale for all installation areas.
   1. Indicate dimensions, descriptions of materials, general construction, component connections, anchorage methods and installation procedures.
   2. Indicate design, schematic layout of system, including equipment, critical dimensions and piping/slab penetration details as well as details for protecting exposed PEX piping.

D. Certification:
   1. Submit independent certification results for the piping systems from an accredited independent testing laboratory.
   2. The design shall be approved by a professional appropriately licensed in the jurisdiction where the installation will take place, as being complete and accurate.
   3. Fittings shall be third-party certified to applicable referenced standards as part of the manufacturer’s PEX piping system, with independent listings from NSF, CSA and ICC, as applicable.
   4. Fittings embedded within the thermal mass or encased behind walls or ceilings shall be certified to ASTM F2080.

E. Maintenance Instructions: Submit instructions for finish maintenance. Note: Consider using other words for “finish maintenance” – the meaning is unclear.

1.05 QUALITY ASSURANCE

A. Manufacturer: Must be a company specializing in the Work of this Section with a minimum of 5 years documented experience.

B. Pipe shall be manufactured in a facility whose quality management system is ISO 9001 certified.

C. Crosslinked polyethylene (PEXa) pipe shall conform and be certified to ASTM F876, F877 and CSA B137.5, and shall have the PPI TR-3 listing. Pipes with an oxygen diffusion barrier shall conform to the requirements for oxygen permeability DIN 4726 and shall also have the PPI TR-3 listing.

1.06 DELIVERY STORAGE AND HANDLING

A. Deliver and store piping and equipment in shipping containers with labeling in place.
   1. Pipe shall be kept in original shipping boxes until required for installation.

B. Store piping and equipment in a safe place, dry, enclosed, under cover, in a well-ventilated area.
   1. Do not expose pipe to ultraviolet light beyond exposure limits recommended by manufacturer.
   2. Protect piping and manifolds from entry of contaminating materials. Install suitable plugs in open pipe ends until installation.
   3. Where possible, connect pipes to assembled manifolds to eliminate possibility of contaminants and cross-connections.
   4. Piping shall not be dragged across the ground or other surfaces and shall be stored on a flat surface with no sharp edges.

C. Protect materials from damage by other trades.

D. Pipe shall be protected from oil, grease, paint, direct sunlight and other elements as recommended by manufacturer.

1.07 WARRANTY

A. Provide manufacturer's standard written warranty.
   1. To repairing or replacing the defective product in question or providing a refund of the defective product’s purchase price.
   2. The radiant heating pipe manufacturer shall warrant the crosslinked polyethylene piping to be free from defects in material and workmanship for a period of twenty-five (25) years.
   3. Cold-expansion compression-sleeve fittings shall be warranted to be free from defects in material and workmanship for a period of twenty-five (25) years.
   4. All manifolds, distribution headers, thermostats and actuators shall be warranted to be free from defects in material and workmanship for a period of one (2) years starting at completion of successful pressurized water tests immediately following system installation.

1.08 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.
   1. Product data
   2. Product certificates
   3. Field quality-control reports.
   4. Warranty: Sample of special warranty.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. REHAU
   2. Uponor Wirsbo Co.
   3. Watts Radiant, Inc.; a division of Watts Water Technologies, Inc.
   4. Zurn Plumbing Products Group.

2.02 PIPING

A. Snow and ice melt system pipe shall be high-density crosslinked polyethylene manufactured using the high-pressure peroxide method of crosslinking (PEXa). Pipe shall conform to ASTM F876, ASTM F877 and CSA B137.5.

B. Pipe shall be rated for continuous operation of 100 psi gauge pressure at 180°F temperature (690 kPa @ 82°C), and 80 psi gauge pressure at 200°F temperature (550 kPa @ 93°C).

C. When required, pipe shall have a co-extruded oxygen diffusion barrier capable of limiting oxygen diffusion through the pipe to less than 0.32 mg/m2/day at 104°F (40°C) water temperature, in accordance with DIN 4726.

D. Bend Radius:
   1. The minimum bend radius for cold bending of the pipe shall be not less than five (5) times the outside diameter.
   2. Bends with a radius less than this shall require the use of a bending template as supplied by the pipe manufacturer, and/or hot air.

E. Compliant to the following standards:
   1. ANSI/UL 263 through certification listings with Underwriters Laboratories, Inc. (UL).
      a. UL Design No. L588: 1-hour wood frame floor/ceiling assemblies
      b. UL Design No. K917: 2-hour concrete floor/ceiling assemblies
      c. UL Design No. U383: 1-hour wood stud/gypsum wallboard wall assemblies
      d. UL Design No. V461: 1-hour steel stud/gypsum wallboard wall assemblies

F. Pipe to have a Flame Spread Index and a Smoke Developed Index listing to ASTM E84 (in U.S.) or CAN/ULC S102.2 (in Canada).

G. PEX-B piping is NOT allowed.

H. All piping shall be labeled for type, size psi ratings, etc.

2.03 FITTINGS

A. Fittings shall be third-party certified to applicable standards ASTM F877, ASTM F2080 and CSA B137.5, with independent listings from NSF and/or CSA as applicable.

B. Compression nut manifold fittings shall be manufactured of brass with a barbed insert and a split compression ring.

C. Compression-sleeve fittings shall be manufactured of brass and shall be approved by the piping manufacturer to be part of a proven cataloged system.

D. Fittings embedded within the thermal mass or encased behind walls or ceilings shall be cold-expansion compression-sleeve fittings certified to ASTM F2080. Where required by the manufacturer, fittings shall be protected from external environmental conditions.

2.04 DISTRIBUTION MANIFOLDS

A. Material: Distribution manifolds shall be manufactured of stainless steel and be supplied by the piping manufacturer as a proven cataloged part of the manufacturer's system.

2.05 VALVES

A. Main Shutoff Valves:
   1. Factory installed on supply and return connections.
   2. Two-piece body.
   3. Body: Stainless Steel.
   4. Ball: Stainless Steel.

5. Seals: PTFE.
6. CWP Rating: 150 psig.
7. Maximum Operating Temperature: 225 deg F.

B. Manual Air Vents:
1. Body: Stainless Steel.
2. Internal Parts: Nonferrous.
3. Operator: Key furnished with valve, or screwdriver bit.
4. Inlet Connection: NPS 1/2.
5. Discharge Connection: NPS 1/8.
6. CWP Rating: 150 psig.
7. Maximum Operating Temperature: 225 deg F.

C. Balancing Valves:
1. Body: Stainless Steel, ball or plug, or globe cartridge type.
2. Ball or Plug: stainless steel.
3. Globe Cartridge and Washer: Brass with EPDM composition washer.
4. Seat: PTFE.
5. Visual Flow Indicator: Flowmeter with visible indication in a clear plastic cap at top of valve.
6. Handle Style: Lever or knob, with memory stop to retain set position if used for shutoff.
7. CWP Rating: Minimum 125 psig.
8. Maximum Operating Temperature: 250 deg F.

D. Zone Control Valves:
1. Body: Plastic or Stainless Steel, ball or plug, or globe cartridge type.
2. Ball or Plug: Brass or stainless steel.
3. Globe Cartridge and Washer: Brass with EPDM composition washer.
4. Seat: PTFE.
5. Actuator: Replaceable electric motor.
6. CWP Rating: Minimum 125 psig.
7. Maximum Operating Temperature: 250 deg F.

E. Thermometers:
1. Mount on supply and return connections.
2. Case: Dry type, metal or plastic, 2-inch diameter.
3. Element: Bourdon tube or other type of pressure element.
4. Movement: Mechanical, connecting element and pointer.
5. Dial: Satin-faced, nonreflective aluminum with permanently etched scale markings.
6. Pointer: Black metal.
7. Window: Plastic.
8. Connector: Rigid, back type.
9. Thermal System: Liquid- or mercury-filled bulb in copper-plated steel, aluminum, or brass stem.
10. Accuracy: Plus or minus 1 percent of range or plus or minus 1 scale division to maximum of 1.5 percent of range.

F. Mounting Brackets: Copper, or plastic or copper-clad steel, where in contact with manifold.

2.06 PIPING SPECIALTIES

A. Cable Ties:
1. Fungus-inert, self-extinguishing, 1-piece, self-locking, Type 6/6 nylon cable ties.

2. Minimum Width: 1/8 inch.
3. Tensile Strength: 20 lb, minimum.
4. Temperature Range: Minus 40 to plus 185 deg F.

2.07 CONTROLS

A. Automatic SIM Detector and Melting Controls
   1. SIM control shall use low-voltage devices to monitor outdoor ambient, slab, fluid supply and/or return temperatures, as well as an automatic snow and ice detector to detect moisture in the SIM zone.
   2. SIM control shall be capable of maintaining a set temperature in a SIM slab or thermal mass, with adjustable settings for Idle and Melting mode.
   3. Connection to output devices shall be as per the recommended installation of the SIM control, as part of a proven cataloged system.

B. Manual SIM Detector Controls
   1. SIM control shall use low-voltage devices to monitor outdoor ambient and slab or thermal mass temperatures. SIM control to have a timed on/off switch that is turned on by system operator then shuts system off after a pre-set time interval.
   2. SIM control shall be capable of maintaining a set temperature in a SIM slab or thermal mass, with adjustable settings for Idle and Melting mode.
   3. Connection to output devices shall be as per the recommended installation of the SIM control, as part of a proven cataloged system.

PART 3 EXECUTION

3.01 ACCEPTABLE INSTALLERS

A. As a minimum, installation shall be performed by qualified laborers trained by the manufacturer in the procedures of PEX SIM systems and appropriately licensed for the jurisdiction where the installation will take place.

3.02 EXAMINATION

A. Examine areas and conditions under which work of this Section will be performed. Correct conditions detrimental to timely and proper completion of Work. Do not proceed until unsatisfactory conditions are corrected.

B. Beginning of installation means acceptance of existing conditions.

3.03 PREPARATION

A. Coordinate with related trades and manufacturer’s recommendations with regard to installation in conjunction with:
   1. Reinforcing wire mesh or rebar.
   2. Precast or existing concrete sub-grade.
   3. Asphalt or other hot mix.
   4. Patio pavers.
   5. Preparation of space for manifold installation.
   6. Mounting outdoors or in an unheated indoor environment.

3.04 INSTALLATION

A. Install in accordance with manufacturer's published installation manual and/or published guidelines and final drawings.

B. Mount manifolds in the locations previously prepared or in previously installed cabinets, if used. Manifolds shall be mounted as level as possible.

C. Route piping in an orderly manner, according to layout and spacing shown in final drawings.

D. At connections and fittings, use a plastic pipe cutter to ensure square and clean cuts, and join pipes immediately or cap ends of pipe to seal from contaminants. Where fittings are installed within the thermal mass, they shall be wrapped in chloride-free tape or sealed within a heat-shrink material approved by the manufacturer.

E. Pipe shall be dispensed using a suitable uncoiling device. Remove twists prior to securing pipe. Pipe shall lie flat on an even plane. Finished grade of a thermal mass shall be a minimum of 3/4 in (19 mm) above the top of PEX heating pipes. Fasten piping at no more than 3 ft (90 cm) intervals, being careful not to twist the pipe. In thin concrete slabs, secure piping every 2 ft (60 cm). Use only fasteners supplied or approved by the manufacturer of the PEX pipe.

F. Piping that shall pass through expansion joints shall be covered in protective polyethylene convoluted sleeving (flexible conduit) extending 15 in (38 cm) on each side of the joint. Sleeving shall be secured on pipe to prevent movement during installation of thermal mass.

G. Where piping exits the thermal mass, a protective conduit shall be placed around the pipe, with the conduit extending a minimum of 6 in (15 cm) into the floor and exiting by a minimum of 6 in (15 cm). For penetrations at manifolds, use rigid PVC bend guides secured in place to prevent movement.

H. At the time of installation of each circuit of pipe, connect the pipe to the correct manifold outlet and record pipe length for balancing. If manifold is not installed, cap the end of the pipe and label the pipe's circuit numbers along with S for supply and R for return. Connect pipes to manifold as soon as possible and record circuit lengths. Circuits shall be labeled to indicate circuit length and serviced area.

I. The installer shall confirm minimum and maximum exposure temperatures for the substrate material (thermal mass) and shall ensure proper SIM operating temperatures.

3.05 FIELD QUALITY CONTROL

A. Filling, Testing & Balancing: Tests of hydronic heating systems shall comply with authorities having jurisdiction, and, where required, shall be witnessed by the building official.

B. Pressure gauges used shall show pressure increments of 1 psig and shall be located at or near the lowest points in the distribution system.

C. Air Test
   1. Charge the completed, yet unconcealed pipes with air at a minimum of 40 psig.
   2. Do not exceed 150 psig.
   3. Use liquid gas detector or soap solution to check for leakage at manifold connections.

D. Water Test
   1. Purge air from pipes.
   2. Charge the completed, yet unconcealed pipes with water.
   3. Take necessary precautions to prevent water from freezing.
   4. Check the system for leakage, especially at pipe joints.

E. Perform a preliminary pressure test pressurizing the system to the greater of 1.5 times the maximum operating pressure or 100 psig for 30 minutes.
   1. As the piping expands, restore pressure, first at 10 minutes into the test and again at 20 minutes.
   2. At the end of the 30-minute preliminary test, pressure shall not fall by more than 8 psig from the maximum, and there shall be no leakage.

F. After successfully performing the preliminary test, perform the main pressure test immediately.

1. The main pressure test shall last 2 hours.
2. The test pressure shall be restored and shall not fall more than 3 psig after 2 hours.
3. No leakage shall be detected.

G. Pressure shall be maintained and monitored during installation of the thermal mass.
1. If any leak is detected during installation of thermal mass, leak shall be found immediately, and the area cleared for repair using manufacturer's approved repair coupling.
2. Retest before covering repair.

H. Complete inspection and furnish test reports supplied by the manufacturer of the system.

I. All low-voltage equipment shall be tested. The following 3 items should be checked at a minimum:
1. Inputs
2. Outputs
3. Sequence of Operations

3.06 CLEANING

A. Clean exposed surfaces upon completion of installation using clean, damp cloth. No cleaning agents are allowed.

B. Comply with manufacturer's recommendations.

3.07 PROTECTION

A. Protect installation throughout construction process until date of final completion.

B. Replace components that cannot be repaired.

SECTION 25 08 00
COMMISSIONING OF INTEGRATED AUTOMATION SYSTEMS

PART 1 GENERAL

1.01 SUMMARY

A. This section includes specific requirements that apply to the implementation of the Commissioning Process and this Division Contractors' participation in this process. This section details the project specific equipment and systems that are included in the Commissioning Process. For general descriptions and responsibilities, refer to SECTION 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

1.02 RELATED DOCUMENTS

A. The Owner's Project Requirements (OPR) document.

B. The Basis of Design (BoD) document.

C. The Project Commissioning Plan (CxP) document.

D. ASHRAE Standard 202-2013 - Commissioning Process for Buildings and Systems.

E. LEED v4 for Building Design and Construction.

1.03 RELATED SECTIONS

A. SECTION 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS

B. SECTION 07 08 00 - COMMISSIONING OF THERMAL AND MOISTURE PROTECTION

C. SECTION 08 08 00 - COMMISSIONING OF OPENINGS

D. SECTION 11 08 00 - COMMISSIONING OF EQUIPMENT

E. SECTION 13 08 00 - COMMISSIONING OF SPECIAL CONSTRUCTION

F. SECTION 14 08 00 - COMMISSIONING OF CONVEYING SYSTEMS

G. SECTION 21 08 00 - COMMISSIONING OF FIRE SUPPRESSION SYSTEMS

H. SECTION 22 08 00 - COMMISSIONING OF PLUMBING SYSTEMS

I. SECTION 23 08 00 - COMMISSIONING OF MECHANICAL SYSTEMS

J. SECTION 26 08 00 - COMMISSIONING OF ELECTRICAL SYSTEMS

K. SECTION 27 08 00 - COMMISSIONING OF COMMUNICATIONS SYSTEMS

L. SECTION 28 08 00 - COMMISSIONING OF SAFETY AND SECURITY SYSTEMS

M. SECTION 33 08 00 - COMMISSIONING OF UTILITIES

1.04 DEFINITIONS

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

1.05 RESPONSIBILITIES

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

PART 2 PRODUCTS

2.01 NO PRODUCTS SUPPLIED

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

B. Contractors and/or Vendors shall provide the specialty testing equipment necessary to fulfill the functional testing requirements, for the duration of the testing period.

PART 3 EXECUTION

3.01 GENERAL

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.02 MEETINGS

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.03 SYSTEM START-UP

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.04 PRE-FUNCTIONAL CHECKLISTS

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.05 FUNCTIONAL PERFORMANCE TESTING

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.06 TRAINING

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.07 SYSTEMS TO BE COMMISSIONED

A. GENERAL
   1. Commissioning specifications supplement the requirements of individual specifications sections but shall not be interpreted to replace or diminish the specified scope of any individual section.
   2. For all systems listed below, Division Contractor shall comply with all commissioning requirements specified.

B. APPLICABLE SYSTEMS
   1. Third-Party Integration Systems
   2. Network Supervisory Controllers
   3. Unitary Controllers
   4. Field Devices
   5. Automation Software
   6. Sequence of Operations

END OF SECTION

SECTION 25 10 00
BAS NETWORK SYSTEMS

PART 1 GENERAL

1.01 SUMMARY

A. This Section includes control equipment and components for a complete Building Automation System (BAS), including control components for terminal heating and cooling units not supplied with factory-wired controls as well as integration of factory-wired controls.

B. Materials covered by this Section are to be purchased direct from the supplier unless noted otherwise. This contractor shall review and adjust shop drawings as necessary, coordinate shipping dates, receive products on the job site, store the product until installation and shall install the product as if it had been purchased by the contractor.

1.02 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. Specifications throughout all Divisions of the Project Manual are directly applicable to this Section, and this Section is directly applicable to them.

C. Division 01, 13, 14, 21, 22, 23, 26, 27, and 28 Specification Sections, apply to this Section.

D. Life Time Fitness “Owner’s Project Requirements” document.

E. Section 23 09 34 – VARIBLE FREQUENCY DRIVES

F. Section 25 20 00 - BAS INSTRUMENTATION

G. Section 25 90 00 - BAS SEQUENCE OF OPERATIONS

1.03 REFERENCE STANDARDS

A. IEEE 802.3 - IEEE Standard for Ethernet; 2022 (Corrigendum 2024).

B. ISA-5.1 - Instrumentation and Control Symbols and Identification; 2024.

C. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

D. UL 916 - Energy Management Equipment; Current Edition, Including All Revisions.

E. Comply with all current codes, ordinances, regulations for the jurisdiction having authority.

F. All materials, installation and workmanship shall comply with the applicable requirements and standards addressed within the following references:

G. ASHRAE Standard 90.1 - Energy Standard for Buildings

H. ASHRAE Standard 62.1 - Ventilation for Acceptable Indoor Air Quality

I. ASHRAE Standard 135 - BACnet - A Data Communication Protocol for Building Automation and Control Networks

K. ASHRAE Standard 41.8 - Standard Methods for Liquid Flow Measurement

L. ASHRAE Standard 202 - Commissioning Process for Buildings and Systems

M. ASHRAE Guideline 36-2021 - High-Performance Sequences of Operation for HVAC Systems

N. IECC - International Energy Conservation Code

O. ICC 2018 International Green Construction Code

1.04 DEFINITIONS

A. BACnet: A data communication protocol defined by ASHRAE Standard 135.

B. BACnet/IP: Annex J of Standard 135 for transmission of BACnet messages over TCP/IP networks.

C. BAS: Building Automation System.

D. DDC: Direct Digital Control.

E. Gateway: Communication hardware and/or software for translating two different protocols.

F. I/O: Input/Output.

G. Workstation: A computer PC where the personnel operating the building DDC systems can interface with the systems and adjust setpoints and operating conditions.

H. MS/TP: Master Slave / Token Passing.

I. Native BACnet Device: A BACnet system that uses BACnet devices at all levels and communicates without the need for intermediary gateways.

J. PID: Proportional, integral, derivative control loop algorithm.

K. Router: A component that joins two or more networks using different LAN technologies.

L. RTD: Resistance temperature device.

M. Server: A computer on which the DDC operating system interfaces with controllers and the internet.

1.05 SCOPE OF WORK

A. This project requires the installation of a new Building Automation System constructed using a Niagara Framework with BACnet Field Level Devices. These devices, design, installation drawings, programming, and startup services shall be provided by Honeywell Multisite using the OPUS Magnum a Niagra based framework. The BAS shall utilize one or multiple JACE controllers, networked with a Niagara Framework Supervisor and compatible field devices.
   1. In the event multiple JACE controllers are used one JACE shall be designated as primary and all graphics/interface shall be through the primary unit.

B. The Contractor will be required to perform the following:
   1. Furnish, install, configure and commission a new Niagara Framework with BACnet fully programmable and application specific DDC controllers for the equipment identified in the DI drawings, including all components, software and applications required to meet the sequence of operation and the design/performance intent of the systems.
   2. Provide Application Specific Controllers (ASCs) and Programmable Control Units (PCUs) as specified herein and as indicated on the DI drawings. Provide I/O and ancillary devices as specified herein, as indicated on the DI drawings, and as necessary to perform the sequences of operation. If any devices are required to achieve the specified sequence of operation and not specified on the drawings or specifications the controls contractor should include that equipment in their bid. Provide BACnet or Niagara Framework products that communicate on MS/TP or TCP/IP channels to meet the functional specifications.
   3. Furnish and install electronic energy meters to monitor energy usage and measure the efficiency of energy use within the facility as indicated on the DI drawings.
   4. Furnish and install all low voltage step-down transformers with associated low voltage connections, power supplies and power/communication/input/output cabling necessary for the control system.

5. Furnish and install conduit, junction boxes, fittings, panels, enclosures, and hardware as specified in these specifications, on the drawings and as required by Code.
6. Provide Graphical User Interface Development for all of the devices identified above and illustrated within the DI drawings.
7. It is the contractor's responsibility to review all of the design documents and specifications and report any discrepancies to the owner.

1.06 GENERAL INSTALLATION

A. Contractor shall implement a Niagara Framework based open system that will allow products from various suppliers to be integrated into a unified system in order to provide flexibility for expansion, maintenance, and service of the system. The Owner shall be the named license holder of all software associated with any and all incremental work on the project.

B. The Owner shall receive ownership of all job specific configuration documentation, data files and application-level software developed for the project. This shall include all custom, job specific software code, databases and documentation for all configuration and programming that is generated for a given project and/or configured for use with the NAC, FMCS Server(s), and any related LAN / WAN / Intranet and Internet connected routers and devices. Any and all required IDs and passwords for admin and programming level access to any component or software program shall be provided to the Owner.

C. It is the Owner's intent to purchase an open system capable of being serviced and expanded by any acceptable system integrator that has and maintains certification (TCP) to work on Niagara Framework systems

D. All hardware and field level devices installed, (i.e., ASCs, PDUs), for the project shall not be limited in their ability to communicate with a specific brand of Niagara Framework device. They shall also be constructed in a modular fashion to permit the next generation and support components to be installed in replace of or in parallel with existing components.

E. Provide and install all wiring required for a complete system, including communication bus, analog points, digital points, low voltage power, emergency power, and spare communication bus. Splices are not permitted within the IAS FAC LAN or DLN communication cables. Only continuous bus topologies, MS/TP or continuous homeruns are allowed for these networks. Capacity of any bus shall be limited to 80% of the allowable device count to allow for future minor modifications or expansions to the network.

F. Provision of all documentation called out in these specifications including, but not limited to, submittals, O&M manuals, commissioning submittals, CAD based as-built documentation, and training manuals. Provide electronic files on electronic media.

G. Training of facility personnel, and or maintenance contractor, on the operation and maintenance of the system. Refer to Section 3.11 for further training requirements.

H. The repair of all finished surfaces effected as a result of BAS related installation work. This includes but is not limited to carpet, drywall, paint, ceiling tiles, furniture, and the like.

I. System point to point check out, verification and documentation. Assist the Owner/LTF CxM, and/or TAB Firm in verification and functional performance testing and GUI acceptance testing. Refer to 25 08 00 for further requirements.

J. Graphical User Interface Development. The Contractor shall develop the graphics, tools, features, and network integration as required.

1.07 CONTROL DIAGRAMS AND SCHEDULE

A. The automation diagrams and schedules are an integral part of the control system design. Together the specifications, design drawings and schedules will provide a complete design. It is important that these documents be completed to a level of detail that will enable the performance expectations for the project to be realized.

B. Refer to BAS and Mechanical, Design and As-Built Drawings for information on the components and intended control functions.

1.08 SEQUENCE OF OPERATIONS

A. Program each Niagara Framework Network Controller, and third-party ASC, PCU, device, etc., to perform the sequences of operation provided in Section 25 90 00 SEQUENCE OF OPERATIONS and the DI drawings. Provide all necessary hardware on each piece of equipment in order for the equipment to perform the specified sequence and to meet the requirements of the point lists.

B. The Contractor shall be responsible for all control wiring connections, auxiliary devices and control wiring diagrams to complete the control system and attain the described sequence of operation.

C. The Contractor shall coordinate a review of the RTU’s setup configurations with the Mechanical Contractors start up representative prior to the configuration of the units.

1.09 BUILDING AUTOMATION SYSTEM POINTS LIST

A. Refer to the DI drawings for all equipment points which should be included in the graphic interface.

B. Alarms shall be provided as indicated on the matrix.

1.10 PARTS LIST

A. As part of the submittal, provide an accurate parts list including manufacturer, model number and quantity for all hardware and software.

1.11 QUALITY ASSURANCE

A. Provide a Niagara Framework as the basis of the new BAS. The Contractor shall be fully certified in the development and customization of the Niagara Framework software.

B. All microprocessor-based control products used shall conform to BTL Certified communication standards and Niagara Framework.

C. The BAS and components shall be listed by Underwriters Laboratories (((UL 916))) as an Energy Management System.

D. Functionality and Completeness: Contractor shall furnish and install all hardware, software and programming necessary to provide a complete and functioning system as specified. Contractor shall include all hardware, software and programming not specifically itemized in these Specifications, which is necessary to implement, maintain, operate, and diagnose the system in compliance with these Specifications.

1.12 INSTALLER’S QUALIFICATIONS

A. Installer's Qualifications: The Contractor shall have a successful history in the design and installation of Niagara Framework based Building Automation Systems to provide web browser monitoring and control of BACnet field level devices. Contractor must demonstrate experience in BAS installations for not less than 5 years and in DDC installation projects with point counts equal to this Project and systems of the same character as this Project.

B. Installer's Experience with Proposed Product Line: Firms shall have specialized in and be experienced with the installation of the proposed product line for not less than one year from date of final completion on at least three (3) projects of similar size and complexity. Submittals shall document this experience with references. Provide evidence of Niagara TCP certification as part of the submittal process.

1.13 BID PACKAGE SUBMITTAL

A. Provide the following submittals as part of the bid package.
   1. Proposed device schedule including all hardware and software.
   2. Qualifications.
   3. One-line diagram indicating how the new Niagara Framework network controllers will integrate with any existing BAS BACnet field level devices.
   4. An overall sequence of the construction as it pertains to the installation of the Building Automation System.

1.14 SUBMITTALS

A. General: Submit under provisions of Division 01.

B. Electronic Submittals: BAS control submittals and operation and maintenance (O&M) information shall be provided in electronic format as follows:
   1. Drawings and Diagrams:
      a. Shall be provided in .PDF Format.
      b. Product Data Sheets shall be provided in .PDF Format.

C. Qualifications: Manufacturer, Installer, and Key personnel qualifications as indicated for the appropriate items.

D. Submit a list of no less than three similar projects, which utilize the Niagara Framework for Enterprise connectivity to provide an Integrated Automation System that consists of web-browser control and monitoring of the proposed BACnet field level devices. These projects must be on-line and functional such that representatives from the Owner can observe the Integrated Automation System and Interface in full operation. Include proper references and contact numbers of these reference projects.

E. Submit validation which indicates the successful completion of the Niagara Framework TCP certification course.

F. Submit resumes of installing staff indicating passing certificates for training on the BACnet and Tridium TCP certification line of controls to be installed as part of this project.

G. Product Data: Submit manufacturer's technical product data for each Niagara Framework based Network Controller, control device, sensor, actuator, relay, panel, and accessory furnished, indicating dimensions, capacities, performance and electrical characteristics, and material finishes. Also include installation and start-up instructions.

H. Products: Within twenty-one (21) days after date of execution of Sub-Contractor agreement, submit for acceptance a list of all material and equipment manufacturers whose products are proposed, as well as names of all subcontractors whom the Contractor proposes to employ.

I. Submit documentation indicating BACnet Testing Laboratories (BTL) compliance and include Protocol Implementation Conformance (PIC) Statements.

J. Submit Shop Drawings for each control system.

K. Control Logic Documentation:
   1. Provide a written description of each control sequence.
   2. Submit a BAS Start-Up Test Agenda and Schedule for review and approval.

L. As-Built Record Documents:
   1. Provide record copies of product data and control Shop Drawings updated to reflect the final installed condition.
   2. Record documents shall include panel layout diagrams including wiring terminal connections. This should be on a 42x30 pdf drawing.
   3. Accurately record actual set points and settings of controls, final sequence of operation, including changes to programs made after submission and approval of Shop Drawings and including changes to programs made during specified testing.
   4. Record copies shall include individual floor plans with device (controllers, routers, sensors, etc.) locations with all interconnecting wiring routing including space sensors, LAN wiring, power wiring, low voltage power wiring.
   5. Network Riser Diagram including controller addresses.
   6. Valve Schedule including: Tag, system served, line size, flow rate (GPM), valve size, type of connection, valve type, flow pattern, supply power, manufacturer, valve and actuator part numbers, fail position, design coefficient, trim material.

1.15 SYSTEM ARCHITECTURE

A. The system provided shall incorporate hardware and software resources sufficient to meet the functional requirements of these Specifications. The Facility Local Area Network (FAC LAN) and Device Level Network (DLN) shall be based on industry standard open platforms as specified herein and utilize commonly available operation, management and application software. All software packages and databases shall be licensed to the Owner to allow unrestricted maintenance and operation of the BAS. Contractor shall include all items not specifically itemized in these Specifications that are necessary to implement, maintain, and operate the system in compliance with the functional intent of these Specifications.

B. The system architecture shall expand on the existing BAS, which is based on the Niagara Framework and consists of an Ethernet-based, wide area network (WAN), a single Local Area Network (LAN) that supports NCs, PCUs, ASCs, Operator Workstations (OWS), Smart Devices (SD), and Remote Communication Devices (RCDs) as applicable.
   1. WAN: Internet-based network connecting multiple facilities with a central data warehouse and server, accessible via standard web-browser. This is an existing infrastructure and Contractor is not required to configure any components of this WAN.
   2. Facility Local Area Network (FAC LAN): The FAC LAN shall be an Ethernet-based, 1 GBS Ethernet LAN connecting Local NCs, IAS Server and OWSs. The FAC LAN serves as the backbone for the NCs communications path and as the connection point to the WAN. The Owner shall provide a FAC LAN for the control system. LAN shall be IEEE 802.3 Ethernet over Fiber or Category 6 cable with switches and routers that support Gigabit Ethernet throughput.
   3. Device Level Network (DLN): Network used to connect PCUs and ASCs. These shall be Master/Slave Token/Passing (MS/TP) devices as defined in the BTL standard. A maximum of 38.4k bps shall be utilized.
   4. ARCnet DLNs shall not be acceptable.
   5. LON Works based devices and/or technology is not acceptable.

C. Remote Data Access: The system shall support the Internet Browser-based remote access to the building data. The IAS contractor shall coordinate with the Owner’s IT department to ensure all remote browser access (if desired by the owner) is protected with the latest Niagara Software updates and a VPN (Virtual Private Network) must be installed to protect the owner’s network from cyber-attacks.

D. Browser-based access: A remote/local user using a standard browser will be able access all control system facilities and graphics via the WAN or direct connection, with proper username and password. Only native Internet browser-based user interfaces, HTML5, that do not require plug-ins (thin clients) are acceptable. The system shall be capable of supporting an unlimited number of clients using a standard Web browser such as Internet Explorer or Chrome.

E. Graphics: Graphics shall include all pieces of mechanical equipment with a dedicated graphics page showing all points as indicated on the DI drawings.

F. Niagara Framework Control Systems Server (CSS): A server that maintains the systems configuration and programming database. It shall allow secure multiple access to the control information.

G. The communication speed between the controllers shall set up to meet each manufacturer's requirements for polling time and data transmission.

H. Systems Configuration Database: The system architecture shall support maintaining the systems configuration database on a server that resides on the FAC LAN. User tools for DLN and FAC LAN management shall be provided and licensed to the Owner and shall allow unrestricted configuring, updating, maintaining, and expanding of all current devices, configurations and settings.

1.16 WARRANTY

A. The entire BAS and all ancillary equipment required for its operation shall be free from defects in workmanship and material under normal use and service. If within 12 months from the date of substantial completion the installed equipment is found to be defective in operation, workmanship or materials, the Contractor shall replace, repair or adjust the defect at no cost to the Owner.

B. The warranty period for work and systems of this project shall commence after functional performance testing is complete.

C. Corrective software modifications made during warranty service periods shall be updated on all user documentation and on user and manufacturer archived software disks.

D. The Owner reserves the right to make changes to the BAS during the Warranty Period. Such changes do not constitute a waiver of warranty. Contractor shall warrant parts and installation work regardless of any such changes made by Owner, unless the Contractor provides clear and convincing evidence that a specific problem is the result of such changes to the BAS.

E. At no cost to the Owner, during the Warranty Period, Contractor shall provide maintenance services for software including all current software updates, firmware and hardware PRODUCTS. Prior to the closeout of the warranty period, the BAS contractor shall meet with the owner's representative to address any questions or concerns and offer ongoing Software Maintenance Services to the owner.

F. All materials shall meet or exceed all applicable referenced standards, federal, state and local requirements, and conform to codes and ordinances of authorities having jurisdiction.

1.17 STAND-ALONE FUNCTIONALITY

A. All controllers provided shall be capable of running standalone in the event of a loss of communications. Equipment fail position shall be set based on controls schematic.

B. Third party interfaces
   1. Manufacturer third party interfaces shall be limited to equipment which the BAS contractor cannot or has not been contracted to control directly via DDC controllers. This equipment shall include the following. Chillers, Boilers, ERUs, MAUs, VFDs, Utility Meters, Generators, Energy Monitors, Lighting Control Systems.

1.18 ENERGY MANAGEMENT APPLICATIONS

A. The BAS shall have the ability to perform energy management routines via preprogrammed function blocks or template programs.

1.19 UNIFORMITY

A. To the extent practical, all equipment of the same type serving the same function shall be identical and from the same manufacturer.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Acceptable Manufacturers:
   1. Niagara Framework version 4.10 or above.
   2. Life Time Property Development Approved Equal.

B. Acceptable Distributors:
   1. Honeywell Novar Multisite
      a. Phil McConnel (608.354.7350 / Philip.McConnell@Honeywell.com)
      b. Jason Nobbe (JNobbe@lt.life)
   2. Life Time Property Development Approved Equal.

C. Acceptable Integrators:
   1. Licensed Contractor, Corporate Facilities Operations approved.
   2. Life Time Property Development Approved Equal.

2.02 MATERIALS AND EQUIPMENT

A. Materials shall be new, the best of their respective kinds without imperfections or blemishes and shall not be damaged in any way. Used equipment shall not be used in any way for the permanent installation except where Drawings or Specifications specifically allow existing materials to remain in place.

2.03 SUBSTITUTIONS

A. Wherever the words “for review” or “for acceptance” are used in regard to manufactured specialties, or wherever it is desired to substitute a different make or type of apparatus for that specified, submit all information pertinent to the adequacy and adaptability of the proposed apparatus to the Owner and secure their approval before the apparatus is ordered. Refer to general condition requirements for substitutions.

PART 3 EXECUTION

3.01 PREPARATION

A. Examine areas and conditions under which control systems are to be installed. Do not proceed with work until unsatisfactory conditions have been corrected in manner acceptable to Installer.

B. These specifications call out certain duties of the Contractor and any subcontractor. They are not intended as a material list of all items required by the Contract.

3.02 INSTALLATION

A. Utilize licensed installers and comply with Division 26 electrical specifications for conduit, junction box, and wiring requirements.

B. Provide related items and work indicated on the DI drawings and items and work called for in this Division of the Specifications. This includes all incidentals, equipment, appliances, services, hoisting, scaffolding, supports, tools, supervision, labor, consumable items, fees, licenses, etc., necessary to provide complete systems. Perform start up, configuration, programming and commissioning coordination on each control product and system to provide fully operable systems in accordance with the specified functional performance.

C. Installation shall be in accordance with manufacturer's published recommendations and shall meet or exceed all applicable federal, state and local requirements, referenced standards and conform to codes and ordinances of authorities having jurisdiction.

D. The DI drawings show the general arrangement of the respective systems. Follow these Drawings as closely as actual building construction and the work of other trades will permit. Provide devices, power, fittings, sensors, controllers, wiring and accessories, which may be required but are not shown on the Drawings or specified herein. The Contractor shall be responsible for achieving the sequence of operations and intent of the system design.

E. All installation shall be in accordance with manufacturer's published recommendations.

F. Limit LAN cable lengths to no longer than 80% of the longest dimension published by the manufacturer of the cable between the most remote network nodes.

G. Comply with all rules, guidelines and procedures defined by the Owner's IT authority.

3.03 DIGITAL CONTROL PANELS, CONTROLLER QUANTITY AND LOCATION

A. Individual Digital Control Panels (DCP) are referenced to indicate allocation of points to each DCP and DCP location. Digital control panels shall consist of one or multiple controllers to meet requirements of this Specification.

B. Contractor shall extend power to the DCP from an acceptable power panel (coordinate with Division 26).

3.04 NETWORK MANAGEMENT FUNCTIONAL REQUIREMENTS

A. Contractor shall thoroughly and completely configure BAS system control devices, software, supplemental software, application programming, network communications, CSS, OWS, and network communications to permit the functional requirements of the BAS herein specified. The setup shall include as a minimum, the following network management procedures:
   1. Automatic backup of the DDC System database to appropriate media.
   2. Program, load and debug all software installations, including integration of third-party applications (e.g. analytics and energy management).
   3. Network user auditing routine.

3.05 SURGE PROTECTION

A. Contractor shall furnish and install any power supply surge protection, filters, etc. as necessary for proper operation and protection of all NCs, routers and other hardware and interface devices. All equipment shall be capable of handling voltage variations 10 % above or below measured nominal value, with no effect on hardware, software, communications, and data storage.

3.06 CONTROL POWER SOURCE AND SUPPLY

A. BAS Contractor shall provide all power source wiring required for operation of all equipment and devices provided under Division 25 and the DI Drawings.

3.07 PRODUCT DELIVERY, STORAGE, HANDLING, PROTECTION AND CLEANING

A. All products and materials shall be new, clean, and free of defects, damage and corrosion.

B. Ship and store products and materials in a manner which will protect them from damage, weather, and entry of debris until final acceptance.

3.08 SITE CLEAN UP

A. At conclusion of each day's work, and at the request of the owner, clean up and remove from the site all rubbish, debris and trash accumulated during the day as a result of work of the Contractor.

B. Marks on walls or ceiling tiles caused by the Contractor shall be cleaned by the Contractor. Ceiling tiles, drywall, carpet, paint, and all architectural finishes damaged by the Contractor shall be replaced by the Contractor.

3.09 CHECK OUT (CCO) START-UP TESTING, ADJUSTING, CALIBRATION

A. Work and/or systems installed under this Division shall be fully functioning prior to Demonstration and Acceptance Phase. Contractor shall conduct the CCO which addresses the start-up, testing, adjustments, and calibrations of all work and/or systems under this Contract.

B. All CCO testing procedures shall be documented in the CCO report to be provided by the contractor to the Owner/LTF CxM.

3.10 SUMMARY OF IAS ACCEPTANCE PROCEDURE

A. Submit product data, Shop Drawings, logic documentation, and sample graphics to the Engineer of Record, and receive approval.

B. Install BAS. Obtain Owner/LTF CxM acceptance of each phase of installation when installation consists of a renovation in an occupied space.

C. Submit as-built record documents.

D. Provide the Owner/LTF CxM an agenda and schedule of CCO testing activities for approval and coordination.

E. Provide written notice that the system is ready for Functional Performance Testing (FPT). Schedule BAS Demonstrations and Owner/LTF CxM Commissioning.

F. Demonstrate BAS systems to Owner/Engineer. Perform Functional Performance Testing including sequence of operation, point to point verification to graphical interface, historical data logging, and alarms.

G. Owner/LTF CxM to provide detailed punch list to contractor.

H. Contractor to repair issues on Owner/LTF CxM punch list in seven (7) calendar days.

I. Contractor provides all usernames, passwords, software, GUI, databases, licenses, and application programming tool(s) to the Owner.

J. Contractor provides training to Owner on all aspects of the IAS including architecture, devices, software, final sequences, and modes of operation.

K. Revise and re-submit as-built record Drawings and O&M Manuals.

L. When Functional Performance Testing Final is complete and all record drawings, submittals, and O&M Manual are submitted this will constitute acceptance and the beginning of the warranty period.

3.11 TRAINING

A. Training Allowance: Provide add service for not less than eight (8) hours formal training to the Owner's designated operations personnel.

B. Additional training shall be available for purchase and attendance by the Owner or designee. This additional training shall be of the same curriculum as the training courses provided by the manufacturer to the System Integrator.

C. Training shall not be provided unital after the completed installation and verified correct operation (FPT) by the owner's third-party commissioning agent. Coordinate with GC for scheduled owner training.

D. Meet all applicable Training requirements of Division 01 and the following:

E. Instruct the operators how to accomplish control of the system. Include basic troubleshooting and override of equipment and controls in the event of system failure.

F. Trainers - Persons conducting the training shall be knowledgeable in the workings of the system, and shall be regularly engaged in training exercises, to provide effective training. Submit names and qualifications of trainers for Owner review prior to scheduling training.

G. Training Manuals - Include the following in training manuals.
   1. Completed FPT Procedure.
   2. "As-installed" Drawings.
   3. Manufacturer's Operation Manuals.

SECTION 25 20 00
BAS INSTRUMENTATION

PART 1 GENERAL

1.01 SUMMARY

A. This Section includes automation device requirements for whole facility automation, including subsystems and equipment.

1.02 RELATED DOCUMENTS

A. Section 25 10 00 - BAS NETWORK SYSTEMS

B. Section 23 09 34 - VARIABLE FREQUENCY DRIVES

C. Section 25 90 00 - BAS SEQUENCE OF OPERATIONS

1.03 REFERENCE STANDARDS

A. Refer to Section 25 10 00 - BAS NETWORK SYSTEMS.

1.04 DEFINITIONS

A. Refer to Section 25 10 00 - BAS NETWORK SYSTEMS.

1.05 SCOPE OF WORK

A. Refer to Section 25 10 00 - BAS NETWORK SYSTEMS.

PART 2 PRODUCTS

2.01 EQUIPMENT REQUIREMENTS

A. All equipment shall meet or exceed the requirements listed below. Equipment shown on the Process Automation drawings shall conform to section 2.02.

B. Temperature Sensors:
   1. Temperature Sensors provided by the equipment manufacturer shall meet manufacturers thermistor standards.
   2. Temperature Sensors provided by the controls contractor shall be 10k ohm Type III thermistors.
   3. Temperature sensing elements shall be accurate within plus or minus 1.0 °F over their expected sensing range for all applications.
   4. Space Sensors shall be provided where shown on plans and shall be mounted above finished floor as directed by the Architect. Provide wall guards as called for on plans. Refer to Installation section for further details.

C. Relative Humidity Sensors:
   1. Relative humidity sensors shall be thin-film capacitance type with accuracy of 2% over the 20% to 95% range for all applications.
   2. All equipment sensors shall be provided by the equipment manufacturer where possible. When not possible, the output signal shall be 0-10 VDC, proportional over full range (4 to 20 mA as approved).

D. Carbon Dioxide Sensors:
   1. Performance Criteria:
      a. Measurement Range: 0 to 2000 ppm.
      b. Accuracy: ±100 ppm.
      c. Repeatability: ±20 ppm.
      d. Drift: ±100 ppm per year.
      e. Output Signal: 0-10 VDC (4 to 20 mA as approved)

f. Proportional signal over the full range.

2. Calibration Adjustments:
   a. Automatic zero compensation and span calibration.
   b. Minimum Adjustment Resolution: ±20 ppm.
   c. Recommended Calibration Interval: 3 years
   d. Maximum Response Time: 60 seconds.
   e. Maximum Warm-Up Time: 15 minutes.

E. Outdoor Air Sensors:
   1. Outdoor air, temperature, and humidity shall be provided to the BAS via National Oceanic and Atmospheric Administration (NOAA) weather stations. Contractor shall determine nearest weather station and submit recommended weather station for approval.

F. Analog Current Sensors:
   1. Analog current sensor shall be loop powered, fully isolated. Sensor through-hole to accommodate appropriate wire size for specific application. Provide with over-range protection. Sensor shall provide accuracy of plus or minus 1.0% of full scale, linearity and repeatability of plus or minus 0.5% of full scale, and response time of no less than 300 milliseconds to 99 percent of full scale.

G. Power Monitors:
   1. Power monitor provided by electrical contractor in electrical panel. Controls contractor shall integrate power monitor with building automation system.
   2. Three-phase type with disconnect/shorting switch assembly, listed voltage and current transformers. Maximum 2% error at 1.0 power factor.
   3. Provide Current Transformers rated for the nominal connected load.
   4. Interface: Factory-installed hardware and software to enable the BAS to monitor, control, and display status and alarms and energy usage.
      a. Network Communications Ports: RS-485.
      b. Embedded Native Protocols for Network Communications: ASHRAE 135 BACnet protocol accessible via the communications port.

H. Pressure Transmitters:
   1. Pressure Transmitters shall be solid state piezo resistive silicon suitable for the measured medium, range and pressures of the application, and shall have the following:
      a. Adjustable span and zero.
      b. Accuracy of plus or minus 1.0% of span.
      c. Linearity of plus or minus 0.1% of span.

I. Flow Meters – Natural Gas:
   1. General:
      a. Inline thermal mass flow meter specifically for natural gas with visual display.
      b. Natural Gas Accuracy: ±1%.
      c. Input Power: 12-28 VDC.
      d. Ambient Temperature Range: -40°F to 158°F.
   2. Interface: Factory-installed hardware and software to enable the BAS to monitor, control, and display status and alarms.
      a. Network Communications Ports: RS-485.
      b. Embedded Native Protocols for Network Communications: ASHRAE 135 BACnet protocol accessible via the communications port.

J. Flow Meters – Displacement-Type:
   1. Description:
      a. Standard: AWWA C700.

b. Pressure Rating: 150 psig working pressure.
c. Body Design: Nutating disc; totalization meter.
d. Registration: In gallons or cubic feet as required by service type.
e. Case: Bronze.
f. End Connections: Threaded.

2. Interface: Factory-installed hardware and software to enable the BAS to monitor, control, and display status and alarms.
   a. Network Communications Ports: RS-485.
   b. Embedded Native Protocols for Network Communications: ASHRAE 135 BACnet protocol accessible via the communications port.

K. Flow Meters – Hydronic:
1. Accuracy:
   a. % of reading at calibrated velocity
   b. ± 1% of reading from 3 to 30 ft/s (10:1 range)
   c. ± 2% of reading from 0.4 to 20 ft/s (50:1 range)
2. Output signals available
   a. 0-10 VDC
3. Electronics enclosure
   a. NEMA4 enclosure
4. Electrical connections
   a. Standard: 10’ of cable with ½” NPT conduit connection
   b. Optional: indoor DIN connector with 10’ of plenum rated cable

L. Pressure Switches – Dry:
1. Static or differential pressure switches shall have a repetitive accuracy of plus or minus 2% of their operating range and shall withstand up to 150 percent of rated pressure. Trip Reset shall be automatic for all applications except, High or Low Static Safeties, in which case Manual Trip Reset is required.

M. Pressure Switches – Wet:
1. Static or differential pressure switches shall have a repetitive accuracy of plus or minus 2% of their operating range and shall withstand up to 150 percent of rated pressure. Actuation shall be adjustable over the operating pressure range. Switch shall have a snap-action dry contact ratedfor the application. Trip Reset shall be automatic.

N. Automation Cables:
1. Insulation:
   a. 300 Volt Class.
2. All cable shall be twisted, shielded, plenum rated.
3. Wire Markers:
   a. Include full wrap self-adhesive type labels on each cable end and on each terminated and un-terminated conductor.

O. Control Cabinets:
1. NEMA rating to match installed locations.
2. Shall maintain Class 2 circuit requirements:
   a. Maximum voltage: 90 Volts
   b. Maximum power: 100 VA
3. Front panel hinge and fitted with a key locking latch.
4. Perforated backboard, supplied with enclosure.

P. Control Labels:

1. Type: Engraved, laminated plastic.
2. Location: All standalone control cabinets
3. Minimum Size: 3/4" by 2-1/2".
4. Text Color: White.
5. Background Color: Black.
6. Minimum Letter Size: 3/8" high.

Q. Raceways:
1. Products: As specified in Division 26.
2. Required Locations:
a. Wire and cable of this section shall be in conduit within any exposed spaces.

R. Relays and Contactors:
1. Relays: General purpose, latching, and time delay types, rated for application.
a. Contacts:
1) Type: Silver-cadmium. Form C.
2) Enclosure: Dustproof.
3) Life Span: One million operations.
b. Operating Time: 20 milliseconds or less.
c. Release Time: 10 milliseconds or less.
2. Contactors: Single coil, electrically operated, mechanically held type, rated for application.
a. Contacts:
1) Type: Double break, silver to silver, protected by arcing contacts.
2) Operating and Release Times: 100 milliseconds or less.
3) Positive Locking: Without use of hooks, latches, and semi-permanent magnets.

S. Current Sensing Relays:
1. Output Characteristic: SPST solid state, normally open.
2. Output Rating: 60 MA, 24 VDC minimum.
3. Trip Point: Adjustable.

T. Aquastats:
1. Features:
a. Switching: SPDT.
b. Contacts: Totally enclosed.
2. Setpoint:
a. Adjustment: External with visible scale.
b. Range: As appropriate for application.
3. Mountings:
a. Immersion Type: In separable well.
b. Surface Type: With adjustable pipe clamp.
4. Differential: 2 °F, fixed.

2.02 SENSORS

A. S01 Wall-Mounted Combination Temperature/Humidity Sensor with Display:
1. Manufacturers:
a. Neptronic TUUB thermostat.
1) White in color for Yoga Studio
2) White in color for Group Fitness Studio
2. This device shall allow the user to set the Yoga Studio class temperature.

B. S02 Wall-Mounted Combination Temperature/Humidity Sensor:

1. Manufacturers:
    a. Equipment Provider as specified in Division 23.
2. This device shall monitor Temperature and Humidity in one device.
3. This device shall have no local display or adjustment capability.

C. S03 Wall-Mounted C02 Sensor:
1. Manufacturers:
    a. Equipment Provider as specified in Division 23.
2. This device shall have no local display.

D. S05 Wall-Mounted Combination Temperature/Humidity Sensor with Display:
1. Manufacturers:
    a. Equipment Provider as specified in Division 23.
2. This device shall monitor Temperature and Humidity in one device.

E. S06 Wall-Mounted Temperature Sensor:
1. Manufacturers:
    a. ACI Part # A/AN-R or equivalent as submitted and accepted
2. This device shall enable the BAS to monitor temperature.
3. This device shall have no local display or adjustment capability.

F. S07 Wall-Mounted Temperature Sensor:
1. Manufacturers:
    a. Luxpro #LV3 or equivalent as submitted and accepted
2. This device shall be a line voltage, cooling only thermostat have local display and adjustment capability.

G. S08 Duct-Mounted Temperature Sensor:
1. Manufacturers:
    a. Equipment Provider as specified in Division 23.

H. S09 Duct-Mounted Temperature Sensor:
1. Manufacturers:
    a. ACI Part # A/AN-D-8-PB or equivalent as submitted and accepted

I. S10 Duct-Mounted Pressure Sensor:
1. Manufacturers:
    a. MAMAC Part # PR-276-R10-VDC or equivalent as submitted and accepted

J. S11 Duct-Mounted CO2 Sensor:
1. Manufacturers:
    a. Equipment Provider as specified in Division 23.

K. S12 Plenum-Mounted Pressure Sensor:
1. Manufacturers:
    a. MAMAC Part # PR-274-R2-VDC or equivalent as submitted and accepted

L. S13 Ceiling-Mounted Pressure Port:
1. Manufacturers:
    a. ACI Part # A/SP-PUP or equivalent as submitted and accepted

M. S14 Pipe-Mounted Immersion Temperature Sensor:
1. Manufacturers:
    a. ACI Part # A/AN-IM-2.5-PB or equivalent as submitted and accepted

N. S15 Pipe-Mounted Immersion Temperature Sensor:
1. Manufacturers:

a. ACI Part # A/AN-IM-4-PB or equivalent as submitted and accepted

O. S16 Secondary Loop Pipe-Mounted Immersion Temperature Sensor:
1. Manufacturers:
a. Equipment Provider as specified in Division 23.

P. S17 Outdoor Mounted Combination Temperature/Humidity Sensor:
1. Manufacturers:
a. ACI Part # A/RH2-AN-O or equivalent as submitted and accepted

Q. S18 Outdoor Mounted Pressure Port:
1. Manufacturers:
a. ACI Part # A/O-PUP-V or equivalent as submitted and accepted

R. S19 Panel-Mounted High-Limit Controller:
1. Manufacturers:
a. ACI Tekmar SP150, NO EXCEPTIONS

S. S20 Pipe-Mounted Flow Switch
1. Manufacturers:
a. Equipment Provider as specified in Division 13.

T. S21 Wall-Mounted 90-Minute Timer with Display
1. Manufacturers:
a. Wattstopper Part #TS-400-24-B, or equivalent as submitted and accepted

PART 3 EXECUTION

3.01 PREPARATION

A. Examine areas and conditions under which control systems are to be installed. Do not proceed with work until unsatisfactory conditions have been corrected in manner acceptable to Installer.

B. These specifications call out certain duties of the Contractor and any subcontractor. They are not intended as a material list of all items required by the Contract.

3.02 INSTALLATION

A. Device in-wall installation coordination requirements:
1. No sensors shall be installed on feature walls.
2. Do not mount behind Gym wall padding. Locate minimum of 6” above to of padding.
3. Do not mount behind Studio wall mirrors. Create RFI to relocate..
4. Do not mount behind wall wood paneling. Create RFI to relocate.
5. Do not mount behind wall tile. Create RFI to relocate.
6. Do not mount in exterior walls. If required, caulk all seams, including mud-ring to drywall.
7. Provide additional insulation behind yoga studio boxes to avoid leakage from non-heated spaces affecting sensor readings.
8. Do not mount inside CMU walls.
9. Verify ADA compliance for Massage, Infants, Mother’s, and Group Fitness.
10. Verify 60” above finished floor for all others except rooms with wall padding and Natatorium.
11. Coordinate height and spacing requirements with division 26 installed devices. When mounting adjacent to other devices, match height and spacing.
12. Space pressure sensing ports are mounted in ceiling tiles.
13. Occupancy sensors are mounted in ceiling tiles.

B. Utilize licensed installers and comply with Division 26 electrical specifications.

C. Provide related items and work indicated on the DI drawings and items and work called for in this Division of the Specifications. This includes all incidentals, equipment, appliances, services, hoisting, scaffolding, supports, tools, supervision, labor, consumable items, fees, licenses, etc., necessary to provide complete systems. Perform start up, configuration, programming and commissioning coordination on each control product and system to provide fully operable systems in accordance with the specified functional performance.

D. Installation shall be in accordance with manufacturer's published recommendations and shall meet or exceed all applicable federal, state and local requirements, referenced standards and conform to codes and ordinances of authorities having jurisdiction.

E. The DI drawings show the general arrangement of the respective systems. Follow these Drawings as closely as actual building construction and the work of other trades will permit. Provide devices, power, fittings, sensors, controllers, wiring and accessories, which may be required but are not shown on the Drawings or specified herein. The Contractor shall be responsible for achieving the sequence of operations and intent of the system design.

F. All installation shall be in accordance with manufacturer's published recommendations.

G. Limit LAN cable lengths to no longer than 80% of the longest dimension published by the manufacturer of the cable between the most remote network nodes.

H. Comply with all rules, guidelines and procedures defined by the Owner's IT authority.

END OF SECTION

This page intentionally left blank

SECTION 25 90 00
BAS - SEQUENCE OF OPERATIONS

PART 1 GENERAL

1.01 SUMMARY

A. This Section includes sequence of operations for whole facility automation, including subsystems and equipment.

1.02 RELATED DOCUMENTS

A. Section 23 09 34 - VARIABLE FREQUENCY DRIVES

B. Section 25 10 00 - BAS NETWORK SYSTEMS

C. Section 25 20 00 - BAS INSTRUMENTATION

1.03 REFERENCE STANDARDS

A. Refer to Section 25 10 00 - BAS NETWORK SYSTEMS.

1.04 DEFINITIONS

A. Refer to Section 25 10 00 - BAS NETWORK SYSTEMS.

1.05 SCOPE OF WORK

A. Refer to Section 25 10 00 - BAS NETWORK SYSTEMS.

PART 2 SEQUENCES

2.01 HEATING WATER SYSTEM

A. Modulating-Cascading Boiler (B-1, B-2, B-3):
   1. The boilers internal burners shall be controlled by the factory installed Master Boiler Controller (MBC).
   2. The MBC shall energize and modulate the Master Boiler between 20% to 100% fire-rate to maintain the supply water temperature at setpoint (150°F).
   3. If the Master Boiler is unable to maintain the setpoint while firing at 95% for 10 minutes (adj.), the MBC shall energize and modulate the secondary boiler between 20% and 100% fire-rate to maintain the setpoint.
   4. This cascade shall continue for however many boilers are in the plant.
   5. As demand decreases, the staging shall be reversed.
   6. As boilers stage on/off the boiler isolation valve shall open and close.
   7. As multiple boilers turn on, boilers shall match fire rate and modulate up/down together.

B. Heating Water Reset:
   1. Heating water supply temperature shall reset based on an outside air schedule.
   2. At 20°F (adj.) outside air the heating water supply temperature shall be 150°F (adj.).
   3. At 50°F (adj.) outside air the heating water supply temperature shall be 130°F (adj.).

C. Boiler Loop Pump (P-1, P-2):
   1. The lead pump will operate continuously.
   2. If the lead pump fails to start or fails while running, the BAS shall switch to the lag pump and indicate an alarm on the BAS.
   3. If the lead pump is not maintaining system differential pressure then the lag pump shall turn on and both pumps shall turn on to 50% speed. These shall modulate up as required to maintain differential pressure setpoint.
   4. If both pumps fail, the BAS shall alarm, and boiler shall turn off.

5. A system differential pressure sensor shall control the pump VFD to maintain system differential pressure at setpoint.
6. The BAS shall modulate the minimum flow bypass valve to maintain system pressure when boiler pump VFDs are at minimum speed.
7. The lead boiler pump shall rotate based on a run time of 200 hours (adj.).

D. Pool Heat Exchangers (HX-1,2)
1. Modulate heat exchanger control valve to maintain pool return water temperature at setpoint.
2. Flow Switch Safety: Wire switch back to control valve signal and open circuit when switch is open.

E. Warm Spa Heat Exchangers (HX-3)
1. Modulate heat exchanger control valve to maintain pool return water temperature at setpoint.
2. High Limit Temperature Controller shall shunt control signal valve actuator.
3. Flow Switch Safety: Wire switch back to control valve signal and open circuit when switch is open.
4. Control valve shall be fail closed style. No exceptions.

2.02 RADIANT SNOWMELT SYSTEM (HX-4, P-3, P-4)

A. The snowmelt system shall have automatic control with manual on, automatic, and standby/reset switch.

B. Precipitation and temperature sensors shall sense the surface conditions of pavement and shall be programmed to operate pump and heat exchanger control valves as follows:
1. Temperature Span: 34 to 44 deg F.
2. Adjustable Delay Off Span: 30 to 90 minutes.
3. Start Pump or Open Heat Exchanger Control Valve: Following two-minute delay if ambient temperature is below set point and precipitation is detected.
4. Stop Pump or Close Heat Exchanger Control Valve: On detection of a dry surface plus time delay.

2.03 MAKEUP AIR UNIT (MAU-1

A. The makeup air unit is enabled by the Hood Control Panel and interlocked with the hood exhaust fan.

B. The makeup air unit shall automatically shut down in conjunction with fire detection or manual activation of Ansul system. Necessary interlocks shall be provided per Code.

C. Outdoor Air Damper:
1. Upon enable call from the Hood Control Panel, the outdoor air damper open, then the fan shall energize. Reverse sequence on call to disable unit from the Hood Control Panel.

D. DX Cooling:
1. The mechanical cooling shall operate to maintain the discharge air temperature at 10°F (adj.) above of room temperature setpoint in cooling mode per energy code.
2. Lockout: The mechanical cooling shall be locked out when the outside air temperature is less than 75°F (adj.).

E. Heating:
1. The gas-fired heating shall operate to maintain the discharge air temperature at 10°F (adj.) below room temperature setpoint in heating mode per energy code.

2. Lockout: The heating shall be locked out when the outside air temperature is greater than 65°F (adj.).

2.04 VAV TERMINAL UNIT

A. Heating:
   1. On a call for heat from the space sensor, the VAV Box dampers shall modulate to the minimum heating position and open/energize the heating coil. On a continued call for heat, the air volume damper shall modulate to the maximum heating damper position and the reheat coil shall modulate to maintain set point.
   2. ELECTRIC HEATING COIL Factory furnished SCR controller and digital thermostat shall modulate electric heat to maintain space set point.
      a. Minimum airflow during heating is 70 CFM/KW.

B. Cooling:
   1. On a call for cooling from the space sensor, the electric reheat coil shall be disabled and air volume damper shall modulate between the minimum position to the maximum position in order to maintain the room set point. In cooling mode, the VAV box shall close to minimum position if the inlet air temperature is higher than the room temperature set point in order to not overheat the room.

2.05 FAN COIL UNIT

A. Fan shall enable/disable from the BAS.

B. Zone Setpoint Adjust:
   1. The occupant shall be able to adjust the zone temperature heating and cooling setpoints at the local thermostat.

C. Fan: The fan shall run anytime the unit is commanded to run, unless shutdown on safeties.

D. Cooling:
   1. The cooling shall be enabled whenever:
      a. The fan is on.
      b. And the heating is not active.
   2. Heat Pump Unit: The zone thermostat shall measure the zone temperature, and the heat pump controller shall cycle the compressor to maintain its setpoint. To prevent short cycling, the stage shall have a user definable (adj.) minimum runtime. The compressor shall run subject to its own internal safeties and controls.

E. Heating:
   1. The heating shall be enabled whenever:
      a. The fan is on.
      b. And the cooling is not active.
   2. Heat Pump Unit: The zone thermostat shall measure the zone temperature, and the heat pump controller shall cycle the compressor to maintain its setpoint. To prevent short cycling, the stage shall have a user definable (adj.) minimum runtime. The compressor shall run subject to its own internal safeties and controls.

F. Drain Pan Overflow Switch:
   1. Upon overflow switch closing (sensing high water), stop fan and stop cooling and heating.

G. In the event of a space thermostat failure the fan shall be configured to run continuously.

2.06 EXHAUST FAN - SCHEDULED (EF-1,2,3,4,5,8,9,10,11)

A. Upon activation of building occupied mode, the motorized damper shall open and make contact with the end switch, and the fan shall energize. Reverse sequence on deactivation of building occupied mode.

2.07 EXHAUST FAN – CONTINUOUS OPERATION (EF-6,7)

A. Fan shall operate constant volume.

B. If the fan fails, an alarm shall initiate at the building automation system.

2.08 COLD SPA (CH-1)

A. The cold spa supply water temperature shall have a setpoint of 50°F (adj.) locally from the cold plunge controller.

B. The cold spa manufacturer provided controller shall modulate the condensing as required to maintain water temperature. When supply water temperature is satisfied the condensing unit shall turn off.

C. Building automation system shall monitor cold spa supply and return water temperatures via thermalwells.

2.09 MSAV - ROOFTOP PACKAGE UNIT (RTU-2-3,RTU-5-15)

A. Occupied Mode:
   1. The Supply Fan, Exhaust Fan, DX Cooling, Gas Heating, Economizer, Dehumidification, and Demand Controlled Ventilation: shall be enabled and operate per defined sequences below.

B. Unoccupied Mode:
   1. The Supply Fan, Exhaust Fan, DX Cooling, Gas Heating, Economizer, Dehumidification, and Demand Controlled Ventilation: shall be disabled.

C. Supply Fan:
   1. The Supply Fan speed shall be fixed to the required percentage of maximum setpoint for each of the following modes;
      a. DX Cooling Stage #1
      b. DX Cooling Stage #2
      c. DX Cooling Stage #3
      d. DX Cooling Stage #4
      e. Gas Heating Mode
      f. Ventilation Mode

D. Exhaust Fan:
   1. The Exhaust Fan shall be commanded to run when the Outside Air Damper position is greater than 50% open.

E. DX Cooling:
   1. The mechanical cooling shall stage compressors to maintain the space temperature at the Zone Cooling Setpoint.
   2. Lockout: The mechanical cooling shall be locked out when the outside air temperature is less than 45.0 °F (adj).

F. Heating:
   1. The gas-fired heating shall stage burners to maintain the space temperature at the Zone Heating Setpoint.

2. Lockout: The heating shall be locked out when the outside air temperature is greater than 45.0 °F (adj).

G. Economizer:
1. Outdoor air temperature, humidity and enthalpy shall be transmitted via NOAA to the building automation system which will input outside conditions to each unit.
2. The Economizer shall be active when the outdoor enthalpy is below the ODE Setpoint and there is a cooling demand. The Economizer shall modulate the outside air damper and return air damper to maintain the supply air temperature.
3. When not active, the Economizer shall modulate outside air damper the minimum position.

H. Dehumidification:
1. The Dehumidification shall be active when the Space Relative Humidity is greater than the Zone RH Setpoint. The compressors and hot-gas reheat shall be modulated to maintain supply air temperature.

I. Demand Control Ventilation (DCV):
1. The DCV shall modulate the outside air and return air dampers from minimum position to maximum position based on space carbon dioxide concentration.

2.10 VARIABLE AIR VOLUME - ROOFTOP PACKAGED UNIT (RTU-4)

A. Occupied Mode:
1. The Supply Fan, Exhaust Fan, DX Cooling, Gas Heating, Economizer, Dehumidification, and Demand Controlled Ventilation: shall be enabled and operate per defined sequences below.

B. Unoccupied Mode:
1. The Supply Fan, Exhaust Fan, DX Cooling, Gas Heating, Economizer, Dehumidification, and Demand Controlled Ventilation: shall be disabled.

C. Supply Fan:
1. The Supply Fan shall modulate to maintain the supply air static pressure at the Supply Air Static Pressure Setpoint.
2. Setpoint Reset:
a. The BAS shall monitor damper position of all VAV terminal units.
b. The initial duct static pressure setpoint shall be 1.00” w.c. (adj.) or the setpoint determined during test and balance to achieve VAV airflows.
c. When all zone dampers are throttling closed, below 85% open, the duct static pressure setpoint shall be incrementally reset down by 0.1” w.c. (adj.) at a frequency of 15 minutes to the minimum setting of 0.5” w.c. (adj.).
d. If more than 3 VAV terminal units (adj.) are at 100% open the reset sequence shall reverse and incrementally add 0.1” w.c. (adj.) every 15 minutes until the initial setpoint is reached.

D. Return Fan:
1. The Return Fan shall be commanded to run when the Outside Air Damper position is greater than 50% open.

E. DX Cooling:
1. The mechanical cooling shall stage compressors to maintain the supply air temperature at the Supply Air Temperature Setpoint.
2. Setpoint Reset:
a. The BAS shall monitor cooling demand of all VAV terminal units.
b. The DAT setpoint shall initially be 55°F (adj.).

c. When the cooling demand of 100% of zones (adj.) is satisfied, the DAT setpoint shall be incrementally reset up by 1°F (adj.) at a frequency of 15 minutes to the maximum setting of 65°F (adj.).
d. When 3 VAV terminal units (adj.) are above 90% damper position then the reset sequence shall reverse and incrementally subtract 1°F (adj.) every 15 minutes until the DAT reaches 55°F (adj.).

3. Lockout: The mechanical cooling shall be locked out when the outside air temperature is less than 45.0°F (adj).

F. Heating:
1. The gas-fired heating shall stage burners to maintain the supply air temperature at the Supply Air Temperature Setpoint.
2. Setpoint Reset: the setpoint shall be reset based on the sequence above.
3. Lockout: The heating shall be locked out when the outside air temperature is greater than 55.0 °F (adj).

G. Economizer:
1. Outdoor air temperature, humidity and enthalpy shall be transmitted via NOAA to the building automation system which will input outside conditions to each unit.
2. The Economizer shall be active when the outdoor enthalpy is below the ODE Setpoint and there is a cooling demand. The Economizer shall modulate the outside air damper and return air damper to maintain the mixed air temperature at the Mixed Air Temperature Setpoint (adj).
3. When not active, the Economizer shall modulate the outside air damper to the minimum position.

H. Dehumidification:
1. The Dehumidification shall be active when the Space Relative Humidity is greater than the Zone RH Setpoint. The compressors shall be modulated to maintain supply air temperature at the Supply Air Temperature Setpoint.
2. The Supply Air Temperature Setpoint shall be overridden to a value of two (2) °F below the current return air dew point. The override shall be released when the mode is not active.

I. Demand Control Ventilation (DCV):
1. The DCV shall modulate the outside air and return air dampers from minimum position to maximum position based on space carbon dioxide concentration.
2. Setpoint Reset: the setpoint shall be reset based on the sequence above.

2.11 YOGA STUDIO (RTU-1, EDC-1)

A. YOGA STUDIO MONITORING:
1. The BAS shall monitor the Studio temperature, humidity, radiant panel status and carbon dioxide concentration.
2. The Space Temperature Setpoint shall be adjustable from the local adjustable thermostat.
3. The setpoint shall be adjustable at 1 °F intervals.
4. The Heating Setpoint shall be equal to the Space Temperature Setpoint.
5. The Cooling Setpoint shall be equal to the Heating Setpoint plus the Cooling Offset.
6. The Cooling Offset shall be set to 4 °F.
7. The CO2 Setpoint shall be set to 1500 ppm.

B. VENTILATION MODE:
1. The Ventilation Mode shall be 50% of the design airflow rate.

2. The Ventilation Mode is active only when the RTU is not heating or cooling.

C. RTU ECONOMIZER MODE:
1. The Economoizer shall be active when the outdoor enthalpy is below the ODE Setpoint and there is a cooling demand. The Economizer shall modulate the outside air damper and return air damper to maintain supply air temperature.
2. When not active, the Economizer shall modulate the outside air damper to minimum position per the RTU schedule.

D. UNNOCUPIED MODE:
1. The Space Temperature setpoint shall reset to 78°F in Cooling Mode and 64°F in heating mode.
2. The RTU Economizer, DX Cooling, gas heating and DCV shall be enabled to maintain the studio at setpoint.

E. OCCUPIED MODE:
1. The Space Temperature shall be controlled to 75°F in Cooling Mode and 72°F in Heating Mode until local setpoint adjustment.
2. The RTU Economizer, DX cooling, gas heating and DCV shall be enabled to maintain the Studio at setpoint.
3. The radiant heat panels shall be activated with local adjustable 90-minute timer (Hot Yoga only).

F. HEATING COIL CONTROL:
1. The reheat coil (hydronic or electric) shall modulate when space temperature is above 80°F to maintain the duct discharge air temperature at the room space temperature setpoint.

2.12 EQUIPMENT SCHEDULING/SETPOINTS

A. Hours of Operation:
1. The schedules below are Life Time standard naming and hours of operation. If a club has non-standard spaces then the “custom” rows should be used for these schedules. All non-standard schedule groups should be reviewed and approved by Life Time Property Development and Operations.

SCHEDULE #	TYPE	SCHEDULE NAME	AREA SERVED	HOURS OF OPERATION	SCHEDULE BASIS
1	STANDARD	MAIN BUILDING	GYM, CARDIO, LOCKER ROOMS, ALPHA	4AM-MIDNIGHT	HOURS OF OPERATION
3	STANDARD	OFFICE	OFFICE/WORK	5AM-10PM	HOURS OF OPERATION
4	STANDARD	TENNIS	TENNIS	4AM-MIDNIGHT	HOURS OF OPERATION
5	STANDARD	CAFÉ	LIFE CAFÉ	5AM-10PM	HOURS OF OPERATION
6	STANDARD	SALON	LIFE SPA	5AM-10PM	HOURS OF OPERATION
7	STANDARD	CHILD CARE	KIDS ACADEMY	5AM-10PM	HOURS OF OPERATION &

					EXERP
8	**STANDARD**	**MECHANICAL**	**MECHANICAL AND LAUNDRY ROOM**	**4AM-10PM**	**HOURS OF OPERATION**
9	**STANDARD**	**STUDIO 1**	**STUDIO 1**	**5AM-10PM**	**HOURS OF OPERATION & EXERP**
10	**STANDARD**	**STUDIO 2**	**STUDIO 2**	**5AM-10PM**	**HOURS OF OPERATION & EXERP**
11	**STANDARD**	**STUDIO 3**	**STUDIO 3**	**5AM-10PM**	**HOURS OF OPERATION & EXERP**

SECTION 26 05 00
GENERAL REQUIREMENTS

PART 1 GENERAL

1.01 CONDITIONS

A. Each contractor involved in the electrical work or any Section of Division 26 for this project shall be governed by this Section 26 05 00 General Requirements in its entirety.

B. The General Conditions, Supplementary General Conditions and Division 1 General Requirements apply to Division 26.

1.02 SUMMARY OF WORK

A. The work to be done under this Specification and the accompanying drawings includes the furnishing of labor, materials, equipment and services necessary for the proper completion of electrical work. In general, this consists of wiring for light and power, installation of raceways for miscellaneous electrical systems and installation of lighting fixtures and other equipment hereinafter specified. Electrical work shall be complete with wiring, conduits, fittings, equipment and connections as specified or required.

B. The omission of express reference to any parts necessary for or reasonably incidental to a complete installation shall not be construed as releasing the contractor from furnishing such parts.

C. Electrical work drawings which include work of this specification division are indexed on the first sheet of the electrical and technology drawings.

D. Types of electrical related work specified in this section include the following:
   1. Access to electrical work:
      a. Access doors in walls, ceilings, and floors.
      b. Removable cover plates in walls, ceilings, and floors.
   2. Concrete for electrical work:
      a. Lean concrete backfill to support electrical work.
      b. Encasement of electrical work.
      c. Electrical equipment foundations and mounting pads.
      d. Rough grouting in and around electrical work.
      e. Patching concrete which has been cut to accommodate electrical work.
   3. Painting of electrical work:
      a. Where specifically noted to be painted.
   4. Quality control testing for concrete work is required as work of this section.

1.03 INSPECTION OF SITE

A. Before submitting a proposal on the work contemplated in this Specification and accompanying drawings, each bidder shall examine the site and check as to the means of making connections to services and shall familiarize himself with the existing conditions and limitations. No extra charges or extension in schedule will be allowed because of the contractor's misunderstanding as to the amount of work involved or lack of knowledge of any site conditions which may affect the work. Any apparent variance of the plan or specification from the existing conditions at the site shall be called to the attention of the Engineer during the bid period so clarification can be made by addendum.

B. The existence of any wires, conduits, pipes, ducts, or other facilities are shown in a general way only. It will be the duty of the bidding contractors to visit the site and make exact determination of the existence of such facilities prior to the submission of bids. It is understood that the bidders will be responsible for making the exact determination of the location and condition of such facilities.

1.04 FEES, PERMITS, TAXES, AND INSPECTIONS

A. Regular inspections shall be requested by the contractor as required by regulations. Charges for the inspections by regulating agencies of installations or plans and specifications shall be paid by the contractor.

B. All permits, inspections and licenses shall be secured and paid for before actual work is started.

C. The contractor, after completion of work, shall furnish to the Owner a Certificate of Final Inspection and approval from the inspection bureau having jurisdiction.

D. State and Local Sales Tax. The Electrical Contractor shall include all state and local sales tax in the bid. The contractor shall maintain accurate records of all taxes and furnish such records to the Owner upon request.

1.05 QUALITY ASSURANCE

A. Manufacturers. Firms regularly engaged in manufacture of products for electrical work of sizes, types, ratings, and materials required, whose products have been in satisfactory use in similar service.

B. Installer’s qualifications. Firm with successful installation experience on projects with electrical related work similar to that required for this project.

C. Access units fire-resistance ratings. Where fire-resistance ratings are indicated for construction penetrated by access units, provide UL-listed and labeled units, except for units which are smaller than minimum size requiring ratings, as recognized by governing authority.

1.06 CODES AND STANDARDS

A. Contractor shall comply with all current ordinances, laws, regulations and codes applicable to the work involved. This does not relieve the contractor from furnishing and installing work shown or specified which may be beyond the requirements of such ordinances, laws, regulations and codes.

B. In case of difference between building codes, specifications, state laws, local ordinances, industry standards, and utility company regulations and the Contract Documents, the most stringent shall govern. The contractor shall promptly notify the Engineer in writing of such difference.

C. Non-Compliance: Should the contractor perform any work that does not comply with the requirements of the applicable building codes, state laws, local ordinances, industry standards and utility company regulations, he shall bear all costs arising in correcting the deficiencies.

D. Contractor shall initiate, maintain, and supervise all safety pre-cautions required for his work including regulations of the Occupational Safety and Health Administration (OSHA).

E. UL Compliance. All equipment and systems specified in Division 26 shall comply with all applicable UL safety standards and have all required UL listings. All systems shall have UL-listed components, as well as a UL listing for the entire system. When a UL listing for the system is not available, the system shall be tested by an independent laboratory.

F. Concrete work. Comply with governing regulations.

1.07 DRAWINGS

A. The drawings are to scale as noted but the contractor shall refer to Architectural and structural Drawings for exact location of partitions, walls, beams, shafts, equipment, etc. Prior to rough-in, the contractor shall verify with Architect/Engineer exact location of all electrical devices, lights, poles, etc.

B. Each trade shall avail himself of drawings and specifications of all other trades and make an effort to coordinate his work with all other trades.

C. The contractor, before roughing-in facilities or installation of any equipment, shall consult all drawings, architectural, structural, mechanical, etc. for finishes, locations of ceiling, ceiling types, structural members, pipes, ducts, recessed lighting fixtures, conduits, etc., which may affect the installation. The contractor in installing his equipment shall leave adequate room for the installation of equipment by other contractors or subcontractors where space is limited.
   1. Consideration has been given to such condition of limited space in the preparation of the drawings and the locations and dimensions of equipment have been selected accordingly. The contractor shall be warned that in certain instances, space may be limited to the extent that there may be only one arrangement of equipment or facilities which will allow installation of same.
   2. Where connections are made to equipment furnished by others the contractor shall obtain exact location of connection from persons furnishing that equipment. The contractor shall confirm all voltage and wiring requirements prior to installation.

D. Discrepancies discovered before or after work has started, shall be brought to the attention of the Engineer immediately and the Engineer reserves the right to require minor changes in the work to eliminate such discrepancies with no change in contract cost.

E. The plans and specifications are complementary and what is called for in either one shall be as binding as if called for in both.

F. Where a disagreement exists in the plans and specifications, the item or arrangement of better quality, greater quantity or higher cost, shall be included.

1.08 SYMBOLS AND ABBREVIATIONS

A. Refer to Symbols and Abbreviations listed on drawings. Other symbols are in common usage but if uncertainty exists regarding plan symbols or abbreviations they shall be brought to the attention of the Engineer for clarification.

B. Where the phrase starts “Provide----,” “provide” shall be construed to mean the same as “Furnish and install-----“.

1.09 PRIOR APPROVALS

A. Prior Approvals. The acceptance of materials and equipment shall be based on the following conditions:
   1. The contractor shall adhere rigidly to the specifications and shall use exact equipment specified or an approved substitution. Where the words “or equal”, or similar, are used in the specifications, other manufacturers will be considered for acceptance as substitutions; however, such requests must be submitted by a bidding contractor for review prior to bidding. If the contractor desires tentative acceptance of a brand of merchandise not specified, sufficient data shall be submitted to the Engineer for appraisal 240 hours before the time set for bides to be received. If any manufacturer or brands other than those specified, are acceptable to the Engineer, the Engineer will indicate before bids are received; however, such acceptance must still be obtained as described in the following. Equipment which is not specified, or is not approved by addendum will not be considered.

1.10 PROJECT CONDITIONS

A. Existing utilities. Locate and protect existing utilities and other underground work in manner which will ensure that no damage or service interruption will result from excavating and backfilling. Do not install electrical work to be above existing piping or be in the way of future excavation to existing piping. Where new electrical work must cross existing piping, cross at right angles, do not run parallel with piping.

B. Protect property from damage which might result from excavating and back-filling.

C. Protect persons from injury at excavations, by utilizing barricades, warnings, and illumination.

1.11 SHOP DRAWINGS

A. The quantity of Shop Drawings to be submitted shall be as noted in the General Conditions.

B. Shop Drawings shall be submitted by Specification section; all items in each section shall be one (1) bound submittal.

C. Shop Drawings shall be submitted electronically in PDF format. Utilize project document management site to post and manage submittals. Clearly mark all submittals with flags or highlights to indicate exact products and options being supplied.

D. Engineer will review initial submittal and one resubmittal. If shop drawings are required to be submitted more than two times dues to Contractor not submitting proper documentation or products, Engineer shall charge Contractor for more time spent reviewing the additional submittals.

E. Acceptance of certain items of equipment, designated by the Engineer, will be based on the manufacturer’s shop drawings and pamphlets which shall be submitted to the Engineer. The contractor shall be prepared to submit samples of equipment or material for appraisal when requested by the Engineer. No materials or equipment shall be installed until the Engineer has given acceptance in writing.

F. The contractor shall supply other trades with approved detail drawings of furnished equipment in the event that equipment will affect the work of other contractors.

1.12 COORDINATION

A. Coordinate work with other trades in the installation of equipment, piping, conduit, and ductwork.

B. HVAC/Sheetmetal Contractor shall initiate the coordination process by providing reproducible plan drawings showing ductwork.

C. Drawings will be forwarded to the Piping Contractor and Electrical Contractor for inclusion of their systems work.

D. Contractors shall solve all coordination conflicts among themselves when possible. The Engineer will arbitrate when necessary, and his judgment will stand, with no additional cost to the owner.

E. Refer to Section 01 31 01 - Project BIM Coordination for additional requirements for clash detection, including, but not limited to additional meetings, layout, and 3D CAD or Revit inputs for the coordination process.

1.13 TEMPORARY SERVICES

A. The Electrical Contractor shall carefully examine all parts of the General Requirements for requirements regarding temporary heat, temporary light, and other services. Contractor shall include in his bid an amount to cover his portion of such services.

1.14 INSTALLATION METHODS

A. The methods used for installation for electrical system and equipment shall conform to the National Electrical Contractors Association (NECA) published “Standard of Installation” except where specifically specified or shown otherwise.

B. Care shall be taken to rough-in outlet boxes, cabinets, etc., to provide a pleasing appearance. Center lines of outlets are to be aligned vertically or horizontally. Where outlets occur in wood panels, below windows, between doors and other such conditions of architectural features, the outlets shall be centered or otherwise located symmetrical with the major feature.

C. Panelboard and terminal cabinets where located adjacent to each other or one another, shall be same size and tops and bottoms shall be aligned.

D. Where factory-made precast panels are noted on the Architect’s drawings, the Electrical Contractor shall provide for in his bid, labor and materials for installation of junction boxes, cabinets, conduit, etc. within the precast panels. The Electrical Contractor will furnish and install all electrical items at the precast manufacturing plant as part of the fabrication process. Precast panels shall not be fabricated until the Electrical Contractor has given written approval that all required electrical items have been installed in precast panels. The Electrical Contractor shall furnish shop drawings (precast panel elevations) indicating all electrical rough-in locations for Engineer approval.

PART 2 PRODUCTS

2.01 ACCESS TO ELECTRICAL WORK

A. Access doors:
   1. General: Where floors, walls and ceilings must be penetrated for access to electrical work, provide types of access doors indicated, including floor doors if any. Furnish sizes indicated or, where not otherwise indicated, furnish adequate size for intended and necessary access. Furnish manufacturer’s complete units, of type recommended for application in indicated substrate construction, in each case, complete with anchorages and hardware.
   2. Access Door Construction: Except as otherwise indicated, fabricated wall/ceiling door units of welded steel construction with welds ground smooth; 16-gauge frames and 14-gauge flush panel doors; 175 swing with concealed spring hinges; flush screw-driver-operated cam locks; factory-applied rust-inhibitive prime-coat paint finish.

B. Removable access plates. Where switches, control devices, pull boxes and similar elements of electrical work are located within or behind walls, ceiling or floor construction of finishes, or below grade, and are not (cannot be) provided with integral removable access plates as specified in other Division 26 sections, provide removable access plates of types and sizes needed for access requirements, as indicated. Provide manufacturer' s complete units with anchorages, fasteners and standard factory-applied finishes.

2.02 PAINT

A. Material quality. Provide best quality grade of various types of coatings as regularly manufactured by acceptable paint materials manufacturers. Materials not displaying manufacturer’s identification as a standard, best-grade product will not be acceptable.
   1. Proprietary names used to designate colors or materials are not intended to imply that products of named manufacturers are required to exclusion of equivalent products of other manufacturers.

B. Color pigments. Pure, non-fading applicable types to suit substrates and service indicated.
   1. Lead content in pigment, NOT ALLOWED.

2.03 KEYING

A. The contractor shall furnish padlocks for each access door and switch operator having provision for padlocking.

B. Padlocks and locks in doors having built-in locks are to be Best or equal with interchangeable cores.

C. Padlocks and locks are to be keyed alike.

2.04 FIRE BARRIER SEALING SYSTEM

A. This contractor shall furnish all labor and materials needed to preserve the fire, smoke, and water containment integrity of the fire rated floors, walls and ceilings penetrated by electrical cables, raceway and ducts. Product shall be as specified in Division 7.

B. All fire barrier sealing systems shall be installed in accordance with manufacturer's instructions. Contractor is not to install the fire barrier material until all of the Owner's cables have been installed.

PART 3 EXECUTION

3.01 ACCESS TO ELECTRICAL WORK

A. Locate each removable access unit accurately in relation to electrical work requiring access.

B. Provide adequate temporary support or attachment to framing of form-work, that units will not be dislocated during construction of substrates.

3.02 PAINTING ELECTRICAL WORK

A. Surface Preparation:
   1. General. Clean surface before applying paint products. Remove oil and grease prior to mechanical cleaning. Comply with paint products manufacturer's instructions for surface cleaning and preparation. Remove surface-applied accessories which are not to be painted, and reinstall after completion of painting. Protect non-removable items not to be painted, by covering with paper or plastic film.
   2. Ferrous metal surfaces. Remove mill scale and loose rust on surfaces which are not zinc-coated or shop/factory prime coated. Each metal edge shall be filed or ground to eliminate sharp edges.
      a. Clean shop-applied prime coats on metal surfaces, and repair (touchup) prime coats wherever abraded or otherwise damaged, prior to application of paint system.
   3. Zinc-coated surfaces. Clean with non-petroleum based solvent. Wash with copper sulfate solution and flush with water, unless surface has been pretreated, or unless treatment is not recommended by manufacturer of prime coat.

3.03 PAINT SYSTEM APPLICATION

A. Mixing. Comply with manufacturer's recommendations for mixing or stirring paint products immediately before application.

B. General application requirements. Apply paint in accordance with manufacturer's directions. Use applicators and techniques best suited for substrate, for type of material being applied, and for ambient conditions. Apply additional coats when undercoats, stains or other conditions show through final coat of paint, or until paint film is of uniform finish, color and appearance.
   1. Apply paint at edges, corners, joints, welds, and exposed fasteners in manner which will ensure a dry-film thickness equal to that of flat surfaces. Allow sufficient time between successive coats for proper drying (comply with manufacturer's drying instructions).
   2. Number of coats. The number indicated is minimum number; apply as many coats as are necessary to comply with dry-film thickness requirements. Minimum thickness 0.002".

3. Coating thickness. Apply uniform coats to produce dry-film thickness indicated or, if not otherwise indicated, apply paint without thinning in application thickness recommended by manufacturer for each coat.
4. Smooth finishes. Except as otherwise indicated, apply paint in smooth finish without noticeable texture, cloudiness, spotting, holidays, laps, brush marks, runs, sags, ripples, ropiness, and other surface imperfections.

3.04 CUTTING AND PATCHING

A. This contractor shall perform all cutting and patching necessary in order to perform this work unless noted on drawings to be performed by the General Contractor; however, special permission shall be obtained from the engineer before cutting structural members or finished material. Patching shall be performed in such a manner as to leave no visible trace and to return the part affected to the condition of undisturbed work. Patching work shall be performed by workers experienced, skilled, and licensed for the particular type of work involved. Inferior work will not be accepted. Holes in masonry shall be drilled by rotary drills. Impact tools shall not be used.

B. Prevent the spread of dust, debris and other material into adjacent areas.

3.05 HOLES THROUGH MASONRY

A. The Electrical Contractor shall provide all holes and openings required for electrical work unless such openings are shown on the Architectural and/or Structural drawings. The notes on structural drawings are particularly significant when precast and pre-stressed members are used.

B. Holes made in existing masonry for raceways or other electrical equipment shall be core drilled.

C. The contractor shall be responsible for grouting air-tight any openings adjacent to raceways etc. to seal against passage of air, smoke or vapors. Maintain ratings of fire rated partitions.

D. The contractor shall be responsible for providing and disposing of water used in the core drilling operation. Work shall be scheduled and coordinate with other trades so that damage will not result from the use of water.

E. The contractor shall install in each wall and floor sleeve opening fire rated material to maintain the fire rating of partition or floor.

3.06 CONCRETE BASES AND PADS

A. Concrete bases and pads for electrical equipment shall be provided by the electrical contractor. Provide concrete pads for all floor mounted and exterior grade mounted electrical equipment. Coordinate concrete pads for service MSA meter/mains and emergency generator with structural or manufacturer.

3.07 RECORD DRAWING NOTES

A. The contractor shall record all changes and deviations from the Contract Drawings. Refer to Division 1 for specific requirements. Include the following as a minimum:
   1. Record exact location and elevation of underground conduits, duct banks and direct burial wiring.
   2. Prepare Record Drawing changes for all electrical work within the building that occurs during the progress of construction. Include such changes as:
      a. Addenda
      b. Change orders
      c. Relocation of devices during construction
      d. Routing of feeder conduits, bus duct, and cable tray.
      e. Routing of exterior conduit

f. Final locations of motors, starters, disconnects, and controls
g. Revisions to over-current protection device quantity or arrangement in panelboards and switchboards.
h. Value engineering

B. The Record Drawings shall be maintained at the job site and be subject to review by the owner or architect/engineer during the construction period. This record keeping requirement shall not be construed as authorization for the contractor to make changes in the layout without definite instructions by the architect/engineer in each case.

C. At the completion of the project, one (1) set of Record Drawings shall be delivered to the Architect/Engineer. This work shall be completed and accepted by the Engineer before approval of final payment.

3.08 OPERATING AND MAINTENANCE MANUAL(S)

A. The contractor shall collect, gather and assemble manuals, each to contain the installation details, instructions, schematics of actual equipment and operations directions supplied by the manufacturer with equipment for the equipment and materials furnished under Division 26. Provide complete listing of suppliers and distributors where replacement parts or maintenance services are available. Manuals shall be submitted in 3-ring binder format and organized according to specification section. Label cover of manuals with project name; date of completion; and electrical contractor' s name, address, and telephone number. Final acceptance of the work will be withheld until such data has been presented complete to the engineer for transmission to the owner. The manual shall be prepared in time for engineer to review and for contractor to make corrections before owner instruction of operations and maintenance of equipment and systems is scheduled to begin. The manuals may be submitted as a PDF set in lieu of a paper set.

B. Manuals shall include, but not be limited to, the following:
1. Copies of final Shop Drawings
2. Copies of manufacturers’ warranties
3. Copies of all test results
4. Copies of all electrical inspector’s reports
5. Certificates of completion for all life safety equipment
6. Manufacturer’s operating instructions for equipment
7. Manufacturer’s wiring and installation instructions for equipment
8. Equipment parts list based on each specification section
9. Local equipment supplies/rep’s names, addresses, and telephone numbers
10. Equipment manufacturer's’ names, addresses, and telephone numbers
11. Subcontractors’ names, addresses, and telephone numbers
12. Refer to individual sections in Division 26 for additional requirements

C. Cross out or delete all information shown on Shop Drawings and other literature definitely not applying to this particular project and its equipment installed.

D. Manuals that do not meet the foregoing criteria will be rejected and returned to the contractor for resubmittal.

3.09 FINAL OBSERVATION

A. A final observation of the electrical systems by the Architect/Engineer will be conducted before the contract can be considered complete. The contractor shall inform the Engineer in writing when the electrical installation is complete and ready for final observation. The Engineer shall visit the project site and provide a list of items that need to be corrected or completed to achieve final completion. Should the Engineer attend the project to conduct the final observation and discovers that the work is not sufficiently complete to perform this task, then the contractor shall compensate the Engineer for his time. The contractor shall remain responsible for completing his work and requesting the Engineer to return for a final observation.

3.10 TESTS

A. The contractor shall test the equipment installed under this specification and shall demonstrate its proper operation to the engineer when requested by the engineer.

B. No equipment shall be tested, or operated for any purpose until it has been fully prepared, connected and made ready for normal operation. Damage to equipment occasioned by improper or ill-timed operation or testing shall be made good, at the contractor's expense, before final inspection and acceptance.

3.11 TRAINING

A. Contractor shall furnish, without additional expense to the owner, the services of competent instructions, who will give full instruction in the care, adjustment, and operation and maintenance of parts of the electrical equipment to the owner's permanent employees who are to have charge of the equipment. Provide a minimum of one man-week (40 hours) of instruction for electrical equipment. See individual sections for additional training requirements for special systems.

B. Each instructor shall be thoroughly familiar with all parts of the equipment on which instructions are to be given and shall be trained in operating theory as well as in practical operation and maintenance work. Factory trained instructors shall be employed where they are available. Instruction shall be given during regular work week and at a time just prior to the time the equipment is accepted and turned over to the owner for regular operation.

C. All training and operating instructions shall be audio and video recorded by the contractor and the recording media handed over to the owner.

D. Contractor shall submit to the Architect/Engineer, a letter, signed by the owner, stating that the instruction of operating personnel has been completed and is accepted by the owner.

3.12 MATERIAL AND WORKMANSHIP

A. All material and workmanship must be of the best throughout. Material and equipment must be new and must be adequately protected from damage and dirt. Each item or system shall be listed, inspected, and approved by a nationally recognized testing laboratory and shall bear a label indicating such. The Engineer reserves the right to reject material or workmanship not in accordance with the Specifications, either before or after installation. Contractor will be held responsible for defects in the material and workmanship which may appear during guarantee period after the building has been accepted. Such defects must be repaired or defective material replaced by the contractor at no expense to the owner. Exposed equipment, conduit, plates, panels, cabinets, etc. shall be installed square and true with building construction.

B. No asbestos, hazardous, or PCB containing materials of any type shall be used on this project.

C. The contractor shall be responsible for the proper installation of all systems in this contract and shall guarantee to remedy free of charge any defects in workmanship and materials for a period of 12 months from substantial completion.

3.13 WIRING METHODS AND HAZARDOUS AREAS

A. In locations exterior to the building, installation and equipment shall conform to NEMA 3R raintight standards.

B. In locations interior to the building, the installation and equipment shall conform to NEMA 1 standards, except as noted on the drawings.

C. In locations noted to be corrosive environments, the installation and equipment shall conform to NEMA 4X corrosion and extreme environment standards.

D. Where it is necessary to install sealing fittings accessible from rooms or areas which are finished, a flush wall or ceiling outlet box is to be installed and the conduit to be sealed run straight through the box with the sealing fitting occurring within the outlet box. The box shall then be covered with a blank plate.

3.14 AIR PLENUMS

A. Air plenums above suspended ceilings are being provided over certain portions of the building for use as a return air plenum in connection with the heating, ventilating, and air conditioning systems. All equipment and installations methods shall be approved for this type of space.

B. Insulated plenum spaces.
   1. The cold or warm perimeters of these plenums are being insulated and provided with insulation and a continuous, effective vapor barrier by the General Contractor where called for on the drawings.
   2. The air tightness and the effectiveness of the insulation and vapor barriers into construction to form air tight joints, or be provided with packed sleeves, are required for other piping.
   3. Where conduit enters these plenums, they must be firmly and tightly embedded into construction to form an air tight joint, or be provided with packed sleeves, as required for other piping.
   4. All boxes in conduit systems which can admit air to or release air from air plenums through connecting conduit systems, must be filled tightly with approved compound. All conduit in air plenums must be air tight.
   5. Where any conduit enter air plenums, extreme precautions must be taken to repair any damage done to insulation and interior vapor barrier, and interior vapor barrier must be tightly sealed to conduit, to ensure vapor tightness.

3.15 FINAL NAMES AND NUMBERS FOR ROOMS AND DOORS

A. Contractor shall note that names and numbers of rooms and doors on the architectural plans may not be the same as that selected by the owner for use in their final naming and/or numbering scheme. Contractor shall use final room names and numbering system as directed by the owner. This shall apply to all labeling, identification, and programming that is required by the Division 26 drawings and specifications.

3.16 CLOSEOUT ACTIVITIES

A. Refer to Division 1 specifications for closeout submittals and any demonstration and training requirements.

END OF SECTION

SECTION 26 05 19
LOW-VOLTAGE ELECTRICAL POWER CONDUCTORS AND CABLES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Single conductor building wire.

B. Metal-clad cable.

C. Wiring connectors.

D. Electrical tape.

E. Heat shrink tubing.

F. Oxide inhibiting compound.

G. Wire pulling lubricant.

H. Cable ties.

1.02 RELATED REQUIREMENTS

A. Section 01 40 00 - Quality Requirements.

B. Section 07 84 00 - Firestopping.

C. Section 26 05 26 - Grounding and Bonding for Electrical Systems.

D. Section 26 05 53 - Identification for Electrical Systems.

1.03 REFERENCE STANDARDS

A. ASTM B3 - Standard Specification for Soft or Annealed Copper Wire; 2013 (Reapproved 2018).

B. ASTM B8 - Standard Specification for Concentric-Lay-Stranded Copper Conductors, Hard, Medium-Hard, or Soft; 2023.

C. ASTM B33 - Standard Specification for Tin-Coated Soft or Annealed Copper Wire for Electrical Purposes; 2010, with Editorial Revision (2020).

D. ASTM B800 - Standard Specification for 8000 Series Aluminum Alloy Wire for Electrical Purposes - Annealed and Intermediate Tempers; 2005 (Reapproved 2021).

E. ASTM B801 - Standard Specification for Concentric-Lay-Stranded Conductors of 8000 Series Aluminum Alloy for Subsequent Covering or Insulation; 2018 (Reapproved 2023).

F. ASTM D3005 - Standard Specification for Low-Temperature Resistant Vinyl Chloride Plastic Pressure-Sensitive Electrical Insulating Tape; 2017.

G. ASTM D4388 - Standard Specification for Nonmetallic Semi-Conducting and Electrically Insulating Rubber Tapes; 2020.

H. NECA 1 - Standard for Good Workmanship in Electrical Construction; 2023.

I. NECA 104 - Standard for Installing Aluminum Building Wire and Cable; 2012.

J. NECA 120 - Standard for Installing Armored Cable (AC) and Type Metal-Clad (MC) Cable; 2018.

K. NEMA WC 70 - Power Cables Rated 2000 Volts or Less for the Distribution of Electrical Energy; 2021.

L. NETA ATS - Standard for Acceptance Testing Specifications for Electrical Power Equipment And Systems; 2025.

M. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

N. UL 44 - Thermoset-Insulated Wires and Cables; Current Edition, Including All Revisions.

O. UL 83 - Thermoplastic-Insulated Wires and Cables; Current Edition, Including All Revisions.

P. UL 267 - Outline of Investigation for Wire-Pulling Compounds; Current Edition, Including All Revisions.

Q. UL 486A-486B - Wire Connectors; Current Edition, Including All Revisions.

R. UL 486C - Splicing Wire Connectors; Current Edition, Including All Revisions.

S. UL 486D - Sealed Wire Connector Systems; Current Edition, Including All Revisions.

T. UL 510 - Polyvinyl Chloride, Polyethylene, and Rubber Insulating Tape; Current Edition, Including All Revisions.

U. UL 1569 - Metal-Clad Cables; Current Edition, Including All Revisions.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Coordinate sizes of raceways, boxes, and equipment enclosures installed under other sections with the actual conductors to be installed, including adjustments for conductor sizes increased for voltage drop.
   2. Coordinate with electrical equipment installed under other sections to provide terminations suitable for use with the conductors to be installed.
   3. Notify Architect of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

1.05 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements listed below.

B. Comply with requirements of NFPA 70.

C. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store conductors and cables in accordance with manufacturer's instructions.

1.07 FIELD CONDITIONS

A. Do not install or otherwise handle thermoplastic-insulated conductors at temperatures lower than 14 degrees F (-10 degrees C), unless otherwise permitted by manufacturer's instructions. When installation below this temperature is unavoidable, notify Architect and obtain direction before proceeding with work.

PART 2 PRODUCTS

2.01 CONDUCTOR AND CABLE APPLICATIONS

A. Do not use conductors and cables for applications other than as permitted by NFPA 70 and product listing.

B. Provide single conductor building wire installed in suitable raceway unless otherwise indicated, permitted, or required.

C. Nonmetallic-sheathed cable is not permitted.

D. Underground feeder and branch-circuit cable is not permitted.

E. Service entrance cable is not permitted.

F. Metal-clad cable is permitted only as follows:
   1. Where not otherwise restricted, may be used:
      a. Where concealed in hollow stud walls, above accessible ceilings, and under raised floors for branch circuits up to 20 A.
         1) Exception: Provide single conductor building wire in raceway for circuit homerun from first outlet to panelboard.
   2. In addition to other applicable restrictions, may not be used:
      a. Where not approved for use by the authority having jurisdiction.
      b. Where exposed to view, except in dedicated electrical, communications, and mechanical rooms where not subject to damage.
      c. Where exposed to damage.
      d. For damp, wet, or corrosive locations.

2.02 CONDUCTOR AND CABLE GENERAL REQUIREMENTS

A. Provide products that comply with requirements of NFPA 70.

B. Provide products listed, classified, and labeled as suitable for the purpose intended.

C. Provide new conductors and cables manufactured not more than one year prior to installation.

D. Unless specifically indicated to be excluded, provide all required conduit, boxes, wiring, connectors, etc. as required for a complete operating system.

E. Comply with NEMA WC 70.

F. Thermoplastic-Insulated Conductors and Cables: Listed and labeled as complying with UL 83.

G. Thermoset-Insulated Conductors and Cables: Listed and labeled as complying with UL 44.

H. Conductors for Grounding and Bonding: Also comply with Section 26 05 26.

I. Conductors and Cables Installed Exposed in Spaces Used for Environmental Air (only where specifically permitted): Plenum rated, listed and labeled as suitable for use in return air plenums.

J. Conductor Material:
   1. Provide copper conductors except where aluminum conductors are specifically indicated or permitted for substitution. Conductor sizes indicated are based on copper unless specifically indicated as aluminum. Conductors designated with the abbreviation "AL" indicate aluminum.
      a. Substitution of aluminum conductors for copper is permitted for service and panelboard feeder conductor sizes 1/0 AWG and larger.
      b. Aluminum conductors shall not be permitted for connection to mechanical equipment.
      c. Where aluminum conductors are substituted for copper, comply with the following:
         1) Size aluminum conductors to provide, when compared to copper sizes indicated, equivalent or greater ampacity and equivalent or less voltage drop.
         2) Increase size of raceways, boxes, wiring gutters, enclosures, etc. as required to accommodate aluminum conductors.
         3) Provide aluminum equipment grounding conductor sized according to NFPA 70.

2. Copper Conductors: Soft drawn annealed, 98 percent conductivity, uncoated copper conductors complying with ASTM B3, ASTM B8, or ASTM B787/B787M unless otherwise indicated.
3. Tinned Copper Conductors: Comply with ASTM B33.
4. Aluminum Conductors (only where specifically indicated or permitted for substitution): AA-8000 series aluminum alloy conductors recognized by ASTM B800 and compact stranded in accordance with ASTM B801 unless otherwise indicated.

K. Minimum Conductor Size:
1. Branch Circuits: 12 AWG.
a. Exceptions:
1) 20 A, 120 V circuits longer than 75 feet (23 m): 10 AWG, for voltage drop.
2) 20 A, 120 V circuits longer than 150 feet (46 m): 8 AWG, for voltage drop. Notify Engineer if circuit will be longer than 210 feet.
3) 20 A, 277 V circuits longer than 150 feet (46 m): 10 AWG, for voltage drop. Notify Engineer if circuit will be longer than 280 feet.
2. Class 1 Control Circuits: 14 AWG.
3. Class 2 Control Circuits: as per system manufacturer recommended size.

L. Where conductor size is not indicated, size to comply with NFPA 70 but not less than applicable minimum size requirements specified.

M. Conductor Color Coding:
1. Color code conductors as indicated unless otherwise required by the authority having jurisdiction. Maintain consistent color coding throughout project.
2. Color Coding Method: Integrally colored insulation.
a. Conductors size 4 AWG and larger may have black insulation color coded using vinyl color coding electrical tape.
3. Color Code:
a. 480Y/277 V, 3 Phase, 4 Wire System:
1) Phase A: Brown.
2) Phase B: Orange.
3) Phase C: Yellow.
4) Neutral/Grounded: Gray.
b. 208Y/120 V, 3 Phase, 4 Wire System:
1) Phase A: Black.
2) Phase B: Red.
3) Phase C: Blue.
4) Neutral/Grounded: White.
c. 240/120 V, 1 Phase, 3 Wire System:
1) Phase A: Black.
2) Phase B: Red.
3) Neutral/Grounded: White.
d. Equipment Ground, All Systems: Green.
e. For modifications or additions to existing wiring systems, comply with existing color code when existing code complies with NFPA 70 and is approved by the authority having jurisdiction.
f. For control circuits, comply with manufacturer's recommended color code.

2.03 SINGLE CONDUCTOR BUILDING WIRE

A. Description: Single conductor insulated wire.

B. Conductor Stranding:
   1. Feeders and Branch Circuits:
      a. Size 12 AWG and Smaller: Solid.
      b. Size 10 AWG and Larger: Stranded.
   2. Control Circuits: Stranded.

C. Insulation Voltage Rating: 600 V.

D. Insulation:
   1. Copper Building Wire: Type THHN/THWN or THHN/THWN-2, except as indicated below.
      a. Size 4 AWG and Larger: Type XHHW-2.
      b. Installed Underground: Type XHHW-2.
      c. Fixture Wiring Within Luminaires: Type TFFN/TFN for luminaires with labeled maximum temperature of 90 degrees C; Approved suitable type for luminaires with labeled maximum temperature greater than 90 degrees C.
   2. Aluminum Building Wire (only where specifically indicated or permitted for substitution): Type XHHW-2.

2.04 METAL-CLAD CABLE

A. Description: NFPA 70, Type MC cable listed and labeled as complying with UL 1569, and listed for use in classified firestop systems to be used.

B. Conductor Stranding:
   1. Size 10 AWG and Smaller: Solid.
   2. Size 8 AWG and Larger: Stranded.

C. Insulation Voltage Rating: 600 V.

D. Insulation: Type THHN/THWN-2.

E. Provide oversized neutral conductors where indicated or required.

F. Provide dedicated neutral conductor for each phase conductor for dedicated circuits, GFCI protected circuits, AFCI protected circuits, or where indicated or required.

G. Grounding: Full-size integral equipment grounding conductor.
   1. Provide additional isolated/insulated grounding conductor.

H. Armor: Steel, interlocked tape.

2.05 WIRING CONNECTORS

A. Description: Wiring connectors appropriate for the application, suitable for use with the conductors to be connected, and listed as complying with UL 486A-486B or UL 486C as applicable.

B. Connectors for Grounding and Bonding: Comply with Section 26 05 26.

C. Wiring Connectors for Splices and Taps:
   1. Copper Conductors Size 8 AWG and Smaller: Use twist-on insulated spring connectors.
   2. Copper Conductors Size 6 AWG and Larger: Use mechanical connectors or compression connectors.
   3. Connectors for Aluminum Conductors: Use compression connectors.

D. Wiring Connectors for Terminations:
   1. Provide terminal lugs for connecting conductors to equipment furnished with terminations designed for terminal lugs.

2. Provide compression adapters for connecting conductors to equipment furnished with mechanical lugs when only compression connectors are specified.
3. Where over-sized conductors are larger than the equipment terminations can accommodate, provide connectors suitable for reducing to appropriate size, but not less than required for the rating of the overcurrent protective device.
4. Provide motor pigtail connectors for connecting motor leads in order to facilitate disconnection.
5. Copper Conductors Size 8 AWG and Larger: Use mechanical connectors or compression connectors where connectors are required.
6. Aluminum Conductors: Use compression connectors for all connections.
7. Stranded Conductors Size 10 AWG and Smaller: Use crimped terminals for connections to terminal screws.
8. Conductors for Control Circuits: Use crimped terminals for all connections.

E. Do not use insulation-piercing or insulation-displacement connectors designed for use with conductors without stripping insulation.

F. Twist-on Insulated Spring Connectors: Rated 600 V, 221 degrees F (105 degrees C) for standard applications and 302 degrees F (150 degrees C) for high temperature applications; pre-filled with sealant and listed as complying with UL 486D for damp and wet locations.

G. Mechanical Connectors: Provide bolted type or set-screw type.

H. Compression Connectors: Provide circumferential type or hex type crimp configuration.

I. Crimped Terminals: Nylon-insulated, with insulation grip and terminal configuration suitable for connection to be made.

2.06 ACCESSORIES

A. Electrical Tape:
1. Vinyl Color Coding Electrical Tape: Integrally colored to match color code indicated; listed as complying with UL 510; minimum thickness of 7 mil (0.18 mm); resistant to abrasion, corrosion, and sunlight; suitable for continuous temperature environment up to 221 degrees F (105 degrees C).
2. Vinyl Insulating Electrical Tape: Complying with ASTM D3005 and listed as complying with UL 510; minimum thickness of 7 mil (0.18 mm); resistant to abrasion, corrosion, and sunlight; conformable for application down to 0 degrees F (-18 degrees C) and suitable for continuous temperature environment up to 221 degrees F (105 degrees C).
3. Rubber Splicing Electrical Tape: Ethylene Propylene Rubber (EPR) tape, complying with ASTM D4388; minimum thickness of 30 mil (0.76 mm); suitable for continuous temperature environment up to 194 degrees F (90 degrees C) and short-term 266 degrees F (130 degrees C) overload service.
4. Moisture Sealing Electrical Tape: Insulating mastic compound laminated to flexible, all-weather vinyl backing; minimum thickness of 90 mil (2.3 mm).

B. Heat Shrink Tubing: Heavy-wall, split-resistant, with factory-applied adhesive; rated 600 V; suitable for direct burial applications; listed as complying with UL 486D.

C. Oxide Inhibiting Compound: Listed; suitable for use with the conductors or cables to be installed.

D. Wire Pulling Lubricant:
1. Listed and labeled as complying with UL 267.
2. Suitable for use with conductors/cables and associated insulation/jackets to be installed.
3. Suitable for use at installation temperature.

E. Cable Ties: Material and tensile strength rating suitable for application.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that interior of building has been protected from weather.

B. Verify that work likely to damage wire and cable has been completed.

C. Verify that raceways, boxes, and equipment enclosures are installed and are properly sized to accommodate conductors and cables in accordance with NFPA 70.

D. Verify that raceway installation is complete and supported.

E. Verify that field measurements are as indicated.

F. Verify that conditions are satisfactory for installation prior to starting work.

3.02 PREPARATION

A. Clean raceways thoroughly to remove foreign materials before installing conductors and cables.

3.03 INSTALLATION

A. Circuiting Requirements:
   1. Unless dimensioned, circuit routing indicated is diagrammatic.
   2. When circuit destination is indicated without specific routing, determine exact routing required.
   3. Arrange circuiting to minimize splices.
   4. Maintain separation of Class 1, Class 2, and Class 3 remote-control, signaling, and power-limited circuits in accordance with NFPA 70.
   5. Maintain separation of wiring for emergency systems in accordance with NFPA 70.
   6. Circuiting Adjustments: Unless otherwise indicated, when branch circuits are indicated as separate, combining them together in a single raceway is not permitted.
      a. Provide no more than six current-carrying conductors in a single raceway. Dedicated neutral conductors are considered current-carrying conductors.
      b. Increase size of conductors as required to account for ampacity derating.
      c. Size raceways, boxes, etc. to accommodate conductors.
   7. Common Neutrals: Unless otherwise indicated, sharing of neutral/grounded conductors among up to three single phase branch circuits of different phases installed in the same raceway is permitted where not otherwise prohibited, except for the following:
      a. Branch circuits fed from ground fault circuit interrupter (GFCI) circuit breakers.
      b. Branch circuits fed from feed-through protection of GFI receptacles.
      c. Branch circuits with dimming controls.
      d. Branch circuits with isolated grounding conductor.

B. Install products in accordance with manufacturer's instructions.

C. Perform work in accordance with NECA 1 (general workmanship).

D. Install aluminum conductors in accordance with NECA 104.

E. Install metal-clad cable (Type MC) in accordance with NECA 120.

F. Installation in Raceway:
   1. Tape ends of conductors and cables to prevent infiltration of moisture and other contaminants.
   2. Pull all conductors and cables together into raceway at same time.

3. Do not damage conductors and cables or exceed manufacturer's recommended maximum pulling tension and sidewall pressure.
4. Use suitable wire pulling lubricant where necessary, except when lubricant is not recommended by the manufacturer.

G. Paralleled Conductors: Install conductors of the same length and terminate in the same manner.

H. Secure and support conductors and cables in accordance with NFPA 70 using suitable supports and methods approved by the authority having jurisdiction. Provide independent support from building structure. Do not provide support from raceways, piping, ductwork, or other systems.
1. Installation Above Suspended Ceilings: Do not provide support from ceiling support system. Do not provide support from ceiling grid or allow conductors and cables to lay on ceiling tiles.
2. Installation in Vertical Raceways: Provide supports where vertical rise exceeds permissible limits.

I. Terminate cables using suitable fittings.
1. Metal-Clad Cable (Type MC):
   a. Use listed fittings.
   b. Cut cable armor only using specialized tools to prevent damaging conductors or insulation. Do not use hacksaw or wire cutters to cut armor.

J. Install conductors with a minimum of 6 inches (150 mm) of slack at each outlet.

K. Where conductors are installed in enclosures for future termination by others, provide a minimum of 5 feet (1.5 m) of slack.

L. Neatly train and bundle conductors inside boxes, wireways, panelboards and other equipment enclosures.

M. Group or otherwise identify neutral/grounded conductors with associated ungrounded conductors inside enclosures in accordance with NFPA 70.

N. Make wiring connections using specified wiring connectors.
1. Make splices and taps only in accessible boxes. Do not pull splices into raceways or make splices in conduit bodies or wiring gutters.
2. Remove appropriate amount of conductor insulation for making connections without cutting, nicking or damaging conductors.
3. Do not remove conductor strands to facilitate insertion into connector.
4. Clean contact surfaces on conductors and connectors to suitable remove corrosion, oxides, and other contaminates. Do not use wire brush on plated connector surfaces.
5. Connections for Aluminum Conductors: Fill connectors with oxide inhibiting compound where not pre-filled by manufacturer.
6. Mechanical Connectors: Secure connections according to manufacturer's recommended torque settings.
7. Compression Connectors: Secure connections using manufacturer's recommended tools and dies.

O. Insulate splices and taps that are made with uninsulated connectors using methods suitable for the application, with insulation and mechanical strength at least equivalent to unspliced conductors.

P. Insulate ends of spare conductors using vinyl insulating electrical tape.

Q. Field-Applied Color Coding: Where vinyl color coding electrical tape is used in lieu of integrally colored insulation as permitted in Part 2 under "Color Coding", apply half overlapping turns of tape at each termination and at each location conductors are accessible.

R. Identify conductors and cables in accordance with Section 26 05 53.

S. Install firestopping to preserve fire resistance rating of partitions and other elements, using materials and methods specified in Section 07 84 00.

T. Unless specifically indicated to be excluded, provide final connections to all equipment and devices, including those furnished by others, as required for a complete operating system.

U. Unless specifically stated otherwise, or shown on drawings, all electrical cables and conductors shall be installed in raceway systems.

V. Coordinate cable and wire installation work with electrical raceway and equipment installation work, as necessary for proper interface. Support and train all feeders within switchboards away from open bus bars and sharp metal edges within cabinets.

W. Use pulling means, including fish tape, cable, rope, and basket-weave wire/cable grips, that will not damage cables or raceway.

X. At minimum, use suitable wire pulling lubricant for building wire 4 AWG and larger. Use manufacturer-approved pulling compound or lubricant; compound used must not deteriorate conductor or insulation. Do not exceed manufacturer's recommended maximum pulling tensions and sidewall pressure values.

Y. Protect exposed cables from damage.

Z. Install exposed cables parallel and perpendicular to surfaces of exposed structural members, and follow surface contours where possible.

AA. Support cable according to Division 26 "Hangers and Supports for Electrical Systems".

BB. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

CC. Splices in conductors shall be made in outlet boxes, junction boxes, or approved wireways, only.

DD. Splices which are not fabricated with insulation device shall be taped with UL approved plastic electrical tape. Thickness of taped insulation shall be as thick as original insulation.

EE. Terminate aluminum conductors with tin-plated aluminum-bodied compression connectors only. Fill with anti-oxidant compound before installing conductor.

FF. Use suitable reducing connectors or mechanical connector adaptors for connecting aluminum conductors to copper conductors.

GG. Use split bolt connectors for copper conductor splices and taps, 6 AWG and larger. Tape uninsulated conductors and connector with electrical tape to 150 percent of insulation rating of conductor.

HH. Bolted splice connectors shall be filled with electrical insulation putty.

II. Use solderless pressure connectors with insulating covers for copper conductor splices and taps, 8 AWG and larger.

JJ. Use insulated spring wire connectors with plastic caps for copper conductor splices and taps, 10 AWG and smaller.

3.04 FIELD QUALITY CONTROL

A. See Section 01 40 00 - Quality Requirements, for additional requirements.

B. Inspect and test in accordance with NETA ATS, except Section 4.

C. Perform inspections and tests listed in NETA ATS, Section 7.3.2. The insulation resistance test is required for all conductors. The resistance test for parallel conductors listed as optional is not required.

D. Correct deficiencies and replace damaged or defective conductors and cables.

END OF SECTION

SECTION 26 05 26
GROUNDING AND BONDING FOR ELECTRICAL SYSTEMS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Grounding and bonding requirements.

B. Conductors for grounding and bonding.

C. Connectors for grounding and bonding.

D. Ground bars.

E. Ground rod electrodes.

1.02 RELATED REQUIREMENTS

A. Section 01 40 00 - Quality Requirements.

B. Section 26 05 19 - Low-Voltage Electrical Power Conductors and Cables.

C. Section 26 05 36 - Cable Trays for Electrical Systems.

D. Section 26 05 53 - Identification for Electrical Systems.

1.03 REFERENCE STANDARDS

A. IEEE 81 - IEEE Guide for Measuring Earth Resistivity, Ground Impedance, and Earth Surface Potentials of a Grounding System; 2012.

B. NECA 1 - Standard for Good Workmanship in Electrical Construction; 2023.

C. NEMA GR 1 - Grounding Rod Electrodes and Grounding Rod Electrode Couplings; 2022.

D. NETA ATS - Standard for Acceptance Testing Specifications for Electrical Power Equipment And Systems; 2025.

E. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

F. NFPA 99 - Health Care Facilities Code; 2024, with Errata.

G. UL 467 - Grounding and Bonding Equipment; Current Edition, Including All Revisions.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Verify exact locations of underground metal water service pipe entrances to building.
   2. Coordinate the work with other trades to provide steel reinforcement complying with specified requirements for concrete-encased electrode.
   3. Notify Architect of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

B. Sequencing:
   1. Do not install ground rod electrodes until final backfill and compaction is complete.

1.05 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements listed below.

B. Comply with requirements of NFPA 70.

C. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store products in accordance with manufacturer's instructions.

PART 2 PRODUCTS

2.01 GROUNDING AND BONDING REQUIREMENTS

A. Do not use products for applications other than as permitted by NFPA 70 and product listing.

B. Unless specifically indicated to be excluded, provide all required components, conductors, connectors, conduit, boxes, fittings, supports, accessories, etc. as necessary for a complete grounding and bonding system.

C. Where conductor size is not indicated, size to comply with NFPA 70 but not less than applicable minimum size requirements specified.

D. Grounding System Resistance:
   1. Achieve specified grounding system resistance under normally dry conditions unless otherwise approved by Architect. Precipitation within the previous 48 hours does not constitute normally dry conditions.
   2. Grounding Electrode System: Not greater than 5 ohms to ground, when tested according to IEEE 81 using "fall-of-potential" method.
   3. Between Grounding Electrode System and Major Electrical Equipment Frames, System Neutral, and Derived Neutral Points: Not greater than 0.5 ohms, when tested using "point-to-point" methods.

E. Grounding Electrode System:
   1. Provide connection to required and supplemental grounding electrodes indicated to form grounding electrode system.
      a. Provide continuous grounding electrode conductors without splice or joint.
      b. Install grounding electrode conductors in raceway where exposed to physical damage. Bond grounding electrode conductor to metallic raceways at each end with bonding jumper.
   2. Metal Underground Water Pipe(s):
      a. Provide connection to underground metal domestic and fire protection (where present) water service pipe(s) that are in direct contact with earth for at least 10 feet (3.0 m) at an accessible location not more than 5 feet (1.5 m) from the point of entrance to the building.
      b. Provide bonding jumper(s) around insulating joints/pipes as required to make pipe electrically continuous.
      c. Provide bonding jumper around water meter of sufficient length to permit removal of meter without disconnecting jumper.
   3. Metal In-Ground Support Structure:
      a. Provide connection to metal in-ground support structure that is in direct contact with earth in accordance with NFPA 70.
   4. Concrete-Encased Electrode:
      a. Provide connection to concrete-encased electrode consisting of not less than 20 feet (6.0 m) of either steel reinforcing bars or bare copper conductor not smaller than 4 AWG embedded within concrete foundation or footing that is in direct contact with earth in accordance with NFPA 70.

5. Ground Rod Electrode(s):
    a. Provide single electrode unless otherwise indicated or required.
    b. Space electrodes not less than 10 feet (3.0 m) from each other and any other ground electrode.
    c. Where location is not indicated, locate electrode(s) at least 5 feet (1.5 m) outside building perimeter foundation as near as possible to electrical service entrance; where possible, locate in softscape (uncovered) area.
6. Provide additional ground electrode(s) as required to achieve specified grounding electrode system resistance.
7. Ground Bar: Provide ground bar, separate from service equipment enclosure, for common connection point of grounding electrode system bonding jumpers as permitted in NFPA 70. Connect grounding electrode conductor provided for service-supplied system grounding to this ground bar.
    a. Ground Bar Size: 1/4 by 2 by 12 inches (6 by 50 by 300 mm) unless otherwise indicated or required.
    b. Where ground bar location is not indicated, locate in accessible location as near as possible to service disconnect enclosure.
    c. Ground Bar Mounting Height: 18 inches (450 mm) above finished floor unless otherwise indicated.

F. Service-Supplied System Grounding:
1. For each service disconnect, provide grounding electrode conductor to connect neutral (grounded) service conductor to grounding electrode system. Unless otherwise indicated, make connection at neutral (grounded) bus in service disconnect enclosure.
2. For each service disconnect, provide main bonding jumper to connect neutral (grounded) bus to equipment ground bus where not factory-installed. Do not make any other connections between neutral (grounded) conductors and ground on load side of service disconnect.

G. Grounding for Separate Building or Structure Supplied by Feeder(s) or Branch Circuits:
1. Provide grounding electrode system for each separate building or structure.
2. Provide equipment grounding conductor routed with supply conductors.
3. For each disconnecting means, provide grounding electrode conductor to connect equipment ground bus to grounding electrode system.
4. Do not make any connections and remove any factory-installed jumpers between neutral (grounded) conductors and ground.

H. Bonding and Equipment Grounding:
1. Provide bonding for equipment grounding conductors, equipment ground busses, metallic equipment enclosures, metallic raceways and boxes, device grounding terminals, and other normally non-current-carrying conductive materials enclosing electrical conductors/equipment or likely to become energized as indicated and in accordance with NFPA 70.
2. Provide insulated equipment grounding conductor in each feeder and branch circuit raceway. Do not use raceways as sole equipment grounding conductor.
3. Where circuit conductor sizes are increased for voltage drop, increase size of equipment grounding conductor proportionally in accordance with NFPA 70.
4. Unless otherwise indicated, connect wiring device grounding terminal to branch circuit equipment grounding conductor and to outlet box with bonding jumper.
5. Terminate branch circuit equipment grounding conductors on solidly bonded equipment ground bus only. Do not terminate on neutral (grounded) or isolated/insulated ground bus.

6. Provide bonding jumper across expansion or expansion/deflection fittings provided to accommodate conduit movement.
7. Provide bonding for interior metal piping systems in accordance with NFPA 70. This includes, but is not limited to:
   a. Metal water piping where not already effectively bonded to metal underground water pipe used as grounding electrode.
   b. Metal gas piping.
   c. Metal process piping.
8. Provide bonding for metal building frame where not used as a grounding electrode.
9. Provide bonding and equipment grounding for pools and fountains and associated equipment in accordance with NFPA 70.
10. Provide redundant grounding and bonding for patient care areas in accordance with NFPA 70 and NFPA 99.

I. Communications Systems Grounding and Bonding:
   1. Provide intersystem bonding termination at service equipment or metering equipment enclosure and at disconnecting means for any additional buildings or structures in accordance with NFPA 70.
   2. Provide bonding jumper in raceway from intersystem bonding termination to each communications room or backboard and provide ground bar for termination.
      a. Bonding Jumper Size: As indicated.
      b. Raceway Size: 3/4 inch (21 mm) trade size unless otherwise indicated or required.
      c. Ground Bar Size: 1/4 by 2 by 12 inches (6 by 50 by 300 mm) unless otherwise indicated or required.
      d. Ground Bar Mounting Height: 18 inches (450 mm) above finished floor unless otherwise indicated.

2.02 GROUNDING AND BONDING COMPONENTS

A. General Requirements:
   1. Provide products listed, classified, and labeled as suitable for the purpose intended.
   2. Provide products listed and labeled as complying with UL 467 where applicable.

B. Conductors for Grounding and Bonding, in Addition to Requirements of Section 26 05 26:
   1. Use insulated copper conductors unless otherwise indicated.
      a. Exceptions:
         1) Use bare copper conductors where installed underground in direct contact with earth.
         2) Use bare copper conductors where directly encased in concrete (not in raceway).

C. Connectors for Grounding and Bonding:
   1. Description: Connectors appropriate for the application and suitable for the conductors and items to be connected; listed and labeled as complying with UL 467.
   2. Unless otherwise indicated, use exothermic welded connections for underground, concealed and other inaccessible connections.
   3. Unless otherwise indicated, use mechanical connectors, compression connectors, or exothermic welded connections for accessible connections.

D. Ground Bars:
   1. Description: Copper rectangular ground bars with mounting brackets and insulators.
   2. Size: As indicated.
   3. Holes for Connections: As indicated or as required for connections to be made.

E. Ground Rod Electrodes:
   1. Comply with NEMA GR 1.
   2. Material: Copper-bonded (copper-clad) steel.
   3. Size: 3/4 inch (19 mm) diameter by 10 feet (3.0 m) length, unless otherwise indicated.
   4. Where rod lengths of greater than 10 feet (3.0 m) are indicated or otherwise required, sectionalized ground rods may be used.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that work likely to damage grounding and bonding system components has been completed.

B. Verify that field measurements are as indicated.

C. Verify that conditions are satisfactory for installation prior to starting work.

3.02 INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. Perform work in accordance with NECA 1 (general workmanship).

C. Ground Rod Electrodes: Unless otherwise indicated, install ground rod electrodes vertically. Where encountered rock prohibits vertical installation, install at 45 degree angle or bury horizontally in trench at least 30 inches (750 mm) deep in accordance with NFPA 70 or provide ground plates.
   1. Outdoor Installations: Unless otherwise indicated, install with top of rod 6 inches (150 mm) below finished grade.
   2. Indoor Installations: Unless otherwise indicated, install with 4 inches (100 mm) of top of rod exposed.

D. Make grounding and bonding connections using specified connectors.
   1. Remove appropriate amount of conductor insulation for making connections without cutting, nicking or damaging conductors. Do not remove conductor strands to facilitate insertion into connector.
   2. Remove nonconductive paint, enamel, or similar coating at threads, contact points, and contact surfaces.
   3. Exothermic Welds: Make connections using molds and weld material suitable for the items to be connected in accordance with manufacturer's recommendations.
   4. Mechanical Connectors: Secure connections according to manufacturer's recommended torque settings.
   5. Compression Connectors: Secure connections using manufacturer's recommended tools and dies.

E. Identify grounding and bonding system components in accordance with Section 26 05 53.

3.03 FIELD QUALITY CONTROL

A. See Section 01 40 00 - Quality Requirements, for additional requirements.

B. Inspect and test in accordance with NETA ATS except Section 4.

C. Perform inspections and tests listed in NETA ATS, Section 7.13.

D. Perform ground electrode resistance tests under normally dry conditions. Precipitation within the previous 48 hours does not constitute normally dry conditions.

E. Investigate and correct deficiencies where measured ground resistances do not comply with specified requirements.

END OF SECTION

SECTION 26 05 29
HANGERS AND SUPPORTS FOR ELECTRICAL SYSTEMS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Support and attachment requirements and components for equipment, conduit, cable, boxes, and other electrical work.

1.02 RELATED REQUIREMENTS

A. Section 01 40 00 - Quality Requirements.

B. Section 03 30 00 - Cast-in-Place Concrete.

C. Section 05 50 00 - Metal Fabrications.

D. Section 26 05 34 - Conduit for Electrical Systems.

E. Section 26 05 36 - Cable Trays for Electrical Systems.

F. Section 26 05 37 - Boxes for Electrical Systems.

G. Section .

H. Section 26 51 00 - Interior Lighting.

1.03 REFERENCE STANDARDS

A. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products; 2017.

B. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware; 2023.

C. ASTM B633 - Standard Specification for Electrodeposited Coatings of Zinc on Iron and Steel; 2023.

D. MFMA-4 - Metal Framing Standards Publication; 2004.

E. NECA 1 - Standard for Good Workmanship in Electrical Construction; 2023.

F. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Coordinate sizes and arrangement of supports and bases with actual equipment and components to be installed.
   2. Coordinate work to provide additional framing and materials required for installation.
   3. Coordinate compatibility of support and attachment components with mounting surfaces at installed locations.
   4. Coordinate arrangement of supports with ductwork, piping, equipment and other potential conflicts.
   5. Notify Architect of conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

B. Sequencing:
   1. Do not install products on or provide attachment to concrete surfaces until concrete has cured; see Section 03 30 00.

1.05 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements listed below.

B. Installer Qualifications for Powder-Actuated Fasteners: Certified by fastener system manufacturer with current operator's license.

C. Installer Qualifications for Field Welding: See Section 05 50 00.

D. Product Listing Organization Qualifications: Organization recognized by OSHA as Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store products in accordance with manufacturer's instructions.

PART 2 PRODUCTS

2.01 SUPPORT AND ATTACHMENT COMPONENTS

A. General Requirements:
   1. Comply with the following. Where requirements differ, comply with most stringent.
      a. NFPA 70.
      b. Applicable building code.
      c. Requirements of authorities having jurisdiction.
   2. Provide required hangers, supports, anchors, fasteners, fittings, accessories, and hardware as necessary for complete installation of electrical work.
   3. Provide products listed, classified, and labeled as suitable for purpose intended, where applicable.
   4. Do not use products for applications other than as permitted by NFPA 70 and product listing.
   5. Do not use wire, chain, perforated pipe strap, or wood for permanent supports unless specifically indicated or permitted.
   6. Steel Components: Use corrosion-resistant materials suitable for environment where installed.
      a. Indoor Dry Locations: Use zinc-plated steel or approved equivalent unless otherwise indicated.
      b. Outdoor and Damp or Wet Indoor Locations: Use galvanized steel, stainless steel, or approved equivalent unless otherwise indicated.
      c. Zinc-Plated Steel: Electroplated in accordance with ASTM B633.
      d. Galvanized Steel: Hot-dip galvanized after fabrication in accordance with ASTM A123/A123M or ASTM A153/A153M.

B. Components for Vibration Isolation and/or Seismic Controls: See Section 26 05 48.

C. Materials for Metal Fabricated Supports: See Section 05 50 00.

D. Conduit and Cable Supports: Straps and clamps suitable for conduit or cable to be supported.
   1. Conduit Straps: One-hole or two-hole type; steel or malleable iron.
   2. Conduit Clamps: Bolted type unless otherwise indicated.

E. Outlet Box Supports: Hangers and brackets suitable for boxes to be supported.

F. Metal Channel/Strut Framing Systems:
   1. Description: Factory-fabricated, continuous-slot, metal channel/strut and associated fittings, accessories, and hardware required for field assembly of supports.
   2. Comply with MFMA-4.

3. Channel Material:
    a. Indoor Dry Locations: Use painted steel, zinc-plated steel, or galvanized steel.
    b. Outdoor and Damp or Wet Indoor Locations: Use galvanized steel.
4. Minimum Channel Thickness: Steel sheet, 12 gauge, 0.1046 inch (2.66 mm).
5. Minimum Channel Dimensions: 1-5/8 inch (41 mm) wide by 13/16 inch (21 mm) high.

G. Hanger Rods: Threaded, zinc-plated steel unless otherwise indicated.
1. Minimum Size, Unless Otherwise Indicated or Required:
    a. Equipment Supports: 1/2-inch (13 mm) diameter.
    b. Single Conduit up to 1-inch (27 mm) Trade Size: 1/4-inch (6 mm) diameter.
    c. Trapeze Support for Multiple Conduits: 3/8-inch (10 mm) diameter.
    d. Outlet Boxes: 1/4-inch (6 mm) diameter.
    e. Luminaires: 1/4-inch (6 mm) diameter.

H. Anchors and Fasteners:
1. Unless otherwise indicated and where not otherwise restricted, use anchor and fastener types indicated for specified applications.
2. Concrete: Use preset concrete inserts, expansion anchors, or screw anchors.
3. Solid or Grout-Filled Masonry: Use expansion anchors or screw anchors.
4. Hollow Masonry: Use toggle bolts.
5. Hollow Stud Walls: Use toggle bolts.
6. Steel: Use beam clamps, machine bolts, or welded threaded studs.
7. Sheet Metal: Use sheet metal screws.
8. Wood: Use wood screws.
9. Plastic and lead anchors are not permitted.
10. Powder-actuated fasteners are permitted only as follows:
    a. Where approved by Architect.
11. Hammer-driven anchors and fasteners are not permitted.
12. Preset Concrete Inserts: Continuous metal channel/strut and spot inserts specifically designed to be cast in concrete ceilings, walls, and floors.
    a. Manufacturer: Same as manufacturer of metal channel/strut framing system.
    b. Comply with MFMA-4.
    c. Channel Material: Use galvanized steel.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that mounting surfaces are ready to receive support and attachment components.

C. Verify that conditions are satisfactory for installation prior to starting work.

3.02 INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. Install hangers and supports in accordance with NECA 1.

C. Provide independent support from building structure. Do not provide support from piping, ductwork, or other systems.

D. Unless specifically indicated or approved by Architect, do not provide support from suspended ceiling support system or ceiling grid.

E. Unless specifically indicated or approved by Architect, do not provide support from roof deck.

F. Do not penetrate or otherwise notch or cut structural members without approval of Structural Engineer.

G. Field Welding, Where Approved by Architect: See Section 05 50 00.

H. Equipment Support and Attachment:
   1. Use metal, fabricated supports or supports assembled from metal channel/strut to support equipment as required.
   2. Use metal channel/strut secured to studs to support equipment surface mounted on hollow stud walls when wall strength is not sufficient to resist pull-out.
   3. Use metal channel/strut to support surface-mounted equipment in wet or damp locations to provide space between equipment and mounting surface.
   4. Unless otherwise indicated, mount floor-mounted equipment on properly sized concrete pad 3 inches (80 mm) in height; see Section 03 30 00.
   5. Securely fasten floor-mounted equipment. Do not install equipment such that it relies on its own weight for support.

I. Conduit Support and Attachment: See Section 26 05 34 for additional requirements.

J. Cable Tray Support and Attachment: See Section 26 05 36 for additional requirements.

K. Box Support and Attachment: See Section 26 05 37 for additional requirements.

L. Interior Luminaire Support and Attachment: See Section 26 51 00 for additional requirements.

M. Preset Concrete Inserts: Use manufacturer provided closure strips to inhibit concrete seepage during concrete pour.

N. Secure fasteners in accordance with manufacturer's recommended torque settings.

O. Remove temporary supports.

P. Identify independent electrical component support wires above accessible ceilings, where permitted, with color distinguishable from ceiling support wires in accordance with NFPA 70.

Q. Install surface-mounted cabinets and panelboards with minimum of four anchors.

R. In wet and damp locations use steel channel supports to stand cabinets and panelboards 1 inch (25 mm) off wall.

S. Use sheet metal channel to bridge studs above and below cabinets and panelboards recessed in hollow partitions.

T. Do not remove any fireproofing from building structure for support devices.

3.03 FIELD QUALITY CONTROL

A. See Section 01 40 00 - Quality Requirements for additional requirements.

B. Inspect support and attachment components for damage and defects.

C. Repair cuts and abrasions in galvanized finishes using zinc-rich paint recommended by manufacturer. Replace components that exhibit signs of corrosion.

D. Correct deficiencies and replace damaged or defective support and attachment components.

END OF SECTION

SECTION 26 05 34
CONDUIT FOR ELECTRICAL SYSTEMS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Galvanized steel rigid metal conduit (RMC).
B. Aluminum rigid metal conduit (RMC).
C. Galvanized steel intermediate metal conduit (IMC).
D. PVC-coated galvanized steel rigid metal conduit (RMC).
E. Flexible metal conduit (FMC).
F. Liquidtight flexible metal conduit (LFMC).
G. Galvanized steel electrical metallic tubing (EMT).
H. Rigid polyvinyl chloride (PVC) conduit.
I. Electrical nonmetallic tubing (ENT).
J. Liquidtight flexible nonmetallic conduit (LFNC).
K. Accessories.

1.02 RELATED REQUIREMENTS

A. Section 01 40 00 - Quality Requirements.
B. Section 03 30 00 - Cast-in-Place Concrete.
C. Section 07 84 00 - Firestopping.
D. Section 26 05 19 - Low-Voltage Electrical Power Conductors and Cables.
E. Section 26 05 26 - Grounding and Bonding for Electrical Systems.
F. Section 26 05 29 - Hangers and Supports for Electrical Systems.
G. Section 26 05 37 - Boxes for Electrical Systems.
H. Section 26 05 53 - Identification for Electrical Systems.

1.03 REFERENCE STANDARDS

A. ANSI C80.1 - American National Standard for Electrical Rigid Steel Conduit (ERSC); 2020.
B. ANSI C80.3 - American National Standard for Electrical Metallic Tubing -- Steel (EMT-S); 2020.
C. ANSI C80.5 - American National Standard for Electrical Rigid Metal Conduit -- Aluminum (ERMC-A); 2020.
D. ANSI C80.6 - American National Standard for Electrical Intermediate Metal Conduit; 2018.
E. NECA 1 - Standard for Good Workmanship in Electrical Construction; 2023.
F. NECA 101 - Standard for Installing Steel Conduits (Rigid, IMC, EMT); 2020.
G. NECA 102 - Standard for Installing Aluminum Rigid Metal Conduit; 2004.
H. NECA 111 - Standard for Installing Nonmetallic Raceways (RNC, ENT, LFNC); 2017.
I. NEMA FB 1 - Fittings, Cast Metal Boxes, and Conduit Bodies for Conduit, Electrical Metallic Tubing, and Cable; 2014.
J. NEMA RN 1 - Polyvinyl-Chloride (PVC) Externally Coated Galvanized Rigid Steel Metal Conduit and Intermediate Metal Conduit; 2018.

K. NEMA TC 2 - Electrical Polyvinyl Chloride (PVC) Conduit; 2020.

L. NEMA TC 3 - Polyvinyl Chloride (PVC) Fittings for Use with Rigid PVC Conduit and Tubing; 2021.

M. NEMA BI 50058 - Electrical Nonmetallic Tubing (ENT); 2014 (Reaffirmed 2019).

N. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

O. UL 1 - Flexible Metal Conduit; Current Edition, Including All Revisions.

P. UL 6 - Electrical Rigid Metal Conduit-Steel; Current Edition, Including All Revisions.

Q. UL 6A - Electrical Rigid Metal Conduit-Aluminum, Red Brass, and Stainless Steel; Current Edition, Including All Revisions.

R. UL 360 - Liquid-Tight Flexible Metal Conduit; Current Edition, Including All Revisions.

S. UL 514A - Metallic Outlet Boxes; Current Edition, Including All Revisions.

T. UL 514B - Conduit, Tubing, and Cable Fittings; Current Edition, Including All Revisions.

U. UL 651 - Schedule 40, 80, Type EB and A Rigid PVC Conduit and Fittings; Current Edition, Including All Revisions.

V. UL 797 - Electrical Metallic Tubing-Steel; Current Edition, Including All Revisions.

W. UL 1203 - Explosion-Proof and Dust-Ignition-Proof Electrical Equipment for Use in Hazardous (Classified) Locations; Current Edition, Including All Revisions.

X. UL 1242 - Electrical Intermediate Metal Conduit-Steel; Current Edition, Including All Revisions.

Y. UL 1653 - Electrical Nonmetallic Tubing; Current Edition, Including All Revisions.

Z. UL 1660 - Liquid-Tight Flexible Nonmetallic Conduit; Current Edition, Including All Revisions.

AA. UL 2419 - Outline of Investigation for Electrically Conductive Corrosion Resistant Compounds; Current Edition, Including All Revisions.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Coordinate minimum sizes of conduits with actual type and quantity of conductors to be installed, including adjustments for conductor sizes increased for voltage drop.
   2. Coordinate arrangement of conduits with structural members, ductwork, piping, equipment, and other potential conflicts.
   3. Verify exact conduit termination locations required for boxes, enclosures, and equipment.
   4. Coordinate work to provide roof penetrations that preserve integrity of roofing system and do not void roof warranty.
   5. Notify Architect of conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

B. Sequencing:
   1. Do not begin installation of conductors and cables until installation of conduit between termination points is complete.

1.05 SUBMITTALS

A. See Section 01 33 00 - Submittal Procedures.

B. Project Record Documents: Record actual routing for conduits installed underground, conduits embedded within concrete slabs, and conduits 2-inch (53 mm) trade size and larger.

1.06 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements listed below.

B. Product Listing Organization Qualifications: Organization recognized by OSHA as Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store conduit and fittings in accordance with manufacturer's instructions.

PART 2 PRODUCTS

2.01 CONDUIT APPLICATIONS

A. Do not use conduit and associated fittings for applications other than as permitted by NFPA 70, manufacturer's instructions, and product listing.

B. Unless otherwise indicated and where not otherwise restricted, use conduit types indicated for specified applications. Where more than one listed application applies, comply with most restrictive requirements. Where conduit type for particular application is not specified, use galvanized steel rigid metal conduit.

C. Underground:
   1. Under Slab on Grade: Use rigid PVC conduit.
   2. Exterior, Direct-Buried: Use rigid PVC conduit.
   3. Where rigid polyvinyl chloride (PVC) conduit is provided, transition to galvanized steel rigid metal conduit (RMC) where emerging from underground.
   4. Where rigid polyvinyl (PVC) conduit larger than 2-inch (53 mm) trade size is provided, use PVC-coated galvanized steel rigid metal conduit (RMC) elbows for bends.

D. Embedded Within Concrete:
   1. Within Slab on Grade(within structural slabs only where approved by Structural Engineer): Use galvanized steel rigid metal conduit, intermediate metal conduit (IMC), PVC-coated galvanized steel rigid metal conduit, or rigid PVC conduit.
   2. Within Slab Above Ground(within structural slabs only where approved by Structural Engineer): Use galvanized steel rigid metal conduit, intermediate metal conduit (IMC), PVC-coated galvanized steel rigid metal conduit, rigid PVC conduit, or electrical nonmetallic tubing (ENT).
   3. Within Concrete Walls Above Ground: Use galvanized steel rigid metal conduit, intermediate metal conduit (IMC), PVC-coated galvanized steel rigid metal conduit, or electrical nonmetallic tubing (ENT).
   4. Where rigid polyvinyl (PVC) conduit is provided, transition to galvanized steel rigid metal conduit (RMC) where emerging from concrete.
   5. Where galvanized steel electrical metallic tubing (EMT) emerges from concrete into salt air, use corrosion protection tape acceptable to authorities having jurisdiction to provide supplementary corrosion protection for minimum of 4 inches (100 mm) on either side of where conduit emerges.

E. Concealed Within Masonry Walls: Use galvanized steel rigid metal conduit, intermediate metal conduit (IMC), or electrical metallic tubing (EMT).

F. Concealed Within Hollow Stud Walls: Use galvanized steel rigid metal conduit, intermediate metal conduit (IMC), or electrical metallic tubing (EMT).

G. Concealed Above Accessible Ceilings: Use galvanized steel rigid metal conduit, intermediate metal conduit (IMC), or electrical metallic tubing (EMT).

H. Interior, Damp or Wet Locations: Use galvanized steel rigid metal conduit or intermediate metal conduit (IMC).

I. Exposed, Interior, Not Subject to Physical Damage: Use galvanized steel rigid metal conduit, intermediate metal conduit (IMC), or electrical metallic tubing (EMT).

J. Exposed, Interior, Subject to Physical Damage: Use galvanized steel rigid metal conduit or intermediate metal conduit (IMC).
   1. Locations subject to physical damage include, but are not limited to:
      a. Where exposed below 8 feet (2.4 m), except within electrical and communication rooms or closets.
      b. Rigid PVC in pool equipment rooms is acceptable except across floors.

K. Exposed, Exterior: Use galvanized steel rigid metal conduit, intermediate metal conduit (IMC), or PVC-coated galvanized steel rigid metal conduit.

L. Concealed, Exterior, Not Embedded in Concrete or in Contact With Earth: Use galvanized steel rigid metal conduit (RMC) or galvanized steel intermediate metal conduit (IMC).

M. Corrosive Locations: Use aluminum rigid metal conduit (RMC), PVC-coated galvanized steel rigid metal conduit (RMC), or rigid PVC conduit.

N. Hazardous/Classified Locations: Use galvanized steel rigid metal conduit (RMC), aluminum rigid metal conduit (RMC), galvanized steel intermediate metal conduit (IMC), or PVC-coated galvanized steel rigid metal conduit (RMC).

O. Flexible Connections to Luminaires Above Accessible Ceilings: Use flexible metal conduit (FMC).
   1. Maximum Length: 6 feet (1.8 m).

P. Flexible Connections to Vibrating Equipment:
   1. Dry Locations: Use flexible metal conduit (FMC).
   2. Damp, Wet, or Corrosive Locations: Use liquidtight flexible metal conduit (LFMC).
   3. Maximum Length: 6 feet (1.8 m) unless otherwise indicated.
   4. Vibrating equipment includes, but is not limited to:
      a. Transformers.
      b. Motors.

Q. Fished in Existing Walls, Where Necessary: Use flexible metal conduit (FMC).

2.02 CONDUIT - GENERAL REQUIREMENTS

A. Comply with NFPA 70.

B. Fittings for Grounding and Bonding: See Section 26 05 26 for additional requirements.

C. Provide conduit, fittings, supports, and accessories required for complete raceway system.

D. Provide products listed, classified, and labeled as suitable for purpose intended.

E. Minimum Conduit Size, Unless Otherwise Indicated:
   1. Branch Circuits: 3/4-inch (21 mm) trade size.
   2. Branch Circuit Homeruns: 3/4-inch (21 mm) trade size.
   3. Control Circuits: 1/2-inch (16 mm) trade size.
   4. Flexible Connections to Luminaires: 3/8-inch (12 mm) trade size.
   5. Underground, Interior: 3/4-inch (21 mm) trade size.
   6. Underground, Exterior: 1-inch (27 mm) trade size.

F. Where conduit size is not indicated, size to comply with NFPA 70 but not less than applicable minimum size requirements specified.

2.03 GALVANIZED STEEL RIGID METAL CONDUIT (RMC)

A. Description: NFPA 70, Type RMC galvanized steel rigid metal conduit complying with ANSI C80.1 and listed and labeled as complying with UL 6.

B. Fittings:
   1. Nonhazardous Locations: Use fittings complying with NEMA FB 1 and listed and labeled as complying with UL 514B or UL 6.
   2. Material: Use steel or malleable iron.
   3. Connectors and Couplings: Use threaded type fittings only. Threadless fittings, including set screw and compression/gland types, are not permitted.

2.04 ALUMINUM RIGID METAL CONDUIT (RMC)

A. Description: NFPA 70, Type RMC aluminum rigid metal conduit complying with ANSI C80.5 and listed and labeled as complying with UL 6A.

B. Fittings:
   1. Nonhazardous Locations: Use fittings complying with NEMA FB 1 and listed and labeled as complying with UL 514B or UL 6A.
   2. Material: Use aluminum.
   3. Connectors and Couplings: Use threaded type fittings only. Threadless fittings, including set screw and compression/gland types, are not permitted.

2.05 GALVANIZED STEEL INTERMEDIATE METAL CONDUIT (IMC)

A. Description: NFPA 70, Type IMC galvanized steel intermediate metal conduit complying with ANSI C80.6 and listed and labeled as complying with UL 1242.

B. Fittings:
   1. Nonhazardous Locations: Use fittings complying with NEMA FB 1 and listed and labeled as complying with UL 514B or UL 1242.
   2. Hazardous/Classified Locations: Use fittings listed and labeled as complying with UL 1203 for classification of installed location.
   3. Material: Use steel or malleable iron.
   4. Connectors and Couplings: Use threaded type fittings only. Threadless fittings, including set screw and compression/gland types, are not permitted.

2.06 PVC-COATED GALVANIZED STEEL RIGID METAL CONDUIT (RMC)

A. Description: NFPA 70, Type RMC galvanized steel rigid metal conduit with external polyvinyl chloride (PVC) coating complying with NEMA RN 1 and listed and labeled as complying with UL 6.

B. Exterior Coating: Polyvinyl chloride (PVC), nominal thickness of 40 mil, 0.040 inch (1.02 mm).

C. Interior Coating: Urethane, minimum thickness of 2 mil, 0.002 inch (0.05 mm).

D. PVC-Coated Boxes and Fittings:
   1. Manufacturer: Same as manufacturer of PVC-coated conduit to be installed.
   2. Nonhazardous Locations: Use boxes and fittings listed and labeled as complying with UL 514A, UL 514B, or UL 6.
   3. Hazardous/Classified Locations: Use fittings listed and labeled as complying with UL 1203 for classification of installed location.
   4. Material: Use steel or malleable iron.
   5. Exterior Coating: Polyvinyl chloride (PVC), minimum thickness of 40 mil, 0.040 inch (1.02 mm).
   6. Interior Coating: Urethane, minimum thickness of 2 mil, 0.002 inch (0.05 mm).

E. PVC-Coated Supports: Furnish with exterior coating of polyvinyl chloride (PVC), minimum thickness of 15 mil, 0.015 inch (0.38 mm).

2.07 FLEXIBLE METAL CONDUIT (FMC)

A. Description: NFPA 70, Type FMC standard-wall steel flexible metal conduit listed and labeled as complying with UL 1, and listed for use in classified firestop systems.

B. Fittings:
   1. Description: Fittings complying with NEMA FB 1 and listed and labeled as complying with UL 514B.
   2. Material: Use steel or malleable iron.

2.08 LIQUIDTIGHT FLEXIBLE METAL CONDUIT (LFMC)

A. Description: NFPA 70, Type LFMC polyvinyl chloride (PVC) jacketed steel flexible metal conduit listed and labeled as complying with UL 360.

B. Fittings:
   1. Description: Fittings complying with NEMA FB 1 and listed and labeled as complying with UL 514B.
   2. Material: Use steel or malleable iron.

2.09 GALVANIZED STEEL ELECTRICAL METALLIC TUBING (EMT)

A. Description: NFPA 70, Type EMT galvanized steel electrical metallic tubing complying with ANSI C80.3 and listed and labeled as complying with UL 797.

B. Fittings:
   1. Description: Fittings complying with NEMA FB 1 and listed and labeled as complying with UL 514B.
   2. Material: Use steel or malleable iron.
   3. Connectors and Couplings: Use compression/gland or set-screw type.
      a. Do not use indenter type connectors and couplings.

2.10 RIGID POLYVINYL CHLORIDE (PVC) CONDUIT

A. Description: NFPA 70, Type PVC rigid polyvinyl chloride conduit complying with NEMA TC 2 and listed and labeled as complying with UL 651; Schedule 40 unless otherwise indicated, Schedule 80 where subject to physical damage; rated for use with conductors rated 90 degrees C.

B. Fittings:
   1. Manufacturer: Same as manufacturer of conduit to be connected.
   2. Description: Fittings complying with NEMA TC 3 and listed and labeled as complying with UL 651; material to match conduit.

2.11 ELECTRICAL NONMETALLIC TUBING (ENT)

A. Description: NFPA 70, Type ENT electrical nonmetallic tubing complying with NEMA BI 50058 and listed and labeled as complying with UL 1653.

B. Fittings:
   1. Manufacturer: Same as manufacturer of ENT to be connected.
   2. Use solvent-welded type fittings.
   3. Solvent-Welded Fittings: Rigid PVC fittings complying with NEMA TC 3 and listed and labeled as complying with UL 651; suitable for use with ENT.

2.12 LIQUIDTIGHT FLEXIBLE NONMETALLIC CONDUIT (LFNC)

A. Description: NFPA 70, Type LFNC liquidtight flexible nonmetallic conduit listed and labeled as complying with UL 1660.

B. Fittings:
   1. Manufacturer: Same as manufacturer of conduit to be connected.
   2. Description: Fittings complying with NEMA FB 1 and listed and labeled as complying with UL 514B; suitable for type of conduit to be connected.

2.13 ACCESSORIES

A. Corrosion Protection Tape: PVC-based, minimum thickness of 20 mil, 0.020 inch (0.51 mm).

B. Conduit Joint Compound: Corrosion-resistant, electrically conductive compound listed as complying with UL 2419; suitable for use with conduit to be installed.

C. Solvent Cement for PVC Conduit and Fittings: As recommended by manufacturer of conduit and fittings to be installed.

D. Pull Strings: Use nylon or polyester tape with average breaking strength of not less than 1,250 lbf (5.6 kN).

E. Sealing Compound for Sealing Fittings: Listed for use with the particular fittings to be installed.

F. Modular Seals for Conduit Penetrations: Rated for minimum of 40 psig; Suitable for the conduits to be installed.

G. Sealing Compound for Hazardous/Classified Location Sealing Fittings: Listed for use with particular fittings to be installed.

H. Sealing Systems for Concrete Penetrations:
   1. Sleeves: Provide water stop ring or cement coating that bonds to concrete to prevent water infiltration.
   2. Rate for minimum of 40 psig; suitable for sealing around conduits to be installed.

PART 3 EXECUTION

3.01 SUMMARY OF WORK

A. Unless specifically stated otherwise, wiring shall be installed in enclosed raceway systems. Raceways shall be sized in accordance with code for the conductors indicated. Where space will not permit the installation of one conduit of sufficient size to contain the conductors required, two or more conduits shall be provided. Raceway systems shall be complete from outlet to outlet and to cabinets and junction boxes and shall enter and be secured to boxes and cabinets in such a manner that the systems shall be electrically continuous from point of origin to all outlets.

B. Electrical Contractor is to furnish and install all wireways and raceways for audio/video, security, and data systems described in later specification sections and as shown on drawings. Where standard outlet boxes are required for installation of systems described in these sections, those outlet boxes shall be furnished and installed by the electrical contractor. Special rough-in and outlet boxes required for installation of systems described in these sections will be furnished by systems equipment manufacturer and shall be installed by electrical contractor. Each wireway and raceway system shall be complete with fittings, supports, etc. required for the rough-in ready installation of cable devices.

3.02 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that mounting surfaces are ready to receive conduits.

C. Verify that conditions are satisfactory for installation prior to starting work.

3.03 INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. Install conduit in accordance with NECA 1.

C. Galvanized Steel Rigid Metal Conduit (RMC): Install in accordance with NECA 101.

D. Aluminum Rigid Metal Conduit (RMC): Install in accordance with NECA 102.

E. Intermediate Metal Conduit (IMC): Install in accordance with NECA 101.

F. PVC-Coated Galvanized Steel Rigid Metal Conduit (RMC): Install using only tools approved by manufacturer.

G. Rigid Polyvinyl Chloride (PVC) Conduit: Install in accordance with NECA 111.

H. Electrical Nonmetallic Tubing (ENT): Install in accordance with NECA 111.

I. Liquidtight Flexible Nonmetallic Conduit (LFNC): Install in accordance with NECA 111.

J. Conduit Routing:
   1. Unless dimensioned, conduit routing indicated is diagrammatic.
   2. When conduit destination is indicated without specific routing, determine exact routing required.
   3. Conceal conduits unless specifically indicated to be exposed.
   4. Conduits in the following areas may be exposed, unless otherwise indicated:
      a. Electrical rooms.
      b. Mechanical equipment rooms.
      c. Within joists in areas with no ceiling.
   5. Unless otherwise approved, do not route exposed conduits:
      a. Across floors.
      b. Across building exterior surfaces.
   6. Conduits installed underground or embedded in concrete may be routed in shortest possible manner unless otherwise indicated. Route other conduits parallel or perpendicular to building structure and surfaces, following surface contours where practical.
   7. Arrange conduit to maintain adequate headroom, clearances, and access.
   8. Arrange conduit to provide no more than equivalent of four 90-degree bends between pull points.
   9. Arrange conduit to provide no more than 150 feet (46 m) between pull points.
   10. Route conduits above water and drain piping where possible.
   11. Arrange conduit to prevent moisture traps. Provide drain fittings at low points and at sealing fittings where moisture may collect.
   12. Maintain minimum clearance of 6 inches (150 mm) between conduits and piping for other systems.
   13. Maintain minimum clearance of 12 inches (300 mm) between conduits and hot surfaces. This includes, but is not limited to:
      a. Heaters.
      b. Hot water piping.
      c. Flues.
   14. Group parallel conduits in same area on common rack.

K. Conduit Support:
   1. Secure and support conduits in accordance with NFPA 70 using suitable supports and methods approved by authorities having jurisdiction; see Section 26 05 29.

2. Provide independent support from building structure. Do not provide support from piping, ductwork, or other systems.
3. Installation Above Suspended Ceilings: Do not provide support from ceiling support system. Do not provide support from ceiling grid or allow conduits to lay on ceiling tiles.
4. Use conduit strap to support single surface-mounted conduit.
    a. Use clamp back spacer with conduit strap for damp and wet locations to provide space between conduit and mounting surface.
5. Use metal channel/strut with accessory conduit clamps to support multiple parallel surface-mounted conduits.
6. Use conduit clamp to support single conduit from beam clamp or threaded rod.
7. Use trapeze hangers assembled from threaded rods and metal channel/strut with accessory conduit clamps to support multiple parallel suspended conduits.
8. Use nonpenetrating rooftop supports to support conduits routed across rooftops, where approved.
9. Use of spring steel conduit clips for support of conduits is permitted only as follows:
    a. Support of electrical metallic tubing (EMT) up to 1-inch (27 mm) trade size concealed above accessible ceilings and within hollow stud walls.
10. Use of wire for support of conduits is not permitted.
11. Where conduit support intervals specified in NFPA 70 and NECA standards differ, comply with most stringent requirements.

L. Connections and Terminations:
1. Use approved zinc-rich paint or conduit joint compound on field-cut threads of galvanized steel conduits prior to making connections.
2. Where two threaded conduits must be joined and neither can be rotated, use three-piece couplings or split couplings. Do not use running threads.
3. Use suitable adapters where required to transition from one type of conduit to another.
4. Provide drip loops for liquidtight flexible conduit connections to prevent drainage of liquid into connectors.
5. Terminate threaded conduits in boxes and enclosures using threaded hubs or double lock nuts for dry locations and raintight hubs for wet locations.
6. Where spare conduits stub up through concrete floors and are not terminated in box or enclosure, provide threaded couplings equipped with threaded plugs set flush with finished floor.
7. Provide insulating bushings, insulated throats, or listed metal fittings with smooth, rounded edges at conduit terminations to protect conductors.
8. Secure joints and connections to provide mechanical strength and electrical continuity.

M. Penetrations:
1. Do not penetrate or otherwise notch or cut structural members, including footings and grade beams, without approval of Structural Engineer.
2. Make penetrations perpendicular to surfaces unless otherwise indicated.
3. Provide sleeves for penetrations as indicated or as required to facilitate installation. Set sleeves flush with exposed surfaces unless otherwise indicated or required.
4. Conceal bends for conduit risers emerging above ground.
5. Provide suitable sealing system where conduits penetrate exterior wall below grade.
6. Where conduits penetrate waterproof membrane, seal as required to maintain integrity of membrane.

7. Make penetrations for roof-mounted equipment within associated equipment openings and curbs where possible to minimize roofing system penetrations. Where penetrations are necessary, seal as indicated or as required to preserve integrity of roofing system and maintain roof warranty.
8. Provide metal escutcheon plates for conduit penetrations exposed to public view.
9. Install firestopping to preserve fire resistance rating of partitions and other elements; see Section 07 84 00.
10. PVC conduit runs below floors: Provide right metal conduit sweeps.

N. Underground Installation:
   1. Minimum Cover, Unless Otherwise Indicated or Required:
      a. Underground, Exterior: 24 inches (610 mm).
      b. Under Slab on Grade: 12 inches (300 mm) to bottom of slab.
   2. Provide underground warning tape along entire conduit length for service entrance where not concrete-encased; see Section 26 05 53.

O. Embedment Within Structural Concrete Slabs (only where approved by Structural Engineer):
   1. Maximum Conduit Size: 3/4-inch (21 mm) trade size unless otherwise approved.
   2. Install conduits within middle one third of slab thickness.
   3. Secure conduits to prevent floating or movement during pouring of concrete.

P. Concrete Encasement: Where conduits not otherwise embedded within concrete are indicated to be concrete-encased, provide minimum concrete cover of 3 inches (76 mm) on all sides unless otherwise indicated; see Section 03 30 00.

Q. Conduit Movement Provisions: Where conduits are subject to movement, provide expansion and expansion/deflection fittings to prevent damage to enclosed conductors or connected equipment. This includes, but is not limited to:
   1. Where conduits cross structural joints intended for expansion, contraction, or deflection.
   2. Where calculated in accordance with NFPA 70 for rigid polyvinyl chloride (PVC) conduit installed above ground to compensate for thermal expansion and contraction.
   3. Where conduits are subject to earth movement by settlement or frost.

R. Conduit Sealing:
   1. Use foam conduit sealant to prevent entry of moisture and gases. This includes, but is not limited to:
      a. Where conduits enter building from outside.
      b. Where conduits enter building from underground.
      c. Where conduits may transport moisture to contact live parts.
   2. Where conduits cross barriers between areas of potential substantial temperature differential, use foam conduit sealant at accessible point near penetration to prevent condensation. This includes, but is not limited to:
      a. Where conduits pass from outdoors into conditioned interior spaces.
      b. Where conduits pass from unconditioned interior spaces into conditioned interior spaces.
      c. Where conduits penetrate coolers or freezers.
   3. Where conduits cross boundaries of hazardous/classified locations, provide identified/listed sealing fittings or conduit mechanical seals as approved by authorities having jurisdiction; locate as indicated or in accordance with NFPA 70.

S. Provide pull string in each empty conduit and in conduits where conductors and cables are to be installed by others. Leave minimum slack of 12 inches (300 mm) at each end.

T. Provide grounding and bonding; see Section 26 05 26.

U. It shall be the responsibility of this contractor to consult with the Mechanical Contractors before installing conduit or pull boxes for electrical feeders in order that any conflicts between the locations of raceway runs, piping and ductwork shall be avoided. Such locations shall be approved by the Engineer and shall in no case result in additional cost to the Owner.

V. Raceways shall not be mounted on equipment except where necessary to make connections to electrical devices which is part of, or mounted on, such equipment. Where raceways must be run on equipment, care shall be taken to not cover access doors, controls, removable panels, etc., or otherwise hinder the normal maintenance and repair of the equipment.

W. Identify conduits; see Section 26 05 53.

3.04 FIELD QUALITY CONTROL

A. See Section 01 40 00 - Quality Requirements for additional requirements.

B. Repair cuts and abrasions in galvanized finishes using zinc-rich paint recommended by manufacturer. Replace components that exhibit signs of corrosion.

C. Where coating of PVC-coated galvanized steel rigid metal conduit (RMC) contains cuts or abrasions, repair in accordance with manufacturer's instructions.

D. Correct deficiencies and replace damaged or defective conduits.

3.05 CLEANING

A. Clean interior of conduits to remove moisture and foreign matter.

3.06 PROTECTION

A. Immediately after installation of conduit, use suitable manufactured plugs to provide protection from entry of moisture and foreign material and do not remove until ready for installation of conductors.

END OF SECTION

This page intentionally left blank

SECTION 26 05 37
BOXES FOR ELECTRICAL SYSTEMS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Outlet and device boxes up to 100 cubic inches (1,650 cu cm), including those used as junction and pull boxes.

B. Cabinets and enclosures, including junction and pull boxes larger than 100 cubic inches (1,650 cu cm).

C. Boxes for hazardous (classified) locations.

D. Floor boxes.

E. Underground boxes/enclosures.

1.02 RELATED REQUIREMENTS

A. Section 01 40 00 - Quality Requirements.

B. Section 07 84 00 - Firestopping.

C. Section 08 31 13 - Access Doors and Frames.

D. Section 26 05 29 - Hangers and Supports for Electrical Systems.

E. Section 26 05 34 - Conduit for Electrical Systems.

F. Section 26 05 53 - Identification for Electrical Systems

G. Section 26 27 26 - Wiring Devices.

1.03 REFERENCE STANDARDS

A. NECA 1 - Standard for Good Workmanship in Electrical Construction; 2023.

B. NECA 130 - Standard for Installing and Maintaining Wiring Devices; 2016.

C. NEMA EN 10250 - Enclosures for Electrical Equipment (1000 Volts Maximum); 2024.

D. NEMA FB 1 - Fittings, Cast Metal Boxes, and Conduit Bodies for Conduit, Electrical Metallic Tubing, and Cable; 2014.

E. NEMA OS 1 - Sheet-Steel Outlet Boxes, Device Boxes, Covers, and Box Supports; 2013 (Reaffirmed 2020).

F. NEMA OS 2 - Nonmetallic Outlet Boxes, Device Boxes, Covers and Box Supports; 2013 (Reaffirmed 2020).

G. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

H. SCTE 77 - Specifications for Underground Enclosure Integrity; 2023.

I. UL 50 - Enclosures for Electrical Equipment, Non-Environmental Considerations; Current Edition, Including All Revisions.

J. UL 50E - Enclosures for Electrical Equipment, Environmental Considerations; Current Edition, Including All Revisions.

K. UL 508A - Industrial Control Panels; Current Edition, Including All Revisions.

L. UL 514A - Metallic Outlet Boxes; Current Edition, Including All Revisions.

M. UL 514C - Nonmetallic Outlet Boxes, Flush-Device Boxes, and Covers; Current Edition, Including All Revisions.

N. UL 1203 - Explosion-Proof and Dust-Ignition-Proof Electrical Equipment for Use in Hazardous (Classified) Locations; Current Edition, Including All Revisions.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Coordinate the work with other trades to avoid placement of ductwork, piping, equipment, or other potential obstructions within the dedicated equipment spaces and working clearances for electrical equipment required by NFPA 70.
   2. Coordinate arrangement of electrical equipment with the dimensions and clearance requirements of the actual equipment to be installed.
   3. Coordinate minimum sizes of boxes with the actual installed arrangement of conductors, clamps, support fittings, and devices, calculated according to NFPA 70.
   4. Coordinate minimum sizes of pull boxes with the actual installed arrangement of connected conduits, calculated according to NFPA 70.
   5. Coordinate the placement of boxes with millwork, furniture, devices, equipment, etc. installed under other sections or by others.
   6. Coordinate the work with other trades to preserve insulation integrity.
   7. Coordinate the work with other trades to provide walls suitable for installation of flush-mounted boxes where indicated.
   8. Notify Architect of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

1.05 SUBMITTALS

A. See Section 01 33 00 - Submittal Procedures.

B. Product Data: Provide manufacturer's standard catalog pages and data sheets for floor boxes and underground boxes/enclosures.

1.06 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements listed below.

B. Comply with requirements of NFPA 70.

C. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store products in accordance with manufacturer's instructions.

PART 2 PRODUCTS

2.01 BOXES

A. General Requirements:
   1. Do not use boxes and associated accessories for applications other than as permitted by NFPA 70 and product listing.
   2. Provide all boxes, fittings, supports, and accessories required for a complete raceway system and to accommodate devices and equipment to be installed.
   3. Provide products listed, classified, and labeled as suitable for the purpose intended.
   4. Where box size is not indicated, size to comply with NFPA 70 but not less than applicable minimum size requirements specified.
   5. Provide grounding terminals within boxes where equipment grounding conductors terminate.

B. Outlet and Device Boxes Up to 100 cubic inches (1,650 cu cm), Including Those Used as Junction and Pull Boxes:
   1. Use sheet-steel boxes for dry locations unless otherwise indicated or required.
   2. Use cast iron boxes or cast aluminum boxes for damp or wet locations unless otherwise indicated or required; furnish with compatible weatherproof gasketed covers.
   3. Use cast iron boxes or cast aluminum boxes where exposed galvanized steel rigid metal conduit or exposed intermediate metal conduit (IMC) is used.
   4. Use cast aluminum boxes where aluminum rigid metal conduit is used.
   5. Use nonmetallic boxes where exposed rigid PVC conduit is used.
   6. Use suitable concrete type boxes where flush-mounted in concrete.
   7. Use suitable masonry type boxes where flush-mounted in masonry walls.
   8. Use raised covers suitable for the type of wall construction and device configuration where required.
   9. Use shallow boxes where required by the type of wall construction.
   10. Do not use "through-wall" boxes designed for access from both sides of wall.
   11. Sheet-Steel Boxes: Comply with NEMA OS 1, and list and label as complying with UL 514A.
   12. Cast Metal Boxes: Comply with NEMA FB 1, and list and label as complying with UL 514A; furnish with threaded hubs.
   13. Nonmetallic Boxes: Comply with NEMA OS 2, and list and label as complying with UL 514C.
   14. Boxes for Supporting Luminaires and Ceiling Fans: Listed as suitable for the type and weight of load to be supported; furnished with fixture stud to accommodate mounting of luminaire where required.
   15. Boxes for Ganged Devices: Use multigang boxes of single-piece construction. Do not use field-connected gangable boxes unless specifically indicated or permitted.
   16. Minimum Box Size, Unless Otherwise Indicated:
      a. Wiring Devices (Other Than Communications Systems Outlets): 4 inch square by 1-1/2 inch deep (100 by 38 mm) trade size.
      b. Communications Systems Outlets: As indicated on plans.
      c. Ceiling Outlets: 4 inch octagonal or square by 1-1/2 inch deep (100 by 38 mm) trade size.
   17. Wall Plates: Comply with Section 26 27 26.

C. Cabinets and Enclosures, Including Junction and Pull Boxes Larger Than 100 cubic inches (1,650 cu cm):
   1. Comply with NEMA EN 10250, and list and label as complying with UL 50 and UL 50E, or UL 508A.
   2. NEMA EN 10250 Environment Type, Unless Otherwise Indicated:
      a. Indoor Clean, Dry Locations: Type 1, painted steel.
      b. Outdoor Locations: Type 3R, painted steel.
   3. Junction and Pull Boxes Larger Than 100 cubic inches (1,650 cu cm):
      a. Provide screw-cover or hinged-cover enclosures unless otherwise indicated.
      b. Boxes 6 square feet (0.56 sq m) and Larger: Provide sectionalized screw-cover or hinged-cover enclosures.
   4. Finish for Painted Steel Enclosures: Manufacturer's standard grey unless otherwise indicated.

D. Boxes for Hazardous (Classified) Locations: Listed and labeled as complying with UL 1203 for the classification of the installed location.

E. Floor Boxes:

1. Description: Floor boxes compatible with floor box service fittings provided in accordance with Section 26 27 26; with partitions to separate multiple services; furnished with all components, adapters, and trims required for complete installation.
2. Use nonmetallic, PVC, or epoxy coated floor boxes within slab on grade.
3. Use sheet-steel or nonmetallic floor boxes within slab above grade.
4. Metallic Floor Boxes: Fully adjustable (with integral means for leveling adjustment prior to and after concrete pour).
5. Manufacturer: Same as manufacturer of floor box service fittings.
   a. Flush Floor Outlets, duplex receptacle, round:
      1) Wiremold, devices and cover plates per drawings.
      2) Equivalent by prior approval only.
   b. Concealed service floor box:
      1) Wiremold, devices and cover plates per drawings.
      2) Equivalent by prior approval only.
6. See drawings for floor box requirements in each area.

F. Underground Boxes/Enclosures:
1. Description: In-ground, open bottom boxes furnished with flush, non-skid covers with legend indicating type of service and stainless steel tamper resistant cover bolts.
2. Size: As indicated on drawings.
3. Depth: As required to extend below frost line to prevent frost upheaval, but not less than 12 inches (300 mm).
4. Provide logo on cover to indicate type of service.
5. Applications:
   a. Sidewalks and Landscaped Areas Subject Only to Occasional Nondeliberate Vehicular Traffic: Use polymer concrete enclosures, with minimum SCTE 77 Tier 8 load rating.
   b. Parking Lots, in Areas Subject Only To Occasional Nondeliberate Vehicular Traffic: Use polymer concrete enclosures, with minimum SCTE 77 Tier 15 load rating.
   c. Do not use polymer concrete enclosures in areas subject to deliberate vehicular traffic.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that mounting surfaces are ready to receive boxes.

C. Verify that conditions are satisfactory for installation prior to starting work.

D. Verify locations of floor boxes prior to rough-in.

3.02 INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. Install boxes in accordance with NECA 1 (general workmanship) and, where applicable, NECA 130, including mounting heights specified in those standards where mounting heights are not indicated.

C. Arrange equipment to provide minimum clearances in accordance with manufacturer's instructions and NFPA 70.

D. Provide separate boxes for emergency power and normal power systems.

E. Unless otherwise indicated, provide separate boxes for line voltage and low voltage systems.

F. Flush-mount boxes in finished areas unless specifically indicated to be surface-mounted.

G. Box Locations:
   1. Locate boxes to be accessible. Provide access panels in accordance with Section 08 31 00 as required where approved by the Architect.
   2. Unless dimensioned, box locations indicated are approximate.
   3. Locate boxes as required for devices installed under other sections or by others.
      a. Switches, Receptacles, and Other Wiring Devices: Comply with Section 26 27 26.
   4. Locate boxes so that wall plates do not span different building finishes.
   5. Locate boxes so that wall plates do not cross masonry joints.
   6. Unless otherwise indicated, where multiple outlet boxes are installed at the same location at different mounting heights, install along a common vertical center line.
   7. Do not install flush-mounted boxes on opposite sides of walls back-to-back. Provide minimum 6 inches (150 mm) horizontal separation unless otherwise indicated.
   8. Acoustic-Rated Walls: Do not install flush-mounted boxes on opposite sides of walls back-to-back; provide minimum 24 inches (610 mm) horizontal separation.
   9. Fire Resistance Rated Walls: Install flush-mounted boxes such that the required fire resistance will not be reduced.
      a. Do not install flush-mounted boxes on opposite sides of walls back-to-back; provide minimum 24 inches (610 mm) separation where wall is constructed with individual noncommunicating stud cavities or protect both boxes with listed putty pads.
      b. Do not install flush-mounted boxes with area larger than 16 square inches (0.0103 sq m) or such that the total aggregate area of openings exceeds 100 square inches (0.0645 sq m) for any 100 square feet (9.29 sq m) of wall area.
   10. Locate junction and pull boxes as indicated, as required to facilitate installation of conductors, and to limit conduit length and/or number of bends between pulling points in accordance with Section 26 05 34.
   11. Locate junction and pull boxes in the following areas, unless otherwise indicated or approved by the Architect:
      a. Concealed above accessible suspended ceilings.
      b. Within joists in areas with no ceiling.
      c. Electrical rooms.
      d. Mechanical equipment rooms.
   12. Electrical devices recessed in precast concrete walls: The electrical contractor is responsible for providing and coordinating all recessed electrical devices mounted in precast walls. The electrical contractor shall obtain a copy of the precast shop drawing submittal from the manufacturer and shall indicate all embedded electrical boxes and conduit on that submittal. A copy of the final submittal shall be submitted to the Engineer for review. See the architectural drawings for information on all walls constructed of precast concrete. Coordinate with manufacturer for installation of boxes into concrete forms at the precast fabrication plant.

H. Box Supports:
   1. Secure and support boxes in accordance with NFPA 70 and Section 26 05 29 using suitable supports and methods approved by the authority having jurisdiction.
   2. Provide independent support from building structure except for cast metal boxes (other than boxes used for fixture support) supported by threaded conduit connections in accordance with NFPA 70. Do not provide support from piping, ductwork, or other systems.
   3. Installation Above Suspended Ceilings: Do not provide support from ceiling grid or ceiling support system.

4. Use far-side support to secure flush-mounted boxes supported from single stud in hollow stud walls. Repair or replace supports for boxes that permit excessive movement.

I. Install boxes plumb and level.

J. Flush-Mounted Boxes:
1. Install boxes in noncombustible materials such as concrete, tile, gypsum, plaster, etc. so that front edge of box or associated raised cover is not set back from finished surface more than 1/4 inch (6 mm) or does not project beyond finished surface.
2. Install boxes in combustible materials such as wood so that front edge of box or associated raised cover is flush with finished surface.
3. Repair rough openings around boxes in noncombustible materials such as concrete, tile, gypsum, plaster, etc. so that there are no gaps or open spaces greater than 1/8 inch (3 mm) at the edge of the box.

K. Install boxes as required to preserve insulation integrity.

L. Metallic Floor Boxes: Install box level at the proper elevation to be flush with finished floor.

M. Nonmetallic Floor Boxes: Cut box flush with finished floor after concrete pour.

N. Underground Boxes/Enclosures:
1. Install enclosure on gravel base, minimum 6 inches (150 mm) deep.
2. Install additional bracing inside enclosures in accordance with manufacturer's instructions to minimize box sidewall deflections during backfilling. Backfill with cover bolted in place.

O. Install permanent barrier between ganged wiring devices when voltage between adjacent devices exceeds 300 V.

P. Install firestopping to preserve fire resistance rating of partitions and other elements, using materials and methods specified in Section 07 84 00.

Q. Close unused box openings.

R. Install blank wall plates on junction boxes and on outlet boxes with no devices or equipment installed or designated for future use.

S. Provide grounding and bonding in accordance with Section 26 05 26.

T. Identify boxes in accordance with Section 26 05 53.

3.03 CLEANING

A. Clean interior of boxes to remove dirt, debris, plaster and other foreign material.

3.04 PROTECTION

A. Immediately after installation, protect boxes from entry of moisture and foreign material until ready for installation of conductors.

END OF SECTION

SECTION 26 05 48
VIBRATION AND SEISMIC CONTROLS FOR ELECTRICAL SYSTEMS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Channel support systems.

B. Restraint cables.

C. Hanger rod stiffeners.

D. Anchorage bushings and washers.

1.02 RELATED REQUIREMENTS

A. Section 01 40 00 - Quality Requirements.

B. Section 26 05 29 - Hangers and Supports for Electrical Systems.

1.03 REFERENCE STANDARDS

A. ASCE 7 - Minimum Design Loads and Associated Criteria for Buildings and Other Structures; Most Recent Edition Cited by Referring Code or Reference Standard.

B. ASHRAE (HVACA) - ASHRAE Handbook - HVAC Applications; Most Recent Edition Cited by Referring Code or Reference Standard.

C. FEMA 413 - Installing Seismic Restraints for Electrical Equipment; 2004.

D. ICC (IBC) - International Building Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

E. MFMA-4 - Metal Framing Standards Publication; 2004.

F. NECA 1 - Standard for Good Workmanship in Electrical Construction; 2023.

G. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

H. SMACNA (SRM) - Seismic Restraint Manual Guidelines for Mechanical Systems; 2024.

1.04 PERFORMANCE REQUIREMENTS

A. Seismic-Restraint Loading:
   1. Site Class as Defined in the IBC: D.
   2. Assigned Seismic Use Group or Risk Category as Defined in the IBC: III.
      a. Component Importance Factor: 1.25.
      b. Component Response Modification Factor: 4.0.
      c. Deflection Amplification Factor: 3.5.
   3. Seismic Design Category as Directed by the IBC: _____.

1.05 SUBMITTALS

A. See Section 01 33 00 - Submittal Procedures.

B. Product Data:
   1. Illustrate and indicate style, material, strength, fastening provision, and finish for each type and size of seismic-restraint component used.
      a. Tabulate types and sizes of seismic restraints, complete with report numbers and rated strength in tension and shear as evaluated by an agency acceptable to authorities having jurisdiction.

b. Annotate to indicate application of each product submitted and compliance with requirements.

2. Restrained-Isolation Devices: Include ratings for horizontal, vertical, and combined loads.

C. Delegated-Design Submittal: For seismic-restraint details indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1. Design Calculations: Calculate static and dynamic loading due to equipment weight and operation, seismic forces required to select vibration isolators and seismic restraints.
   a. Coordinate design calculations with wind-load calculations required for equipment mounted outdoors. Comply with requirements in other electrical Sections for equipment mounted outdoors.
2. Indicate materials and dimensions and identify hardware, including attachment and anchorage devices.
3. Field-fabricated supports.
4. Seismic-Restraint Details:
   a. Design Analysis: To support selection and arrangement of seismic restraints. Include calculations of combined tensile and shear loads.
   b. Details: Indicate fabrication and arrangement. Detail attachments of restraints to the restrained items and to the structure. Show attachment locations, methods, and spacings. Identify components, list their strengths, and indicate directions and values of forces transmitted to the structure during seismic events.
   c. Preapproval and Evaluation Documentation: By an agency acceptable to authorities having jurisdiction, showing maximum ratings of restraint items and the basis for approval (tests or calculations).

1.06 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements listed below.

B. Comply with NFPA 70.

C. Comply with applicable building code.

D. Comply with seismic-restraint requirements in the IBC unless requirements in this Section are more stringent.

E. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

F. Seismic-restraint devices shall have horizontal and vertical load testing and analysis and shall bear anchorage preapproval OPA number from OSHPD, preapproval by ICC-ES, or preapproval by another agency acceptable to authorities having jurisdiction, showing maximum seismic-restraint ratings. Ratings based on independent testing are preferred to ratings based on calculations. If preapproved ratings are not available, submittals based on independent testing are preferred. Calculations (including combining shear and tensile loads) to support seismic-restraint designs must be signed and sealed by a qualified professional engineer.

PART 2 PRODUCTS

2.01 SEISMIC-RESTRAINT DEVICES

A. General Requirements for Restraint Components: Rated strengths, features, and application requirements shall be as defined in reports by an agency acceptable to authorities having jurisdiction.

1. Structural Safety Factor: Allowable strength in tension, shear, and pullout force of components shall be at least four (4) times the maximum seismic forces to which they will be subjected.

B. Channel Support System: MFMA-3, shop- or field-fabricated support assembly made of slotted steel channels with accessories for attachment to braced component at one end and to building structure at the other end and other matching components and with corrosion-resistant coating; and rated in tension, compression, and torsion forces.

C. Trapeze System:
1. The hangers must be ASTM A36 all-thread rod.
2. The threads must be rolled form.
3. Pipes must be rigidly attached to the hanger rods.
4. Provisions must be made to avoid impact with the adjacent pipe, duct, equipment or building structure or to protect the pipe from such impact.

D. Restraint Cables: ASTM A 603 galvanized-steel cables with end connections made of steel assemblies with thimbles, brackets, swivels, and bolts designed for restraining cable service; and with a minimum of two clamping bolts for cable engagement.

E. Hanger Rod Stiffener: Reinforcing steel angle clamped to hanger rod. Do not weld stiffeners to rods.

F. Bushings for Floor-Mounted Equipment Anchor: Neoprene bushings designed for rigid equipment mountings, and matched to type and size of anchors and studs.

G. Bushing Assemblies for Wall-Mounted Equipment Anchorage: Assemblies of neoprene elements and steel sleeves designed for rigid equipment mountings, and matched to type and size of attachment devices.

H. Resilient Isolation Washers and Bushings: One-piece, molded, oil- and water-resistant neoprene, with a flat washer face.

I. Mechanical Anchor Bolts: Drilled-in and stud-wedge or female-wedge type in zinc-coated steel for interior applications and stainless steel for exterior applications. Select anchors with strength required for anchor and as tested according to ASTM E 488. Minimum length of eight times diameter.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that mounting surfaces are ready to receive vibration isolation and/or seismic control components and associated attachments.

B. Verify that conditions are satisfactory for installation prior to starting work.

3.02 APPLICATIONS

A. Multiple Raceways or Cables: Secure raceways and cables to trapeze member with clamps approved for application by an agency acceptable to authorities having jurisdiction.

B. Hanger Rod Stiffeners: Install hanger rod stiffeners where required to prevent buckling of hanger rods due to seismic forces.

C. Strength of Support and Seismic-Restraint Assemblies: Select sizes of components so strength will be adequate to carry present and future static and seismic loads within specified loading limits.

3.03 SEISMIC-RESTRAINT DEVICE INSTALLATION

A. Equipment and Hanger Restraints:
   1. Install restrained isolators on electrical equipment.
   2. Install resilient, bolt-isolation washers on equipment anchor bolts where clearance between anchor and adjacent surface exceeds 0.125 inch (3.2 mm).
   3. Install seismic-restraint devices using methods approved by an agency acceptable to authorities having jurisdiction providing required submittals for component.

B. Hanging Conduit:
   1. Space lateral supports a maximum of 40' o.c. and longitudinal supports at 80' o.c.
   2. Brace a change of direction longer than 12'.
   3. Install restrained isolators on electrical equipment.
   4. Install resilient, bolt-isolation washers on equipment anchor bolts where clearance between anchor and adjacent surface exceeds 0.125 inch (3.2 mm).

C. Install cables so they do not bend across edges of adjacent equipment or building structure.

D. Install bushing assemblies for mounting bolts for wall-mounted equipment, arranged to provide resilient media where equipment or equipment-mounting channels are attached to wall.

E. Attachment to Structure: If specific attachment is not indicated, anchor bracing to structure at flanges of beams, at upper truss chords of bar joists, or at concrete members.

F. Drilled-in Anchors:
   1. Identify position of reinforcing steel and other embedded items prior to drilling holes for anchors. Do not damage existing reinforcing or embedded items during coring or drilling. Notify the structural engineer if reinforcing steel or other embedded items are encountered during drilling. Locate and avoid prestressed tendons, electrical and telecommunications conduit, and gas lines.
   2. Do not drill holes in concrete or masonry until concrete, mortar, or grout has achieved full design strength.
   3. Wedge Anchors: Protect threads from damage during anchor installation. Heavy-duty sleeve anchors shall be installed with sleeve fully engaged in the structural element to which anchor is to be fastened.
   4. Adhesive Anchors: Clean holes to remove loose material and drilling dust prior to installation of adhesive. Place adhesive in holes proceeding from the bottom of the hole and progressing toward the surface in such a manner as to avoid introduction of air pockets in the adhesive.
   5. Set anchors to manufacturer's recommended torque, using a torque wrench.
   6. Install zinc-coated steel anchors for interior and stainless-steel anchors for exterior applications.

3.04 ACCOMMODATION OF DIFFERENTIAL SEISMIC MOTION

A. Install flexible connections in runs of raceways, cables, wireways, cable trays, and busways where they cross seismic joints, where adjacent sections or branches are supported by different structural elements, and where they terminate with connection to equipment that is anchored to a different structural element from the one supporting them as they approach equipment.

3.05 FIELD QUALITY CONTROL

A. See Section 01 40 00 - Quality Requirements, for additional requirements.

B. Tests and Inspections:

1. Obtain Architect's approval before transmitting test loads to structure. Provide temporary load-spreading members.
2. Test at least four (4) of each type and size of installed anchors and fasteners selected by Architect.
3. Test to 90 percent of rated proof load of device.
4. Measure isolator restraint clearance.
5. Measure isolator deflection.
6. If a device fails test, modify all installations of same type and retest until satisfactory results are achieved.

C. Remove and replace malfunctioning units and retest as specified above.

D. Prepare test and inspection reports.

3.06 ADJUSTING

A. Adjust restraints to permit free movement of equipment within normal mode of operation.

3.07 ELECTRICAL VIBRATION-CONTROL AND SEISMIC-RESTRAINT DEVICE SCHEDULE

A. IBC Table 13.6-1 Seismic Coefficients for Mechanical and Electrical Components.

Mechanical and Electrical Components	**Apa**	**Rpb**
Generator, batteries, inverters, motors, transformers and other electrical components constructed of high deformability materials	1.0	2.5
Motor control centers, panel boards, switch gear, instrumentation cabinets and others constructed of sheet metal framing	2.5	6.0
Lighting fixtures	1.0	1.5
Other mechanical or electrical components	1.0	1.5
Distribution Systems		
Electrical conduit, bus ducts, rigidly mounted cable trays and plumbing	1.0	2.5
Suspended cable trays	2.5	6.0

SECTION 26 05 53
IDENTIFICATION FOR ELECTRICAL SYSTEMS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Electrical identification requirements.

B. Identification nameplates and labels.

C. Wire and cable markers.

D. Voltage markers.

E. Underground warning tape.

F. Floor marking tape.

G. Warning signs and labels.

1.02 RELATED REQUIREMENTS

A. General Conditions, Supplementary Conditions and Division 01 apply to this section.

B. Section 09 91 00 - Painting.

C. Section 09 91 01 - Painting - Schedule.

D. Section 26 05 19 - Low-Voltage Electrical Power Conductors and Cables.

E. Section 26 05 73 - Power System Studies.

F. Section 26 27 26 - Wiring Devices.

1.03 REFERENCE STANDARDS

A. ANSI Z535.2 - American National Standard for Environmental and Facility Safety Signs; 2023.

B. ANSI Z535.4 - American National Standard for Product Safety Signs and Labels; 2023.

C. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

D. NFPA 70E - Standard for Electrical Safety in the Workplace; 2024.

E. UL 969 - Marking and Labeling Systems; Current Edition, Including All Revisions.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Verify final designations for equipment, systems, and components to be identified prior to fabrication of identification products.

B. Sequencing:
   1. Do not conceal items to be identified, in locations such as above suspended ceilings, until identification products have been installed.
   2. Do not install identification products until final surface finishes and painting are complete.

1.05 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements listed below.

B. Comply with requirements of NFPA 70.

1.06 FIELD CONDITIONS

A. Do not install adhesive products when ambient temperature is lower than recommended by manufacturer.

PART 2 PRODUCTS

2.01 IDENTIFICATION REQUIREMENTS

A. Identification for Equipment:
1. Use identification nameplate to identify each piece of electrical distribution and control equipment and associated sections, compartments, and components.
   a. Switchboards:
      1) Equipment name
      2) Identify ampere rating.
      3) Identify voltage and phase.
      4) Identify power source and circuit number. Include location when not within sight of equipment.
      5) Use identification nameplate to identify main overcurrent protective device.
      6) Use identification nameplate to identify load(s) served for each branch device. Do not identify spares and spaces.
   b. Motor Control Centers:
      1) Equipment name
      2) Identify ampere rating.
      3) Identify voltage and phase.
      4) Use identification nameplate to identify load(s) served for each branch device. Do not identify spares and spaces.
   c. Panelboards:
      1) Equipment name
      2) Identify ampere rating.
      3) Identify voltage and phase.
      4) Identify power source and circuit number. Include location when not within sight of equipment.
      5) Identify main overcurrent protective device. Use identification label for panelboards with a door. For power distribution panelboards without a door, use identification nameplate.
      6) Use typewritten circuit directory to identify load(s) served for panelboards with a door. Identify spares and spaces using pencil.
      7) For power panelboards without a door, use identification nameplate to identify load(s) served for each branch device. Do not identify spares and spaces.
   d. Transformers:
      1) Equipment name
      2) Identify kVA rating.
      3) Identify voltage and phase for primary and secondary.
      4) Identify power source and circuit number. Include location when not within sight of equipment.
      5) Identify load(s) served. Include location when not within sight of equipment.
   e. Enclosed switches, circuit breakers, and motor controllers:
      1) Identify power source and circuit number. Include location when not within sight of equipment.
      2) Identify load(s) served. Include location when not within sight of equipment.
   f. Electricity Meters:
      1) Identify load(s) metered.
2. Service Equipment:
   a. Use identification nameplate to identify each service disconnecting means.
3. Emergency System Equipment:

a. Use identification nameplate or voltage marker to identify emergency system equipment in accordance with NFPA 70.
b. Use identification nameplate at each piece of service equipment to identify type and location of on-site emergency power sources.

4. Use identification nameplate to identify disconnect location for equipment with remote disconnecting means.
5. Use identification label to identify overcurrent protective devices for branch circuits serving fire alarm circuits. Identify with text "FIRE ALARM CIRCUIT".
6. Use field-painted floor markings, floor marking tape, or warning labels to identify required equipment working clearances where indicated or where required by the authority having jurisdiction.
   a. Field-Painted Floor Markings: Alternating black and white stripes, 3 inches (76 mm) wide, painted in accordance with Section 09 91 00.
7. Available Fault Current Documentation: Use identification label to identify the available fault current and date calculations were performed at locations requiring documentation by NFPA 70 including but not limited to the following.
   a. Service equipment.
   b. Motor control centers.
   c. Elevator control panels.
8. Arc Flash Hazard Warning Labels: Use warning labels to identify arc flash hazards for electrical equipment, such as switchboards, panelboards, industrial control panels, meter socket enclosures, and motor control centers that are likely to require examination, adjustment, servicing, or maintenance while energized.
   a. Minimum Size: 3.5 by 5 inches (89 mm by 127 mm).
   b. Legend: Include orange header that reads "WARNING", followed by the word message "Arc Flash and Shock Hazard; Appropriate PPE Required; Do not operate controls or open covers without appropriate personal protection equipment; Failure to comply may result in injury or death; Refer to NFPA 70E for minimum PPE requirements" or approved equivalent.
   c. Service Equipment: Include the following information in accordance with NFPA 70.
      1) Nominal system voltage.
      2) Available fault current.
      3) Date label applied.
9. Use warning signs to identify electrical hazards for entrances to all rooms and other guarded locations that contain exposed live parts operating at 600 V nominal or less with the word message "DANGER; Electrical hazard; Authorized personnel only" or approved equivalent.
10. Use warning labels, identification nameplates, or identification labels to identify electrical hazards for equipment where multiple power sources are present with the word message "DANGER; Hazardous voltage; Multiple power sources may be present; Disconnect all electric power including remote disconnects before servicing" or approved equivalent.

B. Identification for Conductors and Cables:
1. Color Coding for Power Conductors 600 V and Less: Comply with Section 26 05 19.
2. Use identification nameplate or identification label to identify color code for ungrounded and grounded power conductors inside door or enclosure at each piece of feeder or branch-circuit distribution equipment when premises has feeders or branch circuits served by more than one nominal voltage system.
3. Use wire and cable markers to identify circuit number or other designation indicated for power, control, and instrumentation conductors and cables at the following locations:
   a. Within boxes when more than one circuit is present.

b. Within equipment enclosures when conductors and cables enter or leave the enclosure.

4. Use underground warning tape to identify direct buried cables.

C. Identification for Raceways:
1. Use identification labels, handwritten text using indelible marker, or plastic marker tags to identify spare conduits at each end. Identify purpose and termination location.
2. Use underground warning tape to identify underground raceways.

D. Identification for Boxes:
1. Use voltage markers or color coded boxes to identify systems other than normal power system.
a. Color-Coded Boxes: Field-painted in accordance with Section 09 91 00 and 09 91 01 per the same color code used for raceways.
1) Fire Alarm System: Red.
b. For exposed boxes in public areas, do not color code.
2. Use identification label to identify receptacles protected by upstream GFI protection, where permitted.

2.02 IDENTIFICATION NAMEPLATES AND LABELS

A. Identification Nameplates:
1. Materials:
a. Indoor Clean, Dry Locations: Use plastic nameplates.
b. Outdoor Locations: Use plastic, stainless steel, or aluminum nameplates suitable for exterior use.
2. Plastic Nameplates: Two-layer or three-layer laminated acrylic or electrically non-conductive phenolic with beveled edges; minimum thickness of 1/16 inch (1.6 mm); engraved text.
3. Stainless Steel Nameplates: Minimum thickness of 1/32 inch (0.8 mm); engraved or laser-etched text.
4. Aluminum Nameplates: Anodized; minimum thickness of 1/32 inch (0.8 mm); engraved or laser-etched text.
5. Mounting Holes for Mechanical Fasteners: Two, centered on sides for sizes up to 1 inch (25 mm) high; Four, located at corners for larger sizes.

B. Identification Labels:
1. Materials: Use self-adhesive laminated plastic labels; UV, chemical, water, heat, and abrasion resistant.
2. Text: Use factory pre-printed or machine-printed text. Do not use handwritten text unless otherwise indicated.

C. Format for Equipment Identification:
1. Minimum Size: 1 inch (25 mm) by 2.5 inches (64 mm).
2. Legend:
a. Equipment designation or other approved description.
3. Text: All capitalized unless otherwise indicated.
4. Minimum Text Height:
a. Equipment Designation: 1/2 inch (13 mm).
5. Color:
a. Normal Power System: White text on black background.
b. Emergency Power System: White text on red background.
c. Fire Alarm System: White text on red background.

D. Format for Fire Alarm Device Identification:
   1. Minimum Size: 3/8 inch (10 mm) by 1.5 inches (38 mm).
   2. Legend: Designation indicated and device zone or address.
   3. Text: All capitalized unless otherwise indicated.
   4. Minimum Text Height: 3/16 inch (5 mm).
   5. Color: Red text on white background.

2.03 WIRE AND CABLE MARKERS

A. Markers for Conductors and Cables: Use wrap-around self-adhesive vinyl cloth, wrap-around self-adhesive vinyl self-laminating, heat-shrink sleeve, plastic sleeve, plastic clip-on, or vinyl split sleeve type markers suitable for the conductor or cable to be identified.

B. Markers for Conductor and Cable Bundles: Use plastic marker tags secured by nylon cable ties.

C. Legend: Power source and circuit number or other designation indicated.

D. Text: Use factory pre-printed or machine-printed text, all capitalized unless otherwise indicated.

E. Minimum Text Height: 1/8 inch (3 mm).

F. Color: Black text on white background unless otherwise indicated.

2.04 VOLTAGE MARKERS

A. Markers for Boxes and Equipment Enclosures: Use factory pre-printed self-adhesive vinyl or self-adhesive vinyl cloth type markers.

B. Minimum Size:
   1. Markers for Pull Boxes: 1 1/8 by 4 1/2 inches (29 by 110 mm).
   2. Markers for Junction Boxes: 1/2 by 2 1/4 inches (13 by 57 mm).

C. Legend:
   1. Markers for System Identification:
      a. Emergency Power System: Text "EMERGENCY".

D. Color: Black text on orange background unless otherwise indicated.

2.05 UNDERGROUND WARNING TAPE

A. Materials: Use non-detectable type polyethylene tape suitable for direct burial, unless otherwise indicated.
   1. Exception: Use foil-backed detectable type tape where required by serving utility.

B. Non-detectable Type Tape: 6 inches (152 mm) wide, with minimum thickness of 4 mil (0.1 mm).

C. Foil-backed Detectable Type Tape: 3 inches (76 mm) wide, with minimum thickness of 5 mil (0.1 mm), unless otherwise required for proper detection.

D. Legend: Type of service, continuously repeated over full length of tape.

E. Color:
   1. Tape for Buried Power Lines: Black text on red background.
   2. Tape for Buried Communication, Alarm, and Signal Lines: Black text on orange background.

2.06 FLOOR MARKING TAPE

A. Floor Marking Tape for Equipment Working Clearance Identification: Self-adhesive vinyl or polyester tape with overlaminate, 3 inches (76 mm) wide, with alternating black and white stripes.

2.07 WARNING SIGNS AND LABELS

A. Comply with ANSI Z535.2 or ANSI Z535.4 as applicable.

B. Warning Signs:
   1. Materials:
      a. Indoor Dry, Clean Locations: Use factory pre-printed rigid plastic or self-adhesive vinyl signs.
      b. Outdoor Locations: Use factory pre-printed rigid aluminum signs.
   2. Rigid Signs: Provide four mounting holes at corners for mechanical fasteners.
   3. Minimum Size: 7 by 10 inches (178 by 254 mm) unless otherwise indicated.

C. Warning Labels:
   1. Materials: Use factory pre-printed or machine-printed self-adhesive polyester or self-adhesive vinyl labels; UV, chemical, water, heat, and abrasion resistant; produced using materials recognized to UL 969.
      a. Do not use labels designed to be completed using handwritten text.
   2. Machine-Printed Labels: Use thermal transfer process printing machines and accessories recommended by label manufacturer.
   3. Minimum Size: 2 by 4 inches (51 mm by 102 mm) unless otherwise indicated.

PART 3 EXECUTION

3.01 PREPARATION

A. Clean surfaces to receive adhesive products according to manufacturer's instructions.

B. Verify identity of each item before installing identification products.

3.02 INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. Install identification products to be plainly visible for examination, adjustment, servicing, and maintenance. Unless otherwise indicated, locate products as follows:
   1. Surface-Mounted Equipment: Enclosure front.
   2. Flush-Mounted Equipment: Inside of equipment door.
   3. Free-Standing Equipment: Enclosure front; also enclosure rear for equipment with rear access.
   4. Elevated Equipment: Legible from the floor or working platform.
   5. Branch Devices: Adjacent to device.
   6. Interior Components: Legible from the point of access.
   7. Conduits: Legible from the floor.
   8. Boxes: Outside face of cover.
   9. Conductors and Cables: Legible from the point of access.
   10. Devices: Outside face of cover.

C. Install identification products centered, level, and parallel with lines of item being identified.

D. Secure nameplates to exterior surfaces of enclosures using stainless steel screws and to interior surfaces using self-adhesive backing or epoxy cement.
   1. Do not use adhesives on exterior surfaces except where substrate cannot be penetrated.

E. Install self-adhesive labels and markers to achieve maximum adhesion, with no bubbles or wrinkles and edges properly sealed.

F. Install underground warning tape above buried lines with one tape per trench at 3 inches (75 mm) below finished grade.

G. Secure rigid signs using stainless steel screws.

H. Mark all handwritten text, where permitted, to be neat and legible.

3.03 FIELD QUALITY CONTROL

A. See Section 01 40 00 - Quality Requirements, for additional requirements.

B. Replace self-adhesive labels and markers that exhibit bubbles, wrinkles, curling or other signs of improper adhesion.

SECTION 26 05 73
POWER SYSTEM STUDIES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Short-circuit study.

B. Protective device coordination study.

C. Arc flash and shock risk assessment.
   1. Includes arc flash hazard warning labels.

D. Criteria for the selection and adjustment of equipment and associated protective devices not specified in this section, as determined by studies to be performed.

1.02 RELATED REQUIREMENTS

A. Section 26 05 53 - Identification for Electrical Systems.

B. Section 26 21 00 - Low-Voltage Electrical Service Entrance.

C. Section 26 29 01 - Integrated Low Voltage Distribution and Controls.

1.03 REFERENCE STANDARDS

A. ANSI Z535.4 - American National Standard for Product Safety Signs and Labels; 2023.

B. IEEE 141 - IEEE Recommended Practice for Electric Power Distribution for Industrial Plants; 1993 (Reaffirmed 1999).

C. IEEE 242 - IEEE Recommended Practice for Protection and Coordination of Industrial and Commercial Power Systems; 2001, with Errata (2003).

D. IEEE 399 - IEEE Recommended Practice for Industrial and Commercial Power Systems Analysis; 1997.

E. IEEE 551 - IEEE Recommended Practice for Calculating Short-Circuit Currents in Industrial and Commercial Power Systems; 2006.

F. IEEE 1584 - IEEE Guide for Performing Arc-Flash Hazard Calculations; 2018, with Errata (2019).

G. NEMA MG 00001 - Motors and Generators; 2024.

H. NETA ATS - Standard for Acceptance Testing Specifications for Electrical Power Equipment And Systems; 2025.

I. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

J. NFPA 70E - Standard for Electrical Safety in the Workplace; 2024.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Coordinate the work to provide equipment and associated protective devices complying with criteria for selection and adjustment, as determined by studies to be performed.
   2. Notify Engineer of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

B. Sequencing:
   1. Submit study reports prior to or concurrent with product submittals.
   2. Do not order equipment until matching study reports and product submittals have both been evaluated by Engineer.

3. Verify naming convention for equipment identification prior to creation of final drawings, reports, and arc flash hazard warning labels (where applicable).

1.05 SUBMITTALS

A. See Section 01 33 00 - Submittal Procedures.

B. Study reports, stamped or sealed and signed by study preparer.

1.06 POWER SYSTEM STUDIES

A. Scope of Studies:
   1. Except where study descriptions below indicate exclusions, analyze system at each bus from primary protective devices of utility source down to each piece of equipment involved, including parts of system affecting calculations being performed (e.g. fault current contribution from motors).
   2. Include in analysis alternate sources and operating modes (including known future configurations) to determine worst case conditions.
      a. Known Operating Modes:
         1) Utility as source.

B. General Study Requirements:
   1. Comply with NFPA 70.
   2. Perform studies utilizing computer software complying with specified requirements; manual calculations are not permitted.

C. Data Collection:
   1. Compile information on project-specific characteristics of actual installed equipment, protective devices, feeders, etc. as necessary to develop single-line diagram of electrical distribution system and associated input data for use in system modeling.
      a. Utility Source Data: Include primary voltage, maximum and minimum three-phase and line-to-ground fault currents, impedance, X/R ratio, and primary protective device information.
         1) Obtain up-to-date information from Utility Company.
         2) Utility Company: See Section 26 21 00 for Utility Company contact information.
      b. Motors: Include manufacturer/model, type (e.g. induction, synchronous), horsepower rating, voltage rating, full load amps, and locked rotor current or NEMA MG 00001 code letter designation.
      c. Transformers: Include primary and secondary voltage ratings, kVA rating, winding configuration, percent impedance, and X/R ratio.
      d. Protective Devices:
         1) Circuit Breakers: Include manufacturer/model, type (e.g. thermal magnetic, electronic trip), frame size, trip rating, voltage rating, interrupting rating, available field-adjustable trip response settings, and features (e.g. zone selective interlocking).
         2) Fuses: Include manufacturer/model, type/class (e.g. Class J), size/rating, and speed (e.g. time delay, fast acting).
      e. Protective Relays: Include manufacturer/model, type, settings, current/potential transformer ratio, and associated protective device.
      f. Conductors: Include feeder size, material (e.g. copper, aluminum), insulation type, voltage rating, number per phase, raceway type, and actual length.

D. Short-Circuit Study:
   1. Comply with IEEE 551 and applicable portions of IEEE 141, IEEE 242, and IEEE 399.

2. For purposes of determining equipment short circuit current ratings, consider conditions that may result in maximum available fault current, including but not limited to:
    a. Maximum utility fault currents.
    b. Maximum motor contribution.
    c. Known operating modes (e.g. utility as source, generator as source, utility/generator in parallel, bus tie breaker open/close positions).
3. For each bus location, calculate the maximum available three-phase bolted symmetrical and asymmetrical fault currents. For grounded systems, also calculate the maximum available line-to-ground bolted fault currents.

E. Protective Device Coordination Study:
1. Comply with applicable portions of IEEE 242 and IEEE 399.
2. Analyze alternate scenarios considering known operating modes (e.g. utility as source, generator as source, utility/generator in parallel, bus tie breaker open/close positions).
3. Analyze protective devices and associated settings for suitable margins between time-current curves to provide adequate protection for equipment and conductors while achieving full selective coordination.

F. Arc Flash and Shock Risk Assessment:
1. Comply with NFPA 70E.
2. Perform incident energy and arc flash boundary calculations in accordance with IEEE 1584 (as referenced in NFPA 70E Annex D), where applicable.
3. Analyze alternate scenarios considering conditions that may result in maximum incident energy, including but not limited to:
    a. Maximum and minimum utility fault currents.
    b. Maximum and minimum motor contribution.
    c. Known operating modes (e.g. utility as source, generator as source, utility/generator in parallel, bus tie breaker open/close positions).

G. Study Reports:
1. General Requirements:
    a. Identify date of study and study preparer.
    b. Identify study methodology and software product(s) used.
    c. Identify scope of studies, assumptions made, implications of possible alternate scenarios, and any exclusions from studies.
    d. Identify base used for per unit values.
    e. Include single-line diagram and associated input data used for studies; identify buses on single-line diagram as referenced in reports, and indicate bus voltage.
    f. Include conclusions and recommendations.
2. Short-Circuit Study:
    a. For each scenario, identify at each bus location:
        1) Calculated maximum available symmetrical and asymmetrical fault currents (both three-phase and line-to-ground where applicable).
        2) Fault point X/R ratio.
        3) Associated equipment short circuit current ratings.
    b. Identify locations where the available fault current exceeds the equipment short circuit current rating, along with recommendations.
3. Protective Device Coordination Study:
    a. For each scenario, include time-current coordination curves plotted on log-log scale graphs.
    b. For each graph include (where applicable):
        1) Partial single-line diagram identifying the portion of the system illustrated.

2) Protective Devices: Time-current curves with applicable tolerance bands for each protective device in series back to the source, plotted up to the maximum available fault current at the associated bus.
3) Conductors: Damage curves.
4) Transformers: Inrush points and damage curves.
5) Motors: Full load current, starting curves, and damage curves.

c. For each protective device, identify fixed and adjustable characteristics with available ranges and recommended settings.
1) Circuit Breakers: Include long time pickup and delay, short time pickup and delay, and instantaneous pickup.
2) Include ground fault pickup and delay.
3) Include fuse ratings.
4) Protective Relays: Include current/potential transformer ratios, tap, time dial, and instantaneous pickup.

d. Identify cases where either full selective coordination or adequate protection is not achieved, along with recommendations.

4. Arc Flash and Shock Risk Assessment:
a. For the worst case for each scenario, identify at each bus location:
1) Calculated incident energy and associated working distance.
2) Calculated arc flash boundary.
3) Bolted fault current.
4) Arcing fault current.
5) Clearing time.
6) Arc gap distance.

b. For purposes of producing arc flash hazard warning labels, summarize the maximum incident energy and associated data reflecting the worst case condition of all scenarios at each bus location.

1.07 QUALITY ASSURANCE

A. Study Preparer Qualifications: Professional electrical engineer licensed in the State in which the Project is located and with minimum five years experience in preparation of studies of similar type and complexity using specified computer software.

B. Computer Software for Study Preparation: Use the latest edition of commercially available software utilizing specified methodologies.

PART 2 PRODUCTS

2.01 ARC FLASH HAZARD WARNING LABELS

A. Provide warning labels complying with ANSI Z535.4 to identify arc flash hazards for each work location analyzed by the arc flash and shock risk assessment.
1. Materials: Comply with Section 26 05 53.
2. Legend: Provide custom legend in accordance with NFPA 70E based on equipment-specific data as determined by arc flash and shock risk assessment.
a. Include the following information:
1) Arc flash boundary.
2) Available incident energy and corresponding working distance.
3) Site-specific PPE (personnel protective equipment) requirements.
4) Nominal system voltage.
5) Limited approach boundary.
6) Restricted approach boundary.
7) Equipment identification.

8) Study preparer, report reference, and date calculations were performed.
9) Date label was applied to equipment.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install arc flash warning labels in accordance with Section 26 05 53.

3.02 FIELD QUALITY CONTROL

A. See Section 01 40 00 - Quality Requirements, for additional requirements.

B. Inspect and test in accordance with NETA ATS, except Section 4.

C. Adjust equipment and protective devices for compliance with studies and recommended settings.

D. Notify Engineer of any conflicts with or deviations from studies. Obtain direction before proceeding.

3.03 CLOSEOUT ACTIVITIES

A. See Section 01 77 00 - Closeout Procedures, for closeout submittals.

END OF SECTION

This page intentionally left blank

SECTION 26 05 83
WIRING CONNECTIONS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Electrical connections to equipment.

1.02 RELATED REQUIREMENTS

A. Section 01 40 00 - Quality Requirements.

B. Section 26 05 19 - Low-Voltage Electrical Power Conductors and Cables.

C. Section 26 05 34 - Conduit for Electrical Systems.

D. Section 26 05 37 - Boxes for Electrical Systems.

E. Section 26 27 26 - Wiring Devices.

F. Section 26 29 01 - Integrated Low Voltage Distribution & Controls.

1.03 REFERENCE STANDARDS

A. NEMA WD 6 - Wiring Devices - Dimensional Specifications; 2021.

B. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Obtain and review shop drawings, product data, manufacturer's wiring diagrams, and manufacturer's instructions for equipment furnished under other sections.
   2. Determine connection locations and requirements.

B. Sequencing:
   1. Install rough-in of electrical connections before installation of equipment is required.
   2. Make electrical connections before required start-up of equipment.

1.05 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements listed below.

B. Comply with requirements of NFPA 70.

C. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

PART 2 PRODUCTS

2.01 MATERIALS

A. Cords and Caps: NEMA WD 6; match receptacle configuration at outlet provided for equipment.
   1. Colors: Comply with NEMA WD 1.
   2. Cord Construction: NFPA 70, Type SO, multiconductor flexible cord with identified equipment grounding conductor, suitable for use in damp locations.
   3. Size: Suitable for connected load of equipment, length of cord, and rating of branch circuit overcurrent protection.

B. Disconnect Switches: As specified in Section 26 29 01 and in individual equipment sections when included.

C. Wiring Devices: As specified in Section 26 27 26.

D. Flexible Conduit: As specified in Section 26 05 34.

E. Wire and Cable: As specified in Section 26 05 19.

F. Boxes: As specified in Section 26 05 37.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that equipment is ready for electrical connection, wiring, and energization.

3.02 ELECTRICAL CONNECTIONS

A. Make electrical connections in accordance with equipment manufacturer's instructions.

B. Make conduit connections to equipment using flexible conduit. Use liquidtight flexible conduit with watertight connectors in damp or wet locations.

C. Connect heat producing equipment using wire and cable with insulation suitable for temperatures encountered.

D. Provide receptacle outlet to accommodate connection with attachment plug.

E. Provide cord and cap where field-supplied attachment plug is required.

F. Install suitable strain-relief clamps and fittings for cord connections at outlet boxes and equipment connection boxes.

G. Install disconnect switches, controllers, control stations, and control devices to complete equipment wiring requirements.

H. Install terminal block jumpers to complete equipment wiring requirements.

I. Install interconnecting conduit and wiring between devices and equipment to complete equipment wiring requirements.

J. Coolers and Freezers: Cut and seal conduit openings in freezer and cooler walls, floor, and ceilings.

END OF SECTION

SECTION 26 08 00
COMMISSIONING OF ELECTRICAL SYSTEMS

PART 1 GENERAL

1.01 SUMMARY

A. This section includes specific requirements that apply to the implementation of the Commissioning Process and this Division Contractors' participation in this process. This section details the project specific equipment and systems that are included in the Commissioning Process. For general descriptions and responsibilities, refer to SECTION 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

1.02 RELATED DOCUMENTS

A. The Owner's Project Requirements (OPR) document.

B. The Basis of Design (BoD) document.

C. The Project Commissioning Plan (CxP) document.

D. ASHRAE Standard 202-2013 - Commissioning Process for Buildings and Systems.

E. LEED v4 for Building Design and Construction.

1.03 RELATED SECTIONS

A. SECTION 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS

B. SECTION 07 08 00 - COMMISSIONING OF THERMAL AND MOISTURE PROTECTION

C. SECTION 08 08 00 - COMMISSIONING OF OPENINGS

D. SECTION 11 08 00 - COMMISSIONING OF EQUIPMENT

E. SECTION 13 08 00 - COMMISSIONING OF SPECIAL CONSTRUCTION

F. SECTION 14 08 00 - COMMISSIONING OF CONVEYING SYSTEMS

G. SECTION 21 08 00 - COMMISSIONING OF FIRE SUPPRESSION SYSTEMS

H. SECTION 22 08 00 - COMMISSIONING OF PLUMBING SYSTEMS

I. SECTION 23 08 00 - COMMISSIONING OF MECHANICAL SYSTEMS

J. SECTION 25 08 00 - COMMISSIONING OF INTEGRATED AUTOMATION SYSTEMS

K. SECTION 27 08 00 - COMMISSIONING OF COMMUNICATIONS SYSTEMS

L. SECTION 28 08 00 - COMMISSIONING OF SAFETY AND SECURITY SYSTEMS

M. SECTION 33 08 00 - COMMISSIONING OF UTILITIES

1.04 DEFINITIONS

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

1.05 RESPONSIBILITIES

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

PART 2 PRODUCTS

2.01 NO PRODUCTS SUPPLIED

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

B. Contractors and/or Vendors shall provide the specialty testing equipment necessary to fulfill the functional testing requirements, for the duration of the testing period.

PART 3 EXECUTION

3.01 GENERAL

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.02 MEETINGS

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.03 SYSTEM START-UP

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.04 PRE-FUNCTIONAL CHECKLISTS

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.05 FUNCTIONAL PERFORMANCE TESTING

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.06 TRAINING

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.07 SYSTEMS TO BE COMMISSIONED

A. GENERAL
   1. Commissioning specifications supplement the requirements of individual specifications sections but shall not be interpreted to replace or diminish the specified scope of any individual section.
   2. For all systems listed below, Division Contractor shall comply with all commissioning requirements specified.

B. APPLICABLE SYSTEMS
   1. Grounding and Bonding for Electrical Systems
   2. Cable Trays for Electrical Systems
   3. Underfloor Ducts
   4. Vibration and Seismic Controls for Electrical Systems
   5. Identification for Electrical Systems
   6. Electrical Utility Services
   7. Integrated Low Voltage Distribution & Controls
   8. Digital Lighting Control System
   9. Digital Power Monitoring System
   10. Interior Lighting
   11. Exterior Lighting

END OF SECTION

SECTION 26 09 23
LIGHTING CONTROL DEVICES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Section Includes:
   1. Digital Lighting Controls.
   2. Emergency Lighting Control.
   3. DMX Lighting Control.

B. Control Intent – Control Intent includes, but is not limited to:
   1. Defaults and initial calibration settings for such items as time delay, sensitivity, fade rates, etc.
   2. Initial sensor and switching zones.
   3. Initial time switch settings.
   4. Emergency lighting control.
   5. DMX programming and control.

1.02 RELATED REQUIREMENTS

A. Section 01 40 00 - Quality Requirements.

B. Section 26 05 19 - Low-Voltage Electrical Power Conductors and Cables.

C. Section 26 05 26 - Grounding and Bonding for Electrical Systems.

D. Section 26 05 29 - Hangers and Supports for Electrical Systems.

E. Section 26 05 37 - Boxes for Electrical Systems.

F. Section 26 05 53 - Identification for Electrical Systems.

G. Section 26 27 26 - Wiring Devices.

H. Section 26 51 00 - Interior Lighting.

1.03 REFERENCE STANDARDS

A. 47 CFR 15 - Radio Frequency Devices; Code of Federal Regulations; current edition.

B. NECA 1 - Standard for Good Workmanship in Electrical Construction; National Electrical Contractors Association; 2010.

C. NECA 130 - Standard for Installing and Maintaining Wiring Devices; National Electrical Contractors Association; 2010.

D. NFPA 70 - National Electrical Code; National Fire Protection Association; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

E. UL 773A - Nonindustrial Photoelectric Switches for Lighting Control; Current Edition, Including All Revisions.

F. UL 916 - Energy Management Equipment; Current Edition, Including All Revisions.

G. UL 1472 - Solid-State Dimming Controls; Current Edition, Including All Revisions.

H. UL924 - Emergency Lighting and Power Equipment, Current Edition, including all revisions.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Do not install equipment until following conditions can be maintained in spaces to receive equipment:
   1. Ambient temperature: 0° to 40° C (32° to 104° F).

2. Relative humidity: Maximum 90 percent, non-condensing.

1.05 SUBMITTALS

A. See Section 01 33 00 submittal procedures and requirements.

B. Submittals Package: Submit the product data and shop drawings specified below at the same time as a package.
   1. Product Data: Catalog sheets including ratings, operating modes or sequence of functions, configurations, standard wiring diagrams, dimensions, colors, service condition requirements, and installed features.
      a. Occupancy Sensors: Include detailed motion detection coverage range diagrams.
   2. Shop Drawings:
      a. Composite wiring and/or schematic diagram of each control circuit as proposed to be installed.
      b. Show exact location of all digital devices, including at minimum sensors, load controllers, and switches for each area.
      c. Provide room/area details including products and sequence of operation for each room or area. Illustrate typical acceptable room/area connection topologies.
   3. Include data for each device which:
      a. Indicates where sensor is proposed to be installed.
      b. Prove that the sensor is suitable for the proposed application.

1.06 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements listed below.

B. Manufacturer: Minimum 10 years experience in manufacture of lighting controls.

C. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store products in accordance with manufacturer's instructions.

1.08 WARRANTY

A. Provide a five year limited manufacturer’s warranty on all room control devices and panels.

1.09 MAINTENANCE

A. Spare Parts:
   1. Provide spares of each product to be used for maintenance as listed below:
      a. Three (3) of each digital control device - room controllers, switches, occupancy sensors, daylight sensors.
      b. One (1) DMX controller.

PART 2 PRODUCTS

2.01 LIGHTING CONTROL SYSTEM DESCRIPTION & OPERATION

A. The digital lighting control system as defined under this section covers the following equipment:
   1. Digital Lighting Management (DLM) local network – Free topology, plug-in wiring system (Cat 5e) for power and data to room devices.
   2. Digital Room Controllers – Self-configuring, addressable one, two or three relay plenum-rated controllers for on/off control. Selected models include 0-10 volt or line voltage forward phase control dimming outputs and integral current monitoring capabilities.

3. Digital Occupancy Sensors – Self-configuring, addressable, calibrated occupancy sensors with LCD display and two-way active infrared (IR) communications.
4. Digital Switches – Self-configuring, addressable pushbutton on/off, dimming, and scene switches with two-way active infrared (IR) communications.
5. Digital Daylighting Sensors – Single-zone closed loop, multi-zone open loop and single-zone dual-loop daylighting sensors with two-way active infrared (IR) communications for daylight harvesting using switching, bi-level, tri-level or dimming control.
6. Configuration Tools – Handheld remote for room configuration and relay panel programming provides two way infrared (IR) communications to digital devices and allows complete configuration and reconfiguration of the device / room from up to 30 feet away.

B. Emergency Lighting Control Unit (ELCU) – Allows a standard lighting control device to control emergency lighting in conjunction with normal lighting in any area within a building.

C. DMX Controller - Programmable touch screen interface to allow for control of RGBW fixtures.

2.02 LIGHTING CONTROL APPLICATIONS

A. Unless relevant provisions of the applicable local energy codes are more stringent, provide a minimum application of lighting controls as indicated on the drawings.
1. Provide Manual-ON configuration for any enclosed office, class room, studio, or meeting room and Automatic-ON in the gymnasium, locker rooms, and any other rooms where hands-free operation is desirable.
2. Daylit Areas – Provide daylight-responsive automatic control in all spaces (conditioned or unconditioned) where daylight contribution is available as defined by relevant local building energy code:
   a. All luminaires within code-defined daylight zones shall be controlled separately from luminaires outside of daylit zones.
   b. Daytime setpoints for total ambient illumination (combined daylight and electric light) levels that initiate dimming shall be programmed in compliance with relevant local building energy codes.
   c. Provide smooth and continuous daylight dimming for areas marked on drawings. Daylighting control system may be designed to turn off electric lighting when daylight is at or above required lighting levels, only if system functions to turn electric lighting back on at dimmed level, rather than turning full-on prior to dimming.

2.03 MANUFACTURERS

A. Acceptable Digital Lighting Controls Manufacturer:
1. Basis of design product: (Legrand) WattStopper Digital Lighting Management (DLM).
2. Subject to compliance with specified requirements of this section, one of the following:
   a. Lutron.
3. Substitutions: By prior approval.
4. All proposed substitutions (clearly delineated as such) must be submitted in writing for approval by the design professional a minimum of ten working days prior to the bid date and must be made available to all bidders. Proposed substitutes must be accompanied by a review of the specification noting compliance on a line-by-line basis.
5. By using pre-approved substitution of basis of design system, the contractor accepts responsibility and associated costs for all required modifications to rough-ins, circuitry, devices, and wiring. The contractor shall provide complete engineered shop drawings (including power and control wiring) with deviations from the original design highlighted for review and approval by engineer prior to rough-in.

6. Furnish the Company's system which accommodates the square-footage coverage requirements for each area controlled, utilizing room controllers, digital occupancy sensors, switches, daylighting sensors and accessories which suit the lighting and electrical system parameters.

B. Acceptable DMX Control Manufacturer:
   1. Nicolaudie.
   2. Substitutions: Not allowed.

2.04 DLM LOCAL NETWORK (ROOM NETWORK)

A. The DLM local network is a free topology lighting control physical connection and communication protocol designed to control a small area of a building.

B. Features of the DLM local network include:
   1. Plug n' Go™ automatic configuration and binding of occupancy sensors, switches and lighting loads to the most energy-efficient sequence of operation based upon the device attached.
   2. Simple replacement of any device in the local DLM network with a standard off the shelf unit without requiring significant testing, configuration or setup.
   3. Push n' Learn™ configuration to change the automatic configuration, including binding and load parameters without tools, using only the buttons on the digital devices in the local network.
   4. Two-way infrared communications for control by handheld remotes, and configuration by a handheld tool including adjusting load parameters, sensor configuration and binding, within a line of sight of up to 30 feet from a sensor, wall switch or IR receiver.

C. Digital room devices connect to the local network using pre-terminated Cat 5e cables with RJ-45 connectors, which provide both data and power to room devices. Systems that utilize RJ-45 patch cords but do not provide serial communication data from individual end devices are not acceptable.

D. If manufacturer's pre-terminated Cat5e cables are not used for the installation, the contractor is responsible for testing each cable following installation and supplying manufacturer with test results.

E. WattStopper Product Number: LMRJ series.

2.05 DIGITAL LOAD CONTROLLERS

A. Digital controllers for lighting and plug loads automatically bind the room loads to the connected devices in the space without commissioning or the use of any tools. Room and plug load controllers shall be provided to match the room lighting and plug load control requirements. The controllers will be simple to install, and will not have dip switches or potentiometers, or require special configuration for standard Plug n' Go applications. The control units will include the following features:
   1. Automatic room configuration to the most energy-efficient sequence of operation based upon the devices in the room.
   2. Simple replacement – Using the default automatic configuration capabilities, a room controller may be replaced with an off-the-shelf.
   3. Multiple room controllers connected together in a local network must automatically arbitrate with each other, without requiring any configuration or setup, so that individual load numbers are sequentially assigned using each controller's device ID's from highest to lowest.
   4. Device Status LEDs to indicate:
      a. Data transmission.

b. Device has power.
c. Status for each load.
d. Configuration status.

5. Quick installation features including:
   a. Standard junction box mounting.
   b. Quick low voltage connections using standard RJ-45 patch cable.
6. Based on individual configuration, each load shall be capable of the following behavior on power up following the loss of normal power:
   a. Turn on to 100%.
   b. Turn off.
   c. Turn on to last level.
7. Each load shall at a minimum be configurable to operate in the following sequences based on occupancy:
   a. Auto-on/Auto-off (Follow on and off).
   b. Manual-on/Auto-off (Follow off only).
8. The polarity of each load output shall be reversible, via digital configuration, so that on is off and off is on.
9. BACnet object information shall be available for the following objects:
   a. Load status.
   b. Electrical current (when available).
   c. Total watts per controller.
   d. Schedule state – normal or after-hours.
   e. Demand response enable and disable.
   f. Room occupancy status.
   g. Total room lighting and plug loads watts.
   h. Total room watts/sq ft.
   i. Force on/off all loads.
10. UL 2043 plenum rated.
11. Manual override and LED indication for each load.
12. Dual voltage (120/277 VAC, 60 Hz), or 347 VAC, 60 Hz (selected models only). 120/277 volt models rated for 20A total load, derating to 16A required for some dimmed loads (forward phase dimming); 347 volt models rated for 15A total load; plug load controllers carry application-specific UL 20 rating for receptacle control.
13. Zero cross circuitry for each load.
14. All digital parameter data programmed into an individual room controller or plug load controller shall be retained in non-volatile FLASH memory within the controller itself. Memory shall have an expected life of no less than 10 years.

B. On/Off Room Controllers shall include:
   1. One or two relay configuration.
   2. Efficient 150 mA switching power supply.
   3. Three RJ-45 DLM local network ports with integral strain relief and dust cover.
   4. WattStopper product numbers: LMRC-100 series.

C. On/Off/Dimming enhanced Room Controllers shall include:
   1. Real time current monitoring.
   2. Multiple relay configurations.
   3. Efficient 250 mA switching power supply.
   4. Four RJ-45 DLM local network ports with integral strain relief and dust cover.
   5. One dimming output per relay.

a. 0-10V Dimming - Where indicated, one 0-10 volt analog output per relay for control of compatible LED drivers. The 0-10 volt output shall automatically open upon loss of power to the Room Controller to assure full light output from the controlled lighting.
b. Line Voltage, Forward Phase Dimming - Where indicated, one forward phase control line voltage dimming output per relay for control of compatible two-wire or three-wire ballasts, LED drivers, MLV, forward phase compatible ELV, neon/cold cathode and incandescent loads.
c. Each dimming output channel shall have an independently configurable minimum and maximum calibration trim level to set the dimming range to match the true dynamic range of the connected driver.
d. The LED level indicators on bound dimming switches shall utilize this new maximum and minimum trim.
e. Each dimming output channel shall have an independently configurable minimum and maximum trim level to set the dynamic range of the output within the new 0-100% dimming range defined by the minimum and maximum calibration trim.
f. Calibration and trim levels must be set per output channel.
g. Devices that set calibration or trim levels per controller are not acceptable.
h. All configuration shall be digital. Devices that set calibration or trim levels per output channel via trim pots or dip-switches are not acceptable.

6. Each load shall have an independently configurable preset on level for Normal Hours and After Hours events to allow different dimmed levels to be established at the start of both Normal Hours and After Hours events.
7. Fade rates for dimming loads shall be specific to bound switch buttons, and the load shall maintain a default value for any bound buttons that do not specify a unique value.
8. The following dimming attributes may be changed or selected using a wireless configuration tool:
   a. Establish preset level for each load from 0-100%.
   b. Set high and low trim for each load.
   c. Set lamp burn in time for each load up to 100 hours.
9. Override button for each load provides the following functions:
   a. Press and release for on/off control.
   b. Press and hold for dimming control.
10. WattStopper product numbers: LMRC series.

2.06 DIGITAL WALL OR CEILING MOUNTED OCCUPANCY SENSOR

A. Wall or ceiling mounted (to suit installation) passive infrared (PIR), ultrasonic or dual technology digital (passive infrared and ultrasonic) occupancy sensor.

B. Digital Occupancy Sensors shall provide graphic LCD display for digital calibration and electronic documentation. Features include the following:
   1. Calibration and pushbutton configuration for the following variables:
      a. Sensitivity – 0-100% in 10% increments.
      b. Time delay – 1-30 minutes in 1 minute increments.
      c. Test mode – Five second time delay.
      d. Detection technology – PIR, Ultrasonic or Dual Technology activation and/or re-activation.
      e. Walk-through mode.
   2. Load parameters including Auto/Manual-ON, blink warning, and daylight enable/disable when photosensors are included in the DLM local network.
   3. Programmable control functionality including:
      a. Each sensor may be programmed to control specific loads within a local network.

b. Sensor shall be capable of activating one of 16 user-definable lighting scenes.
c. Adjustable retrigger time period for manual-on loads. Load will retrigger (turn on) automatically within a configurable period of time (default 10 seconds) after turning off.
d. On dual technology sensors, independently configurable trigger modes are available for both Normal (NH) and After Hours (AH) time periods. The retrigger mode can be programmed to use the following technologies:
    1) Ultrasonic and Passive Infrared.
    2) Ultrasonic or Passive Infrared.
    3) Ultrasonic only.
    4) Passive Infrared only.
e. Independently configurable sensitivity settings for passive infrared and ultrasonic technologies (on dual technology sensors) for both Normal (NH) and After Hour (AH) time periods.

4. One or two RJ-45 port(s) for connection to DLM local network.
5. Two-way infrared (IR) transceiver to allow remote programming through handheld tool and control by remote personal controls.
6. Device Status LEDs, which may be disabled for selected applications, including:
    a. PIR detection.
    b. Ultrasonic detection.
    c. Configuration mode.
    d. Load binding.
7. Assignment of occupancy sensor to a specific load within the room without wiring or special tools.
8. Manual override of controlled loads.
9. All parameter data programmed into an individual occupancy sensor shall be retained in non-volatile FLASH memory within the sensor itself. Memory shall have an expected life of no less than 10 years.

C. BACnet object information shall be available for the following objects:
1. Detection state.
2. Occupancy sensor time delay.
3. Occupancy sensor sensitivity, PIR and Ultrasonic.

D. Units shall not have any dip switches or potentiometers for field settings.

E. Multiple occupancy sensors may be installed in a room by simply connecting them to the free topology DLM local network. No additional configuration will be required.

F. WattStopper product numbers: LMPX, LMDX, LMPC, LMUC, LMDC series.

G. Indoor Occupancy Sensors: refer to drawings for occupancy sensor types and locations.
1. Type DT: ceiling mount, dual technology, low voltage.
2. Type DT-B: ceiling mount, dual technology, low voltage. Black finish.
3. Type P: ceiling mount, PIR, low voltage.
4. Type P-EH: ceiling mount, PIR, low voltage, extended height lens.
5. Type P-ER: ceiling mount, PIR, low voltage, extended range lens.
6. Type U: ceiling mount, ultrasonic, low voltage.

H. Occupancy sensors in areas subject to damage (gymnasiums, tennis courts, pools, ball courts, and childcare gym and tumbling) shall be installed complete with wireguards.

2.07 DIGITAL WALL SWITCH OCCUPANCY SENSORS

A. Wallbox mounted passive infrared PIR or dual technology (passive infrared and ultrasonic) digital occupancy sensor with 1 or 2 switch buttons.

B. Digital Occupancy Sensors shall provide scrolling LCD display for digital calibration and electronic documentation. Features include the following:
   1. Calibration and pushbutton configuration for the following variables:
      a. Sensitivity – 0-100% in 10% increments.
      b. Time delay – 1-30 minutes in 1 minute increments.
      c. Test mode – Five second time delay.
      d. Detection technology – PIR, Dual Technology activation and/or re-activation.
      e. Walk-through mode.
      f. Load parameters including Auto/Manual-ON, blink warning, and daylight enable/disable when photosensors are included in the DLM local network.
   2. Programmable control functionality including:
      a. Each sensor may be programmed to control specific loads within a local network.
      b. Sensor shall be capable of activating one of 16 user-definable lighting scenes.
      c. Adjustable retrigger time period for manual-on loads. Load will retrigger (turn on) automatically during the configurable period of time (default 10 seconds) after turning off.
      d. On dual technology sensors, independently configurable trigger modes are available for both Normal (NH) and After Hours (AH) time periods. The retrigger mode can be programmed to use the following technologies:
         1) Ultrasonic and Passive Infrared.
         2) Ultrasonic or Passive Infrared.
         3) Ultrasonic only.
         4) Passive Infrared only.
   3. Independently configurable sensitivity settings for passive infrared and ultrasonic technologies (on dual technology sensors) for both Normal (NH) and After Hour (AH) time periods.
   4. Two RJ-45 ports for connection to DLM local network.
   5. Two-way infrared (IR) transceiver to allow remote programming through handheld configuration tool and control by remote personal controls.
   6. Device Status LEDs including
      a. PIR detection.
      b. Ultrasonic detection.
      c. Configuration mode.
      d. Load binding.
   7. Assignment of any occupancy sensor to a specific load within the room without wiring or special tools.
   8. Assignment of local buttons to specific loads within the room without wiring or special tools.
   9. Manual override of controlled loads.
   10. All parameter data programmed into an individual wall switch sensor shall be retained in non-volatile FLASH memory within the wall switch sensor itself. Memory shall have an expected life of no less than 10 years.

C. BACnet object information shall be available for the following objects:
   1. Detection state.
   2. Occupancy sensor time delay.

3. Occupancy sensor sensitivity, PIR and Ultrasonic.
4. Button state.
5. Switch lock control.
6. Switch lock status.

D. Units shall not have any dip switches or potentiometers for field settings.

E. Multiple occupancy sensors may be installed in a room by simply connecting them to the free topology DLM local network. No additional configuration will be required.

F. Two-button wall switch occupancy sensors, when connected to a single relay dimming room or fixture controller, shall operate in the following sequence as a factory default:
1. Top button:
   a. Press and release - Turn load on/off.
2. Bottom button:
   a. Press and hold left side - Lower dimming load.
   b. Press and hold right side - Raise dimming load.

G. Low voltage momentary pushbuttons shall include the following features:
1. Load/Scene Status LED on each switch button with the following characteristics:
   a. Bi-level LED.
   b. Dim locator level indicates power to switch.
   c. Bright status level indicates that load or scene is active.
2. The following button attributes may be changed or selected using a wireless configuration tool:
   a. Load and Scene button function may be reconfigured for individual buttons (from Load to Scene, and vice versa).
   b. Individual button function may be configured to Toggle, On only or Off only.
   c. Individual scenes may be locked to prevent unauthorized change.
   d. Fade Up and Fade Down times for individual scenes may be adjusted from 0 seconds to 18 hours.
   e. Ramp rate may be adjusted for each dimmer switch.
   f. Switch buttons may be bound to any load on any load controller or relay panel and are not load type dependent; each button may be bound to multiple loads.

H. Digital Wall Switch Occupancy Sensor: refer to drawings for switch types and locations.
1. Type A: Wattstopper LMDW series dual technology occupancy sensor with raise/lower buttons for control of dimmable loads.

2.08 DIGITAL WALL SWITCHES

A. Low voltage momentary pushbutton switches in 1, 2, 3, 4, 5 and 8 button configuration. Wall switches shall include the following features:
1. Two-way infrared (IR) transceiver for use with personal and configuration remote controls.
2. Removable buttons for field replacement with engraved buttons and/or alternate color buttons. Button replacement may be completed without removing the switch from the wall.
3. Configuration LED on each switch that blinks to indicate data transmission.
4. Load/Scene Status LED on each switch button with the following characteristics:
   a. Bi-level LED.
   b. Dim locator level indicates power to switch.
   c. Bright status level indicates that load or scene is active.
   d. Dimming switches shall include seven bi-level LEDs to indicate load levels using 14 steps.
5. Programmable control functionality including:

a. Button priority may be configured to any BACnet priority level, from 1-16, corresponding to networked operation allowing local actions to utilize life safety priority.
b. Scene patterns may be saved to any button other than dimming rockers. Once set, buttons may be digitally locked to prevent overwriting of the preset levels.

6. All digital parameter data programmed into an individual wall switch shall be retained in non-volatile FLASH memory within the wall switch itself. Memory shall have an expected life of no less than 10 years.

B. BACnet object information shall be available for the following objects:
1. Button state.
2. Switch lock control.
3. Switch lock status.

C. Two RJ-45 ports for connection to DLM local network.

D. Multiple digital wall switches may be installed in a room by simply connecting them to the free topology DLM local network. No additional configuration shall be required to achieve multi-way switching.

E. Load and Scene button function may be reconfigured for individual buttons (from Load to Scene, and vice versa).
1. Individual button function may be configured to Toggle, On only or Off only.
2. Individual scenes may be locked to prevent unauthorized change.
3. Fade Up and Fade Down times for individual scenes may be adjusted from 0 seconds to 18 hours.
4. Ramp rate may be adjusted for each dimmer switch.
5. Switch buttons may be bound to any load on any load controller or relay panel and are not load type dependent; each button may be bound to multiple loads.

F. WattStopper product numbers: LMSW series. Available in white, light almond, ivory, grey, red and black; compatible with wall plates with decorator opening.
1. Refer to section 26 27 26 Wiring Devices for finish requirements.

G. Digital Wall Switches: refer to drawings for switch types and locations.
1. Type B: 5-button (4-scene plus off) scene switch.
2. Type L: switch for control of dimmable loads.
3. Type S: -button switch.

2.09 DIGITAL DAYLIGHTING SENSORS

A. Digital daylighting sensors shall work with load controllers and relay panels to provide automatic switching, bi-level, or tri-level or dimming daylight harvesting capabilities for any load type connected to the controller or panel. Daylighting sensors shall be interchangeable without the need for rewiring.
1. Closed loop sensors measure the ambient light in the space and control a single lighting zone.
2. Open loop sensors measure incoming daylight in the space, and are capable of controlling up to three lighting zones.
3. Dual loop sensors measure both ambient and incoming daylight in the space to insure that proper light levels are maintained as changes to reflective materials are made in a single zone.

B. Digital daylighting sensors shall include the following features:

1. The sensor's internal photodiode shall only measure lightwaves within the visible spectrum. The photodiode's spectral response curve shall closely match the entire photopic curve. The photodiode shall not measure energy in either the ultraviolet or infrared spectrums. The photocell shall have a sensitivity of less than 5% for any wavelengths less than 400 nanometers or greater than 700 nanometers.
2. Sensor light level range shall be from 1-6,553 footcandles (fc).
3. The capability of ON/OFF, bi-level or tri-level switching, or dimming, for each controlled zone, depending on the selection of load controller(s) and load binding to controller(s).
4. For switching daylight harvesting, the photosensor shall provide a field-selectable deadband, or a separation, between the "ON Setpoint" and the "OFF Setpoint" that will prevent the lights from cycling excessively after they turn off.
5. For dimming daylight harvesting, the photosensor shall provide the option, when the daylight contribution is sufficient, of turning lights off or dimming lights to a field-selectable minimum level.
6. Photosensors shall have a digital, independently configurable fade rate for both increasing and decreasing light level in units of percent per second.
7. Photosensors shall provide adjustable cut-off time. Cut-off time is defined by the number of selected minutes the load is at the minimum output before the load turns off. Selectable range between 0-240 minutes including option to never cut-off.
8. Optional wall switch override shall allow occupants to reduce lighting level to increase energy savings or, if permitted by system administrator, raise lighting levels for a selectable period of time or cycle of occupancy.
9. Integral infrared (IR) transceiver for configuration with a handheld configuration tool, to transmit detected light level to wireless configuration tool, and for communication with personal remote controls.
10. Configuration LED status light on device that blinks to indicate data transmission.
11. Status LED indicates test mode, override mode and load binding.
12. Recessed switch on device to turn controlled load(s) ON and OFF.
13. BACnet object information shall be available for the following daylighting sensor objects, based on the specific photocell's settings:
    a. Light level.
    b. Day and night setpoints.
    c. Off time delay.
    d. On and off setpoints.
    e. Up to three zone setpoints.
    f. Operating mode – on/off, bi-level, tri-level or dimming.
14. One RJ-45 port for connection to DLM local network.
15. A choice of accessories to accommodate multiple mounting methods and building materials.
16. Any load or group of loads in the room can be assigned to a daylighting zone.
17. Each load within a daylighting zone can be individually enabled or disabled for discrete control (load independence).
18. All digital parameter data programmed into a photosensor shall be retained in non-volatile FLASH memory within the photosensor itself. Memory shall have an expected life of no less than 10 years.

C. Open loop digital photosensors shall include the following additional features:
   1. An internal photodiode that measures light in a 60-degree angle (cutting off the unwanted light from the interior of the room).

2. Automatically establishes application-specific setpoints following manual calibration using a wireless configuration tool or a PC with appropriate software. For switching operation, an adequate deadband between the ON and OFF setpoints for each zone shall prevent the lights from cycling; for dimming operation, a proportional control algorithm shall maintain the design lighting level in each zone.
3. Each of the three discrete daylight zones can include any non overlapping group of loads in the room.
4. WattStopper Product Number: LMLS-500 series.

2.10 HANDHELD AND COMPUTER CONFIGURATION TOOLS

A. A wireless configuration tool facilitates optional customization of DLM local networks using two-way infrared communications, while PC software connects to each local network via a USB interface.

B. Features and functionality of the wireless configuration tool shall include but not be limited to:
1. Two-way infrared (IR) communication with DLM IR-enabled devices within a range of approximately 30 feet.
2. High visibility organic LED (OLED) display, pushbutton user interface and menu-driven operation.
3. Must be able to read and modify parameters for load controllers and relay panels, occupancy sensors, wall switches, daylighting sensors, network bridges, and identify DLM devices by type and serial number.
4. Save up to eight occupancy sensor setting profiles, and apply profiles to selected sensors.
5. Temporarily adjust light level of any load(s) on the local network, and incorporate those levels in scene setting. Set room mode for testing of Normal Hours (NH) and After Hours (AH) parameter settings.
6. Adjust or fine-tune daylighting settings established during auto-configuration, and input light level data to complete configuration of open loop daylighting controls.
7. Set room mode for testing of Normal Hours (NH) and After Hours (AH) parameter settings.
8. Verify status of building level network devices.

C. WattStopper Product Numbers: LMCT-100.
1. Furnish one (1) and hand over to Life Time facility engineer during training.

2.11 EMERGENCY LIGHTING CONTROL DEVICES

A. Emergency Lighting Control Unit – A UL 924 listed device that monitors a switched circuit providing normal lighting to an area. The unit provides control of emergency lighting along with the normal lighting. Upon normal power failure the emergency lighting circuit will close, forcing the emergency lighting ON until normal power is restored. Features include:
1. 120/277 volts, 50/60 Hz, 20 amp rating.
2. Push to test button.
3. Auxiliary contact for remote test or fire alarm system interface.

B. Refer to drawings for emergency lighting control device types and locations:
1. Type S: switching relay.
a. LVS Controls Inc. Product Numbers: EPC-PM-120V, EPC-PM-277V.
2. Type D: dimming relay.
a. Where located in area where digital controls are not implemented:
1) LVS Controls Inc. Product Number: EPC-D-F.
b. Where located in area where digital controls are implemented:
1) WattStopper Product Numbers: ELCU-100, ELCU-200.

2.12 DMX CONTROL DEVICES

A. Touch sensitive controller with the following features:
   1. One (1) dedicated ON/OFF button.
   2. Eight (8) dedicated preset scene selector buttons.
   3. Two (2) dedicated buttons to allow for cycling between pages.
   4. Horizontal fader to adjust dimming level, color, and color fade speed.
   5. Clock and calendar integration.
   6. USB and ethernet connectivity for programming and control.
   7. RS232 and dry contact ports.
   8. Flexible programming options: PC, Mac, Android, iPad, or iPhone using included software.

B. Input Power: 6-9V DC.

C. Output Protocol: DMX512 (x2).

D. Device Color: Black.

E. Mounting: Single or double gang junction box.

F. Memory: microSD card, 4GB max, FAT16/32.

G. Programming Requirements: Each area where DMX control is indicated shall have unique scenes based on owner preference. Contact owner for .dlm files and upload to associated controller.

H. Additional Requirements: Utilize manufacturer's software to ensure certain controller functions are disabled based on owner preference. Contact owner for OPR document outlining desires and process.

I. Additional Materials: For each DMX controller, furnish one (1) additional SD card with .dlm file loaded. Cards to be labeled for appropriate area and handed over to Life Time facility engineer during system training.

J. DMX Controllers: refer to drawings for controller types and locations:
   1. Type X: Nicolaudie Stick-KE2.

PART 3 EXECUTION

3.01 PRE-INSTALLATION MEETING

A. A factory authorized manufacturer’s representative shall provide the electrical contractor a functional overview of the lighting control system prior to installation. The contractor shall schedule the pre-installation site visit after receipt of approved submittals to review the following:
   1. Confirm the location and mounting of all digital devices, with special attention to placement of occupancy and daylighting sensors.
   2. Review the specifications for low voltage control wiring and termination.
   3. Discuss the functionality and configuration of all products, including sequences of operation, per design requirements.
   4. Discuss requirements for integration with other trades.

3.02 CONTRACTOR INSTALLATION AND SERVICES

A. Contractor to install all devices and wiring in accordance with NECA 1 (general workmanship). All line voltage connections to be tagged to indicate circuit and switched legs.

B. Contractor to install all room/area devices using manufacturer's factory-tested Cat 5e cable with pre-terminated RJ-45 connectors. If pre-terminated cable is not used for room/area wiring, the contractor is responsible for testing each field-terminated cable following installation, and shall supply the lighting controls manufacturer with test results. Low voltage wiring topology must comply with manufacturer' s specifications. Contractor shall route wiring as shown in submittal drawings as closely as possible, and shall document final wiring location, routing and topology on as built drawings.

C. Install the work of this section in accordance with manufacturer’s printed instructions unless otherwise indicated. Before start up, contractor shall test all devices to ensure proper communication.

D. Calibrate all sensor time delays and sensitivity to guarantee proper detection of occupants and energy savings.
   1. Adjust time delay so that controlled area remains lighted while occupied.

E. Provide written or computer-generated documentation on the configuration of the system including room by room description including:
   1. Sensor parameters, time delays, sensitivities, and daylighting setpoints.
   2. Sequence of operation, (e.g. manual ON, Auto OFF. etc.)
   3. Load Parameters (e.g. blink warning, etc.)

F. Post start-up tuning - After 30 days from occupancy contractor shall adjust sensor time delays and sensitivities to meet the Owner' s requirements. Provide a detailed report to the Engineer of post start-up activity.

3.03 FIELD QUALITY CONTROL

A. See Section 01 40 00 - Quality Requirements, for additional requirements.

B. Inspect each lighting control device for damage and defects.

C. Test occupancy sensors to verify proper operation, including time delays and ambient light thresholds where applicable. Verify optimal coverage for entire room or area. Record test results in written report to be turned over to the owner's personnel.

D. Correct wiring deficiencies and replace damaged or defective conductors, cables, and lighting control devices.

3.04 ADJUSTING

A. Adjust devices and wall plates to be flush and level.

B. Adjust occupancy sensor settings to minimize undesired activations and to achieve desired function as indicated or as directed by Architect.

C. Adjust position of directional occupancy sensors and outdoor motion sensors to achieve optimal coverage as required.

D. Where indicated or as directed by Architect, install factory masking material or adjust integral blinders on passive infrared (PIR) and dual technology occupancy sensor lenses to block undesired motion detection.

3.05 CLEANING

A. Clean exposed surfaces to remove dirt, paint, or other foreign material and restore to match original factory finish.

3.06 FACTORY SERVICES FOR DIGITAL LIGHTING CONTROLS

A. Upon completion of the installation, the manufacturer's factory authorized representative shall start up and verify a complete fully functional system.

B. The electrical contractor shall provide both the manufacturer and the electrical engineer with three weeks written notice of the system start up and adjustment date.

C. Upon completion of the system start up, the factory-authorized technician shall provide the proper training to the owner's personnel on the adjustment and maintenance of the system.

3.07 COMMISSIONING

A. A commissioning agent will be hired to verify the installation and programming of all building systems, which includes the lighting control system. Manufacturer should include an extra day of technician's time to review the functionality and settings of the lighting control hardware with the commissioning agent, including reviewing submittal drawings and ensuring that instructions on how to configure each device are readily available. Manufacturer is NOT responsible for helping the commissioning agent inspect the individual devices. It will be the commissioning agent's responsibility to create any forms required for the commissioning process. The electrical contractor shall complete pre-functional checklists to ensure a smooth commissioning process.

B. The commissioning agent shall work with the electrical contractor during installation of the lighting control hardware to become familiar with the specific products. The agent shall also accompany the manufacturer's technicians during their start-up work to better understand the process of testing, calibration and configuration of the products. The contractor and manufacturer shall ensure that interfacing with the agent does not prevent them from completing the requirements outlined in the contract documents, and does not affect project schedule.

SECTION 26 21 00
LOW-VOLTAGE ELECTRICAL SERVICE ENTRANCE

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Electrical service requirements.

1.02 RELATED REQUIREMENTS

A. Section 03 30 00 - Cast-in-Place Concrete.

B. Section 26 05 19 - Low-Voltage Electrical Power Conductors and Cables.

C. Section 26 05 26 - Grounding and Bonding for Electrical Systems.

D. Section 26 05 29 - Hangers and Supports for Electrical Systems.

E. Section 26 05 53 - Identification for Electrical Systems:.

F. Section 26 29 01 - Switchboards and Integrated Low-Voltage Distribution and Controls.

1.03 DEFINITIONS

A. Service Point: The point of connection between the facilities of the serving utility and the premises wiring as defined in NFPA 70, and as designated by the Utility Company.

1.04 REFERENCE STANDARDS

A. IEEE C2 - National Electrical Safety Code(R) (NESC(R)); 2023.

B. NECA 1 - Standard for Good Workmanship in Electrical Construction; 2023.

C. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

1.05 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Verify the following with Utility Company representative:
      a. Utility Company requirements, including division of responsibility.
      b. Exact location and details of utility point of connection.
      c. Utility easement requirements.
      d. Utility Company charges associated with providing service.
   2. Coordinate the work with other trades to avoid placement of other utilities or obstructions within the spaces dedicated for electrical service and associated equipment.
   3. Coordinate arrangement of service entrance equipment with the dimensions and clearance requirements of the actual equipment to be installed.

B. Arrange for Utility Company to provide permanent electrical service. Prepare and submit documentation required by Utility Company.

C. Preinstallation Meeting: Convene 30 days prior to commencing work of this section to review service requirements and details with Utility Company representative.

D. Scheduling:
   1. Arrange for inspections necessary to obtain Utility Company approval of installation.

1.06 QUALITY ASSURANCE

A. Comply with the following:
   1. IEEE C2 (National Electrical Safety Code).
   2. NFPA 70 (National Electrical Code).

3. The requirements of the Utility Company.

PART 2 PRODUCTS

2.01 ELECTRICAL SERVICE REQUIREMENTS

A. Provide new electrical service consisting of all required conduits, conductors, equipment, metering provisions, supports, accessories, etc. as necessary for connection between Utility Company point of supply and service entrance equipment.

B. Electrical Service Characteristics: As indicated on drawings.

C. Utility Company: Rocky Mountain Power.
   1. Point of Contact: Dustin Rudd.
   2. Phone: (801) 220-6209.
   3. Email: dustin.rudd@pacificorp.com.

D. Division of Responsibility:
   1. Pad-Mounted Utility Transformers:
      a. Transformer Vaults and Pads: Provided by Contractor per Utility Company requirements.
      b. Transformers: Provided by Utility Company.
      c. Transformer Grounding Provisions: Provided by Contractor per Utility Company requirements.
      d. Primary:
         1) Trenching and Backfilling: Provided by Contractor.
         2) Conduits: Provided by Contractor.
         3) Conductors: Provided by Utility Company.
      e. Secondary:
         1) Trenching and Backfilling: Provided by Contractor.
         2) Conduits: Provided by Contractor.
         3) Conductors: Provided by Contractor (Service Point at transformer).
   2. Terminations at Service Point: Provided by Utility Company.
   3. Metering Provisions:
      a. Metering Transformer Cabinets: Provided by Contractor per Utility Company requirements.

E. Products Furnished by Contractor: Comply with Utility Company requirements.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that ratings and configurations of service entrance equipment are consistent with the indicated requirements.

C. Verify that conditions are satisfactory for installation prior to starting work.

3.02 PREPARATION

A. Verify and mark locations of existing underground utilities.

B. Verify that field measurements are as indicated on utility company drawings.

C. Verify that utility requirements for clearances are met.

3.03 INSTALLATION

A. Install products in accordance with manufacturer's instructions and Utility Company requirements.

B. Perform work in accordance with NECA 1 (general workmanship).

C. Arrange equipment to provide minimum clearances and required maintenance access.

D. Provide required support and attachment components in accordance with Section 26 05 29.

E. Provide grounding and bonding for service entrance equipment in accordance with Section 26 05 26.

F. Identify service entrance equipment, including main service disconnect(s) in accordance with Section 26 05 53.

G. Service connections shall be installed in strict accordance with the rules of the utility company. Electrical Contractor shall also be responsible for all negotiations with the utility company with regard to the service connections, and shall initiate the necessary requests to the utility company for the work which will be performed by the utility company.

H. This contractor shall pay all fees and charges submitted by the utility company for their part of the service installation and connections and shall perform all work required by the utility company to facilitate the complete installation of the service(s). No extra charges or extension in schedule will be allowed because of the failure of the contractor to contact the utility company and determine what will be required by the contractor in order to complete the service installation.

3.04 PROTECTION

A. Protect installed equipment from subsequent construction operations.

END OF SECTION

This page intentionally left blank

SECTION 26 27 26
WIRING DEVICES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Wall switches.
B. Wall-box occupancy sensors.
C. Receptacles.
D. Wall plates and covers.
E. Floor box service fittings.
F. Poke-through assemblies.
G. Overfloor raceways.

1.02 RELATED REQUIREMENTS

A. Section 01 40 00 - Quality Requirements.
B. Section 09 30 00 - Tiling.
C. Section 09 51 13 - Acoustical Panel Ceilings.
D. Section 09 54 23 - Linear Metal Ceilings.
E. Section 09 72 00 - Wall Coverings.
F. Section 09 91 00 - Painting.
G. Section 26 05 19 - Low-Voltage Electrical Power Conductors and Cables.
H. Section 26 05 26 - Grounding and Bonding for Electrical Systems.
I. Section 26 05 37 - Boxes for Electrical Systems.
J. Section 26 05 53 - Identification for Electrical Systems.
K. Section 26 05 83 - Wiring Connections.
L. Section 26 09 23 - Lighting Control Devices.

1.03 REFERENCE STANDARDS

A. FS W-C-596 - Connector, Electrical, Power, General Specification for; 2014h (Validated 2022).
B. FS W-S-896 - Switches, Toggle (Toggle and Lock), Flush Mounted (General Specification); 2017g (Validated 2023).
C. NECA 1 - Standard for Good Workmanship in Electrical Construction; 2023.
D. NECA 130 - Standard for Installing and Maintaining Wiring Devices; 2016.
E. NEMA WD 1 - General Color Requirements for Wiring Devices; 1999 (Reaffirmed 2020).
F. NEMA WD 6 - Wiring Devices - Dimensional Specifications; 2021.
G. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.
H. UL 20 - General-Use Snap Switches; Current Edition, Including All Revisions.
I. UL 498 - Attachment Plugs and Receptacles; Current Edition, Including All Revisions.
J. UL 514D - Cover Plates for Flush-Mounted Wiring Devices; Current Edition, Including All Revisions.

K. UL 943 - Ground-Fault Circuit-Interrupters; Current Edition, Including All Revisions.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
1. Coordinate the placement of outlet boxes with millwork, furniture, equipment, etc. installed under other sections or by others.
2. Coordinate wiring device ratings and configurations with the electrical requirements of actual equipment to be installed.
3. Coordinate the placement of outlet boxes for wall switches with actual installed door swings.
4. Coordinate the installation and preparation of uneven surfaces, such as split face block, to provide suitable surface for installation of wiring devices.
5. Coordinate the core drilling of holes for poke-through assemblies with the work covered under other sections.
6. Notify Architect of any conflicts or deviations from Contract Documents to obtain direction prior to proceeding with work.

B. Sequencing:
1. Do not install wiring devices until final surface finishes and painting are complete.

1.05 SUBMITTALS

A. See Section 01 33 00 - Submittal Procedures.

B. Product Data: Provide manufacturer's catalog information showing dimensions, colors, and configurations.

C. Shop Drawings: Include dimensioned layout with required components indicated for overfloor raceway.

1.06 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements listed below.

B. Comply with requirements of NFPA 70.

C. Products: Listed, classified, and labeled as suitable for the purpose intended.

1.07 DELIVERY, STORAGE, AND PROTECTION

A. Store in a clean, dry space in original manufacturer's packaging until ready for installation.

PART 2 PRODUCTS

2.01 WIRING DEVICES - GENERAL REQUIREMENTS

A. Provide wiring devices suitable for intended use with ratings adequate for load served.

B. Except where explicitly permitted, substitution of combination switch-and-receptacle devices for separate switches and receptacles is not permitted.

C. Wiring Device Applications:
1. Receptacles Installed Outdoors or in Damp or Wet Locations: Use weather-resistant GFCI receptacles with weatherproof covers.
2. Provide GFCI protection for:
a. Receptacles installed within 6 feet (1.8 m) of sinks.
b. Receptacles installed in kitchens.
3. Flush Floor Service Fittings in Tile Floors: Use tile rings.
4. Flush Floor Service Fittings in Carpeted Floors: Use carpet flanges.

D. Wiring Device Finishes:

1. Provide wiring device finishes as described below, unless otherwise indicated.
    a. Wiring devices installed in tile: Refer to specification section 09 30 00 - Tiling.
    b. Wiring devices installed in acoustical panel ceilings: Refer to specification section 09 51 13 - Acoustical Panel Ceilings.
    c. Wiring devices installed in linear metal ceilings: Refer to specification section 09 54 23 - Linear Metal Ceilings.
    d. Wiring devices installed in vinyl covered walls: Refer to specification section 09 72 00 - Wall Coverings.
    e. Wiring devices installed in painted walls: Refer to specification section 09 91 00 - Painting.
    f. Wiring devices installed in mirrors, granite, or slate, and in the kitchens, pool areas, and gymnasiums: Stainless steel faceplates with grey devices.
    g. Wiring devices installed in unpainted wood paneling or millwork: Brown devices and brown nylon coverplates.
    h. Wiring devices installed in unfinished areas: Galvanized steel faceplates with grey devices.
    i. Receptacles shutdown during fire alarm: Orange color.
2. Flush Floor Box Service Fittings: Refer to electrical drawings.

2.02 WALL SWITCHES

A. Manufacturers:
    1. Hubbell Incorporated: www.hubbell.com.
    2. Leviton Manufacturing Company, Inc: www.leviton.com.
    3. Pass & Seymour, a brand of Legrand North America, Inc: www.legrand.us.

B. Wall Switches - General Requirements: AC only, quiet operating, general-use snap switches with silver alloy contacts, complying with NEMA WD 1 and NEMA WD 6, and listed as complying with UL 20 and where applicable FS W-S-896; types as indicated on the drawings.
    1. Wiring Provisions: Terminal screws for side wiring and screw actuated binding clamp for back wiring with separate ground terminal screw.

C. Standard Wall Switches: Industrial specification grade, 20 A, 120/277 V with standard toggle type switch actuator and maintained contacts; single pole single throw, double pole single throw, three way, or four way as indicated on the drawings.

D. Momentary Contact Wall Switches: Industrial specification grade, 20 A, 120/277 V with toggle type three position switch actuator and momentary contacts; single pole double throw, off with switch actuator in center position.

E. Locking Maintained Contact Wall Switches: Low voltage maintained keyed switch mounted to switch plate by contractor. Key all switches alike.

2.03 WALL-BOX OCCUPANCY SENSORS

A. Wall-Switch Sensors (type OS on plans)
    1. Products: Subject to compliance with requirements, provide one of the following:
        a. Wattstopper, a brand of Legrand North America, Inc. #PW-301, set for manual ON operation.
        b. Approved equivalent.
    2. Description: Passive-infrared type, 120/277 V, adjustable time delay up to 30 minutes, 180-degree field of view, with a major motion coverage area of 900 sq. ft.

2.04 RECEPTACLES

A. Manufacturers:
    1. Hubbell Incorporated: www.hubbell.com.

2. Leviton Manufacturing Company, Inc: www.leviton.com.
3. Lutron Electronics Company, Inc; Designer Style: www.lutron.com.
4. Pass & Seymour, a brand of Legrand North America, Inc: www.legrand.us.

B. Receptacles - General Requirements: Self-grounding, complying with NEMA WD 1 and NEMA WD 6, and listed as complying with UL 498, and where applicable, FS W-C-596; types as indicated on the drawings.
1. Wiring Provisions: Terminal screws for side wiring or screw actuated binding clamp for back wiring with separate ground terminal screw.
2. NEMA configurations specified are according to NEMA WD 6.

C. Convenience Receptacles:
1. Standard Convenience Receptacles: Industrial specification grade, 20A, 125V, NEMA 5-20R; single or duplex as indicated on the drawings.
2. Automatically Controlled Convenience Receptacles: Industrial specification grade, 20A, 125V, NEMA 5-20R; controlled receptacle marking on device face per NFPA 70; single or duplex as indicated on the drawings.
3. Weather Resistant Convenience Receptacles: Industrial specification grade, 20A, 125V, NEMA 5-20R, listed and labeled as weather resistant type complying with UL 498 Supplement SD suitable for installation in damp or wet locations; single or duplex as indicated on the drawings.
4. Tamper Resistant Convenience Receptacles: Industrial specification grade, 20A, 125V, NEMA 5-20R, listed and labeled as tamper resistant type; single or duplex as indicated on the drawings.
5. Tamper Resistant and Weather Resistant Convenience Receptacles: Industrial specification grade, 20A, 125V, NEMA 5-20R, listed and labeled as tamper resistant type and as weather resistant type complying with UL 498 Supplement SD suitable for installation in damp or wet locations; single or duplex as indicated on the drawings.

D. GFCI Receptacles:
1. GFCI Receptacles - General Requirements: Self-testing, with feed-through protection and light to indicate ground fault tripped condition and loss of protection; listed as complying with UL 943, class A.
a. Provide test and reset buttons of same color as device.
2. Standard GFCI Receptacles: Industrial specification grade, duplex, 20A, 125V, NEMA 5-20R, rectangular decorator style.
3. Weather Resistant GFCI Receptacles: Industrial specification grade, duplex, 20A, 125V, NEMA 5-20R, rectangular decorator style, listed and labeled as weather resistant type complying with UL 498 Supplement SD suitable for installation in damp or wet locations.
4. Tamper Resistant GFCI Receptacles: Industrial specification grade, duplex, 20A, 125V, NEMA 5-20R, rectangular decorator style, listed and labeled as tamper resistant type.
5. Tamper Resistant and Weather Resistant GFCI Receptacles: Industrial specification grade, duplex, 20A, 125V, NEMA 5-20R, rectangular decorator style, listed and labeled as tamper resistant type and as weather resistant type complying with UL 498 Supplement SD suitable for installation in damp or wet locations.

E. Locking Receptacles: Industrial specification grade, configuration as indicated on the drawings.

F. Clock Hanger Receptacles: Single, 20A, 125V, NEMA 5-20R.

2.05 WALL PLATES AND COVERS

A. Manufacturers:
1. Hubbell Incorporated: www.hubbell-wiring.com.
2. Leviton Manufacturing Company, Inc: www.leviton.com.

3. Lutron Electronics Company, Inc: www.lutron.com.
4. Pass & Seymour, a brand of Legrand North America, Inc: www.legrand.us.

B. Wall Plates: Comply with UL 514D.
1. Configuration: One piece cover as required for quantity and types of corresponding wiring devices.
2. Size: Standard.
3. Screws: Metal with slotted heads finished to match wall plate finish.

C. Nylon Wall Plates: Smooth finish, high-impact thermoplastic.

D. Stainless Steel Wall Plates: Brushed satin finish, Type 302 stainless steel.

E. Galvanized Steel Wall Plates: Rounded corners and edges, with corrosion resistant screws.

F. Weatherproof Receptacle Covers for Damp Locations: Gasketed, cast aluminum, with self-closing hinged cover and corrosion-resistant screws; listed as suitable for use in wet locations with cover closed.

G. Weatherproof Receptacle Covers for Wet Locations: Gasketed, cast aluminum, with hinged lockable cover and corrosion-resistant screws; listed as suitable for use in wet locations while in use with attachment plugs connected and identified as extra-duty type.

H. Weatherproof Switch Covers for Wet or Damp Locations: Gasketed, metallic, with externally operable actuating means and corrosion-resistant screws; listed as suitable for use in wet locations.

2.06 FLOOR BOX SERVICE FITTINGS

A. Manufacturers:
1. Wiremold, a brand of Legrand North America, Inc: www.legrand.us.

B. Description: Service fittings compatible with floor boxes provided under Section 26 05 37 with components, adapters, and trims required for complete installation.

C. Flush Floor Service Fittings:
1. Single Service Flush Convenience Receptacles:
a. Cover: As indicated on plans.
b. Configuration: As indicated on plans.
2. Dual Service Flush Combination Outlets:
a. Cover: As indicated on plans.
b. Configuration:
1) Power: As indicated on plans.
2) Voice and Data Jacks: As indicated on plans.
3. Accessories:
a. Tile Rings: Finish to match covers; configuration as required to accommodate specified covers.
b. Carpet Flanges: Finish to match covers; configuration as required to accommodate specified covers.

2.07 POKE-THROUGH ASSEMBLIES

A. Manufacturers:
1. Hubbell Incorporated: www.hubbell.com.
a. 2x2 series.
2. Thomas & Betts Corporation: www.tnb.com.
a. FPT3 series
3. Wiremold, a brand of Legrand North America, Inc: www.legrand.us.

a. RC7 series.
4. As indicated on plans.

B. Description: Assembly comprising floor service fitting, poke-through component, fire stops and smoke barriers, and junction box for conduit termination; fire rating listed to match fire rating of floor and suitable for floor thickness where installed.

C. Flush Floor Service Fittings:
1. Dual Service Flush Combination Outlets:
a. Cover: Slider access to power and data outlets.
b. Configuration:
1) Power: One standard convenience duplex receptacle(s).
2) Voice and Data Jacks: Refer to Division 27 specifications.
2. Accessories:
a. Closure Plugs: Size and fire rating as required to seal unused core hole and maintain fire rating of floor.

2.08 OVERFLOOR RACEWAYS

A. Manufacturers:
1. Wiremold, a brand of Legrand North America, Inc[<>]: www.legrand.us.
a. OFR series.
2. Substitutions: not allowed.

B. Overfloor Raceway:
1. Description: Four-channel aluminum base with black powder coat finish, designed for installation directly to floor covering; furnished with removable tamper-resistant steel covers for installation of conductors and cables.
2. Routing and Required Components: As indicated on plans.
3. Components:
a. Base & Cover, #OFRBC-8.
b. Seam Clip, #OFR6.
c. Blank End Fitting, #OFR10B.
d. In-Wall Entrance End Fitting, #OFR10IW.
e. 4-Gang Box, #OFR48-4.
f. Crossover Kit, #OFR48-4GX.
g. Flat Elbow, #OFR11.
h. 45 Degree Flat Elbow, #OFR12.
i. Tee/Cross, #OFR15.
j. 3-Inch Poke-Thru Transition, #OFRPT3.
k. 4-Inch Poke-Thru Transition, #OFRPT4.
l. Coupling, #OFR1.
m. Grounding Clip, #OFR9.
n. Blank Device Plate, #OFR47-B.
o. Duplex Device Plate, #OFR47-D.
p. Communications Device Plate, #OFR47-2A.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that outlet boxes are installed in proper locations and at proper mounting heights and are properly sized to accommodate devices and conductors in accordance with NFPA 70.

C. Verify that wall openings are neatly cut and will be completely covered by wall plates.

D. Verify that final surface finishes are complete, including painting.

E. Verify that floor boxes are adjusted properly.

F. Verify that branch circuit wiring installation is completed, tested, and ready for connection to wiring devices.

G. Verify that core drilled holes for poke-through assemblies are in proper locations.

H. Verify that conditions are satisfactory for installation prior to starting work.

3.02 PREPARATION

A. Provide extension rings to bring outlet boxes flush with finished surface.

B. Clean dirt, debris, plaster, and other foreign materials from outlet boxes.

3.03 INSTALLATION

A. Perform work in accordance with NECA 1 (general workmanship) and, where applicable, NECA 130, including mounting heights specified in those standards unless otherwise indicated.

B. Coordinate locations of outlet boxes provided under Section 26 05 37 as required for installation of wiring devices provided under this section.
   1. Orient outlet boxes for vertical installation of wiring devices unless otherwise indicated.
   2. Where multiple receptacles, wall switches, or wall dimmers are installed at the same location and at the same mounting height, gang devices together under a common wall plate unless otherwise indicated.
   3. Locate wall switches on strike side of door with edge of wall plate 3 inches (80 mm) from edge of door frame. Where locations are indicated otherwise, notify Architect to obtain direction prior to proceeding with work.
   4. Locate receptacles for electric drinking fountains concealed behind drinking fountain according to manufacturer's instructions.

C. Install wiring devices in accordance with manufacturer's instructions.

D. Install permanent barrier between ganged wiring devices when voltage between adjacent devices exceeds 300 V.

E. Where required, connect wiring devices using pigtails not less than 6 inches (150 mm) long. Do not connect more than one conductor to wiring device terminals.

F. Connect wiring devices by wrapping conductor clockwise 3/4 turn around screw terminal and tightening to proper torque specified by the manufacturer. Where present, do not use push-in pressure terminals that do not rely on screw-actuated binding.

G. Unless otherwise indicated, connect wiring device grounding terminal to branch circuit equipment grounding conductor and to outlet box with bonding jumper.

H. For isolated ground receptacles, connect wiring device grounding terminal only to identified branch circuit isolated equipment grounding conductor. Do not connect grounding terminal to outlet box or normal branch circuit equipment grounding conductor.

I. Unless otherwise indicated, GFCI receptacles may be connected to provide feed-through protection to downstream devices. Label such devices to indicate they are protected by upstream GFCI protection.

J. Where split-wired duplex receptacles are indicated, remove tabs connecting top and bottom receptacles.

K. Install wiring devices plumb and level with mounting yoke held rigidly in place.

L. Install wall switches with OFF position down.

M. Do not share neutral conductor on branch circuits utilizing wall dimmers.

N. Install vertically mounted receptacles with grounding pole on bottom and horizontally mounted receptacles with grounding pole on left.

O. Install wall plates to fit completely flush to wall with no gaps and rough opening completely covered without strain on wall plate. Repair or reinstall improperly installed outlet boxes or improperly sized rough openings. Do not use oversized wall plates in lieu of meeting this requirement.

P. Install blank wall plates on junction boxes and on outlet boxes with no wiring devices installed or designated for future use.

Q. Identify wiring devices in accordance with Section 26 05 53.

R. Install poke-through closure plugs in each unused core holes to maintain fire rating of floor.

S. For overfloor raceways, install devices such that receptacles and low voltage outlets are mounted facing fitness equipment being served.

T. For fitness equipment receptacles, do not share neutral conductors or ground conductors across multiple circuits.

3.04 FIELD QUALITY CONTROL

A. See Section 01 40 00 - Quality Requirements, for additional requirements.

B. Inspect each wiring device for damage and defects.

C. Operate each wall switch and wall dimmer with circuit energized to verify proper operation.

D. Test each receptacle to verify operation and proper polarity.

E. Test each GFCI receptacle for proper tripping operation according to manufacturer's instructions.

F. Correct wiring deficiencies and replace damaged or defective wiring devices.

3.05 ADJUSTING

A. Adjust devices and wall plates to be flush and level.

3.06 CLEANING

A. Clean exposed surfaces to remove dirt, paint, or other foreign material and restore to match original factory finish.

END OF SECTION

SECTION 26 29 01
SWITCHBOARDS AND INTEGRATED LOW-VOLTAGE DISTRIBUTION AND CONTROLS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Equipment purchased by Division 26 contractor from Integrated Panel Manufacturer.
   1. All equipment necessary for low voltage power distribution, motor control, centralized lighting control, and emergency egress lighting power.
   2. Includes: switchboards, panelboards, transformers, circuit breakers, lighting contactors, timeclock, photocell, motor controllers, emergency uninterruptible power supply, and loose disconnects.

1.02 RELATED REQUIREMENTS

A. Seismic Performance: Panelboards shall withstand the effects of earthquake motions determined according to SEI/ASCE 7.
   1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified.
   2. Refer to Section 26 05 48 - Vibration and Seismic Controls for Electrical Systems for seismic bracing requirements.

B. Section 01 40 00 - Quality Requirements.

C. Section 26 05 19 - Low-Voltage Electrical Power Conductors and Cables.

D. Section 26 05 26 - Grounding and Bonding for Electrical Systems.

E. Section 26 05 34 - Conduit for Electrical Systems.

F. Section 26 05 37 - Boxes for Electrical Systems.

G. Section 26 05 73 - Power System Studies.

1.03 ABBREVIATIONS AND ACRONYMS

A. CPI: Carolina Products, Inc.

B. EPO: Emergency power off.

C. HOA: Hand/Off/Auto.

D. I/O: Input/Output.

E. IPM: Integrated Panel Manufacturer.

1.04 REFERENCE STANDARDS

A. NFPA 70 - National Electrical Code; National Fire Protection Association; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

B. IEC 60947-1: General Applicable Rules for Standard utilizations Categories

C. IEC 60947-2: Circuit Breakers.

D. IEC 60947-3: Isolating Devices.

E. IEC 60947-4-1: Contactors and Motor Starters.

F. IEC 60947-5-1: Control and Signaling Units.

G. IEC 60947-6-2: Control and Protection Devices.

H. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum); 2008.

I. NEMA PB 1 - Panelboards; National Electrical Manufacturers Association; 2006.

J. NEMA PB 1.1 - General Instructions for Proper Installation, Operation and Maintenance of Panelboards Rated 600 Volts or Less; National Electrical Manufacturers Association; 2007.

K. UL 50 - Enclosures for Electrical Equipment, Non-Environmental Considerations; Current Edition, Including All Revisions.

L. UL 50E - Enclosures for Electrical Equipment, Environmental Considerations; Current Edition, Including All Revisions.

M. UL 67 - Panelboards; Current Edition, Including All Revisions.

1.05 SUBMITTALS

A. See 01 33 00 - Submittal Procedures.

B. IPM shall prepare product data and shop drawings for Division 26 contractor and Engineer's review required.
   1. Product Data: Provide manufacturer's standard catalog pages and data sheets for switchboards, lighting inverters, overcurrent protective devices, and other installed components and accessories.
   2. Shop Drawings: for each type of switchgear, integrated panel, and related equipment.
      a. Dimensioned plans, elevations, sections, and details, including required clearances and service space around equipment. Show tabulations of installed devices, equipment features, and ratings.
      b. Provide wiring diagrams for power, signal, and control wiring clearly indicating factory wiring and required field wirings.
      c. Include documentation demonstrating selective coordination.

C. Operation and Maintenance data. Provide as specified under "Administrative Requirements" or under "Operation and Maintenance" section, whichever is more stringent.

1.06 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements listed below.

B. Comply with requirements of NFPA 70.

C. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with not less than three years of documented experience.

D. Electrical components, devices, and accessories shall be UL listed and approved, and final assemblies shall have a serialized UL label for entire enclosed assembly.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store products in accordance with manufacturer's instructions.

1.08 COORDINATION

A. IPM to coordinate features of devices specified in this Section with systems and components specified in other Sections to form an integrated system of compatible components. Match components and interconnections for optimum performance of specified functions.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Basis of Design Manufacturer: CPI, contact Adam Worth: (704)-264-9029, adamw@cpipanels.com.

B. Alternate manufacturers will be considered with prior approval. Full design drawings indicating field and factory wiring requirements, control components used, component interlocks, and equipment room layouts showing all equipment footprints and clearances must be submitted as part of the approval process.

2.02 MANUFACTURED UNITS FOR POWER AND CONTROL DISTRIBUTION

A. Includes Square D Switchboard, overall service size and rated fault withstand current as indicated on the plans. Include customer demand metering as per the utility requirements.
   1. Selectivity: Where selectivity is required per specifications, furnish products as required to achieve selective coordination.
   2. Arc Flash Energy-Reducing Maintenance Switching: For circuit breakers rated 1200 A or higher, provide a local accessory switch with status indicator light that permits selection of a maintenance mode with alternate electronic trip unit settings for reduced fault clearing time.

B. Circuit Breakers:
   1. Interrupting Capacity:
      a. Provide circuit breakers with interrupting capacity as required to provide the short circuit current rating indicated, but not less than specified minimum requirements.
      b. Fully Rated Systems: Provide circuit breakers with interrupting capacity not less than the short circuit current rating indicated.
   2. Molded Case Circuit Breakers:
      a. Description: Quick-make, quick-break, over center toggle, trip-free, trip-indicating circuit breakers; listed and labeled as complying with UL 489, and complying with FS W-C-375 where applicable; ratings, configurations, and features as indicated on the drawings.
         1) Provide thermal magnetic circuit breakers, unless otherwise indicated.
         2) Provide electronic trip circuit breakers for circuit breakers rated 800 A and larger and for all breakers serving emergency systems and elevators.
      b. Minimum Interrupting Capacity:
         1) 10,000 rms symmetrical amperes at 208 VAC.
         2) 14,000 rms symmetrical amperes at 480 VAC.
      c. Thermal Magnetic Circuit Breakers: For each pole, furnish thermal inverse time tripping element for overload protection and magnetic instantaneous tripping element for short circuit protection.
         1) Provide field-adjustable magnetic instantaneous trip setting for circuit breaker frame sizes 225 A and larger.
         2) Provide interchangeable trip units for circuit breaker frame sizes 225 A and larger.
      d. Electronic Trip Circuit Breakers: Furnish solid state, microprocessor-based, true rms sensing trip units.
         1) Provide the following field-adjustable trip response settings:
            (a) Long time pickup, adjustable by setting dial.
            (b) Long time delay.
            (c) Short time pickup and delay.
            (d) Instantaneous pickup.
            (e) Ground fault pickup and delay where ground fault protection is indicated.

C. Loose stepdown transformers with efficiencies as required per current standards and loose motor disconnects of size and fault current withstand as indicated on the plans.

D. Enclosure(s):
   1. Material: Bare Aluminum, NEMA 1 rated.
   2. Final Assembly shall bare a serialized UL 508 label.
   3. Size: As required per plans indicating locations, footprint limitations with power and controls functions as indicated.
   4. Panel front door shall be cut out to allow operation of all circuit breakers, hand switches and miscellaneous other devices without exposure to live components.
   5. Enclosure shall have an open bottom and closed top.
   6. Standard 84 in. height doors shall have at least 3 lift-out hinges and at least 2 quarter-turn, quick release, cam-lock fasteners opposite the hinge side for securing door closed.
   7. Spacing between internal mounted components shall, at minimum, meet the required clearances per NEC.
   8. Panels shall have separate lockable cover over each circuit breaker operator access panel.

E. Surface-mounted Pilot Lights, Push Buttons and Selector Switches:
   1. Physical Characteristics:
      a. Size: 30.5 mm.
      b. Rating: NEMA 1/4/12/13; IEC 529 IP66/65
   2. Pilot Lights:
      a. Power Source Modification: 120VAC or higher requires integral step-down transformer; Maximum voltage at the lamp: 24V.
      b. Lamp/bulb: LED high intensity -- easily recognized "on-state" under typical indoor room illumination levels.
      c. Colors: green = equipment "on/running"; red = "off"; orange/amber = "fault/failure".
   3. Push Buttons and Selector Switches:
      a. Contact Ratings:
         1) Utilization Categories: NEMA A600 / IEC AC-15
         2) 120 - 600Vac: 7200VA make; 720VA break.
         3) 72 -120Vac: 60A make; 720VA break
         4) 24 - 72Vac: 60A make; 10A break.
         5) Maximum continuous current: 10A(ac).
   4. Other Miscellaneous Surface-Mounted Devices
      a. Nameplates/Labels.
         1) Machine printed permanent black ink or engraved bi-layer phenolic plastic; black surface with white lettering.
         2) Protected from degradation due to accidental water splash.
         3) Text size: Major Equipment: 1/2"H, Small Devices 3/16"H.

F. Interior Mounted Components.
   1. All Panelboards.
      a. Provide products listed and labeled by Underwriters Laboratories Inc. as suitable for the purpose indicated.
      b. Unless otherwise indicated, provide products suitable for continuous operation under the following service conditions:
         1) Altitude: Less than 6,600 feet (2,000 m).
         2) Ambient Temperature:
            (a) Panelboards containing Circuit Breakers: 32 - 104 F.
      c. Short Circuit Current Rating:

1) Provide panelboards with listed short circuit current rating not less than the available fault current at the installed location as indicated on the drawings.

d. Mains: Configure for top or bottom incoming feed as indicated or as required for the installation.

e. Branch Overcurrent Protective Devices: Replaceable without disturbing adjacent devices.

f. Bussing: Sized in accordance with UL 67 temperature rise requirements.
1) Provide solidly bonded equipment ground bus in each panelboard, with a suitable lug for each feeder and branch circuit equipment grounding conductor.

g. Conductor Terminations: Suitable for use with the conductors to be installed.

h. Enclosures: Comply with NEMA 250, and list and label as complying with UL 50 and UL 50E.
1) Environment Type per NEMA 250: Unless otherwise indicated, as specified for the following installation locations:
2) Boxes: Galvanized steel unless otherwise indicated.
(a) Provide wiring gutters sized to accommodate the conductors to be installed.
3) Fronts:
(a) Where mounted as assemblies inside an overall enclosure, provide open frame plus circuit breaker cover plate. Provide spacers to provide secure fit when assembly door is closed.
(b) Finish for Painted Steel Fronts: Manufacturer's standard grey unless otherwise indicated.

i. Future Provisions: Prepare all unused spaces for future installation of devices including bussing, connectors, mounting hardware and all other required provisions.

j. Ground Fault Protection: Where ground-fault protection is indicated, provide system listed and labeled as complying with UL 1053.
1) Where electronic circuit breakers equipped with integral ground fault protection are used, provide separate neutral current sensor where applicable.
2) Where accessory ground fault sensing and relaying equipment is used, equip companion overcurrent protective devices with ground-fault shunt trips.
(a) Use zero sequence ground fault detection method unless otherwise indicated.
(b) Provide test panel and field-adjustable ground fault pick-up and delay settings.

k. Multi-Section Panelboards: Provide enclosures of the same height, with feed-through lugs or sub-feed lugs and feeders as indicated or as required to interconnect sections.

l. Load centers are not acceptable.

2. Combination Motor Starters Conforming to IEC and UL508
a. Utilization category: AC-3.
b. Coordination required: Type 2.
c. Combination Motor Starter configuration (circuit breaker, contactor & overload) must be a UL listed combination for the Short Circuit Current Rating (SCCR) as shown on the plans. See Website: http://www.ul.com/global/eng/pages/offerings/industries/powerandcontrols/industrialcontrolequipment/shortcircuit/
d. Acceptable Manufacturers for Combination Motor Starters:
1) Square D TeSys for the North American Market; No Substitutions

3. Lighting Contactors

a. Utilization Category: AC-1.
b. Coordination required: Type 1.
c. Combination circuit breaker and contactor must be a UL listed combination for the Short Circuit Current Rating (SCCR) as shown on the plans. See Website: http://www.ul.com/global/eng/pages/offerings/industries/powerandcontrols/industrial control equipment/shortcircuit/
d. Acceptable Manufacturers for lighting assemblies: Square D TeSys for the North American Market; No Substitutions.

4. Small Size, 6-pulse Component Variable Frequency Drives (1/2 to 25 HP)
   a. Equipment Name(s)/Tagname(s): see schedules for information.
   b. Power Input Options: with 5% line choke, see schedules for information.
   c. Power Output Options: see schedules for information.
   d. Motor Size(s): see schedules for information.
   e. Output wiring from drive to motor: specific purpose shielded cable required, see "Low Voltage Electrical Power Conductors and Cables".
   f. VFD size selected for each application shall be based on the motor current as per NFPA 70, Table 430.250 or motor nameplate data, which ever is the greatest.
   g. Load carrying capacity: Continuous at 100% load, 150% for 60s (every 10 min), 180% for 2s (every 10 min).
   h. Output frequency: 0 to 120 Hz minimum.
   i. Output carrier frequency: programmable 5 to 10 kHz.
   j. Drive interface requirements:
      1) VFD shall contain the minimum built-in standard configurations to operate as described herein:
         (a) Drive output to motor shall be selectable to either V/Hz or Sensorless Vector scheme. V/Hz characteristic curve shall be adjustable.
         (b) The drive shall have an integral start/stop device, and speed control knob, such that a power interruption, and subsequent return to power, will cause the drive to restart automatically and ramp up to the speed setting set by the speed control knob, if in fact, it was previously operating at the time of power interruption. If the drive was off at the time of power interruption, it will remain off on return of power.
         (c) The drive shall have the minimum capabilities (via hardwired I/O) for remote start/stop and speed control, such that a power interruption, and subsequent return to power, will cause the drive to restart automatically and ramp up to the speed setting as determined by remote unpowered sources such as momentary start & stop push buttons and a potentiometer, if in fact, it was previously operating at the time of power interruption. If the drive was off at the time of power interruption, it will remain off on return of power.
         (d) The drive shall have all the functions as stated in above items "a & b" plus an Integral remote/local switch, such that a power interruption, and subsequent return to power, will cause the drive to restart in it's previous mode (local or remote) and ramp back up to speed based on the previous setting (local or remote).
         (e) When the drive has a fault, a dry relay contact shall close for remote indication of status and be capable of at least 120Vac at 2A resistive.
         (f) If the drive fails to start, provide configurable parameter for number of retries before setting the "fault" status.

(g) The drive shall have an embedded PID function and the I/O to provide such functions as remote (and local) start/stop and HOA hardwired switches and speed control based on a process set point.
(h) The drive shall contain communications interconnection and sufficient I/O whereby the following minimum features can be viewed and controlled via local, remote hardwired and remote communications.
(i) Communications protocol required: RS485 (modbus RTU), Ethernet/IP, or DeviceNet. NOTE: if a particular manufacturer cannot the communications protocol specified, the manufacturer may submit on the next best drive line that can supply this protocol or provide the necessary adapter, plus power required to that adapter and an enclosure that meets the rating where the drive will be installed.

2) Hardwired I/O:
(a) Analog Input(s): 2 - configurable/programmable unipolar either 0-10Vdc or 4-20mA.
(b) Analog Output(s): 1 - configurable/programmable.
(c) Digital Input(s): 3 - as sensed by remote dry contacts
(d) Digital Output(s): 1 - dry contact for indication of : ready/fault status. Minimum contact rating of switching voltage up to 120Vac and minimum resistive current of 2A.

3) Minimum Operational Programmable Features:
(a) Current limit: 0 - 200%.
(b) Overload Class Protection: Class 10.
(c) Acceleration Time.
(d) Deceleration Time.
(e) All inputs' and outputs' functions and configurations.

4) Operator Interface: at minimum integral one line LCD display with membrane buttons for navigation, start/stop and speed control capable of being mounted remotely from the drive, up to 15', and be capable of uploading the drive's configuration parameters to be downloaded to another.

k. Ambient Environment
1) Operating temperature: 0 to 40°C (32 to 104°F), no frost, non-condensing.
2) Location: Indoors exposed.
3) Required drive enclosure rating: IP20/ NEMA/UL Type 0. NOTE: if a particular manufacturer cannot meet the enclosure rating required, this manufacturer shall provide an enclosure which can meet the requirement, and in addition, provide a cooling system so that the drive can function in the ambient environment specified.
4) Physical Mounting: wall mount.
5) Public Exposure: limited access to unskilled operators.

l. Acceptable Manufacturers
1) Square D Altivar 312 series.
2) No Substitutions.

5. VFD Input Line Reactors
a. Designed for specifically for harmonic filtering service.
b. Maximum Operating Temperature: 40 C.
c. Ambient Humidity operating limits: 0 - 95% non-condensing.
d. Impedance: 5%
e. Basic Construction: copper wire wound on magnetic steel core.

1) Copper windings shall be wire or foil.
2) Core shall be constructed of laminated, grain-oriented, magnetic steel; grade M6 or better.

f. Assembly
1) Completed inductors shall be double-impregnated using 100% solid epoxy resin.
2) All insulation varnish systems shall be rated Class H, 600V.
3) Inductors shall be air-gapped to avoid control point saturation.

g. Quality Assurance
1) Inductors shall be Hi-Potential tested (at 2,500 V, 60 Hz) for one minute both all line-to-line and line-to-ground connections.
2) UL component-recognized and built to comply with UL508A standards.

h. Acceptable Manufacturers
1) Trans-coil Inc. KDR or KLR series.
2) MTE RL-Line Load Reactors.
3) Or Equal.

6. Programmable Logic Controller (PLC) System
a. PLC Assembly shall have at least one analog input and multiple dry contact relay outputs to accept a photocell input and energize corresponding outputs depending on daylight intensity. At minimum, programming shall include operator adjustable set points for each relay output determined by daylight intensity on a scale 0 to 10.
b. At minimum, analog input(s) shall accept +/-10Vdc signal with a minimum impedance of 100kΩ and are allowed to share a common (single-ended). Resolution shall be -32,000 to +32,000.
c. At minimum analog output(s) shall be configurable as 0-10V into impedance >= 5kΩ or 0-20mA into 500 Ω maximum load.
d. Digital inputs shall be field configurable as sinking or sourcing, 24 Vdc maximum supply voltage.
e. Digital outputs shall be dry contact relay type capable of switch voltage of from 5 to 30Vdc or 5 to 250Vac at 2.0A maximum. Up to 4 dry contacts are allowed to be on one common return/neutral; total common current not to exceed 10A.
f. PLC System shall be able to control an additional 7- I/O modules within a limited power budget depending on types of expansion modules used. Control panel layout shall leave at least 12" for future I/O module installations.
g. The PLC shall also provide at least 2 digital communication ports; one for an Electronic Operator Interface (EOI) and one for connection to a PC/laptop for maintenance, programming and troubleshooting.
h. PLC system shall have a modem connection to a standard analog telephone line for remote troubleshooting and maintenance.
i. Electronic Operator Interface (EOI) shall be included and programmed to perform basic operator input and status of controlled equipment. EOI may be monochrome, and be at least 5.5" diagonal size.
j. Entire system as described herein shall be a single source manufacturer and shall be a Siemens Simatic S7-200 series with compatible expansion modules, modem and EOI as described herein.

2.03 REMOTE HOA PANEL

A. Manufacturer: IPM.

B. Refer to drawings for enclosure quantity, location(s), and control information.

C. Enclosure:
   1. Size: 16"x16"x6" or as required per plans indicating location, footprint limitiations with power and control functions as indicated.
   2. Material: NEMA 4X construction.
   3. Door Latches: non-metallic except for hasp and pin which are to be 316L stainless steel.

D. Door-mounted Components:
   1. Push Buttons and Selector Switches:
      a. 22mm hand/off/auto switches in quantity required for control of pool pumps.
         1) Hand position bypasses control and runs continuously.
         2) Auto position runs based on control status only.
      b. 120V maintained switch positions.
   2. Pilot Lights:
      a. Voltage: 120V pilot light to indicate operation.
      b. Colors:
         1) Green: Equipment on/running.
         2) Red: Equipment off.
         3) Orange/Amber: Fault/failure.
   3. Internal Components:
      a. Terminal strips for field connections between HOA panel and associated integrated panel.

2.04 STEAM GENERATOR CONTROL PANEL

A. Manufacturer: IPM.

B. Refer to drawings for enclosure quantity, location(s), and control information.

C. Enclosure:
   1. Size: 18"x18"x6" or as required per plans indicating location, footprint limitiations with power and control functions as indicated.
   2. Material:
      a. Non-Corrosive Environments: bare aluminum NEMA 1 construction.
      b. Corrosive Environments: 16"x16"x6" NEMA 4X construction.

D. Internal Components:
   1. Honeywell thermostat programmed by IPM for dual setpoint temperature control.
      a. Setpoint 1 for solenoid 1: 115 degrees Fahrenheit interlocked with eucalyptus pump.
      b. Setpoint 2 for solenoid 2: 110 degrees Fahrenheit.
   2. Time delay relay programmed by IPM for 15-minute steam demand.
   3. QOU115 circuit breaker for 120V control power.
   4. Terminal strip for field connection of steam generator solenoids, temperature sensor, and pushbutton for steam demand.

E. Loose Components for Field Installation:
   1. Normally closed maintained contact EPO for emergency shutdown of steam generator. Refer to drawings for quantity, location(s), and model number specification.
   2. Normally open momentary contact pushbutton for steam demand. Refer to drawings for quantity and location(s).

2.05 EMERGENCY UNINTERRUPTIBLE POWER SUPPLY (UPS)

A. Description: NFPA 111 Type A, Class 1.5 stored emergency power supply system designed for Level 1 applications and consisting of rectifier/charger unit, storage battery, and solid state inverter with mechanical transfer switch, in one or several enclosures. Provide unit suitable for operating LED lamps without extinguishing lamp on transfer.

B. Ratings: As indicated on the drawings. Unit shall be capable of supplying 100% of the indicated kVA, at 1.0 power factor, for 90 minutes.

2.06 POWER MONITORING EQUIPMENT

A. Customer meter to be as specified on plans, furnished factory installed in MSB as part of the IPM package, meter wiring by Division 26 contractor.

PART 3 EXECUTION

3.01 PREPARATION

A. Protection from in-place conditions until startup.

3.02 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Control Wiring Installation:
   1. Wiring Method: Install all wiring in raceway as specified in 26 05 34 and 26 05 37, unless run in accessible ceiling space.
   2. Bundle, train, and support wiring in enclosures.
   3. Ground equipment.

3.03 FIELD QUALITY CONTROL

A. Provide manufacturer's field representative to set up test, adjust, and program dimming controls.

B. Schedule visual and mechanical inspections and electrical tests with at least seven days advanced notice.

C. Inspect control components for defects and physical damage, testing laboratory labeling, and nameplate compliance with the contract documents.

D. Check tightness of electrical connections with torque wrench calibrated within the previous 6 months. Use manufacturer's recommended torque values.

E. Electrical Tests: Use particular caution when testing devices containing solid-state components. Perform the following according to manufacturer's written instructions:
   1. Continuity tests of circuits.
   2. Operational Tests: Set and operate controls to demonstrate their functions and capabilities in a methodical sequence that cues and reproduces actual operating functions.
      a. Include testing of timing control equipment under conditions that simulate actual operational conditions. Record control settings, operations, cues, and functional observations.

F. Correct deficiencies, make adjustments, and retest. Verify that specified requirements are met.

G. Test labeling: After satisfactory completion of tests and inspection, apply a label to tested components indicating test results, date, and responsible agency and representative.

H. Reports: Written reports of tests and observations. Record defective materials and workmanship and unsatisfactory test results. Record repairs and adjustments.

3.04 CLEANING

A. Cleaning: Clean equipment and devices internally and externally using methods and materials recommended by the manufacturers, and repair damaged finishes.

3.05 DEMONSTRATION

A. Coordinate training for low-voltage, programmable lighting systems.

B. Engage a factory-authorized service representative to train Owner's maintenance personnel as specified below.
   1. Train Owner's maintenance personnel on troubleshooting, servicing, adjusting, and maintaining equipment and schedules. Provide a minimum of two four-hour sessions on separate days for training. Use both classroom training and hands-on exercises.
   2. Training Aid: User the approved final version of the maintenance manual as a training aid.
   3. Schedule training with the Owner, through Architect, with at least seven days advance notice.

3.06 SYSTEM STARTUP

A. Provide manufacturer's field representative to perform systems startup.

B. Prepare and start equipment and systems in accordance with manufacturers' instructions and recommendations.

C. Record basic parameter setup and set points required to operate the drive correctly.

END OF SECTION

This page intentionally left blank

SECTION 26 51 00
INTERIOR LIGHTING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Interior luminaires.

B. Emergency lighting units.

C. Exit signs.

D. LED drivers.

E. Lamps.

F. Luminaire accessories.

1.02 RELATED REQUIREMENTS

A. Section .

B. Section 26 05 37 - Boxes for Electrical Systems.

C. Section .

D. Section 26 05 53 - Identification for Electrical Systems.

E. Section 26 09 23 - Lighting Control Devices.

F. Section 26 27 26 - Wiring Devices.

G. Section 26 56 00 - Exterior Lighting.

1.03 REFERENCE STANDARDS

A. IES LM-63 - Approved Method: IES Standard File Format for the Electronic Transfer of Photometric Data and Related Information; 2019.

B. IES LM-79 - Approved Method: Optical and Electrical Measurements of Solid-State Lighting Products; 2024.

C. IES LM-80 - Approved Method: Measuring Maintenance of Light Output Characteristics of Solid-State Light Sources; 2021.

D. NECA 1 - Standard for Good Workmanship in Electrical Construction; 2023.

E. NECA/IESNA 500 - Standard for Installing Indoor Lighting Systems; 2006.

F. NECA/IESNA 502 - Standard for Installing Industrial Lighting Systems; 2006.

G. NEMA LE 4 - Recessed Luminaires, Ceiling Compatibility; 2023.

H. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

I. NFPA 101 - Life Safety Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

J. UL 924 - Emergency Lighting and Power Equipment; Current Edition, Including All Revisions.

K. UL 1598 - Luminaires; Current Edition, Including All Revisions.

L. UL 8750 - Light Emitting Diode (LED) Equipment for Use in Lighting Products; Current Edition, Including All Revisions.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate the installation of luminaires with mounting surfaces installed under other sections or by others. Coordinate the work with placement of supports, anchors, etc. required for mounting. Coordinate compatibility of luminaires and associated trims with mounting surfaces at installed locations.
2. Coordinate the placement of luminaires with structural members, ductwork, piping, equipment, diffusers, fire suppression system components, and other potential conflicts installed under other sections or by others.
3. Coordinate the placement of exit signs with furniture, equipment, signage or other potential obstructions to visibility installed under other sections or by others.
4. Notify Architect of any conflicts or deviations from Contract Documents to obtain direction prior to proceeding with work.

B. State Approval:
   1. Where required, fixtures shall be listed and approved by the state of California.

1.05 SUBMITTALS

A. See Section 01 33 00 - Submittal Procedures.

B. Failure to promptly submit shop drawings per this specification for scheduling purposes shall not be an acceptable reason for substitution.

C. Submit in booklet form with separate sheets for each fixture, assembled in alphabetical order, and labeled by luminaire type as indicated on drawings.

D. Product Data: Provide manufacturer's standard catalog pages and data sheets including detailed information on luminaire construction, dimensions, ratings, finishes, mounting requirements, listings, service conditions, photometric performance, installed accessories, and ceiling compatibility; include model number nomenclature clearly marked with all proposed features.
   1. LED Luminaires:
      a. Include estimated useful life, calculated based on IES LM-80 test data.
   2. Indicate dimensions and components for each luminaire that is not a standard product of the manufacturer.
   3. Submit dimensioned drawings for linear type suspended fixtures indicating suspension points and feed points, extrusion lengths and lamping. Include wiring diagrams to indicate switching, dimming, and emergency wiring arrangements.
   4. Shop drawings for custom fixtures shall be accurately drawn and dimensioned to indicate all critical design elements of the fixture, including wiring, ballasts (if required), and mounting information.
   5. Provide photometric calculations where luminaires are proposed for substitution upon submittal.

E. Samples:
   1. Provide one sample of each specified luminaire where indicated.
   2. Provide one sample of each custom luminaire upon request.
   3. Provide one sample of each luminaire proposed for substitution upon request.
   4. Provide one sample(s of each product finish illustrating color and texture upon request.

F. Field quality control reports.

G. Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, and installation of product.

H. Operation and Maintenance Data: Instructions for each product including information on replacement parts.

1.06 QUALITY ASSURANCE

A. Comply with requirements of NFPA 70.

B. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

1.07 DELIVERY, STORAGE, AND PROTECTION

A. Receive, handle, and store products according to NECA/IESNA 500 (commercial lighting), NECA/IESNA 502 (industrial lighting), and manufacturer's written instructions.

B. Keep products in original manufacturer's packaging and protect from damage until ready for installation.

1.08 FIELD CONDITIONS

A. Maintain field conditions within manufacturer's required service conditions during and after installation.

1.09 WARRANTY

A. See Section 01 77 00 - Closeout Procedures, for additional warranty requirements.

B. Provide five year manufacturer warranty for all LED luminaires, including drivers.

C. Provide five year full warranty for batteries for emergency lighting units.

D. Provide five year full warranty for batteries for fixture emergency lighting units.

E. Provide five year full warranty for batteries for self-powered exit signs.

PART 2 PRODUCTS

2.01 LUMINAIRE TYPES

A. Furnish products as indicated in luminaire schedule included on the drawings.

B. Basis-of-Design Product: The design for each light fixture is based on the product named.

C. Substitutions: By prior approval.

1. All proposed substitutions (clearly delineated as such) must be submitted in writing for approval by the design professional a minimum of ten working days prior to the bid date and must be made available to all bidders.

2.02 LUMINAIRES

A. Provide products that comply with requirements of NFPA 70.

B. Provide products that are listed and labeled as complying with UL 1598, where applicable.

C. Provide products listed, classified, and labeled as suitable for the purpose intended.

D. Unless otherwise indicated, provide complete luminaires including lamp(s) and all sockets, drivers, reflectors, lenses, housings and other components required to position, energize and protect the lamp and distribute the light.

E. Unless specifically indicated to be excluded, provide all required conduit, boxes, wiring, connectors, hardware, supports, trims, accessories, etc. as necessary for a complete operating system.

F. Provide products suitable to withstand normal handling, installation, and service without any damage, distortion, corrosion, fading, discoloring, etc.

G. Recessed Luminaires:

1. Ceiling Compatibility: Comply with NEMA LE 4.

2. Luminaires Recessed in Insulated Ceilings: Listed and labeled as IC-rated, suitable for direct contact with insulation and combustible materials.
3. Luminaires Recessed in Sloped Ceilings: Provide suitable sloped ceiling adapters.

H. LED Luminaires:
1. Components: UL 8750 recognized or listed as applicable.
2. Tested in accordance with IES LM-79 and IES LM-80.
3. LED Estimated Useful Life: Minimum of 50,000 hours at 70 percent lumen maintenance, calculated based on IES LM-80 test data.
4. References to SSL and/or LED sources shall include the entire solid-state lighting system, including circuitry, LEDs, power supplies, drivers, etc.
5. CRI and color temperature as scheduled in accordance with ANSI C78.377.
6. NEMA.SSL-1 compliant for operational characteristics and electrical safety of SSL power supplies and drivers. ANSI/NEMA C82.77 compliant for maximum allowable harmonic distortion produced by SSL power supplies.

I. LED Tape Lighting Systems: Provide all power supplies, drivers, cables, connectors, channels, covers, mounting accessories, and interfaces as necessary to complete installation.
1. LED Tape - General Requirements:
a. Listed.
b. Designed for field cutting in accordance with listing.

J. Track Lighting Systems: Provide track compatible with specified track heads, with all connectors, power feed fittings, dead ends, hangers and canopies as necessary to complete installation.

K. Luminaires Mounted in Continuous Rows: Provide quantity of units required for length indicated, with all accessories required for joining and aligning.

2.03 EMERGENCY LIGHTING UNITS

A. Description: Emergency lighting units complying with NFPA 101 and all applicable state and local codes, and listed and labeled as complying with UL 924.

B. Operation: Upon interruption of normal power source or brownout condition exceeding 20 percent voltage drop from nominal, solid-state control automatically switches connected lamps to integral battery power for minimum of 90 minutes of rated emergency illumination, and automatically recharges battery upon restoration of normal power source.

C. Battery:
1. Size battery to supply all connected lamps, including emergency remote heads where indicated.

D. Diagnostics: Provide power status indicator light and accessible integral test switch to manually activate emergency operation.

E. Provide low-voltage disconnect to prevent battery damage from deep discharge.

F. Self-Diagnostics: Provide units that self-monitor functionality and automatically perform testing required by NFPA 101 where indicated; provide indicator light(s) to report test and diagnostic status.

G. Accessories:
1. Provide compatible accessory mounting brackets where indicated or required to complete installation.
2. Provide compatible accessory high impact polycarbonate vandal shields where indicated.
3. Provide compatible accessory wire guards where indicated.

4. Where indicated, provide emergency remote heads that are compatible with the emergency lighting unit they are connected to and suitable for the installed location.

2.04 EXIT SIGNS

A. Description: Exit signs complying with NFPA 101 and applicable state and local codes, and listed and labeled as complying with UL 924.
   1. Number of Faces: Single- or double-face as indicated or as required for installed location.
   2. Directional Arrows: As indicated or as required for installed location.
   3. Housings for edge-lit style exit lights shall be recess mounted.

B. Powered Exit Signs: Internally illuminated with LEDs unless otherwise indicated.
   1. Self-Powered Exit Signs:
      a. Operation: Upon interruption of normal power source or brownout condition exceeding 20 percent voltage drop from nominal, solid-state control automatically switches connected lamps to integral battery power for minimum of 90 minutes of rated emergency illumination, and automatically recharges battery upon restoration of normal power source.
      b. Battery: Sealed, maintenance-free, nickel cadmium unless otherwise indicated.
      c. Diagnostics: Provide power status indicator light and accessible integral test switch to manually activate emergency operation.
      d. Provide low-voltage disconnect to prevent battery damage from deep discharge.
      e. Self-Diagnostics: Provide units that self-monitor functionality and automatically perform testing required by NFPA 101 where indicated; provide indicator light(s) to report test and diagnostic status.

C. Self-Luminous Exit Signs: Internally illuminated by tritium gas sealed inside phosphor-lined gas tubes, requiring no electrical power or batteries to operate, and with a service life of 20 years unless otherwise indicated.

D. Photoluminescent Exit Signs: Illuminated with photoluminescent-pigmented material for emergency illumination, activated by ambient light, and requiring no electrical power or batteries to operate.

2.05 LED DRIVERS

A. Manufacturers:
   1. Manufacturer Limitations: Where possible, for each type of luminaire provide drivers produced by a single manufacturer.
   2. Where a specific manufacturer or model is indicated elsewhere in the luminaire schedule or on the drawings, substitutions are not permitted unless explicitly indicated.

B. Dimmable LED Drivers:
   1. Dimming Range: Continuous dimming from 100 percent to 10 percent relative light output unless dimming capability to lower level is indicated, without flicker.
   2. Control Compatibility: Fully compatible with the dimming controls to be installed.
      a. Lighting Controls: See Section 26 09 23.

2.06 LAMPS

A. Lamps - General Requirements:
   1. Unless explicitly excluded, provide new, compatible, operable lamps in each luminaire.
   2. Verify compatibility of specified lamps with luminaires to be installed. Where lamps are not specified, provide lamps per luminaire manufacturer's recommendations.
   3. Minimum Efficiency: Provide lamps complying with all current applicable federal and state lamp efficiency standards.

4. Color Temperature Consistency: Unless otherwise indicated, for each type of lamp furnish products which are consistent in perceived color temperature. Replace lamps that are determined by the Architect to be inconsistent in perceived color temperature.

2.07 ACCESSORIES

A. Provide accessory plaster frames for luminaires recessed in plaster ceilings.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that outlet boxes are installed in proper locations and at proper mounting heights and are properly sized to accommodate conductors in accordance with NFPA 70.

C. Verify that suitable support frames are installed where required.

D. Verify that branch circuit wiring installation is completed, tested, and ready for connection to luminaires.

E. Verify that conditions are satisfactory for installation prior to starting work.

3.02 PREPARATION

A. Provide extension rings to bring outlet boxes flush with finished surface.

B. Clean dirt, debris, plaster, and other foreign materials from outlet boxes.

3.03 INSTALLATION

A. Coordinate locations of outlet boxes provided under Section 26 05 37 as required for installation of luminaires provided under this section.

B. Perform work in accordance with NECA 1 (general workmanship).

C. Install products in accordance with manufacturer's instructions.

D. Install luminaires securely, in a neat and workmanlike manner, as specified in NECA 500 and NECA 502.

E. Provide required support and attachment in accordance with Section .

F. Provide required seismic controls in accordance with Section .

G. Install luminaires plumb and square and aligned with building lines and with adjacent luminaires.

H. Suspended Ceiling Mounted Luminaires:
   1. Do not use ceiling tiles to bear weight of luminaires.
   2. Do not use ceiling support system to bear weight of luminaires unless ceiling support system is certified as suitable to do so.
   3. Secure pendant-mounted luminaires to building structure.
   4. Secure lay-in luminaires to ceiling support channels using listed safety clips at four corners.
   5. In addition to ceiling support wires, provide two galvanized steel safety wire(s), minimum 12 gage, connected from opposing corners of each recessed luminaire to building structure.
   6. See appropriate Division 9 section where suspended grid ceiling is specified for additional requirements.

I. Recessed Luminaires:
   1. Install trims tight to mounting surface with no visible light leakage.

2. Non-IC Rated Luminaires: Maintain required separation from insulation and combustible materials according to listing.
3. Luminaires Recessed in Fire-Rated Ceilings: Install using accessories and firestopping materials to meet regulatory requirements for fire rating.

J. Suspended Luminaires:
1. Unless otherwise indicated, specified mounting heights are to bottom of luminaire.
2. Install using the suspension method indicated, with support lengths and accessories as required for specified mounting height.
3. Install canopies tight to mounting surface.
4. Unless otherwise indicated, support pendants from swivel hangers.

K. Wall-Mounted Luminaires: Unless otherwise indicated, specified mounting heights are to center of luminaire.

L. Install accessories furnished with each luminaire.

M. Bond products and metal accessories to branch circuit equipment grounding conductor.

N. Emergency Lighting Units:
1. Unless otherwise indicated, connect unit to unswitched power from same circuit feeding normal lighting in same room or area. Bypass local switches, contactors, or other lighting controls.

O. Exit Signs:
1. Unless otherwise indicated, connect unit to unswitched power from circuit indicated. Bypass local switches, contactors, or other lighting controls.

P. Remote Drivers: Install in accessible location as indicated or as required to complete installation, using conductors per manufacturer's recommendations not exceeding manufacturer's recommended maximum conductor length to luminaire.

Q. Identify luminaires connected to emergency power system in accordance with Section 26 05 53.

R. Install lamps in each luminaire.

3.04 FIELD QUALITY CONTROL

A. See Section 01 40 00 - Quality Requirements, for additional requirements.

B. Inspect each product for damage and defects.

C. Operate each luminaire after installation and connection to verify proper operation.

D. Test emergency lighting units to verify proper operation upon loss of normal power supply.

E. Correct wiring deficiencies and repair or replace damaged or defective products. Repair or replace excessively noisy ballasts as determined by Architect.

3.05 ADJUSTING

A. Aim and position adjustable luminaires to achieve desired illumination as indicated or as directed by Architect. Secure locking fittings in place.

B. Aim and position adjustable emergency lighting unit lamps to achieve optimum illumination of egress path as required or as directed by Architect or authority having jurisdiction.

C. Exit Signs with Field-Selectable Directional Arrows: Set as indicated or as required to properly designate egress path as directed by Architect or authority having jurisdiction.

3.06 CLEANING

A. Clean surfaces according to NECA 500, NECA 502, and manufacturer's instructions to remove dirt, fingerprints, paint, or other foreign material and restore finishes to match original factory finish.

3.07 CLOSEOUT ACTIVITIES

A. Demonstration: Demonstrate proper operation of luminaires to Architect, and correct deficiencies or make adjustments as directed.

B. Just prior to club opening, replace all lamps that have failed.

3.08 PROTECTION

A. Protect installed luminaires from subsequent construction operations.

END OF SECTION

SECTION 26 56 00
EXTERIOR LIGHTING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Exterior luminaires.

B. LED drivers.

C. Lamps.

D. Poles and accessories.

E. Luminaire accessories.

1.02 RELATED REQUIREMENTS

A. Section 03 30 00 - Cast-in-Place Concrete.

B. Section .

C. Section 26 05 37 - Boxes for Electrical Systems.

D. Section .

E. Section .

F. Section 26 51 00 - Interior Lighting.

1.03 REFERENCE STANDARDS

A. AASHTO LTS - Standard Specifications for Structural Supports for Highway Signs, Luminaires, and Traffic Signals; 2013, with Editorial Revision (2025).

B. IES LM-63 - Approved Method: IES Standard File Format for the Electronic Transfer of Photometric Data and Related Information; 2019.

C. IES LM-79 - Approved Method: Optical and Electrical Measurements of Solid-State Lighting Products; 2024.

D. IES LM-80 - Approved Method: Measuring Maintenance of Light Output Characteristics of Solid-State Light Sources; 2021.

E. NECA 1 - Standard for Good Workmanship in Electrical Construction; 2023.

F. NECA/IESNA 501 - Standard for Installing Exterior Lighting Systems; 2000 (Reaffirmed 2006).

G. NEMA LE 4 - Recessed Luminaires, Ceiling Compatibility; 2023.

H. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

I. UL 1598 - Luminaires; Current Edition, Including All Revisions.

J. UL 8750 - Light Emitting Diode (LED) Equipment for Use in Lighting Products; Current Edition, Including All Revisions.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate placement of poles and associated foundations with utilities, curbs, sidewalks, trees, walls, fences, striping, etc. installed under other sections or by others. Coordinate elevation to obtain specified foundation height.
2. Notify Architect of any conflicts or deviations from Contract Documents to obtain direction prior to proceeding with work.

B. State Approval:

1. Where required, fixtures shall be listed and approved by the state of California.

1.05 SUBMITTALS

A. See Section 01 33 00 - Submittal Procedures.

B. Failure to promptly submit shop drawings per this specification for scheduling purposes shall not be an acceptable reason for substitution.

C. Submit in booklet form with separate sheets for each fixture, assembled in alphabetical order and labeled by luminaire type as indicated on drawings.

D. Product Data: Provide manufacturer's standard catalog pages and data sheets including detailed information on luminaire construction, dimensions, ratings, finishes, mounting requirements, listings, service conditions, photometric performance, weight, effective projected area (EPA), and installed accessories; include model number nomenclature clearly marked with all proposed features.
   1. LED Luminaires:
      a. Include estimated useful life, calculated based on IES LM-80 test data.
   2. Poles: Include information on maximum supported effective projected area (EPA) and weight for the design wind speed.
   3. Indicate dimensions and components for each luminaire that is not a standard product of the manufacturer.
   4. Shop drawings for custom fixtures shall be accurately drawn and dimensioned to indicate all critical design elements of the fixture, including wiring, ballasts (if required), and mounting information.
   5. Provide photometric calculations where luminaires are proposed for substitution upon submittal.
   6. Provide structural calculations for each pole proposed for substitution upon submittal.

E. Samples:
   1. Provide one sample of each specified luminaire where indicated.
   2. Provide one sample of each custom luminaire upon request.
   3. Provide one sample of each luminaire proposed for substitution upon request.
   4. Provide one sample of each product finish illustrating color and texture upon request.

F. Certificates for Poles and Accessories: Manufacturer's documentation that products are suitable for the luminaires to be installed and comply with designated structural design criteria.

G. Field Quality Control Reports.

H. Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, installation, and starting of product.

I. Operation and Maintenance Data: Instructions for each product including information on replacement parts.

J. Project Record Documents: Record actual connections and locations of pole foundations, luminaires, and any pull or junction boxes.

1.06 QUALITY ASSURANCE

A. Comply with requirements of NFPA 70.

B. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Receive, handle, and store products according to NECA/IESNA 501 and manufacturer's written instructions.

B. Keep products in original manufacturer's packaging and protect from damage until ready for installation.

1.08 WARRANTY

A. See Section 01 77 00 - Closeout Procedures, for additional warranty requirements.

B. Provide 3-year manufacturer warranty for all LED luminaires, including drivers.

PART 2 PRODUCTS

2.01 LUMINAIRE TYPES

A. Furnish products as indicated in luminaire schedule included on the drawings.

B. Basis-of-Design Product: The design for each light fixture is based on the product named.

C. Substitutions: By prior approval.
   1. All proposed substitutions (clearly delineated as such) must be submitted in writing for approval by the design professional a minimum of ten working days prior to the bid date and must be made available to all bidders.

2.02 EXTERIOR LUMINAIRES

A. Provide products that comply with requirements of NFPA 70.

B. Provide products that are listed and labeled as complying with UL 1598, where applicable.

C. Provide products listed, classified, and labeled as suitable for the purpose intended.

D. Unless otherwise indicated, provide complete luminaires including lamp(s) and all sockets, drivers, reflectors, lenses, housings and other components required to position, energize and protect the lamp and distribute the light.

E. Unless specifically indicated to be excluded, provide all required conduit, boxes, wiring, connectors, hardware, poles, foundations, supports, trims, accessories, etc. as necessary for a complete operating system.

F. Provide products suitable to withstand normal handling, installation, and service without any damage, distortion, corrosion, fading, discoloring, etc.

G. Provide luminaires listed and labeled as suitable for wet locations unless otherwise indicated.

H. Recessed Luminaires:
   1. Ceiling Compatibility: Comply with NEMA LE 4.
   2. Luminaires Recessed in Insulated Ceilings: Listed and labeled as IC-rated, suitable for direct contact with insulation and combustible materials.
   3. Luminaires Recessed in Sloped Ceilings: Provide suitable sloped ceiling adapters.

I. SSL/LED Luminaires:
   1. Components: UL 8750 recognized or listed as applicable.
   2. Tested in accordance with IES LM-79 and IES LM-80.
   3. LED Estimated Useful Life: Minimum of 50,000 hours at 70 percent lumen maintenance, calculated based on IES LM-80 test data.
   4. References to SSL and/or LED sources shall include the entire solid-state lighting system, including circuitry, LEDs, power supplies, drivers, etc.
   5. CRI and color temperature as scheduled in accordance with ANSI C78.377.

6. NEMA.SSL-1 compliant for operational characteristics and electrical safety of SSL power supplies and drivers. ANSI/NEMA C82.77 compliant for maximum allowable harmonic distortion produced by SSL power supplies.

J. Exposed Hardware: Stainless steel.

2.03 LED DRIVERS

A. Manufacturers:
1. Manufacturer Limitations: Where possible, for each type of luminaire provide ballasts produced by a single manufacturer.
2. Where a specific manufacturer or model is indicated elsewhere in the luminaire schedule or on the drawings, substitutions are not permitted unless explicitly indicated.

B. Dimmable LED Drivers:
1. Dimming Range: Continuous dimming from 100 percent to ten percent relative light output unless dimming capability to lower level is indicated, without flicker.
2. Control Compatibility: Fully compatible with the dimming controls to be installed.

2.04 LAMPS

A. Lamps - General Requirements:
1. Unless explicitly excluded, provide new, compatible, operable lamps in each luminaire.
2. Verify compatibility of specified lamps with luminaires to be installed. Where lamps are not specified, provide lamps per luminaire manufacturer's recommendations.
3. Minimum Efficiency: Provide lamps complying with all current applicable federal and state lamp efficiency standards.
4. Color Temperature Consistency: Unless otherwise indicated, for each type of lamp furnish products which are consistent in perceived color temperature. Replace lamps that are determined by the Architect to be inconsistent in perceived color temperature.

2.05 POLES AND ACCESSORIES

A. All Poles:
1. Provide poles and associated support components suitable for the luminaire(s) and associated supports and accessories to be installed.
2. Structural Design Criteria:
   a. Comply with AASHTO LTS.
   b. Wind Load: Include effective projected area (EPA) of luminaire(s) and associated supports and accessories to be installed.
      1) Design Wind Speed: 120 miles per hour (193 kph), with gust factor of 1.3.
   c. Dead Load: Include weight of proposed luminaire(s) and associated supports and accessories.
   d. Fatigue Design and Vortex Shedding: Nontapered lighting structures shall be designed to resist vortex shedding-induced loads for critical wind velocities less than approximately 65 fps; 45 mph. Except for round tapered poles, for all poles 20 feet in height or higher, provide a factory installed internal vibration dampener designed to resist fatigue caused by vortex shedding induced loads and natural wind gusts in the pole indefinitely without failure. Apply an importance factor of 0.3 for vortex shedding and 0.44 for natural wind gusts.
3. Material: Steel, unless otherwise indicated.
4. Shape: As indicated on drawings.
5. Finish: Match luminaire finish, unless otherwise indicated.
6. Mounting: Install on concrete foundation, height as indicated on the drawings, unless otherwise indicated.

7. Unless otherwise indicated, provide with the following features/accessories:
   a. Top cap.
   b. Handhole minimum 2-1/2 X 5 inches in size.
   c. Anchor bolts with leveling nuts or leveling shims.
   d. Anchor base cover.

B. Metal Poles: Provide ground lug, accessible from handhole or transformer base.

2.06 LUMINAIRE ACCESSORIES

A. Provide accessory plaster frames for luminaires recessed in EIFS ceilings.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that outlet boxes are installed in proper locations and at proper mounting heights and are properly sized to accommodate conductors in accordance with NFPA 70.

C. Verify that suitable support frames are installed where required.

D. Verify that branch circuit wiring installation is completed, tested, and ready for connection to luminaires.

E. Verify that conditions are satisfactory for installation prior to starting work.

3.02 PREPARATION

A. Provide extension rings to bring outlet boxes flush with finished surface.

B. Clean dirt, debris, plaster, and other foreign materials from outlet boxes.

3.03 INSTALLATION

A. Coordinate locations of outlet boxes provided under Section 26 05 37 as required for installation of luminaires provided under this section.

B. Perform work in accordance with NECA 1 (general workmanship).

C. Install products in accordance with manufacturer's instructions.

D. Install luminaires in accordance with NECA/IESNA 501.

E. Provide required support and attachment in accordance with Section .

F. Provide required seismic controls in accordance with Section .

G. Install luminaires plumb and square and aligned with building lines and with adjacent luminaires.

H. Recessed Luminaires:
   1. Install trims tight to mounting surface with no visible light leakage.
   2. Non-IC Rated Luminaires: Maintain required separation from insulation and combustible materials according to listing.

I. Wall-Mounted Luminaires: Unless otherwise indicated, specified mounting heights are to center of luminaire.

J. Pole-Mounted Luminaires:
   1. Foundation-Mounted Poles:
      a. Provide cast-in-place concrete foundations for poles as indicated, in accordance with Section 03 30 00.
         1) Install anchor bolts plumb per template furnished by pole manufacturer.
         2) Position conduits to enter pole shaft.

b. Install foundations plumb.
c. Install poles plumb, using leveling nuts or shims as required to adjust to plumb.
d. Tighten anchor bolt nuts to manufacturer's recommended torque.
e. Install non-shrink grout between pole anchor base and concrete foundation, leaving small channel for condensation drainage.
f. Install anchor base covers or anchor bolt covers as indicated.

2. Grounding:
   a. Bond luminaires, metal accessories, metal poles, and foundation reinforcement to branch circuit equipment grounding conductor.
3. Install separate service conductors, size as indicated on drawings, from each luminaire down to handhole for connection to branch circuit conductors.
4. Install weather resistant GFI duplex receptacle with weatherproof cover as specified in Section 26 27 26 in designated poles.

K. Install accessories furnished with each luminaire.

L. Bond products and metal accessories to branch circuit equipment grounding conductor.

M. Install lamps in each luminaire where required.

3.04 FIELD QUALITY CONTROL

A. See Section 01 40 00 - Quality Requirements, for additional requirements.

B. Inspect each product for damage and defects.

C. Operate each luminaire after installation and connection to verify proper operation.

D. Correct wiring deficiencies and repair or replace damaged or defective products. Repair or replace excessively noisy ballasts as determined by Architect.

3.05 ADJUSTING

A. Aim and position adjustable luminaires to achieve desired illumination as indicated or as directed by Architect. Secure locking fittings in place.

B. Luminaires with Field-Rotatable Optics: Position optics according to manufacturer's instructions to achieve lighting distribution as indicated or as directed by Architect or authority having jurisdiction.

3.06 CLEANING

A. Clean surfaces according to NECA/IESNA 501 and manufacturer's instructions to remove dirt, fingerprints, paint, or other foreign material and restore finishes to match original factory finish.

3.07 CLOSEOUT ACTIVITIES

A. Demonstration: Demonstrate proper operation of luminaires to Architect, and correct deficiencies or make adjustments as directed.

B. Just prior to club opening, replace all lamps that have failed.

3.08 PROTECTION

A. Protect installed luminaires from subsequent construction operations.

END OF SECTION

This page intentionally left blank

SECTION 27 05 10
BASIC REQUIREMENTS FOR COMMUNICATION SYSTEMS

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this section and other Division 27 sections.

1.02 SUMMARY

A. This contractor shall be responsible for providing the complete installation of systems and components specified in all Division 27 sections. Systems included in this technology package include, but are not limited to, the following:
   1. Communications Systems:
      a. Data and voice communications distribution systems.
      b. Satellite and off air antenna video distribution systems.
      c. Audio/Visual systems.
      d. Local Sound Reinforcement systems.

B. Work Provided by Others (not-in-contract):
   1. Unless otherwise noted, rough-in work for cabling, including boxes, conduits, sleeves, and cable tray are provided under Division 26.
   2. Network routers, hubs, switches, UPS's and rack mount power strips are supplied and configured by owner.
   3. Telephone system.
   4. A/V equipment including video displays and projectors.

C. This contractor shall furnish and install all material specified or described herein and as shown on the plans to provide complete and operating systems. Include supporting devices, accessories, and assemblies, including cable supports, cable runways, and any additional rough-in and pathways as necessary or as noted. The contractor shall provide all necessary configuration of each installed system according to the owner' s requirements, unless noted otherwise.

1.03 BASIC INSTRUCTION

A. Before bidding, the Contractor shall diligently study and compare all contract documents and shall promptly report to the Architect/Engineer any discrepancies or deficiencies discovered by or made known to the Contractor.

B. Discrepancies: Whenever a discrepancy or inconsistency exists between related information indicated on the contract drawings and/or specifications (such as differences between product descriptions and catalog numbers) this contractor shall obtain additional clarification and direction from the Architect/Engineer before proceeding. For bidding purposes, this contractor shall include the labor and materials necessary to comply with the alternative that results in the greatest cost to the Contract.

C. Deficiencies: The Contractor and subcontractors shall resolve all known deficiencies and omissions, including non-compliance with applicable codes, with the Architect/Engineer prior to ordering materials or proceeding with the work. Any work performed prior to receipt of instruction from the Architect/Engineer will be done so at the Contractor’s risk.

D. Manufacturer's Catalog Numbers: Product series, model, or catalog numbers, whether indicated on drawings or specifications, shall not be considered complete. This Contractor shall not order any product based solely upon the stated catalog number. Furnish products including accessories and options necessary to match the full product description and its intended purpose and application based on all information available from the contract documents.

1.04 DEFINITIONS

A. Provide: The term "provide" means "to furnish and install, ready for the intended use and in complete operating condition".

B. Install: The term "install" is used to describe operations at project site including the actual "unloading, unpacking, assembly, erection, placing, anchoring, applying, working to dimension, finishing, curing, protecting, cleaning, and similar operations".

C. BICSI: Building Industry Consulting Service International.

D. IT: Information technology.

E. LAN: Local area network.

F. LEC: Local Exchange Carrier.

G. NEC: National Electrical Code (NFPA 70).

H. POT: Point of Termination.

I. RCDD: Registered Communications Distribution Designer.

J. UTP: Unshielded twisted pair.

1.05 CODES, PERMITS, AND FEES

A. Comply with all applicable laws, ordinances, rules, regulations, codes or rulings of governmental units having jurisdiction, as well as standards of the National Fire Protection Association and serving utility requirements.
   1. Electrical installations within IT equipment rooms shall comply with NEC Article 645.
   2. IT equipment rooms containing communications equipment (electronic data processing equipment), such as in the main IT equipment room (Head-End) shall comply also with NEC Article 800.

B. Coordinate all permits, fees, inspections, utility connections and extensions and the like associated with work in each section of this Division. Utility installation charges or fees shall be paid directly by the contractor as part of this contract.

C. The Contractor shall procure all easements, permits, and right-of-ways on behalf of the Owner for all outside plant ducts and pathways. The costs of all easements, permits, and right-of-ways shall be included in the Contractor's bid

D. Installation procedure, methods and conditions shall comply with the latest requirements of the Federal Occupational Safety and Health Act (OSHA).

1.06 CONTRACTOR EXPERIENCE

A. Submit evidence of successful completion of other operational systems of similar size, scope, and complexity upon Owner's request, prior to awarding contract Indicate the following:
   1. Names and locations of two previously installed systems and two most recently installed systems.
   2. Scope description for each system.
   3. Building engineer/technician contact information for each system.
   4. Previous installation experiences.

5. At least two personal references for similar UTP and fiber installations.

B. Installer experience preference: System installer, including all technician journeymen and equipment operators, shall have a minimum of five (5) years of communications cabling experience and prior references of at least 5 projects of similar size, scope, and complexity.

C. Contractor shall be currently licensed to install low-voltage cabling systems in the state where the work is being performed.

D. Contractor shall meet manufacturer's requirements for the provision and installation of specified equipment.

E. The Contractor shall provide a complete list of personnel proposed to perform the work, listing their qualifications and experience with the type and size of work required by the project.

F. The Contractor bidding on communication systems specified herein shall be certified by the product manufacturer to install, service, and warranty the specified product prior to the time of bid and throughout the duration of the installation; or, the bidding contractor shall utilize a sub-contractor(s) certified by the product manufacturer to install, service, and warranty the specified product. Manufacturer certifications shall not be project specific and should be valid for any and all projects completed by the Contractor. The Contractor shall send only qualified personnel to perform work under this section of work.

G. The Contractor shall provide copies of certificates for proof of manufacturer’s training, manufacturer’s certified installer, authorized distributor in the shop drawing submittal and at the request of the engineer to verify compliance with specification prior to recommendations for awarding bid.

H. The Contractor shall provide a complete list of personnel proposed to perform the work, listing their qualifications and experience with the type and size of work required by the project.

1.07 GUARANTEES AND WARRANTIES

A. Guarantee all material, equipment and workmanship for all sections under this Division in writing to be free from defects of material and workmanship for not less than 12 months from the established Date of Substantial Completion, unless specifically noted elsewhere to be longer than one year, as outlined in the General Conditions. Replace without charge any material or equipment proving defective during this period. The guarantee shall include performance of equipment under all conditions of load, installing any additional items of control and/or protective devices as required.

B. All cabling shall be tested and certified. All UTP cabling shall meet the minimum requirements listed in section 27 16 00 - Testing of communications systems, part 3.2.B.

C. Refer to individual sections for additional guarantee and/or warranty requirements.

1.08 SUBMITTALS

A. General: Follow the procedures specified in Division 01 Section “Submittals”. Additional submittal copies may be requested or required by the Architect/Engineer for specific sections of these specifications.

B. No part of the work requiring a submittal shall be commenced until the submittal has been approved by the Architect/Engineer. Any related work performed before approval shall be at Contractor's risk.

C. Qualifications:
1. Submit documentation of qualifications as specified in individual Sections.
2. Submit documentation of experience as specified in this Section.

D. Prior Approvals:
   1. Submit for prior approval on Substitution Request Forms. Only written requests on these forms with complete submittal data will be considered.
   2. Refer to each Section for specific submittal requirements.
   3. Final approval of all equipment and materials shall be determined during shop drawing review. Any changes required due to substitution are entirely the Contractor's responsibility (and therefore shall not add any cost to the contract).

E. Shop Drawings:
   1. Prior to submitting shop drawings, the Contractor shall review them and signify by stamping and initialing, compliance with plans and specifications and for dimensional suitability for each application. If any deviation from the specified criteria for any item of material exists, such deviation shall be stated in writing and incorporated with the shop drawings submittal. Review of shop drawings by the Architect shall not constitute agreement of any deviations from the plans and specifications unless such deviations are as specifically listed as required above, and such deviations accepted. Review of shop drawings by the Architect shall not relieve the Contractor from responsibility for errors or omissions in them.
   2. Prepare and submit all required shop drawings at one time. Unless given approval by the Architect/Engineer, piecemeal submittals will be unacceptable.
   3. The complete shop drawings shall be provided in electronic (PDF) format as well as a printed copy, bound neatly in hard cover, 3-ring binders.

F. Record Documents (“As-Built” Drawings)
   1. Prepare and submit record documents in accordance with the requirements in Division 01 Section “Project Closeout”.
   2. Maintain a contract set of record drawings at the site. Neatly mark all changes and deviations from the original drawings. Use a color that contrasts with the prints. This shall be a separate set of drawings, not used for construction purposes, and shall be kept up-to-date as the job progresses. This set shall be made available for inspection by the Architect/Engineer at the job site and submitted for final review prior to project closeout.

G. Cabling Administration Drawings:
   1. Show building floor plans with cable administration point labeling. Identify labeling convention and show labels for telecommunications closets, backbone pathways and cables, entrance pathways and cables, terminal hardware and positions, horizontal cables, work areas and workstation terminal positions, grounding buses and pathways, and equipment grounding conductors. Follow convention of TIA/EIA-606. Furnish electronic record of all drawings, in the software and format selected by Owner.
   2. See Division 01 Section, “CAD Electronic Media Transfer Agreement” for obtaining AutoCAD files from the Architect and for associated request form and fees.
   3. Submit final cabling administration drawings to Engineer for review prior to posting on wall in Main IT equipment room (Head-End).

H. Maintenance Manuals:
   1. Prepare maintenance manuals in accordance with Division 01 Section "Project Closeout." In addition to the requirements specified in Division 1, include information as required in all Division 27 sections and the following:
      a. Maintenance procedures for routine preventative maintenance and troubleshooting; disassembly, repair, and reassembly; aligning and adjusting instructions.
      b. Parts list.
      c. Servicing instructions and schedules.

d. Manufacturer's printed operating procedures to include start-up, break-in, and routine and normal operating instructions; and summer and winter operating instructions.
e. All applicable warranty certificates and associated documentation.

2. Include copy of Record Documents in Maintenance Manuals.

I. Extra Materials:
1. Submit a signed copy a delivery receipt for spare materials provided, listing each item and its quantity. Differentiate between station cords, patch cords, and various lengths, for example.

1.09 COORDINATION

A. All drawings, specifications and documents for this project shall be taken as a whole. Before undertaking each part of the Work, carefully review and compare all documents pertaining to this project. This contractor shall take into consideration ceiling heights, ceiling types, structural components, mechanical equipment, and other field conditions that may impact the installation and installation costs.

B. Coordinate arrangement, mounting, and support of communications equipment:
1. To allow maximum possible headroom unless specific mounting heights that reduce headroom are indicated.
2. To provide for ease of disconnecting the equipment with minimum interference to other installations.
3. To allow right of way for piping and conduit installed at required slope.
4. So connecting pathways, cables, wireways, cable trays, and busways will be clear of obstructions and of the working and access space of other equipment.
5. In preparation of the contract documents, a reasonable effort has been made to provide layouts based on the selected and specified manufacturers equipment. Since space requirements and equipment arrangement vary according to manufacturer, the final responsibility for initial access and proper fit rests with the Contractor.

C. Coordinate phasing of work with the General Contractor to organize materials and resources to meet the scheduled completion dates indicated.
1. Where the installation of one part of the Work is dependent on the installation of other components, either before or after its own installation, schedule construction activities in the sequence required to obtain the best results. As necessary, prepare dated memoranda and distribute to each party involved, outlining special procedures required for coordination of their Work.

D. Conduct pre-installation conference at project site.

E. Coordinate backbone cable lengths with pathways including underground pathways.

F. Coordinate work with ceiling grid installation by others. Insure that scope of work includes possible cable installation delays and construction coordination with the work of other trades including installed lay in ceilings.

G. Coordinate location of access panels and doors for communications items that are behind finished surfaces or otherwise concealed.

H. Coordinate sleeve selection and application with selection and application of firestopping.
1. Coordinate the installation of firestopping compounds with other trades to facilitate the timely progress of work.

1.10 PROJECT CONDITIONS

A. Environmental Limitations: Do not install cable until construction in spaces is complete and ambient temperature and humidity conditions are maintained as indicated below, in referenced standards and in manufacturer's written instructions.
   1. Temperature: MDF & IDF should be designed to maintain temperatures between range of 64 degrees and 75 degrees Fahrenheit. One air change per hour is required.

PART 2 PRODUCTS

2.01 SLEEVES FOR PATHWAYS AND CABLES

A. Unless otherwise noted, sleeves and pathways are provided under Division 26 (by electrical contractor).

B. Where additional conduits are needed beyond those shown on the drawings to accommodate the installation of systems cabling, this contractor shall include such provisions in this contract. Provide conduit suitable for its application and sized in accordance with the National Electrical Code (40% fill capacity). Install conduit in accordance with industry standards. Holes in masonry shall be made with rotary drills; impact tools are not permitted. Never penetrate through structural members or architectural finishes without prior approval from the architect or engineer. All penetration work shall be patched, sealed, cleaned, and returned to original conditions. Include nylon bushings at conduit ends and firestopping as required wherever building barriers are penetrated. If necessary, this contractor shall hire a qualified contractor to perform this work.

C. This communications contractor is responsible for creating a waterproof seal in and around openings to the building exterior created by or used by the communications contractor. All waterproof sealing materials shall comply with appropriate codes and shall be installed in accordance with manufacturer’s instructions.

PART 3 EXECUTION

3.01 COMMON REQUIREMENTS FOR COMMUNICATIONS INSTALLATION

A. Comply with NECA 1.

B. Headroom Maintenance: If mounting heights or other location criteria are not indicated, arrange and install components and equipment to provide maximum possible headroom consistent with these requirements.

C. Equipment: Install to facilitate service, maintenance, and repair or replacement of components of both communications equipment and other nearby installations. Connect in such a way as to facilitate future disconnecting with minimum interference with other items in the vicinity.

D. Right of Way: Give to piping systems installed at a required slope.

E. The communications contractor shall clean up all debris related to Division 27 work on a regular basis leaving the job site in a clean, safe condition.

F. Ground (grass and soil conditions) disturbed by the installation of buried communications cabling and duct shall be restored to the original condition or better than original condition. Grass, plants, trees, and shrubs shall be restored when damaged; grass shall be seeded or replaced with sod when necessary. The contractor shall be responsible for watering areas of new seed and sod when natural rain is insufficient for good growth.

G. The low voltage contractor is responsible for closing ceiling tiles that they have opened (be mindful of the directional arrows, check with the superintendent for proper orientation).

3.02 FIRESTOPPING

A. Apply firestopping to penetrations of fire-rated floor and wall assemblies for communications installations to restore original fire-resistance rating of assembly. Firestopping materials and installation requirements are specified in Division 07 Section "Penetration Firestopping."

3.03 GROUNDING

A. Grounding Bars: Provided under Division 26.

B. Comply with requirements in Division 26 Section "Grounding and Bonding for Electrical Systems" for grounding conductors and connectors.

C. A licensed electrician shall perform all grounding and bonding.

D. Install grounding according to BICSI TDMM, "Grounding, Bonding, and Electrical Protection" Chapter.

E. Comply with ANSI-J-STD-607-A and TIA-942.

F. Provide permanent and effective equipment grounding/bonding for technology systems equipment. Connections shall be tightened in accordance with the torque values specified in UL Standard 486A.

G. Bond each equipment rack together and to the ground reference point (ground bar) using a green #4 AWG copper conductor.
   1. Make connections using listed compression connectors.
   2. Bond other metallic equipment in IT equipment rooms to the grounding bus/bar, using not smaller than No. 6 AWG equipment grounding conductor.
   3. All metallic raceways, cable runways, ladder racks, cable trays, and other metal objects shall be bonded together and connected to a grounding bus/bar in the equipment room.
   4. Bond the shield of shielded cable to the grounding bus/bar in IT equipment rooms and spaces.
   5. Flooring in MDF should be tiled and anti-static protection shall be taken as required by equipment. The copper ribbon should extend 3ft into flooring and grounded to ground bus bar.

H. The grounding system shall be a complete system including all necessary components, including lock washers, hex nuts, compression lugs, insulators, mounting screws, lugs, and other grounding hardware.

I. Refer to individual Sections for additional requirements.

3.04 IDENTIFICATION

A. Obtain actual room numbers from Owner prior to labeling. Room numbers shown on the contract drawings may not be the final room numbers and therefore shall not be used for labeling. Cabling administration drawings shall indicate actual room numbers, but may indicate both actual room numbers and floor plan number.

B. Use logical and systematic designations for facility’s architectural arrangement. Coordinate labeling schemes with owner prior to implementation.

C. Cable Schedule: Provide documents in 3-ring binder and hang from terminal board next to Cabling Administration Drawings in each equipment room and wiring closet. List incoming and outgoing cables and their designations, origins, and destinations. Furnish an electronic copy of final comprehensive schedules for Project, in software and format acceptable to Owner.

D. Cabling Administration Drawings:

1. Develop Cabling Administration Drawings for system identification, testing, and management. Use unique, alphanumeric designation for each cable and label cable, jacks, connectors, and terminals to which it connects with same designation.
2. Prepare building floor plans with cabling administration-point labeling. Identify labeling convention and show labels for each technology/telecommunications closet (TC-#), backbone pathways and cables, entrance pathways and cables, terminal hardware and positions, horizontal cables, work areas and workstation terminal positions, grounding buses and pathways, and equipment grounding conductors. Follow convention of TIA/EIA-606-A. Furnish electronic record of all drawings, in software and format acceptable to Owner.
3. Post final cabling administration drawings (after review by Engineer) on wall in a prominent location in the Main IT equipment room (Head-End). Provide clear acrylic covering (Plexiglass or equivalent) and attach with screws to a painted plywood terminal board.

E. Final labeling shall include: face of patch panel, cable end behind patch panel, cable end within j-box, and faceplate. All terminations and all cables ends on every system shall be labeled.

F. Labeling shall be in accordance with owner requirements.

G. Refer to individual Sections for additional requirements.

3.05 QUALITY CONTROL

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements listed below.

B. Refer to individual Sections for requirements.

C. Submit test and inspection reports to Engineer for review.

D. Include Original and two (2) copies of warranty documents covering materials, installation, workmanship, and performance.

3.06 CLEANING AND PROTECTION

A. During the progress of the work, keep the premises clean and free of debris. Provide reasonable protection of the system from the normal activities of other workers on site and occupants of the facility.

B. Thoroughly clean all parts of the equipment prior to submittal for substantial completion.

3.07 SYSTEMS ADJUSTMENTS

A. Coordinate any selectable settings, adjustments, or programming with the Owner’s representative prior to final commissioning of systems. Refer to individual Sections for any additional requirements.

3.08 FINAL ACCEPTANCE

A. All project review reports (“punchlists”) submitted by the engineer shall be completed and signed by the Contractor prior to final project acceptance.

B. The Contractor shall schedule and conduct a final project review meeting with the Owner and Engineer to discuss the following items:
1. As-built CAD and PDF drawings must be provided by the low voltage cabling contractor on CD and submitted to LTF IT Telecommunication Engineer. Acceptable CAD format preferred is AutoCAD (DWG).drawings and documentation
2. Test results

3. Warranty and problem resolution procedures
4. Special maintenance procedures
5. A set of T-layer drawings (including bulletins, CCDs and change orders) must be kept and maintained onsite for reference during the construction process.
6. Address any questions of the Owner and Engineer.

C. The Contractor shall complete all additional training for the Owner as specified in other Division 27 specification sections.

SECTION 27 05 36
CABLE TRAYS FOR COMMUNICATIONS SYSTEMS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Metal cable tray systems:
   1. Metal ladder cable tray.
   2. Metal solid-bottom cable tray.
   3. Metal wire mesh/basket cable tray.

1.02 RELATED REQUIREMENTS

A. Section 01 40 00 - Quality Requirements.

B. Section 07 84 00 - Firestopping.

C. Section 26 05 26 - Grounding and Bonding for Electrical Systems.

D. Section 26 05 29 - Hangers and Supports for Electrical Systems.

E. Section 26 05 53 - Identification for Electrical Systems.

F. Section 26 05 48 - Vibration and Seismic Controls for Electrical Systems.

1.03 REFERENCE STANDARDS

A. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process; 2023.

B. NECA 1 - Standard for Good Workmanship in Electrical Construction; 2023.

C. NEMA BI-50016 - Cable Tray Installation Guidelines; 2024.

D. NEMA BI 50015 - Metal Cable Tray Systems; 2024.

E. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Coordinate arrangement of cable tray with structural members, ductwork, piping, equipment and other potential conflicts. Coordinate work to avoid installation of obstructions within cable tray required clearances.
   2. Coordinate arrangement of cable tray with dimensions and clearance requirements of actual products to be installed.
   3. Coordinate work with placement of supports and anchors required for mounting.
   4. Notify of conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

B. Sequencing:
   1. Do not begin installation of cables until installation of associated cable tray run is complete.

1.05 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements for submittal procedures.

B. Product Data: Provide manufacturer's standard catalog pages and data sheets for cable tray system components and accessories. Include dimensions, materials, fabrication details, finishes, and span/load ratings.

1. Catalog and data sheets to be labeled with intended location(s) of use for each cable tray system.

C. Project Record Documents: Record actual routing of cable tray and locations of supports.

D. Seismic Bracing: Submit deferred submittal to AHJ as required for bracing requirements.

1.06 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements listed below.

B. Comply with NFPA 70.

C. Product Evaluation and Listing Organization Qualifications: Organization engaged in evaluation of products and services, including those recognized by OSHA as Nationally Recognized Testing Laboratories (NRTL), and acceptable to authorities having jurisdiction.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store products in accordance with manufacturer's instructions and NEMA BI-50016, except do not store cable tray outdoors without cover as permitted in NEMA BI-50016.

B. Handle products carefully to avoid damage to finish.

PART 2 PRODUCTS

2.01 CABLE TRAY SYSTEM - GENERAL REQUIREMENTS

A. Provide new cable tray system consisting of required components, fittings, supports, and accessories, as necessary for complete system.

B. Provide products listed, classified, and labeled as suitable for purpose intended.

C. Do not use cable tray for applications other than as permitted by NFPA 70 and product listing/classification.

D. Provide cable tray system and associated components suitable for use at indicated span/load ratings under service conditions at installed location.

E. Unless otherwise indicated, specified span/load ratings are based on safety factor of 1.5 and working load only (i.e., no additional concentrated static load), with ratings for metal cable tray systems in accordance with NEMA BI 50015.

F. Unless otherwise indicated, specified load/fill depths and inside widths are nominal values, with values for metal cable tray systems in accordance with NEMA BI 50015 including applicable allowable tolerances.

2.02 METAL CABLE TRAY SYSTEMS

A. Manufacturers:
   1. Basis of Design: Cablofil, a brand of Legrand North America, Inc: www.legrand.us/cablofil/#sle.
   2. Substitutions: See Section 01 60 00 - Product Requirements.
   3. Source Limitations: Furnish cable tray system and associated components and accessories produced by single manufacturer and obtained from single supplier.

B. Comply with NEMA BI 50015.

C. Material/Finishes:
   1. Zinc Electroplated Steel: Comply with ASTM B633.

2. Mill-Galvanized Before Fabrication (Pre-Galvanized) Steel: Comply with ASTM A653/A653M, G90 coating.

D. Metal Ladder Cable Tray:
1. Location: MDF or where indicated on drawings.
2. Material: Mill-galvanized before fabrication (pre-galvanized) steel.
3. Rung Spacing: 9 inches (229 mm) on center for straight lengths.
4. Inside Width: 12 inches (305 mm).
5. Inside Radius of Fittings: 12 inches (305 mm).

E. Metal Solid-Bottom Cable Tray:
1. Location: Customer facing areas with exposed structure.
2. Material: Mill-galvanized before fabrication (pre-galvanized) steel.
3. Bottom Type: Flat..
4. Load/Fill Depth: As indicated on drawings.
5. Inside Width: As indicated on drawings.
6. Inside Radius of Fittings: 12 inches (305 mm).
7. Covers: Solid flat flanged.

F. Metal Wire Mesh/Basket Cable Tray:
1. Location: Customer facing areas with ceilings, back-of-house areas with exposed structure.
2. Material: Zinc-electroplated steel or mill-galvanized before fabrication (pre-galvanized) steel.
3. Tray Depth: As indicated on drawings.
4. Mesh Spacing: 2 by 4 inches (51 by 102 mm).
5. Tray Width: As indicated on drawings.
6. Inside Radius of Fittings: 12 inches (305 mm).
a. Field fabricate fittings in accordance with manufacturer's instructions, using only manufacturer-approved connectors classified for bonding.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that work likely to damage cable tray system has been completed.

B. Verify field measurements.

C. Verify dimensions and span/load ratings of cable tray system components.

D. Verify that mounting surfaces are ready to receive cable tray and associated supports.

E. Verify that conditions are satisfactory for installation prior to starting work.

3.02 INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. Install cable tray system in accordance with the following. Where requirements differ, comply with most stringent.
1. NECA 1 (general workmanship).
2. NEMA BI-50016 (cable tray).

C. Unless otherwise indicated, arrange cable tray to be parallel or perpendicular to building lines.

D. Arrange cable tray to provide required clearances and maintain cable access.

E. Install cable tray plumb and level, with sections aligned and with horizontal runs at specified elevation.

F. Cable Tray Movement Provisions:
   1. Provide expansion fittings where cable tray is subject to movement, including but not limited to:
      a. Where cable tray crosses structural joints intended for expansion.
      b. Long straight cable tray runs in accordance with NEMA BI-50016.
   2. Use expansion guides in lieu of hold-down clamps where prescribed in NEMA BI-50016.
   3. Set gaps for expansion fittings in accordance with NEMA BI-50016.

G. Cable Provisions:
   1. Use fixed barrier strips to maintain separation of cables as indicated and as required by NFPA 70.
   2. Use drop-out fittings or bushings where cables exit cable tray as required to maintain minimum cable bending radius.
   3. Use cable support fittings for long vertical cable tray runs with heavy cables.

H. Provide end closures at unconnected ends of cable tray runs.

I. Cable Tray Support:
   1. Use manufacturer's recommended hangers and supports, located in accordance with NEMA BI-50016, BICSI ITSIMM, and manufacturer's requirements, but not exceeding specified span unless otherwise approved by Engineer. Provide required support and attachment where not furnished by cable tray manufacturer.
   2. Provide independent support from building structure. Do not provide support from piping, ductwork, or other systems.

J. Grounding and Bonding Requirements:
   1. Install cable tray grounding in accordance with the following. Where requirements differ, comply with the most stringent.
      a. NEMA BI-50016 (cable tray).
   2. Metal Cable Tray Systems: Use suitable bonding jumpers or classified cable tray connectors to provide electrical continuity. Do not use classified cable tray connectors where cable tray sections have been modified, such as being bent, cut, or reshaped.

K. Penetrations: Install firestopping to preserve fire resistance rating of building elements.

L. Install cable tray covers where indicated.

3.03 FIELD QUALITY CONTROL

A. See Section 01 40 00 - Quality Requirements for additional requirements.

B. Inspect cable tray system for damage and defects.

C. Repair cuts and abrasions in galvanized finishes using zinc-rich paint recommended by manufacturer. Replace components that exhibit signs of corrosion.

D. Correct deficiencies and replace damaged or defective cable tray system components.

3.04 ADJUSTING

A. Adjust tightness of mechanical connections to manufacturer's recommended torque settings.

3.05 CLEANING

A. Remove dirt and debris from cable tray.

B. Clean exposed surfaces to remove dirt, paint, or other foreign material and restore to match original factory finish.

3.06 PROTECTION

A. Protect cable tray system from subsequent construction operations.

END OF SECTION

This page intentionally left blank

SECTION 27 08 00
COMMISSIONING OF COMMUNICATIONS SYSTEMS

PART 1 GENERAL

1.01 SUMMARY

A. This section includes specific requirements that apply to the implementation of the Commissioning Process and this Division Contractors' participation in this process. This section details the project specific equipment and systems that are included in the Commissioning Process. For general descriptions and responsibilities, refer to SECTION 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

1.02 RELATED DOCUMENTS

A. The Owner's Project Requirements (OPR) document.

B. The Basis of Design (BoD) document.

C. The Project Commissioning Plan (CxP) document.

D. ASHRAE Standard 202-2013 - Commissioning Process for Buildings and Systems.

E. LEED v4 for Building Design and Construction.

1.03 RELATED SECTIONS

A. SECTION 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS

B. SECTION 07 08 00 - COMMISSIONING OF THERMAL AND MOISTURE PROTECTION

C. SECTION 08 08 00 - COMMISSIONING OF OPENINGS

D. SECTION 11 08 00 - COMMISSIONING OF EQUIPMENT

E. SECTION 13 08 00 - COMMISSIONING OF SPECIAL CONSTRUCTION

F. SECTION 14 08 00 - COMMISSIONING OF CONVEYING SYSTEMS

G. SECTION 21 08 00 - COMMISSIONING OF FIRE SUPPRESSION SYSTEMS

H. SECTION 22 08 00 - COMMISSIONING OF PLUMBING SYSTEMS

I. SECTION 23 08 00 - COMMISSIONING OF MECHANICAL SYSTEMS

J. SECTION 25 08 00 - COMMISSIONING OF INTEGRATED AUTOMATION SYSTEMS

K. SECTION 26 08 00 - COMMISSIONING OF ELECTRICAL SYSTEMS

L. SECTION 28 08 00 - COMMISSIONING OF SAFETY AND SECURITY SYSTEMS

M. SECTION 33 08 00 - COMMISSIONING OF UTILITIES

1.04 DEFINITIONS

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

1.05 RESPONSIBILITIES

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

PART 2 PRODUCTS

2.01 NO PRODUCTS SUPPLIED

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

B. Contractors and/or Vendors shall provide the specialty testing equipment necessary to fulfill the functional testing requirements, for the duration of the testing period.

PART 3 EXECUTION

3.01 GENERAL

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.02 MEETINGS

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.03 SYSTEM START-UP

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.04 PRE-FUNCTIONAL CHECKLISTS

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.05 FUNCTIONAL PERFORMANCE TESTING

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.06 TRAINING

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.07 SYSTEMS TO BE COMMISSIONED

A. GENERAL
   1. Commissioning specifications supplement the requirements of individual specifications sections but shall not be interpreted to replace or diminish the specified scope of any individual section.
   2. For all systems listed below, Division Contractor shall comply with all commissioning requirements specified.

B. APPLICABLE SYSTEMS
   1. Identification for Communications Systems
   2. Ambient Sound Distribution and Masking System
   3. Audio/Visual Systems and Displays
   4. Broadband Television Distribution System
   5. Video Surveillance
   6. Area of Refuge/Rescue Assistance Systems

END OF SECTION

SECTION 27 11 00
COMMUNICATIONS EQUIPMENT ROOM FITTINGS AND PATHWAYS

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SECTION INCLUDES

1.03 DEFINITIONS

A. BICSI: Building Industry Consulting Service International.

B. Cable Runway: A fabricated structure consisting of a one-piece, ventilated-bottom or solid-bottom channel.

C. LAN: Local area network.

D. RCDD: Registered Communications Distribution Designer.

E. LEC: Local Exchange Carrier.

1.04 SUBMITTALS

A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for equipment racks and cabinets. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
   1. Submit data for each of the following components:
      a. Equipment racks.
      b. Cable runway.
      c. Horizontal and vertical wire management.
      d. J-hooks, D-rings, lacing bars, tie-wraps.

B. Shop Drawings: For communications equipment room fittings. Include plans, elevations, sections, details, and attachments to other work.
   1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   2. Equipment Racks and Cabinets: Include workspace requirements and access for cable connections.
   3. Cable runway layout in equipment rooms, showing routing to scale, with relationship between the tray and adjacent structural, electrical, and mechanical elements. Include the following:
      a. Vertical and horizontal offsets and transitions.
      b. Clearances for access above and to the sides of cable runway.
      c. Vertical elevation of cable runways above the floor or bottom of ceiling structure.
      d. Load calculations to show dead and live loads as not exceeding the manufacturer's ratings for the cable runway and its support elements.

1.05 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements listed below.

B. Installer Qualifications: Cabling Installer must have personnel certified by BICSI on staff.

1. Lead Cable Installer must have five years of communications cabling experience and prior references of at least five projects of similar size, scope and complexity.
2. Installation Supervision: Installation shall be under the direct supervision of a Senior Technician or Level 2 Installer (or equivalent), who shall always be present when work of this section is performed at project site.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

D. Telecommunications Pathways and Spaces: Comply with TIA/EIA-569-A.

E.

F. Grounding: Comply with ANSI-J-STD-607-A.

1.06 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install equipment frames and cable trays until spaces are enclosed and weathertight, wet work in spaces is complete and dry, and work above ceilings is complete.

1.07 COORDINATION

A. Coordinate layout and installation of communications equipment with Owner's telecommunications and LAN equipment and service suppliers. Coordinate service entrance arrangement with LEC.
1. Meet jointly with telecommunications and LAN equipment suppliers, LEC representatives, and Owner to exchange information and agree on details of equipment arrangements and installation interfaces.
2. Record agreements reached in meetings and distribute to other participants.
3. Adjust arrangements and locations of distribution frames, cross-connects, and patch panels in equipment rooms to accommodate and optimize arrangement and space requirements of telephone switch and LAN equipment.
4. Adjust arrangements and locations of equipment with distribution frames, cross-connects, and patch panels of cabling systems of other communications, electronic safety and security, and related systems that share space in the equipment room.

B. Coordinate location of power raceways and receptacles with locations of communications equipment requiring electrical power to operate.

PART 2 PRODUCTS

2.01 PATHWAYS

A. General Requirements: Comply with TIA/EIA-569-A.

B. J-hooks: Steel, UL listed, ultimate static load limit 50 lbs. minimum. Wide base, beveled edges. Rated to support Category 6 cables, and optical fiber cables. Integral Velcro strap. If required, assemble to manufacturer recommended specialty fasteners including beam clips, flange clips, drop wire/rod, C and Z purlin clips.
1. Provide products manufactured by one of the following:
   a. Chatsworth Products (CPI) # 31422-801 series.
   b. Caddy by Erico, Inc.
   c. B-line

C. Provide plenum rated velcro straps, length and strength as required to organize and bundle cables. Vinyl tie straps are prohibited throughout. Do not use vinyl to temporarily organize cables.

D. Existing building structure may be used to support cabling, if the structural members are smooth, free of burrs, and have adequate surface area to prevent deforming of cable jacket. Bundle cables with Velcro when utilizing existing structure for support. Coordinate with other trades for locations.

E. Cable Runways in Equipment Rooms:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following or approved equal:
      a. Cablofil Inc.
      b. Chatsworth Products, Inc. (CPI)
      c. CommScope
      d. Cooper B-Line, Inc.
      e. GS Metals Corp.
      f. Hoffman (a Pentair Company).
   2. Cable Runway Materials: Tubular steel cable runways made of 3/8-inch” x 1-1/2-inch x 0.065 wall rectangular welded sections, with welded cross members every 12-inches. Includes standard manufactured 90-degree sweeps, horizontal and vertical bends, cable drop-outs, mounting hardware, brackets and assemblies which shall be equivalent to owner preferred solutions, or approved equal in this section.
      a. 12" wide ladder rack. Black in color. CommScope Part #: CR-SLR-1OL12W.
      b. Wall angle support kit. Black in color. CommScope Part #: CR6-12WRSK.
      c. Four T-junction ladder brackets. CommScope Part #: CRTJSK.
      d. Butt-splice ladder clamps. CommScope Part #: CRBSK.
      e. Two ladder rack protective end caps. CommScope Part #: CRPECK.
      f. Cable runway 90 degree radius flat bend. CommScope Part #: CR90FCB-12W.
      g. Cable runway, rung drop out. CommScope Part #: CRDK-12W
      h. Runway to rack mounting kit. CommScope Part #: CRR2RRMK.

F. Conduit and Boxes: Provided under Division 26 (by electrical contractor), unless specifically noted otherwise. Where additional conduit and boxes are needed to comply with these specifications and drawings, this Contractor shall comply with requirements in Division 26 Section "Raceway and Boxes for Electrical Systems." Flexible metal conduit shall not be used.

2.02 BACKBOARDS

A. Backboards (Terminal Boards):
   1. ¾” fire rated plywood, painted to match adjacent finishes, with the fire rating stamp on each piece remaining visible (unpainted).

2.03 EQUIPMENT FRAMES/RACKS/CABINETS

A. Manufacturers: Subject to compliance with requirements, provide the following product or approved equal:
   1. Hoffman (a Pentair Company).

B. Open Four-Post Adjustable Frame Requirements:
   1. Freestanding, steel units designed for rack mounted server support and coordinated with dimensions of units to be supported.
   2. Module Dimension: Width compatible with EIA 310 standard, 19-inch (480-mm) panel mounting.
   3. Rack Height: Approximately 96 inches (2130 mm), providing a mounting space of 51 rack units (1 RU = 1¾”). Each mounting space shall be marked and numbered on the mounting channel.

4. Finish: Manufacturer's standard black, baked-polyester powder coat.
5. Cable Management:
   a. Vertical wire management devices: Approximately 6 or 10 inches wide as indicated by 4 inches deep double-sided, mounted either side of vertical rack frames. Provide with removable front and rear covers. Provide two (2) wire retainers for each 12 inches of duct. Basis of design: Hoffman # DV10D8 / DV06D8.
   b. Horizontal wire management devices: Horizontal distribution channel front only. Provide slotted wall wiring duct with hinged metal cover. 2 RMU tall by 8” deep. Basis of Design: Panduit # NCMHAEF2.
6. When assembled with top and bottom pans and angles, equipment-mounting channels will be spaced to allow attachment of 19” EIA rack-mount equipment.
7. Grounding lug.
8. Anchor to floor with four bolts. Anchor to wall with ladder rack.
9. Rack construction method shall ensure an electrically bonded structure for ease of grounding.
10. Alternating hole-pattern: 5/8” – 5/8” – 1/2”, compatible with EIA 1-1/4” – 1-1/2” alternating hole-patterns.
11. Quantities of Mounting Screws: Quantity needed to mount equipment plus 12 spare screws per rack.
12. Basis of Design: Hoffman E4DR19FM51U-96.00 x 20.25.

C. Swing Gate Wall Rack:
1. Wall mounted, extruded aluminum units designed for telecommunications terminal support and coordinated with dimensions of units to be supported.
2. Module Dimension: Width compatible with EIA 310 standard, 19-inch panel mounting.
3. Rack Height: Provide a mounting space of 25 rack units (1 RU = 1¾”). Each mounting space shall be marked and numbered on the mounting channel.
4. Finish: Manufacturer's standard black, baked-polyester powder coat.
5. Alternating hole-pattern: 5/8” – 5/8” – 1/2”, compatible with EIA 1-1/4” – 1-1/2” alternating hole-patterns.
6. Quantities of Mounting Screws: Quantity needed to mount equipment plus 12 spare screws per rack.
7. Grounding lug.
8. Basis of Design: Hoffman RW25-18
9. Dual hinges open to right or left stopping in 90-degree position.

2.04 UNDERGROUND DUCTS AND RACEWAYS FOR COMMUNICATIONS SYSTEMS AND SAFETY MEASURES

A. Removing Trench Duct Cover Plates:
1. Remove trench duct covers with suction cups lifter, Legrand part #485 or equivalent. Do not use screwdrivers.
2. When heavy material or equipment loads will be placed on or moved over the duct system, install temporary planking that will transfer loads to adjacent concrete

B. Trench Duct Safety:
1. A barricade must be placed a minimum of 6 feet around the opening of the Trench Duct.
2. A barricade could be made from wood with top rail of 42” AFF and middle rail of 21” AFF. Caution floor 36” safety cones with Danger Keep Out (red) tape could be used as well.
3. “Danger Due To” signs must be posted around barricade.
4. Communicate all safety barricades with superintendent.

2.05 GROUNDING

A. Comply with requirements in Division 26 Section "Grounding and Bonding for Electrical Systems." for grounding conductors and connectors.

B. Comply with ANSI-J-STD-607-A.

2.06 LABELING

A. Comply with TIA/EIA-606-A and UL 969 for a system of labeling materials, including label stocks, laminating adhesives, and inks used by label printers.

PART 3 EXECUTION

3.01 EQUIPMENT AND PATHWAYS

A. Entrance pathways shall comply with Division 26 Section "Raceway and Boxes for Electrical Systems."

B. Comply with NECA 1.

C. Comply with BICSI TDMM for layout and installation of communications equipment rooms.

D. Cable Runways in Equipment Rooms: Comply with NEMA VE 2 and TIA/EIA-569-A-7.

E. Bundle, lace, and train conductors and cables to terminal points without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.

F. Cable Supports shall be installed at intervals not exceeding 5' and shall be installed directly to beams, ceiling structure, or walls independent of other trades anchoring/hanging systems; furnish and install all required fasteners and anchoring equipment for cable support system. Install cable supports in accordance with manufacture manufactures fill capacities and per NEC requirements.

G. The communications cabling contractor shall verify bushings have been installed on all conduit ends and conduit sleeves, and provide bushings as required, prior to installing communications cabling to avoid damaging cable sheathing.

3.02 GROUNDING

A. Install grounding according to BICSI TDMM, "Grounding, Bonding, and Electrical Protection" Chapter.

B. Comply with ANSI-J-STD-607-A.

C. Refer to Division 27 Section “Basic Requirements for Technology Systems” for additional requirements.

3.03 BACKBOARDS

A. Provide ¾” fire rated plywood installed the full length of wall behind data equipment racks, A/V cabinet, and along the same wall as demarcation; 60 days before grand opening date.

3.04 IDENTIFICATION

A. Identify system components, cabling, and equipment complying with TIA/EIA-606-A. Comply with requirements in Division 26 Section "Identification for Electrical Systems."

B. Label each equipment rack with its technology closet number at top (TC1, TC2, TC3, etc. depending upon its location).

C. See Division 27 Section "Communications Horizontal Cabling" for additional identification requirements.

D. Labels shall be preprinted or computer-printed type.

END OF SECTION

SECTION 27 12 00
IDENTIFICATION FOR COMMUNICATIONS SYSTEMS

PART 1 GENERAL

1.01 SUMMARY

A. This section covers the identification and labeling for all Division 27 communications systems.

B. Identification and labeling for communications shall conform to ANSI/TIA/EIA 606 standards, labeling requirements specified herein and as indicated on detail drawings.

1.02 SUBMITTALS

A. Included with the shop drawing submittals, the Contractor shall provide a sample of all label types and labeling methods planned for use on the project. The labeling sample submittal shall include the following items:
   1. Labels attached to an 8½x11 sheet of paper with a written description of each label and the intended use for each label
   2. Provide one sample of custom style faceplates including engraved labeling
   3. Indicate the labeling method and labeling scheme intended for identifying both end of cables (on cabling sheathing).

PART 2 PRODUCTS

2.01 NOT USED

PART 3 EXECUTION

3.01 GENERAL

A. Labels shall be machine generated (unless other methods are specifically indicated) and shall be made with the Brady TLS 2200 thermal labeling system or approved equal labeling system. Labels shall be a permanent polyester material clear in color (or color matching/near color of material affixed to label) with label lettering black in color (or of a contrasting color; i.e., white letters on black label when label is placed on black surface).

B. Surfaces shall be cleaned before attaching labels. All labels shall be attached firmly and vertically plumb on equipment, faceplates, patch panels, etc.

C. The Engineer and Owner shall approve the Labeling scheme prior to the installation of any cabling.

D. All labeling of cables, equipment, and components shall be included in as-built documentation, floor plan drawings, and schematic diagrams.

3.02 LABELING OF CABLES

A. All structured cables (horizontal and backbone) shall be labeled at both ends within 3” of cable termination point. Where voice backbone cables extend behind termination blocks, cable labels shall be places at a location on the cable where the labels are visible from the front of the termination blocks.

B. Labels shall have an adhesive backing and shall wrap completely around the circumference of the cable sheathing. Label and lettering sizes shall be of appropriate size for the varying cable sizes.

C. All of the Cat 6 Jacks within the club are within specific Emergency 911 Zones (e.911). These zones are in place so that calls to 911 originate from a general area of the club that will give the first responders more detailed information about the location within the club that the emergency is taking place (or was reported). It will provide the first responders with information like “Life Time, Indoor Pool, and Main Entrance” for example.

D. The cabling within the club has been installed in a pattern that allows for growth or the installation of additional drops in the future without creating a messy cabling or numbering scheme. Each e.911 zone within the club terminates onto a patch panel(s) dedicated to that zone. For each zone, cables are terminated onto 48 port Patch Panels, even if there are less than 48 jacks in the zone. The numbering from panel to panel allows for jacks to be added to a zone at a later date without throwing non-sequential jack numbers into a zone. Because of this, there are gaps in the jack numbers installed within the club, as the entire jack numbers within a zone have been reserved for that zone.

3.03 LABELING OF EQUIPMENT RACKS AND TERMINATION HARDWARE

A. All communications equipment racks, cabinets, fiber enclosures, and termination hardware shall be clearly labeled at the top, left-hand corner of the equipment.

B. Equipment Racks and Cabinets shall have 3/4” to 1” high lettering and shall be labeled with the telecommunications room number followed by an alphanumeric character in sequence for each rack/cabinet; labeling scheme shall match existing.

C. Fiber Enclosures shall have 3/8” to 1/2” high lettering and shall be labeled with the telecommunications room number followed by an alphanumeric character of the rack/cabinet and the enclosure number; labeling scheme shall match existing. Additionally, each strand of fiber shall be identified with the termination location of the opposite end and the fiber position number on the outside (or inside) front cover and top, left-hand corner of the enclosure under the enclosure label.

D. Patch Panels shall have 3/8” to 1/2” high lettering and shall be labeled with the telecommunications room number followed by an alphanumeric character of the rack/cabinet and the patch panel number; labeling scheme shall match existing utilizing resident unit room numbers.

E. Voice Termination Blocks shall have voice backbone cable pairs labeled starting with V001 starting at the main communications room and continuing sequentially and matching existing labeling scheme.

3.04 LABELING OF FACEPLATES

A. Work Area Outlets shall have 3/16” high lettering with the labeling method as indicated in Specifications Section 271543 and on detail drawings. Voice and data outlets shall be identified utilizing resident unit room number matching existing labeling scheme. The contractor shall terminate all cabling in a sequential method.

END OF SECTION

SECTION 27 12 50
OPERATION, MAINTENANCE, AND WARRANTIES FOR COMMUNICATIONS SYSTEMS

PART 1 GENERAL

1.01 SUMMARY

A. This section describes the general operation, maintenance, and warranty requirements relating to all Division 27 systems.

B. This section will also cover any special training requirements the Contractor is required to provide to the Owner.

1.02 GENERAL COMMUNICATIONS SYSTEMS OPERATION AND MAINTENANCE REQUIREMENTS

A. All Communications Systems shall be demonstrated to be operation to the Owner and Engineer by documented test results and/or actual performance demonstrations of installed components. Systems shall perform at or beyond levels described in this section or other Division 27 sections.

B. Structured Cabling shall perform at or beyond levels required to obtain the specified connectivity hardware manufacturer's applications assurance warranties and as required by Section 27 08 00 (Testing of Communications Systems).

1.03 COMMUNICATION SYSTEM WARRANTIES

A. All Communication Systems shall include a one-year workmanship warranty from the Contractor. The workmanship warranty will start at the Substantial Completion Date which is the date mutually agreed upon between by the Owner, Contract, and Architect/Engineer; A.I.A. form G704 (Certificate of Substantial Completion) will document this date. The Contractor's workmanship warranty shall provide corrective action, at no cost to the Owner and in a timely manner, for instances where products are found to be defective, poor installation practices have been discovered, specified work was found to be incomplete, or communications systems are unable to perform properly on the cabling systems.

B. Extended and Special Manufactures Warranties and/or Service Agreements will be required as described below for the following systems or system components.
   1. Category 6 Cabling, Connectivity Hardware, and Patch Cables shall be covered by a warranty offered by the connectivity hardware manufacturer; this warranty shall provide coverage if the cabling system fails to perform under any of the following applications:
      a. 10BaseT, 100BaseT, or 1000BaseT
      b. 155/622 Mbps ATM
      c. Voice-Over-IP (analog or digital)
      d. 100 Mbps TP-TMD
      e. Analog and Digital (Baseband/Broadband) Video
      f. The application assurance warranty shall be structured in a manner that the Contractor providing corrective services will be reimbursed by the warranty provider when the manufacturer's warranty requirements have been met. The Contractor shall register the cabling system with the connectivity hardware manufacturer to obtain the warranty for the Owner and include the approved warranty certificate in the final as-built records. The Owner will be responsible for adhering to the warranty stipulations if they should desire to continue receiving applications assurance warranty coverage.

PART 2 PRODUCTS

2.01 NOT USED (REFER TO OTHER DIVISION 27 SECTIONS)

PART 3 EXECUTION

3.01 GENERAL OPERATION, MAINTENANCE AND WARRANTY DOCUMENTATION REQUIREMENTS

A. System Operation Manuals for all system components shall be provided to the Owner and included with the as-built documentation. 3-ring binders with all documentation hole punched, neatly, organized, and index tabbed shall be provided

B. Manufacture & Extended Warranties for all system components shall be provided to the Owner and included with the as-built documentation. 3-ring binders with all documentation hole-punched, neatly, organized, and index tabbed shall be provided.

3.02 COMMUNICATIONS SYSTEMS TRAINING

A. Structured Cabling System Training shall be reviewed by the Contractor in a final project close-out meeting with the Engineer and Owner's representatives. The training on the structured cabling system shall include, but not limited to, the following items:
   1. Review of the distribution and labeling method schemes
   2. Review of patch panel and rack layouts
   3. Review of as-built drawings and documentation
   4. Explanation of test results and data
   5. Review of Engineer's Final Project Review Report with discussion of resolutions for any outstanding items
   6. Explanation of Quality Assurance Warranties, 1-Year workmanship warranty, and any other extended warranties
   7. Discussion of future problem resolution procedures
   8. The Contractor shall provide a written outline of the meeting including important contact information (i.e., phone numbers and contact personal for problem resolution).

END OF SECTION

SECTION 27 13 00
STRUCTURED CABLING GENERAL REQUIREMENTS

PART 1 GENERAL

1.01 SUMMARY

A. This section covers general installation practices for all Division 27 series communications cabling and equipment products.

B. All work specified under Division 27 series sections shall follow installation practices described herein and all guidelines as established by the following codes and standards:
   1. ANSI/EIA/TIA-568-C.0 and C.1 (Commercial Building Telecommunications Cabling Standard – General Requirements)
   2. ANSI/EIA/TIA-568-C.2 (Commercial Building Telecommunications Cabling Standard – Balanced Twisted-Pair)
   3. ANSI/EIA/TIA-568-C.3 (Optical Fiber Cabling Components Standard)
   4. ANSI/NECA/BICSI-568 (Standard for Installing Commercial Building Telecommunications Cabling)
   5. NFPA 70 (National Electrical Code)
   6. OSHA Regulations
   7. All addenda to the codes, standards, and regulations lists above shall be applicable.

1.02 OVERVIEW OF STRUCTURED CABLING WORK

A. The structured cabling work includes all cabling and components required for the voice and data communications systems.

B. Other systems, including CCTV, TV, Audio-Video, Security, Paging, Intercom, or other smart building systems may utilize portions of the structured cabling system. Should other systems need special structured cabling requirements, specific reference will be made in other specification sections and/or on drawings.

PART 2 PRODUCTS

2.01 NOT USED

PART 3 EXECUTION

3.01 GENERAL

A. All cable, equipment, and components shall be installed in accordance with manufacturer’s written instructions, in compliance with NEC, and in accordance with industry standard practices.

B. All equipment shall be installed in a neat, professional manner, always vertically plumb and securely fastened.

C. Equipment and cable colors shall be consistent throughout the entire project unless specifically noted otherwise. In example, if horizontal data UTP cable is specified as blue, then blue cable shall be used throughout the entire project; or, if equipment racks are specified as black, then black racks, black rack mounting screws, and black cable mangers shall be used throughout the entire project.

D. All equipment racks/cabinets, cable tray, cable runways, and metallic sheathing on cables shall be bonded and grounded to the communications grounding system; refer to Section 27 05 10 (Basic Requirements for Communications Systems) for more information.

E. All equipment, cabling, and terminations shall be labeled; refer to Section 27 12 00 (Identification of Communications Systems) for more information.

F. The communications cabling contractor shall provide approved fire-stopping materials in and around any opening created for communications cabling where code or good installation practices suggests or requires fire-stopping materials.

G. All sleeves in smoke rated walls and floor penetration openings shall be fire stopped using either a pillow or fire protection putty per prevailing code requirements upon completion of cable installation; mineral wool is to be placed inside the sleeve. For proper fire stopping the fill ratio (cable to sleeve volume) will range from a minimum of 12% to a maximum of 40%.

3.02 CABLING INSTALLATION PRACTICES

A. All cabling shall be installed in accordance with manufacturers' written bend radius and pulling tensions. General industry guidelines recommend the following bend radius and pulling tensions:
   1. Tensile loading on a single 4-pair copper UTP cable shall not exceed 25 lbf.
   2. Bend radius of a single 4-pair copper UTP cable shall not exceed 4 times the diameter of the cable.
   3. Bend radius of multi-pair copper UTP and optical fiber cable shall not exceed 10 times the diameter of the cable.
   4. Manufacturers' minimum bend radius specifications shall be observed in all instances. Use of plastic cable ties is not acceptable. Cable bundles shall be neatly dressed with use of Velcro type straps.

B. All conduits and conduit sleeves shall have bushings or grommets shall be installed prior to the installation of communications cables to avoid damage and abrasions to cable sheathing and insulation. If bushings have are installed by the electrical contractor, the communications cabling contract shall furnish and install bushings prior to pulling communications cabling.

C. The maximum station cable drop length for UTP cables shall not exceed 295 feet (90 meters) in order to meet data communications performance specifications. This length is measured from the termination panel in the wiring closet to the outlet and must include any slack required for the installation and termination. The LVC contractor is responsible for installing station cabling in a fashion as to avoid unnecessarily long runs. Any area that cannot be reached within the above constraints should be identified and reported to Life Time Telecommunications Engineer prior to installation. Life Time Telecommunications Engineer should approve changes to the plan.

D. Splices are not permitted in any voice or data cable unless other specified or show on drawings. All cables shall be installed splice-free from telecommunications rooms (MDF, IDF) to the work out area (WOA).

E. Avoid placing copper cables near sources of extreme heat (i.e., boilers, radiators, heat coils).

F. Maintaining cable twists for all UTP cables. For terminations cable sheathing shall be stripping back no more than ½" back from termination point for all Category 5e and Category 6 cables.

G. All cables shall be supported by cable tray, cable runway, Arlington Strap or J-hooks. When large quantities of cables leave trays or runways, cables shall be supported by drop-outs or cable support hardware manufactured specifically for the purpose of supporting cables. J-hooks shall be installed a minimum of every 5 feet and cabling shall maintain minimal deflection and strain (less than 12" deflection). Cables shall not be supported from ceiling grid wires. Cables shall not run above iron joists.

H. All cables shall be separated and bundled into like groups by cable sheathing colors.

I. Service loops shall be provided at both ends of installed horizontal and backbone cabling. A 24” service loop shall be installed in the ceil space near workstation outlets at the last support (e.g. Arlington Strap) before the cables enter a fishable wall, conduit, surface raceway, or box; excessive cable shall not be coiled in outlet boxes. A 10’ service loop shall be provided in communication rooms and shall be installed to allow for future equipment rack/cabinet relocations without the need to re-terminate patch panels; the 10’ service loop shall be neatly bundled and secured in ceiling space with large D-rings or place in cable trays. Manufacturers’ minimum bend radius specifications shall be observed in all instances. Use of plastic cable ties is not acceptable. Cable bundles shall be neatly dressed with use of Velcro type straps.

J. Any cabling installing in equipment rooms shall be neatly placed in cabling trays, cabling runways, or horizontal and vertical rack/cabinet cable managers. When tray, runways, or cable managers are not specified, cable shall be neatly installed with Ladder Racking or D-rings. Cables shall always be installed vertically/horizontally or at right angles to structure.

K. Utilize Velcro straps to secure permanently installed horizontal and backbone cabling; any cable ties installed in plenum ceiling spaces shall be rated for use in plenum spaces. Cable ties shall never be secured too tight whereby potentially changing the cable geometry. Do not use vinyl tie straps.

L. All Category 3, Category 5e and Category 6 cables shall be terminated TIA/EIA-568B.

M. Free-air installation shall be installed as follows:
   1. Cable shall be run at right angles and be kept clear of other trades' work.

N. Cable shall never be laid directly on the ceiling gird.

O. All cable shall be free of tension at both ends. In cases where the cable must bear some stress, Kellum grips may be used to spread the strain over a longer length of cable.

P. Cables shall not be attached to existing cabling, plumbing, or steam piping, ductwork, ceiling supports, or electrical or communications conduit.

Q. Cable sheaths shall be protected from damage from sharp edges. Where a cable passes over a sharp edge, a bushing or grommet shall be used to protect the cable.

END OF SECTION

This page intentionally left blank

SECTION 27 13 50
STRUCTURED CABLING FOR VOICE AND DATA

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Category 6 Cable, Jacks, Faceplates, Surface Mount Boxes (SMB), and Patch Panels.

1.02 RELATED REQUIREMENTS

A. Section 078413 – Firestopping.

B. Section 260537 - Boxes.

1.03 REFERENCE STANDARDS

A. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

B. TIA/EIA-568-C.1 - Commercial Building Telecommunications Cabling Standard - Part 1: General Requirements; Rev C, 2012; Addenda 1-7.

C. TIA-569 - Commercial Building Standard for Telecommunications Pathways and Spaces; 2012.

D. TIA/EIA-606 - Administration Standard for the Telecommunications Infrastructure; Rev B, 2012.

1.04 SUBMITTALS

A. See Section 01 30 00 for Administrative Requirements and submittal procedures.

B. Product Data: Manufacturer's data sheets on each product to be used, including:
   1. Storage and handling requirements and recommendations.
   2. Installation methods.

C. Installer Qualifications.

D. Field Test Reports.

E. Project Record Documents:
   1. Record actual locations of outlet boxes and distribution frames.
   2. Show as-installed color coding, pair assignment, polarization, and cross-connect layout.
   3. Identify distribution frames and equipment rooms by room number on contract drawings.

F. Operation and Maintenance Data: List of all components with part numbers, sources of supply, and operation and maintenance instructions; include copy of project record documents.

1.05 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements listed below.

B. Installer Qualifications: A company having at least 5 years experience in the installation and testing of the type of system specified, and:
   1. Contractor employs a BICSI Registered Communications Distribution Designer (RCDD) and BICSI Certified Technicians.
   2. Supervisors and installers factory certified by manufacturers of products to be installed.

C. The contractor shall become familiar with installation guides and any other miscellaneous installation documentation prior to the commencement of the work.

D. Any discrepancies between the design specifications, drawings, field conditions, and manufacturer's recommendations shall be brought to the attention of Life Time immediately in writing.

1.06 DELIVERY, STORAGE, AND HANDLING

A. The cabling contractor shall be responsible for the procurement, storage and security of all materials either purchased by or supplied to the contractor for installation throughout the project.

B. All cables and components shall be protected from damage through the construction project.

PART 2 PRODUCTS

2.01 SUMMARY

A. Unless noted otherwise, all products shall be owner preferred product solutions listed in sections 2.02 through 2.13 or be approved equal.

2.02 CATEGORY 6 CABLES

A. Cable shall consist of 4-pair plenum rated balanced Unshielded Twisted Pairs U/UTP. 100 OHM, 22 AWG to 24 AWG, insulated solid-copper conductors.

B. The cable shall be high performance capable of supporting bandwidths more than 10/100/1000 MBPS for lengths up to 100 Meters (328 Ft).

C. Cable shall be white.

D. Approved products:
   1. Panduit Part #: PUP6C04WH-U
   2. CommScope Part #: 2071E-UTG ETL

2.03 JACKS

A. Cat6 U/UTP jack, white in color.

B. Approved products:
   1. Panduit Part #: CJ688TGWH
   2. CommScope Part #: MGS400 White

2.04 FACEPLATES

A. The color of the faceplates shall be coordinated with finish conditions listed in Division 26 27 26 Wiring Devices.

B. All faceplates shall be covered and protected against dust and paint during construction.

C. 1-Port Faceplate:
   1. Flush mounted faceplate for Cat 6 jacks.
   2. Approved products:
      a. Panduit Part #: CFPL1WHY
      b. CommScope Part #: M10L-262

D. 4-Port Faceplate:
   1. Flush mounted faceplate with labels.
   2. Approved products:
      a. Panduit Part #: CFPL4WHY
      b. CommScope Part #: M14L-262

2.05 SURFACE MOUNT BOX (SMB)

A. SMB port capacity should match the cable quantity.

B. Color of SMB shall match the color of the 8P-8C RJ45 jack.

2.06 CATEGORY 6 PHONE PLATE

A. Wall phone plate:
   1. Stainless steel.
   2. 8P-8C RJ45 jack insert.

2.07 PATCH PANELS

A. 24-Port Cat 6 Patch Panel:
   1. Patch panel shall be black.
   2. Patch panel shall be flat.
   3. Patch panel shall be preloaded.
   4. Patch panel shall be Panduit, CommScope or approved equal.

B. 48-Port Cat 6 Patch Panel:
   1. Patch panel shall be black.
   2. Patch panel shall be flat.
   3. Patch panel shall be preloaded.
   4. Patch panel shall be Panduit, CommScope or approved equal.

2.08 PATCH CORDS

A. All patch cables shall be furnished by the LVC Vendor and installed by Life Time LVC Engineer.

B. Items patched in to the switches should use an appropriately colored patch cable for easy identification and line tracing. Both the color of the patch cable as well as the switch port should be determined by the type of device being patched in.

C. Quantities of patch cables for data and voice shall be provided by the owner. Quantities of patch cables for the audio and visual systems shall be provided by the audio/visual contractor.

D. All patch cables shall be Cat 6. (28 AWG high-density patch cable to optimize the space in equipment racks cable management) and the modular plug be tangle free with strain relief boot.

E. Items patched in should be routed and protected properly utilizing the provided cable management hardware on the Racks. Items in the IDF Rack should also be bundled utilizing the Velcro Cable Wraps to protect them from being snagged or ripped out.

F. Copper patch cables shall be the following lengths and colors:
   1. Manufacturers:
      a. Panduit Part #: UTP28SP6
      b. CommScope Part #: UNC6 series
   2. Fitness Floor TV's and Fitness Cardio Equipment
      a. Color: Black.
      b. Length: 5 ft.
   3. Club Network Devices at MDF/IDF Equipment Rooms
      a. Color: Blue.
      b. Length: 7 ft.
   4. Servers / WAN Links at Building Demarcation/MDF/IDF Equipment Rooms
      a. Color: Red.
      b. Length: 7 ft.
      c. Length: 14 ft.
   5. Analog Dial Tone at MDF/IDF Equipment Rooms
      a. Color: White.
      b. Length: 7 ft.
      c. Length: 14 ft.

6. Work Area Outlet / Station Cords
    a. Color: Black.
    b. Length: 7 ft.
    c. Length: 14 ft.
7. Video Surveillance Cameras at MDF/IDF Equipment Rooms
    a. Color: Black.
    b. Length: 7 ft.

2.09 WORK AREA OUTLET STATION CORDS

A. Station cords shall be similar to patch cords.

B. All station cords shall be Cat 6 and be black in color.

C. All computer and phone station cords shall be 7' long, furnished and installed by owner.

2.10 WIRELESS ACCESS POINTS (AP)

A. Cabling for wireless access points (WAP) is installed by Low-Voltage Cabling Contractor.

B. WAP devices are furnished by Life Time Technology and installed by the Low-Voltage Cabling Contractor per the direction of Life Time Technology.

2.11 FIBER PATCH CABLES

A. Fiber patch cables shall be provided by LVC cabling contractor.

B. 10Gig 50/125um aqua, LazrSPEED.

C. Fiber optic connectors shall be LC to LC unless otherwise noted.Lengths and quantities of fiber patch cable should be confirmed with Life Time Technology prior to ordering.

2.12 EMERGENCY TELEPHONES

A. Emergency phone locations:
    1. Emergency Phones listed are required by owner and no deviation from these make and models will be accepted.
    2. Contractor shall provide and commission emergency phones. The following shall be provided for each location (as applicable):
        a. Men's & Women's Locker Room Wet Spa, Indoor Pool, and Outdoor Pool Locations: Allen-Tel #GB92V14.
        b. Parking Ramps, Pickleball and/or Tennis Court locations: Viking Model E1600-ABLT2EWP.

PART 3 EXECUTION

3.01 INSTALLATION - GENERAL

A. Comply with latest editions and addenda of TIA/EIA-568, TIA/EIA-569, ANSI/J-STD-607, NFPA 70, and SYSTEM DESIGN as specified in PART 2.

3.02 PATHWAYS

A. To reduce or eliminate EMI, the following minimum separation distances from power lines, fluorescent lights and other RF sources such as motors and generators shall be adhered to:
    1. 39 inches from motors, generators, frequency converters, transformers, x-ray equipment, and uninterruptible power systems.
    2. 12 inches from power conduits and cables and panel boards of less than 5 kVA.
    3. 18 inches from fluorescent and high frequency lighting fixtures.
    4. 6 inches from flues, hot water pipes, and steam pipes.
    5. 39 inches from power lines of greater than 5 kVA.

B. Conduit:
   1. Do not install more than 2 (two) 90 degree bends in a single horizontal cable run.
   2. Leave pull cords in place where cables are not initially installed.
   3. Conceal conduit under floor slabs and within finished walls, ceilings, and floors except where specifically indicated to be exposed.
      a. Conduit may remain exposed to view in mechanical rooms, electrical rooms, and telecommunications rooms.
      b. Treat conduit in crawl spaces and under floor slabs as if exposed to view.
      c. Where exposed to view, install parallel with or at right angles to ceilings, walls, and structural members.
      d. Under floor slabs, locate conduit at 12 inches, minimum, below vapor retarder; seal penetrations of vapor retarder around conduit.

C. Outlet Boxes:
   1. Coordinate locations of outlet boxes provided under Section 260537 as required for installation of telecommunications outlets provided under this section.
      a. Locate outlet boxes so that wall plate does not span different building finishes.

D. Grounding and Bonding: Perform in accordance with ANSI/J-STD-607 and NFPA 70.

E. Firestopping: Seal openings around pathway penetrations through fire-rated walls, partitions, floors, and ceilings in accordance with Section 078413.

3.03 INSTALLATION OF EQUIPMENT AND CABLING

A. Cabling:
   1. Do not bend cable at radius less than manufacturer's recommended bend radius; for unshielded twisted pair use bend radius of not less than 4 times cable diameter.
   2. Do not over-cinch or crush cables.
   3. Do not exceed manufacturer's recommended cable pull tension.
   4. When installing in conduit, use only lubricants approved by cable manufacturer and do not chafe or damage outer jacket.

B. Field-Installed Labels: Comply with TIA/EIA-606 using encoded identifiers.
   1. Cables: Install color coded labels on both ends.
   2. Outlets: Label each jack on its face plate as to its type and function, with a unique numerical identifier.

3.04 FIELD QUALITY CONTROL

A. Comply with inspection and testing requirements of specified installation standards.

B. Visual Inspection:
   1. Inspect cable jackets for certification markings.
   2. Inspect cable terminations for color coded labels of proper type.
   3. Inspect outlet plates and patch panels for complete labels.

C. Final Testing: After all work is complete, including installation of telecommunications outlets, and telephone dial tone service is active; test each voice jack for dial tone.

END OF SECTION

This page intentionally left blank

SECTION 27 15 00
COMMUNICATIONS BACKBONE CABLING

PART 1 GENERAL

1.01 SUMMARY

A. This section covers copper horizontal cabling utilized by all Division 27 systems and possibly other intelligent building systems specified by other Divisions.

B. Quantities and pair count for all copper backbone cabling shall be provided as required to complete cabling system as shown on the drawing schematic diagrams.

C. Unless noted otherwise, all product shall be equivalent of the owner preferred solutions listed in PART 2.

PART 2 PRODUCTS

2.01 COPPER BACKBONE CABLING

A. Voice Backbone Cable shall comply with the following requirements:
   1. TIA/EIA Category 3 compliant
   2. 24 AWG solid bare copper conductor, unshielded twisted pair
   3. Industry standard conductor insulation color coding (blue, orange, green, brown, slate); bandmarked PVC insulation
   4. Plenum rated, UL Listed CMP marking on cable
   5. Product identifications and cable distance markings at regular intervals on cable

B. Communications Copper Cable Splicing and Terminations:
   1. Copper backbone shall extend from MDF to IDF(s) and detached Bistro, where applicable.
      a. Category 3 U/UTP plenum rated cable. White cable jacket, 25-pair count.
      b. Approved products:
         1) CommScope Part #: 2010B WH 25/24 R1000
         2) Or approved equal.
   2. Emergency Phone's, POTS Lines Extension, Internal Analog Devices
      a. LVC installer to extend dedicated POTS line to each emergency phone and program emergency phone to ring-down to specific number. Each phone comes with program instructions.
      b. Install Life Time Fitness assigned POTS to fire panel and elevator.
      c. Extend internal analog phone lines to courtesy phones in locker rooms, on the work out floor, analog lines to credit card machines in Life Cafe and Life Spa, and fax machines.

2.02 OPTICAL FIBER BACKBONE CABLING

A. Indoor 50/125µm Multi-Mode Optical Fiber Cable shall comply with the following requirements:
   1. Maximum attenuation of 3.5dB/km @ 850nm and 1.5dB/km @ 1300nm
   2. Plenum rated, UL Listed type marking on cable
   3. Product identifications and cable distance markings at regular intervals on cable
   4. Aramid yarn central strength members
   5. Plenum rated armored cable, aqua in color.
   6. 12-Strand LazrSPEED, 50um OM3, 300m.
   7. CommScope Part #: P-012-DZ-5L-FSUAQ or Panduit equal.

B. Exterior backbone fiber optic cable shall be indoor/outdoor single unit plenum distribution type installed within conduit system. At building entrances, provide termination of all conductive portions of the assembly to ground. Install fiber within plenum rated innerduct or plenum rated armored sheath to fiber interconnection unit for physical protection.

2.03 OPTICAL FIBER CABLE TERMINATING CONNECTORS

A. Provide rack mounted fiber enclosures capable of terminations and splices noted on drawings. Equip with LC connectors and cover plate. Units shall provide top or bottom cable entry, fiber termination, cross connection, interconnection, routing, fiber identification labels, fiber storage and radius organizers.

B. Optical Fiber Connectors shall be LC-type and shall comply with the following requirements:
   1. Comply with ANSI/TIA/EIA 568-B.3
   2. Ceramic ferrules utilizing adhesive for connection to ferrule
   3. Designed for multimode 50/125, 62.5/125µm and single mode fiber
   4. Typical insertion loss of 0.2dB
   5. Coordinate with owner electronics and provide duplex LC connectors where possible.

PART 3 EXECUTION

3.01 GENERAL

A. All backbone cabling shall be labeled on cable sheathing and at termimal points.

B. Wiring in Wire Closets and Cabinets: Install conductors parallel to and at right angles to walls. Bundle, lace, and train the conductors to terminal points and terminate using manufacturer's installation procedures. Connect conductors that are terminated, spliced, or interrupted to terminal blocks.

C. Fire Stopping: Provide fire stopping for all conduit sleeves shown on the plans and as added as required at all fire rated walls. Firewalls are indicated on the architectural drawings and are available for review at the Construction Manager' s office

D. Install cable without damaging conductors or jacket. Do not bend cable to a smaller radius than minimum recommended by manufacturer. Do not exceed manufacturers recommended pulling tensions.

3.02 COPPER BACKBONE CABLING INSTALLATION PRACTICES

A. All pairs of copper backbone cables shall be terminated at both ends.

3.03 OPTICAL FIBER BACKBONE CABLING INSTALLATION PRACTICES

A. The same manufacturer’s product shall be utilized throughout the entire project for all optical fiber backbone cabling.

B. All strands of optical fiber backbone cables shall be terminated at both ends in enclosures.

C. Optical fiber backbone cables shall be installed in cable runways and cable tray systems in such a manner to avoid crushing or cable deformation by other cables. Where optical fiber backbone cables runway/tray support systems, optical fiber backbone cables shall be installed in inter-duct and supported at regular intervals.

D. Splicing of optical fiber backbone cables is only permitted in communication room enclosures for manufacture approved pigtail connectors, at splice enclosures identified on the drawings, or for other special situations with prior approval from the Engineer.

E. A maximum connector insertion loss of 0.75dB is permitted by industry standards; however, typical insertion losses of 0.2dB shall be observed in test results. Contractor may be required to re-terminate connectors if losses are higher than 0.3dB and the to fiber segment loss budgets are excessive.

SECTION 27 16 00
TESTING OF COMMUNICATIONS SYSTEMS

PART 1 GENERAL

1.01 SUMMARY

A. This section covers contractor testing, and test result documentation for all Division 27 communications systems.

B. All communications systems shall be tested and documented by the contractor installing each system as specified herein.

C. The Engineer and/or Owner may test up to 5% of the cable runs for any communication cabling system prior to substation completion of the project.

1.02 OVERVIEW OF COMMUNICATION SYSTEMS TESTING REQUIREMENTS

A. Structured Cabling System testing shall be completed for all segments of the structured cabling systems including Category 6 horizontal cabling, copper backbone cabling, and optical fiber backbone cabling. All cables shall be tested and documented as specified herein.

PART 2 PRODUCTS

2.01 NOT USED

PART 3 EXECUTION

3.01 GENERAL

A. The Contractor shall notify the Engineer a minimum of one week prior to any testing and shall provide a testing schedule prior to the testing of cabling and equipment. Owner's representatives and the Engineer may be in attendance to witness the test procedures. The Contractor shall re-schedule testing as necessary to accommodate the schedules of the Owner/Engineer for any testing the Owner/Engineer may want to witness.

B. All cable runs shall be tested. Any segment with failing or receiving marginal test results shall be evaluated and receive corrective action. Cable runs continuing to fail test results should be evaluated with the Engineer and shall be replaced when necessary to obtain passing test results.

C. All cable runs must receive passing test results prior to final acceptance of the project.

D. All test results shall be documented and included with contractor's final as-built documentation and will be review by the Engineer prior to final acceptance and closeout of the project.

E. The test equipment manufacturer shall calibrate all test equipment at regular intervals as recommended by the manufacturer. Calibration reports shall be provided to the Engineer upon request.

F. Technicians who have completed an appropriate training course for the use of specified test equipment shall conduct all testing.

3.02 CATEGORY 6 HORIZONTAL CABLE TESTING

A. All Category 5e & 6 horizontal cable runs shall be tested with a Level III tester capable of testing 4-pair UTP cable frequencies from 0.1-250 MHz. The Contractor shall use one of the following testers: Agilent Wirescope 350, Fluke DSP-4000, Ideal LanTek 7, or more current/advanced model from these manufactures.

B. Category 6 cabling shall include the following tests:
   1. Wire Map

2. Length
   a. Record all cable lengths.
   b. Any cable runs longer than 295 feet shall be brought to the attention of Life Time Technology in writing.
3. Attenuation (insertion loss)
4. NEXT (near end cross talk—to be performed on all Category 6 cables BI-directionally)
5. Power Sum NEXT
6. Pair to pair ELFEXT (equal level far end cross-talk)
7. Power Sum ELFEXT
8. Return Loss
9. Propagation Delay
10. Delay Skew
11. Permanent Link testing shall be performed and shall conform to the following test result parameters defined by ANSI/EIA/TIA 568-C.2-1for Category 5e or 6 as applicable.
12. In addition to 100% of the cables passing all Permanent Link test parameters, the contractor is required to provide a manufacturer's warranty covering the Channel Link (including patch cords/station cords). Refer to Section 27 01 00 for more information on manufacturer's warranty requirements.
13. Test results (in summary format) shall be printed and bound in a 3-ring binder. Provide two copies of the printed test results with the as-built documentation submittal. In addition to the printed test results, the Contract shall provide the detailed electronic test results (on compact disk) and a copy of the test manufacturer's software to view the test results with the as-built documentation submittal. The test equipment manufacturer's software can be provided on CD or can be instructions on how to download the software (free of charge).

3.03 COPPER BACKBONE CABLE TESTING

A. Multi-pair UTP backbone cables shall be tested for the following parameters:
   1. Wire-map (corrector conductor position on 110 blocks)
   2. Continuity
   3. Shorts
   4. Length
   5. All pairs shall be free of shorts, shall be terminated in the correct position, and shall have continuity. Any discrepancies shall be corrected.
   6. Lengths of all copper backbone cables shall be recorded on as-build documentation.

3.04 OPTICAL FIBER CABLING TESTING

A. All strands of all optical fiber cables shall be field-tested (unless specifically noted on drawings as un-terminated strands for future use). Field test equipment and testing methods for multimode optical fiber cable shall meet the requirements of ANSI/EIA/TIA-526-14A; single-mode field test equipment and methods shall meet the requirements of ANSI/EIA/TIA-526-1. Optical fiber cabling testing shall adhere to the following criteria:
   1. Building backbone fiber cabling shall be tested with a power loss meter for insertion loss (Link Attenuation) in both directions and at both operating wavelengths.
   2. Test equipment shall measure the length and automatically calculate the link loss based on ANSI/EIA/TIA-568-C.1 standard loss values; all links shall receive a PASS value.
   3. Test results, including distances and insertion loss readings shall be printed and bound in a 3-ring binder. Provide two copies of the printed test results with the as-built documentation submittal.

END OF SECTION

SECTION 27 20 00
AMBIENT SOUND DISTRIBUTION AND MASKING SYSTEM

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and General provisions of Contract including General and Supplementary Conditions and Division 1, specification sections, apply to the work of this section.

1.02 DESCRIPTION OF WORK

A. Provide equipment and hardware to provide a complete integrated audio distribution system and sound masking system. Furnish all specified materials, products, installation labor, programming, and testing work required for a complete and fully functioning system. Equipment notated on BOM as “OFE” is owner furnished equipment by Life Time. Work includes:
   1. This section pertains to speakers, unless specified otherwise.
   2. The work provided under this specification and the associated drawings, applies to the Facility including indoor and outdoor areas as designated in the drawings.
   3. The audio system will be composed of equipment provided under this Contract. All equipment shall be installed by the A/V Contractor.

B. A conduit / raceway system required to support this equipment will be provided by others.

1.03 DEFINITIONS

A. AV or A/V = Audio Video
B. AVC = Audio Video Contractor
C. BOM = Bill of Material
D. CAD = Computer aided design
E. DMX = Digital Multiplex
F. DSP = Digital Signal Processor (for Audio)
G. EC = Electrical Contractor
H. GC = General Contractor
I. GF = Group Fitness Studio
J. IDF = Intermediate Distribution Frame (Secondary IT Closet)
K. IT = Information Technology (For this document its referred to as a department)
L. LAN = Local Area Network
M. LTF Standards = Life Time Standards
N. LVC = Low Voltage Contractor
O. MDF = Main Distribution Frame (Main IT closet)
P. Misc. = Miscellaneous
Q. NEC = National Electric Code
R. OFE = Owner Furnished Equipment (By Life Time)
S. POE = Power Over Ethernet
T. QLAN = Q-Sys local area network
U. Q-SYS = Manufacturer “Q-Sys”

V. SPL = Sound Pressure Level

W. SOW = Scope of Work

X. UL = Underwriters Laboratories (Safety Standards

Y. XLR = External Line Return (Style of Audio connector)

1.04 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements listed below.

B. Installer Qualifications, Certifications, and General Knowledge:
   1. CTS and Dante Certification by representative working directly on this project.
   2. Dante Certification.
   3. Q-Sys Designer Level 2 Completion.
   4. Experience with Bluebeam Revu, AutoCAD, Microsoft Windows 10, and Microsoft Office Suite.
   5. Network switch configuration experience including, but not limited to, IP addressing, QoS, VLAN, and DHCP.

C. Manufacturers
   1. The system shall be the product of the specified manufacturers, installed by an agency experienced in such work. The installation and connections of all equipment and tests of the operation of the system be made by a representative of the manufacturer or aforementioned installing agency.
   2. Contractor / integrator providing this system must be manufacturer approved to furnish, install, maintain, and warranty the system equipment specified.

D. Installation
   1. Installation of required raceways, conduits, and power receptacles shall be by the electrical contractor. The installation of communication outlets, wallplates, devices, and connections of all parts of the audio system shall be done by the A/V Contractor.

E. Programming
   1. The Contractor shall employ the services of an experienced system programming specialist for the Digital Signal Processor/Control system provided under this specification and an experienced programmer for configuring and programming the audio DSP processing equipment.

F. NEC Compliance
   1. Comply with NEC as applicable to construction and installation of system components and wiring.

G. UL Compliance
   1. Where required, provide system equipment which is UL listed and labeled.

H. Licensing
   1. Contractor shall comply with local licensing, including state and city laws/regulations.

1.05 SUBMITTALS

A. Licensing details.

B. Product Data
   1. Submit manufacturers' data on all equipment, including:
      a. Detailed equipment list indicating the manufacturer, model number, and quantity for each equipment item being provided or existing item being re-installed.

b. Manufacturer's product data sheets for each new equipment item
c. Dimensions, rough-in drawings, installation instructions, and operation and maintenance, suitable for inclusion in maintenance manual.

C. Shop Drawings
1. Shop drawings provided by Life Time. Adjustments required must be sent to Life Time AV representative for review and approval. Submit shop drawing data, including:
a. Detailed wiring diagrams of the system. Diagrams shall show connection to each unit of system. Single-line block diagrams are not sufficient.
b. Detail drawings of all custom fabricated panels, connection wallplates and associated components being supplied.
c. Equipment rack elevation / layout diagrams (front face)
d. Audio DSP programming: Provide for review, a proposed configuration layout indicating all DSP processing functions and internal connectivity for the DSP processor.

D. Speaker 70V System Tap Values
1. Prior to installation provide a speaker tap value list for approval by Life Time AV representative.

E. Inputs and Outputs on DSP/Amplifiers must be submitted to Life Time in Excel format.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Prior to acceptance, OFE shall be inspected for damage. If damage on boxes, pallets, or equipment is visible, the shipments shall be rejected and sent back to logistics company. Communicate damage to Life Time AV representative.

B. Store products in manufacturer's packaging. Keep dry and protect from damage until ready for installation.

C. Equipment must be kept locked up at all times in either an on-site storage container provided by AV Installation contractor or within the building in a designated secure location.

D. Contractor shall not install any product in construction areas where the product is subject to damage from water, dust, and construction debris.

E. Contractor is responsible for their own tools and AV components that they are installing. Keep them secure at all times.

PART 2 PRODUCTS

2.01 GENERAL

A. Provide materials in quantities listed in Life Time BOM for a complete and operational system as indicated herein and in the drawings.

B. Coordinate with system block diagrams for verification of specific quantity of equipment items required in each system.

2.02 OWNER PROVIDED EQUIPMENT/MATERIAL (OFE)

A. Reference BOM for purchasing equipment. Do not provide items indicated as OFE.

2.03 CONFLICTS WITH BOM

A. Present conflicts, errors, or omissions to Life Time AV representative for review and approval prior to purchasing.

2.04 SUBSTITUTIONS ON BOM

A. All substitutions outside of owner provided BOM must be presented and approved by Life Time AV representative.

2.05 MISCELLANEOUS MATERIALS

A. Provide list of construction required equipment for installations not called out specifically on BOM.

PART 3 EXECUTION

3.01 GENERAL

A. Wiring, except in equipment cabinets and where raceway or cable tray is provided, shall be routed open above suspended ceilings and in accessible walls and shall be in accordance with manufacturer's directions. All wiring in ceiling spaces shall be plenum rated. In accessible ceiling spaces, wiring shall be supported from ceiling structure at regular intervals of at least 48 inches. Cabling shall not be attached to or supported by ceiling tile support wires.

B. Final wiring connections shall be made and the entire system shall be tested and certified as working properly by an authorized representative of the Contractor. Written verification of test results shall be furnished to the Owner, Architect, and Engineer.

C. Identify and tag all cables with permanent type markers to denote location served.

D. All rack and in-cabinet wiring and cabling shall be neatly routed in plastic wiring duct or secured with tie wraps and routed along rack sides. All splices and connections shall be by plug, solder, or captive screw terminal strips, etc. Splices shall not hang in rack or cabinets.

3.02 INSTALLATION

A. Systems installation, cabling and rack building procedures shall fall in strict accordance with industry standards and manufacturer recommendations for safety and operation compliance.

B. Componentry installed during construction shall be either installed after finish carpentry and drywall sanding/construction is complete or covered in a method conducive to provide a dust free environment for the installed items if the possibility of damage could occur to the item prior to first use by the client.

C. Final installation measures by the AVC shall include cleaning components to eliminate fingerprints, dust, or debris during the installation phase. Additional cleaning required by Life Time prior to first use by client will incur a cleaning fee payable by the AVC.

D. Install all equipment, components, accessories, terminal blocks, connectors and hardware necessary to provide a complete and operational system. Connector types and quantities shown in the drawings are representative and the Contractor shall be responsible to supply any additionally required connectors and wiring. Connectors shall be provided and installed as recommended by the manufacturer of the terminating equipment. All other wiring connections to connectors mounted on input plates and floor boxes shall be soldered connections or crimp (video) connections.

E. All interconnects must be tied neatly with Velcro ties every 12”.

F. Zip ties are not allowed.

G. Cable minimum bend radius after installation shall be no less than 10 times the cable diameter.

H. Speaker installation by type:
   1. In-ceiling /flush mount style speakers
      a. In-ceiling speakers shall be mounted in ceiling tiles or gypsum wallboard ceilings according to the manufacturer’s direct specifications.

b. Unless otherwise stated in writing by the owner, the specifications and mounting techniques will be followed verbatim and applied to site installation.
c. A hole shall be cut using the supplied cut-out template. The speakers will have their terminations made by the installer at the time of concealment in the tile or gypsum.
d. Speaker terminations shall be precisely cut and managed in the connector or crimp methods.
e. A service loop 10” in circumference shall be utilized and relieve strain to speaker connections. Exposure of bare copper conductors is a hazard to the electronics systems and shall not be permitted. In outdoor applications, exposure to the elements leads to corrosion and damage to the integrity of the cable and shall not be permitted.
f. Drop ceiling tiles shall have tile bridge supports in place for all in-ceiling speakers. Tile bridges will be installed per the manufacturer’s specification.
g. The ceiling tile shall not solely support the weight of the speaker.
h. Ceiling grid support pencil rod shall be utilized to support the added weight of the speaker against the ceiling grid. Support pencil rod shall be shot directly into the deck/ceiling or fastened to structural members with beam clamps or a combination of them and d-rings.
i. At no point shall the speaker support pencil rod be secured to existing pencil rod that is used for existing ceiling grid support.
j. The roto-lock clamps will be securely tightened. Moderate resistance felt while securing the clamps will ensure that the speaker has been clamped successfully. Over tightening can damage the clamp and the speaker and make grill installation difficult or unsuccessful.
k. Speaker, clamp, or grill damage shall be the responsibility of the installer and shall be reported to a Life Time AV representative and replaced immediately by the AVC.

2. Surface mount style speakers
a. Surface mount speakers shall be mounted to brick, wood, concrete, or gypsum wall types according to the manufacturer’s direct specifications.
b. Unless otherwise stated in writing by the owner, the specifications and mounting techniques will be followed verbatim and applied to site installation.
c. Where a cabling backbox has been supplied, the speaker shall be mounted directly below the backbox as to conceal the opening with the body of the speaker. The box shall not be covered by the mount in entirety as to retain the ability to access the opening without the need to remove the speaker in times of serviceability or cable replacement.
d. The yoke mount or similar shall be fastened to the surface utilizing the appropriate weight distributing fastener for the application.
e. A proportional weight rating relationship of 5:1 shall be applied when choosing the appropriate fastener and the wall surface in which the device is to be mounted.
f. Plywood backing shall be called out by AVC and installed by GC as required prior to AVC site installation.
g. The yoke mount shall be secured to a wall stud where available.
h. Speaker terminations shall be precisely cut and managed in the connector or crimp methods.
i. A service loop 10” in circumference shall be utilized and relieve strain to speaker connections.
j. Exposure of bare copper conductors is a hazard to the electronics systems and shall not be permitted. In outdoor applications, exposure to the elements leads to corrosion and damage to the integrity of the cable and shall not be permitted.

k. Interior/exterior speaker cabling for surface-mounted speakers shall require a drip/service loop in before securing the cable to the connector or binding post(s) of the speaker/device.
l. Aircraft safety cable shall be applied to all devices based on geographic location and seismic requirements.
m. Consult the local building codes per the authority having jurisdiction for exact safety mounting requirements.

3. Pendant speakers
   a. Pendant speakers shall be mounted (anchored) directly to the corrugated deck/ceiling via dual aircraft cable suspension and a stress relief cable loop.
   b. Unless otherwise stated in writing by the owner, the specifications and mounting techniques will be followed verbatim and applied to site installation.
   c. Fasteners/anchors shall be of the approved type in the fastener/anchor's specifications section below.
   d. Only approved devices will be permitted. If the situation calls for alternate mounting methods. A Life Time AV representative and AV Engineer will be notified prior to installation.
   e. Installation by contractor will only occur if the alternate fastening/anchoring device or method is approved by a life-time project manager.
   f. Interior/exterior speaker cabling for surface-mounted speakers shall require a drip/service loop in before securing the cable to the connector or binding post(s) of the speaker/device.
   g. A service loop 10" in circumference shall be utilized and relieve strain to speaker connections.
   h. Plenum rated zip ties shall be used to bundle the cable above the speaker. Exposed, jacketed speaker cabling between the pendant speaker and ceiling-mounted junction box shall be strapped to the aircraft safety cable, with white plenum rated wire retention straps/ties closest to the ceiling-mounted junction box.
4. Outdoor landscape speakers and subwoofers
   a. Outdoor landscape speakers must be installed flush to final landscape mulch, rock, or other landscape material. Installation shall be level and symmetrical.
   b. Speakers must be installed with supplied burial security feet
   c. Provide direct burial speaker cabling and install from speaker to nearest junction box. All wiring must be hidden from view to the nearby junction box. Drill small hole on side or underside of junction box, supply and install with silicone to fill hole.
   d. All screws/boxes/anchors must be secured to speaker/junction boxes.
5. Subwoofers
   a. Subwoofers shall be mounted according to the manufacturer's direct specifications. Unless otherwise stated in writing, the specifications and mounting techniques will be followed verbatim and applied to site installation.
   b. Ceiling mounted subwoofers
      1) Subwoofer installation locations shall vary by the individual site build.
      2) Anchoring subwoofers must be sufficient enough to hold 4 times the weight of the subwoofer/combo.
      3) Anchoring must be done with two (2) primary anchor cables/chains and one (1) backup safety support anchor.
      4) Anchoring into concrete ceiling use Hilti Kwik Bolt concrete anchors. Length will vary depending on thickness of concrete.

5) Bar joist mounting shall consist of heavy duty uni-strut structure designed to withhold four (4) times the weight of the subwoofer and mount.

c. Floor mounted subwoofers shall be placed on the floor in the approved location. All wire and cabling paths to and from the subwoofer device shall be concealed and dressed in braided cable wrap sized appropriately for the quantity of cables it will conceal.

6. Speaker taps
   a. All speakers shall be tapped to wattage that does not exceed 80% of total wattage per amp channel.

I. Shunted circuits with fire alarm system (code compliance)
   1. All speakers within the facility must mute with activation of the fire alarm system. Life Time uses shunted power outlets and circuits to shut down power to specific audio systems. Installation should follow this guidance and be tested for functionality.

J. MDF and IDF equipment racks
   1. All MDF and IDF equipment racks shall be bolted to the concrete floor by the AVC by appropriate means and hardware relative to the application. Please consult local building safety codes and GC requirements.
   2. Seismic locations may require addition iso-base equipment application prior to permanently affixing equipment or server rack cabinets.
   3. Follow OFE rack layout for equipment layout in rack.
   4. All MDF and IDF equipment rack enclosures shall be properly grounded and bonded to the electrical earth grounding system as specified in the NEC. Please consult with the project EC to determine wire size and additional requirements.
   5. The audio rack layout shall provide for power conditioning and amplifiers stack neatly at the lower end and follow with DSP, AV network devices, baluns etc. to the top with a blank rack panel between each separate component type. Appropriate thermal management shall be employed as required.
   6. All cables shall have labels which depict source and destination which are clearly labeled and visible as stated above in item - 11. Cable Labeling Standards.
   7. Network cabling from patch panel follow network cable color scheme:
      a. Purple depicts all QLAN.
      b. Green depicts AV items.
   8. AV network switches – Netgear.
   9. Do not exceed POE allowances.
   10. Cable management shall be neat, organized, and stress free. Strict adherence to the Avixa Rack Building for Audio Visual Systems Standard is required. Items bulleted below must be calculated and applied in the rack building process.
      a. Velcro cable strap support every 12” (the use of nylon wire ties is prohibited).
      b. Strain relief
      c. Service loops
      d. Horizontal cable management
      e. Vertical cable management
   11. Equipment rack thermal management shall be employed to ensure a nominal temperature of no more than 75 degrees Fahrenheit.
   12. MDF to IDF interconnection runs shall be over fiber as Q-Lan.
   13. Group fitness racks provided by others.
      a. Barre, Pilates, Yoga, Others etc. Small format racks built, populated, and installed/commissioned by AVC.

K. Terminations
1. Soldering
    a. Soldered connections shall follow the ISO 12224 soldiering specification.
    b. All connections require tinned wire tips and solder cups prior to application.
    c. Cold solder joints shall not be permitted.
    d. All connections shall be tested for continuity prior to application of heat shrink material.
    e. Heat shrink material sized appropriately for the specific wire gauge and over-all jacket is required on all connections in an effort to prevent shorts or possible electrical inter-connection between poles or adjacent conductors.
    f. In the event that accidental wire insulation burn-off has occurred which results in bare conductor exposure, the termination shall be void. The connection(s)/termination shall be re-terminated to correct the improper cable/termination state.
    g. If the accidental cable damage does not permit an optimal cable re-termination due to improper length, the cable must be re-pulled/replaced to assure correct fitment of the application.
2. Phoenix style
    a. Follow guidelines below:
        1) Remove the outer jacket of the cable with a cable stripper.
        2) Slide outer shrink wrap over the cable jacket.
        3) Outer shrink wrap should be measured to allow ¼” coverage over outer jacket and ¼” distance from connector housing where applicable.
        4) Spin the shield thoroughly, remove the bare wires. Pre-tinning the shield wires with solder.
        5) Place the cable shrink wrap on the shielded wire 1cm (about 0.39 in) from the end of the conductor ensuring that all bare wire is enclosed in the connector housing upon insertion.
        6) Insert the remaining conductors in appropriate configuration in the connector housing and secure the wires with the 2.5mm (about 0.1 in) flat-head screwdriver.
        7) Affix heat shrink wrap the outer jacket and conductors to form a secure bond without melting the jacket or insulation.
3. XLR
    a. Connections shall be soldered following soldering standards above.
        1) Pinout as follows:
            (a) Pin 1 = Ground
            (b) Pin 2 = Hot/Positive
            (c) Pin 3 = Cold/Negative
        2) Re-solder may be required with excess noise on speakers/sound system.
4. DMX
    a. Connections shall be soldered following soldering standards above.
        1) Pinout as follows:
            (a) Pin 1 = Ground
            (b) Pin 2 = Cold/Negative
            (c) Pin 3 = Hot/Positive
        2) Re-solder may be required.
5. Terminal blocks and barrier strips
    a. Solder tin ends of bare wire. Provide heat shrink as part of AV standards.

b. All barrier strip connections require spade lug termination on speaker cable pair ends prior to termination to barrier strip. Spade lugs are to be specifically sized for the individual cable conductor pairs and neatly terminated/crimped with no exposed copper conductor.

6. Miscellaneous
   a. Amplifier terminations shall require spade lugs specifically sized for the individual cable conductor pairs and neatly terminated/crimped with no exposed copper conductor.
   b. Undefined terminations must use AV standards.
7. Wall plates
   a. Wall plate terminations and face plate, regardless of connection type, shall be free of defects prior to adhesion to wall box.
   b. XLR/DMX connections shall be properly soldered and tested as noted above prior to on-plate connection. All XLR type soldered connections shall have heat shrink tubing applied to prevent shorts.
8. Wall and ceiling boxes
   a. Wall and ceiling boxes shall be properly grounded and bonded to the electrical earth grounding system as specified in the NEC.
   b. Box fill shall strictly adhere to article 314 of the NEC.
   c. Cable slack must be neatly dressed and free from abrasion, stress, or bare conductor conditions.
   d. Cable slack shall provide a minimum of six inches where applicable of working distance from the interior of the box for service or maintenance of internal or plate connections.
   e. Boxes shall be checked and free of scrap material, insulation, bare conductors or loose metallic objects prior to plate adhesion.
      1) Ceiling mounted boxes must be secured via manufacturer's recommendation. Ceiling grid support pencil rod(s) shall be utilized to support the added weight of the speaker against the ceiling grid. Support pencil rod shall be shot directly into the deck/ceiling or fastened to structural members with beam clamps or a combination of them and d-rings.

3.03 IDENTIFICATION AND LABELING

A. Each cable related to AV equipment must be labeled on each end. This includes, but is not limited to:
   1. Speaker cables
   2. Power cables
   3. Network cables
   4. Audio cables

B. Cable labeling shall follow the Avixa/Infocomm F501-01:2015 Cable Labeling for Audiovisual Systems printed standard.

C. Adaptation of other standards shall not be permitted unless specifically stated in writing by an authorized Life Time representative.

D. Each unique identifier (primary data element) should have a prefix and/or suffix determined by the accompanying project documentation.

E. Examples:
   1. Signal type • Cable type designation
   2. Room/floor/building number

3. Location designation of cables
4. Review and adhere to the standard as compliance is mandatory throughout.

3.04 TOOLS AND MATERIALS REQUIRED

A. Provide the following, including, but not limited to:
1. Safety equipment including hard hats, safety vests, steel toe boots, and eye protection.
2. Ladders
3. Scissor lift
4. Lockboxes and storage boxes
5. Hand tools
6. Termination tools
7. Hardware and screws
8. Anchors and ceiling support wires
9. Misc. materials/tools as needed to complete scope of work.

3.05 PROGRAMMING AND COMMISSIONING

A. General
1. The Contractor shall perform all required programming and adjustment of equipment to provide the functions described herein and in the drawings. Final programming of systems must be pre-approved by Life Time AV team.

B. Audio Processor Programming
1. Owner to provide base templates for Audio Signal Processor programming: Configure programming file for internal DSP signal routing and processing of audio DSP system to support all required and specified functions of the audio system, configure for remote control of required functions and to optimize the frequency response of each loudspeaker type used in the system for its specific application. DSP configuration shall provide for the following, via programmable internal routers, matrix mixers, mutes, volume controls, filters, equalizers, signal generators and dynamics processors. DSP shall be programmed with presets for all required selectable functions:
a. Independent audio source selection from each remote control for its speaker zone (minimum of 5 preset source selections programmed per control)
b. Independent volume control from each remote control for its speaker zone
c. Parametric Equalization for audio input sources (Pre-EQ)
d. Filter settings (high pass)
e. Equalization to optimize loudspeaker frequency response for music/program zones.
f. Equalization to a standardized masking EQ curve for each masking zone output of the DSP.
g. Dynamics processing if required.

C. Network switch configuration
1. Configuration with owner supplied configuration document.

D. Audio music levels
1. All Speakers must have great sound quality free from background noise, static, or other noticeable interference.
a. Workout Floor Music – Must be intelligible 71dB SPL A weighted at 5.5 ft above floor.
b. General Areas, Corridors, Lockers, Cafe, Salon, Spa - Must be intelligible 71dB SPL A weighted at 5.5 ft above floor.

c. Paging Levels - Must be intelligible at a level of 80 dB SPL A weighted at 5.5 ft above floor.
d. Paging Horns - Must be intelligible at a level of 80 dB SPL A weighted at 5.5 ft above floor.
e. Misc. Speakers – Must be intelligible 71dB SPL A weighted at 5.5 ft above floor.

3.06 ADJUSTMENTS AND TESTS

A. The Contractor shall adjust and calibrate all system controls for standard operation, provide all programming of programmable equipment, set internal jumpers as required and completely test all system functions.

B. The Contractor shall completely test, calibrate and adjust all components as recommended by manufacturers.

C. The Contractor shall completely test all functions of the remote control system to verify proper operation and coordinate the testing with the Consultant and Owner Representative.

D. The Contractor shall equalize the loudspeaker systems, utilizing professional 1/3 octave real-time analyzer equipment and pink-noise generator and /or an approved audio measurement platform (TEF, EASERA, SMART Live).
1. Optimize the equalization of the loudspeaker zones for speech and music reproduction and provide all necessary programming of EQ filters to meet the designated (ref. D.1.a. below) EQ curve for each speaker system type (wall mounted, ceiling mounted).
a. The designated EQ curve to be used for the ambient sound system speaker systems shall provide flat (+-2 dB) response from 120 Hz to 4 Khz, with a high frequency rolloff of 3 dB per octave above 4 Khz to the natural response limits of the speaker devices. Apply parametric filters in cut mode, applying minimal boost only when gain reduction (cut) is not able to maintain the designated response curve. Provide up to 10 PEQ filters, applying as needed to maintain response curve.
b. Measure and apply equalization with one (1) speaker active within the specific room or zone to avoid phase related filtering of the response. Apply the final equalized PEQ settings to both DSP channels feeding stereo audio output to the measured room or zone.
c. Conduct a post EQ listening test in each room or zone, using music and speech audio program sources, in presence of designated Owner representative if/as elected by the Owner. Make final fine EQ adjustments if directed or required by Owner after listening tests.

3.07 INSTRUCTION OF OWNER

A. The contractor shall make available to the owner's representatives at least four (4) hours for demonstration and instruction in the use of the systems.

3.08 CLOSEOUT DELIVERABLES

A. Warranty statement document.

B. As-built architectural system drawings marked with redlines or finalized zone numbers/labels.

C. Q-Sys Designer Backup files.

D. IP Table with specific static IP’s are given by Life Time and should be noted in Excel format including all networked items with this information: Update and provide the following for each online device:
1. Device IP
2. Subnet Mask

3. Gateway
4. MAC Address
5. Switch Port
6. Switch Name
7. Usernames/ Passwords for each device documented if outside of Life Time standards.

E. Site photos
1. The contractor must provide site photos that are relevant to the individual room and job phase in a categorized digital format and file structure to Life Time upon completion of the project work.
2. Photos must include both close up and wide angle of all items as shown in scope. Label each picture and categorize folders for each area of facility.

F. Serial numbers for all equipment present in the final installation shall be presented to Life Time in a categorized digital format.
1. Make, model, serial number, and location.
2. Audio/visual rack mounted equipment make, model, serial number, and location.
3. Speaker systems make, model, serial number, and location.
4. Lighting equipment make, model, serial number, and location.
5. Temporary or portable, etc. audiovisual and DJ equipment make, model, serial number, and location.

G. As-built schematics
1. The contractor shall provide an as-built complete drawing set to Life Time upon completion of the assigned project work.
2. For all systems to include schematic/line drawings, floor plans, reflected ceiling plans and elevations.

3.09 FINAL CHECKOUT AND ACCEPTANCE

A. The Contractor shall verify that the system is complete and fully operational before requesting final approval and before scheduling system demonstration.

B. This Contractor shall be available to demonstrate the operation and use of the system to the Architect/Engineer and to the owner's representatives.

C. At the time of the demonstration, this Contractor shall furnish to the owner two (2) complete record manuals.

D. Final acceptance of the system will be given upon completion of all of the above requirements.

E. All components are free from dust, dirt, and fingerprints.

F. All components must be level, flush, and free from visible damage

3.10 MAINTENANCE SERVICE

A. This Contractor shall guarantee all equipment and workmanship to be free from defects for a period of one (1) year from substantial completion. The warranty period shall begin at the time of completion or at the time the Owner first receives beneficial use, whichever comes first.

B. When requested by Life Time within 12 months of date of Substantial Completion, provide on-site assistance for adjusting system to suit actual occupied needs and/or to maintain optimum system performance. Warranty issues shall be considered separately. Provide up to two visits to Project outside normal occupancy hours for this purpose. Include a minimum of 8 hours of on-site labor designated specifically for this purpose plus all necessary travel time. Any material costs and man-hours that extend beyond this provision may be billed to the owner provided such work and a prior cost estimate have been approved in advance by the owner.

END OF SECTION

This page intentionally left blank

SECTION 27 25 00
AUDIO/VISUAL SYSTEMS AND DISPLAYS

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and General provisions of Contract including General and Supplementary Conditions and Division 1, specification sections, apply to the work of this section.

1.02 DESCRIPTION OF WORK

A. This section is centered around TV Service (DirecTV/Cable TV) displays and independent Audio/Video Systems including standalone Audio systems.

B. Provide equipment and hardware to provide a complete integrated audio distribution system and sound masking system. Furnish all specified materials, products, installation labor, programming, and testing work required for a complete and fully functioning system. Equipment notated on BOM as “OFE” is owner furnished equipment by Life Time.
   1. Unless specified otherwise in the BOM, televisions, displays, digital signage PCs, portable sterio systems, music plays, and lighting systems are owner provided.

C. A conduit / raceway system required to support this equipment will be provided by others.

D. Programming and configuration documents, where applicable, are provided by LIfe Time.

1.03 DEFINITIONS

A. AV or A/V = Audio Video

B. AVC = Audio Video Contractor

C. BOM = Bill of Material

D. CAD = Computer aided design

E. DMX = Digital Multiplex

F. DSP = Digital Signal Processor (for Audio)

G. DSP = Digital Signage Player (for Digital Signage)

H. EC = Electrical Contractor

I. GC = General Contractor

J. GF = Group Fitness Studio

K. IDF = Intermediate Distribution Frame (Secondary IT Closet)

L. IT = Information Technology (For this document its referred to as a department)

M. LAN = Local Area Network

N. LTF Standards = Life Time Standards

O. LVC = Low Voltage Contractor

P. MDF = Main Distribution Frame (Main IT closet)

Q. Misc. = Miscellaneous

R. NEC = National Electric Code

S. OFE = Owner Furnished Equipment (By Life Time)

T. POE = Power Over Ethernet

U. QLAN = Q-Sys local area network

V. Q-SYS = Manufacturer “Q-Sys”

W. SPL = Sound Pressure Level

X. SOW = Scope of Work

Y. UL = Underwriters Laboratories (Safety Standards

Z. XLR = External Line Return (Style of Audio connector)

1.04 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements listed below.

B. Installer Qualifications, Certifications, and General Knowledge:
   1. CTS and Dante Certification by representative working directly on this project.
   2. Dante Certification.
   3. Training and experience with configuring Technicolor Com System.
   4. DirecTV dish certified installer.
   5. Experience with RF balancing on CATV systems.
   6. Experience using digital CATV meter to balance system.
   7. Experience with Bluebeam Revu, AutoCAD, Microsoft Windows 10, and Microsoft Office Suite.
   8. Network switch configuration experience including, but not limited to, IP addressing, QoS, VLAN, and DHCP.

C. Manufacturers
   1. The system shall be the product of the specified manufacturers, installed by an agency experienced in such work. The installation and connections of all equipment and tests of the operation of the system be made by a representative of the manufacturer or aforementioned installing agency.
   2. Contractor / integrator providing this system must be manufacturer approved to furnish, install, maintain, and warranty the system equipment specified.

D. Installation
   1. Installation of required raceways, conduits, and power receptacles shall be by the electrical contractor. The installation of communication outlets, wallplates, devices, and connections of all parts of the audio system shall be done by the A/V Contractor.

E. Programming
   1. The Contractor shall employ the services of an experienced system programming specialist for the Digital Signal Processor/Control system provided under this specification and an experienced programmer for configuring and programming the audio DSP processing equipment.

F. NEC Compliance
   1. Comply with NEC as applicable to construction and installation of system components and wiring.

G. UL Compliance
   1. Where required, provide system equipment which is UL listed and labeled.

H. Licensing
   1. The Communications Contractor shall be a low voltage contractor, licensed by the State of Minnesota.

1.05 SUBMITTALS

A. Product Data
   1. Submit manufacturers' data on all equipment, including:
      a. Detailed equipment list indicating the manufacturer, model number, and quantity for each equipment item being provided or existing item being re-installed.
      b. Manufacturer's product data sheets for each new equipment item.
      c. Dimensions, rough-in drawings, installation instructions, and operation and maintenance, suitable for inclusion in maintenance manual.

B. Shop Drawings
   1. Detailed wiring diagrams of the system. Diagrams shall show connection to each unit of system. Single-line block diagrams are not sufficient.
   2. Detail drawings of all custom fabricated panels, connection wallplates and associated components being supplied.
   3. Equipment rack elevation / layout diagrams (front face)

1.06 DELIVERY, STORAGE, AND HANDLING

A. Prior to acceptance, OFE shall be inspected for damage. If damage on boxes, pallets, or equipment is visible, the shipments shall be rejected and sent back to logistics company. Communicate damage to Life Time AV representative.

B. Store products in manufacturer's packaging. Keep dry and protect from damage until ready for installation.

C. Equipment must be kept locked up at all times in either an on-site storage container provided by AV Installation contractor or within the building in a designated secure location.

D. Contractor shall not install any product in construction areas where the product is subject to damage from water, dust, and construction debris.

E. Contractor is responsible for their own tools and AV components that they are installing. Keep them secure at all times.

PART 2 PRODUCTS

2.01 GENERAL

A. Provide materials in quantities listed in Life Time BOM for a complete and operational system as indicated herein and in the drawings.

B. Coordinate with system block diagrams for verification of specific quantity of equipment items required in each system.

2.02 OWNER PROVIDED EQUIPMENT/MATERIAL (OFE)

A. Reference BOM for purchasing equipment. Do not provide items indicated as OFE.

2.03 CONFLICTS WITH BOM

A. Present conflicts, errors, or omissions to Life Time AV representative for review and approval prior to purchasing.

2.04 SUBSTITUTIONS ON BOM

A. All substitutions outside of owner provided BOM must be presented and approved by Life Time AV representative.

2.05 MISCELLANEOUS MATERIALS

A. Provide list of construction required equipment for installations not called out specifically on BOM.

PART 3 EXECUTION

3.01 GENERAL

A. Wiring, except in equipment cabinets and where raceway or cable tray is provided, shall be routed open above suspended ceilings and in accessible walls and shall be in accordance with manufacturer's directions. All wiring in ceiling spaces shall be plenum rated. In accessible ceiling spaces, wiring shall be supported from ceiling structure at regular intervals of at least 48 inches. Cabling shall not be attached to or supported by ceiling tile support wires.

B. Final wiring connections shall be made and the entire system shall be tested and certified as working properly by an authorized representative of the Contractor. Written verification of test results shall be furnished to the Owner, Architect, and Engineer.

C. Identify and tag all cables with permanent type markers to denote location served.

D. All rack and in-cabinet wiring and cabling shall be neatly routed in plastic wiring duct or secured with tie wraps and routed along rack sides. All splices and connections shall be by plug, solder, or captive screw terminal strips, etc. Splices shall not hang in rack or cabinets.

E. All remotes, manuals, batteries, and spare cables shall be left in MDF Video Rack drawer.

3.02 INSTALLATION

A. Systems installation, cabling and rack building procedures shall fall in strict accordance with industry standards and manufacturer recommendations for safety and operation compliance.

B. Componentry installed during construction shall be either installed after finish carpentry and drywall sanding/construction is complete or covered in a method conducive to provide a dust free environment for the installed items if the possibility of damage could occur to the item prior to first use by the client.

C. Final installation measures by the AVC shall include cleaning components to eliminate fingerprints, dust, or debris during the installation phase. Additional cleaning required by Life Time prior to first use by client will incur a cleaning fee payable by the AVC.

D. Install all equipment, components, accessories, terminal blocks, connectors and hardware necessary to provide a complete and operational system. Connector types and quantities shown in the drawings are representative and the Contractor shall be responsible to supply any additionally required connectors and wiring. Connectors shall be provided and installed as recommended by the manufacturer of the terminating equipment. All other wiring connections to connectors mounted on input plates and floor boxes shall be soldered connections or crimp (video) connections.

E. Provide and coordinate integration of this equipment with the CATV cabling distribution system specified under appropriate Division 27 specification section(s) and as indicated in the drawings.

F. All interconnects must be tied neatly with Velcro ties every 12”.

G. Zip ties are not allowed.

H. Cable minimum bend radius after installation shall be no less than 10 times the cable diameter.

I. MDF and IDF equipment racks

1. All MDF and IDF equipment racks shall be bolted to the concrete floor by the AVC by appropriate means and hardware relative to the application. Please consult local building safety codes and GC requirements.
2. Seismic locations may require addition iso-base equipment application prior to permanently affixing equipment or server rack cabinets.
3. Follow OFE rack layout for equipment layout in rack.
4. All MDF and IDF equipment rack enclosures shall be properly grounded and bonded to the electrical earth grounding system as specified in the NEC. Please consult with the project EC to determine wire size and additional requirements.
5. The audio rack layout shall provide for power conditioning and amplifiers stack neatly at the lower end and follow with DSP, AV network devices, baluns etc. to the top with a blank rack panel between each separate component type. Appropriate thermal management shall be employed as required.
6. All cables shall have labels which depict source and destination which are clearly labeled and visible as stated above in item - 11. Cable Labeling Standards.
7. Network cabling from patch panel follow network cable color scheme:
    a. Purple depicts all QLAN.
    b. Green depicts AV items.
8. AV network switches – Netgear.
9. Do not exceed POE allowances.
10. Cable management shall be neat, organized, and stress free. Strict adherence to the Avixa Rack Building for Audio Visual Systems Standard is required. Items bulleted below must be calculated and applied in the rack building process.
    a. Velcro cable strap support every 12” (the use of nylon wire ties is prohibited).
    b. Strain relief
    c. Service loops
    d. Horizontal cable management
    e. Vertical cable management
11. Equipment rack thermal management shall be employed to ensure a nominal temperature of no more than 75 degrees Fahrenheit.
12. MDF to IDF interconnection runs shall be over fiber as Q-Lan.
13. Group fitness racks provided by others.
    a. Barre, Pilates, Yoga, Others etc. Small format racks built, populated, and installed/commissioned by AVC.

J. Satellite systems
1. DirecTV is the preferred satellite system vendor for Lifetime installations.
2. New Satellite account information will be supplied and activated by Life Time. The AVC will coordinate and supply the dish installation. Dish installation must be done to DirecTV standards and includes, but is not limited to the following:
    a. Provide 8x8x16 cinder blocks for non-penetration roof mounts.
    b. Non-penetration mount shall have a rubber mat between rooftop and dish mount.
    c. Provide dish grounding to DirecTV standards.
    d. Terminations must include dielectric grease.
    e. Must include drip loops.
3. The LVC provides terminal feeds from the MDF to satellite dish/LNB. Connect cabling to Dish.
4. DIRECTV signal is modulated onto RF channels which are then displayed via set top boxes at each cardio display.

5. All display, head end, and set top boxes are provided by Sonify as well as the satellite dish, LNB/LNA, and satellite dish roof mount.
6. Dish signal strength must be free from obstructions.

K. Cable TV systems
1. New cable TV services will be supplied and activated by Life Time.
2. The AVC will provide and connect coaxial cable feeds from cable TV system with MDF to Video Rack.

L. Display (TV) mounting procedures
1. Wall Mount:
a. Wood or metal stud wall covered with gypsum board (drywall) the studs shall be a minimum of 2" x 4" nominal size. Do not install over gypsum board with a thickness greater than 5/8".
1) The structural wall is required to be able to support five times the load of mounted display and equipment.
b. Solid concrete
1) The wall shall be at least 8" thick with a minimum compressive strength of 2000 psi. The cinder blocks shall meet ASTM (American Society for Testing and Materials) C-90 specifications and have a minimum nominal width of 8". Mortar joints are not approved to be used for mounting displays or other materials in any case.
2) The structural wall is required to be able to support five times the load of mounted display and equipment.
c. Cinder block wall
1) The cinder blocks must meet ASTM C-90 specifications and have a minimum nominal width of 8”. Mount securely in a solid portion of the block, generally 1" (25 mm) minimum from the side of the block. A standard electric drill on slow setting shall be used to drill the hole in lieu of a hammer drill to avoid breaking out the back of the hole when entering a void or cavity. The installer shall not attach concrete expansion anchors to concrete or cinder block covered with drywall or other finishing material.
2) The structural wall must support five times the load of mounted display and equipment.
d. Components behind TV including, but limited to, TV tuner, digital signage PC, or power conditioners must be strapped to wall and accessible to service from side of TV without having to remove display to access.
e. Cabling/adapters must not be visible and tied with Velcro.
2. Ceiling pole mount for TVs, projectors, or others
a. Ceiling pole mounts shall utilize a combination of a ceiling plate adapter directly anchored to the deck/ceiling or securely fastened to uni-strut utilizing a combination of spring nuts, threaded rod, and the appropriate combinations of machine nuts and washers.
b. Adapter plates shall have a 6x6 hole pattern and withstand five times the load of the mounted display and equipment.
c. Uni-strut channel shall be mounted securely by either spanning and passing through structural members attached with beam clamps or directly shot into the deck/ceiling with the appropriate fastener. The two end points of the uni-strut channel must pass through structural members to ensure stability and proper load dispersion.

d. Back-to-back display mounting applications shall follow also follow the above specifications and the manufacturers' direct specifications for sway and weight ratio.
e. The mounting of electronic DSP (Digital Signage Player) installation location shall be strapped to the back of the mounted display device and accessible for serviceability.
f. Routing of audio-visual cables shall be neatly tucked into the extension pole or run through a flex material and strapped to the extension pole.
g. Projectors must be mounted flush with top of visible screen.

3. Millwork display mounting
   a. Flat panel displays mounted in millwork shall be directly coordinated with the architectural millwork drawing set. The display mount shall be fastened securely to the millworkers supplied backing and a minimum air gap of no less than six inches shall be observed on all sides for adequate display heat dissipation/ventilation.
   b. In complete enclosure applications, proper thermal management practices shall be required to always keep display and electronics temperature within the sealed/trimmed enclosure to no more than 80% of the maximum allowable operating temperature per the individual manufacturer's specifications. Exhaust fans and temperature sensors shall be utilized to ensure safe operating conditions and electronic equipment operational longevity that does aid to harm or void the manufacturers equipment warranty.
   c. The structural wall must support five times the load of mounted display and equipment.
   d. The mounting of electronic DSP and tv tuner and installation location shall be behind the display device mounted to the internal structure of the millwork enclosure.
   e. Routing of audio-visual cables shall be tucked neatly behind the display device and strapped with strain relief and allow for removal of the display device prior to cable disconnection. Visible or unmanaged cables shall not be permitted.

M. Projectors
1. Ceiling mounted projectors must follow pole mounted structural requirements above.
2. Projector positioning and height must be calculated based on throw distance and approved by Life Time AV representative.
3. Projector image must fill screen exactly with no keystone or stretching allowed.
4. Projectors must be level
5. Projectors must be 8ft above floor.
6. Projector ceiling storage boxes must be used, include power within, and no wires visible routing up pole to ceiling storage.

N. Projector screens
1. Projector screens must be secured via manufacturer directions/hardware requirements.
   a. Must be secured to ceiling or walls.
2. Projector screens must be adjusted to be within 1" of overhead case, unless AV representative approved.

O. Standalone audio/video systems (i.e. Group Fitness, Cycle, Yoga, Barre, Stereo/Video Systems)
1. Racks must follow wiring and rack layouts.
2. Devices must be accessible on networks as shown on drawings. Follow IP information and give MAC addresses.
3. Programming provided by Life Time. Provide minor adjustments such as labels and levels.

P. Portable systems

1. Receive owner provided portable systems at facility and secure.

Q. Bluetooth
1. Bluetooth must not have interference with any other wireless device. Must work within 30 ft per manufacturer specifications. Notify Life Time AV representative if interference cannot be mitigated.

R. Interconnects and Cabling Specifications
1. DMX lighting control cabling
   a. All DMX cabling shall conform to ANSI e1.27-2-2009 (r2014), recommended practice for permanently installed control cables for use with ANSI e1.11 (DMX512-a) and USITT DMX 512/1990 products.
   b. The maximum total length of a daisy-chain DMX control run is 300 meters (1,000 feet) using the lowest grade cabling conforming to ANSI e1.27-2-2009 (r2014). Improved wire gauge and shielding can extend this limitation.
   c. Some additional devices such as repeaters or splitters may also extend this limitation. Consult manufacturer to validate any limitation extensions.
   d. Every DMX control run must be terminated after the last DMX control module in a daisy-chain sequence with a DMX terminator. All cables shall be UL listed type cmp (plenum) or cm/cmr (non-plenum) as required.
   e. All cables shall meet or exceed the following performance requirements:
      1) Nominal impedance: 120 ohm
      2) Nominal outer jacket OD of 0.271”
      3) Meet or exceed USITT standards for DMX 512 cabling specifications
      4) Core conductor AWG - 24AWG (7x32) stranded tc
      5) (4) conductor cable with foil and tc braid
      6) Insulation type foam pe, .025” wall
      7) Drain wire 24AWG (7x32) stranded tc
      8) Termination connectors shall be Nuetrik DMX 3 pin m/f
2. HDMI interconnection cables
   a. All HDMI interconnect cabling shall comply with the HDMI 2.1 specification developed by the HDMI consortium.
   b. All cables shall meet or exceed the following performance requirements:
      1) Frame rate: 24, 25, 30, 50 or 60fps
      2) Chroma sampling: 4:4:4, 4:2:2, or 4:2:0
      3) Bit color depth: 8 bits per color
      4) Signal type: HDMI 2.0
      5) Max video data rate: 18.0 gbps (6.0 gbps per color)
      6) Resolution range: up to 4k @ 60 Hz (4096x2160), uhd @ 60 Hz
      7) 8-bit color depth, max. 18.0 gbps data rate
      8) Voltage: 30v
      9) Pair impedance: 100 ohms +/- 10 ohms
      10) Attenuation:
         (a) At 0.3 – 0.825 GHz ≤5 dB per 3 m
         (b) At 0.825 - 2.475 GHz: ≤12 dB per 3 m
         (c) At 2.475 - 4.125 GHz: ≤20 dB per 3 m
         (d) At 4.125 - 5.100 GHz: ≤25 dB per 3 m
      11) Fext: ≥20 dB per 3 m
      12) Skew:

(a) Intrapair: ≤112 ps per 3 m
(b) Intrapair: ≤1.78 ns per 3 m

3. Display port interconnection cables
   a. All cables shall meet or exceed the following performance requirements:
      1) Frame rate: 24, 25, 30, 50 or 60fps
      2) Chroma sampling: 4:4:4, 4:2:2
      3) Bit color depth: 8, 10 or 12 bits per color
      4) Signal type: DisplayPort 1.2, HDCP 1.4, HDCP 2.3
      5) Max video data rate: 21.6 gbps (5.4 gbps per lane)
      6) Resolution range: up to 4k @ 60 Hz (4096x2160), uhd @ 60 Hz
      7) 12-bit color depth, max. 21.6 gbps data rate
      8) Voltage: 40v
      9) Pair impedance: 100 ohms +/- 10 ohms
      10) Attenuation:
         (a) At 0.3 – 0.825 GHz ≤5 dB per 3 m
         (b) At 0.45 - 1 GHz: ≤7.7 dB per 3 m
         (c) At 1 - 2 GHz: ≤12.6 dB per 3 m
         (d) At 2 - 3 GHz: ≤17.5 dB per 3 m
         (e) At 3 - 4 GHz: ≤22.4 dB per 3 m
         (f) At 4 - 5 GHz: ≤27.3 dB per 3 m
         (g) At 5 - 7 GHz: ≤37.1 dB per 3 m
         (h) Fext: ≥20 dB per 3 m
         (i) Skew:
            (1) Intrapair: ≤50 ps per 3 m
            (2) Intrapair: ≤4 ns per 3

3.03 IDENTIFICATION AND LABELING

A. Each cable related to AV equipment must be labeled on each end. This includes, but is not limited to:
   1. Speaker cables
   2. Power cables
   3. Network cables
   4. Audio cables

B. Cable labeling shall follow the Avixa/Infocomm F501-01:2015 Cable Labeling for Audiovisual Systems printed standard.

C. Adaptation of other standards shall not be permitted unless specifically stated in writing by an authorized Life Time representative.

D. Each unique identifier (primary data element) should have a prefix and/or suffix determined by the accompanying project documentation.

E. Examples:
   1. Signal type • Cable type designation
   2. Room/floor/building number
   3. Location designation of cables
   4. Review and adhere to the standard as compliance is mandatory throughout.

3.04 TOOLS AND MATERIALS REQUIRED

A. Provide the following, including, but not limited to:

1. Safety equipment including hard hats, safety vests, steel toe boots, and eye protection.
2. Ladders
3. Scissor lift
4. Lockboxes and storage boxes
5. Hand tools
6. Termination tools
7. Hardware and screws
8. Anchors and ceiling support wires
9. Misc. materials/tools as needed to complete scope of work.

3.05 PROGRAMMING AND COMMISSIONING

A. General
   1. Provide all initial setup and programming required for operation of the digital signage server including coordinating and testing network connectivity and web-based accessibility and shall utilize manufacturer provided assistance as needed and available.

B. Digital Signage
   1. Digital Signage players provided by Life Time are pre-programmed. Confirm these players are connected to the Life Time Cisco Network and are accessible by Life Time digital signage team.
   2. Coordinate with Life Time Digital signage team to align aspect ratio and naming.

C. Audio Fetch
   1. Audiofetch listening device(s) must be programmed to Life Time channel lineup.
   2. All TV audio must be balanced on member app during configuration.
   3. Audio must be calibrated for delay to minimize delay between audio and video.

D. Technicolor COM system (for DirecTV satellite distribution)
   1. Configure COM system to LIfe Time standards.
   2. HD programming must follow Life Time provided channel lineup.
   3. HD Channels must be programmed with IP information provided, live on Life Time internal network.
   4. Licensing must be applied per channel.
   5. Each QAM Carrier must be enabled with “Clear HD”, also known and “In the Clear”.
      a. Coordinate the approval process with Technicolor and DirecTV. Life Time will provide the signed paperwork with grandfathered agreement with DirecTV.
   6. Output of COM system “QAM” coax output must be measured between +30dBmV and +50dBmV.
   7. Electronic programming guide channel should be activated but NOT included in channel lineup. Program guide to include channel information to be broadcasted to cardio equipment and TV tuners.

E. TV settings
   1. Each TV should be set to operate 24/7. Follow these settings:
      a. TVs must be set with auto-off disabled.
      b. Set time on each display.

F. TV tuners
   1. Follow the owner provided configuration documentation for initial setup

2. Life Time will provide the desired Channel TV lineup with QAM channel numbers broadcasted from TV distribution. Provide coordination with Life Time AV representative to verify subscriber network channels to be deleted for inserting local channels and determining channels for channel elimination filters. The channel lineup indicated on the drawings shall be verified by the contractor and coordinated with the owner.
3. Close captioning must be visible on large TVs.
4. Channel information and TV channel numbers shall be visible on TV tuner.

G. Programming cardio equipment TV tuners
1. Each TV attached or built in, with RF distribution, must include every channel in channel lineup. Must be clear from static, pixelization, and other interference.
2. Audio must be verified at each piece of equipment with headphones. Clear from any static or glitching.
3. Closed captioning must be visible upon demand on each TV.

H. Projectors
1. Projectors must fill entire screen.
2. Set to auto-off after four (4) hours.

I. Wireless microphone systems
1. Wireless microphone systems must not interfere with other wireless devices in the facility or outside. Frequency scans must be performed to ensure no interference.

J. Portable audio systems
1. Each must be setup, tested for audio, wireless mic configured for facility, and no interference.

3.06 ADJUSTMENTS AND TESTS

A.

B. The Contractor shall completely test, calibrate, and adjust all components as recommended by manufacturers.

C. The Contractor shall completely test all functions of the remote control system to verify proper operation and coordinate the testing with the Consultant and Owner Representative.

3.07 INSTRUCTION OF OWNER

A. The Contractor shall provide Owner user training on all operational aspects of new equipment provided for the system and shall provide up to eight (8) hours of instruction (in conjunction with manufacturer) for operation of the new video messaging system. Training information, sign-in sheets shall be included in as-built documentation.

3.08 CLOSEOUT DELIVERABLES

A. Warranty statement document.

B. As-built architectural system drawings marked with redlines or finalized zone numbers/labels.

C. TV tuner cloned image backup file(s).

D. IP Table with specific static IP’s are given by Life Time and should be noted in Excel format including all networked items with this information: Update and provide the following for each online device:
1. Device IP
2. Subnet Mask
3. Gateway
4. MAC Address

5. Switch Port
6. Switch Name
7. Usernames/ Passwords for each device documented if outside of Life Time standards.

E. Site photos
1. The contractor must provide site photos that are relevant to the individual room and job phase in a categorized digital format and file structure to Life Time upon completion of the project work.
2. Photos must include both close up and wide angle of all items as shown in scope. Label each picture and categorize folders for each area of facility.

F. Serial numbers for all equipment present in the final installation shall be presented to Life Time in a categorized digital format.
1. Display/television make, model, serial number, and location
2. Audio/visual rack mounted equipment make, model, serial number, and location.
3. Lighting equipment make, model, serial number, and location.
4. Temporary or portable, etc. audiovisual and DJ equipment make, model, serial number, and location.

G. As-built schematics
1. The contractor shall provide an as-built complete drawing set to Life Time upon completion of the assigned project work.
2. For all systems to include schematic/line drawings, floor plans, reflected ceiling plans and elevations.

H. Each wireless microphone system frequency in Excel and photos.

3.09 FINAL CHECKOUT AND ACCEPTANCE

A. The Contractor shall verify that the system is complete and fully operational before requesting final approval and before scheduling system demonstration.

B. This Contractor shall be available to demonstrate the operation and use of the system to the Architect/Engineer and to the owner's representatives.

C. At the time of the demonstration, this Contractor shall furnish to the owner two (2) complete record manuals.

D. Final acceptance of the system will be given upon completion of all of the above requirements.

E. All components are free from dust, dirt, and fingerprints.

F. All components must be level, flush, and free from visible damage

3.10 MAINTENANCE SERVICE

A. This contract shall include a written warranty for the installed system, including all equipment and workmanship, as a guarantee to correct any defects and failures for a period of 12 months. The warranty period shall begin at the time of completion (fully tested and accepted) or at the time the owner first receives beneficial use, whichever comes first. Within this 12 month warranty period, the entire system shall be kept in proper operating condition at no charge to the Owner.

B. When requested by owner within 12 months of date of Substantial Completion, provide on-site assistance for adjusting system to suit actual occupied needs and/or to maintain optimum system performance. Warranty issues shall be considered separately. Provide up to two visits to Project outside normal occupancy hours for this purpose. Include a minimum of 8 hours of on-site labor designated specifically for this purpose plus all necessary travel time. Any material costs and man-hours that extend beyond this provision may be billed to the owner provided such work and a prior cost estimate have been approved in advance by the owner.

END OF SECTION

SECTION 27 41 33
BROADBAND TELEVISION DISTRIBUTION SYSTEM

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SECTION INCLUDES

A. Broadband Television Distribution System: Equipment, coaxial cabling, and components configured for the distribution of television signals.

1.03 DEFINITIONS

A. Agile Receiver: A broadband receiver that can be tuned to any desired channel.

B. Broadband: For the purposes of this Section, wide bandwidth equipment or systems that can carry signals occupying in the frequency range of 54 to 1002 MHz. A broadband communication system can simultaneously accommodate television, voice, data, and many other services.

C. Carrier: A pure-frequency signal that is modulated to carry information. In the process of modulation, it is spread out over a wider band. The carrier frequency is the center frequency on any television channel.

D. CATV: Community antenna television; a communication system that simultaneously distributes several different channels of broadcast programs and other information to customers via a coaxial cable.

E. CEA: Consumer Electronics Association.

F. dBmV: Decibels relative to 1 mV across 75 ohms. Zero dBmV is defined as 1 mV across 75 ohms. dBmV = 20 log 10(V1/V2) where V1 is the measurement of voltage at a point having identical impedance to V2 (0.001 V across 75 ohms).

G. Headend: The control center of the master antenna television system, where incoming signals are amplified, converted, processed, and combined into a common cable along with any locally originated television signals, for transmission to user-interface points.

H. MATV: Master antenna television; a small television antenna distribution system usually restricted to one or two buildings.

I. RF: Radio frequency.

1.04 SYSTEM DESCRIPTION

A. The system shall consist of a DirecTV or Cable TV service transmitted over a a coaxial cable distribution system.

B. Headend equipment shall consist of receiving antennas and associated signal amplification and equalization.

C. Distribution of DirecTV or Cable TV service signals. Obtain signal levels, and noise and distortion characteristics from service provider as the point of departure for system layout and final equipment selection.

D. Cable distribution system consisting of coaxial cables, user interfaces, signal taps and splitters, RF amplifiers, signal equalizers, power supplies, and required hardware complying with IEEE 802.7 and resulting in performance parameters specified in this Section.

E. Hardware Requirements: Use modular, plug-in, solid-state electronic components. Mount amplifiers and other powered equipment in head end racks.

1.05 SUBMITTALS

A. Product Data: For each type of product indicated.
   1. Equipment List: Include every piece of equipment by model number, manufacturer, serial number, location, and date of original installation. Add testing record of each piece of adjustable equipment, listing name of person testing, date of test, and description of as-left set points.
   2. Source quality-control test reports on coaxial cable sweep tests.

B. Field quality-control test reports.

C. Operation and Maintenance Data: For head-end and distribution system to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:
   1. Lists of spare parts and replacement components recommended to be stored at the site for ready access.
   2. Operating Instructions: Provide two sets. Furnish instructions so the users of the system will know how to fully operate the system.
   3. As-Built Drawings: Provide one set. These drawings shall include any changes made to the system during installation. Include circuit diagrams and other information necessary for the proper operating and maintenance of the system.
      a. Include dimensioned plan and elevation views of components and enclosures. Show access and workspace requirements.
   4. Include all warranty information as specified.

D. Record Documents and Drawings:

E. This contractor shall furnish to the Owner two (2) complete as-built manuals. These manuals shall be assembled in a loose-leaf binder and shall contain the following:
   1. System Operating Instructions
   2. System Functional Block Diagram(s)
   3. System Schematic Diagram(s)
   4. Component Operating Manual(s)
   5. Component Service Manual(s)
   6. System Wiring List(s)

1.06 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements listed below.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

C. Comply with NECA 1.

D. Comply with NFPA 70 (National Electrical Code).

E. UL Compliance: Provide equipment and components that are UL listed and labeled.

1.07 COORDINATION

A. Coordinate size and location of raceway system, and provisions for electrical power to equipment of this Section.

B. Coordinate Work of this Section with requirements of DirecTV or Cable TV service provider.

1.08 GUARANTEES AND WARRANTIES

A. This contract shall include a written warranty for the installed system, including all equipment and workmanship, as a guarantee to correct any defects and failures for a period of 12 months. The warranty period shall begin at the time of completion (fully tested and accepted) or at the time the owner first receives beneficial use, whichever comes first. Within this 12-month warranty period, the entire system shall be kept in proper operating condition at no charge to the Owner.

1.09 MAINTENANCE SERVICE

A. System Adjustments: When requested by owner within 12 months of date of Substantial Completion, provide on-site assistance for adjusting system to suit actual occupied needs and/or to maintain optimum system performance. Warranty issues shall be considered separately. Provide up to two visits to Project outside normal occupancy hours for this purpose. Include a minimum of 8 hours of on-site labor designated specifically for this purpose plus all necessary travel time. Any material costs and man-hours that extend beyond this provision may be billed to the owner provided such work and a prior cost estimate have been approved in advance by the owner.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: All listed manufacturers are subject to compliance with the requirements specified herein.

B. Equipment shall be made by manufacturers listed herein are considered approved for bidding on this project. Where specific makes and models are referred to, the intention is to establish a minimum level of performance and features. Materials shall never be ordered based solely upon model numbers, but rather foremost upon specifications, descriptions, and applications of such materials. Any perceived inconsistencies shall be discussed with the Life Time AV representative prior to bid.

C. Any equipment or materials proposed as equivalent to the system herein specified, must be so proven by the contractor. Provide manufacturer's name, model numbers, and two (2) copies of product data documentation. Once such information is provided, the alternate manufacturer may be approved only by the specifying authority. Alternate manufacturers are allowed only after the specifying authority modifies this contract (via addendum) to include such manufacturers as equivalents.

2.02 SUBSTITUTIONS

A. The contractor shall submit proposed alternates to the Life Time AV representative at least ten (10) working days prior to the bid date.

2.03 BROADBAND EQUIPMENT

A. Description: Signal-source components, signal-processing and amplifying equipment, distribution components, and interconnecting wiring. System shall receive signals from sources, amplify and process them, and distribute them to outlets for receiving sets. Equipment shall translate UHF channels to VHF channels before distribution to outlets.

B. Identification of Signal Sources and Channels Distributed: Coordinate all such information directly with the owner and their signal service provider.

C. Broadband System Qualitative Performance Requirements: Reception quality of color-television program transmissions at each system outlet from each designated channel and source shall be equal to or superior than that obtained with performance checks specified in Part 3 "Field Quality Control" Article, using a standard, commercial, cable-ready, color-television receiver.

D. Broadband System Quantitative Performance Requirements: Level and quality of signal at each outlet from each designated channel and source shall comply with Specifications below when tested according to 47 CFR 76.

2.04 BROADBAND HEAD-END COMPONENTS

A. Manufacturers:
1. Blonder Tongue Laboratories, Inc.
2. Cabletronix, Inc.
3. Technicolor
4. ZeeVee

B. Head-end Equipment: Channel mixers, processors for channel translation, broadband amplifier, single-channel amplifiers, and/or combining networks for receiving off-air television and FM signals and outputting the signals to cable distribution system. Equip coaxial down leads of the off-air antennas with preamplifiers to send signals at strength required by head-end.
1. House the units in within the head end rack.
2. All head-end equipment shall be 19" rack mountable in the floor-mounted rack(s).

C. Broadband Amplifier:
1. Frequency Range: 47 to 860 MHz.
2. Frequency Response: Plus or minus 1.0 dB across passband.
3. Maximum Noise: 10 dB.
4. Minimum Return Loss: 16 dB.
5. I/O Impedance: 75 ohms.
6. Design Basis: Broadband Indoor Distribution Bi-directional Amplifier, 47-860 MHz frequency range, Blonder Tongue RMDA series or approved equivalent. Determine quantity and size as required for proper signal level.

2.05 DISTRIBUTION COMPONENTS

A. Cable Fittings shall be male F-connectors designed specifically for the specified RG-6/11 and ½" hard-line cable. Manufacture of cable fittings shall be Gilbert, LRC, or approved equivalent.
1. Type F, 75 ohms.
2. Compression-type cable fitting.
3. Anti-corrosion nickel-plated finish.

B. Couplers (or taps) for connections of coaxial signal distribution in telecommunication rooms shall have bandwidth performance of 5 to 1000 MHz, be available in 2-way to 8-way configurations, be available in attenuations from 8-30 dB (provide appropriate attenuation to meet design and signal distribution requirements, and have 120 dB RFI shielding. Approved manufacturers are Cable Tronix, Blonder-Tongue, or approved equivalent.

C. Splitters for distribution of coaxial backbone cabling shall have bandwidth performance of 5 to 1000 MHz, be available in 2-way to 8-way balanced configurations (or 3-way unbalanced), and have 120 dB RFI shielding. Provide splitters as required to meet signal distribution requirements. Approved manufactures are Cabletronix, Blonder-Tongue, or approved equivalent.

D. All cable fittings shall be compression-type with anti-corrosion nickel-plated finish.

E. Provide Type-F terminating resistors for all unused taps of splitters and directional couplers.

F. Cable System Power Supplies: Plug-in modular construction, with surge, short circuit, and overload protection.

G. Signal Traps: Packaged filters tuned to interference frequencies encountered in Project.

H. Attenuators: Passive, of fixed value, used to balance signal levels.

I. User-Interface Device: Flush, female-type outlets, designed for installation in data faceplate, mounting in standard outlet box, with metallic parts of anodized brass, beryllium copper, or phosphor bronze.
   1. Cable Connector: Female, Type F. Insert to be pass-thru RF-Type connector for mating with F type male connectors.
   2. Wall Plates: specified in section 271350
   3. Attenuation: Less than 0.1 dB.
   4. Voltage Standing-Wave Ratio: Less than 1.15 to 1.

2.06 COAXIAL CABLING

A. Cable Characteristics: Broadband type, recommended by cable manufacturer specifically for broadband CATV and data transmission applications. Coaxial cable and accessories shall have 75-ohm nominal impedance with a return loss of 20 dB minimum from 5 to 1000 MHz, and shall be listed to comply with NFPA 70, Articles 810 and 820.

B. NFPA and UL compliance, listed and labeled by an NRTL acceptable to authorities having jurisdiction as complying with UL 1655 and with NFPA 70 "Radio and Television Equipment" and "Community Antenna Television and Radio Distribution" Articles. Types are as follows:
   1. CATV Cable: Type CATV or CATVR.
   2. CATV Plenum Rated: Type CATVP, complying with NFPA 262.
   3. CATV Riser Rated: Type CATVR, complying with UL 1666.
   4. CATV Limited Rating: Type CATVX.

C. Indoor RG6 Cable shall comply with the following requirements:
   1. Type RG6, quad shielded with CL2P jacket.
      a. Nominal impedance: 75 ohm +/-3.0 Ohm
      b. Nominal velocity of propagation: 83%
      c. Nominal capacitance: 16.2 pf/ft. (53.1 pf/m)
      d. Temperature rating: -40ºc +80ºc temp
      e. Core AWG: 18
      f. Nominal core o.d.: 0.180in (4.57mm)
      g. Nominal o.d.: 0.275 in (6.99 mm)
      h. Nominal delay: 1.24 ns/ft
      i. Nominal conductor dc resistance 20ºc: 28.0 / 1000 ft.
      j. Structural return loss:
      k. 23 dB min, 5-85 MHz
      l. 21 dB min, 851-3000 MHz
   2. Nominal attenuation:
      a. 1.0 MHz - 0.24dB/100 ft
      b. 3.6 MHz - 0.45dB/100 ft
      c. 10.0 MHz - 0.72dB/100 ft
      d. 71.0 MHz - 1.70dB/100 ft

e. 135.0 MHz - 2.10dB/100 ft
f. 270.0 MHz - 2.97dB/100 ft
g. 360.0 MHz - 3.43dB/100 ft
h. 720.0 MHz - 4.95dB/100 ft
i. 1000.0 MHz - 5.89dB/100 ft
j. 3000.0 MHz - 10.67dB/100 ft

3. Attenuation per 100 feet shall not exceed 7.3 dB at 1000 MHz.
4. Plenum rated, UL Listed type CMP marking on cable.
5. Product identifications markings at regular intervals on cable
6. White in color (cable jacket) unless noted otherwise
7. Approved products:
   a. CommScope #7461604
   b. Equal by West Penn
   c. Equal by Belden
   d. Or prior approval.

D. Outdoor RG6 Cable shall comply with the following requirements:
1. Type RG6, quad shielded with sunlight resistant rated jacket.
2. Nominal impedance: 75 ohm +/-3.0 Ohm
   a. Nominal velocity of propagation: 83%
   b. Nominal capacitance: 16.2 pf/ft. (53.1 pf/m)
   c. Temperature rating: -40ºc +80ºc temp
   d. Core AWG: 18
   e. Nominal core o.d.: 0.180in (4.57mm)
   f. Nominal o.d.: 0.275 in (6.99 mm)
   g. Nominal delay: 1.24 ns/ft
   h. Nominal conductor dc resistance 20ºc: 28.0 / 1000 ft (about 304.8 m).
   i. Structural return loss:
   j. 23 dB min, 5-85 MHz
   k. 21 dB min, 851-3000 MHz
3. Nominal attenuation:
   a.
   b. 3.6 MHz - 0.45dB/100 ft
   c. 10.0 MHz - 0.72dB/100 ft
   d. 71.0 MHz - 1.70dB/100 ft
   e. 135.0 MHz - 2.10dB/100 ft
   f. 270.0 MHz - 2.97dB/100 ft
   g. 360.0 MHz - 3.43dB/100 ft
   h. 720.0 MHz - 4.95dB/100 ft
   i. 1000.0 MHz - 5.89dB/100 ft
4. 3000.0 MHz - 10.67dB/100 Attenuation per 100 feet shall not exceed 7.3 dB at 1000 MHz.
5. Product identifications markings at regular intervals on cable.
6. Black in color (cable jacket).
7. Approved manufacturers:
   a. CommScope
   b. West Penn
   c. Belden
   d. Or prior approval.

E. Indoor RG11 Cables shall comply with the following requirements:
   1. Type RG11, quad shielded with CL2P jacket.
   2. Nominal impedance: 75 ohms.
      a. Nominal velocity of propagation: 84%
      b. Nominal capacitance: 16 pf/ft. (53.1Pf/m) temperature rating: -40ºc +80ºc
      c. Core AWG: 14
      d. Nominal core o.d.: 0.064in
      e. Nominal o.d.: 0.400 in
      f. Nominal delay: 1.21 ns/ft
      g. Nominal conductor dc resistance 20ºc: 25 /1000 ft.
   3. Structural return loss:
      a. 23 dB min, 5-85 MHz
      b. 21 dB min, 851-3000 MHz
   4. Nominal attenuation:
      a. 1.0 MHz - 0.16dB/100 ft
      b. 3.6 MHz - 0.29dB/100 ft
      c. 10.0 MHz - 0.46dB/100 ft
      d. 71.5 MHz - 1.09dB/100 ft
      e. 135.0 MHz - 1.47dB/100 ft
      f. 270.0 MHz - 2.09dB/100 ft
      g. 360.0 MHz - 2.45dB/100 ft
      h. 720.0 MHz - 3.58dB/100 ft
      i. 1000.0 MHz - 4.30dB/100 ft
      j. 3000.0 MHz - 8.20dB/100 ft
   5. Attenuation per 100 feet shall not exceed 4.3 dB at 1000 MHz.
   6. Plenum rated, UL Listed type CMP marking on cable.
   7. Product identifications markings at regular intervals on cable.
   8. White in color (cable jacket).
   9. Approved manufacturers:
      a. CommScope
      b. West Penn
      c. Belden or prior approved equivalent.
      d. Or prior approval.

F. Coaxial trunk cable from the main telecommunications room to telecommunications rooms shall comply with the following requirements:
   1. Trunk and distribution coaxial cable.
      a. Copper-clad aluminum wire covered with foam FEP dialectic aluminum tube shield and PVC jacket; overall cable diameter of 0.536 inches.
      b. Nominal impedance 75 ohm
      c. Attenuation per 100 feet shall not exceed 3.78 dB at 1000 MHz.
      d. Plenum rated. UL Listed type CMP marking on cable.
      e. Product identifications markings at regular intervals on cable.
      f. White in color (cable jacket).
      g. Approved products:
         1) CommScope #2312V
         2) West Penn equal.
         3) Belden equal.

4) Or prior approval.

G. Station Cords:
1. For each user-interface device installed, provide a 10-foot (or other length as noted) RG-6/U 18 AWG coax cable terminated at both ends for connection to owner-provided audio/video electronics.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine pathway elements intended for coaxial cable installation. Check raceways, cables, trays, and other elements for compliance with accessibility for installation and maintenance, and other conditions affecting installation.

B. Examine walls, floors, roofs, equipment bases, and roof supports for suitable conditions where television equipment is to be installed.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 GENERAL REQUIREMENTS

A. Wiring Method: Install cables in raceways and cable trays except within consoles, cabinets, casework, and in accessible ceiling spaces. Conceal raceway and cables except in unfinished spaces.
1. Install plenum cable in environmental air spaces, including plenum ceilings.
2. Install cables concealed in accessible ceilings, walls, and floors wherever possible.

B. Supporting Cables: All cabling supports installed on this project shall be installed in a manner that results in all cabling being routed parallel and/or perpendicular with adjacent building lines (walls, floors, and structural elements). Cables flown above ceilings diagonally or angles other than 90-degrees or 0-degrees relative to adjacent building lines will not be accepted. Non-compliant installations shall be removed and reinstalled at the expense of this contractor. Do not run adjacent and parallel to power or data cables.

C. Cable and wiring shall not lay loose on ceiling tiles or grids.

D. Wiring within enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Provide and use lacing bars and distribution spools.

E. Support cables with Velcro straps. Vinyl cable ties are prohibited.

F. Tighten connectors and terminals, including screws and bolts, in accordance with equipment manufacturers published torque tightening values for equipment connectors. Where manufacturer's torque tightening requirements are not indicated, tighten connectors and terminals to comply with tightening torques per NEC specifications.

G. Grounding: According to recommendations in IEEE 142 and IEEE 1100.

H. Install coaxial cables in telecommunications cable trays where permissible; place coaxial cables separated away from voice and data cabling. When coaxial cables are not support in cable tray or conduit, provide a separate J-hook support system.

I. Follow manufacturer’s installation instructions for the installation of coaxial cable. Trunk cable shall not bend of 20 times the cable diameter (approximately 11-inch maximum bend radius).

J. Terminate RG-6 cables at TV outlet locations with F-connectors and connected to faceplate feed-through couplers installed in faceplates.

K. Connect all coaxial cable on couplers, splitter, and amplifiers so the coaxial cabling system is ready to distribute input signals with clear images at all TV outlet locations in the building.

L. TV outlet locations shall be clearly labeled and identified on the as-built drawings.

M. Cold-Weather Installation: Bring cable to room temperature before dereeling. Heat lamps may not be used for heating.

N. Cable may not be installed in same raceway with power cable.

O. Coaxial cable shall not be spliced except on plywood backboards in wire closets or in cabinets designated for the purpose.

P. Do not use water-based cable pulling lubricants with PVC-jacketed cable.

Q. Do not exceed manufacturer's recommended minimum bending radiuses.

R. Pulling Cable: Do not exceed manufacturer's recommended pulling tensions. Do not install bruised, kinked, scored, deformed, or abraded cable. Do not splice cable between termination, tap, or junction points. Remove and discard cable if damaged during installation and replace it with new cable.

S. Cable Support: Install supports at intervals recommended in writing by cable manufacturer. Install supports within 6 inches (150 mm) of connector so no weight of cable is carried by connector. Use no staples or wire ties, pull tie-wrap snug, and do not over tighten.

T. Signal Equalization: Where system performance may be degraded in certain operating modes, revise component connections and install distribution amplifiers and attenuators as required, providing a balanced signal across the system.

U. Install passive circuit devices, such as splitters and attenuators, in wire closets or cabinets. Do not install attenuators as part of user-interface device outlets.

V. Provide a 75ohm terminator cap at every jack. Tighten each with a wrench until snug.

3.03 MDF AND FACILITY WIDE RF SYSTEM

A. Provide taps/splitters/attenuators/amplifiers in all locations shown on Technology Prints. (NOTE: Drawing is a basic guide based off of estimated distances. Actual distances depend on cable pathways and other variables. Results could vary and minor changes of tap/splitters/amplifiers/attenuators may need to take place. Please take this into consideration. Find best suitable technician with broad range of knowledge on RF distribution to complete work and before all hardware is purchased. Any changes to drawing will first need to be consulted with Life Time AV representative representative).
   1. All splitters/taps shall be anchored to a solid surface using anchors/zip ties or other means. No Splitter/tap/attenuator shall be visible.
   2. Soffit TV taps shall be installed on soffit shelf adjacent to each TV.
   3. Tighten all F connectors with wrench until snug.

B. In MDF: Install all Splitters/Amplifiers on Wall behind Video Rack(s).
   1. Provide custom made, short black RG6 quad jumpers terminated with F connectors for the interconnects between all pieces on wall behind video rack. Jumpers are no less than 12" long.
   2. All cables shall be secured to wall in a neat and workmanlike manor.
   3. All open ports on splitters shall be capped with 75ohm terminator cap. Provide caps as necessary.
   4. All splitters/amplifiers shall be grounded. See drawing for more information.
   5. Provide proper minimum #16 solid grounding cable and termination hardware. See Section 27 05 26 for more grounding information.

6. Provide secondary grounding bus for splitters/amplifiers.
7. Ground secondary bus to main copper ground bus in MDF. Provide proper grounding hardware.

C. For each TV coax jack (F connector) installed in entire facility:
1. Provide a custom made 10 foot black RG6 quad jumper with terminated with F connectors on both ends. Test each cable to rule out any shorts/opens in cable.
a. Box up and give to AV installation vendor.
b. Jumpers will be installed by AV vendor.

3.04 MAIN WORKOUT FLOOR

A. Overhead Soffit TVs:
1. Cat5e: (1 termination per TV)
a. Terminate to female cat5e jack in wallplate.
b. All ceiling wiring must be tied to deck.
2. RF: (1 termination per TV)
a. Design RF System design based on layout on prints.
b. Install RG6/RG11 quad shielded cabling.
c. Terminate with F-Connectors and provide wall plates.
d. Provide RG6 “patch cables” at each wall plate for connection to cardio equipment. Lengths will vary per piece of equipment.
e. All ceiling wiring must be tied to deck.

B. Workout Floor cardio equipment TVs in floor boxes
1. RF: (1 termination per floor box)
a. Design/Provide RF System design based on layout on prints.
b. Install RG6/RG11 quad shielded cabling.
c. Terminate with F-Connectors.
d. Provide RG6 “patch cables” at each floor plate for connection to cardio equipment. Lengths will vary per piece of equipment.

3.05 HEAD-END INSTALLATION

A. Mount head-end equipment in electronic equipment cabinets recommended by manufacturer. Group related items in methodical sequence.

B. Arrange equipment to facilitate access for maintenance and to preserve headroom and passage space. Parts that require periodic service or maintenance shall be readily accessible. Head-end components that require tuning adjustments shall be accessible from the front of equipment cabinets.

C. Cable Entrance: Use entrance fittings, seal, and waterproof penetrations of the building envelope.

D. Provide a #6 AWG insulated ground wire from the main equipment rack to the ground bus located in the room.

3.06 IDENTIFICATION

A. Identify system components, wiring, cabling, and terminals according to Division 26 Section "Identification for Electrical Systems."

B. Identify and tag all cables with permanent type markers to denote location served.
1. Label each coax feed with the zone number associated, location, and calculated line loss. Use professional label, black on white. See section 270553 for labels for communications system.

2. Label input/output of each Splitter with input signal dB and output signal dB.
3. Label input/output of each Amplifier with input signal dB and what output signal dB is set to.
4. Label each tap to correspond with floor box location on Technology Drawing, i.e. C1-01, C1-02 etc.

C. Each major system component shall be labeled as to function and area served.

D. All front panel controls used in the normal operation of the system shall be clearly labeled using plastic laminate engraved labels or approved equal. Labels shall be firmly affixed to the panel or device. Dymo or Kroy tape adhesive backed lettering is not acceptable.

3.07 FIELD QUALITY CONTROL

A. Inspection: Verify that units and controls are properly installed, connected, and labeled, and that interconnecting wires and terminals are identified.

B. Pretesting: Align and adjust system and pretest components, wiring, and functions to verify that they comply with specified requirements. Replace malfunctioning or damaged items. Retest until satisfactory performance and conditions are achieved. Prepare television equipment for acceptance and operational testing as follows:
1. Use an agile receiver and signal strength meter or spectrum analyzer for testing.
2. Off-Air, Mast-Mounted Antenna Sources: Connect receiver to the down lead of a 10-element, single-channel antenna, tuned and oriented to optimize reception for the channel and placed at system antenna's location. Alternatively, connect receiver to a single-channel video amplifier connected to the down lead of the above single-channel antenna.
3. CATV Sources: Connect receiver to an agile demodulator or CATV set-top converter at CATV service entrance to the facility.

C. Final Acceptance Testing Schedule: Schedule tests after pretesting has successfully been completed and system has been in normal functional operation for at least 14 days. Provide notice of test schedule a minimum of 10 days prior to testing.

D. Operational Tests: Perform operational system tests to verify that system complies with Specifications. Include all modes of system operation. Test equipment for proper operation in all functional modes.

E. Send test signal and test each TV location, using Digital and Analog RF tester.
1. Test signal from main feed to each drop. See drawing for more information.
   a. If signal is not present at time of balancing, generate a test signal of 28dB to match output of video rack.
2. Adjust amplifiers if attenuation is necessary. Before adjustment, contact/discuss with Life Time AV representative before any changes occur.
3. Measure each jack, at each TV location in entire facility, and ensure it reads between +0dB and +5dBmV. Provide digital RF meter for tests.
4. If adjustment is needed, install correct taps and/or attenuators at each piece to accommodate the proper signal level. Contact/discuss with Life Time AV representative before any changes occur.
5. Provide Microsoft Excel form and/or print out stating measured dB at each TV jack for certification. Turn over documentation to Life Time AV representative upon completion for signoff. Form shall include:
   a. Each Homerun Distance.
   b. Each Homerun dB loss.
   c. Number and final dB reading of each tap, attenuator, and/or splitter in run

d. Measurement of each splitter/amplifier in MDF.

F. Distribution System Acceptance Tests:
1. Field-Strength Instrument: Rated for minus 40-dBmV measuring sensitivity and a frequency range of 54 to 1000 MHz, minimum. Provide documentation of recent calibration agains recognized standards.
2. Signal Level and Picture Quality: Use a field-strength meter or spectrum analyzer, and a standard TV receiver to measure signal levels and check picture quality at random sampling of 25 percent of outlets. User-interface outlets.
   a. Test the signal strength in dBmV at 55, 151, 547, and 750 and 1000 MHz.
   b. Minimum acceptable signal level is 0 dBmV (1000 mV).
   c. Maximum acceptable signal level over the entire bandwidth is 15 dBmV.
   d. Television receiver shall show no evidence of cross-channel intermodulation, ghost images, or beat interference.
3. Signal-to-Noise-Ratio Test: Use a field-strength meter to make a sequence of measurements at the output of the last distribution amplifier or of another agreed-on location in system. With system operating at normal levels, tune meter to the picture carrier frequency of each of the designated channels in turn and record the level. With signal removed and input to corresponding head-end amplifier terminated at 75 ohms, measure the level of noise at same tuning settings. With meter correction factor added to last readings, differences from first set must not be less than 45 dB.

G. Qualitative and Quantitative Performance Tests: Demonstrate reception quality of color-television program transmissions at each user interface from each designated channel and source. Quality shall be equal to or superior than that obtained with performance checks specified below, using a standard, commercial, cable-ready, color-television receiver. Level and quality of signal at each outlet and from each designated channel and source shall comply with the following Specifications when tested according to 47 CFR 76:
1. RF video-carrier level.
2. Relative video-carrier level.
3. Carrier level stability, 60-minute and 24-hour periods.
4. Broadband frequency response.
5. Channel frequency response.
6. Carrier-to-noise ratio.
7. RF visual signal-to-noise ratio.
8. Cross modulation.
9. Carrier-to-echo ratio.
10. Composite triple beat.
11. Second order beat
12. Terminal isolation.
13. Terminal isolation between television and FM.
14. Hum modulation.
15. RF FM carrier level.
16. FM frequency response.
17. FM carrier-to-noise ratio.

H. Record test results.

I. Retest: Correct deficiencies identified by tests and observations and retest until requirements specified in Part 1 are met.

J. After certification:

1. Create “As-Built” drawings of the final RF design, stating length, db loss, etc., of entire facility on a separate set of Technology sheets. Leave a copy Stapled to the wall in the MDF and also send a copy of to the Life Time AV representative upon completion.

SECTION 28 08 00
COMMISSIONING OF SAFETY AND SECURITY SYSTEMS

PART 1 GENERAL

1.01 SUMMARY

A. This section includes specific requirements that apply to the implementation of the Commissioning Process and this Division Contractors' participation in this process. This section details the project specific equipment and systems that are included in the Commissioning Process. For general descriptions and responsibilities, refer to SECTION 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

1.02 RELATED DOCUMENTS

A. The Owner's Project Requirements (OPR) document.

B. The Basis of Design (BoD) document.

C. The Project Commissioning Plan (CxP) document.

D. ASHRAE Standard 202-2013 - Commissioning Process for Buildings and Systems.

E. LEED v4 for Building Design and Construction.

1.03 RELATED SECTIONS

A. SECTION 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS

B. SECTION 07 08 00 - COMMISSIONING OF THERMAL AND MOISTURE PROTECTION

C. SECTION 08 08 00 - COMMISSIONING OF OPENINGS

D. SECTION 11 08 00 - COMMISSIONING OF EQUIPMENT

E. SECTION 13 08 00 - COMMISSIONING OF SPECIAL CONSTRUCTION

F. SECTION 14 08 00 - COMMISSIONING OF CONVEYING SYSTEMS

G. SECTION 21 08 00 - COMMISSIONING OF FIRE SUPPRESSION SYSTEMS

H. SECTION 22 08 00 - COMMISSIONING OF PLUMBING SYSTEMS

I. SECTION 23 08 00 - COMMISSIONING OF MECHANICAL SYSTEMS

J. SECTION 25 08 00 - COMMISSIONING OF INTEGRATED AUTOMATION SYSTEMS

K. SECTION 26 08 00 - COMMISSIONING OF ELECTRICAL SYSTEMS

L. SECTION 27 08 00 - COMMISSIONING OF COMMUNICATIONS SYSTEMS

M. SECTION 33 08 00 - COMMISSIONING OF UTILITIES

1.04 DEFINITIONS

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

1.05 RESPONSIBILITIES

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

PART 2 PRODUCTS

2.01 NO PRODUCTS SUPPLIED

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

B. Contractors and/or Vendors shall provide the specialty testing equipment necessary to fulfill the functional testing requirements, for the duration of the testing period.

PART 3 EXECUTION

3.01 GENERAL

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.02 MEETINGS

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.03 SYSTEM START-UP

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.04 PRE-FUNCTIONAL CHECKLISTS

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.05 FUNCTIONAL PERFORMANCE TESTING

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.06 TRAINING

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.07 SYSTEMS TO BE COMMISSIONED

A. GENERAL
   1. Commissioning specifications supplement the requirements of individual specifications sections, but shall not be interpreted to replace or diminish the specified scope of any individual section.
   2. For all systems listed below, Division Contractor shall comply with all commissioning requirements specified.

B. APPLICABLE SYSTEMS
   1. Identification for Security Systems
   2. Electronic Access Systems
   3. Digital Addressable Fire Alarm System
   4. Distributed Antenna System

END OF SECTION

SECTION 28 10 04
ACCESS CONTROL DEVICES AND EQUIPMENT

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Intelligent controllers with licenses.

B. Access control cabinets and power supplies.

C. Card readers.

D. Request-to-exit sensors.

E. Door contacts

F. Key cabinets.

G. Cable terminations.

1.02 RELATED REQUIREMENTS

A. The Drawings, the provisions of the Contract, including General and Supplementary Conditions, and the General Requirements apply to the Work of this Section.

B. Section 08 71 00 Door Hardware.
   1. Review all electric locks, strikes and panic bars.

C. Division 26 – All Sections.

D. Division 27 – All Sections.

E. Division 28 – All Sections.

1.03 DEFINITIONS

A. Access Control Device and Equipment Contractor (ADEC) – The contractor performing the scope of work described in this section.

B. Access Control System Integrator (ACSI) – The owner's current access control system integrator.
   1. Contact:
      Affinitech, Inc
      1264 Park Rd,
      Chanhassen, MN 55317
      +1 (952) 697-2100
      info@affinitechinc.com

1.04 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements listed below.

B. The ADEC shall meet the following requirements:
   1. Open Options Essentials Certification.
   2. Project Experience
      a. Three (3) years experience in the access control field of commercial, institutional and/or industrial facilities (non-residential).
   3. Minimum Staff Qualifications
      a. Must have the necessary trained, licensed, and bonded trade and technical persons necessary to perform the tasks required under this specification.

b. Licensed as Power Limited Technicians through the Minnesota State Board of Electricity and have successfully completed an accredited, industry related, electronics course.
c. In-house personnel to maintain and submit electronic record documentation in the most current AutoCAD and Microsoft Excel format.

4. References and Qualification Submittal
   a. Project references and qualification submittals shall be provided upon request.

1.05 SUBMITTALS

A. Submit per the General Requirements of the project specifications.

B. Shop Drawings:
   1. Submit to the engineer all data sheets for components. The parts list and the corresponding data sheets shall be submitted in the same order in a single PDF file. Multiple PDF files will be rejected.
   2. A system riser with typical wiring diagram for devices and cabinets

C. Project Coordination Documents:
   1. ADEC Excel Spreadsheet
      a. Provide a Microsoft Excel Spreadsheet listing the controllers with associated boards and devices.
      b. The spreadsheet shall identify:
         1) Install date
         2) Controller numbers
         3) Model
         4) IP address
         5) MAC address
         6) Door numbers
         7) Device termination
         8) Device model number

1.06 DELIVERY, STORAGE, AND HANDLING

A. Package, handle, deliver and store at the job site in a manner that will avoid damage.

B. Provide locked storage units.

C. Contractor shall not deliver, store, or install any product in construction areas where the product is subject to damage from water, dust, and construction debris.

1.07 WARRANTY

A. Provide warranty per the general and supplemental conditions of the contract.

PART 2 PRODUCTS

2.01 SUBSTITIUTIONS

A. Unless noted as “Or Approved Equal” the approved products are standard products in use throughout the owner’s facilities. No substitutions are allowed. If a listed product cannot be provided, notify the engineer in writing prior to the final addendum date and an alternative product will be identified.

B. Where noted as “Or Approved Equal” submit requests per the general terms and conditions of the contract.

C. Approved equals must meet or exceed all manufacturer’s specifications for the listed product. Any exceptions must be approved by the design engineer.

D. Approved equals will only be considered when submitted by a qualified ADEC. Requests from product manufacturers or their representatives will not be considered.

2.02 APPROVED PRODUCTS

A. Intelligent controller module for member management system
   1. Minimum requirements:
      a. Mercury hardware
      b. 96 MB available memory
      c. 2,000,000 card holder capacity
      d. Support 64 total doors with 2 on-board
      e. Open Option license
   2. Approved products:
      a. Open Options LP4502 (SSP-LX)

B. Intelligent controller module for staff management system
   1. Minimum requirements:
      a. Mercury hardware
      b. 6 MB available memory
      c. 240,000 card holder capacity
      d. Support (17) total doors with (1) on-board
      e. Open Option license
   2. Approved products:
      a. Open Options DController (LP1501)

C. 4 door power supply and cabinet for control modules
   1. Minimum requirements:
      a. FPO offline power supply
         1) 120 or 230 VAC input
         2) 12 and 24 VDC outputs
         3) Continuous and resettable DC
      b. Distributed outputs
         1) 8 auxiliary
         2) 4 controlled
         3) PTC option
      c. Lifetime Warranty
   2. Approved products:
      a. Lifesafety Power Supply #LSP-4DR-E4M
      b. Or approved equal.

D. Card reader/keypad
   1. Minimum requirements:
      a. Dimensions: 80 mm x 121.5 mm x 19.5 mm (3.15 in x 4.78 in x 0.77 in)
      b. MHz contactless smart cards supported: Seos®, iCLASS SE, iCLASS®, MIFARE DESFire®EV1/EV2 and MIFARE® Classic.
      c. 125 kHz contactless cards supported: HID Prox®, Indala® Prox, Dorado® Prox, and EM Prox legacy contactless credentials
      d. Protocol: Wiegand
   2. Approved products:
      a. HID 40KNKS-00-000000

E. Request-to-exit sensor

1. Minimum requirements:
    a. Ceiling mount
    b. PIR sensor
2. Approved products:
    a. Bosch DS-160
    b. Or approved equal.

F. Door contact – recessed
1. Minimum requirements:
    a. Recess mount
    b. Match color to frame
    c. DPDT contact arrangement
2. Approved products:
    a. GE Sentrol 1076D
    b. Or approved equal.

G. Key cabinet
1. Minimum requirements:
    a. Manage a minimum of 5 sets of keys
    b. Wall mount
    c. Ethernet (TCP/IP) 10/100MB communications
    d. Reader interface: Clock/ data, Wiegand, Serial (RS232/TTL), Pin only, OSDP Readers (RS485) with or without encryption
    e. Alarm interface: 3x1A/24V dry contact relay contacts
2. Approved products:
    a. Traka Touch Pro V

PART 3 EXECUTION

3.01 PHASING REQUIREMENTS

A. Refer to the architectural phasing plans. Provide all scope of work per the phasing plans.

3.02 INSTALLATION AND OPERATIONAL REQUIREMENTS

A. Access control cabinets
1. Mount the Access Control Cabinets for both the Member Management System and the Staff Management System where shown on plans.
2. Coordinate mounting location of power supplies / cabinets and 120V connection requirements with electrical contractor.
3. ACSI shall identify which doors that are terminated on the Member Management System and the Staff Management System. Coordinate prior to cabling termination in the cabinet.

B. Device cabling
1. Composite device cabling (Belden 658AFJ) is provided by Division 27 15 00 Communications Horizontal Cabling Contractor. Cabling will be installed from the panel location to the ceiling space of the door.
2. Coordinate the location of the device cabling in the ceiling from the cabling contractor and complete routing of the cabling through conduit and frame to device locations.
3. Provide final termination of device cabling to card reader, electric lock, door contact and request-to-exit sensor.
4. Provide final termination of device cabling to the control modules and power supplies. Maintain a 10’ service loop where the cable enters the cabinet.
5. Provide permanent label to each end of the device cable with the device number.

C. Card readers
   1. Coordinate final reader location with electrical contractor prior to electrical rough in.
   2. Provide device cabling to the Access Control Panel identified by the Access Control System Integrator.
   3. Coordinate testing of the card reader operation with the Access Control System Integrator such that the reader is tested at the time of installation.

D. Door contacts
   1. Provide supervised inputs with end of line resistors at the contact. Do not place end of line resistors at the panel location.

E. Request-to-exit sensors
   1. Locate and adjust the sensor to detect person(s) as they contact the exiting door hardware.
   2. Adjust as required to minimize false alarms.
   3. Adjust timers per recommendations from the Access Control System manufacturer.

F. Electric lock
   1. Electric lock provided by Division 08 71 00 Door Hardware Contractor.
   2. Coordinate connection requirements and lock voltage with Hardware Contractor.
   3. Provide cable routing through frame, hinge/transfer, and final cable termination.

G. Key cabinets
   1. Mount the key cabinets where shown on plans.
   2. Coordinate mounting location of power supplies / cabinets and 120V connection requirements with electrical contractor.
   3. Coordinate the network jack, patch panel, and TR room number for the key cabinet with the Division 27 15 00 Communications Horizontal Cabling Contractor.

H. Labeling
   1. All labels shall be machine printed white background black letter labels with permanent ink and permanent adhesive.
   2. Handwritten labels are not acceptable at any locations.
   3. All equipment, cabinets, and junction boxes shall be labeled to match the designators shown on a corresponding as-built riser wiring diagram.
   4. Each cable shall be labeled at all terminations points to match a corresponding as-built wiring diagram. Labeling is not required for interconnections within an enclosure or assembly.
   5. Submit a labeling plan to the owner prior to label installation.

3.03 CLOSEOUT ACTIVITIES

A. Provide testing and close out per each phase as shown in the architectural phasing plan.

B. System testing
   1. Testing shall be a coordinated effort between the ACSI, and the ADCE. Each contractor shall provide technicians to fully test each door.
      a. ADCE – Provide a technician at the door.
      b. ACSI– Provide a technician at the head end and provide either a laptop or connection to a workstation to facilitate testing.

C. Each door shall be tested in sequential order and a corresponding written test report shall be submitted to the engineer. Test each door and each of the following conditions in this order:
   1. System Testing - Test each door and each of the following conditions in this order:
      a. Normal card read – No alarms.

b. Normal egress – No alarms, adjust RTE sensors to eliminate false alarms.
c. Prop door – workstation alarm.
d. Forced door – workstation alarm.

D. Conduct a final acceptance test with the Owner and ACSI after system testing is complete, test reports have been submitted, and as built documentation has been submitted.
1. Upon completion of the above items and all requirements identified in the plans and specifications:
a. Notify the engineer in writing and request final acceptance.
b. Conduct an on-site demonstration to the engineer of system performance and compliance with the plans and specifications.
c. Correct any items noted by the engineer during acceptance and submit a signed punch list of corrections made..

E. Submit project closeout documentation.
1. Final ADEC Excel Spreadsheet
2. As-built plans in AutoCAD format.
a. As-builts shall include floorplans showing symbols for all devices, access control panel locations, and power supply locations.
b. Riser diagrams showing interconnection of all devices and controller locations.
c. Elevations of access control cabinets and powers supplies.
3. Operator and Maintenance Manuals shall be submitted as electronic documents or media. Hardcopy shall only be submitted if electronic versions are not available.

F. Issue a statement of warranty to the Owner and copy the Engineer.

END OF SECTION

SECTION 28 21 00
VIDEO SURVEILLANCE

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Interior directional cameras.

B. Interior panoramic cameras.

C. Indoor environmental rated camera.

D. Exterior directional camera.

E. Patch cables.

F. Corporate camera licenses.

1.02 RELATED REQUIREMENTS

A. Section 07 84 00 - Firestopping.

B. Section 26 05 26 - Grounding and Bonding for Electrical Systems.

C. Section 26 05 29 - Hangers and Supports for Electrical Systems.

D. Section 26 05 34 - Conduit for Electrical Systems.

E. Section 26 05 53 - Identification for Electrical Systems: Identification products and requirements.

F. Division 27 - All sections.

1.03 REFERENCE STANDARDS

A. NECA 1 - Standard for Good Workmanship in Electrical Construction; National Electrical Contractors Association; 2010.

B. NECA 303 - Standard for Installing Closed-Circuit Television (CCTV) Systems; National Electrical Contractors Association; 2005.

C. NFPA 70 - National Electrical Code; National Fire Protection Association; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

1.04 DEFINITIONS

A. Video Surveillance Camera Contractor (VSCC) – The contractor performing the scope of work described in this section.

B. Video Management System Integrator (VMSI) – The owner’s current video system integrator.

1. Contact:

Affinitech, Inc
1264 Park Rd,
Chanhassen, MN 55317
+1 (952) 697-2100
info@affinitechinc.com

1.05 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate the placement of cameras with structural members, ductwork, piping, equipment, luminaires, diffusers, fire suppression system components, and other potential conflicts installed under other sections or by others.

2. Coordinate the work with other installers to provide power for cameras and equipment at required locations.
3. Notify Architect of any conflicts with or deviations from the contract documents. Obtain direction before proceeding with work.

1.06 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Shop Drawings
   1. Submit to the engineer all data sheets for components. The parts list and the corresponding data sheets shall be submitted in the same order in a single PDF file. Multiple PDF files will be rejected.

C. Project Coordination Documents
   1. VSCC Excel Spreadsheet
      a. Provide a Microsoft Excel Spreadsheet listing the cameras in sequential order as shown on floorplans.
      b. The VSCC spreadsheet shall identify:
         1) Install Date
         2) Device Number
         3) Floor
         4) Model
         5) Mount
         6) Firmware
         7) Serial Number
         8) MAC Address
         9) Patch Panel Termination
         10) IP Address

1.07 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements listed below.

B. Comply with the following:
   1. NFPA 70
   2. Applicable TIA/EIA standards.

C. The VSCC shall meet the following requirements:
   1. Axis certified professional.
   2. Project experience:
      a. Five (5) years experience in installation of IP camera systems.
      b. Five (5) projects exceeding (50) cameras within the last (5) years.
   3. Minimium staff qualifications:
      a. Must have the necessary trained, licensed, and bonded trade and technical persons necessary to perform the tasks required under this specification.
      b. Licensed as Power Limited Technicians through the Minnesota State Board of Electricity and have successfully completed an accredited, industry related, electronics course.
      c. Two (2) persons assigned to the project that have completed the Axis Certification Program and are directly responsible for:
         1) Camera configuration.
         2) On-site camera installation.
         3) As-built documentation.

d. In-house personnel to maintain and submit electronic record documentation in the most current AutoCAD and Microsoft Excel format.

4. References and qualification submittal.
   a. Project references and qualification submittals shall be provided upon request.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store products in accordance with manufacturer's instructions and NECA 303.

B. Store products in manufacturer's unopened packaging, keep dry and protect from damage until ready for installation.

C. Provide locked storage units.

D. Contractor shall not install any product in construction areas where the product is subject to damage from water, dust, and construction debris.

1.09 FIELD CONDITIONS

A. Maintain field conditions within manufacturer's required service conditions during and after installation.

1.10 WARRANTY

A. Provide warranty per the general and supplemental conditions of the project.

PART 2 PRODUCTS

2.01 SUBSTITUTIONS

A. Unless noted as “Or Approved Equal” the approved products are standard products in use throughout the owner’s facilities. No substitutions are allowed. If a listed product cannot be provided, notify the engineer in writing prior to the final addendum date and an alternative product will be identified.

B. Where noted as “Or Approved Equal” submit requests per the general terms and conditions of the contract.

C. Approved equals must meet or exceed all manufacturer’s specifications for the listed product. Any exceptions must be approved by the design engineer.

D. Approved equals will only be considered when submitted by a qualified VSCC. Requests from product manufacturers or their representatives will not be considered.

2.02 APPROVED PRODUCT

A. Interior directional camera
   1. Minimum Requirements
      a. Overview
         1) Resolution: 2MP.
         2) Zipstream.
         3) Lens: Varifocal, 3.4–8.9 mm, F1.8.
         4) WDR: Forensic Capture.
         5) Axis’ Lightfinder technology.
      b. Video Compression
         1) H.264 (MPEG-4 Part 10/AVC) Baseline, Main, and High Profiles H.265 (MPEG-H Part 2/HEVC) Main Profile Motion JPEG.
      c. Video Streaming

1) Multiple, individually configurable streams in H.264, H.265, and Motion JPEG Axis Zipstream technology in H.264 and H.265 controllable frame rate and bandwidth VBR/ABR/MBR H.264/H.265 low latency mode video streaming indicator.

d. Power
1) Power over Ethernet (PoE) IEEE 802.3af/802.3at Type 1 Class 2 Typical 3 W, max 5.1 W.

e. Mount
1) Provide mounts as shown on plan, schedule, and/or required for proper installation of a complete system.

2. Approved products:
a. Camera type Axis P3265-V.

B. Interior panoramic camera
1. Minimum Requirements:
a. Overview
1) Resolution: 6MP.
2) Zipstream.
3) Lens: 1.6 mm, F2.0.
4) WDR: Forensic Capture.
5) Axis' Lightfinder technology.

b. Video Compression
1) H.264 (MPEG-4 Part 10/AVC) Baseline, Main, and High Profiles H.265 (MPEG-H Part 2/HEVC) Main Profile Motion JPEG.

c. Video Streaming
1) Multiple, individually configurable streams in H.264, H.265, and Motion JPEG Axis Zipstream technology in H.264 and H.265 Controllable frame rate and bandwidth VBR/ABR/MBR H.264/H.265 Low latency mode Video streaming indicator.

d. Power
1) Power over Ethernet (PoE) IEEE 802.3af/802.3at Type 1 Class 2 Typical 3.7 W, max 6.49 W.

e. Mount
1) Provide mounts as shown on plan, schedule, and/or required for proper installation of a complete system.

2. Approved products:
a. Camera type Axis M3067-P.

C. Indoor environmental rated camera
1. Minimum Requirements:
a. Overview
1) Resolution: 2MP.
2) Zipstream.
3) Lens: Varifocal, 3.4–8.9 mm, F1.8
4) WDR: Forensic Capture.
5) Axis' Lightfinder technology.

b. Video Compression
1) H.264 (MPEG-4 Part 10/AVC) Baseline, Main, and High Profiles H.265 (MPEG-H Part 2/HEVC) Main Profile Motion JPEG.

c. Video Streaming

1) Multiple, individually configurable streams in H.264, H.265, and Motion JPEG Axis Zipstream technology in H.264 and H.265 Controllable frame rate and bandwidth VBR/ABR/MBR H.264/H.265 Low latency mode Video streaming indicator.

d. Power
1) Power over Ethernet (PoE) IEEE 802.3af/802.3at Type 1 Class 2 Typical 4.8 W, max 10.7 W.

e. Mount
1) Provide mounts as shown on plan, schedule, and/or required for proper installation of a complete system.

2. Approved products:
a. Camera type Axis P3265-LVE.

D. Exterior directional camera
1. Minimum Requirements:
a. Overview
1) Resolution: 8MP.
2) Zipstream.
3) Lens: Varifocal, 6.2–12.9 mm, F1.6–2.9.
4) WDR: Forensic Capture.
5) Axis' Lightfinder technology.

b. Video Compression
1) H.264 (MPEG-4 Part 10/AVC) Baseline, Main, and High Profiles H.265 (MPEG-H Part 2/HEVC) Main Profile Motion JPEG.

c. Video Streaming
1) Multiple, individually configurable streams in H.264, H.265, and Motion JPEG Axis Zipstream technology in H.264 and H.265 Controllable frame rate and bandwidth VBR/ABR/MBR H.264/H.265 Low latency mode Video streaming indicator.

d. Power
1) Power over Ethernet (PoE) IEEE 802.3at Type 2 Class 4 Typical 9 W, max 23 W 10–28 V DC, typical 9 W, max 24 W.

e. Mount
1) Provide mounts as shown on plan, schedule, and/or required for proper installation of a complete system.

f. Powder coating
1) Provide powder coating of camera body. Color code furnished by architect.

2. Approved products:
a. Camera type Axis Q3538-LVE with custom powder coating.

E. Patch cables
1. Minimum requirements:
a. Provide patch cabling from device jack to camera.
b. Provide patch cabling from the patch panel to network switch.
c. 7' length typical, unless noted otherwise.
d. Stranded cabling.
e. Booted.
f. Plenum rated.
g. Meet or exceed Cat6 TIA/EI-568-B2.1.
h. Blue jacket.

2. Approved products:

a. Systimax.
b. Panduit.
c. Leviton.
d. Or approved equals.

F. Corporate camera licenses
1. Approved products:
a. Milestone XProtect corporate license.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as shown on the drawings.

B. Verify that ratings and configurations of system components are consistent with the indicated requirements.

C. Verify that mounting surfaces are ready to receive system components.

D. Verify that branch circuit wiring installation is completed, tested, and ready for connection to system.

E. Verify that conditions are satisfactory for installation prior to starting work.

3.02 PHASING

A. Phasing and scheduling.
1. Complete all work in accordance with the architectural project phasing plans and specifications.

3.03 INSTALLATION AND OPERATIONAL REQUIREMENTS

A. Material and workmanship shall comply with applicable codes. As a minimum, codes include all state and federal laws, local ordinances and interpretations of the following by the local Authority Having Jurisdiction (AHJ).

B. Install video surveillance system in accordance with NECA 1 (general workmanship) and NECA 303.

C. Comply with all OSHA requirements.

D. Camera configuration and pretest
1. Prior to installation, connect the camera to a test PC and POE network switch (contractor owned).
a. Upgrade the camera firmware to the most recent available firmware approved by the VMSI.
b. Configure the default password as directed by the VMSI.
c. Configure the default IP Address as directed by the VMSI.
d. Test the following applicable functions:
1) Motorized or manual focus.
2) IR illumination.
3) Inspect the image for clarity and color reproduction.
4) Inspect the camera door for scratches or other visual deficiencies.
5) Inspect the camera housing for scratches, cracks, or other deficiencies.
2. Receive the network jack, patch panel, and TR room number for each camera from the Division 27 15 00 Communications Horizontal Cabling Contractor.
3. Provide a permanent label to the rear of the camera body denoting the camera number.
a. Black lettering on clear backing, 0.125” W.

4. Log all resulting configuration information in the VSCC spreadsheet and submit to the VMSI for approval prior to camera installation.

E. Camera installation
   1. Follow instructions in the installation documentation provided by the camera manufacturer.
   2. All equipment shall be tested and configured in accordance with instructions provided by the manufacturer prior to installation.
   3. Refer to camera details and schedules for mounting and accessory requirements.
   4. Seal exterior camera raceways and penetrations to prevent water infiltration to the building and camera enclosure.
   5. Field of View coordination.
      a. Prior to the installation of any cameras, the contractor shall review each location and view with the VMSI.
      b. Locate the camera to best provide the intended field of view. Where placement adjustments are required, locate the camera to provide a larger area of view than shown on plans. Notify the VMSI of any issues prior to installation.
      c. Do not install cameras in any location where the field of view is blocked by signage or any other visual obstruction. It is the contractor's responsibility to notify the owner of any locations that should be changed to provide the intended field of view.
   6. Once installed, provide a final cleaning of the camera assembly. Ensure that domes or viewing window are free of dirt, dust, and fingerprints.
   7. Focus the camera per manufacture instructions.
   8. Turn on WDR for any cameras where light differentials may cause silhouetting of the foreground image. Typical locations include:
      a. Perimeter vestibules and perimeter doors.
      b. Loading dock doors.
      c. Skyways.
      d. Window lined corridors.
      e. Rooms with exterior windows.
   9. Test images.
      a. Capture a test image of each camera in full resolution. Name the image filename to match the camera number.
      b. Submit a test image of each camera view to the VMSI.

F. Raceway and patch cabling from the camera to the data jack.
   1. Coordinate final camera locations with the Division 27 15 00 Communications Horizontal Cabling Contractor.
   2. Provide patch cabling from the camera to the camera data jack.
   3. Exposed patch cabling from the camera to the data jack is allowed in accessible ceiling spaces.
   4. In interior exposed areas and exposed ceiling spaces, provide metallic wiremold or surface conduit from the camera to the data jack or accessible ceiling space.
   5. For exterior cameras, provide flexible metallic sealtight conduit from the camera to the data jack or accessible ceiling.

G. Provide required support and attachment for each installed condition.

H. Provide grounding and bonding in accordance with Section 26 05 26.

I. Install firestopping to preserve fire resistance rating of partitions and other elements.

J. Identify system wiring and components.

3.04 CLEANING

A. Clean exposed surfaces to remove dirt, paint, or other foreign material and restore to match original factory finish.

3.05 CLOSEOUT ACTIVITIES

A. Acceptance Testing.
   1. Schedule an acceptance test with the owner and VMSI after all record documentation is submitted for approval.
      a. Provide on site demonstration of installed equipment.
      b. Demonstrate device locations and cabling terminations.
   2. A punch list of deficiencies will be generated by the engineer.
   3. Make all required corrections and return a signed punch list stating that all repairs are complete.

B. Training: Train Owner's personnel on operation, adjustment, and maintenance of system.
   1. Use operation and maintenance manual as training reference, supplemented with additional training materials as required.
   2. Provide minimum of four hours of training.
   3. Location: At project site.

C. Submit: Project closeout documentation.
   1. Final VSCC Microsoft Excel spreadsheet.
   2. Final image file from each camera.
   3. As-built floorplans in AutoCAD format showing:
      a. Camera locations.
   4. Warranty letter.
   5. All close out documentation required by the general and supplemental conditions of the contract.

D. Warranty
   1. Provide a 1-year parts and labor warranty. The warranty period shall commence with the completion of all punch list items.
   2. Material Warrantees – Identify the material warranty period for all devices.
   3. Submit all warranty information in a warranty letter to the owner. The warranty letter shall be signed by a company officer.

3.06 PROTECTION

A. Protect installed system components from subsequent construction operations.

END OF SECTION

SECTION 28 31 11
DIGITAL ADDRESSABLE FIRE ALARM SYSTEM

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Fire alarm system design and installation, including all components, wiring, and conduit.

B. Transmitters for communication with supervising station.

C. Maintenance of fire alarm system under contract for specified warranty period.

1.02 REFERENCE STANDARDS

A. IEEE C62.41.2 - Recommended Practice on Characterization of Surges in Low-Voltage (1000 V and Less) AC Power Circuits; 2002 (R2008).

B. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

C. NFPA 72 - National Fire Alarm Code and Signaling Code ; 2010.

1.03 SUBMITTALS

A. See Division 1 sections for submittal procedures.

B. Engineer will provide electronic floor plan drawings for Contractor's use upon request; verify all dimensions on provided drawings.

C. Design Documents: Submit all information required for plan review and permitting by authorities having jurisdiction, including but not limited to floor plans, riser diagrams, and description of operation:
   1. Copy (if any) of list of data required by authority having jurisdiction.
   2. NFPA 72 "Record of Completion", filled out to the extent known at the time.
   3. Clear and concise description of operation, with input/output matrix similar to that shown in NFPA 72 Appendix A-7-5-2.2(9), and complete listing of software required.
   4. System zone boundaries and interfaces to fire safety systems.
   5. Location of all components, circuits, and raceways; mark components with identifiers used in control unit programming.
   6. Circuit layouts; number, size, and type of raceways and conductors; conduit fill calculations; spare capacity calculations; notification appliance circuit voltage drop calculations.
   7. List of all devices on each signaling line circuit, with spare capacity indicated.
   8. Manufacturer's detailed data sheet for each component, including wiring diagrams, installation instructions, and circuit length limitations.
   9. Description of power supplies; if secondary power is by battery include calculations demonstrating adequate battery power.
   10. Certification by either the manufacturer of the control unit or by the manufacturer of each other component that the components are compatible with the control unit.
   11. Certification by the manufacturer of the control unit that the system design complies with the contract documents.
   12. Certification by Contractor that the system design complies with the contract documents.

D. Evidence of installer qualifications.

E. Inspection and Test Reports:
   1. Submit inspection and test plan prior to closeout demonstration.
   2. Submit documentation of satisfactory inspections and tests.

3. Submit NFPA 72 "Inspection and Test Form," filled out.

F. Operating and Maintenance Data: See Division 1 for additional requirements; revise and resubmit until acceptable; have one set available during closeout demonstration:
   1. Complete set of specified design documents, as approved by authority having jurisdiction.
   2. Additional printed set of project record documents and closeout documents, bound or filed in same manuals.
   3. Contact information for firm that will be providing contract maintenance and trouble call-back service.
   4. List of recommended spare parts, tools, and instruments for testing.
   5. Replacement parts list with current prices, and source of supply.
   6. Detailed troubleshooting guide and large scale input/output matrix.
   7. Preventive maintenance, inspection, and testing schedule complying with NFPA 72; provide printed copy and computer format acceptable to Owner.
   8. Detailed but easy to read explanation of procedures to be taken by non-technical administrative personnel in the event of system trouble, when routine testing is being conducted, for fire drills, and when entering into contracts for remodeling.

G. Project Record Documents: See Division 1 for additional requirements; have one set available during closeout demonstration:
   1. Complete set of floor plans showing actual installed locations of components, conduit, and zones.
   2. "As installed" wiring and schematic diagrams, with final terminal identifications.
   3. "As programmed" operating sequences, including control events by device, updated input/output chart, and voice messages by event.

H. Closeout Documents:
   1. Certification by manufacturer that the system has been installed in compliance with his installation requirements, is complete, and is in satisfactory operating condition.
   2. NFPA 72 "Record of Completion", filled out completely and signed by installer and authorized representative of authority having jurisdiction.
   3. Certificate of Occupancy.

1.04 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements listed below.

B. Designer Qualifications: NICET Level III or IV (3 or 4) certified fire alarm technician or registered fire protection engineer, employed by fire alarm control panel manufacturer, Contractor, or installer , with experience designing fire alarm systems in the jurisdictional area of the authorities having jurisdiction.

C. Installer Qualifications: Firm with minimum 3 years documented experience installing fire alarm systems of the specified type and providing contract maintenance service as a regular part of their business.
   1. Authorized representative of control unit manufacturer; submit manufacturer's certification that installer is authorized; include name and title of manufacturer's representative making certification.
   2. Installer Personnel: At least 2 years of experience installing fire alarm systems.
   3. Supervisor: NICET level III or IV (3 or 4) certified fire alarm technician; furnish name and address.
   4. Certified in the State in which the Project is located as fire alarm installer.

D. Instructor Qualifications: Experienced in technical instruction, understanding fire alarm theory, and able to provide the required training; trained by fire alarm control unit manufacturer.

1.05 WARRANTY

A. See Division 1 Section Closeout Submittals, for additional warranty requirements.

B. Provide control panel manufacturer's warranty that system components other than wire and conduit are free from defects and will remain so for 1 year after date of Substantial Completion.

C. Provide installer's warranty that the installation is free from defects and will remain so for 1 year after date of Substantial Completion.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Fire Alarm Control Units - Subject to compliance with requirements, provide products by the following:
   1. Silent Knight, by Honeywell.
   2. Fire Lite Alarms, by Honeywell.

B. Initiating Devices, and Notification Appliances:
   1. Same manufacturer as control units.
   2. Provide all initiating devices and notification appliances made by the same manufacturer.

C. Substitutions: As required by Authority Having Jurisdiction after review by owner, contact: Fire and Safety Systems Project Manager, 952-229-7273.

2.02 SEQUENCE OF OPERATIONS

A. Basic Alarm Performance Requirements: Unless otherwise indicated on the drawings, operation of a manual station, automatic alarm operation of a smoke or heat detector, or operation of a sprinkler flow device initiates the following:
   1. Indication of alarm condition at the FACP and the annunciator(s).
   2. Identification of the device or zone that is the source of the alarm at the FACP and the annunciator(s).
   3. Operation of audible and visible notification devices throughout the building until silenced at FACP.
   4. Unlocking designated doors.
   5. Shutting down supply and return fans that have duct smoke detectors.
   6. Closing smoke dampers on system serving zone where alarm is initiated.
   7. Notifying the local fire department.
   8. Initiation of elevator recall in accordance with ASME/ANSI A17.1, when specified detectors or sensors are activated.
   9. Shut down of audio reinforcement systems throughout building as indicated on the drawings.

B. Supervisory Operations: Upon activation of a supervisory device such as a tamper switch or carbon monoxide detector, the system shall operate as follows:
   1. Activate the system supervisory service audible signal and illuminate the LED at the control unit and the remote annunciator.
   2. Pressing the Supervisory Acknowledge Key will silence the supervisory audible signal while maintaining the Supervisory LED "on" indicating off-normal condition.
   3. Record the event in the FACP historical log.
   4. Transmission of supervisory signal to remote central station.

5. Restoring the condition shall cause the Supervisory LED to clear and restore the system to normal.

C. Fire Suppression Monitoring:
   1. Water flow: Activation of a water flow switch shall initiate general alarm operations.
   2. Sprinkler valve tamper switch: The activation of any valve tamper switch shall activate system supervisory operations.
   3. WSO: Water flow switch and sprinkler valve tamper switch shall be capable of existing on the same initiating zone. Activation of either device shall distinctly report which device is in alarm on the initiating zone.

D. Required Functions: The following are required system functions and operating features:
   1. Priority of Signals: Fire alarm events have highest priority. Subsequent alarm events are queued in the order received and do not affect existing alarm conditions. Priority Two, Supervisory and Trouble events have second-, third-, and fourth-level priority respectively. Signals of a higher-level priority take precedence over signals of lower priority even though the lower-priority condition occurred first. Annunciate all events regardless of priority or order received.
   2. Non-interfering: An event on one zone does not prevent the receipt of signals from any other zone. All zones are manually resettable from the FACP after the initiating device or devices are restored to normal. The activation of an addressable device does not prevent the receipt of signals from subsequent addressable device activations.
   3. Transmission to Remote Central Station: Automatically route alarm, supervisory, and trouble signals to a remote central station service transmitter provided under another contract.
   4. Annunciation: Operation of alarm and supervisory initiating devices shall be annunciated at the FACP and the remote annunciator, indicating the location and type of device.
   5. Alarm Silencing: If the "Alarm Silence" button is pressed, all audible (and visible alarm signals shall cease operation.
   6. System Reset
      a. The "System Reset" button shall be used to return the system to its normal state. Display messages shall provide operator assurance of the sequential steps ("IN PROGRESS", "RESET COMPLETED") as they occur. The system shall verify all circuits or devices are restored prior to resetting the system to avoid the potential for re-alarming the system. The display message shall indicate "ALARM PRESENT, SYSTEM RESET ABORTED."
      b. Should an alarm condition continue, the system will remain in an alarmed state.
   7. A manual evacuation (drill) switch shall be provided to operate the notification appliances without causing other control circuits to be activated.
   8. WALKTEST: The system shall have the capacity of 8 programmable passcode protected one person testing groups, such that only a portion of the system need be disabled during testing. The actuation of the "enable one person test" program at the control unit shall activate the "One Person Testing" mode of the system as follows:
      a. The city circuit connection and any suppression release circuits shall be bypassed for the testing group.
      b. Control relay functions associated to one of the 8 testing groups shall be bypassed.
      c. The control unit shall indicate a trouble condition.
      d. The alarm activation of any initiation device in the testing group shall cause the audible notification appliances assigned only to that group to sound a code to identify the device or zone.
      e. The unit shall automatically reset itself after signaling is complete.

f. Any opening of an initiating or notification appliance circuit wiring shall cause the audible signals to sound for 4 seconds indicating the trouble condition.

2.03 FIRE ALARM SYSTEM

A. General: Provide a complete, non-coded, addressable, microprocessor-based fire alarm system with initiating devices, notification appliances, and monitoring and control devices as indicated on the drawings and as specified herein.

B. Software: The fire alarm system shall allow for loading and editing instructions and operating sequences as necessary. The system shall be capable of on-site programming to accommodate system expansion and facilitate changes in operation. All software operations shall be stored in a non-volatile programmable memory within the fire alarm control unit. Loss of primary and secondary power shall not erase the instructions stored in memory. System shall be capable of storing dual configuration programs with one active and one in reserve. Panel shall be capable of full system operation during a new configuration download.

C. History Logs: The system shall provide a means to recall alarms and trouble conditions in chronological order for the purpose of recreating an event history. A separate alarm and trouble log shall be provided.

D. Recording of Events: Record all alarm, supervisory, and trouble events by means of system printer. The printout shall include the type of signal (alarm, supervisory, or trouble) the device identification, date and time of the occurrence. The printout differentiates alarm signals from all other printed indications.

E. Remote Access:
1. FACP shall have the capability to provide Remote Access through a Dial-Up Service Modem using the public switched telephone system of a private switched telephone system. Sheet Metal Components: Corrosion-resistant aluminum, unless otherwise indicated. Form and support to prevent warping and sagging.
2. A personal computer or technician's laptop, configured with terminal emulation software shall have the ability to access the FACP for diagnostics, maintenance reporting and information gathering.
3. FACP shall have the capability to provide third party access through a serial interface connection and be agency listed for specific interfaces and for the purpose.
4. FACP shall have the capability to provide remote access via an Internet/Intranet Interface. The Internet interface shall provide an alternative access to system information using the familiar interface of a standard Internet browser. A remotely located fire professional can use this access to analyze control panel status during non-alarm conditions and can also use this information to assist local fire responders during alarm conditions.

F. Voice Alarm Notification: By speakers in areas as indicated on drawings.

G. Supervising Stations and Fire Department Connections:
1. Public Fire Department Notification: By on-premises supervising station.
2. Remote Supervising Station: UL-listed central station under contract to facility.
3. Means of Transmission to Remote Supervising Station: Digital alarm communicator transmitter (DACT), 2 telephone lines.

H. Circuits:
1. Initiating Device Circuits (IDC): Class B, Style A.
2. Signaling Line Circuits (SLC) Within Single Building: Class B, Style 0.5.
3. Notification Appliance Circuits (NAC): Class B, Style W.

I. Spare Capacity:

1. Initiating Device Circuits: Minimum 25 percent spare capacity.
2. Notification Appliance Circuits: Minimum 25 percent spare capacity.
3. Speaker Amplifiers: Minimum 25 percent spare capacity.
4. Master Control Unit: Capable of handling all circuits utilized to capacity without requiring additional components other than plug-in control modules.

2.04 FIRE SAFETY SYSTEMS INTERFACES

A. Supervision: Provide supervisory signals in accordance with NFPA 72 for the following:
   1. Sprinkler water control valves.
   2. Elevator shut-down control circuits.

B. Alarm: Provide alarm initiation in accordance with NFPA 72 for the following:
   1. Sprinkler water flow.
   2. Kitchen hood suppression activation; also disconnect fuel source from cooking equipment.
   3. Elevator lobby, elevator hoistway, and elevator machine room smoke detectors.

C. Elevators:
   1. Elevator lobby, hoistway, and machine room smoke detectors: Elevator recall for fire fighters' service.
   2. Elevator Machine Room Heat Detector: Shut down elevator power prior to hoistway sprinkler activation.
   3. Sprinkler pressure or waterflow: Shut down elevator power prior to hoistway sprinkler activation.

D. HVAC:
   1. Duct Smoke Detectors: Close dampers indicated; shut down roof top unit and corresponding zone.
   2. Carbon Monoxide Detectors: Shut down roof top unit and corresponding zone.

E. Sound Reinforcement Systems: Shut down via relay as indicated on the drawings. Reset automatically upon alarm clear.

2.05 COMPONENTS

A. General:
   1. Provide flush mounted units where installed in finish areas; in unfinished areas, surface mounted unit are acceptable.
   2. Provide legible, permanent labels for each control device, using identification used in operation and maintenance data.

B. System Wiring: Wiring shall be as indicated on the drawings. Wire shall be in conduit inside walls and inaccessible ceilings, and where required by local code. Plenum rated power limited cable may be used where allowed by local code. Plenum rated cables shall be red in color. Individual conductor colors in conduit shall not correspond to other colors used for power wiring in building. Wire and cable shall be a type listed for its intended use by an approval agency acceptable to the Authority Having Jurisdiction (AHJ) and shall be installed in accordance with the appropriate articles from the current approved edition of NFPA 70: National Electric Code (NEC).
   1. Wire shall be power-limited fire alarm cable. Type FPLP#14 AWG solid conductor cable, unshielded.
      a. West Penn Wire #60993B(2-conductor); #60700B (4-conductor).
      b. Belden
      c. Superior
      d. Allied Wire

e. Honeywell
f. Engineer Approved Equal.

C. Fire Alarm Control Panel (FACP)
1. General: Comply with UL 864, "Control Units for Fire-Protective Signaling Systems."
2. The following FACP hardware shall be provided:
a. Power Limited base panel with red cabinet and door, 120 VAC input power.
b. 2,000 point capacity where (1) point equals (1) monitor (input) or (1) control (output).
c. 2,000 points of Network Annunciation at FACP Display when applied as a Network Node.
d. 2000 points of annunciation where one (1) point of annunciation equals:
1) One (1) LED driver output on a graphic driver or 1 switch input on a graphic switch input module.
2) One (1) LED on panel or 1 switch on panel.
e. From all battery charging circuits in the system provide battery voltage and ammeter readouts on the FCP LCD Display.
f. Municipal City Circuit Connection with Disconnect switch, 24VDC Remote Station (reverse polarity), local energy, shunt master box, or a form "C" contact output.
g. One Auxiliary electronically resettable fused 2A @24VDC Output, with programmable disconnect operation for 4-wire detector reset.
h. One Auxiliary Relay, SPDT 2A @32VDC, programmable as a trouble relay, either as normally energized or de-energized, or as an auxiliary control.
i. Three (3) Class B or A (Style Y/Z) Notification Appliance Circuits (NAC; rated 3A@24VDC, resistive).
j. Four (4) form "C" Auxiliary Relay Circuits (Form C contacts rated 2A @ 24VDC, resistive), operation is programmable for trouble, alarm, supervisory of other fire response functions. Relays shall be capable of switching up to ½ A @ 120VAC, inductive.
k. The FACP shall support (6) RS-232-C ports and one service port.
l. Remote Unit Interface: supervised serial communication channel for control and monitoring of remotely located annunciators and I/O panels.
m. Programmable DACT for either Common Event Reporting or per Point Reporting.
n. Service Port Modem for dial in passcode access to all fire control panel information.
3. Cabinet: Lockable steel enclosure. Arrange unit so all operations required for testing or for normal care and maintenance of the system are performed from the front of the enclosure. If more than a single unit is required to form a complete control unit, provide exactly matching modular unit enclosures.
4. Alphanumeric Display and System Controls: Panel shall include an 80 character LCD display to indicate alarm, supervisory, and component status messages and shall include a keypad for use in entering and executing control commands.

D. Auto-call System Interface
1. When a fire alarm system using existing Auto-call XA loop devices requires expansion FACP shall be capable of interfacing to the XA loop via an interface module. This module shall allow the FACP to be selected to function as either the XA loop master controller (head end) or as a Data Gathering Panel as an intelligent device on the XA loop reporting to a remote master controller. Multiple XA Loop Interface Modules can be installed in the FACP allowing a variety of system expansion situations to be satisfied.

E. Remote LCD Annunciator

1. Provide where required a remote LCD Annunciator with the same "look and feel" as the FACP operator interface. The Remote LCD Annunciator shall use the same Primary Acknowledge, Silence, and Reset Keys, Status LEDs and LCD Display as the FACP.
2. Annunciator shall have super-twist LCD display with two lines of 40 characters each. Annunciator shall be provided with four (4) programmable control switches and associated LEDs.
3. Under normal conditions the LCD shall display a "SYSTEM IS NORMAL" message and the current time and date.
4. Should an abnormal condition be detected the appropriate LED (Alarm, Supervisory or Trouble) shall flash. The unit audible signal shall pulse for alarm conditions and sound steady for trouble and supervisory conditions.
5. The LCD shall display the following information relative to the abnormal condition of a point in the system:
   a. 40 character custom location label.
   b. Type of device (e.g., smoke, pull station, waterflow).
   c. Point status (e.g., alarm, trouble).
6. Operator keys shall be key switch enabled to prevent unauthorized use. The key shall only be removable in the disabled position. Acknowledge, Silence and Reset operation shall be the same as the FACP.

F. Emergency Power Supply
   1. General: Components include battery, charger, and an automatic transfer switch.
   2. Battery: Sealed lead-acid or nickel cadmium type. Provide sufficient capacity to operate the complete alarm system in normal or supervisory (non-alarm) mode for a period of 24 hours. Following this period of operation on battery power, the battery shall have sufficient capacity to operate all components of the system, including all alarm indicating devices in alarm or supervisory mode for a period of 5 minutes.

G. Addressable Manual Pull Stations
   1. Description: Addressable single- or double-action type, red LEXAN, with molded, raised-letter operating instructions of contrasting color. Station will mechanically latch upon operation and remain so until manually reset by opening with a key common with the control units.
   2. Protective Shield:
      a. At wall mounted locations: Where indicated on drawings, provide a tamperproof, clear LEXAN shield and red frame that easily fits over manual pull stations.
      b. At casework mounted locations: Where indicated on drawings, provide a tamperproof, low profile, clear LEXAN shield and red frame that easily fits over manual pull stations. The shield shall protrude a maximum of 2 inches and shall not interfere with operation of casework. Coordinate with casework provider.
      c. When shield is lifted to gain access to the station, a battery powered piercing warning horn shall be activated. The horn shall be silenced by lowering and realigning the shield. The horn shall provide 85dB at 10 feet and shall be powered by a 9 VDC battery.
      d. Protective shields shall be provided at all pull stations within childcare area.

H. Smoke Sensors
   1. General: Comply with UL 268, "Smoke Detectors for Fire Protective Signaling Systems." Include the following features:
      a. Factory Nameplate: Serial number and type identification.
      b. Operating Voltage: 24 VDC, nominal.

c. Self-Restoring: Detectors do not require resetting or readjustment after actuation to restore normal operation.
d. Plug-In Arrangement: Sensor and associated electronic components are mounted in a module that connects to a fixed base with a twist-locking plug connection. Base shall provide break-off plastic tab that can be removed to engage the head/base locking mechanism. No special tools shall be required to remove head once it has been locked. Removal of the detector head shall interrupt the supervisory circuit of the fire alarm detection loop and cause a trouble signal at the control unit.
e. Each sensor base shall contain an LED that will flash each time it is scanned by the Control Unit (once every 4 seconds). In alarm condition, the sensor base LED shall be on steady.
f. Each sensor base shall contain a magnetically actuated test switch to provide for easy alarm testing at the sensor location.
g. Each sensor shall be scanned by the Control Unit for its type identification to prevent inadvertent substitution of another sensor type. Upon detection of a "wrong device", the control unit shall operate with the installed device at the default alarm settings for that sensor; 2.5% obscuration for photoelectric sensor, 135-deg F and 15-deg F rate-of-rise for the heat sensor, but shall indicate a "Wrong Device" trouble condition.
h. The sensor's electronics shall be immune from false alarms caused by EMI and RFI.
i. Sensors include a communication transmitter and receiver in the mounting base having a unique identification and capability for status reporting to the FACP. Sensor address shall be located in base to eliminate false addressing when replacing sensors.
j. Removal of the sensor head for cleaning shall not require the setting of addresses.

2. Type: Smoke sensors shall be of the photoelectric or combination photoelectric / heat type. Where acceptable per manufacturer specifications, ionization type sensors may be used.
3. Bases: Relay output, sounder and isolator bases shall be supported alternatives to the standard base.
4. Duct Smoke Sensor: Photoelectric type, with sampling tube of design and dimensions as recommended by the manufacturer for the specific duct size and installation conditions where applied. Sensor includes relay as required for fan shutdown.
   a. Environmental compensation, programmable sensitivity settings, status testing, and monitoring of sensor dirt accumulation for the duct sensor shall be provided by the FACP.
   b. The Duct Housing shall provide a supervised relay driver circuit for driving up to 15 relays with a single "Form C" contact rated at 7A@ 28VDC or 10A@ 120VAC. This auxiliary relay output shall be fully programmable. Relay shall be mounted within 3 feet of HVAC control circuit.
   c. Duct Housing shall provide a relay control trouble indicator Yellow LED.
   d. Compact Duct Housing shall have a transparent cover to monitor for the presence of smoke. Cover shall secure to housing by means of four (4) captive fastening screws.
   e. Duct Housing shall provide two (2) Test Ports for measuring airflow and for testing. These ports will allow aerosol injection in order to test the activation of the duct smoke sensor.
   f. Duct Housing shall provide a magnetic test area and Red sensor status LED.
   g. For maintenance purposes, it shall be possible to clean the duct housing sampling tubes by accessing them through the duct housing front cover.

h. Each duct sensor shall have a Remote Test Station with an alarm LED and test switch.
i. Where indicated provide a NEMA 4X weatherproof duct housing enclosure shall provide for the circulation of conditioned air around the internally mounted addressable duct sensor housing to maintain the sensor housing at its rated temperature range. The housing shall be UL Listed to Standard 268A.

I. Heat Sensors
1. Thermal Sensor: Combination fixed-temperature and rate-of-rise unit with plug-in base and alarm indication lamp; 135-deg F fixed-temperature setting except as indicated.
2. Thermal sensor shall be of the epoxy encapsulated electronic design. It shall be thermistor-based, rate-compensated, self-restoring and shall not be affected by thermal lag.
3. Sensor fixed temperature sensing shall be independent of rate-of-rise sensing and] programmable to operate at 135-deg F or 155-deg F. Sensor rate-of-rise temperature detection shall be selectable at the FACP for either 15-deg F or 20-deg F per minute.
4. Sensor shall have the capability to be programmed as a utility monitoring device to monitor for temperature extremes in the range from 32-deg F to 155-deg F.

J. Carbon Monoxide Sensors
1. General: Carbon monoxide detector listed for connection to fire alarm system.
a. Mounting: Adapter plate for outlet box mounting.
b. Testable by introducing test carbon monoxide into the sensing cell.
c. Detector shall provide alarm contacts and trouble contacts.
d. Detector shall send trouble alarm when nearing end-of-life, power supply problems, or internal faults.
e. Comply with UL 2075.
f. Locate, mount, and wire per manufacturer's written instructions.
g. Provide means for addressable connection to fire alarm system.
h. Test button simulates an alarm condition.

K. Addressable Circuit Interface Modules
1. Addressable Circuit Interface Modules: Arrange to monitor one or more system components that are not otherwise equipped for addressable communication. Modules shall be used for monitoring of waterflow, valve tamper, non-addressable devices, and for control of evacuation indicating appliances and AHU systems.
2. Addressable Circuit Interface Modules will be capable of mounting in a standard electric outlet box. Modules will include cover plates to allow surface or flush mounting. Modules will receive their operating power from the signaling line or a separate two wire pair running from an appropriate power supply as required.
3. There shall be the following types of modules:
a. Type 1: Monitor Circuit Interface Module:
1) For conventional 2-wire smoke detector and/or contact device monitoring with Class B or Class A wiring supervision. The supervision of the zone wiring will be Class B. This module will communicate status (normal, alarm, trouble) to the FACP.
2) For conventional 4-wire smoke detector with Class B wiring supervision. The module will provide detector reset capability and over-current power protection for the 4-wire detector. This module will communicate status (normal, alarm, trouble) to the FACP.
b. Type 2: Line Powered Monitor Circuit Interface Module

1) This type of module is an individually addressable module that has both its power and its communications supplied by the two wire multiplexing signaling line circuit. It provides location specific addressability to an initiating device by monitoring normally open dry contacts. This module shall have the capability of communicating four zone status conditions (normal, alarm, current limited, trouble) to the FACP.
2) This module shall provide location specific addressability for up to five initiating devices by monitoring normally closed or normally open dry contact security devices. The module shall communicate four zone status conditions (open, normal, abnormal, and short). The two-wire signaling line circuit shall supply power and communications to the module.

c. Type 3: Single Address Multi-Point Interface Modules
1) This multi-point module shall provide location specific addressability for four initiating circuits and control two output relays from a single address. Inputs shall provide supervised monitoring of normally open, dry contacts and be capable of communicating four zone status conditions (normal, open, current limited, and short). The input circuits and output relay operation shall be controlled independently and disabled separately.
2) This dual point module shall provide a supervised multi-state input and a relay output, using a single address. The input shall provide supervised monitoring of two normally open, dry contacts with a single point and be capable of communicating four zone status conditions (normal, open, current limited, and short). The two-wire signaling line circuit shall supply power and communications to the module.
3) This dual point module shall monitor an unsupervised normally open, dry contact with one point and control an output relay with the other point, using a single address. The two-wire signaling line circuit shall supply power and communications to the module.

d. Type 4: Line Powered Control Circuit Interface Module
1) This module shall provide control and status tracking of a Form "C" contact. The two-wire signaling line circuit shall supply power and communications to the module.

e. Type 5: 4-20 mA Analog Monitor Circuit Interface Module
1) This module shall communicate the status of a compatible 4-20 mA sensor to the FACP. The FACP shall annunciate up to three threshold levels, each with custom action message; display and archive actual sensor analog levels; and permit sensor calibration date recording.

4. All Circuit Interface Modules shall be supervised and uniquely identified by the control unit. Module identification shall be transmitted to the control unit for processing according to the program instructions. Modules shall have an on-board LED to provide an indication that the module is powered and communicating with the FACP. The LEDs shall provide a troubleshooting aid since the LED blinks on poll whenever the peripheral is powered and communicating.

L. Addressable Alarm Notification Appliances
1. Addressable Notification Appliances: The Contractor shall furnish and install Addressable Notification Appliances and accessories to operate on compatible signaling line circuits (SLC).

a. Addressable Notification appliance operation shall provide power, supervision and separate control of horns and strobes over a single pair of wires. The controlling channel (SLC) digitally communicates with each appliance and receives a response to verify the appliance's presence on the channel. The channel provides a digital command to control appliance operation. SLC channel wiring shall be unshielded twisted pair (UTP), with a capacitance rating of less than 60pf/ft and a minimum 3 twists (turns) per foot.
b. Class B (Style 4) notification appliances shall be wired without requiring traditional in/out wiring methods; addressable "T" Tapping shall be permitted. Up to 63 appliances can be supported on a single channel.
c. Each Addressable notification appliance shall contain an electronic module and a selectable address setting to allow it to occupy a unique location on the channel. This on-board module shall also allow the channel to perform appliance diagnostics that assist with installation and subsequent test operations. A visible LED on each appliance shall provide verification of communications and shall flash with the appliances address setting when locally requested using a magnetic test tool.

2. Addressable Controller: Addressable Controller shall supervise Channel (SLC) wiring, communicate with and control addressable notification appliances. It shall be possible to program the High/Lo setting of the audible (horn) appliances by channel from the addressable controller.
3. Horn: Addressable horn shall be listed to UL 464. Horn appliances shall have a High/Lo Setting, programmable by channel from the addressable controller or by appliance from the host FACP. The horn shall have a minimum sound pressure level of 83 or 89 dBA @ 24VDC. The horn shall mount directly to a standard single gang, double gang or 4" square electrical box, without the use of special adapter or trim rings. Appliances shall be wired with UTP conductors, having a minimum of 3 twists per foot.
4. Visible/Only: Addressable strobe shall be listed to UL 1971. The V/O shall consist of a xenon flash tube and associated lens/reflector system. The V/O enclosure shall mount directly to standard single gang, double gang or 4" square electrical box, without the use of special adapters or trim rings. Appliances shall be wired with UTP conductors, having a minimum of 3 twists per foot. V/O appliances shall be provided with different minimum flash intensities of 15cd, 75cd and 110cd. Provide a label inside the strobe lens to indicate the listed candela rating of the specific Visible/Only appliance.
5. Audible/Visible: Addressable combination Audible/Visible (A/V) Notification Appliances shall be listed to UL 1971 and UL 464. The strobe light shall consist of a xenon flash tube and associated lens/reflector system. Provide a label inside the strobe lens to indicate the listed candela rating of the specific strobe. The horn shall have a minimum sound pressure level of 83 or 89 dBA @ 24VDC. The audible/visible enclosure shall mount directly to standard single gang, double gang or 4" square electrical box, without the use of special adapters or trim rings. Appliances shall be wired with UTP conductors, having a minimum of 3 twists per foot. The appliance shall be capable of two-wire synchronization with one of the following options:
   a. Synchronized Strobe with Horn on steady
   b. Synchronized Strobe with Temporal Code Pattern on Horn
   c. Synchronized Strobe with March Time cadence on Horn
   d. Synchronized Strobe firing to NAC sync signal with Horn silenced
6. Speaker/Visible: Combination Speaker/Visible (S/V) units combine the speaker and visible functions into a common housing. The S/V shall be listed to UL 1971 and UL 1480. Addressable functionality controls visible operation, while the speaker operates on a 25VRMS or 70.7VRMS NAC.

a. Twisted/shielded wire is required for speaker connections on a standard 25VRMS or 70.7VRMS NAC using and UTP conductors, having a minimum of 3 twists per foot is required for addressable strobe connections.
b. The following taps are available: 0.25W, 0.50W, 1.0W and 2.0W. At the 1.0W tap, the speaker has minimum UL rated sound pressure level of 84dBA at 10 feet.
c. The S/V shall have a frequency response of 400 to 4000 Hz for Fire Alarm and 125 to 12kHz for General Signaling.
d. The S/V installs directly to a 4" square, 1 1/2 in. deep electrical box with 1 1/2" extension.

7. Isolator Module: Isolator module provides short circuit isolation for addressable notification appliance SLC wiring. Isolator shall be listed to UL 864. The Isolator shall mount directly to a minimum 2 1/8" deep, standard 4" square electrical box, without the use of special adapter or trim rings. Power and communications shall be supplied by the Addressable Controller channel SLC; dual port design shall accept communications and power from either port and shall automatically isolate one port from the other when a short circuit occurs. The following functionality shall be included in the Isolator module:
   a. Report faults to the host FACP.
   b. On-board Yellow LED provides module status.
   c. After the wiring fault is repaired, the Isolator modules shall test the lines and automatically restore the connection.
8. Accessories: The contractor shall furnish the necessary accessories.

M. NAC Power Extender
1. The IDNet NAC Power Extender panel shall be a stand-alone panel capable of powering a minimum of 4 notification appliance circuits. Notification appliance circuits shall be Class B Style Y rated at 2 amps each. Panel shall provide capability to be expanded to 8 notification appliance circuits.
2. The internal power supply & battery charger shall be capable of charging up 12.7 Ah batteries internally mounted or 18Ah batteries mounted in an external cabinet.
3. The NAC extender panel may be mounted close to the host control panel or can be remotely located. The IDNET Addressable NAC Extender Panel when connected to an addressable panel shall connect to the host panel via an IDNet communications channel. Via the IDNET channel each output NAC can be individually controlled for general alarm or selective area notification.
4. For IDNet connected NAC extender panels up to five panels can be connected on a single IDNet channel.
5. When connected to a conventional (non-addressable panel) one or two standard notification appliance circuits from the main control panel may be used to activate all the circuits on the NAC power extender panel.
6. Alarms from the host fire panel shall signal the NAC power extender panel to activate. The panel shall monitor itself and each of its NACs for trouble conditions and shall report trouble conditions to the host panel.

N. Contractor shall obtain from the Fire Alarm System Manufacturer written instruction regarding the appropriate wire/cable to be used for this installation. No deviation from the written instruction shall be made by the Contractor without the prior written approval of the Fire Alarm System Manufacturer.

O. Color Coding: Color-code fire alarm conductors differently from the normal building power wiring. Use one color code for alarm initiating device circuits wiring and a different color code for supervisory circuits. Color-code notification appliance circuits differently from alarm-initiating circuits. Paint fire alarm system junction boxes and covers red.

P. Surge Protection: In accordance with IEEE C62.41.2 category B combination waveform and NFPA 70; except for optical fiber conductors.
   1. Equipment Connected to Alternating Current Circuits: Maximum let through voltage of 350 V(ac), line-to-neutral, and 350 V(ac), line-to-line; do not use fuses.
   2. Initiating Device Circuits, Notification Appliance Circuits, and Communications Circuits: Provide surge protection at each point where circuit exits or enters a building; rated to protect applicable equipment; for 24 V(dc) maximum dc clamping voltage of 36 V(dc), line-to-ground, and 72 V(dc), line-to-line.
   3. Signaling Line Circuits: Provide surge protection at each point where circuit exits or enters a building, rated to protect applicable equipment.

Q. Locks and Keys: Deliver keys to Owner.
   1. Provide the same standard lock and key for each key operated switch and lockable panel and cabinet; provide 5 keys of each type.

R. Instruction Charts: Printed instruction chart for operators, showing steps to be taken when a signal is received (normal, alarm, supervisory, and trouble); easily readable from normal operator's station.
   1. Frame: Stainless steel or aluminum with polycarbonate or glass cover.
   2. Provide one for each control unit where operations are to be performed.
   3. Obtain approval of Owner prior to mounting; mount in location acceptable to Owner.
   4. Provide extra copy with operation and maintenance data submittal.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install in accordance with applicable codes, NFPA 72, NFPA 70, and the contract documents.

B. Conceal all wiring, conduit, boxes, and supports where installed in finished areas.

C. All wiring on second floor exercise area shall be concealed in gypsum board soffits. Where visible routing is required, wiring shall be straight, level, and plumb, and secured at 36 inch intervals to avoid sagging. Low voltage cable straps must be used.

D. Obtain Engineer's approval before modifying any locations of devices indicated on drawings.

E. Install instruction cards and labels.

3.02 INSPECTION AND TESTING FOR COMPLETION

A. Notify Owner 7 days prior to beginning completion inspections and tests.

B. Notify authorities having jurisdiction and comply with their requirements for scheduling inspections and tests and for observation by their personnel.

C. Provide the services of the installer's supervisor or person with equivalent qualifications to supervise inspection and testing, correction, and adjustments.

D. Prepare for testing by ensuring that all work is complete and correct; perform preliminary tests as required.

E. Provide all tools, software, and supplies required to accomplish inspection and testing.

F. Perform inspection and testing in accordance with NFPA 72 and requirements of local authorities; document each inspection and test.

G. Correct defective work, adjust for proper operation, and retest until entire system complies with contract documents.

H. Diagnostic Period: After successful completion of inspections and tests, Operate system in normal mode for at least 14 days without any system or equipment malfunctions.
   1. Record all system operations and malfunctions.
   2. If a malfunction occurs, start diagnostic period over after correction of malfunction.
   3. Owner will provide attendant operator personnel during diagnostic period; schedule training to allow Owner personnel to perform normal duties.
   4. At end of successful diagnostic period, fill out and submit NFPA 72 "Inspection and Testing Form."

3.03 PERSONNEL INSTRUCTION

A. Provide the following instruction to designated Owner personnel:
   1. Hands-On Instruction: On-site, using operational system.

B. Basic Operation: One-hour sessions for attendant personnel, security officers, and engineering staff; combination of classroom and hands-on:
   1. Initial Training: 1 session pre-closeout.

C. Furnish the services of instructors and teaching aids; have copies of operation and maintenance data available during instruction.

3.04 CLOSEOUT

A. Closeout Demonstration: Demonstrate proper operation of all functions to Owner.
   1. Be prepared to conduct any of the required tests.
   2. Have at least one copy of operation and maintenance data, preliminary copy of project record drawings, input/output matrix, and operator instruction chart(s) available during demonstration.
   3. Have authorized technical representative of control unit manufacturer present during demonstration.
   4. Demonstration may be combined with inspection and testing required by authority having jurisdiction; notify authority having jurisdiction in time to schedule demonstration.
   5. Repeat demonstration until successful.

B. Substantial Completion of the project cannot be achieved until inspection and testing is successful and:
   1. Specified diagnostic period without malfunction has been completed.
   2. Approved operating and maintenance data has been delivered.
   3. All aspects of operation have been demonstrated to Owner.
   4. Final acceptance of the fire alarm system has been given by authorities having jurisdiction.
   5. Occupancy permit has been granted.
   6. Specified pre-closeout instruction is complete.

3.05 MAINTENANCE

A. See Division 1 specification Execution Requirements, for additional requirements relating to maintenance service.

B. Provide to Owner, at no extra cost, a written maintenance contract for entire manufacturer's warranty period, to include the work described below.

C. Perform routine inspection, testing, and preventive maintenance required by NFPA 72, including:

1. Maintenance of fire safety interface and supervisory devices connected to fire alarm system.
2. Repairs required, unless due to improper use, accidents, or negligence beyond the control of the maintenance contractor.
3. Record keeping required by NFPA 72 and authorities having jurisdiction.

D. Provide trouble call-back service upon notification by Owner:
1. Provide on-site response within 2 hours of notification.
2. Include allowance for call-back service during normal working hours at no extra cost to Owner.
3. Owner will pay for call-back service outside of normal working hours on an hourly basis, based on actual time spent at site and not including travel time; include hourly rate and definition of normal working hours in maintenance contract.

E. Provide a complete description of preventive maintenance, systematic examination, adjustment, cleaning, inspection, and testing, with a detailed schedule.

F. Maintain a log at each fire alarm control unit, listing the date and time of each inspection and call-back visit, the condition of the system, nature of the trouble, correction performed, and parts replaced. Submit duplicate of each log entry to Owner's representative upon completion of site visit.

G. Comply with Owner's requirements for access to facility and security.

3.06 MONITORING

A. Fire Alarm Monitoring services shall be contracted by Owner with Life Safety Fire & Security Solutions.
1. Contact Owner prior to engaging Life Safety Fire & Security Solutions.
2. Contact, Life Safety Fire & Security Solutions, Tempe AZ: Leo Gonzales, 716-382-7965.

END OF SECTION

SECTION 28 31 19
DISTRIBUTED ANTENNA SYSTEM (EMERGENCY RESPONSE)

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This section includes performance requirements and products for a bi-directional amplifier system. A bi-directional radio frequency (RF) amplifier will be required inside the building. Antennas will be installed where indicated in the building to transmit and receive the radio signals. The system shall ensure full building coverage for the two way communications for the emergency services in the area. An outdoor donor antenna will be mounted on the roof as indicated. All required cabling shall be provided for a complete and functional system. The Contractor shall provide a fully functional Distributed Antenna System compliant with local first responder emergency services requirements and the following specifications.

1.03 IN-BUILDING DAS SPECIFICATION

A. Description: For purposes of this specification, a distributed antenna system is an in-building wireless system facilitating frequencies as required by the authority having jurisdiction, designed to serve emergency response services. The system antenna design and layout shall be engineered and configured to meet local Fire Department coverage requirements. Calculations shall be provided for each supported service, to verify the signal levels required to maintain the specified reliability and coverage objectives.

B. The system shall meet all requirements for the local fire department. All tests and documentation shall be completed per local codes.

C. The in-building Distributed Antenna System (DAS) solution must be implemented with proven, type-accepted, state of the art technology.

D. The DAS system proposed by the Contractor must comply with the following design, coverage and reliability requirements:
   1. Active Signal Handling
      a. The in-building DAS shall have active powered elements that filter and amplify signals on a band specific basis to consistently deliver wireless services at the appropriate power levels.
   2. Signal Distribution
      a. The in-building DAS shall utilize a coaxial distribution cable with passive, broadband antennas in the distribution area.
   3. Life Safety Centralized Power
      a. The in-building DAS system shall be powered through a local UPS. The UPS shall provide full operation of the system for a minimum of 12 hours at rated output in the event of a power failure. See below for UPS specification.
   4. Delivered Audio Quality (DAQ) level shall be 3.4 or above. DAQ 3.4 is defined as "speech understandable without repetition. Some noise/distortion present."

E. Acceptance Testing Procedure

1. Upon completion of installation, The Contractor shall have the radio system tested to ensure that two-way communications coverage in the building and on each floor meets the specified performance requirements. Each floor of the building shall be divided into a grid of 20 equal squares or a grid spacing of no more than 50 feet by 50 feet. Testing criterial shall be in accordance with local code requirements. Signal level measurements shall be made using a test receiver with sensitivity and thermal noise floor equal to or better than the Department of Safety radio, taking at least one sample measurement of the radio system control channel within each accessible grid location.
2. Ensure all documentation is ready for final inspection.
    a. Document all plots for transmission lines. Show that the TDR instrument is calibrated to NIST specifications.
    b. Provide a chart showing loss for each transmission line.
    c. Provide all engineering calculations in plan set.
        1) Link budget from interior antennas as well as link budget for the donor antenna to the public safety repeater site. Include both downlink and uplink calculations.
    d. Document downlink field strengths on the gridded off floor plan set.
    e. Document and show downlink and uplink noise floor as measured with a spectrum analyzer.
    f. Document and show spectrum plot of the downlink signal as present from the donor antenna.
    g. Capture all BDA configuration pages and provide a copy in documentation.
    h. Show on the air downlink plot from the spectrum analyzer as measured at the output of the BDA.
3. If the building fails to achieve the coverage requirement, the Contractor shall provide additional DAS equipment as required and conduct a new acceptance test.
4. Contactor shall pay all fees associated with testing the system.

1.04 RANGE OF SERVICE

A. Public Safety Spectrum
1. The in-building DAS head end equipment shall be capable of supporting the spectrum, services, applications, and technologies required by the local fire department.
2. System Overview
    a. The radios DAS head end equipment will be located as indicated in the Contract Documents.
    b. IEEE 802.11 a/b/g/n will not be part of the DAS design.
3. The primary role of the DAS system is to provide life safety radio communications. As such, reliability should be a primary goal of the design.
4. Recommended Coverage Design Goal
    a. The radio system control channel signal level shall exceed -95dBm at 95% or more of the locations measured within each grid area. Equivalently, the service area reliability shall be 95% or greater on each floor of the structure.
5. Failure Detection
    a. DAS equipment shall have failure detection circuitry which provides detection of mechanical, electrical, and power failure of the DAS, as well as oscillation detection capability which will reduce the amplifier output to zero in the event of a system oscillation. Detection of any failure shall result in a distinct audible notification at a constantly attended location approved by the Fire Department.

1.05 SUBMITTALS

A. Product Data:

1. Product Data for all items provided under this Section.
    a. Indicate materials, finishes, load ratings, dimensions, listings, approvals and attachment methods.
    b. Indicate how the components of an item or system are assembled, interconnected, function together and how they will be installed on the project.
    c. Highlight with yellow or blue marker, or indicate with arrow stamp, adequate information to demonstrate materials being submitted fully comply with contract documents.
    d. Indicate listing by UL or other approved testing agency.
    e. Manufacturers' Cable Installation Instructions

B. System Block Diagram: Provide a block diagram illustrating system components and connectivity requirements. At a minimum label: cabling requirements, electrical requirements, and related system components. Include detailed diagrams of head end and rooftop equipment.

C. Operation and Maintenance Data: For system components to include in emergency, operation, and maintenance manuals.

D. Shop Drawings
1. Provide detailed plan views (minimum scale 3/32"=1'-0") and elevations of all telecommunications spaces showing field conditions, ancillary room components, dimensions, equipment racks, termination blocks, patch panels, cable paths and workspace requirements for access to equipment and cable connections.
2. Ratings of items.
3. Fire rating of room penetrations.
4. Coordinate with other division shop drawings and submittals. Identify interface points and indicate method of connection.
5. Provide plan drawings of each floor of each building showing:
    a. Routing for all cables installed under this Work.
6. Reports and Schedules
    a. Provide Cable Termination Schedules for all cables installed under this work, with the following information:
        1) Backbone cables
        2) Horizontal (antenna) distribution cables
7. Provide sample reports showing the proposed format for cable test reports.

E. As Built Drawings: The Contractor shall provide a complete set of as-built drawings.

F. Permits: Contractor shall obtain and submit required permitting for the installation of the system. Contractor shall provide all required submittals to the local authority having jurisdiction and the Fire Department. Contractor shall fill out and provide design and engineering specifications per local requirements to obtain permit.

1.06 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements listed below.

B. The installation shall be performed by a company that has been in the business of installing DAS systems for a period of at least three years.

C. Response times for remote diagnostics shall be within two hours, on site diagnostics within 8 hours, and parts availability / service restoration within 24 hours.

D. References: Provide manufacturer references for five projects of a similar size / scope where the system proposed is currently installed. Provide contact information at each site as well as any written recommendations available.

E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

F. Comply with NFPA 70 for components and installation.

G. Comply with local Fire Code.

1.07 WARRANTY

A. Provide a warranty of 2 years from substantial completion.

PART 2 PRODUCTS

2.01 EQUIPMENT MANUFACTURERS

A. All equipment shall be the product of a manufacturer that has been in the business of manufacturing like product and financially stable for a period of at least five years. The Contractor shall provide equipment references as required in the request for proposals for any substitutions.

B. The Contractor shall commit, in writing, to factory support for the primary components of the DAS system, providing hardware availability and support for a minimum period of ten years following system implementation. The primary components shall include all equipment by a single or multiple manufacturers, totaling at least 70% of the capital equipment cost.

2.02 PARTS AND EQUIPMENT SPECIFICATIONS

A. Contractor shall provide parts and equipment list, and specifications for all components of the system, including:
   1. Shielded Coaxial Cable and connectors.
   2. Coaxial splitters and terminators.
   3. Interior Antennas.
   4. Donor antennas.
   5. Radios, amplifiers, head end equipment.

2.03 BI-DIRECTIONAL AMPLIFIER (BDA)

A. Maximum output power: As required to provide coverage for entire building.

B. Minimum gain: 80 dB.

C. Frequency band uplink/downlink: as required by authority having jurisdiction.

D. Technology:
   1. Digital repeater with channel filtering.
   2. Signal to be repeated is FM, system must be capable of P25 digital.

E. Input and output impedance: 50 ohms.

F. Enclosure: NEMA 4

G. Additional outputs: System shall have alarm output.

H. BDA shall included re-tunable or replaceable filters to acommodate pass band changes. The use of non-adjustable and non-replaceable RF duplexer filters is prohibited.

2.04 ANTENNAS

A. Exterior Donor Antenna: Yagi 12 dBd gain.

B. Interior Omni-directional antenna: 1.5 dBi gain.

C. Interior directional panel antenna: 6 dBd gain.

2.05 DIRECTIONAL COUPLERS & SPLITTERS

A. Directional Couplers

B. Power Splitter

2.06 WIRING AND CABLES

A. Coax: ½" coax transmission line.
   1. Jack material: PE.
   2. Outer conductor material: Corrugated copper.
   3. Dielectric material: Foam PE.
   4. Inner conductor material: Copper-clad aluminum wire.
   5. Jacket color: Black.
   6. Cable shall be plenum rated.
   7. Andrews LDF4-50A.

B. Jumper Cables:
   1. Jumper cables shall be RJ-142 jumpers cables with type "N" male connectors on each end.

2.07 LIGHTNING PROTECTION DEVICE

A. Provide lightning protection equipment on cabling entering the building from the exterior donor antenna. Ground antenna to building grounding system.

2.08 UNINTERRUPTIBLE POWER SYSTEM

A. Rack-Mounted Uninterruptible Power Supply (UPS) shall be furnished and installed for the radio repeater system with the following requirements:
   1. 19" rack/cabinet mountable and two rack units in height. Provide necessary mounting hardware.
   2. Rated for 12-hours of backup capacity.
   3. Six NEMA 5-15R receptacles and 10' line cord with NEMA 5-15P plug.
   4. Approved manufacturer: American Power Conversion.
   5. Approved equals by Tripp Lite and Liebert.

2.09 SPARE MATERIALS

A. Furnish spare materials described below, before installation begins, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents. Provide not less than one of each item listed below. Deliver extra materials to Owner.
   1. Antennas: One of each type installed.
   2. Passive Components (taps, combiners, splitters, couplers, etc.): One of each type installed.
   3. Cable: 100 feet (30 m); each type used
   4. Jumper Cables: Two for every type installed.

PART 3 EXECUTION

3.01 INSTALLATION

A. The installation shall be performed by a company that has been in the business of installing DAS systems for a period of at least three years.

3.02 COORDINATION

A. Design coordination is required for this Work. Coordination with General Contractor and the design team is required to address system integration and structure cabling design.

B. Coordinate Work of this Section with on-site General Contractor and their sub-contractors.

C. Coordinate layout and installation of distributed antenna system equipment and antenna cable with other construction that penetrates ceilings or is supported by them, including but not limited to light fixtures, HVAC equipment, fire-suppression-system components, and partition assemblies.

D. Coordinate locations of any equipment that differs from that shown on the Construction Documents with the Engineer and Owner prior to installation. All difference shall be clearly noted in the submittals. Special consideration shall be taken to install antennas in areas with the least visual impact. All cabling shall be concealed wherever possible and adequately supported.

E. Coordinate installation and system level measurement with engineer, Owner, vendors and installation contractors.

F. Coordinate with the local public safety jurisdiction and secure "Approval to Carry" letter from the owner of each public safety radio system carried by the DAS.

3.03 CABLE INSTALLATION

A. Coaxial cable, and other associated cable and wiring shall be installed in sleeves indicated on the Construction Documents for antenna system. Provide proper support for all cabling. Cabling shall be installed in a neat and workmanlike manor. Any cabling deemed by the Engineer to be improperly installed or improperly supported shall be fixed by the Contractor at no expense to the Owner. Provide j-hooks where cable trays are not present, and install cabling in conduit where installed in exposed finished areas.

B. Coaxial cables are to be terminated at bulkheads in each designated equipment room. Provide proper grounding on each bulkhead.

C. Contractor will provide as-built documentation of the installed cable system.

3.04 IDENTIFICATION

A. Comply with Division 26 Section "Identification for Electrical Systems."

B. All installed cable shall be labeled "INTERNAL DISTRIBUTED ANTENNA SYSTEM CABLE" every twenty feet.

C. Provide an information sign labeled “THIS BUILDING IS EQUIPPED WITH A RADIO REPEATER SYSTEM” conspicuously posted above fire control panel.

3.05 FIELD QUALITY CONTROL

A. Contractor shall provide detailed documentation specifying test procedures for installed cabling, antennas, radios, amplifiers, coverage, and management system.

B. Perform the following field adjustments, tests, and inspections and prepare test reports:
   1. Perform operational-system tests to verify compliance with the Specifications and make adjustments to bring system into compliance.

C. Remove and replace malfunctioning units and retest.

D. Provide copies of test results to the Engineer.

3.06 PROTECTION

A. Protect finished installation until final acceptance of the project.

3.07 DEMONSTRATION

A. Provide training to Owner's representative. Provide 2 hours of training. Refer to Division 01 Section "Demonstration and Training"

3.08 QUALITY ASSURANCE

A. Installer Qualifications: Engage an experienced Installer who has completed installation of distributed antenna systems similar in material, design, and extent to that indicated for this Project and with a record of successful in-service performance. Contractor or installer will provide.

END OF SECTION

This page intentionally left blank

SECTION 28 31 20
DISTRIBUTED ANTENNA SYSTEM (INTERNAL COMMUNICATION)

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This section includes performance requirements and products for a four-channel bi-directional repeater system. A bi-directional radio frequency (RF) repeater will be required inside the building. Antennas will be installed in and out of the building to transmit and receive the radio signals. The system shall ensure full building coverage for the two-way communications services in the area. All required cabling shall be provided for a complete and functional system. The Contractor shall provide a fully functional Distributed Antenna System compliant with national and local requirements and the following specifications. Contractor shall provide license for operation.

1.03 IN-BUILDING DISTRIBUTED ANTENNA SYSTEM SPECIFICATION

A. Description: For purposes of this specification, a distributed antenna system (DAS) is an in-building Wireless system facilitating frequencies as required by Life Time system, designed to serve internal communication services. The system antenna design and layout shall be engineered and configured to meet national and local requirements. Calculation shall be provided for each supported service, to verify the signal levels required to maintain the specified reliability and coverage objectives.

B. The in-building Distributed Antenna System (DAS) solution must be implemented with proven, type- accepted, state of the art technology.

C. The DAS system proposed by the Contractor must comply with the following design, coverage and reliability requirements:
   1. Active Signal Handling
      a. The in-building DAS shall have active powered elements that filter and amplify signals on a band specific basis to consistently deliver wireless services at the appropriate power levels.
   2. Signal Distribution
      a. The in-building DAS shall utilize a coaxial distribution cable with passive, broadband antennas in the distribution area.
   3. Centralized Power
      a. The in-building DAS system shall be powered through a local UPS.
   4. Delivered Audio Quality (DAQ) level shall be 3.4 or above. DAQ 3.4 is defined as “speech understandable without repetition. Some noise/distortion present.”

D. Acceptance Testing Procedure
   1. Upon completion of installation, The Contractor shall have the radio system tested to ensure that two-way communications coverage in the building and on each floor meets the specified performance requirements. Each floor of the building shall be divided into a grid of 20 equal squares or a grid spacing of no more than 50 feet by 50 feet. Signal level measurements shall be made using a test receiver with sensitivity and thermal noise floor approved by taking at least one sample measurement of the radio system control channel within each accessible grid location.
   2. Ensure all documentation is ready for final inspection.

a. Document all plots for transmission lines. Show that the Time-Domain Reflectometer (TDR) instrument is calibrated to NIST specifications.
b. Provide a chart showing loss for each transmission line.
c. Provide all engineering calculations in plan set.
    1) Link budget from interior antennas as well as link budget for the exterior antenna to the repeater. Include both downlink and uplink calculations.
d. Document downlink field strengths on the gridded off floor plan set.
e. Document and show downlink and uplink noise floor as measured with a spectrum analyzer.
f. Capture all Bi-Directional Repeater configuration pages and provide a copy in documentation.
g. Show on the air downlink plot from the spectrum analyzer as measured at the output of the repeater.

3. If the building fails to achieve the coverage requirement, the Contractor shall provide additional DAS equipment as required and conduct a new acceptance test.
4. Contactor shall pay all fees associated with testing the system.

1.04 RANGE OF SERVICE

A. Life Time Spectrum
1. The in-building DAS head end equipment shall be capable of supporting the spectrum, services, applications, and technologies required by Life Time.
2. System Overview
    a. System shall support 4 channel AWR D6000 digital two-way radios in use by Life Time.
    b. Coordinate the location of the radio DAS head end equipment with Life Time IT department to ensure proper MDF rack location.
    c. System shall serve all area of the Life Time Premises including parking area and outdoor amenities.
    d. IEEE 802.11 a/b/g/n will not be part of the DAS design.
3. The primary role of the DAS system is to provide radio communications. As such, reliability should be a primary goal of the design.
4. Recommended Coverage Design Goal
    a. The radio system control channel signal level shall exceed —95dBm at 95% or more of the locations measured within each grid area. Equivalently, the service area reliability shall be 95% or greater on each floor of the structure.
5. Failure Detection
    a. DAS equipment shall have failure detection circuitry which provides detection of mechanical, electrical, and power failure of the DAS, as well as oscillation detection capability which will reduce the repeater output to zero in the event of a system oscillation. Detection of any failure shall result in a distinct audible notification at a constantly attended location approved by Life Time.

1.05 SUBMITTALS

A. Product Data:
1. Product Data for all items provided under this Section.
    a. Indicate materials, finishes, load ratings, dimensions, listings, approvals and attachment
    b. Indicate how the components of an item or system are assembled, interconnected, function together and how they will be installed on the project.

c. Highlight with yellow or blue marker, or indicate with arrow stamp, adequate information to demonstrate materials being submitted fully comply with contract documents.
d. Indicate listing by UL or other approved testing agency.
e. Manufacturers' Cable Installation Instructions

B. System Block Diagram: Provide a block diagram illustrating system components and connectivity requirements. At a minimum label: cabling requirements, electrical requirements, and related system components. Include detailed diagrams of head end and rooftop equipment.

C. Operation and Maintenance Data: For system components to include in emergency, operation, and maintenance manuals.

D. Shop Drawings
1. Provide detailed plan views (minimum scale 3/32"=1'-0") and elevations of all telecommunications spaces showing field conditions, ancillary room components, dimensions, equipment racks, termination blocks, patch panels, cable paths and workspace requirements for access to equipment and cable connections.
2. Ratings of items.
3. Fire rating of room penetrations.
4. Coordinate with other division shop drawings and submittals. Identify interface points and indicate method of connection.
5. Provide plan drawings of each floor of each building showing:
a. Routing for all cables installed under this Specification.
6. Reports and Schedules
a. Provide Cable Termination Schedules for all cables installed under this work, with the following information:
1) Backbone cables
2) Horizontal (antenna) distribution cables
7. Provide sample reports showing the proposed format for cable test reports.

E. As Built Drawings: The Contractor shall provide a complete set of as-built drawings.

F. Permits: Contractor shall obtain and submit required permitting for the installation of the system. Contractor shall provide all required submittals to the local authority having jurisdiction and the Fire Department. Contractor shall fill out and provide design and engineering specifications per local requirements to obtain permit.

1.06 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements listed below.

B. The installation shall be performed by a company that has been in the business of installing DAS systems for a period of at least three years.

C. Response times for remote diagnostics shall be within two hours, on site diagnostics within 5 days, and parts availability / service restoration within 10 days.

D. References: Provide manufacturer references for five projects of a similar size / scope where the system proposed is currently installed. Provide contact information at each site as well as any written recommendations available.

E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

F. Comply with NFPA 70 for components and installation.

G. Comply with local Fire Code.

1.07 WARRANTY

A. Provide a warranty of 2 years from substantial completion.

PART 2 - PRODUCTS

2.01 EQUIPMENT MANUFACTURERS

A. All equipment shall be the product of a manufacturer that has been in the business of manufacturing like product and financially stable for a period of at least five years. The Contractor shall provide equipment references as required in the request for proposals for any substitutions.

B. The Contractor shall commit, in writing, to factory support for the primary components of the DAS system, providing hardware availability and support for a minimum period of ten years following system implementation. The primary components shall include all equipment by a single or multiple manufacturers, totaling at least 70% of the capital equipment cost.

2.02 PARTS AND EQUIPMENT SPECIFICATIONS

A. Contractor shall provide parts and equipment list, and specifications for all components of the system, including:
   1. Kenwood rack mount repeaters, head end equipment.
   2. Interior Antennas.
   3. Exterior antennas.
   4. Four channel coaxial hybrid combiner and terminators.
   5. Hybrid coupler.
   6. Shielded Coaxial Cable and connectors.
   7. Lightning arrester.

2.03 REPEATER

A. Frequency range: 450-520 MHz.

B. One repeater for each channel up to four-channel.

C. Technology:
   1. Digital/analog repeater with channel filtering.

D. Input and output impedance: 50 ohms.

E. Enclosure: NEMA 4.

F. Additional outputs: System shall have alarm output.

G. Repeater shall include re-tunable or replaceable filters to accommodate pass band changes. The use of non-adjustable and non-replaceable RF duplexer filters is prohibited.

2.04 ANTENNAS

A. Exterior Antenna: Per site requirement.

B. Interior Omni-directional antenna: Per site requirement.

2.05 HYBRID COMBINERS AND COUPLERS

A. It shall cover entire RF range and provide power split ratio proper for balancing the signal strength through the signal distribution network.

2.06 WIRING AND CABLES

A. Coax: 1/2” coax transmission line.
   1. Jack material: PE.
   2. Outer conductor material: Corrugated copper.
   3. Dielectric material: Foam PE.
   4. Inner conductor material: Copper-clad aluminum wire.
   5. Jacket color: Black.
   6. Cable shall be plenum rated.

2.07 LIGHTNING PROTECTION DEVICE

A. Provide lightning protection equipment on cabling entering the building from the exterior antenna. Ground antenna to building grounding system

2.08 SPARE MATERIALS

A. Furnish spare materials described below, before installation begins, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents. Provide not less than one of each item listed below. Deliver extra materials to Owner.
   1. Antennas: One of each type installed.
   2. Passive Components (taps, combiners, splitters, couplers, etc.): One of each type installed.
   3. Cable: 100 feet (30 m); each type used
   4. Jumper Cables: Two for every type installed.

PART 3 - EXECUTION

3.01 INSTALLATION

A. The installation shall be performed by a company that has been in the business of installing DAS systems for a period of at least three years.

3.02 COORDINATION

A. Design coordination is required for this Work. Coordination with General Contractor and the design team is required to address system integration and structure cabling design.

B. Coordinate Work of this Section with on-site General Contractor and their sub-contractors.

C. Coordinate layout and installation of distributed antenna system equipment and antenna cable with other construction that penetrates ceilings or is supported by them, including but not limited to light fixtures, HVAC equipment, fire-suppression-system components, and partition assemblies.

D. Coordinate locations of any equipment that differs from that shown on the Construction Documents with the Engineer and Owner prior to installation. All difference shall be clearly, noted in the submittals. Special consideration shall be taken to install antennas in areas with the least visual impact. All cabling shall be concealed wherever possible and adequately supported.

E. Coordinate installation and system level measurement with engineer, Owner, vendors and installation contractors.

3.03 CABLE INSTALLATION

A. Coaxial cable, and other associated cable and wiring shall be installed in sleeves indicated on the Construction Documents for antenna system. Provide proper support for all cabling. Cabling shall be installed in a neat and workmanlike manor. Any cabling deemed by the Engineer to be improperly installed or improperly supported shall be fixed by the Contractor at no expense to the Owner. Provide j-hooks where cable trays are not present and install cabling in conduit where installed in exposed finished areas.

B. Coaxial cables are to be terminated at bulkheads in each designated equipment room. Provide proper grounding on each bulkhead.

C. Contractor will provide as-built documentation of the installed cable system.

3.04 IDENTIFICATION

A. Comply with Division 26 Section "Identification for Electrical Systems."

B. All installed cable shall be labeled "INTERNAL RADIO DISTRIBUTED ANTENNA SYSTEM CABLE "every twenty feet.

3.05 FIELD QUALITY CONTROL

A. Contractor shall provide detailed documentation specifying test procedures for installed cabling, antennas, repeaters, coverage, and management system.

B. Perform the following field adjustments, tests, and inspections and prepare test reports:
   1. Perform operational-system tests to verify compliance with the Specifications and make adjustments to bring system into compliance.

C. Remove and replace malfunctioning units and retest.

D. Provide copies of test results to the Engineer.

3.06 PROTECTION

A. Protect finished installation until final acceptance of the project.

3.07 DEMONSTRATION

A. Provide training to Owner's representative. Provide 2 hours of training. Refer to Division 01 Section "Demonstration and Training".

3.08 QUALITY ASSURANCE

A. Installer Qualifications: Engage an experienced Installer who has completed installation of distributed antenna systems similar in material, design, and extent to that indicated for this Project and with a record of successful in-service performance. Contractor or installer will provide.

END OF SECTION

SECTION 28 31 29
AREA OF REFUGE/RESCUE ASSISTANCE SYSTEMS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Area of refuge/rescue assistance emergency communication system and associated call stations, control stations, and accessories.

1.02 RELATED REQUIREMENTS

A. Section 07 84 00 - Firestopping.

B. Section 26 05 26 - Grounding and Bonding for Electrical Systems.

C. Section 26 05 34 - Conduit for Electrical Systems.

D. Section 26 05 53 - Identification for Electrical Systems.

1.03 REFERENCE STANDARDS

A. 36 CFR 1191 - Americans with Disabilities Act (ADA) Accessibility Guidelines for Buildings and Facilities; Architectural Barriers Act (ABA) Accessibility Guidelines; current edition.

B. ADA Standards - 2010 ADA Standards for Accessible Design; 2010.

C. ICC (IBC) - International Building Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

D. NECA 1 - Standard for Good Workmanship in Electrical Construction; 2023.

E. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

F. NFPA 72 - National Fire Alarm and Signaling Code; Most Recent Edition Cited by Referring Code or Reference Standard.

G. NFPA 101 - Life Safety Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

H. UL 924 - Emergency Lighting and Power Equipment; Current Edition, Including All Revisions.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Coordinate the work with other trades to avoid placement of ductwork, piping, equipment or other potential obstructions within the spaces dedicated for area of refuge/rescue assistance system components.
   2. Coordinate the work with other installers to provide communication lines required for control station timed automatic connection to designated constantly attended monitoring location.
   3. Notify Architect of any conflicts with or deviations from the contract documents. Obtain direction before proceeding with work.

B. Sequencing:
   1. Do not install call stations and control station(s) until final surface finishes and painting are complete.

1.05 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide manufacturer's standard catalog pages and data sheets for each system component. Include configurations, standard wiring diagrams, dimensions, finishes, service condition requirements, and installed features.

C. Shop Drawings: Include plan views indicating locations of system components and proposed size, type, and routing of conduits and/or cables. Include system interconnection schematic diagrams.

D. Design Data: Include standby battery calculations.

E. Maintenance contracts.

1.06 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements listed below.

B. Comply with the following:
1. ADA Standards.
2. NFPA 70 (National Electrical Code).
3. NFPA 101 (Life Safety Code).
4. The requirements of the local authorities having jurisdiction.
5. Applicable TIA/EIA standards.

C. Manufacturer Qualifications: Company engaged in manufacturing the products specified in this section with minimum three years documented experience.

D. Installer Qualifications: Company with minimum three years documented experience with similar area of refuge/rescue assistance systems and providing contract maintenance service as a regular part of their business; manufacturer's authorized installer.

E. Maintenance Contractor Qualifications: Same entity as installer.

F. Products: Listed, classified, and labeled as suitable for the purpose intended.

G. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store products in accordance with manufacturer's instructions.

B. Store products in manufacturer's unopened packaging, keep dry and protect from damage until ready for installation.

1.08 FIELD CONDITIONS

A. Maintain field conditions within manufacturer's required service conditions during and after installation.

1.09 WARRANTY

A. See Section 01 78 00 - Closeout Submittals, for additional warranty requirements.

B. Provide minimum one year manufacturer warranty covering repair or replacement due to defective materials or workmanship.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Area of Refuge/Rescue Assistance Communication System:
1. Basis of Design: Rath Microtech, model(s) as indicated on plans.

2. Subject to compliance with specified requirements of the section and prior approval, one of the following:
    a. Cornell Communications: www.cornell.com
    b. Code Blue: www.codeblue.com
    c. Alpha Communications; www.alphacommunications.com

B. Products other than basis of design are subject to compliance with specified requirements and prior approval of Engineer. By using products other than basis of design, Contractor accepts responsibility for costs associated with any necessary modifications to related work, including any design fees.

C. Source Limitations: Furnish system components and accessories produced by a single manufacturer and obtained from a single supplier.

2.02 AREA OF REFUGE/RESCUE ASSISTANCE COMMUNICATION SYSTEM

A. Provide new area of refuge/rescue assistance communication system consisting of all required equipment, conduit, boxes, wiring, connectors, hardware, accessories, system programming, etc. as necessary for a complete operating system that provides the functional intent indicated.

B. System Description:
1. Call Stations: Located at each designated area of refuge/rescue assistanceas indicated on drawings, unless otherwise directed by authorities having jurisdiction.
2. Master Control Station: New, located as indicated on drawings, unless otherwise directed by authorities having jurisdiction.
3. System battery backup is required.
4. Timed automatic connection to designated constantly attended monitoring location is required.

C. System Operation:
1. When a call for assistance is initiated at call station:
    a. Provide audible and visual notification at call station to confirm that call has been placed.
    b. Provide audible and visual notification at control station(s) that call has been placed and annunciate the location of the call station/zone that initiated a call.
    c. Maintain visual notification of each call location at control station(s) until manually reset by control station operator.
    d. Maintain audible notification at control station(s) that call(s) have been placed until call is acknowledged by control station operator.
    e. Maintain visual notification at call station until manually reset by control station operator.
2. When a call for assistance is acknowledged at control station:
    a. Provide visual notification at control station that call has been acknowledged.
    b. Provide visual notification at call station that call has been received.
    c. Establish two-way voice communication between call station and control station.
3. When a call has not been acknowledged during a programmed time delay to allow for local response, automatically initiate call to listed remote monitoring station under contract with facility and establish two-way voice communication.

D. Call Station(s):
1. Suitable for the environment where installed.
2. Finish: Stainless steel.
3. Mounting: Flush-mounted.

4. Button engraved: PUSH FOR HELP.
5. Provides means to initiate call for assistance.
6. Provides for distinct audible and visual notification to confirm that call has been placed and for distinct visual notification that call has been acknowledged.
7. Following initial call for assistance, provides for hands-free two-way communication with control station(s).

E. Control Station(s):
1. Suitable for the environment where installed.
2. Mounting: As indicated on drawings.
3. Provides visual notification that system is operational.
4. Provides for distinct audible and visual notification of calls with annunciation of call station/zone locations.
5. Provides for two-way communication with selected call stations.
6. Provides for supervision of system wiring and provides distinct audible and visual notification of faults.
7. Audible Notification Sound Level: Not less than 90 dB.

F. Accessories:
1. Provide components as indicated or as required for a complete operating system.
2. Wiring: Provide manufacturer's recommended cables as indicated or as required for connections between system components, and in accordance with wiring methods indicated.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that characteristics of system components are consistent with the indicated requirements.

C. Verify that mounting surfaces are ready to receive system components.

D. Verify that conditions are satisfactory for installation prior to starting work.

3.02 INSTALLATION

A. Perform work in accordance with NECA 1 (general workmanship).

B. Install products in accordance with manufacturer's instructions.

C. Mounting Heights:
1. Call Stations: Comply with applicable accessibility requirements.
2. Control Stations: As indicated on drawings.

D. Wiring Method:
1. Use listed plenum rated cables in spaces used for environmental air.
2. Install wiring in conduit where required for rough-in, where required by authorities having jurisdiction, and where exposed to damage.
3. Conduit: Comply with Section 26 05 34.

E. Provide grounding and bonding in accordance with Section 26 05 26.

F. Install firestopping to preserve fire resistance rating of partitions and other elements, using materials and methods specified in Section 07 84 00.

G. Identify system wiring and components in accordance with Section 26 05 53.

H. Identify zones at control station(s) to indicate call station locations.

I. Provide required instructional signage at each call station.

3.03 FIELD QUALITY CONTROL

A. See Section 01 40 00 - Quality Requirements, for additional requirements.

B. Test to verify wiring is free of shorts and grounds.

C. Prepare and start system in accordance with manufacturer's instructions.

D. Test system for proper operation.

E. Correct defective work, adjust for proper operation, and retest until entire system complies with contract documents.

F. Submit detailed reports indicating inspection and testing results and corrective actions taken.

3.04 CLEANING

A. Clean exposed surfaces to remove dirt, paint, or other foreign material and restore to match original factory finish.

3.05 CLOSEOUT ACTIVITIES

A. Demonstration: Demonstrate proper operation of system to Owner, and correct deficiencies or make adjustments as directed.

B. Training: Train Owner's personnel on operation, adjustment, and maintenance of system.
   1. Use operation and maintenance manual as training reference, supplemented with additional training materials as required.
   2. Provide minimum of two hours of training.
   3. Instructor: Manufacturer's authorized representative.
   4. Location: At project site.

3.06 PROTECTION

A. Protect installed system components from subsequent construction operations.

3.07 MAINTENANCE

A. Provide to Owner, a proposal as an alternate to the base bid, a separate maintenance contract for the service and maintenance of area of refuge/rescue assistance system for one year from date of Substantial Completion; Include a complete description of preventive maintenance, systematic examination, adjustment, cleaning, inspection, and testing, with a detailed schedule.

B. Provide trouble call-back service upon notification by Owner:
   1. Include allowance for call-back service during normal working hours at no extra cost to Owner.
   2. Owner will pay for call-back service outside of normal working hours on an hourly basis, based on actual time spent at site and not including travel time; include hourly rate and definition of normal working hours in maintenance contract.

SECTION 31 00 10
DIVISION 31 TABLE OF CONTENTS

1.01 DIVISION 31 – EARTHWORK

31 10 00 - Site Clearing
31 23 00 - Excavation and Fill
31 23 19 - Dewatering

END OF SECTION

This page intentionally left blank

SECTION 31 10 00 - SITE CLEARING

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. Protecting existing trees, shrubs, groundcovers, plants and grass to remain.
2. Clearing and grubbing.
3. Stripping and stockpiling topsoil.
4. Removing above- and below-grade site improvements.
5. Disconnecting and capping or sealing site utilities.
6. Temporary erosion and sedimentation control measures.

1.2 MATERIAL OWNERSHIP

A. Except for stripped topsoil or other materials indicated to remain Owner's property, cleared materials shall become Contractor's property and shall be removed from Project site.

1.3 PROJECT CONDITIONS

A. Traffic: Minimize interference with adjoining roads, streets, walks, and other adjacent occupied or used facilities during site-clearing operations.

1. Do not close or obstruct streets, walks, or other adjacent occupied or used facilities without permission from Owner and authorities having jurisdiction.
2. Provide alternate routes around closed or obstructed traffic ways if required by authorities having jurisdiction.

B. Salvable Improvements: Carefully remove items indicated to be salvaged and store on Owner's premises where indicated.

C. Utility Locator Service: Notify utility locator service for area where Project is located before site clearing.

D. Do not commence site clearing operations until temporary erosion and sedimentation control measures are in place.

PRODUCTS

1.4 SOIL MATERIALS

A. Satisfactory Soil Materials: Requirements for satisfactory soil materials are specified in Division 31 Section "Earth Moving."

1. Obtain approved borrow soil materials off-site when satisfactory soil materials are not available on-site.

PART 2 - EXECUTION

2.1 PREPARATION

A. Protect and maintain benchmarks and survey control points from disturbance during construction.

B. Locate and clearly flag trees and vegetation to remain or to be relocated.

C. Protect existing site improvements to remain from damage during construction.

1. Restore damaged improvements to their original condition, as acceptable to Owner.

2.2 TEMPORARY EROSION AND SEDIMENTATION CONTROL

A. Provide temporary erosion and sedimentation control measures to prevent soil erosion and discharge of soil-bearing water runoff or airborne dust to adjacent properties and walkways, according to Sediment and Erosion Control Drawings.

B. Inspect, repair, and maintain erosion and sedimentation control measures during construction until permanent vegetation has been established.

C. Remove erosion and sedimentation controls and restore and stabilize areas disturbed during removal.

2.3 TREE PROTECTION

A. Erect and maintain temporary fencing around tree protection zones before starting site clearing. Remove fence when construction is complete.

B. Do not excavate within tree protection zones, unless otherwise indicated.

C. Repair or replace trees and vegetation indicated to remain that are damaged by construction operations, in a manner approved by Architect.

2.4 UTILITIES

A. Locate, identify, disconnect, and seal or cap off utilities indicated to be removed.

1. Arrange with utility companies to shut off indicated utilities.

B. Existing Utilities: Do not interrupt utilities serving facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary utility services according to requirements indicated:

1. Notify Architect not less than two days in advance of proposed utility interruptions.
2. Do not proceed with utility interruptions without Architect's written permission.

2.5 CLEARING AND GRUBBING

A. Fill depressions caused by clearing and grubbing operations with satisfactory soil material unless further excavation or earthwork is indicated.

1. Place fill material in horizontal layers not exceeding a loose depth of 8 inches, and compact each layer to a density equal to adjacent original ground.

2.6 TOPSOIL STRIPPING

A. Remove sod and grass before stripping topsoil.

B. Strip topsoil to whatever depths are encountered in a manner to prevent intermingling with underlying subsoil or other waste materials.

C. Stockpile topsoil materials away from edge of excavations without intermixing with subsoil. Grade and shape stockpiles to drain surface water. Cover to prevent windblown dust.

2.7 SITE IMPROVEMENTS

A. Remove existing above- and below-grade improvements as indicated and as necessary to facilitate new construction.

2.8 DISPOSAL

A. Disposal: Remove surplus soil material, unsuitable topsoil, obstructions, demolished materials, and waste materials including trash and debris, and legally dispose of them off Owner's property.

1. Separate recyclable materials produced during site clearing from other nonrecyclable materials. Store or stockpile without intermixing with other materials and transport them to recycling facilities.

END OF SECTION 311000

SECTION 31 10 00
SITE CLEARING

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Protecting existing vegetation to remain.
   2. Removing existing vegetation.
   3. Clearing and grubbing.
   4. Stripping and stockpiling topsoil.
   5. Removing above- and below-grade site improvements.
   6. Disconnecting, capping or sealing, and removing site utilities and abandoning site utilities in place.
   7. Temporary erosion- and sedimentation-control measures.

1.02 RELATED SECTIONS

A. Section 00 31 00 – Available Information.

B. Section 02 41 00 - Selective Site Demolition.

1.03 DEFINITIONS

A. Subsoil: All soil beneath the topsoil layer of the soil profile, and typified by the lack of organic matter and soil organisms.

B. Surface Soil: Soil that is present at the top layer of the existing soil profile at the Project site. In undisturbed areas, the surface soil is typically topsoil; but in disturbed areas such as urban environments, the surface soil can be subsoil.

C. Topsoil: Top layer of the soil profile consisting of existing native surface topsoil or existing in-place surface soil and is the zone where plant roots grow. Its appearance is generally friable, pervious, and black or a darker shade of brown, gray, or red than underlying subsoil; reasonably free of subsoil, clay lumps, gravel, and other objects more than 2 inches (50 mm) in diameter; and free of subsoil and weeds, roots, toxic materials, or other nonsoil materials.

D. Plant-Protection Zone: Area surrounding individual trees, groups of trees, shrubs, or other vegetation to be protected during construction, and indicated on Drawings.

E. Tree-Protection Zone: Area surrounding individual trees or groups of trees to be protected during construction, and indicated on Drawings.

F. Vegetation: Trees, shrubs, groundcovers, grass, and other plants.

1.04 MATERIAL OWNERSHIP

A. Except for stripped topsoil and other materials indicated to be stockpiled or otherwise remain Owner's property, cleared materials shall become Contractor's property and shall be removed from Project site.

1.05 SUBMITTALS

A. Existing Conditions: Documentation of existing trees and plantings, adjoining construction, and site improvements that establishes preconstruction conditions that might be misconstrued as damage caused by site clearing.
   1. Use sufficiently detailed photographs or videotape.
   2. Include plans and notations to indicate specific wounds and damage conditions of each tree or other plants designated to remain.

B. Record Drawings: Identifying and accurately showing locations of capped utilities and other subsurface structural, electrical, and mechanical conditions.

1.06 PROJECT CONDITIONS

A. Traffic: Minimize interference with adjoining roads, streets, walks, and other adjacent occupied or used facilities during site-clearing operations.
   1. Do not close or obstruct streets, walks, or other adjacent occupied or used facilities without permission from Owner and authorities having jurisdiction.
   2. Provide alternate routes around closed or obstructed traffic ways if required by Owner or authorities having jurisdiction.

B. Utility Locator Service: Notify utility locator service for area where Project is located before site clearing.

C. Do not commence site clearing operations until temporary erosion- and sedimentation-control and plant-protection measures are in place.

D. Soil Stripping, Handling, and Stockpiling: Perform only when the topsoil is dry or slightly moist.

PART 2 PRODUCTS

2.01 MATERIALS

A. Satisfactory Soil Material: Refer to Section 31 23 00 Excavation and Fill. If materials are not indicated there, refer to Soils Report and Coordinate with Architect.
   1. Obtain approved borrow soil material off-site when satisfactory soil material is not available on-site.
   2. Contractor to provide documentation that all imported materials are environmentally clean.

PART 3 EXECUTION

3.01 PREPARATION

A. Protect and maintain benchmarks and survey control points from disturbance during construction.
   1. Locate and clearly identify trees, shrubs, and other vegetation to remain. Flag each tree trunk at 54 inches (1372 mm) above the ground.

B. Protect existing site improvements to remain from damage during construction.
   1. Restore damaged improvements to their original condition, as acceptable to Owner.

3.02 TEMPORARY EROSION AND SEDIMENTATION CONTROL

A. Provide temporary erosion- and sedimentation-control measures to prevent soil erosion and discharge of soil-bearing water runoff or airborne dust to adjacent properties and walkways, according to erosion- and sedimentation-control Drawings and requirements of authorities having jurisdiction.

B. Inspect, maintain, and repair erosion- and sedimentation-control measures during construction until permanent vegetation has been established.

C. Remove erosion and sedimentation controls with approval from the AHJ and restore and stabilize areas disturbed during removal

3.03 TREE AND PLANT PROTECTION

A. Protect existing trees and plants to remain by marking and enforcing landscape protection areas.
   1. Size construction limits as recommended for size and type of plant.
   2. Do not dig, store materials, pile earth, drive or park vehicles within the limits.
   3. See Section 31 23 00 for more requirements for landscape protection areas.

B. Repair or replace trees, shrubs, and other vegetation indicated to remain or be relocated that are damaged by construction operations, in a manner approved by Architect/Engineer.

3.04 EXISTING UTILITIES

A. Owner will arrange for disconnecting and sealing indicated utilities that serve existing structures before site clearing, when requested by Contractor.
   1. Verify that utilities have been disconnected and capped before proceeding with site clearing.

B. Locate, identify, disconnect, and seal or cap utilities indicated to be removed or abandoned in place.
   1. Arrange with utility companies to shut off indicated utilities.

C. Locate, identify, and disconnect utilities indicated to be abandoned in place.

D. Interrupting Existing Utilities: Do not interrupt utilities serving facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary utility services according to requirements indicated:
   1. Notify Architect not less than 2 days in advance of proposed utility interruptions.
   2. Do not proceed with utility interruptions without Architect's/Engineer's written permission.

E. Excavate for and remove underground utilities indicated to be removed.

3.05 CLEARING AND GRUBBING

A. Install Phase I Erosion and Sediment Controls prior to any land disturbing activities.

B. Remove obstructions, trees, shrubs, and other vegetation to permit installation of new construction.
   1. Do not remove trees, shrubs, and other vegetation indicated to remain or to be relocated.
   2. Grind down stumps and remove roots, obstructions, and debris to a depth of 18 inches (450 mm) below exposed subgrade.
   3. Use only hand methods for grubbing within protection zones.

C. Fill depressions caused by clearing and grubbing operations with satisfactory soil material unless further excavation or earthwork is indicated.
   1. Place fill material in horizontal layers not exceeding a loose depth of 8 inches (200 mm), and compact each layer to a density equal to adjacent original ground.

3.06 TOPSOIL STRIPPING

A. Remove sod and grass before stripping topsoil.

B. Strip topsoil to depth indicated on Drawings or to a minimum depth of 6 inches (150 mm) in a manner to prevent intermingling with underlying subsoil or other waste materials.
   1. Remove subsoil and non-soil materials from topsoil, including clay lumps, gravel, and other objects more than 2 inches (50 mm) in diameter; trash, debris, weeds, roots, and other waste materials.

C. Stockpile topsoil away from edge of excavations without intermixing with subsoil. Grade and shape stockpiles to drain surface water. Cover to prevent windblown dust and erosion by water.
   1. Height of topsoil stockpiles not to exceed 72 inches (1800 mm) unless approved otherwise in advance.
   2. Do not stockpile topsoil within protection zones.
   3. Dispose of surplus topsoil. Surplus topsoil is that which exceeds quantity indicated to be stockpiled or reused.
   4. Stockpile surplus topsoil to allow for respreading deeper topsoil.

3.07 SITE IMPROVEMENTS

A. Remove existing above- and below-grade improvements as indicated and necessary to facilitate new construction.

B. Remove slabs, paving, curbs, gutters, and aggregate base as indicated and as necessary for all new construction.
   1. Unless existing full-depth joints coincide with line of demolition, neatly saw-cut along line of existing pavement to remain before removing adjacent existing pavement. Saw-cut faces vertically.
   2. Paint cut ends of steel reinforcement in concrete to remain with two coats of antirust coating, following coating manufacturer's written instructions. Keep paint off surfaces that will remain exposed.

3.08 DISPOSAL OF SURPLUS AND WASTE MATERIALS

A. Remove surplus soil material, unsuitable topsoil, obstructions, demolished materials, and waste materials including trash and debris, and legally dispose of them off Owner's property.

B. Separate recyclable materials produced during site clearing from other nonrecyclable materials. Store or stockpile without intermixing with other materials and transport them to recycling facilities. Do not interfere with other Project work.

C. Comply with all federal, state and local regulations associated with disposal of material removed from the site.

END OF SECTION

SECTION 31 20 00 - EARTH MOVING

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. Preparing subgrades for slabs-on-grade, walks, pavements, lawns and grasses.
2. Excavating and backfilling for buildings and structures.
3. Drainage course for slabs-on-grade.
4. Base course for asphalt paving and concrete pavement and walks.
5. Excavating and backfilling for utility trenches.

B. Related Sections:
1. Project Geotechnical Report

1.2 DEFINITIONS

A. Backfill: Soil material used to fill an excavation.

1. Initial Backfill: Backfill placed beside and over pipe in a trench, including haunches to support sides of pipe.
2. Final Backfill: Backfill placed over initial backfill to fill a trench.

B. Base Course: Course placed between the subbase course and hot-mix asphalt paving and concrete pavement and walks.

C. Bedding Course: Course placed over the excavated subgrade in a trench before laying pipe.

D. Borrow Soil: Satisfactory soil imported from off-site for use as fill or backfill.

E. Drainage Course: Course supporting the slab-on-grade that also minimizes upward capillary flow of pore water.

F. Excavation: Removal of material encountered above subgrade elevations and to lines and dimensions indicated.

1. Authorized Additional Excavation: Excavation below subgrade elevations or beyond indicated lines and dimensions as directed by Architect. Authorized additional excavation and replacement material will be paid for according to Contract provisions changes in the Work.
2. Unauthorized Excavation: Excavation below subgrade elevations or beyond indicated lines and dimensions without direction by Architect. Unauthorized excavation, as well as remedial work directed by Architect, shall be without additional compensation.

G. Fill: Soil materials used to raise existing grades.

H. Structures: Buildings, footings, foundations, retaining walls, slabs, tanks, curbs, mechanical and electrical appurtenances, or other man-made stationary features constructed above or below the ground surface.

I. Subbase Course: Course placed between the subgrade and base course.

J. Subgrade: Surface or elevation remaining after completing excavation, or top surface of a fill or backfill immediately below subbase, drainage fill, or topsoil materials.

K. Utilities: On-site underground pipes, conduits, ducts, and cables, as well as underground services within buildings.

1.3 PROJECT CONDITIONS

A. Existing Utilities: Do not interrupt utilities serving facilities occupied by Owner or others unless permitted in writing by Architect and then only after arranging to provide temporary utility services according to requirements indicated.

PART 2 - PRODUCTS

2.1 SOIL MATERIALS

A. General: Provide borrow soil materials when sufficient satisfactory soil materials are not available from excavations.

B. Satisfactory Soils: ASTM D 2487 Soil Classification Groups GW, GP, GM, SW, SP, and SM or AASHTO M 145 Soil Classification Groups A-1, A-2-4, A-2-5, and A-3, or a combination of these groups; free of rock or gravel larger than 3 inches in any dimension, debris, waste, frozen materials, vegetation, and other deleterious matter.

C. Unsatisfactory Soils: Soil Classification Groups GC, SC, CL, ML, OL, CH, MH, OH, and PT according to ASTM D 2487 and A-2-6, A-2-7, A-4, A-5, A-6, and A-7 according to AASHTO M 145, or a combination of these groups.

1. Unsatisfactory soils also include satisfactory soils not maintained within 2 percent of optimum moisture content at time of compaction.

D. Subbase Material: Naturally or artificially graded mixture of crushed gravel, crushed stone, and natural or crushed sand; ASTM D 2940; with at least 90 percent passing a 1-1/2-inch sieve and not more than 12 percent passing a No. 200 sieve.

E. Base Course: Naturally or artificially graded mixture of crushed gravel, crushed stone, and natural or crushed sand; ASTM D 2940; with at least 95 percent passing a 1-1/2-inch sieve and not more than 12 percent passing a No. 200 sieve.

F. Engineered Fill: Naturally or artificially graded mixture of natural or crushed gravel, crushed stone, and natural or crushed sand; ASTM D 2940; with at least 90 percent passing a 1-1/2-inch sieve and not more than 15 percent passing a No. 200 sieve.

G. Bedding Course: Naturally or artificially graded mixture of natural or crushed gravel, crushed stone, and natural or crushed sand; ASTM D 2940; except with 100 percent passing a 1-inch sieve and not more than 8 percent passing a No. 200 sieve.

H. Drainage Course: Narrowly graded mixture of washed crushed stone, or crushed or uncrushed gravel; ASTM D 448; coarse-aggregate grading Size 57; with 100 percent passing a 1-1/2-inch sieve and 0 to 5 percent passing a No. 8 sieve.

PART 3 - EXECUTION

3.1 PREPARATION

A. Protect structures, utilities, sidewalks, pavements, and other facilities from damage caused by settlement, lateral movement, undermining, washout, and other hazards created by earthwork operations.

B. Preparation of subgrade for earthwork operations including removal of vegetation, topsoil, debris, obstructions, and deleterious materials from ground surface is specified in Division 31 Section "Site Clearing."

C. Protect and maintain erosion and sedimentation controls, which are specified in Division 31 Section "Site Clearing." during earthwork operations.

3.2 EXCAVATION

A. Unclassified Excavation: Excavate to subgrade elevations regardless of the character of surface and subsurface conditions encountered. Unclassified excavated materials may include rock, soil materials, and obstructions. No changes in the Contract Sum or the Contract Time will be authorized for rock excavation or removal of obstructions.

1. If excavated materials intended for fill and backfill include unsatisfactory soil materials and rock, replace with satisfactory soil materials.

3.3 EXCAVATION FOR STRUCTURES

A. Excavate to indicated elevations and dimensions within a tolerance of plus or minus 1 inch. If applicable, extend excavations a sufficient distance from structures for placing and removing concrete formwork, for installing services and other construction, and for inspections.

1. Excavations for Footings and Foundations: Do not disturb bottom of excavation. Excavate by hand to final grade just before placing concrete reinforcement. Trim bottoms to required lines and grades to leave solid base to receive other work.

3.4 EXCAVATION FOR WALKS AND PAVEMENTS

A. Excavate surfaces under walks and pavements to indicated lines, cross sections, elevations, and subgrades.

3.5 EXCAVATION FOR UTILITY TRENCHES

A. Excavate trenches to indicated gradients, lines, depths, and elevations.

B. Excavate trenches to uniform widths to provide the following clearance on each side of pipe or conduit. Excavate trench walls vertically from trench bottom to 12 inches higher than top of pipe or conduit, unless otherwise indicated.

1. Clearance: 12 inches each side of pipe or conduit.

C. Trench Bottoms: Excavate and shape trench bottoms to provide uniform bearing and support of pipes and conduit. Shape subgrade to provide continuous support for bells, joints, and barrels of pipes and for joints, fittings, and bodies of conduits. Remove projecting stones and sharp objects along trench subgrade.

1. Excavate trenches 6 inches deeper than elevation required in rock or other unyielding bearing material, 4 inches deeper elsewhere, to allow for bedding course.

3.6 SUBGRADE INSPECTION

A. Proof-roll subgrade below the building slabs and pavements with heavy pneumatic-tired equipment to identify soft pockets and areas of excess yielding. Do not proof-roll wet or saturated subgrades.

B. Reconstruct subgrades damaged by freezing temperatures, frost, rain, accumulated water, or construction activities, as directed by Architect, without additional compensation.

3.7 UNAUTHORIZED EXCAVATION

A. Fill unauthorized excavation under foundations or wall footings by extending bottom elevation of concrete foundation or footing to excavation bottom, without altering top elevation. Lean concrete fill, with 28-day compressive strength of 2500 psi, may be used when approved by Architect.

1. Fill unauthorized excavations under other construction or utility pipe as directed by Architect.

3.8 STORAGE OF SOIL MATERIALS

A. Stockpile borrow soil materials and excavated satisfactory soil materials without intermixing. Place, grade, and shape stockpiles to drain surface water. Cover to prevent windblown dust.

1. Stockpile soil materials away from edge of excavations. Do not store within drip line of remaining trees.

3.9 UTILITY TRENCH BACKFILL

A. Place backfill on subgrades free of mud, frost, snow, or ice.

B. Place and compact bedding course on trench bottoms and where indicated. Shape bedding course to provide continuous support for bells, joints, and barrels of pipes and for joints, fittings, and bodies of conduits.

C. Backfill trenches excavated under footings and within 18 inches bottom of footings with satisfactory soil; fill with concrete to elevation of bottom of footings.

D. Place and compact initial backfill of subbase material, free of particles larger than 1 inch in any dimension, to a height of 12 inches over the utility pipe or conduit.

1. Carefully compact initial backfill under pipe haunches and compact evenly up on both sides and along the full length of utility piping or conduit to avoid damage or displacement of piping or conduit. Coordinate backfilling with utilities testing.

E. Place and compact final backfill of satisfactory soil to final subgrade elevation.

3.10 SOIL FILL

A. Plow, scarify, bench, or break up sloped surfaces steeper than 1 vertical to 4 horizontal so fill material will bond with existing material.

B. Place and compact fill material in layers to required elevations as follows:

1. Under grass and planted areas, use satisfactory soil material.
2. Under walks and pavements, use satisfactory soil material.
3. Under steps and ramps, use engineered fill.
4. Under building slabs, use engineered fill.
5. Under footings and foundations, use engineered fill.

3.11 SOIL MOISTURE CONTROL

A. Uniformly moisten or aerate subgrade and each subsequent fill or backfill soil layer before compaction to within 2 percent of optimum moisture content.

1. Do not place backfill or fill soil material on surfaces that are muddy, frozen, or contain frost or ice.

2. Remove and replace, or scarify and air dry otherwise satisfactory soil material that exceeds optimum moisture content by 2 percent and is too wet to compact to specified dry unit weight.

3.12 COMPACTION OF SOIL BACKFILLS AND FILLS

A. Place backfill and fill soil materials in layers not more than 8 inches in loose depth for material compacted by heavy compaction equipment, and not more than 4 inches in loose depth for material compacted by hand-operated tampers.

B. Place backfill and fill soil materials evenly on all sides of structures to required elevations, and uniformly along the full length of each structure.

C. Compact soil materials to not less than the following percentages of maximum dry unit weight according to ASTM D 1557:

1. Under structures, building slabs, steps, and pavements, scarify and recompact top 12 inches of existing subgrade and each layer of backfill or fill soil material at 95 percent.
2. Under walkways, scarify and recompact top 6 inches below subgrade and compact each layer of backfill or fill soil material at 95 percent.
3. Under lawn or unpaved areas, scarify and recompact top 6 inches below subgrade and compact each layer of backfill or fill soil material at 85 percent.
4. For utility trenches, compact each layer of initial and final backfill soil material at 95 percent.

3.13 GRADING

A. General: Uniformly grade areas to a smooth surface, free of irregular surface changes. Comply with compaction requirements and grade to cross sections, lines, and elevations indicated.

B. Site Grading: Slope grades to direct water away from buildings and to prevent ponding. Finish subgrades to required elevations within the following tolerances:

1. Lawn or Unpaved Areas: Plus or minus 1 inch.
2. Walks: Plus or minus 1 inch.
3. Pavements: Plus or minus 1/2 inch.

C. Grading inside Building Lines: Finish subgrade to a tolerance of 1/2 inch when tested with a 10-foot straightedge.

3.14 SUBBASE AND BASE COURSES

A. Place subbase and base course on subgrades free of mud, frost, snow, or ice.

B. On prepared subgrade, place subbase and base course under pavements and walks as follows:

1. Shape subbase and base course to required crown elevations and cross-slope grades.
2. Compact subbase and base course at optimum moisture content to required grades, lines, cross sections, and thickness to not less than 95 percent of maximum dry unit weight according to ASTM D 1557.

3.15 DRAINAGE COURSE

A. Place drainage course on subgrades free of mud, frost, snow, or ice.

B. On prepared subgrade, place and compact drainage course under cast-in-place concrete slabs-on-grade as follows:

1. Place drainage course that exceeds 6 inches in compacted thickness in layers of equal thickness, with no compacted layer more than 6 inches thick or less than 3 inches thick.
2. Compact each layer of drainage course to required cross sections and thicknesses to not less than **95** percent of maximum dry unit weight according to ASTM D 698.

3.16 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified independent geotechnical engineering testing agency to perform field quality-control testing.

B. Allow testing agency to inspect and test subgrades and each fill or backfill layer. Proceed with subsequent earthwork only after test results for previously completed work comply with requirements.

C. Footing Subgrade: At footing subgrades, at least one test of each soil stratum will be performed to verify design bearing capacities. Subsequent verification and approval of other footing subgrades may be based on a visual comparison of subgrade with tested subgrade when approved by Architect.

D. Testing agency will test compaction of soils in place according to ASTM D 1556, ASTM D 2167, ASTM D 2922, and ASTM D 2937, as applicable.

E. When testing agency reports that subgrades, fills, or backfills have not achieved degree of compaction specified, scarify and moisten or aerate, or remove and replace soil to depth required; recompact and retest until specified compaction is obtained.

3.17 PROTECTION

A. Protecting Graded Areas: Protect newly graded areas from traffic, freezing, and erosion. Keep free of trash and debris.

B. Repair and reestablish grades to specified tolerances where completed or partially completed surfaces become eroded, rutted, settled, or where they lose compaction due to subsequent construction operations or weather conditions.

C. Where settling occurs before Project correction period elapses, remove finished surfacing, backfill with additional soil material, compact, and reconstruct surfacing.

1. Restore appearance, quality, and condition of finished surfacing to match adjacent work, and eliminate evidence of restoration to greatest extent possible.

3.18 DISPOSAL OF SURPLUS AND WASTE MATERIALS

A. Disposal: Remove surplus satisfactory soil and waste material, including unsatisfactory soil, trash, and debris, and legally dispose of it off Owner's property.

END OF SECTION 312000

SECTION 31 23 00
EXCAVATION AND FILL

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Preparing subgrades for slabs-on-grade, walks, pavements, turf and grasses, and plants.
   2. Excavating and backfilling for buildings and structures.
   3. Drainage course for concrete slabs-on-grade.
   4. Subbase course for concrete walks and pavements.
   5. Aggregates.
   6. Subbase course for asphalt paving.
   7. Subsurface drainage backfill for walls and trenches.
   8. Excavating and backfilling trenches for utilities and pits for buried utility structures.

1.02 RELATED SECTIONS

A. Section 00 31 00 – Available Project Information: Geotechnical Report.

B. Section 31 10 00 - Site Clearing.

1.03 UNIT PRICES

A. Aggregate Materials, per cubic yard.

B. Rock Measurement: Volume of rock actually removed, measured in original position, but not to exceed the following. Unit prices for rock excavation include replacement with approved materials.
   1. 24 inches (600 mm) outside of concrete forms other than at footings.
   2. 12 inches (300 mm) outside of concrete forms at footings.

1.04 DEFINITIONS

A. Backfill: Soil material or controlled low-strength material used to fill an excavation.
   1. Initial Backfill: Backfill placed beside and over pipe in a trench, including haunches to support sides of pipe.
   2. Final Backfill: Backfill placed over initial backfill to fill a trench.

B. Base Course: Aggregate layer placed between the subbase course and hot-mix asphalt paving.

C. Bedding Course: Aggregate layer placed over the excavated subgrade in a trench before laying pipe.

D. Borrow Soil: Satisfactory soil imported from off-site for use as fill or backfill.

E. Drainage Course: Aggregate layer supporting the slab-on-grade that also minimizes upward capillary flow of pore water.

F. Excavation: Removal of material encountered above subgrade elevations and to lines and dimensions indicated.
   1. Authorized Additional Excavation: Excavation below subgrade elevations or beyond indicated lines and dimensions as directed by Architect/Engineer. Authorized additional excavation and replacement material will be paid for according to Contract provisions for unit prices.
   2. Bulk Excavation: Excavation more than 10 feet (3 m) in width and more than 30 feet (9 m) in length.
   3. Unauthorized Excavation: Excavation below subgrade elevations or beyond indicated lines and dimensions without direction by Architect/Engineer. Unauthorized excavation, as well as remedial work directed by Architect/Engineer, shall be without additional compensation.

G. Fill: Soil materials used to raise existing grades.

H. Rock: Rock material in beds, ledges, unstratified masses, conglomerate deposits, and boulders of rock material 3/4 cu. yd. (0.57 cu. m) or more in volume that exceed a standard penetration resistance of 100 blows/2 inches (97 blows/50 mm) when tested by a geotechnical testing agency, according to ASTM D1586.

I. Structures: Buildings, footings, foundations, retaining walls, slabs, tanks, curbs, mechanical and electrical appurtenances, or other man-made stationary features constructed above or below the ground surface.

J. Subbase Course: Aggregate layer placed between the subgrade and base course for hot-mix asphalt pavement, or aggregate layer placed between the subgrade and a cement concrete pavement or a cement concrete or hot-mix asphalt walk.

K. Subgrade: Uppermost surface of an excavation or the top surface of a fill or backfill immediately below subbase, drainage fill, drainage course, or topsoil materials.

L. Utilities: On-site underground pipes, conduits, ducts, and cables, as well as underground services within buildings.

1.05 SUBMITTALS

A. Product Data: For each type of the following manufactured products required:
   1. Geotextiles.
   2. Controlled low-strength material, including design mixture.
   3. Geofoam.
   4. Warning tapes.

B. Qualification Data: For qualified testing agency.

C. Material Test Reports: For each on-site and borrow soil material proposed for fill and backfill as follows:
   1. Classification according to ASTM D2487.
   2. Laboratory compaction curve according to ASTM D698.

D. Pre-excavation Photographs or Videotape: Show existing conditions of adjoining construction and site improvements, including finish surfaces that might be misconstrued as damage caused by earth moving operations. Submit before earth moving begins.

E. Contractor to provide delivery slips to the Architect/Engineer for materials used.

F. Contractor to provide certification that all imported materials are environmentally clean.

1.06 QUALITY ASSURANCE

A. Geotechnical Testing Agency Qualifications: Qualified according to ASTM E329 and ASTM D3740 for testing indicated.

B. Pre-Excavation Meeting: Conduct meeting at Project site.

1.07 PROJECT CONDITIONS

A. Traffic: Minimize interference with adjoining roads, streets, walks, and other adjacent occupied or used facilities during earth moving operations.
   1. Do not close or obstruct streets, walks, or other adjacent occupied or used facilities without permission from Owner and authorities having jurisdiction.
   2. Provide alternate routes around closed or obstructed traffic ways if required by Owner or authorities having jurisdiction.

B. Utility Locator Service: Notify utility locator service provider a minimum of 72 hours before beginning earth moving operations.

C. Do not commence earth moving operations until temporary erosion- and sedimentation-control measures, specified in Division 2 - Selective Site Demolition, are in place.

D. Do not commence earth moving operations until plant-protection measures specified in Division 2 Section - Selective Site Demolition are in place.

E. The following practices are prohibited within protection zones:
   1. Storage of construction materials, debris, or excavated material.
   2. Parking vehicles or equipment.
   3. Foot traffic.
   4. Erection of sheds or structures.

5. Impoundment of water.
6. Excavation or other digging unless otherwise indicated.
7. Attachment of signs to or wrapping materials around trees or plants unless otherwise indicated.

F. Do not direct vehicle or equipment exhaust towards protection zones.

G. Prohibit heat sources, flames, ignition sources, and smoking within or near protection zones.

PART 2 PRODUCTS

2.01 GENERAL

A. All materials imported to the site are to be environmentally clean. Contractor to maintain manifest of all materials imported on to the site.

2.02 SOIL MATERIALS

A. General: Provide borrow soil materials when sufficient satisfactory soil materials are not available from excavations.

B. Satisfactory Soils: Soil Classification Groups GW, GP, GM, SW, SP, and SM according to ASTM D2487, or a combination of these groups; free of rock or gravel larger than 3 inches (75 mm) in any dimension, debris, waste, frozen materials, vegetation, and other deleterious matter.

C. Unsatisfactory Soils: Soil Classification Groups GC, SC, CL, ML, OL, CH, MH, OH, and PT according to ASTM D2487 or a combination of these groups.
   1. Unsatisfactory soils also include satisfactory soils not maintained within 2 percent of optimum moisture content at time of compaction.

D. Subbase Material: Naturally or artificially graded mixture of natural or crushed gravel, crushed stone, and natural or crushed sand; ASTM D2940; with at least 90 percent passing a 1-1/2-inch (37.5-mm) sieve and not more than 12 percent passing a No. 200 (0.075-mm) sieve.

E. Base Course: Naturally or artificially graded mixture of natural or crushed gravel, crushed stone, and natural or crushed sand; ASTM D2940; with at least 95 percent passing a 1-1/2-inch (37.5-mm) sieve and not more than 8 percent passing a No. 200 (0.075-mm) sieve.

F. Engineered Fill: Naturally or artificially graded mixture of natural or crushed gravel, crushed stone, and natural or crushed sand; ASTM D2940; with at least 90 percent passing a 1-1/2-inch (37.5-mm) sieve and not more than 12 percent passing a No. 200 (0.075-mm) sieve.

G. Bedding Course: Naturally or artificially graded mixture of natural or crushed gravel, crushed stone, and natural or crushed sand; ASTM D2940; except with 100 percent passing a 1-inch (25-mm) sieve and not more than 8 percent passing a No. 200 (0.075-mm) sieve.

H. Drainage Course: Narrowly graded mixture of washed crushed stone, or crushed or uncrushed gravel; ASTM D448; coarse-aggregate grading Size 57; with 100 percent passing a 1-1/2-inch (37.5-mm) sieve and 0 to 5 percent passing a No. 8 (2.36-mm) sieve.

I. Filter Material: Narrowly graded mixture of natural or crushed gravel, or crushed stone and natural sand; ASTM D448; coarse-aggregate grading Size 67; with 100 percent passing a 1-inch (25-mm) sieve and 0 to 5 percent passing a No. 4 (4.75-mm) sieve.

J. Sand: ASTM C33; fine aggregate.

K. Impervious Fill: Clayey gravel and sand mixture capable of compacting to a dense state.

2.03 GEOTEXTILES

A. Subsurface Drainage Geotextile: Nonwoven needle-punched geotextile, manufactured for subsurface drainage applications, made from polyolefins or polyesters; with elongation greater than 50 percent; complying with AASHTO M 288 and the following, measured per test methods referenced:
   1. Survivability: Class 2; AASHTO M 288.
   2. Apparent Opening Size: No. 40 (0.425-mm) sieve, maximum; ASTM D4751.
   3. Permittivity: 0.5 per second, minimum; ASTM D4491.

2.04 CONTROLLED LOW-STRENGTH MATERIAL

A. Controlled Low-Strength Material: Self-compacting, low-density, flowable concrete material produced from the following:
   1. Portland Cement: ASTM C150, Type I.
   2. Fly Ash: ASTM C618, Class C or F.
   3. Normal-Weight Aggregate: ASTM C33, 3/4 inch (19-mm) nominal maximum aggregate size.

B. Produce conventional-weight, controlled low-strength material with 80 psi (550-kPa) compressive strength when tested according to ASTM C495.

2.05 ACCESSORIES

A. Warning Tape: Acid- and alkali-resistant, polyethylene film warning tape manufactured for marking and identifying underground utilities, 6 inches (150 mm) wide and 4 mils (0.1 mm) thick, continuously inscribed with a description of the utility; colored as follows:
   1. Red: Electric.
   2. Yellow: Gas, oil, steam, and dangerous materials.
   3. Orange: Telephone and other communications.
   4. Blue: Water systems.
   5. Green: Sewer systems.

PART 3 EXECUTION

3.01 PREPARATION

A. Protect structures, utilities, sidewalks, pavements, and other facilities from damage caused by settlement, lateral movement, undermining, washout, and other hazards created by earth moving operations.

B. Protect and maintain erosion and sedimentation controls during earth moving operations.

C. Protect subgrades and foundation soils from freezing temperatures and frost. Remove temporary protection before placing subsequent materials.

3.02 DEWATERING

A. Prevent surface water and ground water from entering excavations, from ponding on prepared subgrades, and from flooding Project site and surrounding area.

B. Protect subgrades from softening, undermining, washout, and damage by rain or water accumulation.
   1. Reroute surface water runoff away from excavated areas. Do not allow water to accumulate in excavations. Do not use excavated trenches as temporary drainage ditches.

3.03 EXPLOSIVES

A. Explosives: Do not use explosives.

3.04 EXCAVATION, GENERAL

A. Unclassified Excavation: Excavate to subgrade elevations regardless of the character of surface and subsurface conditions encountered. Unclassified excavated materials may include rock, soil materials, and obstructions. No changes in the Contract Sum or the Contract Time will be authorized for rock excavation or removal of obstructions.
   1. If excavated materials intended for fill and backfill include unsatisfactory soil materials and rock, replace with satisfactory soil materials.
   2. Remove rock to lines and grades indicated to permit installation of permanent construction without exceeding the following dimensions:
      a. 24 inches (600 mm) outside of concrete forms other than at footings.
      b. 12 inches (300 mm) outside of concrete forms at footings.
      c. 6 inches (150 mm) outside of minimum required dimensions of concrete cast against grade.
      d. Outside dimensions of concrete walls indicated to be cast against rock without forms or exterior waterproofing treatments.
      e. 6 inches (150 mm) beneath bottom of concrete slabs-on-grade.

f. 6 inches (150 mm) beneath pipe in trenches, and the greater of 24 inches (600 mm) wider than pipe or 42 inches (1065 mm) wide.

3.05 EXCAVATION FOR STRUCTURES

A. Excavate to indicated elevations and dimensions within a tolerance of plus or minus 1 inch (25 mm). If applicable, extend excavations a sufficient distance from structures for placing and removing concrete formwork, for installing services and other construction, and for inspections.
   1. Excavations for Footings and Foundations: Do not disturb bottom of excavation. Excavate by hand to final grade just before placing concrete reinforcement. Trim bottoms to required lines and grades to leave solid base to receive other work.
   2. Pile Foundations: Stop excavations 6 to 12 inches (150 to 300 mm) above bottom of pile cap before piles are placed. After piles have been driven, remove loose and displaced material. Excavate to final grade, leaving solid base to receive concrete pile caps.
   3. Excavation for Underground Tanks, Basins, and Mechanical or Electrical Utility Structures: Excavate to elevations and dimensions indicated within a tolerance of plus or minus 1 inch (25 mm). Do not disturb bottom of excavations intended as bearing surfaces.

B. Excavations at Edges of Tree- and Plant-Protection Zones:
   1. Excavate by hand to indicated lines, cross sections, elevations, and subgrades. Use narrow-tine spading forks to comb soil and expose roots. Do not break, tear, or chop exposed roots. Do not use mechanical equipment that rips, tears, or pulls roots.
   2. Cut and protect roots according to requirements in Division 2 Section "Tree Protection and Trimming."

3.06 EXCAVATION FOR WALKS AND PAVEMENTS

A. Excavate surfaces under walks and pavements to indicated lines, cross sections, elevations, and subgrades.

3.07 EXCAVATION FOR UTILITY TRENCHES

A. Excavate trenches to indicated gradients, lines, depths, and elevations.
   1. Beyond building perimeter, excavate trenches to allow installation of top of pipe below frost line.

B. Excavate trenches to uniform widths to provide the following clearance on each side of pipe or conduit. Excavate trench walls vertically from trench bottom to 12 inches (300 mm) higher than top of pipe or conduit unless otherwise indicated.
   1. Clearance: 12 inches (300 mm) each side of pipe or conduit.

C. Trench Bottoms: Excavate trenches 4 inches (100 mm) deeper than bottom of pipe and conduit elevations to allow for bedding course. Hand-excavate deeper for bells of pipe.

D. Trenches in Tree- and Plant-Protection Zones:
   1. Hand-excavate to indicated lines, cross sections, elevations, and subgrades. Use narrow-tine spading forks to comb soil and expose roots. Do not break, tear, or chop exposed roots. Do not use mechanical equipment that rips, tears, or pulls roots.
   2. Do not cut main lateral roots or taproots; cut only smaller roots that interfere with installation of utilities.
   3. Cut and protect roots according to requirements in Division 2 Section "Tree Protection and Trimming."

3.08 SUBGRADE INSPECTION

A. Notify Project Manager when excavations have reached required subgrade.

B. If Project Manager determines that unsatisfactory soil is present, continue excavation and replace with compacted backfill or fill material as directed.

C. Proof-roll subgrade below the building slabs and pavements with a pneumatic-tired and loaded 10-wheel, tandem-axle dump truck weighing not less than 15 tons (13.6 tonnes) to identify soft pockets and areas of excess yielding. Do not proof-roll wet or saturated subgrades.
   1. Completely proof-roll subgrade in one direction, repeating proof-rolling in direction perpendicular to first direction. Limit vehicle speed to 3 mph (5 km/h).

2. Excavate soft spots, unsatisfactory soils, and areas of excessive pumping or rutting, as determined by Project Manager, and replace with compacted backfill or fill as directed.
3. Proof roll subgrade under area of porous pavement in accordance with porous pavement manufacturer's recommendations

D. Authorized additional excavation and replacement material will be paid for according to Contract provisions for unit prices.

E. Reconstruct subgrades damaged by freezing temperatures, frost, rain, accumulated water, or construction activities, as directed by Project Manager, without additional compensation.

3.09 UNAUTHORIZED EXCAVATION

A. Fill unauthorized excavation under foundations or wall footings by extending bottom elevation of concrete foundation or footing to excavation bottom, without altering top elevation. Lean concrete fill, with 28-day compressive strength of 2500 psi (17.2 MPa), may be used when approved by Project Manager.
1. Fill unauthorized excavations under other construction, pipe, or conduit as directed by Project Manager.

3.10 STORAGE OF SOIL MATERIALS

A. Stockpile borrow soil materials and excavated satisfactory soil materials without intermixing. Place, grade, and shape stockpiles to drain surface water. Cover to prevent windblown dust.
1. Stockpile soil materials away from edge of excavations. Do not store within drip line of remaining trees.
2. Provide filter fabric fencing around stock pile areas.

3.11 BACKFILL

A. Place and compact backfill in excavations promptly, but not before completing the following:
1. Construction below finish grade including, where applicable, subdrainage, damp-proofing, waterproofing, and perimeter insulation.
2. Surveying locations of underground utilities for Record Documents.
3. Testing and inspecting underground utilities.
4. Removing concrete formwork.
5. Removing trash and debris.
6. Removing temporary shoring and bracing, and sheeting.
7. Installing permanent or temporary horizontal bracing on horizontally supported walls.

B. Place backfill on subgrades free of mud, frost, snow, or ice.

3.12 UTILITY TRENCH BACKFILL

A. Place backfill on subgrades free of mud, frost, snow and ice.

B. Place and compact bedding course on trench bottoms and where indicated. Shape bedding course to provide continuous support for bells, joints, and barrels of pipes and for joints, fittings, and bodies of conduits.

C. Trenches under Footings: Backfill trenches excavated under footings and within 18 inches (450 mm) of bottom of footings with satisfactory soil; fill with concrete to elevation of bottom of footings. Concrete is specified in Division 3 Section Cast-in-Place Concrete.

D. Trenches under Roadways: Provide 4-inch- (100-mm-) thick, concrete-base slab support for piping or conduit with less than 18" of cover below surface of roadways. After installing and testing, completely encase piping or conduit in a minimum of 4 inches (100 mm) of concrete before backfilling or placing roadway subbase course. Concrete is specified in Division 3 Section Cast-in-Place Concrete.

E. Backfill voids with satisfactory soil while removing shoring and bracing.

F. Place and compact initial backfill of subbase material, free of particles larger than 1 inch (25 mm) in any dimension, to a height of 12 inches (300 mm) over the pipe or conduit.

1. Carefully compact initial backfill under pipe haunches and compact evenly up on both sides and along the full length of piping or conduit to avoid damage or displacement of piping or conduit. Coordinate backfilling with utilities testing.

G. Place and compact final backfill of satisfactory soil to final subgrade elevation.

H. Controlled Low-Strength Material: Place final backfill of controlled low-strength material to final subgrade elevation.

I. Install warning tape directly above utilities, 12 inches (300 mm) below finished grade, except 6 inches (150 mm) below subgrade under pavements and slabs.

3.13 SOIL FILL

A. Plow, scarify, bench, or break up sloped surfaces steeper than 1 vertical to 4 horizontal so fill material will bond with existing material.

B. Place and compact fill material in layers to required elevations as follows:
1. Under grass and planted areas, use satisfactory soil material.
2. Under walks and pavements, use satisfactory soil material.
3. Under steps and ramps, use engineered fill.
4. Under building slabs, use engineered fill.
5. Under footings and foundations, use engineered fill.

C. Place soil fill on subgrades free of mud, frost, snow, or ice.

3.14 SOIL MOISTURE CONTROL

A. Uniformly moisten or aerate subgrade and each subsequent fill or backfill soil layer before compaction to within 2 percent of optimum moisture content.
1. Do not place backfill or fill soil material on surfaces that are muddy, frozen, or contain frost or ice.
2. Remove and replace, or scarify and air dry, otherwise satisfactory soil material that exceeds optimum moisture content by 2 percent and is too wet to compact to specified dry unit weight.

3.15 COMPACTION OF SOIL BACKFILLS AND FILLS

A. All fill and backfill in structural areas, such as building, parking deck, pavement, and sidewalk areas, should be placed in maximum nine-inch loose lifts and compacted to 93 percent of the maximum dry density within two percent of the optimum moisture content as determined by ASTM D 1557 (Modified Proctor).

B. Fill placed within landscaped areas may be placed and compacted to 85 percent of the maximum dry density within three percent of the optimum moisture content as determined by ASTM D 1557 (Modified Proctor).

C. A sheep's foot roller shall be used to compact the on-site soils or a small hand-held vibratory compactor within excavations.

3.16 STRUCTURAL FILL TESTING

A. Before filling operations begin, representative samples of each proposed fill material shall be collected. The samples shall be tested to determine the maximum dry density, optimum moisture content, natural moisture content, gradation, and plasticity of the soil prior to construction in order to avoid construction delays. These tests are needed for quality control during compaction, and also to determine if the fill material is acceptable.

B. The placement of fill and backfill shall be monitored by a qualified engineering technician to ensure that the specified material and lift thicknesses are properly installed. The following frequency of in-place density tests shall be performed to ensure that the specified compaction is achieved throughout the height of the fill or backfill:
1. Building and Pool Areas – One compaction test per 2,500 square feet of building footprint, for each lift.
2. Pavement Areas – One compaction test per each 10,000 square feet of pavement area, for each lift.
3. Utility Trenches – One compaction test per each 150 linear feet of trench, for each lift.

4. Landscaped Areas – One compaction test per each 20,000 square feet, for each lift.
5. All areas – One moisture content test per 5,000 square feet, for each lift.

3.17 GRADING

A. General: Uniformly grade areas to a smooth surface, free of irregular surface changes. Comply with compaction requirements and grade to cross sections, lines, and elevations indicated.
   1. Provide a smooth transition between adjacent existing grades and new grades.
   2. Cut out soft spots, fill low spots, and trim high spots to comply with required surface tolerances.

B. Site Rough Grading: Slope grades to direct water away from buildings and to prevent ponding. Finish subgrades to required elevations within the following tolerances:
   1. Turf or Unpaved Areas: Plus or minus 1 inch (25 mm).
   2. Walks: Plus or minus 1 inch (25 mm).
   3. Pavements: Plus or minus 1/2 inch (13 mm).

C. Grading inside Building Lines: Finish subgrade to a tolerance of 1/2 inch (13 mm) when tested with a 10-foot (3-m) straightedge.

3.18 SUBSURFACE DRAINAGE

A. Subdrainage Pipe: Specified in Division 2 Section "Subdrainage."

B. Subsurface Drain: Place subsurface drainage geotextile around perimeter of subdrainage trench. Place a 6-inch (150-mm) course of filter material on subsurface drainage geotextile to support subdrainage pipe. Encase subdrainage pipe in a minimum of 12 inches (300 mm) of filter material, placed in compacted layers 6 inches (150 mm) thick, and wrap in subsurface drainage geotextile, overlapping sides and ends at least 6 inches (150 mm).
   1. Compact each filter material layer to 85 percent of maximum dry unit weight according to ASTM D698.

C. Drainage Backfill: Place and compact filter material over subsurface drain, in width indicated, to within 12 inches (300 mm) of final subgrade, in compacted layers 6 inches (150 mm) thick. Overlay drainage backfill with one layer of subsurface drainage geotextile, overlapping sides and ends at least 6 inches (150 mm).

3.19 SUBBASE AND BASE COURSES UNDER PAVEMENTS AND WALKS

A. Place subbase course and base course on subgrades free of mud, frost, snow and ice.

B. On prepared subgrade, place subbase course and base course under pavements and walks as follows:
   1. Install separation geotextile on prepared subgrade according to manufacturer's written instructions, overlapping sides and ends.
   2. Place base course material over subbase course under hot-mix asphalt pavement.
   3. Shape subbase course and base course to required crown elevations and/or cross-slope grades.
   4. Place subbase course and base course 6 inches (150 mm) or less in compacted thickness in a single layer.
   5. Place subbase course and base course that exceeds 6 inches (150 mm) in compacted thickness in layers of equal thickness, with no compacted layer more than 6 inches (150 mm) thick or less than 3 inches (75 mm) thick.
   6. Compact subbase course and base course at optimum moisture content to required grades, lines, cross sections, and thickness to not less than 95 percent of maximum dry unit weight according to ASTM D698.

3.20 DRAINAGE COURSE UNDER CONCRETE SLABS-ON-GRADE

A. Place drainage course on subgrades free of mud, frost, snow, and ice.

B. On prepared subgrade, place and compact drainage course under cast-in-place concrete slabs-on-grade as follows:
   1. Install subdrainage geotextile on prepared subgrade according to manufacturer's written instructions, overlapping sides and ends.
   2. Place drainage course 6 inches (150 mm) or less in compacted thickness in a single layer.

3. Place drainage course that exceeds 6 inches (150 mm) in compacted thickness in layers of equal thickness, with no compacted layer more than 6 inches (150 mm) thick or less than 3 inches (75 mm) thick.
4. Compact each layer of drainage course to required cross sections and thicknesses to not less than 95 percent of maximum dry unit weight according to ASTM D698.

3.21 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage a qualified special inspector to perform the following special inspections:
   1. Determine prior to placement of fill that site has been prepared in compliance with requirements.
   2. Determine that fill material and maximum lift thickness comply with requirements.
   3. Determine, at the required frequency, that in-place density of compacted fill complies with requirements.

B. Testing Agency: Owner will engage a qualified geotechnical engineering testing agency to perform tests and inspections.

C. Allow testing agency to inspect and test subgrades and each fill or backfill layer. Proceed with subsequent earth moving only after test results for previously completed work comply with requirements.

D. Testing agency will test compaction of soils in place according to ASTM D1556, ASTM D2167, ASTM D2922, and ASTM D2937, as applicable. Tests will be performed at the following locations and frequencies:
   1. Paved and Building Slab Areas: At subgrade and at each compacted fill and backfill layer, at least one test for every 2000 sq. ft. (186 sq. m) or less of paved area or building slab, but in no case fewer than three tests.
   2. Foundation Wall Backfill: At each compacted backfill layer, at least one test for every 100 feet (30 m) or less of wall length, but no fewer than two tests.
   3. Trench Backfill: At each compacted initial and final backfill layer, at least one test for every 150 feet (46 m) or less of trench length, but no fewer than two tests.

E. When testing agency reports that subgrades, fills, or backfills have not achieved degree of compaction specified, scarify and moisten or aerate, or remove and replace soil materials to depth required; recompact and retest until specified compaction is obtained.

3.22 PROTECTION

A. Protecting Graded Areas: Protect newly graded areas from traffic, freezing, and erosion. Keep free of trash and debris.

B. Repair and reestablish grades to specified tolerances where completed or partially completed surfaces become eroded, rutted, settled, or where they lose compaction due to subsequent construction operations or weather conditions.
   1. Scarify or remove and replace soil material to depth as directed by Project Manager; reshape and re-compact.

C. Where settling occurs before Project correction period elapses, remove finished surfacing, backfill with additional soil material, compact, and reconstruct surfacing.
   1. Restore appearance, quality, and condition of finished surfacing to match adjacent work, and eliminate evidence of restoration to greatest extent possible.

3.23 DISPOSAL OF SURPLUS AND WASTE MATERIALS

A. Remove surplus satisfactory soil and waste materials, including unsatisfactory soil, trash, and debris, and legally dispose of them off Owner's property.

SECTION 31 23 19
DEWATERING

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes
   1. Construction dewatering.

1.02 PERFORMANCE REQUIREMENTS

A. Dewatering Performance: Design, furnish, install, test, operate, monitor, and maintain dewatering system of sufficient scope, size, and capacity to control hydrostatic pressures and to lower, control, remove, and dispose of ground water and permit excavation and construction to proceed on dry, stable subgrades.
   1. Delegated Design: Design dewatering system, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
   2. Continuously monitor and maintain dewatering operations to ensure erosion control, stability of excavations and constructed slopes, that excavation does not flood, and that damage to subgrades and permanent structures is prevented.
   3. Prevent surface water from entering excavations by grading, dikes, or other means.
   4. Accomplish dewatering without damaging existing buildings, structures, and site improvements adjacent to excavation.
   5. Remove dewatering system when no longer required for construction.

B. Dewatering activities are to comply with requirements of the Soil Conservation District (SCD).

1.03 SUBMITTALS

A. Shop Drawings: For dewatering system. Show arrangement, locations, and details of wells and well points; locations of risers, headers, filters, pumps, power units, and discharge lines; and means of discharge, control of sediment, and disposal of water.
   1. Include layouts of piezometers and flow-measuring devices for monitoring performance of dewatering system.
   2. Include a written plan for dewatering operations including control procedures to be adopted if dewatering problems arise.

B. Qualification Data: For qualified Installer.

C. Field quality-control reports.

D. Other Informational Submittals:
   1. Photographs: Show existing conditions of adjoining construction and site improvements that could be misconstrued as damage caused by dewatering operations.

1.04 QUALITY ASSURANCE

A. Installer Qualifications: An experienced installer that has specialized in design of dewatering systems and dewatering work.

B. Regulatory Requirements: Comply with governing EPA and SCD notification regulations before beginning dewatering. Comply with hauling and disposal regulations of authorities having jurisdiction.

C. Pre-Installation Meeting: Conduct meeting at Project site.
   1. Review methods and procedures related to dewatering including, but not limited to, the following:
      a. Inspection and discussion of condition of site to be dewatered including coordination with temporary erosion control measures and temporary controls and protections.
      b. Geotechnical report.
      c. Proposed site clearing and excavations.
      d. Existing utilities and subsurface conditions.
      e. Coordination for interruption, shutoff, capping, and continuation of utility services.
      f. Construction schedule. Verify availability of Installer's personnel, equipment, and facilities needed to make progress and avoid delays.

g. Testing and monitoring of dewatering system.

1.05 PROJECT CONDITIONS

A. Interruption of Existing Utilities: Do not interrupt any utility serving facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary utility according to requirements indicated:
   1. Notify Architect/Engineer no fewer than two days in advance of proposed interruption of utility.
   2. Do not proceed with interruption of utility without Architect's/Engineer's written permission.

B. Project-Site Information: A geotechnical report has been prepared for this Project and is available for information only. The opinions expressed in this report are those of geotechnical engineer and represent interpretations of subsoil conditions, tests, and results of analyses conducted by geotechnical engineer. Owner will not be responsible for interpretations or conclusions drawn from this data.
   1. Make additional test borings and conduct other exploratory operations necessary for dewatering.
   2. The geotechnical report is included elsewhere in the Project Manual.

C. Survey Work: Engage a qualified professional land surveyor licensed to practice in California to survey adjacent existing buildings, structures, and site improvements, establishing exact elevations at fixed points to act as benchmarks. Clearly identify benchmarks and record existing elevations.
   1. During dewatering, regularly resurvey benchmarks, maintaining an accurate log of surveyed elevations for comparison with original elevations. Promptly notify Architect if changes in elevations occur or if cracks, sags, or other damage is evident in adjacent construction.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION

3.01 PREPARATION

A. Protect structures, utilities, sidewalks, pavements, and other facilities from damage caused by settlement, lateral movement, undermining, washout, and other hazards created by dewatering operations.
   1. Prevent surface water and subsurface or ground water from entering excavations, pavement subgrades and porous pavement area, from ponding on prepared subgrades, and from flooding site and surrounding area.
   2. Protect subgrades and foundation soils from softening and damage by rain or water accumulation.

B. Install dewatering system to ensure minimum interference with roads, streets, walks, and other adjacent occupied and used facilities.
   1. Do not close or obstruct streets, walks, or other adjacent occupied or used facilities without permission from Owner and authorities having jurisdiction. Provide alternate routes around closed or obstructed traffic ways if required by authorities having jurisdiction.

C. Provide temporary grading to facilitate dewatering and control of surface water.

D. Monitor dewatering systems continuously.

E. Promptly repair damages to adjacent facilities caused by dewatering.

F. Protect and maintain temporary erosion and sedimentation controls, which are specified in Division 1 Section "Temporary Facilities and Controls" Division 2 Section "Site Clearing" during dewatering operations.

3.02 INSTALLATION

A. Install dewatering system utilizing wells, well points, or similar methods complete with pump equipment, standby power and pumps, filter material gradation, valves, appurtenances, water disposal, and surface-water controls.
   1. Space well points or wells at intervals required to provide sufficient dewatering.
   2. Use filters or other means to prevent pumping of fine sands or silts from the subsurface.

B. Before excavating below ground-water level, place system into operation to lower water to specified levels. Operate system continuously until drains, sewers, and structures have been constructed and fill materials have been placed or until dewatering is no longer required.

C. Provide an adequate system to lower and control ground water to permit excavation, construction of structures, and placement of fill materials on dry subgrades. Install sufficient dewatering equipment to drain water-bearing strata above and below bottom of foundations, drains, sewers, and other excavations.
   1. Do not permit open-sump pumping that leads to loss of fines, soil piping, subgrade softening, and slope instability.

D. Reduce hydrostatic head in water-bearing strata below subgrade elevations of foundations, drains, sewers, and other excavations.
   1. Maintain piezometric water level a minimum of 24 inches (600 mm) below surface of excavation.

E. Dispose of water removed by dewatering in a manner that complies with requirements of the SCD and avoids endangering public health, property, and portions of work under construction or completed. Dispose of water and sediment in a manner that avoids inconvenience to others. Provide sumps, sedimentation tanks, and other flow-control devices as required by authorities having jurisdiction.

F. Provide standby equipment on site, installed and available for immediate operation, to maintain dewatering on continuous basis if any part of system becomes inadequate or fails. If dewatering requirements are not satisfied due to inadequacy or failure of dewatering system, restore damaged structures and foundation soils at no additional expense to Owner.
   1. Remove dewatering system from Project site on completion of dewatering. Plug or fill well holes with sand or cut off and cap wells a minimum of 36 inches (900 mm) below overlying construction.

G. Damages: Promptly repair damages to adjacent facilities caused by dewatering operations.

3.03 FIELD QUALITY CONTROL

A. Observation Wells: Provide, take measurements, and maintain at least the minimum number of observation wells or piezometers indicated; additional observation wells may be required by authorities having jurisdiction.
   1. Observe and record daily elevation of ground water and piezometric water levels in observation wells.
   2. Repair or replace, within 24 hours, observation wells that become inactive, damaged, or destroyed. In areas where observation wells are not functioning properly, suspend construction activities until reliable observations can be made. Add or remove water from observation-well risers to demonstrate that observation wells are functioning properly.
   3. Fill observation wells, remove piezometers, and fill holes when dewatering is completed.

B. Provide continual observation to ensure that subsurface soils are not being removed by the dewatering operation.

SECTION 32 12 16 - ASPHALT PAVING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Cold milling of existing hot-mix asphalt pavement.
2. Hot-mix asphalt patching.
3. Hot-mix asphalt paving.
4. Hot-mix asphalt paving overlay.
5. Pavement-marking paint.

B. Related Sections:

1. Division 31 Section "Earth Moving" for aggregate subbase and base courses.
2. Division 32 Section "Concrete Paving Joint Sealants" for joint sealants and fillers at paving terminations.

1.2 SUBMITTALS

A. Product Data: For each type of product indicated. Include technical data and tested physical and performance properties.

1. Job-Mix Designs: Certification, by authorities having jurisdiction, of approval of each job mix proposed for the Work.
2. Job-Mix Designs: For each job mix proposed for the Work.

B. Material Certificates: For each paving material, from manufacturer.

1.3 QUALITY ASSURANCE

A. Manufacturer Qualifications: A paving-mix manufacturer registered with and approved by authorities having jurisdiction or the DOT of state in which Project is located.

B. Regulatory Requirements: Comply with materials, workmanship, and other applicable requirements of local DOT for asphalt paving work.

1. Measurement and payment provisions and safety program submittals included in standard specifications do not apply to this Section.

1.4 PROJECT CONDITIONS

A. Environmental Limitations: Do not apply asphalt materials if subgrade is wet or excessively damp, if rain is imminent or expected before time required for adequate cure, or if the following conditions are not met:

1. Tack Coat: Minimum surface temperature of 60 deg F.
2. Asphalt Base Course: Minimum surface temperature of 40 deg F and rising at time of placement.
3. Asphalt Surface Course: Minimum surface temperature of 60 deg F at time of placement.

B. Pavement-Marking Paint: Proceed with pavement marking only on clean, dry surfaces.

PART 2 - PRODUCTS

2.1 AGGREGATES

A. Coarse Aggregate: ASTM D 692, sound; angular crushed stone, crushed gravel, or cured, crushed blast-furnace slag.

B. Fine Aggregate: ASTM D 1073 or AASHTO M 29, sharp-edged natural sand or sand prepared from stone, gravel, cured blast-furnace slag, or combinations thereof.

C. Mineral Filler: ASTM D 242 or AASHTO M 17, rock or slag dust, hydraulic cement, or other inert material.

2.2 ASPHALT MATERIALS

A. Asphalt Binder: AASHTO M 320 or AASHTO MP 1a, AC10 - for on-site pavement. Coordinate with authority having jurisdiction for pavement in public right-of-ways.

B. Tack Coat: ASTM D 977 or AASHTO M 140 emulsified asphalt.

2.3 AUXILIARY MATERIALS

A. Herbicide: Commercial chemical for weed control, registered by the EPA. Provide in granular, liquid, or wettable powder form.

B. Pavement-Marking Paint: MPI #32 Alkyd Traffic Marking Paint.

1. Color: As indicated.

C. Wheel Stops: Precast, air-entrained concrete, 2500-psi minimum compressive strength, 4-1/2 inches high by 9 inches wide by 72 inches long. Provide chamfered corners, drainage slots on underside, and holes for anchoring to substrate.

1. Dowels: Galvanized steel, 3/4-inch diameter, 10-inch minimum length.

2.4 MIXES

A. Hot-Mix Asphalt: Dense, hot-laid, hot-mix asphalt plant mixes approved by authorities having jurisdiction and complying with the following requirements:

1. Provide mixes with a history of satisfactory performance in geographical area where Project is located.
2. Surface Course: ½" Mix.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Proof-roll subgrade below pavements with heavy pneumatic-tired equipment to identify soft pockets and areas of excess yielding. Do not proof-roll wet or saturated subgrades.

B. Proceed with paving only after unsatisfactory conditions have been corrected.

3.2 COLD MILLING

A. Clean existing pavement surface of loose and deleterious material immediately before cold milling. Remove existing asphalt pavement by cold milling to grades and cross sections indicated.

1. Mill to a depth of 2 inches, unless otherwise noted.

3.3 PATCHING

A. Hot-Mix Asphalt Pavement: Saw cut perimeter of patch and excavate existing pavement section to sound base. Excavate rectangular or trapezoidal patches, extending 12 inches into adjacent sound pavement, unless otherwise indicated. Cut excavation faces vertically. Remove excavated material. Recompact existing unbound-aggregate base course to form new subgrade.

B. Portland Cement Concrete Pavement: Break cracked slabs and roll as required to reseat concrete pieces firmly.

1. Remove disintegrated or badly cracked pavement. Excavate rectangular or trapezoidal patches, extending into adjacent sound pavement, unless otherwise indicated. Cut excavation faces vertically. Recompact existing unbound-aggregate base course to form new subgrade.

C. Tack Coat: Apply uniformly to vertical surfaces abutting or projecting into new, hot-mix asphalt paving at a rate of 0.05 to 0.15 gal./sq. yd..

1. Allow tack coat to cure undisturbed before applying hot-mix asphalt paving.

2. Avoid smearing or staining adjoining surfaces, appurtenances, and surroundings. Remove spillages and clean affected surfaces.

D. Patching: Fill excavated pavements with hot-mix asphalt base mix for full thickness of patch and, while still hot, compact flush with adjacent surface.

3.4 SURFACE PREPARATION

A. General: Immediately before placing asphalt materials, remove loose and deleterious material from substrate surfaces. Ensure that prepared subgrade is ready to receive paving.

B. Herbicide Treatment: Apply herbicide according to manufacturer's recommended rates and written application instructions. Apply to dry, prepared subgrade or surface of compacted-aggregate base before applying paving materials.

C. Tack Coat: Apply uniformly to surfaces of existing pavement at a rate of 0.05 to 0.15 gal./sq. yd.

1. Allow tack coat to cure undisturbed before applying hot-mix asphalt paving.
2. Avoid smearing or staining adjoining surfaces, appurtenances, and surroundings. Remove spillages and clean affected surfaces.

3.5 HOT-MIX ASPHALT PLACING

A. Machine place hot-mix asphalt on prepared surface, spread uniformly, and strike off. Place asphalt mix by hand to areas inaccessible to equipment in a manner that prevents segregation of mix. Place each course to required grade, cross section, and thickness when compacted.

1. Spread mix at minimum temperature of 250 deg F.
2. Regulate paver machine speed to obtain smooth, continuous surface free of pulls and tears in asphalt-paving mat.

B. Place paving in consecutive strips not less than 10 feet wide unless infill edge strips of a lesser width are required.

C. Promptly correct surface irregularities in paving course behind paver. Use suitable hand tools to remove excess material forming high spots. Fill depressions with hot-mix asphalt to prevent segregation of mix; use suitable hand tools to smooth surface.

3.6 JOINTS

A. Construct joints to ensure a continuous bond between adjoining paving sections. Construct joints free of depressions, with same texture and smoothness as other sections of hot-mix asphalt course.

1. Clean contact surfaces and apply tack coat to joints.

2. Offset longitudinal joints, in successive courses, a minimum of 6 inches.
3. Offset transverse joints, in successive courses, a minimum of 24 inches.
4. Construct transverse joints at each point where paver ends a day's work and resumes work at a subsequent time. Construct these joints using either "bulkhead" or "papered" method according to AI MS-22, for both "Ending a Lane" and "Resumption of Paving Operations."

3.7 COMPACTION

A. General: Begin compaction as soon as placed hot-mix paving will bear roller weight without excessive displacement. Compact hot-mix paving with hot, hand tampers or with vibratory-plate compactors in areas inaccessible to rollers.

1. Complete compaction before mix temperature cools to 185 deg F.

B. Breakdown Rolling: Complete breakdown or initial rolling immediately after rolling joints and outside edge. Examine surface immediately after breakdown rolling for indicated crown, grade, and smoothness. Correct laydown and rolling operations to comply with requirements.

C. Intermediate Rolling: Begin intermediate rolling immediately after breakdown rolling while hot-mix asphalt is still hot enough to achieve specified density. Continue rolling until hot-mix asphalt course has been uniformly compacted to the following density:

1. Average Density: 92 percent of reference maximum theoretical density according to ASTM D 2041, but not less than 90 percent nor greater than 96 percent.

D. Finish Rolling: Finish roll paved surfaces to remove roller marks while hot-mix asphalt is still warm.

E. Edge Shaping: While surface is being compacted and finished, trim edges of pavement to proper alignment. Bevel edges while asphalt is still hot; compact thoroughly.

F. Protection: After final rolling, do not permit vehicular traffic on pavement until it has cooled and hardened.

G. Erect barricades to protect paving from traffic until mixture has cooled enough not to become marked.

3.8 INSTALLATION TOLERANCES

A. Pavement Thickness: Compact each course to produce the thickness indicated within the following tolerances:
1. Surface Course: Plus 1/4 inch, no minus.

B. Pavement Surface Smoothness: Compact each course to produce a surface smoothness within the following tolerances as determined by using a 10-foot straightedge applied transversely or longitudinally to paved areas:

1. Surface Course**:** 1/8 inch.
2. Crowned Surfaces: Test with crowned template centered and at right angle to crown. Maximum allowable variance from template is 1/4 inch.

3.9 PAVEMENT MARKING

A. Do not apply pavement-marking paint until layout, colors, and placement have been verified with Architect.

B. Allow paving to age for **30** days before starting pavement marking.

C. Sweep and clean surface to eliminate loose material and dust.

D. Apply paint with mechanical equipment to produce pavement markings, of dimensions indicated, with uniform, straight edges. Apply at manufacturer's recommended rates to provide a minimum wet film thickness of 15 mils.

3.10 WHEEL STOPS

A. Install wheel stops in bed of adhesive as recommended by manufacturer.

B. Securely attach wheel stops to pavement with not less than two galvanized-steel dowels embedded at one-quarter to one-third points. Securely install dowels into pavement and bond to wheel stop. Recess head of dowel beneath top of wheel stop.

3.11 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Replace and compact hot-mix asphalt where core tests were taken.

C. Remove and replace or install additional hot-mix asphalt where test results or measurements indicate that it does not comply with specified requirements.

3.12 DISPOSAL

A. Except for material indicated to be recycled, remove excavated materials from Project site and legally dispose of them in an EPA-approved landfill.

END OF SECTION 321216

SECTION 32 13 13 - CONCRETE PAVING

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes exterior cement concrete pavement for the following:

1. Driveways and roadways.
2. Parking lots.
3. Curbs and gutters.
4. Walkways.

B. Related Sections:
1. Division 31 Section "Earth Moving" for aggregate subbase and base courses.

1.2 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Design Mixtures: For each concrete pavement mixture.

1.3 QUALITY ASSURANCE

A. Manufacturer Qualifications: Manufacturer of ready-mixed concrete products who complies with ASTM C 94/C 94M requirements for production facilities and equipment.

B. ACI Publications: Comply with ACI 301, "Specification for Structural Concrete," unless modified by requirements in the Contract Documents.

PART 2 - PRODUCTS

2.1 STEEL REINFORCEMENT

A. Plain-Steel Welded Wire Reinforcement: ASTM A 185, fabricated from as-drawn steel wire into flat sheets.

B. Deformed-Steel Welded Wire Reinforcement: ASTM A 497, flat sheet.

C. Reinforcing Bars: ASTM A 615/A 615M, Grade 60; deformed.

D. Plain Steel Wire: ASTM A 82, as drawn.

E. Deformed-Steel Wire: ASTM A 496.

F. Bar Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars, welded wire reinforcement, and dowels in place. Manufacture bar supports according to CRSI's "Manual of Standard Practice."

2.2 CONCRETE MATERIALS

A. Cementitious Material: Use the following cementitious materials, of the same type, brand, and source throughout the Project:

1. Portland Cement: ASTM C 150, Type II

B. Normal-Weight Aggregates: ASTM C 33, Class 4S coarse aggregate, uniformly graded. Provide aggregates from a single source.

C. Water: ASTM C 94/C 94M.

D. Air-Entraining Admixture: ASTM C 260.

E. Chemical Admixtures: ASTM C 494/C 494M, of type suitable for application, certified by manufacturer to be compatible with other admixtures and to contain not more than 0.1 percent water-soluble chloride ions by mass of cementitious material.

2.3 CURING MATERIALS

A. Absorptive Cover: AASHTO M 182, Class 2, burlap cloth.

B. Moisture-Retaining Cover: ASTM C 171, polyethylene film or white burlap-polyethylene sheet.

C. Water: Potable.

D. Evaporation Retarder: Waterborne, monomolecular film forming; manufactured for application to fresh concrete.

E. Clear Waterborne Membrane-Forming Curing Compound: ASTM C 309, Type 1, Class B, dissipating.

F. White Waterborne Membrane-Forming Curing Compound: ASTM C 309, Type 2, Class B.

2.4 RELATED MATERIALS

A. Expansion- and Isolation-Joint-Filler Strips: ASTM D 1751, asphalt-saturated cellulosic fiber or ASTM D 1752, cork or self-expanding cork.

B. Joint Sealant- Prosoco LS and Prosoco Salt Guard

C. Pavement-Marking Paint: Latex, waterborne emulsion, lead and chromate free, ready mixed, complying with FS TT-P-1952, with drying time of less than 45 minutes.

1. Color: As indicated.

2.5 CONCRETE MIXTURES

A. Prepare design mixtures, proportioned according to ACI 301, with the following properties:

1. Compressive Strength (28 Days): 4000 psi.
2. Maximum Water-Cementitious Materials Ratio at Point of Placement: 0.45.
3. Air Content: 5 to 7 percent.

2.6 CONCRETE MIXING

A. Ready-Mixed Concrete: Measure, batch, and mix concrete materials and concrete according to ASTM C 94/C 94M and ASTM C 1116. Furnish batch certificates for each batch discharged and used in the Work.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Proof-roll prepared base surface below concrete pavements with heavy pneumatic-tired equipment to identify soft pockets and areas of excess yielding.

3.2 EDGE FORMS AND SCREED CONSTRUCTION

A. Set, brace, and secure edge forms, bulkheads, and intermediate screed guides for pavement to required lines, grades, and elevations. Install forms to allow continuous progress of work and so forms can remain in place at least 24 hours after concrete placement.

B. Clean forms after each use and coat with form-release agent to ensure separation from concrete without damage.

3.3 STEEL REINFORCEMENT

A. General: Comply with CRSI's "Manual of Standard Practice" for fabricating, placing, and supporting reinforcement.

3.4 JOINTS

A. General: Form construction, isolation, and contraction joints and tool edgings true to line with faces perpendicular to surface plane of concrete. Construct transverse joints at right angles to centerline, unless otherwise indicated.

B. Construction Joints: Set construction joints at side and end terminations of pavement and at locations where pavement operations are stopped for more than one-half hour unless pavement terminates at isolation joints.

C. Isolation Joints: Form isolation joints of preformed joint-filler strips abutting concrete curbs, catch basins, manholes, inlets, structures, walks, other fixed objects, and where indicated.

D. Contraction Joints: Form weakened-plane contraction joints, sectioning concrete into areas as indicated. Construct contraction joints for a depth equal to at least one-fourth of the concrete thickness.

E. Edging: Tool edges of pavement, gutters, curbs, and joints in concrete after initial floating with an edging tool to a 1/4-inch radius. Repeat tooling of edges after applying surface finishes. Eliminate tool marks on concrete surfaces.

F. Sealant: Apply Prosoco LS and Prosoco Salt Guard to all joints after concrete is propery cured.

3.5 CONCRETE PLACEMENT

A. Moisten subbase to provide a uniform dampened condition at time concrete is placed.

B. Comply with ACI 301 requirements for measuring, mixing, transporting, and placing concrete.

C. Deposit and spread concrete in a continuous operation between transverse joints. Do not push or drag concrete into place or use vibrators to move concrete into place.

D. Screed pavement surfaces with a straightedge and strike off.

E. Commence initial floating using bull floats or darbies to impart an open textured and uniform surface plane before excess moisture or bleed water appears on the surface. Do not further disturb concrete surfaces before beginning finishing operations or spreading surface treatments.

3.6 FLOAT FINISHING

A. General: Do not add water to concrete surfaces during finishing operations.

B. Float Finish: Begin the second floating operation when bleed-water sheen has disappeared and concrete surface has stiffened sufficiently to permit operations. Float surface with power-driven floats, or by hand floating if area is small or inaccessible to power units. Finish surfaces to true planes. Cut down high spots and fill low spots. Refloat surface immediately to uniform granular texture.

1. Burlap Finish: Drag a seamless strip of damp burlap across float-finished concrete, perpendicular to line of traffic, to provide a uniform, gritty texture.

2. Medium-to-Fine-Textured Broom Finish: Draw a soft bristle broom across float-finished concrete surface perpendicular to line of traffic to provide a uniform, fine-line texture.
3. Medium-to-Coarse-Textured Broom Finish: Provide a coarse finish by striating float-finished concrete surface 1/16 to 1/8 inch deep with a stiff-bristled broom, perpendicular to line of traffic.

C. Slip-Resistive Aggregate Finish: Before final floating, spread slip-resistive aggregate finish on pavement surface according to manufacturer's written instructions.

1. Cure concrete with curing compound recommended by slip-resistive aggregate manufacturer. Apply curing compound immediately after final finishing.
2. After curing, lightly work surface with a steel wire brush or abrasive stone and water to expose nonslip aggregate.

3.7 CONCRETE PROTECTION AND CURING

A. General: Protect freshly placed concrete from premature drying and excessive cold or hot temperatures.

B. Comply with ACI 306.1 for cold-weather protection.

C. Evaporation Retarder: Apply evaporation retarder to concrete surfaces if hot, dry, or windy conditions cause moisture loss approaching 0.2 lb/sq. ft. x h before and during finishing operations. Apply according to manufacturer's written instructions after placing, screeding, and bull floating or darbying concrete, but before float finishing.

D. Begin curing after finishing concrete but not before water has disappeared from surface.

E. Curing Methods: Cure concrete by moisture curing, moisture-retaining-cover curing, curing compound or a combination of these methods.

3.8 PAVEMENT TOLERANCES

A. Comply with tolerances of ACI 117 and as follows:

1. Elevation: 1/4 inch.
2. Thickness: Plus 3/8 inch, minus 1/4 inch.
3. Surface: Gap below 10-foot- long, unleveled straightedge not to exceed 1/4 inch.
4. Joint Spacing: 3 inches.
5. Contraction Joint Depth: Plus 1/4 inch, no minus.
6. Joint Width: Plus 1/8 inch, no minus.

3.9 PAVEMENT MARKING

A. Allow concrete pavement to cure for 28 days and be dry before starting pavement marking.

B. Sweep and clean surface to eliminate loose material and dust.

C. Apply paint with mechanical equipment to produce pavement markings of dimensions indicated with uniform, straight edges. Apply at manufacturer's recommended rates to provide a minimum wet film thickness of 15 mils.

3.10 REPAIRS AND PROTECTION

A. Remove and replace concrete pavement that is broken, damaged, or defective or that does not comply with requirements in this Section.

B. Exclude traffic from pavement for at least 14 days after placement.

C. Maintain concrete pavement free of stains, discoloration, dirt, and other foreign material. Sweep concrete pavement not more than two days before date scheduled for Substantial Completion inspections.

END OF SECTION 321313

SECTION 32 13 13
CONCRETE PAVING

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Driveways
   2. Roadways
   3. Parking lots
   4. Curbs and gutters
   5. Walks

1.02 REFERENCE STANDARDS

1.03 RELATED SECTIONS

A. Section 00 31 00 - Available Project Information.

B. Section 01 33 00 - Submittal Procedures.

C. Section 01 40 00 - Quality Requirements.

D. Section 01 60 00 - Product Requirements.

E. Section 03 20 00 - Concrete Reinforcement.

F. Section 03 30 00 - Cast in Place Concrete.

1.04 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings: Indicate pavement markings, lane separations, and defined parking spaces. Indicate, with international symbol of accessibility, spaces allocated for people with disabilities.

C. Other Action Submittals:
   1. Design Mixtures: For each concrete paving mixture. Include alternate design mixtures when characteristics of materials, Project conditions, weather, test results, or other circumstances warrant adjustments.

D. Qualification Data: For qualified ready-mix concrete manufacturer.

E. Material Certificates: For the following, from manufacturer:
   1. Cementitious materials.
   2. Steel reinforcement and reinforcement accessories.
   3. Fiber reinforcement.
   4. Admixtures.
   5. Curing compounds.

1.05 PROJECT CONDITIONS

A. Traffic Control: Maintain access for vehicular and pedestrian traffic as required for other construction activities.

PART 2 PRODUCTS

2.01 MATERIALS

A. Form Material: Steel, wood, or other suitable material of size and strength to resist movement during concrete placement and to retain horizontal and vertical alignment until removal. Use straight forms, free of distortion and defects. Use flexible spring steel forms or laminated boards to form radius bends as required.

B. Reinforcing Steel: Provide per Section 03 20 00.

C. Concrete and Aggregates: Provide concrete to comply with Section 03 30 00.

D. Water: Potable and complying with ASTM C94/C94M.

E. Joint Fillers: ASTM D1751, 1 inch thick asphalt-saturated cellulosic fiber in preformed strips.

2.02 CONCRETE MIXTURES

A. Prepare design mixtures, proportioned per ACI 301 (ACI 301M), for each type and strength of normal-weight concrete, and as determined by either laboratory trial mixtures or field experience.
   1. Use a qualified independent testing agency for preparing and reporting proposed concrete design mixtures for the trial batch method.
   2. When automatic machine placement is used, determine design mixtures and obtain laboratory test results that meet or exceed requirements.

B. Proportion mixtures to provide normal-weight concrete with the following properties:
   1. Compressive Strength (28 Days): 4,500 psi (27.6 MPa)
      a. Curbs, Gutters, and Walks: 4,500 psi (20.7 MPa).
      b. Heavy-Duty Concrete Paving: 4,500 psi (27.6 MPa), 7 inches thick.
      c. Standard Concrete Paving: 4,500 psi (27.6 MPa), 5 inches thick.
   2. Maximum Water-Cementitious Materials Ratio at Point of Placement: 0.45 unless indicated otherwise.
   3. Slump Limit: 4 inches (102 mm), plus or minus 1 inch (25 mm), unless indicated otherwise.

2.03 CONCRETE MIXING

A. Ready-Mixed Concrete: Comply with Section 03 30 00. Measure, batch, and mix concrete materials and concrete per ASTM C94/C94M. Furnish batch certificates for each batch discharged and used in Work.
   1. When air temperature is between 85 and 90 degrees F (30 and 32 degrees C), reduce mixing and delivery time from 1-1/2 hours to 75 minutes; when air temperature is above 90 degrees F (32 degrees C), reduce mixing and delivery time to 60 minutes.

PART 3 EXECUTION

3.01 PREPARATION

A. Remove loose material from compacted subbase surface immediately before placing concrete.

3.02 EDGE FORMS AND SCREED CONSTRUCTION

A. Set, brace, and secure edge forms, bulkheads, and intermediate screed guides for pavement to required lines, grades, and elevations. Install forms to allow continuous progress of Work and so forms can remain in place at least 24 hours after concrete placement.
   1. Provide grade stakes at a minimum spacing of 25 feet. Provide 1/4 inch crown or cross slope in direction indicated on the drawings. Pitch walks as indicated on Drawings and per guidelines of the AHJ. Make adjustments in slopes at walk intersections to provide positive drainage. Install sufficient quantity of forms to allow continuous progress of Work.
   2. Check completed form Work for grade and alignment.

B. Clean forms after each use and coat with form-release agent to ensure separation from concrete without damage.

3.03 STEEL REINFORCEMENT

A. General: Comply with CRSI (DA4) "Manual of Standard Practice" for fabricating, placing, and supporting reinforcement, and with Sections 03 20 00 and 03 30 00.

B. Clean reinforcement of loose rust and mill scale, earth, ice, or other bond-reducing materials.

C. Arrange, space, and securely tie bars and bar supports to hold reinforcement in position during concrete placement. Maintain minimum cover to reinforcement.

3.04 JOINTS:

A. General: Form construction, isolation, and contraction joints and tool edges true to line, with faces perpendicular to surface plane of concrete. Construct transverse joints at right angles to centerline unless otherwise indicated.
   1. When joining existing paving, place transverse joints to align with previously placed joints unless otherwise indicated.

B. Construction Joints: Set construction joints at side and end terminations of paving and at locations where paving operations are stopped for more than 1/2 hour unless paving terminates at isolation joints.

C. Isolation Joints: Form isolation joints of preformed joint-filler strips abutting concrete curbs, catch basins, manholes, inlets, structures, other fixed objects, and where indicated.
   1. Locate expansion joints at intervals of 50 feet (15.25 m) unless otherwise indicated.
   2. Extend joint fillers full width and depth of joint.
   3. Terminate joint filler not less than 1/4 inch (6 mm) or more than 1 inch (25 mm) below finished surface if joint sealant is indicated.
   4. Place top of joint filler flush with finished concrete surface if joint sealant is not indicated.
   5. Furnish joint fillers in 1-piece lengths. Where more than 1 length is required, lace or clip joint-filler sections together.

D. Control Joints: Form weakened-plane contraction joints, sectioning concrete into areas as indicated. Construct control joints for a depth equal to at least 1/3 of concrete thickness.
   1. Spacing: Install control joints at a maximum of 15 feet on center.
   2. Grooved Joints: Form control joints after initial floating by grooving and finishing each edge of joint with grooving tool to a 1/4 inch (6 mm) radius. Repeat grooving of control joints after applying surface finishes.

E. Edging: After initial floating, tool edges of paving, gutters, curbs, and joints in concrete with an edging tool to a 1/4 inch (6 mm) radius. Repeat tooling of edges after applying surface finishes.

3.05 CONCRETE PLACEMENT

A. General: Comply with the requirements of Division 3 Sections for mixing and placing concrete, and as herein specified.

B. Do not place concrete until subbase and forms have been checked for line and grade. Moisten subbase if required to provide a uniform dampened condition at time concrete is placed. Do not place concrete around manholes and other structures until they are at required finish elevation and alignment.

C. Deposit and spread concrete in a continuous operation between transverse joints. Do not push or drag concrete into place or use vibrators to move concrete into place. If placement operations are interrupted for more than 1/2 hour, place construction joint.

D. Consolidate concrete per ACI 301 (ACI 301M) by mechanical vibrating equipment supplemented by hand spading, rodding, or tamping.
   1. Consolidate concrete along face of forms and adjacent to transverse joints with an internal vibrator. Keep vibrator away from joint assemblies, reinforcement, or side forms. Use only square-faced shovels for hand spreading and consolidation. Consolidate with care to prevent dislocating reinforcement, dowels, and joint devices.
   2. When adjacent pavement lanes are placed in separate pours, do not operate equipment on concrete until pavement has attained sufficient strength to carry loads without injury.

E. Cold-Weather Placement: Protect concrete Work from physical damage or reduced strength that could be caused by frost, freezing, or low temperatures. Comply with ACI 306.1 and the following:
   1. When air temperature has fallen to or is expected to fall below 40 degrees F (4.4 degrees C), uniformly heat water and aggregates before mixing to obtain a concrete mixture temperature of not less than 50 degrees F (10 degrees C) and not more than 80 degrees F (27 degrees C) at point of placement.
   2. Do not use frozen materials or materials containing ice or snow.
   3. Do not use calcium chloride, salt, or other materials containing antifreeze agents or chemical accelerators unless otherwise specified and approved in design mixtures.

F. Hot-Weather Placement: Comply with ACI 301 (ACI 301M) and as follows when hot-weather conditions exist:
   1. Cool ingredients before mixing to maintain concrete temperature below 90 degrees F (32 degrees C) at time of placement. Chilled mixing water or chopped ice may be used to control

temperature, provided water equivalent of ice is calculated in total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor's option.

2. Cover steel reinforcement with water-soaked burlap so steel temperature will not exceed ambient air temperature immediately before embedding in concrete.
3. Fog-spray forms, steel reinforcement, and subgrade just before placing concrete. Keep subgrade moisture uniform without standing water, soft spots, or dry areas.

3.06 FLOAT FINISHING

A. General: Do not add water to concrete surfaces during finishing operations.

B. Float Finish: Begin second floating operation when bleed-water sheen has disappeared and concrete surface has stiffened sufficiently to permit operations. Float surface with power-driven floats or by hand floating if area is small or inaccessible to power units. Finish surfaces to true planes. Cut down high spots and fill low spots. Refloat surface immediately to uniform granular texture.
   1. Medium-to-Fine-Textured Broom Finish: Draw a soft-bristle broom across float-finished concrete surface perpendicular to line of traffic to provide a uniform, fine-line texture.

3.07 CONCRETE PROTECTION AND CURING

A. General: Protect freshly placed concrete from premature drying and excessive cold or hot temperatures.
   1. Comply with ACI 306.1 for cold-weather protection.
   2. Provide protection to maintain allowable temperatures for a minimum of 5 days after placement.
   3. Replace concrete damaged by frost action at no additional cost to Owner.

B. Curing Methods: Cure concrete by moisture curing, moisture-retaining-cover curing, curing compound, or a combination of these as follows and as indicated in Section 03 30 00. Use moist-curing methods for initial curing whenever possible.
   1. Moisture Curing: Keep surfaces continuously moist for not less than 7 days with the following materials:
      a. Water.
      b. Continuous water-fog spray.
      c. Absorptive cover, water saturated and kept continuously wet. Cover concrete surfaces and edges with 12 inch (305 mm) lap over adjacent absorptive covers.
   2. Moisture-Retaining-Cover Curing: Cover concrete surfaces with moisture-retaining cover, placed in widest practicable width, with sides and ends lapped at least 12 inches (305 mm) and sealed by waterproof tape or adhesive. Immediately repair any holes or tears occurring during installation or curing period using cover material and waterproof tape.

3.08 PAVEMENT TOLERANCES

A. Comply with tolerances of ACI 117 and as follows, unless indicated otherwise:
   1. Elevation: 3/4 inch (19 mm).
   2. Thickness: Plus 3/8 inch (10 mm), minus 1/4 inch (6 mm).
   3. Surface: Gap below 10 foot (3 m) long, unleveled straightedge not to exceed 1/2 inch (13 mm).
   4. Alignment of Tie-Bar End Relative to Line Perpendicular to Paving Edge: 1/2 inch per 12 inches (13 mm per 300 mm) of tie bar.
   5. Lateral Alignment and Spacing of Dowels: 1 inch (25 mm).
   6. Vertical Alignment of Dowels: 1/4 inch (6 mm).
   7. Alignment of Dowel-Bar End Relative to Line Perpendicular to Paving Edge: 1/4 inch per 12 inches (6 mm per 300 mm) of dowel.
   8. Joint Spacing: 3 inches (75 mm).
   9. Contraction Joint Depth: Plus 1/4 inch (6 mm), no minus.
   10. Joint Width: Plus 1/8 inch (3 mm), no minus.

3.09 PAVEMENT MARKING

A. Do not apply pavement-marking paint until layout, colors, and placement have been verified with Architect.

B. Allow concrete paving to cure for a minimum of 28 days and be dry before starting pavement marking.

C. Sweep and clean surface to eliminate loose material and dust.

D. Apply paint with mechanical equipment to produce markings of dimensions indicated with uniform, straight edges. Apply at manufacturer's recommended rates to provide a minimum wet film thickness of 15 mils (0.4 mm).
   1. Apply graphic symbols and lettering with paint-resistant, die-cut stencils, firmly secured to concrete surface. Mask an extended area beyond edges of each stencil to prevent paint application beyond stencil. Apply paint so that it cannot run beneath stencil.

3.10 REPAIRS AND PROTECTION

A. Remove and replace concrete paving that is broken, damaged, or defective or that does not comply with requirements in this Section. Remove Work in complete sections from joint to joint unless otherwise approved by Architect.

B. Drill test cores, where directed by Architect, when necessary to determine magnitude of cracks or defective areas. Fill drilled core holes in satisfactory paving areas with portland cement concrete bonded to paving with epoxy adhesive.

C. Protect concrete paving from damage. Exclude traffic from paving for at least 14 days after placement. When construction traffic is permitted, maintain paving as clean as possible by removing surface stains and spillage of materials as they occur.

D. Maintain concrete paving free of stains, discoloration, dirt, and other foreign material. Sweep paving not more than 2 days before date scheduled for Substantial Completion inspections.

END OF SECTION

This page intentionally left blank

SECTION 32 14 00
UNIT PAVING

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Concrete pavers set in aggregate setting beds.
   2. Joint sand.
   3. Plastic edge restraints.
   4. Cast-in-place concrete edge restraints.

1.02 RELATED SECTIONS

A. Section 00 31 00 - Available Data, including Geotechnical Report.

B. Section 01 33 00 - Submittal Procedures.

C. Section 01 40 00 - Quality Requirements.

D. Section 01 60 00 - Product Requirements.

E. Section 32 13 13 - Concrete Paving.

1.03 SUBMITTALS

A. Product Data: For the following:
   1. Pavers.
   2. Edge restraints.
   3. Paver Joint Sand.

B. Sieve Analyses: For aggregate setting-bed materials, according to ASTM C136.

C. Samples for Verification:
   1. Full-size units of each type of unit paver indicated.
   2. Joint materials.
   3. Exposed edge restraints.

D. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

1.04 QUALITY ASSURANCE

A. Source Limitations: Obtain each type of unit paver, joint material, and setting material from single source with resources to provide materials and products of consistent quality in appearance and physical properties.

B. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
   1. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Store pavers on elevated platforms in a dry location. If units are not stored in an enclosed location, cover tops and sides of stacks with waterproof sheeting, securely tied.

B. Store aggregates where grading and other required characteristics can be maintained and contamination avoided.

1.06 PROJECT CONDITIONS

A. Cold-Weather Protection: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen subgrade or setting beds. Remove and replace unit paver work damaged by frost or freezing.

1.07 WARRANTY

A. Manufacturer to supply a 3 year product warranty for concrete paver and concrete edger products.

B. The use of deicer on the pavers shall not void the manufacturer’s warranty.

PART 2 PRODUCTS

2.01 CONCRETE PAVERS

A. Concrete Pavers: Solid paving units complying with ASTM C936 and resistant to freezing and thawing when tested per ASTM C67, made from normal-weight aggregates.
   1. Approved Manufacturers: (Submit samples to match specified paving unit for architect approval match Architect's sample.)
      a. Belgard
         (Oldcastle Architectural, Inc.)
         375 Northridge Road, Suite 350
         Atlanta, GA 30360
         (800) 899-8455
         (770) 804-3363
         (770) 804-3369 (Fax)
         E-mail: belgard@oldcastleapg.com
      b. No substitutions.
   2. Products:
      a. PV-3 - Pool Deck and other Pedestrian Walkways:
         1) Pavers: Belgard; Dimensions Pavers.
         2) Thickness: 2-3/8 inches (60 mm). (at all pedestrian traffic areas)
         3) Face Size and Shape:
            (a) Field: 3 piece Dimensions 12; 6" x 12", 12" x 12", 18" x 12".
            (b) Border: 9" x 6"
         4) Color:
            (a) Field Color: Scandina Gray.
            (b) Accent Color: Bourbon.
         5) Pattern: Manufacturer's Pattern C.

2.02 CURBS AND EDGE RESTRAINTS

A. Plastic Edge Restraints: 1-piece high density polyethylene (HDPE) edging with spikes every 4 inches on center.
   1. Manufacturer:
      Snap Edge Corporation
      3925 Stern Avenue
      Charles, IL 60124
      (800) 932-3343
   2. No Substitutions.

2.03 ACCESSORIES

A. Compressible Foam Filler: Preformed strips complying with ASTM D1056, Grade 2A1.

2.04 AGGREGATE SETTING-BED MATERIALS

A. Graded Aggregate for Subbase: Sound, crushed stone or gravel complying with requirements in Division 31 for subbase material.

B. Graded Aggregate for Base: Sound, crushed stone or gravel complying with requirements in Division 31 for base course.

C. Sand for Leveling Course: Sound, sharp, washed, natural sand or crushed stone complying with gradation requirements in ASTM C33 for fine aggregate.
   1. Sieve per ASTM C136 and CSA-A23.2A.
   2. Conform to the grading requirements of Table 2, Grading Requirements for Bedding Sand, ASTM C33 and CSA A23.1-M94.

D. Sand for Joints: Fine, sharp, washed, natural sand or crushed stone with 100 percent passing No. 16 (1.18-mm) sieve and no more than 10 percent passing No. 200 (0.075-mm) sieve.
   1. Techni-Seal HP Next Gel Polymeric Sand; dry mix, containing polymeric binding agent, activated with water.
   2. Color: To match adjacent paver unit. Submit color samples to architect for approval from manufacturer's full range of color options.
   3. Herbicide: Commercial chemical for weed control, registered with the EPA. Provide in granular, liquid, or wettable powder form.

2.05 COMPRESSIVE STRENGTH

A. At the time of delivery to the work site, the average compressive strength of the paver shall not be less than 8,000 psi, with no individual unit less than 7,200 psi. Testing procedures shall be in accordance with ASTM C140 specifications.

2.06 ABSORPTION

A. The average absorption shall not be greater than five percent (5%), with no individual unit result greater than seven percent (7%) per ASTM C140 specifications.

2.07 RESISTANCE TO FREEZING AND THAWING

A. The manufacturer shall satisfy the purchaser by laboratory testing that the paving units have adequate resistance to freezing and thawing per ASTM C67-83 specifications. The specimens shall have no breakage and not greater than one percent (1%) loss in dry weight of any individual unit when subjected to 50 cycles of freezing and thawing.

2.08 DIMENSIONAL TOLERANCES

A. Pavers shall be prismatic in plan and formed with straight, uniform edges. The tolerance for the flat portions of the sides shall not exceed 1/32" as measured with a steel straight edge. "Slumped" pavers exceeding this tolerance will be rejected. The length, width and thickness of the paving stones shall meet the allowable tolerances specified in ASTM C936.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine areas indicated to receive paving, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Remove substances from concrete substrates that could impair mortar bond, including curing and sealing compounds, form oil, and laitance.

B. Sweep concrete substrates to remove dirt, dust, debris, and loose particles.

C. Proof-roll prepared subgrade according to requirements in Division 2 Section "Earthwork" to identify soft pockets and areas of excess yielding. Proceed with unit paver installation only after deficient subgrades have been corrected and are ready to receive subbase and base course for unit pavers.

3.03 INSTALLATION, GENERAL

A. Do not use unit pavers with chips, cracks, voids, discolorations, or other defects that might be visible or cause staining in finished work.

B. Mix pavers from several pallets or cubes, as they are placed, to produce uniform blend of colors and textures.

C. Cut unit pavers with motor-driven masonry saw equipment to provide clean, sharp, unchipped edges. Cut units to provide pattern indicated and to fit adjoining work neatly. Use full units without cutting where possible. Hammer cutting is not acceptable.
   1. For concrete pavers, a block splitter may be used.

D. Handle protective-coated brick pavers to prevent coated surfaces from contacting backs or edges of other units. If, despite these precautions, coating does contact bonding surfaces of brick, remove coating from bonding surfaces before setting brick.

E. Joint Pattern: "Herringbone."

F. Tolerances: Do not exceed 1/32-inch (0.8-mm) unit-to-unit offset from flush (lippage) nor 1/8 inch in 10 feet (3 mm in 3 m) from level, or indicated slope, for finished surface of paving.

G. Expansion and Control Joints: Provide for sealant-filled joints at locations and of widths indicated. Provide compressible foam filler as backing for sealant-filled joints unless otherwise indicated; where unfilled joints are indicated, provide temporary filler until paver installation is complete. Install joint filler before setting pavers. Sealant materials and installation are specified in Division 7 Section "Joint Sealants."

H. Provide edge restraints as indicated. Install edge restraints before placing unit pavers.
   1. Install edge restraints to comply with manufacturer's written instructions. Install stakes at intervals required to hold edge restraints in place during and after unit paver installation.

I. Provide steps made of pavers as indicated. Install paver steps before installing adjacent pavers.

3.04 AGGREGATE SETTING-BED APPLICATIONS

A. Place separation geotextile over prepared subgrade, overlapping ends and edges at least 12 inches (300 mm).

B. Place leveling course and screed to a thickness of 1 to 1-1/2 inches (25 to 38 mm), taking care that moisture content remains constant and density is loose and uniform until pavers are set and compacted.

C. Treat leveling course with herbicide to inhibit growth of grass and weeds.

D. Set pavers with a minimum joint width of 1/16 inch (1.5 mm) and a maximum of 1/8 inch (3 mm), being careful not to disturb leveling base. If pavers have spacer bars, place pavers hand tight against spacer bars. Use string lines to keep straight lines. Fill gaps between units that exceed 3/8 inch (10 mm) with pieces cut to fit from full-size unit pavers.
   1. When installation is performed with mechanical equipment, use only unit pavers with spacer bars on sides of each unit.

E. Vibrate pavers into leveling course with a low-amplitude plate vibrator capable of a 3500- to 5000-lbf (16- to 22-kN) compaction force at 80 to 90 Hz. Use vibrator with neoprene mat on face of plate or other means as needed to prevent cracking and chipping of pavers. Perform at least three passes across paving with vibrator.
   1. Compact pavers when there is sufficient surface to accommodate operation of vibrator, leaving at least 36 inches (900 mm) of un-compacted pavers adjacent to temporary edges.
   2. Before ending each day's work, compact installed concrete pavers except for 36-inch (900 mm) width of un-compacted pavers adjacent to temporary edges (laying faces).
   3. As work progresses to perimeter of installation, compact installed pavers that are adjacent to permanent edges unless they are within 36 inches (90 mm) of laying face.
   4. Before ending each day's work and when rain interrupts work, cover pavers that have not been compacted and cover leveling course on which pavers have not been placed with non-staining plastic sheets to protect them from rain.

F. Spread dry sand and fill joints immediately after vibrating pavers into leveling course. Vibrate pavers and add sand until joints are completely filled, then remove excess sand. Leave a slight surplus of sand on the surface for joint filling.

G. Do not allow traffic on installed pavers until sand has been vibrated into joints.

H. Repeat joint-filling process 30 days later.

3.05 REPAIRING, POINTING, AND CLEANING

A. Remove and replace unit pavers that are loose, chipped, broken, stained, or otherwise damaged or that do not match adjoining units. Provide new units to match adjoining units and install in same manner as original units, with same joint treatment and with no evidence of replacement.

B. Pointing: During tooling of joints, enlarge voids or holes and completely fill with grout. Point joints at sealant joints to provide a neat, uniform appearance, properly prepared for sealant application.

C. Cleaning: Remove excess grout from exposed paver surfaces; wash and scrub clean.

END OF SECTION

SECTION 32 17 23
PAVEMENT MARKING

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Division 1 of the Specifications for the Fitness Center portion of the development apply to the Work in this Section.

1.02 WORK INCLUDED

A. The work of this Section included furnishing all material, labor, equipment and services to paint the following items of the types, patterns, sizes and colors as indicated on the Drawings.
   1. Parking stripes.
   2. Traffic arrows.
   3. Walkway stripes.
   4. Text.
   5. ADA accessible space logo.

1.03 RELATED WORK

A. The following Work is related to this Section:
   1. Section 01 33 00 - Submittals Procedure.
   2. Section 01 40 00 - Quality Requirements.
   3. Section 01 60 00 - Product Requirements.
   4. Section 03 30 00 - Cast-in-Place Concrete.
   5. Section 32 13 13 - Concrete Paving.

1.04 SUBMITTALS

A. Submit for review and approval Manufacturer's Spec Data Sheets of each product to be used.

B. Submit for record Material Safety Data Sheets of each product, solvent, or related chemicals to be used, and certification that the materials conform to local, state, and federal environmental and worker’s safety laws and regulations.

C. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

1.05 ENVIRONMENTAL REQUIREMENTS

A. Manufacturer and Installer are required to confirm that all materials used in accordance with this Section conform to local, state, and federal environmental and workers' safety laws and regulations.
   1. VOC content of materials shall not exceed the limits per Environmental Protection Agency National Volatile Organic Compound Emission Standards for Architectural Coatings (40 CFR 59, Subpart D).

B. The Installer is solely responsible for fume control and shall take all necessary pre-cautions against injury to personnel or adjacent building occupants during application. As a minimum, Installer shall take the following precautions:
   1. Provide and maintain barricades.
   2. Locate and protect building air intakes during application.
   3. Follow all state, federal, and local safety regulations.
   4. Follow all Manufacturer's safety requirements.
   5. Dispose empty containers immediately and properly.
   6. Use protective equipment.
   7. Ensure work area is well vented to the exterior.

1.06 TRANSPORTATION AND HANDLING

A. Deliver all materials to site in original, unopened containers bearing the following information:
   1. Name of Product
   2. Name of Manufacturer
   3. Date of Manufacture
   4. Lot or Batch Number

B. Store materials under cover and protected from the weather.

C. Replace containers showing any signs of damage with new material at no additional cost to Owner.

D. Mix and prepare coatings only in areas designated by the Contractor for that purpose.

E. Take precautions to prevent fire in or around coatings materials. Provide and maintain hand fire extinguisher near storage and mixing area.

F. At no time shall the weight of the stored material placed on a slab area exceed 30 PSF or 2,000 lbs. over 20 square inches.

PART 2 PRODUCTS

2.01 PAVEMENT MARKINGS

A. All materials shall meet Federal Specification FS TT-P-1952 or MPI #32.

B. Provide pavement markings as indicated on the Drawings.
   1. Provide Waterborne pavement markings when conditions permit them to be applied.
      a. See Manufacturer's recommendations for required conditions.
   2. Provide Solventborne pavement markings when conditions are too cold for Waterborne markings.

C. Approved pavement markings:
   1. Setfast Waterborne Acrylic Traffic Marking Paint, The Sherwin Williams Company, Cleveland, Ohio.
      a. Colors:
         1) TM226 White.
         2) TM227 Yellow.
         3) Handicap Blue Use TM226 White as base and add tint.
   2. SetFast Solventborne Acrylic Traffic Marking Paint, The Sherwin Williams Company, Cleveland, Ohio.
      a. Colors:
         1) TM5626 White.
         2) TM5627 Yellow.
         3) Handicap Blue Use TM51626 White as base and add tint.
   3. Or approved equal.

2.02 PAVEMENT MARKING BEADS

A. All materials shall meet AASHTO M 247, Glass Beads used in traffic paints, Type I. Beads shall be treated with a performance adhesion coating.

B. Provide Glass Beads at a rate of 6 pounds per gallon into all traffic arrows, center traffic lines, walkway stripes and floor text to produce reflectorized pavement markings. Glass beads are not required in parking space striping.

C. Approved pavement marking bead manufacturers are:
   1. Cataphote Inc., Jackson, MS.
   2. Potters Industries Inc., Valley Forge, PA.
   3. Flex-O-Lite, St. Louis, MO.
   4. Or approved equal.

PART 3 EXECUTION

3.01 INSPECTION

A. Architect/Engineer as required in the General Conditions any conditions detrimental to the proper execution of this work.

B. Do not proceed until unsatisfactory conditions are acceptably remedied. Commencement of work implies acceptance of related work.

3.02 PREPARATION

A. Before commencing work, make certain that surfaces are clean, dry, and in sound condition.

B. Do not paint any surface which is wet or damp.

C. Remove all oil, dust, grease, dirt, and other foreign material to ensure adequate adhesion.

D. Any discrepancies, interferences or changes in striping due to field conditions to the Architect/ Engineer prior to painting. Paint Contractor shall be required to remove paint, repair surface and repaint stripes not applied in strict accordance with the Drawings and Specification.

E. Verify compatibility with concrete sealer, joint sealant, traffic bearing membrane, and all other surface treatments as specified in Division 7.

3.03 MIXING

A. Do not intermix different types of materials or materials from different Manufacturers.

B. Do not thin material except as recommended by Manufacturer for spray application.

C. Mix paint thoroughly by boxing, stirring or power agitation before use.

3.04 APPLICATION

A. Apply painting and finishing materials in accordance with the Manufacturer's directions. Use techniques best suited for the material and surfaces to which applied. Apply at 15 mils wet thickness.

B. Do not apply paint when the air and/or surface temperature is below 50 degrees F, when relative humidity exceeds 85%, when rain is threatening or late in the evening when dew might form before drying.

C. It is recommended to allow concrete to age 60 days (asphalt 90 days) before coating, when practical.

D. Parking space striping dimensions indicated on the Drawings are nominal dimensions. Tolerances shall be as follows:
   1. Parking space length shall equal indicated length ± 2 inches.
   2. Parking space width (or base line dimension) shall equal indicated width ± 2 inches.
   3. Striping shall extend to within not more than 3 inches from walls or other vertical surfaces.
   4. A string of parking spaces shall equal indicated dimension ± 2 inches per run.
   5. Stripe width shall equal 4 inches ± 1/2 inch.

E. For traffic arrows, walkways stripes, and floor text add glass beads on wet paint so that proper bead embedment and retention is achieved.

F. All markings shall be placed in a clean and professional manner.
   1. Lines shall be straight and clear.
   2. There shall be no overspray.
   3. Lines intersections shall be neat and square.

3.05 CLEANING

A. Immediately upon completion of work, clean up all paint spots, remove excess materials and equipment, and repair all paint damage to other finishes.

END OF SECTION

This page intentionally left blank

SECTION 32 18 23
SYNTHETIC FIELD SPORT SURFACING

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Outdoor Turf Systems.

1.02 RELATED SECTIONS

A. Section 00 31 00 - Available information (Geotechnical Report)

B. Section 01 31 00 - Project Management and Coordination.

C. Section 01 33 00 - Submittal Procedures.

D. Section 01 40 00 - Quality Requirements.

E. Section 01 60 00 - Product Requirements.

F. Section 32 18 25 - Athletic Surfacing.

1.03 REFERENCES

A. ASTM D412 - Standard Test Methods for Vulcanized Rubber and Thermoplastic Elastomers--Tension; 2016 (Reapproved 2021).

B. ASTM D624 - Standard Test Method for Tear Strength of Conventional Vulcanized Rubber and Thermoplastic Elastomers; 2000 (Reapproved 2020).

C. ASTM D2859 - Standard Test Method for Ignition Characteristics of Finished Textile Floor Covering Materials; 2016 (Reapproved 2021).

D. ASTM F1292 - Standard Specification for Impact Attenuation of Surfacing Materials Within the Use Zone of Playground Equipment; 2022.

E. ASTM F1951 - Standard Specification for Determination of Accessibility of Surface Systems Under and Around Playground Equipment; Current Edition.

1.04 SYSTEM DESCRIPTION – OUTDOOR TURF SYSTEM

A. Performance Requirements: Provide a 2-layer (bottom layer rubber-polyurethane/top layer synthetic grass (without rubber infill) playground surfacing system that has been designed, manufactured and installed to meet the following criteria:
   1. Shock Attenuation (ASTM F1292):
      a. Gmax: Less than 200.
      b. Head Injury Criteria: Less than 1000.
   2. Flammability (ASTM D2859): Pass.
   3. Tensile Strength (ASTM D412): 60 psi (413 kPa).
   4. Tear Resistance (ASTM D624): 140%.
   5. Water Permeability: 0.4 gal/yd2/second.
   6. Accessibility: Comply with requirements of ASTM F1951.

1.05 SYSTEM DESCRIPTION – INDOOR TURF SYSTEM

A. Provide a 2-layer (bottom layer 3mm foam backing/ top layer broadloom tufted filament carpet)

1.06 SUBMITTALS

A. General: Submit listed submittals in accordance with Conditions of the Contract and Division 1 Submittal Procedures Section.

B. Product Data: Submit manufacturer’s product data and installation instructions.

C. Quality Assurance/Control Submittals: Submit the following:
   1. Certificate of qualifications of the playground surfacing installer.

D. Closeout Submittals: Submit the following:

1. Warranty documents specified herein.

1.07 QUALITY ASSURANCE

A. Qualifications: Utilize an installer approved and trained by the manufacturer of the playground surfacing system, having experience with other projects of the scope and scale of the work described in this section.

B. Certifications: Certification by manufacturer that installer is an approved applicator of the playground surfacing system.

1.08 DELIVERY, STORAGE & HANDLING

A. General: Comply with Division 1 Product Requirement Section.

B. Delivery: Deliver materials in manufacturer's original, unopened, undamaged containers with identification labels intact.

C. Storage and Protection: Store materials protected from exposure to harmful environmental conditions and at a minimum temperature of 40 degrees F (4 degrees C) and a maximum temperature of 90 degrees F (32 degrees C).

1.09 PROJECT SITE CONDITIONS

A. Environmental Requirements: Install surfacing system when minimum ambient temperature is 40 degrees F (1 degree C) and maximum ambient temperature is 90 degrees F (32 degrees C). Do not install in steady or heavy rain.

1.10 WARRANTY

A. Project Warranty: Refer to Conditions of the Contract for project warranty provisions.
   1. Manufacturer's Warranty: Submit, for Owner's acceptance, manufacturer's standard warranty document executed by authorized company official. Manufacturer's warranty is in addition to, and not a limitation of, other rights Owner may have under contract documents.
   2. Warranty Period: 5 years from date of completion of work.

PART 2 PRODUCTS

2.01 TF-1: OUTDOOR TURF SYSTEM

A. Acceptable Manufacturers:
   1. Surface America, Inc.
      a. Contact: PO Box 157, Williamsville, NY 14231; Telephone: (800) 999-0555, (716) 632-8413; Fax: (716) 632-8324; E-mail: info@surfaceamerica.com; website: http://www.surfaceamerica.com.
   2. Xgrass Innovative Turf Solutions.
      a. Contact: 242 Duckworth Road, Dalton, GA 30721. Mark Prince Telephone (651)341-7763. mark.prince@xgrass.com.

B. Acceptable Products/Systems.
   1. Surface America: PlayBound TurfTop playground surfacing system.
   2. Xgrass: Xgrass Rec.

C. Components:
   1. Primer:
      a. By Manufacturer.
   2. Basemat:
      a. By Manufacturer.
      b. Material: Blend of 100% recycled resilient material.
      c. Thickness: As recommended by Manufacturer for playground applications, see details.
   3. Synthetic Turf:
      a. The synthetic turf material shall be in accordance with the following:
         1) The fiber shall be low friction fiber, measuring not less than 1-1/4" high. The low friction fiber shall be specifically designed to virtually eliminate abrasion.

2) The tufted fiber weight shall not be less than 70 ounces per square yard. The fiber shall be tufted on a 3/8" tufting machine at a rate of 3 stitches per inch minimum. The low friction non-abrasive fiber shall be treated with a UV inhibitor.
3) The primary backing shall consist of a one part, two or three component polyester/polypropylene or urethane backing with a minimum weight of 7 ounces per square yard. The secondary backing shall consist of an application of polyurethane (minimum of 20 ounces per square yard); heat activated to permanently lock fiber tufts in place. Products using latex based secondary backings will not be acceptable. The synthetic grass system shall be perforated with 3/16" holes every four (4") inches min in both directions to provide for maximum drainage. Complete synthetic grass system (including base pad) shall drain in excess of 15" per hour. Non-perforated systems shall not be acceptable alternates for purposes of this specification.
4) Granular fill (Optional):
   (a) Provide Granular fill if recommended by manufacturer for application.
   (b) Infill to be Acrylic Coated quartz with anti-Microbial properties. Xgrass Envirofill or equal.
   (c) Color to match turf.
   (d) Crumb rubber infill is not permitted.
5) The turf shall be delivered in Manfacturer's standard widths and lengths best suited for the project.
6) The fiber shall be field green in color to simulate natural grass as closely as possible and treated with UV inhibitor.

b. Boundary lines:
   1) Boundary lines (white) shall be painted as shown on drawings with paint recommended by turf manufacturer.

2.02 TF-X1: OUTDOOR TURF SYSTEM, IN-FILL SYSTEM

A. Manufacturer: Xgrass.
B. Product: Prime
C. Pile Height: 1 1/2”.
D. Face Weight 53oz.
E. Fiber Type: Omega Horseshoe
F. Color: Summer Blend.
G. Thatch: Green.
H. Infill System (By Alternate): Xgrass Envirofill. 3lbs/sf
I. Location: See Drawings

2.03 MIXES

A. Required mix proportions by weight:
   1. Basemat (outdoor turf system): 16+% polyurethane (as ratio: 14% polyurethane divided by 86% rubber). 14% polyurethane, 86% rubber (based on entire rubber & polyurethane mix).

PART 3 EXECUTION

3.01 MANUFACTURER’S INSTRUCTIONS

A. Comply with the instructions and recommendations of the playground surfacing manufacturer.

3.02 EXAMINATION

A. Site Verification of Conditions: Verify that substrate conditions are suitable for installation of the playground surfacing system. New asphalt must be fully cured - up to 30 days. New concrete must be fully cured - up to 7 days.
B. Do not proceed with installation until unsuitable conditions are corrected.

3.03 PREPARATION

A. Surface Preparation:
   1. If asphalt or concrete base, using a brush or short nap roller, apply primer to the substrate perimeter and any adjacent vertical barriers such as playground equipment support legs, curbs or slabs that will contact the surfacing system at the rate of 300 ft2/gal (7.5 m2/L).
   2. If crushed stone base, must be contained by wood or concrete border, which the material will abut.

B. Remove from the work site and replace material, which has deteriorated, or become contaminated in any way, prior to its application, at no additional expense to this contract. Dispose of waste materials legally, off site.

3.04 INSTALLATION

A. Do not proceed with playground surfacing installation until all applicable site work, including substrate preparation, fencing, playground equipment installation and other relevant work, has been completed.

B. Basemat Installation (outdoor system):
   1. Using screeds and hand trowels, install the basemat at a consistent density of 29 pounds, 10 ounces per cubic foot (466 kg/m3) to the specified thickness.
   2. Allow basemat to cure for sufficient time so that indentations are not left in the basemat from applicator foot traffic or equipment.
   3. Do not allow foot traffic or use of the basemat surface until it is sufficiently cured.

C. Synthetic Turf installation (outdoor system):
   1. Rough cut synthetic grass rolls for installation.
   2. Using 15" wide seam tape and 1-part urethane adhesive, seam synthetic grass rolls to form monolithic surface. Adhere synthetic grass to basemat around play area perimeter.
   3. If infill is included in system, using manual or machine-operated spreading equipment, distribute infill throughout synthetic grass installation to manufacturer's recommended depth.

3.05 PROTECTION

A. Protect the installed playground surface from damage resulting from subsequent construction activity on the site.

END OF SECTION

SECTION 32 18 25
ATHLETIC SURFACING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Recreational and high traffic surface for Outdoor Turf Area stoops.

1.02 RELATED SECTIONS

A. Section 00 31 00 - Available Project Information: Geotechnical Report.

B. Section 01 11 10 - Summary of Work.

C. Section 01 31 00 - Project Management and Coordination.

D. Section 03 30 00 - Cast-in-Place Concrete.

E. Section 32 18 23 - Synthetic Field Sport Surfacing.

1.03 SUBMITTALS

A. Product Data: Manufacturer’s descriptive literature for specified cushioned athletic recreational sport coatings.

B. Shop Drawings: Dimensional plans indicating layout of athletic recreational sports coatings.

C. Samples: Two (2) sets of color chips representing manufacturer’s full range of available color finishes to athletic recreational sports coatings.

D. Quality Assurance Submittals: Manufacturer’s printed installation instructions.

E. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

1.04 QUALITY ASSURANCE

A. Qualifications:
   1. Manufacturer: Minimum five (5) years documented experience producing athletic recreational sports coatings similar to those specified.
   2. Installer: Minimum five (5) years documented experience installing athletic recreational sports coatings similar to those specified.

1.05 DELIVERY, STORAGE & HANDLING

A. Acceptance at Site: Ensure materials arrive at the site in unopened and undamaged containers. Do not allow unacceptable materials to be used.

B. Storage: Keep material from freezing, store on pallets in a cool place; never in the hot sun.

1.06 PROJECT CONDITIONS

A. Existing Conditions: Examine areas where materials are to be installed, particularly the sub-base, drainage, compaction and levelness.

B. Ensure area to be surfaced is to be clear of any construction traffic, pedestrian traffic and any obstructions during application.

1.07 WARRANTY

A. Manufacturer’s Warranty: Manufacturer’s standard warranty against defects in products.

B. Installer’s Warranty: Installers standard warranty against defective workmanship.

PART 2 PRODUCTS

2.01 ATHLETIC SURFACING FOR OUTDOOR TURF AREA STOOPS

A. Manufacturer:

1. Ever Top - Surface America, PO Box 157, Williamsville, NY 14231
   Phone: (800) 999-0555, Fax: 716-64323-8324

B. Materials:
   1. Ever Top Primer Material: Urethane.
   2. Ever Top Flooring Surface:
      a. Material: Blend of recycled EPDM (ethylene propylene diene monomer) rubber and Aromatic urethane binder per manufacturer's recommendations.
      b. Required mix proportions by weight: 22% urethane (ratio: 18% urethane divided by 82% rubber). 18% urethane, 82% rubber (based on entire rubber & urethane mix).
      c. Thickness: Nominal 1/2" (12.7 mm), minimum 3/8" (9.5 mm), maximum 5/8" (15.9 mm).
      d. Custom color created with combination of 4 standard colors: Hunter Green, Bright Green, Dark Grey, and Eggshell - submit sample for review and approval.
   3. Dry Static Coefficient of Friction (ASTM D2047): 1.0.
   4. Wet Static Coefficient of Friction (ASTM D2047): 0.9.
   5. Dry Skid Resistance (ASTM E303): 89.
   6. Wet Skid Resistance (ASTM E303): 57.

C. Concrete Slab Requirements: Minimum thickness, typically 4" for non-weight bearing loads per the standard of the geographic region. 2% slop is recommended with broom finish.

PART 3 EXECUTION

3.01 EXAMINATION

A. Check concrete surfaces for spalling, depressions, cracking and surface irregularities.

B. Installers Examination:
   1. Installer to examine conditions under which construction activities are to be performed, and then submit written notification if such conditions are unacceptable.
   2. Transmit 1 copy of installers report to architect.
   3. Beginning construction activities of this Section indicates installers acceptance of conditions.

3.02 INSTALLATION

A. Install athletic recreational sports surface in accordance with shop drawings and manufacturer's written instructions.

3.03 PROTECTION

A. Protect installed products of this Section from damage to function or finish by subsequent construction activities.

B. Repair minor damage to finishes in accordance with manufacturer's recommendations.

3.04 DEFECTIVE WORK OR MATERIALS

A. Remove from the work site and replace material, which has deteriorated, or become contaminated in any way, prior to its application, at no additional expense to this contract. Dispose of waste materials legally, off site.

END OF SECTION

SECTION 32 31 19
DECORATIVE METAL FENCES AND GATES

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Ornamental fences.
   2. Gates: single swing exit gates and double swing at Trash Enclosure gate.
   3. Hardware.
   4. Screens.
   5. Concrete Piers.
   6. Embed plates.

1.02 RELATED SECTIONS:

A. Section 00 31 00 - Available Project Information.

B. Section 01 33 00 - Submittal Procedures.

C. Section 01 40 00 - Quality Requirements.

D. Section 01 60 00 - Product Requirements.

E. Section 03 20 00 - Concrete Reinforcement.

F. Section 03 30 00 - Cast in Place Concrete.

G. Section 08 71 00 - Door Hardware.

1.03 REFERENCE STANDARDS

A. ASCE 7 - Minimum Design Loads and Associated Criteria for Buildings and Other Structures; Most Recent Edition Cited by Referring Code or Reference Standard.

B. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process; 2025.

C. ASTM C1107/C1107M - Standard Specification for Packaged Dry, Hydraulic-Cement Grout (Nonshrink); 2020.

D. ASTM F2408 - Standard Specification for Ornamental Fences Employing Galvanized Steel Tubular Pickets; 2016 (Reapproved 2023).

E. CLFMI WLG 2445 - Wind Load Guide for the Selection of Line Post and Line Post Spacing; 2023.

F. IEEE 81 - IEEE Guide for Measuring Earth Resistivity, Ground Impedance, and Earth Surface Potentials of a Grounding System; 2012.

1.04 PERFORMANCE REQUIREMENTS

A. Delegated Design: Design ornamental fences, foundations and gates, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated on Structural drawings.

B. Structural Performance: Ornamental fence, foundation and gate framework shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated according to ASCE 7.
   1. Post Size: 4 inches (at pool fence and outdoor child activity fence), 3” (at patio seating area) and post spacing not to exceed 10 feet (3 m).
   2. Minimum Post Size and Maximum Spacing: Determine according to CLFMI WLG 2445, based on size and pattern specified and on the following:
      a. Wind Loads: Design wind pressures shall be based on Basic Wind Speed, Risk Category and Exposure Category indicated on Structural Drawings.
      b. Fence Height: Varies - Coordinate with Architectural Drawings.
      c. Material Group: Galvanized square steel.

1.05 SUBMITTALS

A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for ornamental fences and gates.
   1. Fence and gate posts, rails, and fittings.
   2. Accessories: screen as indicated.
   3. Gates and hardware.

B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work. Show accessories, hardware, gate operation, and operational clearances.

C. Samples for Verification: Prepared on Samples of size indicated below:
   1. Polyester power coated components: In 6-inch (150-mm) lengths for components and on full-sized units for accessories.

D. Delegated-Design Submittal: For ornamental fences and gate framework indicated to comply with performance requirements and design criteria, including calculations signed and sealed by the qualified professional engineer responsible for their preparation.

E. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

F. Operation and Maintenance Data: Submit O&M manuals according to the requirements of Section 01 92 00 - Facility Operation and Maintenance. For the following to include in emergency, operation, and maintenance manuals:
   1. Polyester power coat finishes.
   2. Gate hardware.

1.06 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Emergency Access Requirements: Comply with requirements of authorities having jurisdiction for gates serving as a required means of access.

C. Pre-installation Conference: Conduct conference at Project site.
   1. Inspect and discuss electrical roughing-in, equipment bases, and other preparatory work specified elsewhere.
   2. Review sequence of operation for each type of gate operator.
   3. Review coordination of interlocked equipment specified in this Section and elsewhere.

1.07 PROJECT CONDITIONS

A. Field Measurements: Verify layout information for ornamental fences and gates shown on Drawings in relation to property survey and existing structures. Verify dimensions by field measurements.

PART 2 PRODUCTS

2.01 MANUFACTURER

A. Approved Manufacturer:
   1. Iron World
      9390 Davis Ave.
      Howard County, MD 20723.
      Telephone 301-776-7448.
      Fax 301-776-7449.
      www.IronWorldFencing.com

B. Approved Product:
   1. Maverick Industrial Ornamental Picket Fence:
   2. Style: Canterbury – flat top picket.

3. Height: Per drawings.
4. Post Option: 4” square x 11 GA.
5. Picket Option: ¾” square x 18 GA.
6. Color: See drawings and spec section 09 91 00.

2.02 ORNAMENTAL PICKET FENCE

A. Pickets: Galvanized square steel tubular members manufactured per ASTM A653/A653M with a G90 zinc coating 0.90 oz/ft2 and steel to have 45,000 psi (310 Mpa) yield strength. Picket size shall be 3/4” 18 gauge wall thickness, and spaced at 3-1/2” face to face. Pickets shall be attached to rails using ¼” industrial drive rivets.

B. Rails: Horizontal U” channels shall be 1½” x 1 ⅜” x 1 ½” 11 gauge wall thickness (.072”) and galvanized: G90 zinc coating 0.90 oz/ft2. Manufactured per ASTM A653/A653M with a 50,000 psi (344 MPa) yield strength. Rails shall be mechanically punched to receive pickets and drive rivets. Attach rails to brackets using one-way security fastener.

C. Posts: Galvanized square steel tubular members manufactured per ASTM A653/A653M with a G90 zinc coating, 0.90 oz/ ft2. Steel to have 45,000 psi (310 MPa) yield strength. Post are coated with zinc on the inside and outside. Post size options 4” 11 gauge wall thickness.

D. Finish: All posts, caps and fence panels shall be polyester coated individually after fabrication to thoroughly coat all surfaces for additional corrosion protection. All components enter a 5 stage in line cleaning process to prepare the galvanized surfaces for complete adhesion of the finish coat. Components are given a TGIC polyester resin powder coating applied by the electrostatic spray process to 3.0 mil thickness. The finish is baked in an oven for 15 - 20 minutes at a temperature ranging from 400°F.

2.03 ACCESSORIES

A. Post Caps: Aluminum or formed steel manufactured to form a weather-tight closure. Caps shall be sloped style on each post.

B. Rail/Post Brackets: Standard 1½” x 1 ⅜” x 1½”, 11 gauge galvanized steel channels. Cover to be pressed to bracket for permanent installation. Bracket shall be fastened to post with one spray galvanized hex bolt. Rails shall be attached to bracket with one-way security fastener.

C. Pickets shall be secured to rails with ¼” aluminum industrial drive rivets to prevent movement. Rivets have a shear strength of 1,500# and a holding power of 1,100#.

D. Picket Tops: Flat top pickets with plugs.

E. Corrugated Metal Screening: Where indicated on drawings. 25 gauge steel min, conforming to the requirements of ASTM A653 and shall have a hot-dipped galvanized coating designation G-90, zinc coating (0.90 oz/ft²). Iron Curtain or eq.

2.04 SWING GATES

A. General Ornamental Metal Fence: Single swing at exit gates with metal screen on swing gate and at strike side of door to prevent entry from outside of enclosure. Refer to drawings for exact layout and door sizes.

B. Hardware: pressed steel, galvanized, and powder coated.
   1. Refer to section 08 71 00 for door hardware.
   2. Provide exit devices per drawings and section 08 71 00.

C. General Metal Trash Enclosure Doors: Double swing at Trash Enclosure gate types. Interlocking metal panels with vertical orientation at Trash Enclosure gate. Bolt/pin type door stop to be installed in door and concrete paving to secure door in closed position.

2.05 SETTING MATERIALS

A. Concrete: Minimum 28 day compressive strength of 2,500 psi.

B. Plated Post: Provide 1/2” steel base plates with 4 holes for surface mounting where indicated.

2.06 GROUT AND ANCHORING CEMENT

A. Non-shrink, Nonmetallic Grout: Premixed, factory-packaged, non-staining, noncorrosive, nongaseous grout complying with ASTM C1107/C1107M. Provide grout, recommended in writing by manufacturer, for exterior applications.

B. Erosion-Resistant Anchoring Cement: Factory-packaged, non-shrink, non-staining, hydraulic-controlled expansion cement formulation for mixing with potable water at Project site to create pourable anchoring, patching, and grouting compound. Provide formulation that is resistant to erosion from water exposure without needing protection by a sealer or waterproof coating and that is recommended in writing by manufacturer, for exterior applications.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine areas and conditions, with Installer present, for compliance with requirements for a verified survey of property lines and legal boundaries, site clearing, earthwork, pavement work, and other conditions affecting performance of the Work.
   1. Do not begin installation before final grading is completed unless otherwise permitted by Project Manager.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Stake locations of fence lines, gates, and terminal posts. Do not exceed intervals of 500 feet (152.5 m) or line of sight between stakes. Indicate locations of utilities, lawn sprinkler system, underground structures, benchmarks, and property monuments.

3.03 INSTALLATION, GENERAL

A. Install ornamental fencing to comply with ASTM F2408.
   1. Install fencing on established boundary lines inside property line.

B. Install fence per fence industry standards.

C. Set post uniformly at 8’-0” to 10’-0” on center unless otherwise indicated in drawings.

D. Set posts in concrete having a diameter 4 times the diameter of the post, and 6” deeper than the bottom of the post. Forms are not necessary or recommended.

E. Check each post for vertical and top alignment.

F. Attach panels to brackets using removable bolts.

3.04 ORNAMENTAL FENCE INSTALLATION

A. Post Excavation: Drill or hand-excavate holes for posts to diameters and spacing indicated, in firm, undisturbed soil.

B. Post Setting: Set posts in concrete at indicated spacing into firm, undisturbed soil.
   1. Verify that posts are set plumb, aligned, and at correct height and spacing, and hold in position during setting with concrete or mechanical devices.
   2. Concrete Fill: Place concrete around posts to dimensions indicated and vibrate or tamp for consolidation. Protect aboveground portion of posts from concrete splatter.
      a. Exposed Concrete: Extend 2 inches (50 mm) above grade; shape and smooth to shed water.
      b. Concealed Concrete: Top as indicated on Drawings to allow covering with surface material.

3.05 GATE INSTALLATION

A. Install gates according to manufacturer's written instructions, level, plumb, and secure for full opening without interference. Attach screening. Attach hardware using tamper-resistant or concealed means. Install ground-set items in concrete for anchorage. Adjust hardware for smooth operation and lubricate where necessary.

3.06 FIELD QUALITY CONTROL

A. Grounding-Resistance Testing: Owner will engage a qualified testing agency to perform tests and inspections.
   1. Grounding-Resistance Tests: Subject completed grounding system to a megger test at each grounding location. Measure grounding resistance no fewer than two full days after last trace of precipitation, without soil having been moistened by any means other than natural drainage or seepage and without chemical treatment or other artificial means of reducing natural grounding resistance. Perform tests by two-point method according to IEEE 81.
   2. Excessive Grounding Resistance: If resistance to grounding exceeds specified value, notify Project Manager promptly. Include recommendations for reducing grounding resistance and a proposal to accomplish recommended work.
   3. Report: Prepare test reports certified by a testing agency of grounding resistance at each test location. Include observations of weather and other phenomena that may affect test results.

3.07 ADJUSTING

A. Gates: Adjust gates to operate smoothly, easily, and quietly, free of binding, warp, excessive deflection, distortion, nonalignment, misplacement, disruption, or malfunction, throughout entire operational range. Confirm that latches and locks engage accurately and securely without forcing or binding.

B. Lubricate hardware and other moving parts.

3.08 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's personnel to adjust, operate, and maintain ornamental fences and gates.

END OF SECTION

This page intentionally left blank

SECTION 32 33 00
SITE FURNISHINGS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Bike Racks.

B. Shade Umbrellas.

C. Cabanas.

1.02 RELATED SECTIONS

A. Section 01 33 00 - Submittal Procedures.

B. Section 01 40 00 - Quality Requirements.

C. Section 01 60 00 - Product Requirements.

D. Section 03 30 00 - Cast In Place Concrete.

E. Section 26 56 00 - Exterior Lighting.

1.03 SUBMITTALS

A. Product Data: For each type of product included, provide construction details, material descriptions, dimensions of individual components and profiles, and finishes for bike racks.

B. Shop Drawings: For each type of product indicated:
   1. Shade Umbrellas.
   2. Cabanas.

C. Manufactures' Warranties.
   1. Bike Rack:
      a. Manufacturer's 2 year warranty.
   2. Shade Umbrellas:
      a. Manufacturer's 15 year Warranty for mast, structure and hardware.
      b. Manufacturer's 5 year Warranty for finishes, lift system.
   3. Cabanas:
      a. Manufacturer's 15 year Warranty for frame, roof and supports.
      b. Manufacturer's 5 year Warranty for finishes.

1.04 DELIVERY, STORAGE & HANDLING

A. Acceptance at Site: Ensure materials arrive at the site in unopened and undamaged containers. Packaging, Shipping, Handling and Unloading; Observe manufacturer’s recommendations and handle in a manner to prevent breakage.

B. Time delivery and installation of products to avoid extended on-site storage and to coordinate with work adjacent to installation locations.

C. Storage: Keep material from freezing, Store on pallets in a cool place; never in the hot sun.

1.05 PROJECT CONDITIONS

A. Field Measurements: Verify layout information shown on Drawings in relation to property survey and existing structures. Verify dimensions by field measurements. Assure structural connections are properly located per plans and per manufacturer’s requirements.

PART 2 PRODUCTS

2.01 BIKE RACK

A. Available Manufacturer’s: Subject to compliance with requirements, manufacturers offering products that may be incorporated in the work include, but are not limited to the following
   1. Basis of Design: Huntco Supply, LLC. Portland, OR, (800-547-5909) model “BR Plus-X.”

B. Model: "Rambler Wide," Seven Bike Capacity.

C. Construction: 2-3/8” OD, 0.154 ASTM A53, Schedule 40 steel pipe, inverted “U” style, 36” to top of the inverted “U”, 18” clear between vertical members.

D. Mounting: In-ground (IG) mounting.

E. Finish: Innotek, Polyarmor G17, thermoplastic polyethylene copolymer-based powder coat.

F. Color: Tan “RAL1001.”

G. Post: Weldment comprised of 5” O.D. x 11 GA. (.120”) stainless steel tubing.

H. Finish: Powdercoat, color to be reviewed and approved by architect.

2.02 UMBRELLAS

A. Manufacturer: Tuuci.

B. UMB-1:
   1. Ocean Master MAX Single Cantilever – CL13 OCT
      a. Parasol Style and Shape: Market Profile – Octagon
      b. Parasol Size: 13’
      c. Parasol Type: Full Umbrella
      d. Top Canopy: Single panel color with edge binding – Fabric: Captain Navy
      e. Top Single Panel Fabric: To match canopy
      f. Frame Finish: Powder Coat – Espresso
      g. Lift System: Easy Drive Crank with wind stabilizer
      h. Final: MAX Accent Final
      i. Mast Height: 108” Open Position, 141" Closed Position
      j. Mounting: Through paver, concrete-set, in-ground security mount, confirm finishing plates with architect and manufacturer.

2.03 CABANAS

A. Manufacturer: Tuuci
   1. Model: Solanox

B. CABN-1:
   1. Frame:
      a. Dimensions: 10’ x 12’
      b. Finish: Powder Coat - Espresso
   2. Roof:
      a. Type: Trellis with soft shade fabric solar screen
      b. Horizontal member finish: Powder Coat - Espresso
      c. Fabric Color: Twitchell Desert Tan
   3. 12’ Back Wall 1:
      a. Type: Trellis
      b. Finish: Powder Coat - Espresso
   4. 10’ Side Wall 2: Full curtains in Sunbrella Canvas Flax #5492.
   5. 12’ Front Wall 3: NO WALL.
   6. 10’ Side Wall 4: Full curtains in Sunbrella Canvas Flax #5492.
   7. Electrical: Outlet & USB included in each cabana, coordinate with electrical for power connection points. Standard outlet and USB location.
   8. Mounting: through-paver, concrete-set security mount IGSM with leveling stainless steel base plate.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine areas and conditions, with Installer present, for compliance with manufacturers requirements before installation; reject any product with defects.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Install bike rack to comply with manufacturer's written instructions, referenced standards and as indicated.

B. Transport, Install; and Clean Umbrellas to comply with manufacturer's written instructions, referenced standards and as indicated.

C. Transport; Install, and Clean Cabanas to comply with manufacturer's written instructions, referenced standards and as indicated.

1. Coordinate lighting and technology features with Electrical and Technology Contractors, drawings and specifications.

3.03 PROTECTION

A. Protect surfaces, edges, and corners from construction damage.

B. Before inspection for Substantial Completion, remove protective coverings and clean surfaces.

3.04 WARRANTY

A. Closeout Submittals: Provide manufacturer's completed warranty form and submit to client.

END OF SECTION

This page intentionally left blank

SECTION 32 35 00
SCREENING DEVICES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Decorative Exterior Ceramic Screening.

1.02 RELATED SECTIONS

A. Section 01 31 00 - Project Management and Coordination.

B. Section 01 33 00 - Submittal Procedures.

C. Section 01 40 00 - Quality Requirements.

D. Section 01 60 00 - Product Requirements.

E. Section 04 20 00 - Unit Masonry.

F. Section 05 50 00 - Metal Fabrications.

1.03 REFERENCE STANDARDS

A. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware; 2023.

1.04 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements for submittal procedures.

B. Submit product data and certification of products to include:
   1. Ceramic Components.
   2. Anchors.
   3. Mortar.
   4. Reinforcement.

C. Shop drawings:
   1. Ceramic unit layout.
   2. Reinforcement.
   3. Frame.

D. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

1.05 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Fabricator Qualifications: Company specializing in fabricating products specified in this section, with at least three years of documented experience.

C. Installer Qualifications: Company specializing in performing work of the type specified and with at least three years of documented experience.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Package units and protect them from staining or damage during shipping and storage.

B. Provide an itemized list of product to support the bill of lading.

1.07 WARRANTY

A. See Section 01 78 00 - Closeout Submittals for additional warranty requirements.

B. Installer Warranty: Provide 2-year warranty commencing on the Date of Substantial Completion. Complete forms in Owner's name and register with installer.

PART 2 PRODUCTS

2.01 CERAMIC UNITS

A. Manufacturer:
   1. WOW USA, Inc.
      9408 Gunston Cove Rd. Unit C-D
      Lorton VA 22079 United States
      (703) 910-6162

B. Materials:
   1. ICON Series INOUT Sand
   2. Substitutions: Not Permitted.
   3. Dimensions: 4" x 8" x 3"
   4. Installation Pattern: See Drawings.

2.02 METAL FRAMES

A. See Section 05 50 00 - Metal Fabrications and Structural Drawings.

2.03 MASONRY ANCHORS

A. See Section 04 20 00.

B. Adjustable “Mechanical” Anchors for Connecting to Cold-Formed Steel Framing: Provide anchors that allow vertical adjustment but resist tension and compression forces perpendicular to plane of wall as recommended by Ceramic Unit Manufacturer.
   1. Hohmann and Banard: HB-213 Adjustable Anchors.
   2. Or equal.

C. Masonry Joint Reinforcement for Single-Wythe Masonry: truss type with single pair of side rods.
   1. Products: Subject to compliance with requirements. Provide one of the following: Single Wythe Joint Reinforcement: Truss type; hot dipped galvanized to comply with ASTM A153/A153M, Class B2 coating; 9 gage side rods and cross ties. Provide preformed corners and tees.
      a. Hohman and Barnard, Inc., Lox-All No. 125 Truss-Mesh.
      b. Dur O Wal, Inc., Dur O Wal Truss.
      c. Wire Products, Blok Trus AA600.
      d. Masonry Reinforcing Corporation of America, Series 300, Single Wythe Truss Type.
      e. Or approved equal.

2.04 MORTAR

A. See Section 04 20 00.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that all substrates have been installed according to requirements.

B. Notify Architect in the event of unsatisfactory conditions.

C. Commencement of work indicates acceptance of conditions.

3.02 INSTALLATION: STEEL FRAME

A. See Section 05 50 00 - Metal Fabrications and Structural Drawings.

B. Field Painting:
   1. Install Masonry anchors prior to field painting of frame.
   2. Field paint frame as indicated on drawings.
   3. Protect exposed surfaces of frame during Ceramic unit installation.

3.03 INSTALLATION: CERAMIC UNITS

A. Install in accordance with manufacturer's written instructions.

B. Avoid cutting units: use manufacturer's full and half units as indicated on drawings.

C. Provide Expansion joints for areas of screen wall longer than 12'-0".

D. Paint Units as indicated.

3.04 PROTECTION

A. Protect installed materials from subsequent construction operations.

END OF SECTION

This page intentionally left blank

SECTION 32 35 15
LANDSCAPE SHADE TOPS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Landscape shade tops.

1.02 RELATED SECTIONS:

A. Section 01 33 00 - Submittal Procedures.

B. Section 01 40 00 - Quality Requirements.

C. Section 01 60 00 - Product Requirements.

D. Section 01 92 00 - Facility Operation and Maintenance.

E. Division 3 Section Cast-in-Place Concrete for cast-in-place concrete post footings.

1.03 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00.

1.04 SUBMITTALS

A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for Landscape Shade Tops.
   1. Landscape Shade Top fabric, posts, and fittings.
   2. Accessories: None.

B. Material and Color Samples: For pre-finished structural members and shade canopy fabric.

C. Product Certificates: For each type of Landscape Shade Structure, from manufacturer.

D. Product Test Reports:
   1. Framing strength according to ASTM F2408.
   2. Non-Combustible per NFPA 701B.

E. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

F. Operation and Maintenance Data: Submit O&M manuals according to the requirements of Section 01 92 00 - Facility Operation and Maintenance. For the following to include in emergency, operation, and maintenance manuals:
   1. Assembly.
   2. Polyester power coat finishes.

G. Warranty: Sample of special warranty.

1.05 DELIVERY, STORAGE & HANDLING

A. Acceptance at Site: Ensure materials arrive at the site in unopened and undamaged containers.

B. Storage: Keep material from freezing, store on pallets in a cool place; never in the hot sun.

C. Deliver landscape shade tops cardboard-wrapped or crated to provide protection during transit and job storage.

D. Inspect landscape shade tops on delivery for damage. Minor damages may be repaired provided refinished items match new work and are acceptable to the Architect; otherwise, remove and replace damaged items as directed.

1.06 PROJECT CONDITIONS

A. Field Measurements: Verify layout information for Landscape Shade Tops shown on Drawings in relation to property survey and existing structures. Verify dimensions by field measurements.

PART 2 PRODUCTS

2.01 MANUFACTURER

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated in the work include, but are not limited to the following
   1. Landscape Structures, Inc.; “CoolToppers” Single Post Shade.
   2. USA Shade and Fabric Structures; Single Post Pyramid Unit.
   3. Or approved substitution.

2.02 CONSTRUCTION

A. Shade Top: High-density polyethylene with ultra-violet additives. All corners to be strengthened with 16 oz. non-tear vinyl material. Protective webbing is sewn into all areas where steel cable enters/exits cloth pockets. Live loads 20.00 psf. Wind design speed to withstand 80 mph. Uplift 18.75 psf. Snow Loads 5.00 psf. Tear strength warp 220.46 lb. and wet 462.97 lb. Burst strength 37.70 PSIA.
   1. Color: Tan. (Desert Sand)
   2. Color at Diamond Pool Reception: Denim. (Navy Blue)

B. Roof Sleeve: Cast from 319 almag.

C. Disc: 1” thick x 10” diameter white high density UV stabilized polyethylene.

D. Extension Arms: Weldment comprised of 2.375” O.D. RS-20 (.095”-.105”) galvanized steel tubing and 5/16” HRPO gusset. Finish: Powdercoat, color: Tan.

E. Post: Weldment comprised of 5” O.D. x 11 GA. (.120”) stainless steel tubing. Finish: Powdercoat, color: Tan.

F. Size: 12 ft by 12 ft.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine areas and conditions, with Installer present, for compliance with requirements for landscape shade tops before installation; reject any landscape shade tops with defects.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Install landscape shade tops to comply with manufacturer’s written instructions, referenced standards and as indicated.

END OF SECTION

SECTION 32 35 16
OUTDOOR SHADE STRUCTURES

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Outdoor Awning Shade Structure.

1.02 RELATED SECTIONS:

A. Section 01 33 00 - Submittal Procedures.

B. Section 01 40 00 - Quality Requirements.

C. Section 01 60 00 - Product Requirements.

D. Section 01 92 00 - Facility Operation and Maintenance.

E. Section 03 30 00 - Cast-in-Place Concrete for cast-in-place concrete post footings.

F. Section 32 31 13 - Tennis/Pickleball Fences Gates and Windscreens, for connections to Tennis/Pickleball Fence.

1.03 DESCRIPTION

A. Work Included: Furnish and install the outdoor shade structures as indicated on the drawings, specified herein, and as necessary for proper completion including, but not necessarily limited to:
   1. Shade fabric top material.
   2. Tension cable and related hardware.
   3. Structural steel support system.
   4. Concrete foundations.
   5. Concrete reinforcement.
   6. Fire resistance.
   7. Fire protection.
   8. Lighting.
   9. Installation supervision.
   10. Labor, material and equipment to complete the installation.
   11. Operations and maintenance manuals.
   12. On site training.

1.04 PERFORMANCE REQUIREMENTS

A. Delegated Design:
   1. Design 100 percent of Awning shade structure, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
      a. Design Awning shade structures under direct supervision of a Professional Structural Engineer experienced in design of this work and licensed in the state/province of the project.

B. Design Trellis shade system and cable supports to be attached to the structure provided.
   1. Design Trellis shade structures under direct supervision of a Professional Structural Engineer experienced in design of this work and licensed in the state/province of the project.

1.05 SUBMITTALS

A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for Outdoor shade structure.
   1. Outdoor shade structure fabric, posts, and fittings.
   2. Accessories.

B. Samples for Verification:
   1. Shade fabric.
   2. Steel colors.

C. Shop Drawings:
   1. Shade Structure Canopy Design:
      a. Shade structure canopy design shall be completed and constructed by the shade structure manufacturer.
      b. Shade structure canopy design, as it relates to connecting to the existing building, shall be coordinated with the Engineer of Record.
   2. Concrete Foundation Design:
      a. Concrete foundation design shall be completed by the shade structure manufacturer and constructed by the general contractor.
   3. Anchor bolts for the shade structure foundations shall be hot dip galvanized and supplied by the shade structure manufacturer.
   4. The shade structure structural steel supports shall be installed by the shade structure manufacturer under the direct supervision of the manufacturer's representative.
   5. Design Submittal: The Contractor shall submit three sets of detailed design calculations and final plans, elevations, and details of the shade structure(s). All calculations and drawings shall be prepared and sealed by a professional Structural Engineer (P.E.) –experienced in shade structure design and licensed in the state where the structure is to be built.

D. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

E. Operation and Maintenance Data: Submit O&M manuals according to the requirements of Section 01 92 00 - Facility Operation and Maintenance. For the following to include in emergency, operation, and maintenance manuals:
   1. Assembly.
   2. Polyester powder coat finishes.

F. Warranty: Sample of special warranty.

1.06 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Codes and Standards:
   1. In addition to complying with all applicable codes and regulations, comply with pertinent recommendations contained in the following:
      a. "Specifications for the Design, Fabrication and Erection of Structural Steel for Buildings" of the American Institute of Steel Construction.

C. Manufacturer's Qualifications: Company specializing in manufacturing products specified in this section with not less than three (3) years of documented experience.

D. Installer Qualifications: Company specializing in performing the work of this Section with a minimum of three (3) years of experience.

E. Products Requiring Electrical Connection: Listed and classified by UL as suitable for the purpose specified and indicated.

1.07 DELIVERY, STORAGE & HANDLING

A. Acceptance at Site: Ensure materials arrive at the site in unopened and undamaged containers.

B. Storage: Keep material from freezing, store on pallets in a cool place.

C. Deliver outdoor shade structure cardboard-wrapped or crated to provide protection during transit and job storage.

D. Inspect outdoor shade structure on delivery for damage. Minor damages may be repaired provided refinished items match new work and are acceptable to the Architect; otherwise, remove and replace damaged items as directed.

1.08 WARRANTY

A. All work of this Section shall be warranted against all defects of material and/or application for a period of one (1) year from the date of acceptance. The shade structure's fabric top material shall be warranted for six (6) years against failure from significant deterioration. Any failures that may occur within this warranty period, due to defective installation and/or materials, shall up written notification of such failure be immediately repaired or replaced.

1.09 PROJECT CONDITIONS

A. Field Measurements: Verify layout information for shade structure as shown on Drawings in relation to property survey and existing structures. Verify dimensions by field measurements.

PART 2 PRODUCTS

2.01 MANUFACTURER

A. Manufacturers: Subject to compliance with requirements, provide products by the following:
   1. USA Shade and Fabric Structures.

2.02 TYPES

A. "Awning" Shade Structure.
   1. Shade Fabric Top Material:
      a. Raw Material: High-density fire-retardant polyethylene with ultra-violet additives.
      b. Construction: Monofilament and tape construction giving a stable material to ensure material will not unravel if cut.
      c. Sewing Specifications:
         1) Strengthened with 16 oz. Non-tear vinyl material.
         2) Protective Webbing: Sewn into all areas where steel cable enters/exits cloth pockets.
   2. Tension Cable & Related Hardware:
      a. General: All hardware to be first grade stainless steel. All bolt fittings include nylon washers for watertight seals at all joints.
      b. Bolts: All erection bolts are ASTM A307, Grade B, treated to retard corrosion, or stainless steel.
      c. Wire Rope: ¼" nominal diameter, 7 strand, 19 wires per strand (minimum), with a minimum nominal tensile strength of 9,000 pounds. Wire rope shall be secured with approved fittings and cable hardware, as per manufacturer's specifications.
   3. Structural Steel Support System:
      a. Where size of structure or determined loads requires larger structural steel members or steel greater than 7-gauge thickness, carbon steel may be substituted. Cleaning and coating of carbon steel conforms to the following:
         1) A de-greasing agent is applied to remove surface oil and grease.
         2) An acid-phosphate wash is applied to etch and prepare the surface for powder-coating, where wall thickness requires preheating.
         3) Steel members are preheated prior to powder coat application to assure adhesion.
      b. All carbon Structural Steel shall be ASTM A36, except steel pipe columns, which shall be ASTM A53, Grade B, unless otherwise noted. Slip fittings are manufactured using drawn-over-mandrel steel with minimum yield strength of70 ksi and a minimum tensile strength of 80 ksi.
      c. Steel telescoped sleeves do not have more than 1/16" tolerance, with no less than 4" overlap at all sleeves. All internal fittings are welded on one side.
      d. Structural steel is detailed, fabricated, and erected in accordance with AISC specifications.
      e. Shop connections are welded unless noted otherwise. Field connections are separately indicated on the shop drawings.
      f. All welds are performed using E70 electrodes or gas-metal arc welding using ER 7053 wire. All fillet welds are a minimum 3/16" unless otherwise noted. All steel shall be welded shut at terminations to prevent internal leakage.

g. All structural steel plates are rust/corrosion treated by zinc electroplating. Steel tubing and plates are finished with a minimum of 2.5 to 3.5 mil thick UV-inhibited weather resistant powder coat.

B. Accessories to outdoor shade structures:
   1. Ceiling fans.
   2. See Electrical drawings and Specifications.
      a. See Architectural drawings for size and location.
      b. Coordinate mounting, wiring and controls with Shade Structure provider and electrical.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine areas and conditions, with Installer present, for compliance with requirements for shade structures before installation.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 FABRICATION

A. Fabricate all shade structures in strict accordance with the approved Shop Drawings and referenced standards.

3.03 INSTALLATION OF FOOTINGS & FOUNDATIONS

A. Foundations shall be installed in strict accordance with the Shop Drawings. All supplies, labor and installation will be furnished by others and not the responsibility of the shade structure manufacturer. Install in accordance with the manufacturer’s structural drawings and instructions.

B. If AHJ requires Special Inspections of footings, coordinate special inspections with owner and Spec Section 01 45 33.

3.04 ERECTION

A. Erect all shade structures in strict accordance with the shop drawings and all pertinent regulations and standards.

3.05 CLEAN-UP

A. Upon completion of the work of this section, immediately remove all debris and rubbish occasioned by this work.

3.06 OWNER INSTRUCTION

A. Manufacturer shall train Life Time personnel in the operation, maintenance, required removal, etc., of the shade structures at the job site during start-up.

END OF SECTION

SECTION 32 84 00
PLANTING IRRIGATION

PART 1 GENERAL

1.01 SUMMARY

A. Scope of work: Furnish and install the complete underground irrigation system specified herein including: enclosure, meter, backflow prevention and Irrigation controller throughout site; including labor, materials, equipment, apparatus, and services for the testing, adjusting, retesting and readjusting as required to place the system in an approved operating condition.

B. Unless otherwise specified, the plans and specifications are intended to include everything obviously requisite and necessary for the proper installation and completion of the work whether each necessary item is mentioned herein or not.

C. The plans and specifications are intended to be cooperative and any item called for in one and not the other shall be as binding as if called for in both.

D. Any Contractor field alterations to the plan, details, or specifications will not be approved by the Facility Manager and/or Landscape Architect. Submittals for substitutions must be submitted 14 days prior to bid for consideration.
   1. The irrigation systems shall include the following:
      a. Source Location – from 4” water line (By Others), meter, backflow (meter and backflow to be installed on “flange” fitting for ease of removal). Contractor to verify location (approximate locations shown in design documents), quality and available flow characteristics as listed in design documents. Contractor to inform Facility Manager’s Representative of any perceived issues with source location.
      b. Control System:
         1) As approved by LT Operations.
         2) Cellular Modem - to be installed by a qualified Contractor.
         3) Soil Moisture Sensors
         4) Flow Sensor
         5) Pressure Sensor Kit
         6) Lightning Arrestor, with grounding as required.
      c. Piping.
      d. Sprinkler heads.
      e. Valves and Valve boxes.
      f. Control wiring & Grounding.
      g. Fittings.
      h. Electrical connections.
      i. Quick-couplers.
      j. All other necessary accessories.
      k. System Manuals.
      l. Instructional walk-through with Facility Manager.

E. Limits of work: Area within project limits as delineated on the irrigation plan.

F. Related Sections: The following Sections contain requirements that relate to this Section:
   1. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.02 DEFINITIONS

A. Backfill: The earth used to replace or the act of replacing earth in an excavation.
   1. Balled and Burlapped Stock: Plants dug with firm, natural balls of earth in which they were grown, with ball size not less than diameter and depth recommended by ANSI Z60.1 for type and size of plant required; wrapped with burlap, tied, rigidly supported, and drum laced with twine with the root flare visible at the surface of the ball as recommended by ANSI Z60.1.

B. Balled and Potted Stock: Plants dug with firm, natural balls of earth in which they are grown and placed, unbroken, in a container. Ball size is not less than diameter and depth recommended by ANSI Z60.1 for type and size of plant required.

C. Bare-Root Stock: Plants with a well-branched, fibrous-root system developed by transplanting or root pruning, with soil or growing medium removed, and with not less than minimum root spread according to ANSI Z60.1 for type and size of plant required.

D. Container-Grown Stock: Healthy, vigorous, well-rooted plants grown in a container, with a well-established root system reaching sides of container and maintaining a firm ball when removed from container. Container shall be rigid enough to hold ball shape and protect root mass during shipping and be sized according to ANSI Z60.1 for type and size of plant required.

E. Duff Layer: The surface layer of native topsoil that is composed of mostly decayed leaves, twigs, and detritus.

F. Fabric Bag-Grown Stock: Healthy, vigorous, well-rooted plants established and grown in-ground in a porous fabric bag with well-established root system reaching sides of fabric bag. Fabric bag size is not less than diameter, depth, and volume required by ANSI Z60.1 for type and size of plant.
   1. Finish Grade: Elevation of finished surface of planting soil.

G. Manufactured Topsoil: Soil produced off-site by homogeneously blending mineral soils or sand with stabilized organic soil amendments to produce topsoil or planting soil.
   1. Pesticide: A substance or mixture intended for preventing, destroying, repelling, or mitigating a pest. This includes insecticides, miticides, herbicides, fungicides, rodenticides, and molluscicides. It also includes substances or mixtures intended for use as a plant regulator, defoliant, or desiccant.

H. Pests: Living organisms that occur where they are not desired, or that cause damage to plants, animals, or people. These include insects, mites, grubs, mollusks (snails and slugs), mammals (gophers, moles, and mice), unwanted plants (weeds), fungi, bacteria, and viruses.

I. Planting Area: Areas to be planted.

J. Planting Soil: Standardized topsoil; existing, native surface topsoil; existing, in-place surface soil; imported topsoil; or manufactured topsoil that is modified with soil amendments and perhaps fertilizers to produce a soil mixture best for plant growth.

K. Plant, Plants, Plant Material: These terms refer to vegetation in general, including trees, shrubs, vines, ground covers, ornamental grasses, bulbs, corms, tubers, or herbaceous vegetation.
   1. Root Flare: Also called "trunk flare." The area at the base of the plant's stem or trunk where the stem or trunk broadens to form roots; the area of transition between the root system and the stem or trunk.

L. Stem Girdling Roots: Roots that encircle the stems (trunks) of trees below the soil surface.

M. Subgrade: Surface or elevation of subsoil remaining after excavation is complete, or the top surface of a fill or backfill before planting soil is placed.
   1. Subsoil: All soil beneath the topsoil layer of the soil profile, and typified by the lack of organic matter and soil organisms.

N. Surface Soil: Soil that is present at the top layer of the existing soil profile at the Project site. In undisturbed areas, the surface soil is typically topsoil; but in disturbed areas such as urban environments, the surface soil can be subsoil.

1.03 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Irrigation contractor must be able to provide “Verifiable Documentation” that they have the technical qualifications, experience, trained personnel and facilities to perform the specified work, including experience with Irrigation control system to be installed and have been engaged in sprinkler design and installation, of systems of similar size and scope for a minimum of five years. Contractor must

submit, along with bid, a list of five projects/contacts of similar scope completed within the last three years.

C. Quality Control Criteria:
   1. Provide irrigation products as described in this specification and according to manufacturer's specifications.
   2. Contractor shall have, on site at all times during construction, a designated individual who is qualified by the irrigation system manufacturer. No work shall be done on site when the authorized individual is not on site.
   3. Comply with requirements of the State of installation for prevention of backflow and back-siphonage.
   4. Comply with requirements of the State of installation for plumbing and other regulations affecting site irrigation.
   5. Comply with National Plumbing Code, National Electric Code, and all other applicable city or state codes.

1.04 SUBMITTALS

A. General: Submit the following according to the Conditions of the Contract and Division 1 Specification Sections.

B. Submit manufacturer's literature, technical data, and recommendations for the system as specified including:
   a. Certificate from Irrigation System Manufacturer that Installer is qualified to install the system.
   b. Pipe.
   c. Fittings.
   d. Valves.
   e. Controller/Flow Sensor.
   f. Backflow preventer.
   g. Wiring & Grounding.
   h. Valve boxes.

C. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

D. Closeout Submittals – Submit the following:
   1. As-built drawings: Following construction of system, submit two (2) reproducible hard line sets of as-built drawings and an electronic copy (BIM or AutoCAD release 2018 or newer).
   2. Irrigation controller complete setup including but not limited to;
      a. Programs for turf, landscape and annuals.
      b. Flows learned and verified for each zone.
      c. Moisture Sensors setup and verified.
      d. Pressure Sensor setup and verified.
      e. Zone Information including – type, decoder information and location descriptions.
      f. Grounding/Lightening Arrestors locations and field readings at all locations.

E. Submit color-coded As-Built drawing of controller chart including zone descriptions, locations, decoder serial numbers and suggested run times.

1.05 JOB CONDITIONS

A. Contractor shall carefully examine the work site, local conditions, specifications and plot plan for any existing conditions and limitations that may apply to the work. Submission of a proposal shall be considered evidence than an examination has been conducted and that any questions and/or concerns have been satisfied.

B. Utilities: Determine location of utilities and perform work in a manner which will avoid possible damage. When necessary the Contractor shall make any minor adjustments in location or alignment of the new work. Hand excavate, as required. Maintain grade stakes set by others until removal is mutually agreed upon by parties concerned. Contact Facility Manager if potential conflicts are apparent.

1.06 SEQUENCING AND SCHEDULING

A. Schedule and coordinate to facilitate the most expeditious completion of the project in a workmanlike manner.

B. Consult all other relevant specification sections to determine the extent of work specified elsewhere but related to that included herein.

C. Schedule and coordinate all required irrigation utility connections with other project trades and/or utility companies.

D. Obtain information pertaining to location of all proposed lines and accessories prior to irrigation installation.

E. Contractor shall assume responsibility for locating all site utilities and perform work in a manner to avoid damage.

1.07 PROTECTION OF EXISTING CONDITIONS

A. Any existing structures, equipment, utilities, pavement, landscaping, etc., damaged by Contractor during the course of the work including any subsequent damage caused by leakage or settling of piping shall be restored at Contractor's expense.

1.08 HANDLING

A. Deliver irrigation system components in manufacturer’s original undamaged and unopened containers with labels intact and legible.

B. Deliver plastic piping in bundles, packed to provide adequate protection of pipe ends, both threaded and plain. Pipe and accessories shall be handled in such manner as to ensure delivery to the trench in sound, undamaged condition. Before installation, the pipe shall be inspected for defects. The interior of pipe and accessories shall be thoroughly cleaned of foreign matter before being lowered into the trench and shall be kept clean during laying operations by plugging or other approved method.

C. Store and handle materials to prevent damage and deterioration.

D. Provide secure, locked storage for valves, sprinkler heads, and similar components that cannot be immediately replaced to prevent installation delays.

E. Manufacturer’s Specifications: The latest printed specifications of approved manufacturer of materials shall become part of these specifications.

1.09 EXTRA MATERIALS

A. Provide extra materials as follows:
   1. Six extra sprinkler heads of each type and size.
   2. Two valve keys for manual valves.
   3. Two Quick-Coupler Keys with hose swivels.
   4. Six wrenches for each type head core and removing and installing each type head.

PART 2 PRODUCTS

2.01 MAIN LINE

A. Piping on pressure side of irrigation control valves:
   1. Polyvinyl chloride (PVC) 1120-1220, SDR 21 Class 200, and conform to ASTM standards D2241-05 & D2672 or latest revision. Materials shall conform to all requirements of D1784, or latest revision.
   2. Main line size 4” and above shall be gasket type pipe & fittings. Gasket fittings can be either ductile iron or PVC gasket fittings with joint restraints.

2.02 LATERALS

A. Piping on non-pressure side of irrigation control valves:
   1. Polyvinyl chloride (PVC) 1120-1220, SDR 26 Class 160, and conform to ASTM standards D2241-05 & D2672 or latest revision. Materials shall conform to all requirements of D1784, or latest revision.
   2. Pipe 1-1/4" and smaller pipe may also be flexible non-toxic polyethylene pipe made for 100% virgin material meeting N.S.F. (National Sanitation Foundation) standard #14 for use in pressure potable water applications, for 800 design stress. All sizes shall have a minimum 100 P.S.I. working pressure rating. All polyethylene pipes shall be continuously and permanently marked with the manufacturer's name, material, size, and schedule. Pipe shall conform to A.S.T.M., D2239, and D1248 (3C5PE34) or latest revision.

2.03 FITTINGS

A. Solvent welded socket fittings conforming to ASTM D2467 (Schedule 80 PVC) and ASTM D2466 (Schedule 40 PVC). Threaded type fittings shall conform to ASTM D2464 (Schedule 80 PVC). Solvent cement shall conform to ASTM D2564. Swing Joints for all rotary/gear driven sprinkler heads shall be minimum schedule 40, as manufactured by Dura or approved equal. Burst strength of fittings shall equal or exceed that of the pipe on which they are installed.

2.04 SPRINKLER HEADS

A. Sprinkler heads shall be installed as shown in design documents.

B. Gear Driven Rotary Heads: Hunter I-20, nozzle and arc as shown on design documents. Sprinkler case shall be of heavy-duty plastic construction rubber cover, Water lubricated gear drive, extra strong spring and Drain check valve for up to 10’ of elevation change. Match the precipitation rates between full circle and part circle heads when valved together in the same zone.

C. Pop-Up Spray Heads: Hunter PRS30-04-CV & MP-PRS40-04-CV in Turf & Hunter PRS30- 12-CV, MP-PRS40-12-CV in Plantings. Matched Precipitation Nozzles - arcs as shown on design documents. Sprinkler case shall be of heavy-duty plastic construction with plastic or rubber cover, extra strong spring. Match the precipitation rates between full circle and part circle heads when valved together in the same zone. Nozzles shall be interchangeable.

D. Adjustable nozzles are acceptable only in “odd” angle applications.

2.05 CONTROL VALVES

A. Remote control valves shall be Hunter ICV Series. Valves shall have Heavy-duty solenoid, High grade construction, and Manual bleed, Flow control with non-rising handle, rigid diaphragm support, Single piece diaphragm, Globe and angle configurations, Captive bonnet bolts and solenoid plunger.

2.06 CONTROLLER

A. Control system: Provide control system with the following features, compliant with local water-use regulation, and acceptable to LT Operations.
   1. Controller shall have an outdoor painted aluminum or stainless steel wall mount controller.
   2. Cell Modem.
   3. Water Management Functions:
      a. Moisture Sensors – located in design documents.
      b. Pressure Sensor – located in design documents.
      c. Rain Sensors--located in design documents.
      d. On-Site Rain/Freeze Switch.

B. Mount the controller in such a way as to simplify the programming/visibility of the controller (see detail). Contractor to ensure controllers and wire path are grounded to 10 OHM or less. Verify the exact location with the Facility Manager and/or Landscape Architect while still adhering to the manufacturer’s recommendations.

2.07 QUICK-COUPLING VALVES

A. Provide quick coupling valves as shown in design documents.

B. Provide six (6) valve keys fitted with 3/4" swivel hose cells.

C. Quick Coupling Equipment:
   1. Valves: One-piece body constructed from heavy-duty cast bronze with a 1" FIP riser connection.
   2. Quick Couplers: Single lug coupler of heavy cast bronze and detachable handle.
   3. Swivel Hose ELL: Heavy cast bronze, connected to quick couplers for hose connection.
      a. 1" FIPX 1" Male Hose Threads.
      b. Or approved equal.
   4. Each quick coupler should be installed in a valve box by Carson (or approved equal) and packed with pea gravel, 4" in depth.

2.08 VALVE BOXES

A. Provide box and cover, with open bottom and openings for piping; designed for installing flush with grade. Include size as required for valves and service. The box shall be of plastic construction with UV protection. Boxes shall be vandal resistant including lockable lid. Permanently label valve box cover with zone number. Box and lid assembly color shall be green color.

B. All valves shall be installed in 12” rectangular valve box – 1 valve per valve box.

C. All drip valve assemblies shall be contained in 12” minimum rectangular box, one valve per valve box.

D. Accepted manufacturers: Carson.

E. Decoders shall be secured to lip of valve box.

F. All valve boxes shall be permanently labeled with brass/stainless tag indicating zone number and/or equipment enclosed.

2.09 CONTROL WIRE

A. Electrical control wires shall be a jacketed, minimum of #14 gauge wire - #12 gauge on any run over 2000 feet. Run an additional two-wire path consisting of a jacketed and twisted pair of #14 gauge wire, as manufactured by Paige. Two-wire path shall be stubbed in to all valves in the system.

B. Provide separate wire path, different color, for each controller.

C. The wire path shall be grounded, to 10 ohm or less, and at a maximum of 500 foot intervals. Grounding shall also be installed on the end of all cable runs.

D. Future wire jackets, if specified, shall be a different color than initial “field” wires.

E. Provide a minimum of 3’ loop for ease of connection at valves and six to ten feet extra at controller location.

2.10 BACKFLOW PREVENTER

A. Provide Vacuum Breaker only if allowed by code and local ordinance.

B. Product:
   1. Febco Vacuum Breaker or Febco RPZ.
   2. Or approved equal.

C. Backflow preventer shall be contained in separate enclosure.

2.11 RAIN/FREEZE SENSOR

A. Sensor shall be capable of rain/freeze shut off. The device shall be mounted in a location unobstructed by walls, trees, or other hindrances (as not to be vandalized). Coordinate final field placement with Facility Manager’s Representative.

2.12 MANUAL VALVES

A. Manual valves shall be bronze gate type. Manual valves shall be sized according to the line size they are being installed on.

B. Manual valve location(s) - refer to plan.

C. Manual valves shall be “push-on” type with joint restraints 3” and larger.

2.13 REMOTE CONTROL

A. Provide remote control and monitoring of the irrigation system. Contractor to verify operation over the entire site and make any adjustments necessary to ensure uninterrupted coverage of site.

2.14 DRIP IRRIGATION

A. Drip pipe and all components are to be specifically manufactured for underground drip irrigation by Rain Bird.

B. Drip control valves shall have basket type, pressure regulating filter assembly, with visible gauge on top of basket.

C. System is to be self-cleaning, pressure compensating and UV resistant. Drip line shall be buried a minimum of 4” and a maximum of 6” deep in planting soil. Staple drip lines a minimum of every four feet and at every change in direction.

D. All “headers” for drip line shall be PVC – minimum 1” or manufactured header pipe such as Rain Bird QF Dripline Header.

E. At least one shut-off valve, flush valve, operation indicator to be installed in each drip irrigation bed.

F. Drip valve assemblies shall be placed in a 12” rectangular valve box – one valve per valve box.

PART 3 EXECUTION

3.01 PERMITS, LICENSES AND CERTIFICATES

A. The Contractor shall procure all permits and licenses, except as otherwise indicated, pay all charges and fees and give all notices necessary and incident to the proper and lawful prosecution of the work.

B. He shall also obtain and supply the Facility Manager all certificates required to show that the work has been performed in accordance with the building, plumbing, other authorities, the Board of Fire Underwriter's, or such other like bodies, as the specifications may require directly or by implication.

C. When the work performed affects the property of facilities of public utility or other corporations or of private persons, he shall obtain and supply from such corporations or person if required, statements that the work has been performed satisfactorily so far as their interests are affected and that all claims therefore have been settled by the Contractor.

3.02 RIGHTS OF WAY

A. The Contractor shall acquire the necessary right of way or lawful authority that may be necessary for approved crossings or occupation of any roads, street or alleys upon which the contract work will be done.

3.03 UNDERGROUND STRUCTURE

A. The Contractor shall be responsible for all necessary information regarding the exact location of existing underground structures and utilities and shall mark their location, at the site.

B. The Contractor shall be liable for the damages to and the cost of repairing or replacing any buried conduit, cables or piping encountered during the installation of the work, unless they were not marked or the Contractor was not previously informed of such underground utilities. If the Contractor is aware of such utilities, he shall immediately have the incurred damages repaired at his own expense. Conversely, the Facility Manager shall be liable for the cost of repairing to any of those existing utilities of which the Contractor had not been previously informed.

3.04 EXCAVATING AND TRENCHING

A. Perform excavations as required for installation of work. Restore all surfaces, existing underground installations, etc., damaged or cut as a result of the excavations, to their original condition.

B. Dig trenches wide enough to allow a minimum 6" between parallel pipelines. Trench sufficient depth to provide minimum cover (18” for all main lines and 12” for all laterals) as measured from finish grade as shown on drawings.

3.05 SLEEVING

A. Install PVC, see plan for type, sleeves where any control wire and/or pipe pass through or under walls.

B. Install PVC, see plan for type, sleeves for control wiring and pipe under walks and paving.

C. Main line shall be placed in PVC, see plan for type, sleeving that is a minimum of two sizes larger than pipe contained. Lateral line sleeving shall be a minimum of two pipe sizes larger than pipe contained.

D. Sleeves to be provided and extend a minimum of 12" beyond edges of walls, walks, and paving.

E. Mark the sleeve ends with an iron post.

F. Place wires in separate sleeve (1 ½" minimum).

G. Coordinate sleeve installation with other trades as required.

3.06 PIPE INSTALLATION

A. Install pipe in accordance with manufacturer's instructions.
   1. Solvent-weld PVC pipe and fittings, using primer, solvents, and methods recommended by manufacturer, except where screw connections are required. Clean pipe and fittings of dirt and moisture before assembly. Snake pipe from side to side of trench bottom to allow for expansion and contraction. Make all connections between PVC pipe and metal valves or pipe with threaded fittings using PVC male adapters.
   2. Use Teflon tape only on threaded joints, plastic to plastic and/or plastic to metal. Assemble threaded PVC fittings finger-tight plus one to two turns - no more.

B. Install thrust blocks on main lines (larger than 3") at locations that make a change of direction.

C. Avoid following piping layout situations:
   1. Avoid piping layout along sides of structures.
   2. Avoid odd angles in piping layout.
   3. Avoid unbalanced friction losses.
   4. Avoid high friction losses.
   5. Avoid excessive trenching.

3.07 SPRINKLER HEADS

A. Location of Sprinkler Heads: Sprinkler heads adjacent to back-of-curbs shall be located 6" off of curb edge and ½" below top of cub to prevent damage to head. Contractor is responsible for 100% radius (head-to-head) overlap coverage. When possible, locate sprinkler heads so that trees are approximately halfway between heads. Sprinkler heads and quick coupling valves shall be installed perpendicular to grade and level with terrain, unless otherwise indicated. Do not spray buildings or sidewalks.

B. All risers to heads shall be constructed to permit height adjustment of head.

C. Adjustable nozzles are acceptable only in "odd angle" situations. Fixed arc nozzles are required on all other heads.

3.08 ZONE VALVES

A. Remote Control Valves: Install control valves in valve boxes where shown and group together where practical. Place no closer than 12" to walk edges, buildings, and walls. Set valve boxes flush with finish grade.

B. Male adapters are NOT permissible – Utilize toe nipples when installing valves or equipment with threaded fittings.

C. Drip valve assemblies shall be placed in a 12" rectangular valve box – one valve per valve box.

3.09 CONTROLLERS

A. Install per local code and manufacturer's instructions.

B. Connect remote control valves to controller in clockwise sequence to correspond with station setting beginning with Stations 1, 2, 3, etc.

C. Affix a non-fading copy of irrigation diagram to cabinet door. Irrigation diagram is to be sealed between two sheets of 20mm laminate. Irrigation diagram shall be a copy of the as-built drawing and shall show clearly all valves operated by the controller, showing station number, valve size, and type of turf/planting irrigated.

D. Exact field location of controllers to be verified before installation. Coordinate the electrical service to these locations.

3.10 CONTROL WIRING

A. Install control wires with sprinkler mains and laterals in common trenches wherever possible. Lie to the side of pipeline and tie wires in bundles at 10' intervals and allow slack for contraction between ties.

B. Provide a minimum of 3' of looped extra ground and control wire at each valve and at 200' intervals on long wire runs. Snake wires in trench to allow for contraction of wires.

C. Control wire splices at remote control valves to be sealed with a Direct Burial Splice Kit - 3M DBY-6/DBR-6. Ensure that splice sealant completely blocks path to wire nut inside of spice.

3.11 VALVE BOXES

A. All valve boxes shall be supported in the ground by using paver style bricks in every corner or side.

B. See valve box detail on plan for installation directions.

C. Provide sufficient clearance (minimum 4”) between valve box cover and the automatic valve, to prevent damage if the valve box is driven over.

D. Wood supports of any kind are not allowed.

E. All valve boxes shall be permanently labeled with brass/stainless tag indicating zone number and/or equipment enclosed.

3.12 IMPROPERLY OPERATING OR LOCATED EQUIPMENT

A. Any equipment which fails to operate properly and/or is located incorrectly shall be promptly corrected or relocated at the Contractor's expense. If the Contractor wishes to make any field changes, he must receive written permission from both the Facility Manager and Landscape Architect.

3.13 THRUST BLOCKS

A. Provide thrust blocks at all changes in size or direction of mainline piping (3” and larger unless otherwise specified). Elbows, reducers, plugs, and the opposite side of tee branches all require thrust blocks. Concrete thrust blocks are constructed by pouring concrete between the fitting and the undisturbed bearing wall of the trench.

3.14 FLUSHING AND TESTING

A. Cap or plug all openings as soon as lines have been installed to prevent entrance of materials that would obstruct the pipe. Leave in place until removal is necessary for completion of installation.

B. Thoroughly flush out all water lines before installing heads, valves, and other hydrants.

C. Testing: All instruments, equipment, facilities, and labor required to conduct the tests shall be provided by Contractor. Piping shall be tested hydrostatically before backfilling and proved tight at a hydrostatic pressure of 100 psi without pumping for a period of one hour with an allowable pressure drop of 5 psi. If hydrostatic pressure cannot be held, Contractor shall make adjustments or replacements and the tests repeated until satisfactory results are achieved and accepted by the Facility Manager.

D. Upon satisfactory completion of testing, complete assembly and adjust all heads for proper arc and radius.

3.15 BACKFILL AND COMPACTING

A. After system is operating and required tests and inspections have been made, backfill excavations and trenches with clean soil, free of rubbish.

B. Backfill for all trenches, regardless of the type of pipe covered, shall be compacted to minimum 95% density under pavements, 85% under planted areas.

C. Compact trenches in areas to be planted by thoroughly flooding the backfill. Jetting process may be used in those areas.

D. Dress off all areas to finish grade.

3.16 CLEANUP

A. Keep areas of work clean, neat, and orderly at all times. Keep paved areas clean during installation. Clean up and remove debris from the entire work areas prior to final acceptance.

B. Protect irrigation system and materials from damage due to performance of work, operations by other contractors, trades and trespassers. Maintain protection during installation and testing period.

C. The Contractor shall be responsible for all damage caused by his operations to trees, turf, shrubs, curbs, paving, structures, utilities, etc., on the site or adjacent to the site of the work and shall repair, replace or otherwise make good any damage caused by their work.

3.17 WINTERIZATION AND SPRING START-UP OF IRRIGATION SYSTEM

A. The contractor shall prepare the entire irrigation system for one winter by removing all water within the mainline and lateral piping. Water shall be diverted so as not erode existing landscaping or final grades. If damage does occur, the contractor shall make repairs to the Facility Manager’s satisfaction at no additional cost.

B. The contractor shall provide one Spring Start-up of the entire irrigation system by filling the mainline and lateral piping with water and operate all control valves with the automatic controller. The contractor shall also set the controller timing for spring irrigation.

C. During Wintering and Spring Start-up the contractor shall contact the Facility Manager and current landscape maintenance provider responsible for the project site and educate them to the operations of the system. Also, the contractor shall provide a written copy to the Facility Manager of the irrigation timing required for establishing plants during late spring, summer and fall schedules.

D. The contractor shall coordinate and assemble a written instruction manual that indicates step by step the winterizing and start-up operations. The instructions shall be included in the O & M manuals.

PART 4 ACCEPTANCE

4.01 ACCEPTANCE

A. Demonstrate operation of all irrigation zones for the Facility Manager and/or Landscape Architect, a current As-Built is to be provided to the Facility Manager/Landscape Architect for purposes of the walk-thru. All irrigated areas are to have 100% coverage. Contractor shall add additional heads, as necessary, at no cost to the Facility Manager. Adjust all heads as required for proper operation, alignment, elevation, radius, and arc.

B. A field training course shall be provided for designated operating and maintenance staff members. Training shall be provided for a total period of up to 16 hours of normal working time and shall start after the central control system, weather station and field components of the irrigation system are functionally complete and major adjustments to controller, due to establishment of materials, is substantially complete. Field training shall cover all the items contained in the operating and maintenance manuals.

C. The Contractor will provide on-site consultation with the Facility Manager's operating personnel for a period of 6 months, not to exceed 8 hours per month, at no cost to the Facility Manager. This consultation will be provided at the Facility Manager's request.

D. All future visits required by the Irrigation Landscape Architect, after initial punch list, will be charged to the irrigation contractor.

4.02 GUARANTEE

A. The entire sprinkler system will be unconditionally guaranteed against defects in material and workmanship, including settling of backfilled areas below grade and adjusting heads to proper level for a period of one year from date of acceptance.

B. In addition to minor adjustments, any defective electrical controls, valves, sprinkler heads or other working parts will be repaired or replaced without cost to the Facility Manager for a period of one year from date of acceptance.

C. Contractor to provide one winterization and spring start up of irrigation system.

D. Damage by others during the one-year guarantee period will be the Facility Manager's responsibility.

4.03 RECORD INFORMATION

A. Furnish record drawings of the complete irrigation system.

B. Record Drawings and Controller Chart:
   1. Provide a complete set of up-to-date as built drawings, and an electronic copy (BIM or AutoCAD release 2018 or newer).
   2. Prepare a controller chart showing:
      a. Location of all sections, valves, lateral lines, and routes of control wires.
      b. Identify all valves as to size, station, number, and type of irrigation.
      c. Provide chart as a black-line print with a different color used to show area of coverage for each station.
      d. Locate chart inside controller door. Seal chart between two pieces of plastic.
      e. Provide suggested irrigation schedule at time of acceptance.
      f. Complete chart and receive approval prior to final inspection of irrigation system.

PART 5 IRRIGATION MANAGEMENT DURING ESTABLISHMENT PERIOD

5.01 ESTABLISHMENT PERIOD

A. Plant Establishment Period (PEP) begins on the date that initial planting operations (Substantial Completion) on the project are completed and continues until final acceptance of the project, and will last for the following period:
   1. 90 Days.
   2. 2 growing seasons. (as defined by Landscape Architect for project location)
   3. 2 calendar years.

5.02 ESTABLISHMENT WORK

A. Keep irrigation operational in accordance with the Landscape Standards throughout the establishment period and submit Life Time Landscape Contractor Inspection Reports. Perform irrigation inspection work throughout the growing seasons and as necessary during the dormant seasons (as defined by Landscape Architect). The Landscape Architect may perform inspections throughout the PEP to verify compliance. The Landscape Architect will consider the Contractor non-compliant if the Contractor does not maintain the irrigation system throughout the PEP and does not submit Inspection reports.

5.03 ALL IRRIGATION

A. During the establishment period, perform the following:
   1. Inspect to assess the condition of the irrigation system and factors that may influence function and watering efficiencies. Inspect these conditions at least every two weeks during the growing season and at least every month during the dormant season;
   2. Submit a written Inspection report to the Landscape Architect via e-mail by the 1st and 15th of each month during the growing season and by the 1st of each month during the dormant season. The Landscape Architect will use the report-frequency and content to assess irrigation system compliance. The report may include scanned copies of the plan sheets with the Contractor notes, copies of the report form found in the Life Time Landscape Standards Manual. Include the following in the report:
      a. The project number.
      b. Engineer's name.

c. Name of Contractor's responsible scout or representative.
d. Dates work was performed.
e. Work locations.
f. Work completed.
g. Prevailing weather conditions.
h. Soil moisture assessments.
i. Insect, animal, vehicular, weather, or other damage.
j. System problems.
k. Modifications or recommendations.
l. Assessment of overall irrigation system.

3. Maintain soil moisture in accordance with the watering guidelines of the standard planting details shown on the plans.
4. Adjust irrigation controller to maintain the optimal balance of watering for the entire site and its plant material.
5. Repair, adjust, or replace broken, malfunctioning or inefficient components or parts in accordance with the irrigation design.
6. Provide and install replacement parts in accordance with Replacement Requirements and according to Construction Drawings and Specifications.
7. Prevent or repair damage that may lead to soil erosion and overwatering.
8. Perform irrigation operations consistent with irrigation practices detailed in the Life Time Landscape Standards.

5.04 REPLACEMENT REQUIREMENTS

A. Within the first half of the PEP, determine which irrigation components need replacing. Replace parts in accordance with initial installation requirements, including irrigation damage due to accidents, vandalism, theft, rodent damage, damage caused by the Contractor, or if ordered by the Landscape Architect, at no additional cost to the Owner. Conduct irrigation replacement operations as needed within the first half of the PEP. At least one week before irrigation replacement, submit a summary report of proposed irrigation replacements to the Landscape Architect. Include by attachment, copies of plan sheets with the proposed replacement parts and locations identified and a Life Time Certificate of Compliance for Irrigation, Irrigation Material, and Equipment, in the report. Using brightly colored paint, mark on site irrigation requiring replacement. Provide replacement irrigation parts and incidental materials that are equal to or better than the initial material required by the contract.

5.05 FINAL ACCEPTANCE

A. As a condition for terminating the PEP and conducting the final inspection, the Landscape Architect and Facility Manager may require the Contractor to bring the irrigation system work into compliance. At the end of the PEP, the Landscape Architect and Facility Manager along with the Establishment Contractor will perform a final inspection of the project.

5.06 TRANSITION TO LONG TERM MAINTENANCE

A. Upon final acceptance, the project will transition from Establishment Contractor maintenance of the irrigation system to Long Term Maintenance. A coordination meeting to transition from the Establishment Contractor to Long-Term Maintenance Contractor will take place one week prior to conclusion of the Establishment period to ensure all requirements are met and the Long-Term Contractor understands their role and when they will take over Maintenance.

END OF SECTION

SECTION 32 84 23

IRRIGATION SYSTEM

PART 1 - GENERAL

1.1 SUMMARY

A. Includes But Not Limited To:
   1. Furnish and install planting irrigation system as described in Contract Documents complete with accessories necessary for proper function.

B. Related Requirements:
   1. Section 32 9223: Sodding.

1.2 REFERENCES

A. Definitions:
   1. Automated Self Flushing Wye Strainer: Wye strainer located immediately downstream from point of connection in-lieu of backflow prevention device for irrigation systems that utilize non-potable, secondary and/or reclaimed water that is automatically self-flushing to control unwanted debris from infiltrating remaining irrigation system.
   2. Dielectric Fittings: Special type of fitting used between dissimilar metals to prevent galvanic action from causing corrosion failure.
   3. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control, signaling power-limited circuits.
   4. Non-Pressure Lateral Line: Downstream from electric control valves to pop-up spray heads and drip valve assemblies to emitters. Piping or tubing is under pressure during flow. In areas where potable or secondary water are used, pressure supply line shall be white. In areas where non-potable or reclaimed water are used, pressure supply line shall be purple.
   5. Peak Flow: Maximum required flow for given month based on six (6) day week, nine (9) hour day watering window to be used for irrigation system design and to be used in hydraulic analysis.
   6. Point of Connection: Location where meter for irrigation system is located.
   7. Pressure Supply Line: Downstream from point of connection to electric control valves. Piping is under water-distribution-system pressure when activated by master valve or hydrometer. In areas where potable or secondary water are used, pressure supply line shall be white. In areas where non-potable or reclaimed water are used, pressure supply line shall be purple.
   8. SMART Controllers: Smart controllers are irrigation clocks that automatically adjust irrigation run times in response to environmental changes using sensors and weather information to manage watering times and frequency. As environmental conditions vary, controller increases or decreases irrigation. Smart controllers have ability to turn off your sprinklers automatically during rain, high wind or low temperature.
   9. Static Water Pressure: Pressure at point of connection when system is not operable.
   10. Two Wire Path: Conducts power to solenoid valves, and also conducts communications signals from SMART controller to each device on system. Sensors receive instructions to take readings, transmit data and perform other tasks; solenoid valves and other devices also receive commands from controller over same wires used to carry power to valves. For new construction, total length of wire in system is limited to 10,000 ft (3 048 m); maximum distance from any system device to controller is 4000 ft (1 220 m). Wire loops are permissible, but length of wire in loop is limited to 2000 ft (610 m). For normal installation, it is recommended that paired wire be installed with 1 in 5 foot (0.305 in 1.500 m) twist to reduce effects of nearby noise sources on communications. Heavy electromagnetic fields such as produced by overhead high tension power lines or near-by generator, transformers or large pump motors can interfere with data signals and generate communications errors over the cable. In such conditions, it is imperative that wire receive 1 in 5 foot (0.305 in 1.500 m) twist when installed.
   11. Working Pressure: Pressure at point of connection when system is operable.

1.3 ADMINISTRATIVE REQUIREMENTS

A. Pre-Installation Conference:
   1. Schedule pre-installation conference before irrigation system installation begins.
   2. Review the following:
      a. Landscape architect or designated landscape consultant shall demonstrate or describe method to be used to maintain head spacing from concrete and to stabilize heads.
      b. Within the field yard, provide one installed example of each type of irrigation detail for review and approval by the architect and owner prior to beginning work in the field.

B. Sequencing:
   1. Install sleeves before installation of cast-in-place concrete site elements and paving.

1.4 SUBMITTALS

A. Action Submittals:
   1. Product Data:
      a. Manufacturer's cut sheets for each element of system.
      b. Parts list for operating elements of system.

B. Informational Submittals:
   1. Certificates:
      a. Acceptance certificate of irrigation system.
         1) Upon acceptance of irrigation system, reviewer will provide signed acceptance certificate.
         2) Certificate will include name and signature of reviewer, reviewer's company, date of review, and reviewer's telephone number.
   2. Test And Evaluation Reports:
      a. Results of mainline service pressure test before beginning work on system should be submitted as a report following the testing and before burial of the mainline.
      b. Provide the following from Main Line Irrigation test and observation:
         1) Record and submit documentation of Irrigation Main Line tests, issues, and measure taking to correct problems.
   3. Manufacturer Instructions:
      a. Manufacturer's printed literature on operation and maintenance of operating elements of system.
      b. Instruction Manual:
         1) Includes complete directions for system operation and maintenance, including winterizing, controller program worksheet and annual service and scheduling calendar based on local site specific conditions.
      c. Complete instructions on how to drain entire backflow preventer to prevent freezing.
   4. Qualification Submittals:
      a. Irrigation Installer:
         1) Provide documentation of the following:
            a) Firm experience in irrigation projects (minimum of five years)
            b) Financial stability.
            c) Comply with specifications and contract documents.
            d) Agree to complete reporting documents, including:
               (1) Assist landscape architect in completing the Watering Schedule for Site Management Plan (SMP).

C. Closeout Submittals:
   1. Include following in Operations And Maintenance Manual:
      a. Operations And Maintenance Data:
         1) Instruction Manual.
         2) Manufacturer's printed literature.
         3) Manufacturer's cut sheets for each element of system.
         4) Manufacturer’s parts list.
         5) Main Line Irrigation observation report.
         6) Controller Program Schedule.

b. Record Documentation:
1) Certificates:
a) Acceptance certificate of irrigation system.
2) Testing and Inspection Reports:
a) Mainline Pressure Test.
b) Main Line Irrigation test and observation.
3) Record drawings: As installation occurs, prepare accurate record drawing to be submitted before final inspection, including:
a) Detail and dimension changes made during construction.
b) Significant details and dimensions not shown in original Contract Documents.
c) Field dimensioned locations of valve boxes, manual drains, quick-coupler valves, control wire runs not in mainline ditch, soil moisture sensors (if soil moisture sensor technology is selected for the site) and both ends of sleeves.
d) Take dimensions from permanent constructed surfaces or edges located at or above finish grade.
e) Take and record dimensions at time of installation.
f) Reduced copy of record drawings to 11 by 17 inches (275 by 425 mm), with color key circuits and laminated both sides with 5 mil thick or heavier plastic.
g) Two (2) additional reduced copies of record drawings to 11 by 17 inches (275 by 425 mm), with color key circuits, unlaminated, and unmounted to be given to Owner's Representative.

2. Final payment for system will not be authorized until Closeout Submittals are received and accepted by Architect and landscape consultant.

D. Maintenance Material Submittals:
1. Tools:
a. Furnish following items before Final Closeout Review:
1) One quick coupler key with brass hose swivel.

1.5 QUALITY ASSURANCE

A. Regulatory Requirements:
1. Work and materials shall be in accordance with latest rules and regulations, and other applicable state or local laws.
2. Nothing in Contract Documents is to be construed to permit work not conforming to these codes.

B. Qualifications:
1. Installer Qualifications:
a. General:
1) Perform installation under direction of foreman or supervisor with five (5) years minimum experience in sprinkling system installations.

C. Mockups:
1. Provide Mock-Ups of each detail within a valve box at the staging area for review by Landscape Architect prior to installation of the irrigation system.
2. These mock-ups may be installed without solvent weld cement so that they can later be used in the field.
3. Mock-ups shall include a complete installation included filter fabric, gravel sump, equipment assembly, valve box placement and branding in conformance with these specifications.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Storage And Handling Requirements:
1. Storage and handling during installation, protect materials from damage and prolonged exposure to sunlight.

1.7 WARRANTY

A. Manufacturer Warranty:
   1. Standard one year guarantee shall include:
      a. Filling and repairing depressions and replacing plantings due to settlement of irrigation system trenches.
      b. Adjusting system to supply proper coverage of areas to receive water.
      c. Ensuring system can be adequately drained.

PART 2 - PRODUCTS

2.1 SYSTEM

A. Manufacturers:
   1. Manufacturer Contact List (for reference only, not all may be included in this project):
      a. 3M, Austin, TX www.3m.com/elpd.
      b. Acclima, Inc. Meridian, ID www.acclima.com.
      c. Action Machining Inc, Bountiful, UT www.actionfilters.com.
      d. Amiad www.amiadusa.com.
      e. Apollo Valves by Conbraco Industries, Matthews, NC www.apollovalves.com.
      f. Carson Industries LLC, Glendora, CA www.carsonind.com.
      g. GPH Irrigation Products, Fontana, CA www.gphirrigation.com.
      h. Harrington Corporation (Harco), Lynchburg, VA www.harcofittings.com.
      i. Hunter Industries, San Marcos, CA www.hunterindustries.com.
      j. HydroPoint Data Systems, Inc., Petaluma, CA www.hydropoint.com.
      k. HydroRain, North Salt Lake, UT www.hydrorain.com.
      l. King Innovation, St Charles, MO www.kinginovation.com.
      m. IPS Corporation, Compton, CA www.ipscorp.com.
      n. Leemco, Colton, CA www.leemco.com.
      o. Netafim, Inc. www.netafimusa.com.
      p. Nibco Inc, Elkhart, IN www.nibco.com.
      q. Northstar Industries, LLC, Methuen MA www.northstarind.com.
      r. Orbit Irrigation Products, Inc. Bountiful, UT www.orbitonline.com.
      s. Paige Electric, Union, NJ www.paigewire.com.
      t. Rain Bird Sprinkler Manufacturing Corp, Glendora, CA www.rainbird.com.
      u. Rain Master, Simi Valley, CA www.rainmaster.com.
      v. Salco by Weathermatic Irrigation Products, Garland, TX www.weathermatic.com.
      w. Toro Company, Irrigation Div, Riverside, CA www.toro.com.
      x. T. Christy Enterprises, Inc. (Christy's), Anaheim, CA www.tchristy.com.
      y. Valve and Filter Corporation, Arvada, CO www.valveandfilterlcom.
      z. Weathermatic Irrigation Products, Garland, TX www.weathermatic.com.
      aa. Wilkins a Zurn Company, Paso Robles, CA www.zurn.com.

B. Materials:
   1. Rock-Free Soil:
      a. Backfill soil around PVC pipe.
      b. Soil having rocks no larger than 1/2 inch (13 mm) in any dimension.
   2. Pea Gravel:
      a. For use around drains, valves, and quick couplers.
      b. 1/2 inch (13 mm) maximum dimension, washed rock.
   3. Sand: Fine granular material naturally produced by rock disintegration and free from organic material, mica, loam, clay, and other deleterious substances.
   4. Native Material: Soil native to project site free of wood and other deleterious materials and rocks over 1-1/2 inches (38 mm).
   5. Topsoil: Remove rocks, roots, sticks, clods, debris, and other foreign matter over 1-1/2 inches (38 mm) longest dimension encountered during trenching.
   6. Pipe, Pipe Fittings, And Connections:
      a. Pipe shall be continuously and permanently marked with Manufacturer's name, size, schedule, type, and working pressure.

b. Pipe sizes shown on Drawings are minimum. Larger sizes may be substituted if at no additional cost to Owner.
c. Pipe:
1) Pressure Lines: Schedule 40 PVC.
2) Lateral Lines: Schedule 40 PVC.
3) Backflow Prevention Assembly Piping: Brass.
4) Quick Coupler Piping: Galvanized steel.
d. Fittings: Same material as pipe, except where detailed otherwise.
1) Mainline Fittings: Schedule 80 PVC of matching size.
2) Lateral Line Fittings: Schedule 40 PVC of matching size.
3) Use dielectric union fittings between dissimilar metal pipes and fittings.
e. Sleeves:
1) Under Parking Area And Driveway Paving: Schedule 40 PVC Pipe.
2) All Other: Class 200 PVC Pipe.
3) Sleeve diameter shall be two times larger than pipe installed in sleeve.

7. Sprinkler Heads:
a. Each type of head shall be product of single manufacturer.
b. Spray Heads:
1) Approved Products:
a) Rain Bird RD 4” pop-up with SAM and PRS options and MPR nozzles.

8. Sprinkler Risers:
a. Pop-up spray heads shall have risers made up one of the following ways:
1) Three (3) schedule 40 street ells or marlex street ells connected to lateral tee to form an adjustable riser or pop-up riser as detailed.
2) Risers for sprinkler heads 14 inches (355 mm) long minimum and 24 inches (610 mm) maximum.
a) Acceptable Products:
(1) Hunter: SJ series with barbed fittings.
(2) Hydro-Rain: Blu-lock Swing pipe & fittings.
(3) Rainbird: Swing Pipe with barbed fittings.
(4) Toro: Super Funny Pipe with barbed fittings, SPFA-5125, SPFA-51275.
(5) Equal as approved by Architect before installation.

9. Automatic Irrigation Controller and Control Wiring:
a. Automatic Controllers:
1) Rain Bird ESP-LXME Modular Controller. Provide and install Rain Bird WR2RFC-48 wireless rain/freeze sensor combo as per manufacturer specifications and details.
b. Control Wiring:
1) Traditional control wire shall be UF-UL listed, color coded PE insulated copper conductor direct burial size 14. For wire runs exceeding 3,300 feet (1 005.84 meter), use 12 AWG wire. Do not use green color coded wire.
2) Paige Electric Cadweld Connection.
3) Waterproof Wire Connectors:
a) Control wire connections shall consist of properly-sized wire nut inserted in waterproof grease cap:
b) Acceptable Products:
(1) DBY or DBR by 3M.
(2) 'One Step' 20111SP by King Innovation.
(3) DB 57905, 57505 by Orbit.
(4) Equal as approved by Architect before installation.
c. Conduit:
1) Exterior applications or inside mechanical shed:
a) Galvanized IMC. Where in contact with earth or concrete, wrap galvanized IMC conduit and fittings completely with vinyl tape.
2) In-ground: commercial grade grey conduit.
3) Size conduit as follows:

Galvanized IMC Conduit

Wire Size (AWG)	Number of Wires					
14	7	13	22	32	47	67
12	6	8	18	25	38	59
Conduit Size	3/4 inch (19 mm)	1 inch (25 mm)	1 1/4 inch (32 mm)	1 1/2 inch (38 mm)	2 inch (50 mm)	2 1/2 inch (64 mm)

PVC Sch. 40 Conduit

Wire Size (AWG)	Number of Wires					
14	6	11	20	29	43	61
12	5	7	17	23	35	54
Conduit Size	3/4 inch (19 mm)	1 inch (25 mm)	1 1/4 inch (32 mm)	1 1/2 inch (38 mm)	2 inch (50 mm)	2 1/2 inch (64 mm)

PVC Sch. 80 Conduit

Wire Size (AWG)	Number of Wires					
14	5	9	17	24	39	55
12	4	6	14	19	32	49
Conduit Size	3/4 inch (19 mm)	1 inch (25 mm)	1 1/4 inch (32 mm)	1 1/2 inch (38 mm)	2 inch (50 mm)	2 1/2 inch (64 mm)

d. Lightning Arrestor:
   1) Provide grounding and Lightning Arrestor(s) as required by Manufacturer.
   2) Valve Boxes
      a) Acceptable Products:
         (1) Hydro-Rain: ProSeries: 10 inch (255 mm) VB 0910.
         (2) Carson Industries: 10 inch (255 mm) Model 0910.
         (3) Equal as approved by Architect before use.
      b) Valve Box Supports:
         (1) Standard size fired clay paving bricks without holes.

10. Valves:
   a. Manual Drain Valves:
      1) Brass ball valve with 'T' handle on main lines and in valve boxes on lateral lines.
      2) Approved Products:
         a) Apollo Valves: 78-621-01 series ball valve, ¾ inch
   b. Automatic Valves:
      1) Approved Products:
         a) Rain Bird PEB series
   c. Isolation Valves:
      1) Approved Products:
         a) Nibco T-113 non-rising stem gate valve, size to match pipe size.
         b) Nibco ductile iron resilient wedge with square operating nut.
   d. Backflow Prevention Assembly: Wilkins 375XLB theft prevention reduced pressure type.
   e. Quick Coupling Valves and Keys:
      1) Approved Products:

a) Rain Bird 33-DRC series and SH-O swivel hose ell.

11. Valve Accessories:
    a. Valve Boxes And Extensions:
        1) Lid Colors:
            a) Green: Lawn areas (potable and secondary water).
            b) Tan: Bare soil and rock areas (potable and secondary water).
            c) Purple: Reclaimed water.
        2) Acceptable Products:
            a) Hydro-Rain: ProSeries:
                (1) 12 inch (300 mm) VB1419 (standard).
                (2) 10 inch (255 mm) VB 0910.
            b) Carson Industries:
                (1) 12 Inch (300 mm) Model 1419-12.
                (2) 10 Inch (255 mm) Model 0910.
            c) Equal as approved by Architect before use.
    b. Valve ID tags:
        1) Acceptable Products:
            a) Christy's: Stamped ID tag.
            b) Equal as approved by Architect before use.
    c. Valve Box Supports:
        1) Standard size 6 inch x 8 inch x 16 inch (150 mm x 200 mm x 400 mm) CMU Block.
12. Drip System:
    a. Drip Valve Assembly:
        1) Approved Products:
            a) Rainbird:
                (1) Over 6 GPM: XCZ-150-PRB-COM series (15-40 gpm).
                (2) Over 4 GPM: XCZ-100-B COM series (3-20 gpm).
                (3) Under 4 GPM: XCZ-075-PRF series.
    b. Distribution Tubing (from lateral lines to emitter):
        1) Acceptable Products:
            (a) Hunter: SJ series with barbed fittings.
            (b) Hydro-Rain: Blu-lock Swing pipe & fittings.
            (c) Rainbird: Swing Pipe with barbed fittings.
            (d) Toro: Super Funny Pipe with barbed fittings, SPFA-5125, SPFA-51275.
            (e) Equal as approved by Architect before installation.
    c. Drip Emitters – Trees, Shrubs & Ornamental Grasses:
        1) Approved Products:
            a) GPH: Model Specflow GPSTCV Spec-Check PC "Desert Camo" color.
    d. Valve Box Supports:
        1) Standard size fired clay paving bricks without holes.
        2) Standard size 6 inch x 8 inch x 16 inch (150 mm x 200 mm x 400 mm) CMU Block.
13. Solvent Cement:
    a. Approved Products:
        1) Primer:
            a) Meet ASTM F656 standard and applicable sections of latest edition of *'Uniform Plumbing Code'.*
            b) Meet NSF/ANSI standard for use on potable water applications.
            c) Low VOC emissions and compliant with LEED.
            d) Product: Weld-On P-70 primer by IPS.
        2) PVC Solvent Cement:
            a) Heavy bodied, medium setting, high strength:
                (1) Meet ASTM D2564 standard and applicable sections of latest edition of *'Uniform Plumbing Code'.*
                (2) Meet NSF/ANSI standard for use on potable water applications.
                (3) Meet CSA standards for use in pressure and non-pressure potable water applications.
                (4) Low VOC emissions and compliant with LEED.
                (5) Product: Weld-On 711 Low VOC PVC Cement by IPS.
            b) Flexible, medium bodied, fast setting, high strength (flexible pipe only):
                (1) Meet ASTM D2564 standard and applicable sections of latest edition of *'Uniform Plumbing Code'.*

(2) Meet NSF/ANSI standard for use on potable water applications.
(3) Low VOC emissions and compliant with LEED.
c) Product: Weld-On 795 Low VOC Flex PVC Cement by IPS.

14. Other Components:
    a. Recommended by Manufacturer and subject to Architect's review and acceptance before installation.
    b. Provide components necessary to complete system and make operational.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verification Of Conditions:
    1. Perform pressure test at stub-out on main water line provided for irrigation system, or at near-by fire hydrant.
    2. Notify Architect if pressures over 70 psi (480 kPA) or under 55 psi (379 kPA) are found to determine if some re-design of system is necessary before beginning work on system.

3.2 PREPARATION

A. Protection:
    1. Protection of In-Place Conditions:
        a. Repair or replace work damaged during course of the Work at no additional cost to Owner. If damaged work is new, installer of original work shall perform repair or replacement.
        b. Do not cut existing tree roots measuring over 2 inches (50 mm) in diameter in order to install irrigation lines.

B. Surface Preparation:
    1. Layout of Irrigation Heads:
        a. Location of heads and piping shown on Drawings is approximate. Actual placement may vary slightly as is required to achieve full, even coverage without spraying onto buildings, sidewalks, fences, etc.
        b. During layout, consult with Architect to verify proper placement and make recommendations, where revisions are advisable.
        c. Minor adjustments in system layout will be permitted to avoid existing fixed obstructions.
        d. Make certain changes from Contract Documents are shown on record drawings.

3.3 INSTALLATION

A. Trenching And Backfilling:
    1. Pulling of pipe is not permitted.
    2. Excavate trenches to specified depth. Remove rocks larger than 1-1/2 inch (38 mm) in any direction from bottom of trench. Separate out rocks larger than 1-1/2 inch (38 mm) in any direction uncovered in trenching operation from excavated material and remove from areas to receive landscaping.
    3. Cover pipe both top and sides with 2 inches (50 mm) of rock-free soil as specified under PART 2 PRODUCTS. Remainder of backfill to within 5 inches (125 mm) of finish grade shall be as specified in Section 31 2323. Top 5 inches (125 mm) of backfill shall be topsoil as specified in Section 32 9113.
    4. Do not cover pressure main, irrigation pipe, or fittings until Architect has inspected and approved system.

B. Sleeving:
    1. Sleeve water lines and control wires under walks and paving. Extend sleeves 6 inches (150 mm) minimum beyond walk or pavement edge. Cover sleeve ends until pipes and wires are installed to keep sleeve clean and free of dirt and debris.

2. Position sleeves with respect to buildings and other obstructions so pipe can be easily removed.

C. Grades And Draining:
1. In localities where winterization is required, grade piping so system can be completely drained or blown out with compressed air. If system is not designed to be blown out with compressed air:
   a. Slope pipe to drain to control valve box where possible.
   b. Where this is not possible, slope pipe to a minimum number of low points. At these low points, install:
      1) 3/4 inch (19 mm) brass ball valve for manual drain. Do not use automatic drain valves.
      2) Install 2 inch (50 mm) Class 200 PVC pipe over top of drain and cut at finish grade.
      3) Provide rubber valve cap marker.
      4) Provide one cu ft (0.03 cu m) pea gravel sump at outlet of each drain.
   c. Slope pipes under parking areas or driveways to drain outside these areas.
   d. Provide and install quick-coupling valve or valves in location for easy blowout of entire system. Install quick coupler valves with 4 lineal feet (1.20 m) minimum of Schedule 80 PVC pipe between valve and main line.

D. Installation of Pipe:
1. Install pipe in manner to provide for expansion and contraction as recommended by Manufacturer.
2. Unless otherwise indicated on Drawings, install main lines and lateral lines connecting pop-up rotor and impact sprinklers with minimum cover of 18 inches (450 mm) based on finished grade. Install remaining lateral lines, including those connecting drip tubing, with minimum of 12 inches (300 mm) of cover based on finish grade.
3. Install pipe and wires under driveways or parking areas in specified sleeves 18 inches (450 mm) below finish grade or as shown on Drawings.
4. Locate no sprinkler head closer than 12 inches (300 mm) from building foundation. Heads immediately adjacent to mow strips, walks, or curbs shall be one inch (25 mm) below top of mow strip, walk, or curb and have one to 3 inches 75 mm clearance between head and mow strip, walk, or curb.
5. Cut plastic pipe square. Remove burrs at cut ends before installation so unobstructed flow will result.
6. Make solvent weld joints as follows:
   a. Do not make solvent weld joints if ambient temperature is below 35 deg F (2 deg C).
   b. Clean mating pipe and fitting with clean, dry cloth and apply one coat of P-70 primer to each.
   c. Apply uniform coat of 711 solvent to outside of pipe.
   d. Apply solvent to fitting in similar manner.
   e. Give pipe or fitting a quarter turn to insure even distribution of solvent and make sure pipe is inserted to full depth of fitting socket.
   f. Allow joints to set at least 24 hours before applying pressure to PVC pipe.
7. Tape threaded connections with teflon tape.
8. If pipe is larger than 3 inches (75 mm), install concrete thrust blocks wherever change of direction occurs on PVC main pressure lines.

E. Control Valves And Controller:
1. Install valves in plastic boxes with reinforced heavy duty plastic covers. Locate valve boxes within 12 inches (300 mm) of sidewalks and shrub bed edges with tops at finish grade. Do not install more than two valves in single box.
2. Place 3 inches (75 mm) minimum of pea gravel below bricks supporting valve boxes to drain box. Set valve boxes over valve so all parts of valve can be reached for service. Set cover of valve box even with finish grade. Valve box cavity shall be reasonably free from dirt and debris.
3. Wiring:
   a. Tape control wire to side of main line every 10 feet (3.050 m). Where control wire leaves main or lateral line, enclose it in gray conduit.
   b. Use waterproof wire connectors consisting of properly-sized wire nut and grease cap at splices and locate all splices within valve boxes.
   c. Use white or gray color for common wire and other colors for all other wire. Each common wire may serve only one controller.
   d. Run one spare control wire from panel continuously from valve to valve throughout system similar to common wire for use as a replacement if a wire fails. Spare wire shall be different color than other wires, except use of green wire is not acceptable. Mark spare control wire in control box as an unconnected wire. Extend spare control wires 24 inches (600 mm) and leave coiled in each valve box.

F. Drip Assembly:
1. Install pipe providing for expansion and contraction as recommended by Manufacturer.
2. Cut tubing square and remove burrs at cut ends.
3. Distribution tubing shall be between 14 inches (350 mm) minimum and 48 inches (1 200 mm) maximum long. Layout PVC lateral lines as necessary to keep distribution tubing lengths within specified tolerances.
4. Locate drip emitter on uphill side of plant within rootball zone.
5. Layout in-line tubing for trees as indicated on Contract Drawings. Layout in-line tubing for shrubs and groundcovers so plants receive water within rootball zones.
6. Locate in-line tubing on top of soil but under bark mulch and weed barrier fabric.
7. Staple in-line tubing to ground at 3 foot (900 mm) to 5 foot (1 500 mm) maximum intervals (sand = 3 foot (900 mm), loam = 4 foot (1 200 mm), clay = 5 foot (1 500 mm) and within 12 inches (300 mm) of ends and intersections.
8. Assembly Using 'Funny Pipe' Type Joints:
   a. Connect distribution tubing to lateral line using barbed ell fitting.
   b. Connect fitting to distribution tubing using straight barbed fitting with 1/2 inch (13 mm) threaded end.

G. Sprinkler Heads And Rotor Pop-ups:
1. Set sprinkler heads and quick-coupling valves perpendicular to finish grade.
2. Do not install sprinklers using side inlets. Install using base inlets only.
3. Heads immediately adjacent to mow strips, walks, or curbs shall be one inch (25 mm) below top of mow strip, walk, or curb and have one inch (25 mm) to 3 inch (75 mm) clearance between head and mow strip, walk, or curb.
4. Set sprinkler heads at consistent distance from walks, curbs, and other paved areas and to grade by using specified components or other method demonstrated in Pre-Construction Conference.

H. Before installation of sprinkler heads, open control valves and use full head of water to flush out system.

I. Arrange valve stations to operate in an easy-to-view progressive sequence around building. Tag valves with waterproof labels showing final sequence station assignments.

3.4 FIELD QUALITY CONTROL

A. Field Tests and Inspections:
1. Irrigation System:
   a. Pressure Test:
      1) In presence of Landscape Architect, provide pressure test. Notify Landscape Architect two (2) working days minimum before conducting test.
      2) Before backfilling main line, test pressure at 100 psi (690 kPA) minimum for two (2) hours minimum and make certain there are no leaks.
   b. Test report:
      1) Report of Pressure Test results along with photographs of testing process are to be provided to Architect and Landscape Architect or his authorized representative at completion of testing.
      2) Pressure test report shall be included in Operations and Maintenance Manual.
2. Pre-Substantial Inspection:
   a. Landscape Architect or designated representative(s) will inspect system to verify completeness approximately two (2) weeks prior to Substantial Completion.
   b. Approval of irrigation system to be in writing.
3. Substantial Completion Walkthrough:
   a. Landscape Architect or designated representative(s) will inspect site and create list of non-conforming items to be resolved prior to Irrigation Final Acceptance. Date on this list will act as date of Landscape Substantial Completion.
   b. Installations completed after water source has been turned off for season, as determined by Landscape Architect, will be inspected following spring after system can be checked for proper operation.
4. Irrigation Final Acceptance:
   a. Irrigation Final Acceptance will be awarded when all non-conforming work is brought into conformance.

b. Landscape Architect will create signed certificate to be included in Operations and Maintenance Manual at completion of all non-conforming work.

B. Non-Conforming Work: Non-conforming work as covered in the General Conditions applies, but is not limited to the following:
1. Underground Sprinkler System:
a. Correct any work found defective or not complying with Contract Document requirements at no additional cost to the Owner.

3.5 ADJUSTING

A. Sprinkler Heads:
1. Adjust sprinkler heads to proper grade when turf is sufficiently established to allow walking on it without appreciable harm. Such lowering and raising of sprinkler heads shall be part of original contract with no additional cost to Owner.
2. Adjust sprinkler heads for proper distribution and trim so spray does not fall on building.

B. Watering Time:
1. Adjust watering time of valves to provide proper amounts of water to plants.

3.6 CLOSEOUT ACTIVITIES

A. Training:
1. After system is installed and approved, instruct Owner's designated personnel in complete operation and maintenance procedures using Landscape Management Plan (LMP).
a. Describe difference between plant establishment schedule and long-term maintenance schedule.
b. Describe annual and regular filter maintenance.

B. Winterization and Spring Start-Up:
1. During first year of operation, Installer shall shut-down irrigation system prior to freezing temperatures and re-start irrigation system at beginning of growing season:
a. Winter Shut-Down is intended to remove all potentially damaging water from irrigation system. Perform following as well as any other efforts necessary to properly winterize system:
1) Turn off water source at point of connection.
2) Blow out system with pressurized air, turning on each valve until water is cleared out of system. Run through system twice. Only blow out components suitable to receive pressurized air. Hydrometers, for instance, should not be blown out. Do not use excessive air pressure that will damage pipes and parts.
3) Turn controller off.
4) Open all manual drain valves.
5) Drain, wrap, protect, or remove any backflow device exposed to freezing temperatures using manufacturer’s recommendations and best practices. Coordinate method with Owner’s Representative.
6) Drain and remove pumps for Owner’s Representative storage.
7) Drain filters using manufacturer’s recommendations.
8) Check sprinkler heads to make sure they are below sidewalk and curb levels and not vulnerable to snowplow damage. Lower heads to proper elevation.
9) Notify Owner’s Representative when system has been turned off.
b. Spring start-up shall include following:
1) Close all manual valves.
2) Clean pump filters and replace if necessary.
3) Remove freeze protection as required.
4) Turn on water source at point of connection.
5) Verify that controller(s) and rain sensor are properly operating. Change battery in controller(s) and sensor(s) as required.
6) Flush entire system. Run each valve for two (2) minutes to check for damage, leaks, and coverage.

7) Repair and adjust system as needed. Fine tune heads for efficient coverage.
8) Notify Owner's Representative when system has been charged and is in full repair.

END OF SECTION

SECTION 32 9001

COMMON PLANTING REQUIREMENTS

PART 1 - GENERAL

1.1 SUMMARY

A. Includes But Not Limited To:
   1. Common procedures and requirements for landscaping work.
   2. Provide maintenance for new landscaping as described in Contract Documents.

B. Related Requirements:
   1. Pre-Installation conferences held jointly with Section 32 9001 as described in Administrative Requirements on Part 1 of this specification section:
   2. Section 32 8423: 'Irrigation System'
   3. Section 32 9120: ‘Topsoil and Placement’
   4. Section 32 9122: ‘Topsoil Grading’
   5. Section 32 9300: 'Plants'

1.2 ADMINISTRATIVE REQUIREMENTS

A. Pre-Installation Conference:
   1. Participate in pre-installation conference held jointly with following sections:
      a. Section 32 8423: 'Irrigation System'
      b. Section 32 9120: ‘Topsoil and Placement’
      c. Section 32 9122: ‘Topsoil Grading’
      d. Section 32 9300: 'Plants'
   2. Review the following:
      a. Site Visits:
         1) Landscape Architect to visit site five (5) times during project construction.
         2) If site conditions necessitate additional visits, Landscape Architect can schedule addition site visits with approval from Architect prior to bid.
         3) During construction, addition site visits may be approved in writing by Architect or Owner for special considerations before commencement.
         4) Site visits caused by lack of work progress by Landscape Subcontractor shall reimburse Landscape Architect amount determined by Architect or Owner for additional site visits.
      b. Coordination:
         1) Landscape Subcontractor and Landscape Architect to coordinate site visits and include Architect and General Contractor in communications.
      c. Landscape Maintenance:
         1) Establish responsibility for maintenance of new landscaping during all phases of construction period.
      d. Percolation Test:
         1) Prepare two (2) typical landscape planting excavations and conduct percolation test to verify that water drains away within two (2) hours.
         2) Discuss results of percolation tests with Architect and Owner's Representative.
      e. Review additional agenda items as specified in related sections listed above.
   3. Approved Site Visits:
      a. Site Visit No. 1:
         1) Description:
            a) Landscape pre-installation Conference.
         2) Schedule: Conduct pre-installation conference after completion of Fine Grading specified in Section 31 2216, but one (1) week minimum before beginning landscape work.
         3) Required Attendees:
            a) Project Manager, Facilities Manager, Architect, General Contractor, Landscape Subcontractor, Excavator, and Landscape Architect.
            b) Include Landscaping Subcontractor Foreman and those responsible for installation of landscaping to be in attendance.

4) Related Sections:
   a) Section 32 8423: 'Underground Sprinklers'
   b) Section 32 9120: 'Topsoil and Placement'
   c) Section 32 9122: 'Topsoil Grading'
   d) Section 32 9223: 'Sodding'
   e) Section 32 9300: 'Plants'
5) Notes:
   a) Verify project site conditions and review scope of work before installation begins.
   b) Verify appropriate sub-grades have been established.

b. Site Visit No. 2:
1) Description:
   a) Irrigation system pressure test compliance, main line inspection, valve inspection.
2) Schedule: Conduct site visit one (1) week minimum after notification before beginning irrigation system pressure test.
3) Required Attendees:
   a) General Contractor, Landscape Subcontractor, Landscape Architect.
4) Recommended Attendees:
   a) Project Manager, Facilities Manager.
5) Related Sections:
   a) Section 32 8423: 'Underground Sprinklers'
   b) Section 32 9120: 'Topsoil and Placement'
   c) Section 32 9122: 'Topsoil Grading'
6) Notes:
   a) Verify finish grading in preparation for planting.

c. Site Visit No. 3:
1) Description:
   a) Inspect and approve plant quality, plant quantity, plant pits, plant pit backfill, planting depths, and removal of packaging/distribution materials, wire, and ties.
2) Schedule: Conduct site visit one (1) week minimum after notification from Contractor before beginning site visit no. 3.
3) Required Attendees:
   a) General Contractor, Landscape Subcontractor, Landscape Architect.
4) Recommended Attendees:
   a) Project Manager, Facilities Manager.
5) Related Sections:
   a) Section 32 9300: 'Plants'
6) Notes:
   a) Inspect irrigation system installation, Inspect weed barrier fabric.

d. Site Visit No. 4:
1) Description:
   a) Comprehensive Substantial Completion inspection prior to beginning thirty (30) day Landscape Subcontractor maintenance period.
2) Schedule: Conduct site visit one (1) week minimum after notification before beginning site visit no. 4.
3) Required Attendees:
   a) Project Manager, Facilities Manager, Architect, General Contractor, Landscape Subcontractor, Landscape Architect.
4) Related Sections:
   a) Section 32 8423: 'Underground Sprinklers'
   b) Section 32 9300: 'Plants'
5) Notes:
   a) Verify contract requirements have been followed including but not limited to: planting compliance, irrigation system coverage and irrigation system operation.

e. Site Visit No. 5:
1) Description:
   a) At the end of thirty (30) day Landscape Subcontractor maintenance period, verify deficient items have been corrected and verify no others exist.
2) Schedule: Conduct site visit one (1) week minimum after notification before beginning site visit no. 5.
3) Required Attendees:
   a) Project Manager, Facilities Manager, Architect, General Contractor, Excavation Subcontractor, Landscape Subcontractor, Landscape Architect.

4) Related Sections:
   a) Section 32 8423: 'Underground Sprinklers'
   b) Section 32 9300: 'Plants'
5) Notes:
   a) Review Site Management Plan (SMP) with Owner. Provide landscape maintenance training.

1.3 SUBMITTALS

A. Informational Submittals:
   1. Special Procedure Submittals:
      a. Landscape Architect and Landscape Subcontractor shall jointly provide the following:
         1) Maintenance recommendations for Site Management Plan (SMP).
         2) Recommendation procedures to be established by Owner for maintenance of landscape work for one (1) full year after contract maintenance period ends required by Contract Documents.
   2. Qualification Statement:
      a. Landscape Subcontractor:
         1) Provide Qualification documentation if requested by Landscape Architect or Owner.
      b. Installer:
         1) Provide Qualification documentation if requested by Landscape Architect or Owner.

B. Closeout Submittals:
   1. Include following in Operations And Maintenance Manual:
      a. Maintenance:
         1) Maintenance recommendations for Site Management Plan (SMP).
      b. Operations And Maintenance Data:
         1) At completion of landscape work, submit two (2) copies of typewritten instructions of the following:
            a) Provide maintenance recommendations for Site Management Plan (SMP).
            b) Provide recommended procedures to be established by Owner for maintenance of landscape work for one (1) full year after contract maintenance period ends.

1.4 QUALITY ASSURANCE

A. Qualifications:
   1. Landscape Subcontractor:
      a. Company specializing in performing work of this section.
      b. Minimum five (5) years experience in landscaping installations.
      c. Minimum five (5) satisfactorily completed installations in past three (3) years of projects similar in size, scope, and complexity required for this project before bidding.
      d. Upon request, submit documentation.
   2. Installer:
      a. Planting shall be performed under direction of foreman or supervisor with minimum three (3) years experience in landscape installations similar in size, scope, and complexity.
      b. Foreman or supervisor required to attend pre-installation conference.
      c. Use trained personnel familiar with required planting procedures and with Contract Documents.
      d. Upon request, submit documentation.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Storage And Handling Requirements:
   1. Deliver packaged materials in containers showing weight, analysis, and name of Manufacturer.
   2. Deliver sod, plants, trees, and shrubs in healthy and vigorous condition.
   3. Protect materials from deterioration during delivery.

B. Storage And Handling Requirements:
   1. Store in location on site where they will not be endangered and where they can be adequately watered and kept in healthy and vigorous condition.
   2. Protect materials from deterioration while stored at site.

PART 2 - PRODUCTS

2.1 N/A

PART 3 - EXECUTION

3.1 EXAMINATION

Acceptable Installers:
1. Meet Quality Assurance Installer Qualifications as specified in Part 1 of this specification.

3.2 EXAMINATION

A. Verification Of Conditions:
   1. Inspect site and Contract Documents to become thoroughly acquainted with locations of irrigation, ground lighting, and utilities.

3.3 PREPARATION

A. Before proceeding with work, verify dimensions and quantities. Report variations between Drawings and site to Architect before proceeding with landscape work.
   1. Plant totals are for convenience of Contractor only and are not guaranteed. Verify amounts shown on Drawings.
   2. All planting indicated on Contract Documents is required unless indicated otherwise.

B. Protection:
   1. Take care in performing landscaping work to avoid conditions that will create hazards. Post signs or barriers as required.
   2. Provide adequate means for protection from damage through excessive erosion, flooding, heavy rains, etc. Repair or replace damaged areas.
   3. Keep site well drained and landscape excavations dry.

3.4 INSTALLATION

A. Interface With Other Work:
   1. Do not plant trees and shrubs until major construction operations are completed. Do not commence landscaping work until work of Section 31 2216 and Section 32 8423 has been completed and approved.

B. Coordinate installation of planting materials during normal planting seasons for each type of plant material required.

C. Hand excavate as required.

D. Maintain grade stakes until parties concerned mutually agree upon removal.

E. When conditions detrimental to plant growth are encountered, such as rubble fill or adverse drainage conditions, notify Architect before planting.

3.5 FIELD QUALITY CONTROL

A. Field Inspection:
   1. Architect will inspect landscaping installation approximately two (2) weeks before Substantial Completion.

B. Non-Conforming Work. Non-conforming work as covered in the General Conditions applies, but is not limited to the following:
   1. Replace landscaping that is dead or appears dead as directed by Architect within ten (10) days of notification and before Substantial Completion at no additional cost to Owner.
   2. Replace damaged plantings at no additional cost to Owner.
   3. Repair damage to irrigation, ground lighting, utilities, asphalt paving, concrete paving, concrete sidewalks, concrete curb and gutters and other items adjacent to landscaping caused by work of this Section or replace at no additional cost to Owner.

3.6 CLEANING

A. Waste Management:
   1. Immediately clean up soil or debris spilled onto pavement and dispose of deleterious materials.

3.7 PROTECTION

A. Protect planted areas against traffic or other use immediately after planting is completed by placing adequate warning signs and barricades.

B. Provide adequate protection of planted areas against trespassing, erosion, and damage of any kind. Remove this protection after Architect has accepted planted areas.

3.8 MAINTENANCE

A. General:
   1. Before beginning maintenance period, plants shall be in at least as sound, healthy, vigorous, and in approved condition as when delivered to site, unless accepted by Architect in writing at final landscape inspection.
   2. Maintain landscaping for thirty (30) days minimum after Substantial Completion Meeting. Areas sodded or seeded after November 1st will accepted following spring approximately one (1) month after start of growing season, May 1st or as determined by Architect, if specified conditions have been met.
   3. Replace landscaping that is dead or appears unhealthy or non-vigorous as directed by Architect before end of maintenance period. Make replacements within ten (10) days of notification. Lawn being replaced shall be guaranteed and maintained an additional thirty (30) days from date of replacement.

B. Seeded Lawn:
   1. Seeded lawn areas will not be accepted as complete and thirty (30) day maintenance period will not begin until uniform stand of grass at least 3 inches (75 mm) tall has been obtained.
   2. After grass is established and 3 inches (75 mm) tall, mow lawn areas at least weekly to a height of 2 inches (50 mm). During this period, perform work necessary to maintain a full, even stand of grass.
   3. At end of thirty (30) days of maintenance period, fertilize lawns as specified in Section 32 9113.
   4. Apply weed killers as necessary in order to obtain weed free lawn. Apply weed killer in accordance with manufacturer's instructions during calm weather when air temperature is between 50 and 80 deg F (10 and 27 deg C).

C. Sodded Lawn:
   1. Maintain sodded lawn areas until lawn complies with specified requirements and throughout maintenance period.
   2. Water sodded areas in sufficient quantities and at required frequency to maintain sub-soil immediately under sod continuously moist 3 to 4 inches (75 to 100 mm) deep.
   3. Cut grass first time when it reaches 3 inches (75 mm) high. Continue to mow at least once each week throughout maintenance period. Remove clippings.
   4. Apply weed killer as necessary to maintain weed-free lawn. Apply weed killer in accordance with manufacturer's instructions during calm weather when air temperature is between 50 and 80 deg F (10 and 27 deg C).
   5. At end of thirty (30) day maintenance period, fertilize lawns as recommended in Section 32 9113.

D. Trees, Shrubs, And Plants:
   1. Maintain by pruning, cultivating, and weeding as required for healthy growth.
   2. Restore planting basins.
   3. Tighten and repair stake and guy supports and reset trees and shrubs to proper grades or vertical positions as required.
   4. Spray as required to keep trees and shrubs free of insects and disease.
   5. Provide supplemental water by hand as needed in addition to water from sprinkling system.

END OF SECTION

SECTION 32 9120

TOPSOIL AND PLACEMENT

PART 1 - GENERAL

1.1 SUMMARY

A. Includes But Not Limited To:
   1. Perform topsoil evaluation and placement required prior to topsoil grading as described in Contract Documents.

B. Related Requirements:
   1. Section 32 9001: 'Common Landscape Requirements'
      a. Pre-installation conference held jointly with other common planting related sections.
   2. Section 32 9122: 'Topsoil Grading' for preparation of topsoil and addition of amendments prior to landscaping.

1.2 REFERENCES

A. Reference Standards:
   1. ASTM International:
      a. ASTM D1557-12, 'Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft-lbf/ft^3 (2,700 kN-m/m^3))'.

1.3 ADMINISTRATIVE REQUIREMENTS

A. Pre-Installation Conference:
   1. Participate in pre-installation conference as specified in Section 32 9001.
   2. In addition to agenda items specified in Section 32 9001, review the following:
      a. Review finish grade elevation and tolerance requirements.
      b. Review surface preparation requirements including disking, tilling, ripping, or aerating.
      c. Review test requirements as per Attachment 'Topsoil Testing Report' in this specification

1.4 SUBMITTALS

A. Informational Submittals:
   1. Field Quality Control Submittals:
      a. Submit tests on imported and site topsoil by licensed laboratory before use, using Owner Form 'Topsoil Testing Report':
         1) Topsoil shall meet minimum specified physical requirements and be approved by Landscape Architect.
         2) If in-place topsoil does not comply, enhance and test until installed topsoil complies with Project Specifications.
         3) If necessary, submit proposed amendments and application rates necessary to bring topsoil up to minimum specified requirements.
      b. Submit report stating location of source of imported topsoil and account of recent use.
   2. Installer Reports:
      a. Delivery slips indicating amount of physical amendments delivered to Project site.

B. Closeout Submittals:
   1. Include following in Operations And Maintenance Manual specified in Section 01 7800:

a. Record Documentation:
   1) 'Topsoil Testing Report'.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Topsoil:
   1. Design Criteria:
      a. Topsoil used in landscaped areas, whether imported, stockpiled, or in place, shall be weed free, fertile, loose, friable soil meeting following criteria:
         1) Chemical Characteristics:
            a) pH 5.5 to 8.0.
            b) Soluble Salts: less than 3.0 mmhos/cm.
            c) Sodium Absorption Ratio (SAR): less than 6.0.
            d) Organic Matter: greater than one percent.
         2) Physical Characteristics:
            a) Gradation as defined by USDA triangle of physical characteristics as measured by hydrometer.
               (1) Sand: 15 to 60 percent.
               (2) Silt: 10 to 60 percent.
               (3) Clay: 5 to 30 percent.
            b) Clean and free from toxic minerals and chemicals, noxious weeds, rocks larger than or equal to 1-1/2 inch (38 mm) in any dimension, and other objectionable materials.
            c) Soil (Coordinate screening as specified in Section 31 1413 'Topsoil Stripping And Stockpiling' to meet these characteristics):
               (1) Soil shall not contain more than five (5) percent by volume of rocks measuring over 1/4 inch (6 mm) in largest size.
               (2) Soil shall be topsoil in nature.
               (3) Soil resembling road base or other like materials are not acceptable.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verification Of Conditions:
   1. Do not commence work of this Section until grading tolerances specified in Section 31 2216 are met.
   2. Do not commence work of this Section until coordination with Section 32 9121 'Physical Preparation' and Section 32 9122 'Topsoil Grading' and if required by these specifications prior to placement.
   3. Receive approval from Landscape Architect of subgrade elevations prior to commencement of this Work.

3.2 PREPARATION

A. Protection Of In-Place Conditions:
   1. Protect utilities and site elements from damage.

B. Surface Preparation:
   1. Surfaces to receive Imported and Stockpiled Topsoil:
      a. Disk, till, rip, or aerate with approved agricultural aerator to depth of 6 inches (150 mm).
      b. Place specified and approved topsoil on prepared surface.

3.3 PERFORMANCE

A. General:
   1. After Surface Preparation requirements are completed, limit use of heavy equipment to areas no closer than 6 feet (1.80 meter) from building or other permanent structures. Use hand held tillers for preparation of subsoil in areas closer than 6 feet (1.80 m).
   2. Do not expose or damage existing shrub or tree roots.

B. Topsoil Depth/Quantity:
   1. Total topsoil depth of 5 inches (125 mm) minimum in lawn and groundcover planting areas.
   2. No topsoil as defined in this Section is required over tree and shrub planting areas or native grass, shrub, or tree areas as long as what is in place is not excessively rocky or otherwise unfavorable to healthy plant growth.
   3. Provide no less than quantity required to achieve tolerance described in Section 32 9122 'Topsoil Grading' along with additional soil amendments required in Section 32 9121 'Topsoil Physical Preparation' and in Section 32 9122 ‘Topsoil Grading’. Installer of this section responsible for providing sufficient topsoil material.

C. Imported Topsoil:
   1. Place tested and approved topsoil:
      a. Before placing topsoil, remove organic material, rocks and clods greater than 1-1/2 inch (38 mm) in any dimension, and other objectionable materials.
      b. Do not place topsoil whose moisture content makes it prone to compaction during placement process.
      c. Do not place topsoil when subgrade is either wet or frozen enough to cause clodding.

D. In Place Topsoil:
   1. At locations where topsoil can remain in place and has been tested and approved, perform the following:
      a. Remove existing vegetation as required in preparation for new landscaping.
      b. Remove vegetative layer, roots, organic material, rocks and clods greater than 1-1/2 inch (38 mm) in any dimension, and other objectionable materials.

E. Grading:
   1. Slope grade away from building for 12 feet (3.60 m) minimum from walls at slope of 1/2 inch in 12 inches (13 mm in 300 mm) minimum unless otherwise noted.
      a. High point of finish grade at building foundation shall be 6 inches (150 mm) minimum below finish floor level.
      b. Direct surface drainage in manner indicated on Contract Documents by molding surface to facilitate natural run-off of water.
      c. Fill low spots and pockets with topsoil and grade to drain properly.

3.4 FIELD QUALITY CONTROL

A. Testing And Inspections:
   1. Topsoil Testing:
      a. Test topsoil for project suitability using Owner supplied ‘Topsoil Testing Report,’ attachment to this specification:
         1) Testing requirements:
            a) If testing report shows topsoil does not meet topsoil Design Criteria and ‘Topsoil Testing Report: Soil Test Data’ requirements, topsoil is non-conforming. Corrections and re-testing are required until topsoil meets requirements.
            b) Use new ‘Topsoil Testing Report’, each time topsoil is tested.
            c) After topsoil testing is approved by Landscape Architect, submit two (2) copies of Final ‘Topsoil Testing Report as specified in Part 1 ‘Submittals’ of this specification.

B. Non-Conforming Work:
   1. If topsoil does not meet topsoil Design Criteria and ‘Topsoil Testing Report: Soil Test Data’ requirements topsoil will be re-tested at no cost to Owner.

a. Correction procedures:
    1) Topsoil not meeting specified physical characteristics of sand, silt, and clay shall be removed from site.
    2) Topsoil not meeting specified organic or fertility specifications may be amended in place with materials recommended in Topsoil Testing Report.
    3) If amendments are necessary, submit proposed amendments and application rates required to bring topsoil up to minimum specified requirements.
    4) Re-test topsoil and remove and amend as required until it meets minimum specified requirements.
b. Submit report to Landscape Architect for approval.
c. Receive approval from Landscape Architect prior to planting.

Topsoil Testing Report

Project	Name		Property Number
	Site Street Address, City, State/Province		
Person Submitting Test	Name	Date Requested	Phone
	Address, City, State/Province		Fax
Soil Testing Laboratory	Name	Date Submitted	Phone
	Address, City, State/Province		Fax

General

1. Owner will pay for pre-bid testing and one (1) final topsoil test.

Landscape Architect Instructions

1. Landscape Architect shall determine by investigation quality and quantity of topsoil on site before landscape design. Add physical and fertility recommendations from laboratory recommendations to relevant Church specifications.

Contractor Instructions

1. Test installed topsoil. Installed topsoil shall comply with Project Specifications.
2. If installed topsoil does not comply, Contractor will enhance and test at no cost to Owner until installed topsoil complies with Project Specifications.

Testing Instructions

1. Collect at least two (2) samples of on-site topsoil and each anticipated topsoil source. If site soil profile or borrow pit are not uniform, additional samples shall be taken. Uniform composite samples may also be used if properly acquired and documented.
2. Submit required soil samples to soil testing laboratory along with all required (for this report and laboratory) information.

Soil Testing Laboratory Instructions

1. This report must be completely filled out and provide soil interpretation and amendment, fertilizer, and soil conditioner recommendations for use by Landscape Architect. These recommendations should consider lawn areas, tree and shrub areas, and native plant areas.
2. Provide appropriate times for fertilizing.
3. Return completed Topsoil Testing Report to person submitting the test.

SOIL SAMPLE LOG		
Soil Sample No.	Description of location where sample was taken	History of use of the soil

Existing Conditions Test Report ("Acceptable Levels" refers to the allowable soil specifications prior to being amended)

SOIL TEST DATA												
Sample No.	pH(1)	EC(1) Mmhos/cm	SAR(1)	% Sand	% Silt	% Clay	Text(2) Class	%(3) OM	NO3-N(4) ppm	P(5) ppm	K(5) ppm	Fe(5) Ppm

SECTION 32 9122

TOPSOIL GRADING

PART 1 - GENERAL

1.1 SUMMARY

A. Includes But Not Limited To:
   1. Perform topsoil grading required to prepare site for installation of landscaping as described in Contract Documents.
   2. Perform topsoil placement and finish grading work required to prepare site for installation of landscaping as described in Contract Documents.
   3. Furnish and apply soil amendments as described in Contract Documents.

B. Related Requirements:
   1. Section 32 9001: 'Common Planting Requirements':
      a. Pre-installation conference held jointly with other common planting related sections.
   2. Section 32 9120: ‘Topsoil And Placement’ for topsoil evaluation and placement required for topsoil grading.

1.2 ADMINISTRATIVE REQUIREMENTS

A. Pre-Installation Conference:
   1. Participate in pre-installation conference as specified in Section 32 9001.
   2. Review the following:
      a. Review soil fertility amendments and fertilizer requirements as per Attachment 'Topsoil Testing Report' in Section 32 9120.

1.3 SUBMITTALS

A. Action Submittals:
   1. Product Data:
      a. Soil Fertility Amendments and Fertilizer:
         1) Product literature and chemical / nutrient analysis of soil amendments and fertilizers.
   2. Samples:
      a. Soil Fertility Amendments and Fertilizer:
         1) Sample of soil conditioner for approval before delivery to site.
         2) Include product analysis list.

B. Informational Submittals:
   1. Field Quality Control Submittals:
      a. Soil Fertility Amendments and Fertilizer:
         1) Submit proposed amendments and application rates necessary to bring topsoil up to minimum specified requirements.
         2) Submit report stating location of source of imported topsoil and account of recent use.
         3) Submit report to verify compost meets Ideal or Acceptable requirements.
   2. Installer Reports:
      a. Soil Fertility Amendments and Fertilizer:
         1) Delivery slips indicating amount of soil amendments, compost, conditioner, and fertilizer delivered to Project site.

C. Closeout Submittals:
   1. Include following in Operations And Maintenance Manual:
      a. Record Documentation:

1) ‘Compost Verification Report’.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Soil Amendments:
1. If required, incorporate following soil amendments into topsoil used for Project:
a. Acceptable Soil Amendments, Soil Conditioners, And Application Rates. (Choose one):
1) 'Soil Pep': Application Rate from Topsoil Testing Report.
2) ‘Compost’: Rate from Topsoil Testing Report.
3) Other amendments and conditioners as specified by topsoil Testing Report, such as lime, gypsum, Axis, etc.
4) Equals as approved by Architect before use.
b. Acceptable Fertilizers And Application Rates:
1) Apply Fertilizer and Application Rates from Topsoil Testing Report.
2) Equal as approved by Architect before installation.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verification Of Conditions:
1. Do not commence work of this Section until imported, stockpiled and in place topsoil are placed as specified in Section 32 9120 'Topsoil And Placement'.

3.2 PREPARATION

A. Protection Of In-Place Conditions:
1. Protect utilities and site elements from damage.

B. Surface Preparation:
1. Surfaces that meet specified topsoil elevations.
a. Seven (7) days maximum before beginning seeding and planting:
1) Loosen topsoil 6 inch (150 mm) deep, dampen thoroughly, and cultivate to properly break up clods and lumps.
2) Rake area to remove clods, rocks, weeds, roots, debris or other material 1-1/2 inches (38 mm) or more in any dimension.
3) Grade and shape landscape area to bring surface to true uniform planes free from irregularities and to provide drainage and proper slope to catch basins.
2. Addition of Soil Amendments:
a. Add specified soil amendments at specified rates to topsoil as directed by Topsoil Testing Report found in Section 32 9120 'Topsoil And Placement'.
b. Add specified fertilizers at specified rates into topsoil as directed by Soil Testing Laboratory.
c. Roto-till or otherwise mix soil amendments evenly into topsoil.
d. Incorporate and leach soil amendments which require leaching, such as gypsum, within such time limits that soil is sufficiently dry to allow proper application of fertilizer and soil conditioners.

3.3 PERFORMANCE

A. General:

1. Limit use of heavy equipment to areas no closer than 6 feet (1.80 meter) from building or other permanent structures. Use hand held tillers for preparation of subsoil in areas closer than 6 feet (1.80 m).
2. Do not expose or damage existing shrub or tree roots.

B. Finish Grade Tolerances (As shown on General Planting Details in Contract Documents):
   1. Finish topsoil grade of planting areas before planting and after addition of soil additives shall be specified distances below top of adjacent pavement of any kind:
      a. Ground Cover Areas: 2 inches (50 mm) below.
      b. Seeded Areas: One inch (25 mm) below.
      c. Sodded Areas: 2 inches (50 mm) below.
      d. Tree and Shrub Areas (not individual trees): 4 inches (100 mm) below.

C. Placed Topsoil:
   1. At locations where topsoil has been placed as per Section 32 9120 'Topsoil and Placement', perform the following:
      a. Remove existing vegetation as required in preparation for new landscaping.
      b. Remove organic material, rocks and clods greater than 1-1/2 inch (38 mm) in any dimension, and other objectionable materials.

D. Grading:
   1. Coordinate grading as described in Section 32 9120 'Topsoil and Placement'.

E. Immediately before planting lawn and with topsoil in semi-dry condition, roll areas that are to receive lawn in two directions at approximately right angles with water ballast roller weighing 100 to 300 lbs (45 to 135 kg), depending on soil type.

F. Rake or scarify and cut or fill irregularities that develop as required until area is true and uniform, free from lumps, depressions, and irregularities.

3.4 PROTECTION

A. After landscape areas have been prepared, take no heavy objects over them except lawn rollers.

END OF SECTION

SECTION 32 92 00
TURF AND GRASSES

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Seeding.
   2. Sodding.
   3. Hydroseeding.
   4. Native grasses and wildflowers.
   5. No Mow grass.

1.02 RELATED SECTIONS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. Section 01 33 00 - Submittal Procedures.

C. Section 01 40 00 - Quality Requirements.

D. Section 01 60 00 - Product Requirements.

E. Section 31 10 00 - Site Clearing: for topsoil stripping and stockpiling.

F. Section 31 23 00 - Excavation and Fill: for excavation, filling and backfilling, and rough grading.

G. Section 32 84 00 - Planting Irrigation: for turf irrigation.

H. Section 32 93 00 - Plants: for border edgings.

1.03 DEFINITIONS

A. Duff Layer: The surface layer of native topsoil that is composed of mostly decayed leaves, twigs, and detritus.

B. Finish Grade: Elevation of finished surface of planting soil.

C. Manufactured Topsoil: Soil produced off-site by homogeneously blending mineral soils or sand with stabilized organic soil amendments to produce topsoil or planting soil.

D. Pesticide: A substance or mixture intended for preventing, destroying, repelling, or mitigating a pest. This includes insecticides, miticides, herbicides, fungicides, rodenticides, and molluscicides. It also includes substances or mixtures intended for use as a plant regulator, defoliant, or desiccant.

E. Pests: Living organisms that occur where they are not desired or that cause damage to plants, animals, or people. These include insects, mites, grubs, mollusks (snails and slugs), mammals (gophers, moles, and mice), unwanted plants (weeds), fungi, bacteria, and viruses.

F. Planting Soil: Standardized topsoil; imported topsoil; or manufactured topsoil that is modified with soil amendments and perhaps fertilizers to produce a soil mixture best for plant growth.

G. Subgrade: Surface or elevation of subsoil remaining after excavation is complete, or top surface of a fill or backfill before planting soil is placed.

H. Subsoil: All soil beneath the topsoil layer of the soil profile,and typified by the lack of organic matter and soil organisms.

I. Surface Soil: Soil that is present at the top layer of the existing soil profile at the Project site. In undisturbed areas, the surface soil is typically topsoil, but in disturbed areas such as urban environments, the surface soil can be subsoil.

1.04 REFERENCE STANDARDS

A. AOSA RULES - Rules for Testing Seeds; 2024.

B. ASTM C602 - Standard Specification for Agricultural Liming Materials; 2023.

C. ASTM D5268 - Standard Specification for Topsoil Used for Landscaping and Construction Purposes; 2023.

D. TPI (SPEC) - Guideline Specifications to Turfgrass Sodding; 2006.

1.05 SUBMITTALS

A. Product Data: For each type of product indicated.
   1. Pesticides and Herbicides: Include product label and manufacturer's application instructions specific to this Project.

B. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

1.06 INFORMATIONAL SUBMITTALS

A. Certification of Grass Seed: From seed vendor for each grass-seed monostand or mixture stating the botanical and common name, percentage by weight of each species and variety, and percentage of purity, germination, and weed seed. Include the year of production and date of packaging.
   1. Certification of each seed mixture:
      a. Turfgrass sod.
      b. Native grass seed mix.
      c. No Mow seed Mix.
      d. Include identification of source and name and telephone number of supplier.

B. Qualification Data: For qualified landscape Installer.

C. Product Certificates: For soil amendments and fertilizers, from manufacturer.

D. Material Test Reports: For imported or manufactured topsoil per Section 31 23 00 - Excavation and Fill.

E. Maintenance Instructions: Recommended procedures to be established by Owner for maintenance of turf and seeded areas during a calendar year. Submit before expiration of required initial maintenance periods.

1.07 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Installer Qualifications: A qualified landscape Installer whose work has resulted in successful turf and native seeding meadow establishment.
   1. Professional Membership: Installer shall be a member in good standing of either the Professional Landcare Network or the American Nursery and Landscape Association.
   2. Experience Five years' experience in turf installation in addition to requirements in Section 01 40 00 - Quality Requirements.
   3. Installer's Field Supervision: Require Installer to maintain an experienced full-time supervisor on Project site when work is in progress.
   4. Personnel Certifications: Installer's field supervisor shall have certification from the Professional Landcare Network as a certified landscape technician – exterior with installation and maintenance specialty areas designated CLT-Exterior and one of the following:
      a. Certified Turfgrass Professional, designated CTP.
      b. Certified Turfgrass Professional of Cool Season Lawns, designated CTP-CSL.
   5. Pesticide Applicator: State licensed, commercial.

C. Soil-Testing Laboratory Qualifications: An independent laboratory or university laboratory, recognized by the State Department of Agriculture, with the experience and capability to conduct the testing indicated and that specializes in types of tests to be performed.

D. Soil Analysis: **Will be by the local University or qualified testing facility** and available for each unamended soil type, furnish soil analysis and a written report by a qualified soil-testing laboratory stating percentages of organic matter; gradation of sand, silt, and clay content; cation exchange capacity; sodium absorption ratio; deleterious material; pH; and mineral and plant-nutrient content of the soil.
   a. Based on the test results, state recommendations for soil treatments and soil amendments to be incorporated. State recommendations in weight per 1000 sq. ft. (92.9 sq. m) or volume per cu. yd. (0.76 cu. m) for nitrogen, phosphorus, and potash nutrients and soil amendments to be added to produce satisfactory planting soil suitable for healthy, viable plants.
   b. Report presence of problem salts, minerals, or heavy metals, including aluminum, arsenic, barium, cadmium, chromium, cobalt, lead, lithium, and vanadium. If such problem materials are present, provide additional recommendations for corrective action.

E. Preinstallation Conference: Conduct conference at Project site.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Seed and Other Packaged Materials: Deliver packaged materials in original, unopened containers showing weight, certified analysis, name and address of manufacturer, and indication of conformance with state and federal laws, as applicable.

B. Sod: Harvest, deliver, store, and handle sod according to requirements in "Specifications for Turfgrass Sod Materials" and "Specifications for Turfgrass Sod Transplanting and Installation" in TPI (SPEC) "Guideline Specifications to Turfgrass Sodding." Deliver sod in time for planting within 24 hours of harvesting. Protect sod from breakage and drying.

C. Bulk Materials:
   1. Do not dump or store bulk materials near structures, utilities, walkways and pavements, or on existing turf areas or plants.
   2. Provide erosion-control measures to prevent erosion or displacement of bulk materials, discharge of soil-bearing water runoff, and airborne dust reaching adjacent properties, water conveyance systems, or walkways.
   3. Accompany each delivery of bulk fertilizers, lime, and soil amendments with appropriate certificates.

1.09 PROJECT CONDITIONS

A. Planting Restrictions: Plant during one of the following periods. Coordinate planting periods with initial maintenance periods to provide required maintenance from date of Substantial Completion.

B. Sod:
   1. Spring Planting: As specified on drawings.
   2. Fall Planting: As specified on drawings.

C. Native Seed:
   1. Spring Planting: As specified on drawings.
   2. Fall Planting: As specified on drawings.

D. No Mow Seed:
   1. Spring Planting: As specified on drawings.
   2. Fall Planting: As specified on drawings.

E. Weather Limitations: Proceed with planting only when existing and forecasted weather conditions permit planting to be performed when beneficial and optimum results may be obtained. Apply products during favorable weather conditions according to manufacturer's written instructions.

1.10 ESTABLISHMENT SERVICES

A. Initial Turf Maintenance Service: Provide full maintenance by skilled employees of landscape Installer. Maintain as required in Part 4. Begin maintenance immediately after each area is planted and continue until acceptable turf is established but for not less than the following period:
   1. Sodded Turf:

a. 2 calendar years.

B. Initial Native Seed Maintenance Service: Provide full maintenance by skilled employees of landscape Installer. Maintain as required in Part 4. Begin maintenance immediately after each area is planted and continue until acceptable native seed is established, but for not less than the following period:
   1. 90 Days.
   2. 2 growing seasons. (as defined by Landscape Architect for project location)
   3. 2 calendar years.

C. Continuing Long Term Maintenance Proposal: May be requested from the Owner to have the Installer provide, in the form of a standard yearly (or other period) maintenance agreement, starting on date initial maintenance service is concluded. State services, obligations, conditions, and terms for agreement period and for future renewal options.

PART 2 PRODUCTS

2.01 SEED

A. Grass Seed: Fresh, clean, dry, new-crop seed complying with AOSA RULES "Journal of Seed Technology; Rules for Testing Seeds" for purity and germination tolerances.

B. Seed Species: State-certified seed of grass species as follows:

C. Seed Species: Seed of grass species as follows, with not less than 95 percent germination, not less than 85 percent pure seed, and not more than 0.5 percent weed seed:
   1. Full Sun: Bermudagrass (Cynodon dactylon).
   2. Full Sun: Kentucky bluegrass (Poa pratensis), a minimum of three cultivars.
   3. Sun and Partial Shade: Proportioned by weight as follows:
      a. 50 percent Kentucky bluegrass (Poa pratensis).
      b. 30 percent chewings red fescue (Festuca rubra variety).
      c. 10 percent perennial ryegrass (Lolium perenne).
      d. 10 percent redtop (Agrostis alba).
   4. Shade: Proportioned by weight as follows:
      a. 50 percent chewings red fescue (Festuca rubra variety).
      b. 35 percent rough bluegrass (Poa trivialis).
      c. 15 percent redtop (Agrostis alba).

2.02 TURFGRASS SOD

A. Turfgrass Sod: Certified Number 1 Quality/Premium, including limitations on thatch, weeds, diseases, nematodes, and insects, complying with "Specifications for Turfgrass Sod Materials" in TPI's "Guideline Specifications to Turfgrass Sodding." Furnish viable sod of uniform density, color, and texture, strongly rooted, and capable of vigorous growth and development when planted.

B. Turfgrass Species: Bermudagrass (Cynodon dactylon), Carpetgrass (Axonopus affinis), Centipedegrass (Eremochloa ophiuroides), St. Augustinegrass (Stenotaphrum secundatum), Zoysiagrass (Zoysia japonica), Zoysiagrass (Zoysia matrella).

C. Turfgrass Species: Sod of grass species as follows, with not less than 95 percent germination, not less than 85 percent pure seed, and not more than 0.5 percent weed seed:
   1. Full Sun: Kentucky bluegrass (Poa pratensis), a minimum of three cultivars.
   2. Sun and Partial Shade: Proportioned by weight as follows:
      a. 50 percent Kentucky bluegrass (Poa pratensis).
      b. 30 percent chewings red fescue (Festuca rubra variety).
      c. 10 percent perennial ryegrass (Lolium perenne).
      d. 10 percent redtop (Agrostis alba).
   3. Shade: Proportioned by weight as follows:
      a. 50 percent chewings red fescue (Festuca rubra variety).
      b. 35 percent rough bluegrass (Poa trivialis).
      c. 15 percent redtop (Agrostis alba).

2.03 MEADOW GRASSES AND WILDFLOWERS

A. Wildflower Seed: Fresh, clean, and dry new seed, of mixed species as follows:
   1. As illustrated on the drawings.

B. Native Grass Seed: Fresh, clean, and dry new seed, of mixed species as follows:
   1. As illustrated on the drawings.

C. Wildflower and Native Grass Seed: Fresh, clean, and dry new seed, of mixed species as follows:
   1. As illustrated on the drawings.

2.04 INORGANIC SOIL AMENDMENTS

A. Lime: ASTM C602, agricultural liming material containing a minimum of 80 percent calcium carbonate equivalent.

B. Iron Sulfate: Granulated ferrous sulfate containing a minimum of 20 percent iron and 10 percent sulfur.

C. Perlite: Horticultural perlite, soil amendment grade.

D. Agricultural Gypsum: Minimum 90 percent calcium sulfate, finely ground with 90 percent passing through No. 50 sieve.

E. Sand: Clean, washed, natural or manufactured, and free of toxic materials.

F. Zeolites: Mineral clinoptilolite with at least 60 percent water absorption by weight.

2.05 ORGANIC SOIL AMENDMENTS

A. Compost: Well-composted, stable, and weed-free organic matter, pH range of 5.5 to 7.5; moisture content 35 to 55 percent by weight; 100 percent passing through 1-inch sieve; soluble salt content of 5 to 10 decisiemens/m; not exceeding 0.5 percent inert contaminants and free of substances toxic to plantings; and as follows:
   1. Organic Matter Content: 50 to 60 percent of dry weight.

B. Sphagnum Peat: Partially decomposed sphagnum peat moss, finely divided or of granular texture, with a pH range of 3.4 to 4.8.

2.06 FERTILIZERS

A. Bonemeal: Commercial, raw or steamed, finely ground; a minimum of 4 percent nitrogen and 20 percent phosphoric acid.

B. Superphosphate: Commercial, phosphate mixture, soluble; a minimum of 20 percent available phosphoric acid.

C. Commercial Fertilizer: Commercial-grade complete fertilizer of neutral character, consisting of fast- and slow-release nitrogen, 50 percent derived from natural organic sources of urea formaldehyde, phosphorous, and potassium in the following composition:
   1. Composition: 1 lb/1000 sq. ft. of actual nitrogen, 4 percent phosphorous, and 2 percent potassium, by weight.
   2. Composition: Nitrogen, phosphorous, and potassium in amounts recommended in soil reports from a qualified soil-testing laboratory.

D. Slow-Release Fertilizer: Granular or pelleted fertilizer consisting of 50 percent water-insoluble nitrogen, phosphorus, and potassium in the following composition:
   1. Composition: 20 percent nitrogen, 10 percent phosphorous, and 10 percent potassium, by weight.
   2. Composition: Nitrogen, phosphorous, and potassium in amounts recommended in soil reports from a qualified soil-testing laboratory.

2.07 PLANTING SOILS

A. Planting Soil: ASTM D5268 topsoil, with pH range of 5.5 to 7, a minimum of 4 percent organic material content; free of stones 1 inch or larger in any dimension and other extraneous materials harmful to plant growth. Mix topsoil with the soil amendments and fertilizers as indicated in the testing reports.

B. Planting Soil: Existing, native surface topsoil formed under natural conditions with the duff layer retained during excavation process and stockpiled on-site. Verify suitability of native surface topsoil to produce viable planting soil. Clean soil of roots, plants, sod, stones, clay lumps, and other extraneous materials harmful to plant growth.
   1. Supplement with another specified planting soil when quantities are insufficient.
   2. Mix existing, native surface topsoil with the following soil amendments and fertilizers as indicated in the soil testing reports.

C. Planting Soil: Imported topsoil or manufactured topsoil from off-site sources. Obtain topsoil displaced from naturally well-drained construction or mining sites where topsoil occurs at least 4 inches deep; do not obtain from agricultural land, bogs or marshes.
   1. Additional Properties of Imported Topsoil or Manufactured Topsoil: Screened and free of stones 1 inch or larger in any dimension; free of roots, plants, sod, clods, clay lumps, pockets of coarse sand, paint, paint washout, concrete slurry, concrete layers or chunks, cement, plaster, building debris, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, acid, and other extraneous materials harmful to plant growth; free of obnoxious weeds and invasive plants including quackgrass, Johnsongrass, poison ivy, nutsedge, nimblewill, Canada thistle, bindweed, bentgrass, wild garlic, ground ivy, perennial sorrel, and bromegrass; not infested with nematodes, grubs, other pests, pest eggs, or other undesirable organisms and disease-causing plant pathogens; friable and with sufficient structure to give good tilth and aeration. Continuous, air-filled, pore-space content on a volume/volume basis shall be at least 15 percent when moisture is present at field capacity. Soil shall have a field capacity of at least 15 percent on a dry weight basis.
   2. Mix imported topsoil or manufactured topsoil with the soil amendments and fetilizers to produce planting suitable soil as directed by the soil testing agencies.

D. Lightweight On-Structure Planting Soil: Soils provided by premanufactured blends suitable for on structure planting. See architectural drawings for specified soil composition and manufacturer.

2.08 MULCHES

A. Straw Mulch: Provide air-dry, clean, mildew- and seed-free, salt hay or threshed straw of wheat, rye, oats, or barley.

B. Sphagnum Peat Mulch: Partially decomposed sphagnum peat moss, finely divided or of granular texture, and with a pH range of 3.4 to 4.8.

C. Fiber Mulch: Biodegradable, dyed-wood, cellulose-fiber mulch; nontoxic and free of plant-growth or germination inhibitors; with a maximum moisture content of 15 percent and a pH range of 4.5 to 6.5.

D. Nonasphaltic Tackifier: Colloidal tackifier recommended by fiber-mulch manufacturer for slurry application; nontoxic and free of plant-growth or germination inhibitors.

2.09 PESTICIDES

A. General: Pesticide, registered and approved by EPA, acceptable to authorities having jurisdiction, and of type recommended by manufacturer for each specific problem and as required for Project conditions and application. Do not use restricted pesticides unless authorized in writing by authorities having jurisdiction.

B. Pre-Emergent Herbicide (Selective and Non-Selective): Effective for controlling the germination or growth of weeds within planted areas at the soil level directly below the mulch layer.

C. Post-Emergent Herbicide (Selective and Non-Selective): Effective for controlling weed growth that has already germinated.

2.10 EROSION-CONTROL MATERIALS

A. Erosion-Control Blankets: Biodegradable wood excelsior, straw, or coconut-fiber mat enclosed in a photodegradable plastic mesh. Include manufacturer's recommended steel wire staples, 6 inches long.

B. Erosion-Control Fiber Mesh: Biodegradable burlap or spun-coir mesh, a minimum of 0.92 lb/sq. yd., with 50 to 65 percent open area. Include manufacturer's recommended steel wire staples, 6 inches long.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine areas to be planted for compliance with requirements and other conditions affecting performance.
   1. Verify that no foreign or deleterious material or liquid such as paint, paint washout, concrete slurry, concrete layers or chunks, cement, plaster, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, or acid has been deposited in soil within a planting area.
   2. Do not mix or place soils and soil amendments in frozen, wet, or muddy conditions.
   3. Suspend soil spreading, grading, and tilling operations during periods of excessive soil moisture until the moisture content reaches acceptable levels to attain the required results.
   4. Uniformly moisten excessively dry soil that is not workable and which is too dusty.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

C. If contamination by foreign or deleterious material or liquid is present in soil within a planting area, remove the soil and contamination as directed by Architect and replace with new planting soil.

3.02 PREPARATION

A. Protect structures, utilities, sidewalks, pavements, and other facilities, trees, shrubs, and plantings from damage caused by planting operations.
   1. Protect adjacent and adjoining areas from hydroseeding and hydromulching overspray.
   2. Protect grade stakes set by others until directed to remove them.

B. Install erosion-control measures to prevent erosion or displacement of soils and discharge of soil-bearing water runoff or airborne dust to adjacent properties and walkways.

3.03 TURF AREA PREPARATION

A. Limit turf subgrade preparation to areas to be planted.

B. Newly Graded Subgrades: Loosen subgrade to a minimum depth of 6 inches. Remove stones larger than 1 inch in any dimension and sticks, roots, rubbish, and other extraneous matter and legally dispose of them off Owner's property.
   1. Apply fertilizer directly to subgrade before loosening.
   2. Spread topsoil, apply soil amendments and fertilizer on surface, and thoroughly blend planting soil.
      a. Delay mixing fertilizer with planting soil if planting will not proceed within a few days.
      b. Mix lime with dry soil before mixing fertilizer.
   3. Spread planting soil to a depth of 6 inches but not less than required to meet finish grades after light rolling and natural settlement. Do not spread if planting soil or subgrade is frozen, muddy, or excessively wet.
      a. Spread approximately 1/2 the thickness of planting soil over loosened subgrade. Mix thoroughly into top 4 inches of subgrade. Spread remainder of planting soil.
      b. Reduce elevation of planting soil to allow for soil thickness of sod.

C. Unchanged Subgrades: If turf is to be planted in areas unaltered or undisturbed by excavating, grading, or surface-soil stripping operations, prepare surface soil as follows:
   1. Remove existing grass, vegetation, and turf. Do not mix into surface soil.
   2. Loosen surface soil to a depth of at least 6 inches. Apply soil amendments and fertilizers according to planting soil mix proportions and mix thoroughly into top 4 inches of soil. Till soil to a homogeneous mixture of fine texture.
      a. Apply fertilizer directly to surface soil before loosening.
   3. Remove stones larger than 1 inch in any dimension and sticks, roots, trash, and other extraneous matter.
   4. Legally dispose of waste material, including grass, vegetation, and turf, off Owner's property.

D. Finish Grading: Grade planting areas to a smooth, uniform surface plane with loose, uniformly fine texture. Grade to within plus or minus 1/2 inch of finish elevation. Roll and rake, remove ridges, and fill depressions to meet finish grades. Limit finish grading to areas that can be planted in the immediate future.

E. Moisten prepared area before planting if soil is dry. Water thoroughly and allow surface to dry before planting. Do not create muddy soil.

F. Before planting, obtain Architect's acceptance of finish grading; restore planting areas if eroded or otherwise disturbed after finish grading.

3.04 PREPARATION FOR EROSION-CONTROL MATERIALS

A. Prepare area as specified in "Turf Area Preparation" Article.

B. For erosion-control mats, install planting soil in two lifts, with second lift equal to thickness of erosion-control mats. Install erosion-control mat and fasten as recommended by material manufacturer.

C. Fill cells of erosion-control mat with planting soil and compact before planting.

D. For erosion-control blanket or mesh, install from top of slope, working downward, and as recommended by material manufacturer for site conditions. Fasten as recommended by material manufacturer.

E. Moisten prepared area before planting if surface is dry. Water thoroughly and allow surface to dry before planting. Do not create muddy soil.

3.05 SEEDING

A. Sow seed with spreader or seeding machine. Do not broadcast or drop seed when wind velocity exceeds 5 mph. Evenly distribute seed by sowing equal quantities in two directions at right angles to each other.
   1. Do not use wet seed or seed that is moldy or otherwise damaged.
   2. Do not seed against existing trees. Limit extent of seed to outside edge of planting saucer.

B. Sow seed at a total rate of 3 to 4 lb/1000 sq. ft.

C. Rake seed lightly into top 1/8 inch of soil, roll lightly, and water with fine spray.

D. Protect seeded areas with slopes exceeding 1:4 with erosion-control blankets and 1:6 with erosion-control fiber mesh installed and stapled according to manufacturer's written instructions.

E. Protect seeded areas with erosion-control mats where shown on Drawings; install and anchor according to manufacturer's written instructions.

F. Protect seeded areas with slopes not exceeding 1:6 by spreading straw mulch. Spread uniformly at a minimum rate of 2 tons/acre to form a continuous blanket 1-1/2 inches in loose thickness over seeded areas. Spread by hand, blower, or other suitable equipment.
   1. Anchor straw mulch by crimping into soil with suitable mechanical equipment.
   2. Bond straw mulch by spraying with asphalt emulsion at a rate of 10 to 13 gal./1000 sq. ft. Take precautions to prevent damage or staining of structures or other plantings adjacent to mulched areas. Immediately clean damaged or stained areas.

G. Protect seeded areas from hot, dry weather or drying winds by applying compost mulch within 24 hours after completing seeding operations. Soak areas, scatter mulch uniformly to a thickness of 3/16 inch and roll surface smooth.

3.06 HYDROSEEDING

A. Hydroseeding: Mix specified seed, fertilizer, and fiber mulch in water, using equipment specifically designed for hydroseed application. Continue mixing until uniformly blended into homogeneous slurry suitable for hydraulic application.

B. Native seed mixtures shall not be hydroseeded and hydromulched together. If necessary tackifiers can be applied by hydromulch, separately, following separate mechanical or hydroseedng as described above.

3.07 SODDING

A. Lay sod within 24 hours of harvesting. Do not lay sod if dormant or if ground is frozen or muddy.

B. Lay sod to form a solid mass with tightly fitted joints. Butt ends and sides of sod; do not stretch or overlap. Stagger sod strips or pads to offset joints in adjacent courses. Avoid damage to subgrade or sod during installation. Tamp and roll lightly to ensure contact with subgrade, eliminate air pockets, and form a smooth surface. Work sifted soil or fine sand into minor cracks between pieces of sod; remove excess to avoid smothering sod and adjacent grass.
   1. Lay sod across angle of slopes exceeding 1:3.
   2. Anchor sod on slopes exceeding 1:6 with wood pegs or steel staples spaced as recommended by sod manufacturer but not less than 2 anchors per sod strip to prevent slippage.

C. Saturate sod with fine water spray within two hours of planting. During first week after planting, water daily or more frequently as necessary to maintain moist soil to a minimum depth of 1-1/2 inches below sod.

3.08 TURF RENOVATION

A. Renovate existing turf.

B. Renovate existing turf damaged by Contractor's operations, such as storage of materials or equipment and movement of vehicles.
   1. Reestablish turf where settlement or washouts occur or where minor regrading is required.
   2. Install new planting soil as required.

C. Remove sod and vegetation from diseased or unsatisfactory turf areas; do not bury in soil.

D. Remove topsoil containing foreign materials such as oil drippings, fuel spills, stones, gravel, and other construction materials resulting from Contractor's operations, and replace with new planting soil.

E. Mow, dethatch, core aerate, and rake existing turf.

F. Remove weeds before seeding. Where weeds are extensive, apply selective herbicides as required. Do not use pre-emergence herbicides.

G. Remove waste and foreign materials, including weeds, soil cores, grass, vegetation, and turf, and legally dispose of them off Owner's property.

H. Till stripped, bare, and compacted areas thoroughly to a soil depth of 6 inches.

I. Apply soil amendments and initial fertilizers required for establishing new turf and mix thoroughly into top 4 inches of existing soil. Install new planting soil to fill low spots and meet finish grades.

J. Apply seed and protect with straw mulch as required for new turf.

K. Water newly planted areas and keep moist until new turf is established.

3.09 TURF MAINTENANCE

A. Maintain and establish turf by watering, fertilizing, weeding, mowing, trimming, replanting, and performing other operations as required to establish healthy, viable turf. Roll, regrade, and replant bare or eroded areas and remulch to produce a uniformly smooth turf. Provide materials and installation the same as those used in the original installation.
   1. Fill in as necessary soil subsidence that may occur because of settling or other processes. Replace materials and turf damaged or lost in areas of subsidence.
   2. In areas where mulch has been disturbed by wind or maintenance operations, add new mulch and anchor as required to prevent displacement.
   3. Apply treatments as required to keep turf and soil free of pests and pathogens or disease. Use integrated pest management practices whenever possible to minimize the use of pesticides and reduce hazards.

B. Watering: Install and maintain temporary piping, hoses, and turf-watering equipment to convey water from sources and to keep turf uniformly moist to a depth of 4 inches.
   1. Schedule watering to prevent wilting, puddling, erosion, and displacement of seed or mulch. Lay out temporary watering system to avoid walking over muddy or newly planted areas.

2. Water turf with fine spray at a minimum rate of 1 inch per week unless rainfall precipitation is adequate.

C. Mow turf as soon as top growth is tall enough to cut. Repeat mowing to maintain specified height without cutting more than 1/3 of grass height. Remove no more than 1/3 of grass-leaf growth in initial or subsequent mowings. Do not delay mowing until grass blades bend over and become matted. Do not mow when grass is wet. Schedule initial and subsequent mowings to maintain the following grass height:
   1. Mow bentgrass to a height of 1/2 inch or less.
   2. Mow bermudagrass to a height of 1/2 to 1 inch.
   3. Mow carpetgrass, centipedegrass, perennial ryegrass, zoysiagrass to a height of 1 to 2 inches.
   4. Mow Kentucky bluegrass, buffalograss, annual ryegrass, chewings red fescue to a height of 1-1/2 to 2 inches.
   5. Mow bahiagrass, turf-type tall fescue, St. Augustinegrass to a height of 2 to 3 inches.

D. Turf Postfertilization: Apply fertilizer after initial mowing and when grass is dry.
   1. Use fertilizer that will provide actual nitrogen of at least 1 lb/1000 sq. ft. to turf area.

3.10 SATISFACTORY TURF

A. Turf installations shall meet the following criteria as determined by Architect:
   1. Satisfactory Seeded Turf: At end of maintenance period, a healthy, uniform, close stand of grass has been established, free of weeds and surface irregularities, with coverage exceeding 90 percent over any 10 sq. ft. and bare spots not exceeding 5 by 5 inches.
   2. Satisfactory Sodded Turf: At end of maintenance period, a healthy, well-rooted, even-colored, viable turf has been established, free of weeds, open joints, bare areas, and surface irregularities.
   3. Satisfactory Plugged Turf: At end of maintenance period, the required number of plugs has been established as well-rooted, viable patches of grass, and areas between plugs are free of weeds and other undesirable vegetation.
   4. Satisfactory Sprigged Turf: At end of maintenance period, the required number of sprigs has been established as well-rooted, viable plants, and areas between sprigs are free of weeds and other undesirable vegetation.

B. Use specified materials to reestablish turf that does not comply with requirements and continue maintenance until turf is satisfactory.

3.11 MEADOW

A. Sow seed with spreader or seeding machine. Do not broadcast or drop seed when wind velocity exceeds 5 mph. Evenly distribute seed by sowing equal quantities in two directions at right angles to each other.
   1. Do not use wet seed or seed that is moldy or otherwise damaged.

B. Sow seed at a total rate of 5 oz./1000 sq. ft.

C. Brush seed into top 1/16 inch of soil, roll lightly, and water with fine spray.

D. Protect seeded areas from hot, dry weather or drying winds by applying compost mulch within 24 hours after completing seeding operations. Soak areas, scatter mulch uniformly to a thickness of 3/16 inch and roll surface smooth.

E. Water newly planted areas and keep moist until meadow is established.

3.12 MEADOW MAINTENANCE

A. Maintain and establish meadow by watering, weeding, mowing, trimming, replanting, and performing other operations as required to establish a healthy, viable meadow. Roll, regrade, and replant bare or eroded areas and remulch. Provide materials and installation the same as those used in the original installation.
   1. Fill in as necessary soil subsidence that may occur because of settling or other processes. Replace materials and meadow damaged or lost in areas of subsidence.

2. In areas where mulch has been disturbed by wind or maintenance operations, add new mulch and anchor as required to prevent displacement.
3. Apply treatments as required to keep meadow and soil free of pests and pathogens or disease. Use integrated pest management practices whenever possible to minimize the use of pesticides and reduce hazards.

B. Watering: Install and maintain temporary piping, hoses, and meadow-watering equipment to convey water from sources and to keep meadow uniformly moist.
1. Schedule watering to prevent wilting, puddling, erosion, and displacement of seed or mulch. Lay out temporary watering system to avoid walking over muddy or newly planted areas.
2. Water meadow with fine spray at a minimum rate of 1/2 inch per week for six weeks after planting unless rainfall precipitation is adequate.

3.13 PESTICIDE APPLICATION

A. Apply pesticides and other chemical products and biological control agents in accordance with requirements of authorities having jurisdiction and manufacturer's written recommendations. Coordinate applications with Owner's operations and others in proximity to the Work. Notify Owner before each application is performed.

B. Post-Emergent Herbicides (Selective and Non-Selective): Apply only as necessary to treat already-germinated weeds and in accordance with manufacturer's written recommendations.

3.14 CLEANUP AND PROTECTION

A. Promptly remove soil and debris created by turf work from paved areas. Clean wheels of vehicles before leaving site to avoid tracking soil onto roads, walks, or other paved areas.

B. Erect temporary fencing or barricades and warning signs as required to protect newly planted areas from traffic. Maintain fencing and barricades throughout initial maintenance period and remove after plantings are established.

C. Remove nondegradable erosion-control measures after grass establishment period.

3.15 DISPOSAL

A. Remove surplus soil and waste material including excess subsoil, unsuitable soil, trash, and debris and legally dispose of them off Owner's property.

3.16 DURATION OF MAINTENANCE

A. Maintenance of Turf and Grasses shall continue until Owner accepts that the processes listed above have been completed.

PART 4 TURF AND GRASS ESTABLISHMENT PERIOD

4.01 ESTABLISHMENT PERIOD

A. Plant Establishment Period (PEP) begins on the date that initial planting operations (Substantial Completion) on the project are completed and continues until final acceptance of the project, and will last for the following period:
1. 2 calendar years.

4.02 ESTABLISHMENT WORK

A. Keep turf and grasses in a healthy growing condition in accordance with the Landscape Standards throughout the establishment period and submit Life Time Landscape Contractor Inspection Reports. Perform turf and grass establishment work throughout the growing seasons and as necessary during the dormant seasons (as defined by Landscape Architect). The Landscape Architect may perform inspections throughout the PEP to verify compliance. The Landscape Architect will consider the Contractor non-compliant if the Contractor does not maintain turf and grasses throughout the PEP and does not submit Inspection reports.

B. All Turf and Grasses:
1. In Turf and Grass establishment work, perform the following:
2. Inspect to assess the condition of the turf and grasses and the site and factors that may influence turf and grass health, vigor, and establishment success. Inspect these conditions at

least every two weeks during the growing season and at least every month during the dormant season;

3. Submit a written Inspection report to the Landscape Architect via e-mail by the 1st and 15th of each month during the growing season and by the 1st of each month during the dormant season. The Landscape Architect will use the report-frequency and content to assess plant establishment compliance. The report may include scanned copies of the plan sheets with the Contractor notes, copies of the report form found in the Life Time Landscape Standards Manual. Include the following in the report:
    a. The project number;
    b. Engineer's name;
    c. Name of Contractor's responsible scout or representative;
    d. Dates work was performed;
    e. Work locations;
    f. Work completed;
    g. Prevailing weather conditions;
    h. Soil moisture assessments;
    i. Insect, animal, vehicular, weather, or other damage;
    j. Disease problems;
    k. Treatment recommendations' and
    l. Assessment of overall plant conditions including weed competition and control.
4. Maintain soil moisture in accordance with the watering guidelines of the standard planting details shown on the plans.
5. Maintain healthy, vigorous turf and grass. free of harmful insects, fungus, and disease.
6. Repair dead, dying, and unsightly turf and grass. Provide and install replacement turf and grass in accordance with Replacement Requirements and according to Construction Drawings and Specifications.
7. Maintain turf and grass areas in a weed-free condition as follows:
    a. Remove weeds, top growth and roots, within the turf and grass limits.
    b. Do not spray chemicals for weed control in mulched planting areas during the PEP. The Contractor may apply a non-selective, non-residual post-emergent herbicide containing 41 percent glyphosate, as the active ingredient with a surfactant on a spot treatment basis with a brush or wick applicator. The Contractor may also apply a broad-spectrum dichlobenil based granular, pre-emergent herbicide in accordance with product labeling and manufacturer's recommendations;
    c. Do not weed whip or weed clip as weed control.
8. Prevent or repair rutting and other damage that may lead to soil erosion and weed infestation.
9. Perform turf and grass establishment operations consistent with plant care and horticultural practices detailed in the Life Time Landscape Standards.
10. Remove excess material, obsolete temporary erosion control devices, rocks, and debris from the project.

C. Replacement requirements:
    1. Within the first half of the PEP, determine which turf and grass need replacing. Replace dead, defective turf and grass and incidental materials in accordance with initial installation requirements, including turf and grass lost due to accidents, vandalism, theft, rodent and pest damage, damage caused by the Contractor, or if ordered by the Landscape Architect or Facilities Manager, at no additional cost to the Owner. Conduct turf and grass replacement operations as needed within the first half of the PEP. At least one week before turf and grass replacement, submit a summary report of proposed turf and grass replacements to the Landscape Architect and Facilities Manager. Include by attachment, copies of plan sheets with the proposed replacement quantities and locations identified and a Life Time Certificate of Compliance for Turf and Grass, Landscape Material, and Equipment, in the report. Using brightly colored paint, mark on site turf and grass requiring replacement. Provide replacement turf and grass and incidental materials that are equal to and the same as the initial material required by the contract.

D. Final Acceptance:

a. As a condition for terminating the PEP and conducting the final inspection, the Landscape Architect and Facility Manager may require the Contractor to bring the turf and grass establishment work into compliance. At the end of the PEP, the Landscape Architect and Facility Manager along with the Establishment Contractor will perform a final inspection of the project.

E. Transition to Long Term Maintenance:

1. Upon final acceptance, the project will transition from Establishment Contractor care of turf and grass to Long Term Maintenance. A coordination meeting to transition from the Establishment Contractor to Long-Term Maintenance Contractor will take place one week prior to conclusion of the Establishment period to ensure all requirements are met and the Long-Term Contractor understands their role and when they will take over Maintenance.

SECTION 32 9223

SODDING

PART 1 - GENERAL

1.1 SUMMARY

A. Includes But Not Limited To:
   1. Furnish and install sodded lawn as described in Contract Documents.

B. Related Requirements:
   1. Section 32 8423: Irrigation system.
   2. Section 32 9001: Common Landscape Requirements:
      a. Pre-installation conference held jointly with other common planting related sections.
   3. Section 32 9120: 'Topsoil and Placement'.
   4. Section 32 9122: 'Topsoil Grading'

1.2 REFERENCES

A. Definitions:
   1. Crop Coefficients and Hydro-Zones: Crop coefficients (Kc) are used with ETo to estimate specific plant evapotranspiration rates. The crop coefficient is a dimensionless number (between 0 and 1.2) that is multiplied by the ETo value to arrive at a plant ET (ETc) estimate. Plants grouped by water needs, organized into one irrigation zone.
   2. Eco-Region Irrigation Design: A bio-regional approach to irrigation and planting design that is relevant to the geographic area for which the planting plan and irrigation system is designed.
   3. Hardiness Zone: A hardiness zone is a more precisely geographically-defined zone within an Eco-Region in which a specific category of plant life is capable of growing, as defined by temperature hardiness, or ability to withstand the minimum temperatures of the zone. Hardiness Zones may be defined by one of two sources:
      a. Sunset Western Garden Book Maps.
      b. USDA Hardiness Zone Map.

      Plant Hardiness zone sources shall be listed by the architect through the planting and irrigation design process.
   4. Hydro-Zone: Plants grouped by water needs (similar Crop Coefficients (Kc), organized into one irrigation zone.
   5. Reference Evapotranspriation (ETo): The total water lost from the soil (evaporation) and from the plant surface (transpiration) over some period.

1.3 ADMINISTRATIVE REQUIREMENTS

A. Pre-Installation Conference:
   1. Participate in pre-installation conference as specified in Section 32 9001.

1.4 SUBMITTALS

A. Informational Submittals:
   1. Source Quality Control Submittals:
      a. Written certification confirming lawn seed quality and mix.

B. Closeout Submittals:

1. Include following in Operations And Maintenance Manual:
    a. Maintenance Contracts:
        1) See Site Management Plan (SMP) for Establishment Period Maintenance.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Delivery And Acceptance Requirements:
1. Harvest, deliver, store, and handle sod in accordance with requirements of Turfgrass Producers International (TPI) (formally American Sod Producers Association) Specifications for Turfgrass Sod Materials and Transplanting / Installing.
2. Schedule deliveries to coincide with topsoil operations and laying. Keep storage at job site to minimum without causing delays.
    a. Deliver, unload, and store sod on pallets within 24 hours of being lifted.
    b. Do not deliver small, irregular, or broken pieces of sod.

B. Storage And Handling Requirements:
1. Cut sod in pieces approximately 3/4 to one inch (19 to 25 mm) thick. Roll or fold sod so it may be lifted and handled without breaking or tearing and without loss of soil.
2. During wet weather, allow sod to dry sufficiently to prevent tearing during lifting and handling.
3. During dry weather, protect sod from drying before installation. Water as necessary to insure vitality and to prevent excess loss of soil in handling. Sod that dries out before installation will be rejected.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Description:
1. Superior sod grown from certified, high quality, seed of known origin or from plantings of certified grass seedlings or stolons:
    a. Assure satisfactory genetic identity and purity.
    b. Assure over-all high quality and freedom from noxious weeds or an excessive amount of other crop and weedy plants at time of harvest.
2. Sod shall be as specified on the planting plans within the landscape schedule.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Interface With Other Work:
1. Do not commence work of this Section until work of Sections 32 9122 and 32 9300 has been completed and approved.

B. Tolerances:
1. Final grade of soil after sodding of lawn areas is complete shall be one inch (25 mm below top of adjacent pavement of any kind.

C. Laying of Sod:
1. Lay sod during growing season and within 48 hours of being lifted.
2. Lay sod while top 6 inches (150 mm) of soil is damp, but not muddy. Sodding during freezing temperatures or over frozen soil is not acceptable.

3. Lay sod in rows perpendicular to slope with joints staggered. Butt sections closely without overlapping or leaving gaps between sections. Cut out irregular or thin sections with a sharp knife.
4. Lay sod flush with adjoining existing sodded surfaces.
5. Do not sod slopes steeper than 3:1. Consult with Architect for alternate treatment.

D. After Laying of Sod Is Complete:
1. Roll horizontal surface areas in two directions perpendicular to each other.
2. Repair and re-roll areas with depressions, lumps, or other irregularities. Heavy rolling to correct irregularities in grade will not be permitted.
3. Water sodded areas immediately after laying sod to obtain moisture penetration through sod into top 6 inches (150 mm) of topsoil.

3.2 FIELD QUALITY CONTROL

A. Field Inspection:
1. Sodded areas will be accepted at Project closeout if:
a. Sodded areas are properly established.
b. Sod is free of bare and dead spots and is without weeds.
c. No surface soil is visible when grass has been cut to height of 2 inches (50 mm).
2. Sodded areas have been mowed a minimum of twice.

END OF SECTION

SECTION 32 93 00
PLANTS

PART 1 GENERAL

2.01 DESCRIPTION

A. This work consists of providing, planting, and establishing trees, shrubs, vines, and perennials of the species, variety, grade, size, or age, and root category specified for the locations shown on the plans.

2.02 SUMMARY

A. Section Includes:
   1. Plants.
   2. Planting soils.
   3. Tree stabilization.
   4. Landscape edgings.
   5. Tree grates.

2.03 RELATED SECTIONS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. Section 01 33 00 - Submittal Procedures

C. Section 01 40 00 - Quality Requirements

D. Section 01 60 00 - Product Requirements

E. Section 31 10 00 - Site Clearing: for protection of existing trees and plantings, topsoil stripping and stockpiling, and site clearing.

F. Section 31 23 00 - Excavation and Fill: for excavation, filling, and rough grading and for subsurface aggregate drainage and drainage backfill materials.

G. Section 32 33 00 - Site Furnishings: for exterior unit planters.

H. Section 32 92 00 - Turf and Grasses: for turf (lawn) and meadow planting, hydroseeding, and erosion-control materials.

2.04 REFERENCE STANDARDS

A. ANSI/AHIA Z60.2 - American Standard for Nursery Stock; 2025.

B. ASME B18.6.1 - Wood Screws; 2016.

C. ASTM A48/A48M - Standard Specification for Gray Iron Castings; 2022.

D. ASTM A641/A641M - Standard Specification for Zinc-Coated (Galvanized) Carbon Steel Wire; 2019.

E. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes; 2021.

F. ASTM C602 - Standard Specification for Agricultural Liming Materials; 2023.

G. ASTM D5268 - Standard Specification for Topsoil Used for Landscaping and Construction Purposes; 2023.

H. USDA Handbook no. 60 - Diagnosis and Improvement of Saline and Alkali Soils; Current Edition.

2.05 UNIT PRICES

A. Provide Unit prices as follows:
   1. Unit prices apply to authorized work covered by quantity allowances.
   2. Unit prices apply to additions to and deletions from Work as authorized by Change Orders.

2.06 DEFINITIONS

A. Backfill: The earth used to replace or the act of replacing earth in an excavation.

B. Balled and Burlapped Stock: Plants dug with firm, natural balls of earth in which they were grown, with ball size not less than diameter and depth recommended by ANSI/AHIA Z60.2 for type and size of plant required; wrapped with burlap, tied, rigidly supported, and drum laced with twine with the root flare visible at the surface of the ball as recommended by ANSI/AHIA Z60.2.

C. Balled and Potted Stock: Plants dug with firm, natural balls of earth in which they are grown and placed, unbroken, in a container. Ball size is not less than diameter and depth recommended by ANSI/AHIA Z60.2 for type and size of plant required.

D. Bare-Root Stock: Plants with a well-branched, fibrous-root system developed by transplanting or root pruning, with soil or growing medium removed, and with not less than minimum root spread according to ANSI/AHIA Z60.2 for type and size of plant required.

E. Container-Grown Stock: Healthy, vigorous, well-rooted plants grown in a container, with a well-established root system reaching sides of container and maintaining a firm ball when removed from container. Container shall be rigid enough to hold ball shape and protect root mass during shipping and be sized according to ANSI/AHIA Z60.2 for type and size of plant required.

F. Duff Layer: The surface layer of native topsoil that is composed of mostly decayed leaves, twigs, and detritus.

G. Fabric Bag-Grown Stock: Healthy, vigorous, well-rooted plants established and grown in-ground in a porous fabric bag with well-established root system reaching sides of fabric bag. Fabric bag size is not less than diameter, depth, and volume required by ANSI/AHIA Z60.2 for type and size of plant.

H. Finish Grade: Elevation of finished surface of planting soil.

I. Manufactured Topsoil: Soil produced off-site by homogeneously blending mineral soils or sand with stabilized organic soil amendments to produce topsoil or planting soil.

J. Pesticide: A substance or mixture intended for preventing, destroying, repelling, or mitigating a pest. This includes insecticides, miticides, herbicides, fungicides, rodenticides, and molluscicides. It also includes substances or mixtures intended for use as a plant regulator, defoliant, or desiccant.

K. Pests: Living organisms that occur where they are not desired, or that cause damage to plants, animals, or people. These include insects, mites, grubs, mollusks (snails and slugs), mammals (gophers, moles, and mice), unwanted plants (weeds), fungi, bacteria, and viruses.

L. Planting Area: Areas to be planted.

M. Planting Soil: Standardized topsoil; existing, native surface topsoil; existing, in-place surface soil; imported topsoil; or manufactured topsoil that is modified with soil amendments and perhaps fertilizers to produce a soil mixture best for plant growth.

N. Plant; Plants; Plant Material: These terms refer to vegetation in general, including trees, shrubs, vines, ground covers, ornamental grasses, bulbs, corms, tubers, or herbaceous vegetation.

O. Root Flare: Also called "trunk flare." The area at the base of the plant's stem or trunk where the stem or trunk broadens to form roots; the area of transition between the root system and the stem or trunk.

P. Stem Girdling Roots: Roots that encircle the stems (trunks) of trees below the soil surface.

Q. Subgrade: Surface or elevation of subsoil remaining after excavation is complete, or the top surface of a fill or backfill before planting soil is placed.

R. Subsoil: All soil beneath the topsoil layer of the soil profile and typified by the lack of organic matter and soil organisms.

S. Surface Soil: Soil that is present at the top layer of the existing soil profile at the Project site. In undisturbed areas, the surface soil is typically topsoil; but in disturbed areas such as urban environments, the surface soil can be subsoil.

2.07 SUBMITTALS

A. Product Data: For each type of product indicated, including soils.
   1. Plant Materials: Include quantities, sizes, quality, and sources for plant materials.
   2. Pesticides and Herbicides: Include product label and manufacturer's application instructions specific to the Project.

3. Plant Photographs: Include color photographs in digital 3- by 5-inch format of each required species and size of plant material as it will be furnished to the Project. Take photographs from an angle depicting true size and condition of the typical plant to be furnished. Include a scale rod or other measuring device in each photograph. For species where more than 20 plants are required, include a minimum of three photographs showing the average plant, the best quality plant, and the worst quality plant to be furnished. Identify each photograph with the full scientific name of the plant, plant size, and name of the growing nursery.

B. Samples for Verification: For each of the following:
   1. Organic Mulch: 1-pint volume of each organic mulch required; in sealed plastic bags labeled with composition of materials by percentage of weight and source of mulch. Each Sample shall be typical of the lot of material to be furnished; provide an accurate representation of color, texture, and organic makeup.
   2. Mineral Mulch: 2 lb of each mineral mulch required, in sealed plastic bags labeled with source of mulch. Sample shall be typical of the lot of material to be delivered and installed on the site; provide an accurate indication of color, texture, and makeup of the material.
   3. Weed Control Barrier: 12 by 12 inches.
   4. Edging Materials and Accessories: Manufacturer's standard size, to verify color selected.
   5. Tree Grates and Accessories: Manufacturer's standard size delivered to the site for review, to verify design and color selected.
   6. Root Barrier: Width of panel by 12 inches.

C. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

2.08 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified landscape Installer. Include list of five(5) similar projects completed by Installer in last three years, demonstrating Installer's capabilities and experience. Include project names, addresses, and year completed, and include references from owner and names and addresses of owners' contact persons.

B. Product Certificates: For each type of manufactured product, from manufacturer, and complying with the following:
   1. Manufacturer's certified analysis of standard products.
   2. Analysis of other materials by a recognized laboratory made according to methods established by the Association of Official Analytical Chemists, where applicable.

C. Material Test Reports: For standardized ASTM D5268A topsoil, existing native surface topsoil and imported or manufactured topsoil.

D. Maintenance Instructions: Recommended procedures to be established by Owner for maintenance of plants during a calendar year. Request Landscape Standards Document for Establishment before start of required Establishment periods.

E. Warranty: Two-year warranty on all plants and materials from substantial completion.

2.09 QUALITY ASSURANCE

A. Manufacturers and Installers shall satisfy minimum qualifications listed in Section 01 40 00 in addition to the requirements below.

B. Installer Qualifications: A qualified landscape Installer whose work has resulted in successful establishment of plants.
   1. Professional Membership: Installer shall be a member in good standing of either the Professional Landcare Network or the American Nursery and Landscape Association.
   2. Experience: Five years' minimum experience in landscape installation in addition to requirements in Section 01 40 00 "Quality Requirements."

3. Installer's Field Supervision: Require Installer to maintain an experienced full-time supervisor on Project site when work is in progress.
4. Personnel Certifications: Installer's field supervisor or personnel assigned to the Work shall have certification from the Professional Landcare Network as a Certified Landscape Technician - Exterior, with installation, maintenance, irrigation specialty area(s), designated CLT-Exterior.
5. Pesticide Applicator: State licensed, commercial.

C. Soil-Testing Laboratory Qualifications: An independent or university laboratory, recognized by the State Department of Agriculture, with the experience and capability to conduct the testing indicated and that specializes in types of tests to be performed.

D. Soil Analysis: For each unamended soil type, furnish soil analysis and a written report by a qualified soil-testing laboratory stating percentages of organic matter; gradation of sand, silt, and clay content; cation exchange capacity; sodium absorption ratio; deleterious material; pH; and mineral and plant-nutrient content of the soil.
1. Testing methods and written recommendations shall comply with USDA Handbook no. 60.
2. The soil-testing laboratory shall oversee soil sampling; with depth, location, and number of samples to be taken per instructions from Architect. A minimum of three representative samples shall be taken from varied locations for each soil to be used or amended for planting purposes.
3. Report suitability of tested soil for plant growth.
    a. Based upon the test results, state recommendations for soil treatments and soil amendments to be incorporated. State recommendations in weight per 1000 sq. ft. or volume per cu. yd. for nitrogen, phosphorus, and potash nutrients and soil amendments to be added to produce satisfactory planting soil suitable for healthy, viable plants.
    b. Report presence of problem salts, minerals, or heavy metals, including aluminum, arsenic, barium, cadmium, chromium, cobalt, lead, lithium, and vanadium. If such problem materials are present, provide additional recommendations for corrective action.

E. Provide quality, size, genus, species, and variety of plants indicated, complying with applicable requirements in ANSI/AHIA Z60.2.
1. Selection of plants purchased under allowances will be made by Architect, who will tag plants at their place of growth before they are prepared for transplanting.

F. Measurements: Measure according to ANSI/AHIA Z60.2. Do not prune to obtain required sizes.
1. Trees and Shrubs: Measure with branches and trunks or canes in their normal position. Take height measurements from or near the top of the root flare for field-grown stock and container grown stock. Measure main body of tree or shrub for height and spread; do not measure branches or roots tip to tip. Take caliper measurements 6 above the root flare for trees up to 4-inch caliper size, and 12 inches above the root flare for larger sizes.
2. Other Plants: Measure with stems, petioles, and foliage in their normal position.

G. Plant Material Observation: Architect may observe plant material either at place of growth or at site before planting for compliance with requirements for genus, species, variety, cultivar, size, and quality. Architect retains right to observe trees and shrubs further for size and condition of balls and root systems, pests, disease symptoms, injuries, and latent defects and to reject unsatisfactory or defective material at any time during progress of work. Remove rejected trees or shrubs immediately from Project site.
1. Notify Architect of sources of planting materials one week in advance of delivery to site and provide the Landscape Architect with the following:
    a. A copy of a valid nursery stock, dealer or grower certificate, registered with the State Department of Agriculture, a current nursery certificate or license from a state or provincial Department of Agriculture for each plant stock supplier, or both;
    b. Documentation certifying that plant material shipped from out-of-state nursery vendors subject to state and federal quarantines, is free of currently regulated pests, including Emerald Ash Borers, and Gypsy Moths. To determine if State vendors are subject to quarantines, call the State Supervisor of Nursery Inspection and Export Certification; and
    c. An updated Certificate of Compliance, signed by the Contractor’s authorized representative.

H. Preinstallation Conference: Conduct conference at the Project site with the Landscape Architect, Construction Project Manager and Landscape Contractor, job captain and key installation specialists.

2.10 DELIVERY, STORAGE, AND HANDLING

A. Packaged Materials: Deliver packaged materials in original, unopened containers showing weight, certified analysis, name and address of manufacturer, and indication of conformance with state and federal laws if applicable.
   1. Upon delivery of plant stock and materials to the project, provide the Landscape Architect with the following:
      1) Bills of lading or shipping documents for plant stock and landscape materials delivered to the project, and
      2) An updated and signed Certificate of Compliance, if necessary, to reflect deviations from the original Certificate of Compliance documentation submitted at or before the preconstruction conference.
   2. As a condition for authorization of payments, provide the Landscape Architect with vendor invoices or billing statements for plant stock and materials used on the project.
   3. The Landscape Architect will consider work performed with plant stock, materials, or equipment that was misrepresented in the documentation, as unauthorized work.

B. Bulk Materials:
   1. Do not dump or store bulk materials near structures, utilities, walkways and pavements, or on existing turf areas or plants.
   2. Provide erosion-control measures to prevent erosion or displacement of bulk materials, discharge of soil-bearing water runoff, and airborne dust reaching adjacent properties, water conveyance systems, or walkways.
   3. Accompany each delivery of bulk fertilizers and soil amendments with appropriate certificates.

C. Do not prune trees and shrubs before delivery. Protect bark, branches, and root systems from sun scald, drying, wind burn, sweating, whipping, and other handling and tying damage. Do not bend or bind-tie trees or shrubs in such a manner as to destroy their natural shape. Provide protective covering of plants during shipping and delivery. Do not drop plants during delivery and handling.

D. Handle planting stock by root ball.

E. Store bulbs, corms, and tubers in a dry place at 60 to 65 deg F until planting.

F. Deliver plants after preparations for planting have been completed and install immediately. If planting is delayed more than six hours after delivery, set plants and trees in their appropriate aspect (sun, filtered sun, or shade), protect from weather and mechanical damage, and keep roots moist.
   1. Set balled stock on ground and cover ball with soil, peat moss, sawdust, or other acceptable material.
   2. Do not remove container-grown stock from containers before time of planting.
   3. Water root systems of plants stored on-site deeply and thoroughly with a fine-mist spray. Water as often as necessary to maintain root systems in a moist, but not overly-wet condition.

2.11 PROJECT CONDITIONS

A. Field Measurements: Verify actual grade elevations, service and utility locations, irrigation system components, and dimensions of plantings and construction contiguous with new plantings by field measurements before proceeding with planting work.

B. Interruption of Existing Services or Utilities: Do not interrupt services or utilities to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary services or utilities according to requirements indicated:
   1. Notify Landscape Architect and Construction Manager no fewer than two days in advance of proposed interruption of each service or utility.
   2. Do not proceed with interruption of services or utilities without Construction Manager's written permission.

C. Planting Restrictions: Plant during one of the following periods. Coordinate planting periods with maintenance periods to provide required establishment from date of Substantial Completion. Plants

installed outside dates listed below will not be paid for or evaluated for payment until 1 full growing season has elapsed. This condition may affect final payment for work. Do not move or plant coniferous evergreen materials after bud break or during conditions of new growth.

1. Deciduous B&B and Potted Plants: April 15th to June 15th: Aug. 21 – Nov. 15
2. Coniferous Evergreen B&B and Potted Plants: April 15 to bud break; Aug 21 to Sept. 30
3. Landscape Architect to verify local planting restrictions to region.

D. Weather Limitations: Proceed with planting only when existing and forecasted weather conditions permit planting to be performed when beneficial and optimum results may be obtained. Apply products during favorable weather conditions according to manufacturer's written instructions and warranty requirements.

E. Coordination with Turf Areas (Lawns): Plant trees, shrubs, and other plants after finish grades are established and before planting turf areas unless otherwise indicated.
   1. When planting trees, shrubs, and other plants after planting turf areas, protect turf areas, and promptly repair damage caused by planting operations.

2.12 WARRANTY

A. Special Warranty: Installer agrees to repair or replace plantings and accessories that fail in materials, workmanship, or growth within specified warranty period.
   1. Failures include, but are not limited to, the following:
      a. Death and unsatisfactory growth, except for defects resulting from abuse, lack of adequate maintenance, or neglect by Owner, or incidents that are beyond Contractor's control.
      b. Structural failures including plantings falling or blowing over.
      c. Faulty performance of tree stabilization, edgings, tree grates.
      d. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
   2. Warranty Periods from Date of Substantial Completion:
      a. Trees, Shrubs, Vines, and Ornamental Grasses: Twelve (12) months.
      b. Ground Covers, Biennials, Perennials, and Other Plants: Twelve(12) months.
      c. Annuals: Three(3) months.
   3. Include the following remedial actions as a minimum:
      a. Immediately remove dead plants and replace unless required to plant in the succeeding planting season.
      b. Replace plants that are more than 25 percent dead or in an unhealthy condition at end of warranty period.
      c. A limit of one replacement of each plant will be required except for losses or replacements due to failure to comply with requirements.
      d. Provide extended warranty for period equal to original warranty period, for replaced plant material.

2.13 ESTABLISHMENT SERVICES

A. Plant Establishment Period for Trees, Ground Cover and Other Plants: Provide maintenance by skilled employees of landscape Installer. Maintain as required in Part Four. Begin maintenance immediately after plants are installed and continue until plantings are acceptably healthy and well established but for not less than maintenance period below.
   1. 2 calendar years.

B. Continuing Long Term Maintenance Proposal: May be requested from the Owner to have the Installer provide, in the form of a standard yearly (or other period) maintenance agreement, starting on date initial Establishment service is concluded. State services, obligations, conditions, and terms for agreement period and for future renewal options.

PART 2 PRODUCTS

3.01 PLANT MATERIAL

A. General: Furnish nursery-grown plants true to genus, species, variety, cultivar, stem form, shearing, and other features indicated in Plant Schedule or Plant Legend shown on Drawings and complying with ANSI/AHIA Z60.2; and with healthy root systems developed by transplanting or root pruning.

Provide well-shaped, fully branched, healthy, vigorous stock, densely foliated when in leaf and free of disease, pests, eggs, larvae, and defects such as knots, sun scald, injuries, abrasions, and disfigurement.

1. Trees with damaged, crooked, or multiple leaders; tight vertical branches where bark is squeezed between two branches or between branch and trunk ("included bark"); crossing trunks; cut-off limbs more than 3/4 inch in diameter; or with stem girdling roots will be rejected.
2. Collected Stock: Do not use plants harvested from the wild, from native stands, from an established landscape planting, or not grown in a nursery unless otherwise indicated.

B. Provide plants of sizes, grades, and ball or container sizes complying with ANSI/AHIA Z60.2 for types and form of plants required. Plants of a larger size may be used if acceptable to Architect, with a proportionate increase in size of roots or balls.

C. Root-Ball Depth: Furnish trees and shrubs with root balls measured from top of root ball, which shall begin at root flare according to ANSI/AHIA Z60.2. Root flare shall be visible before planting.

D. Labeling: Label each plant of each variety, size, and caliper with a securely attached, waterproof tag bearing legible designation of common name and full scientific name, including genus and species. Include nomenclature for hybrid, variety, or cultivar, if applicable for the plant as shown on Drawings.

E. If formal arrangements or consecutive order of plants is shown on Drawings, select stock for uniform height and spread, and number the labels to assure symmetry in planting.

F. Annuals and Biennials: Provide healthy, disease-free plants of species and variety shown or listed, with well-established root systems reaching to sides of the container to maintain a firm ball, but not with excessive root growth encircling the container. Provide only plants that are acclimated to outdoor conditions before delivery and that are in bud but not yet in bloom.

3.02 INORGANIC SOIL AMENDMENTS

A. Lime: ASTM C602, agricultural liming material containing a minimum of 80 percent calcium carbonate equivalent and as follows:

1. Class: T, with a minimum of 99 percent passing through No. 8 sieve and a minimum of 75 percent passing through No. 60 sieve.
2. Class: O, with a minimum of 95 percent passing through No. 8 sieve and a minimum of 55 percent passing through No. 60 sieve.
3. Provide lime in form of any of these local ground materials including dolomitic limestone, calcitic limestone, mollusk shells.

B. Sulfur: Granular, biodegradable, and containing a minimum of 90 percent sulfur, with a minimum of 99 percent passing through No. 6 sieve and a maximum of 10 percent passing through No. 40 sieve.

C. Iron Sulfate: Granulated ferrous sulfate containing a minimum of 20 percent iron and 10 percent sulfur.

D. Aluminum Sulfate: Commercial grade, unadulterated.

E. Perlite: Horticultural perlite, soil amendment grade.

F. Agricultural Gypsum: Minimum 90 percent calcium sulfate, finely ground with 90 percent passing through No. 50 sieve.

G. Sand: Clean, washed, natural or manufactured, and free of toxic materials.

H. Diatomaceous Earth: Calcined, 90 percent silica, with approximately 140 percent water absorption capacity by weight.

I. Zeolites: Mineral clinoptilolite with at least 60 percent water absorption by weight.

3.03 ORGANIC SOIL AMENDMENTS

A. Compost: Well-composted, stable, and weed-free organic matter, pH range of 5.5 to 8; moisture content 35 to 55 percent by weight; 100 percent passing through 1/2-inch sieve; soluble salt content of 5 to 10 decisiemens/m; not exceeding 0.5 percent inert contaminants and free of substances toxic to plantings; and as follows:

1. Organic Matter Content: 50 to 60 percent of dry weight.

2. Feedstock: Agricultural, food, or industrial residuals; biosolids; yard trimmings; or source-separated or compostable mixed solid waste.

B. Sphagnum Peat: Partially decomposed sphagnum peat moss, finely divided or granular texture, with a pH range of 3.4 to 4.8.

C. Muck Peat: Partially decomposed moss peat, native peat, or reed-sedge peat, finely divided or of granular texture, with a pH range of 6 to 7.5, and having a water-absorbing capacity of 1100 to 2000 percent.

D. Wood Derivatives: Decomposed, nitrogen-treated sawdust, ground bark, or wood waste; of uniform texture and free of chips, stones, sticks, soil, or toxic materials.
1. In lieu of decomposed wood derivatives, mix partially decomposed wood derivatives with ammonium nitrate at a minimum rate of 0.15 lb/cu. ft. of loose sawdust or ground bark, or with ammonium sulfate at a minimum rate of 0.25 lb/cu. ft. of loose sawdust or ground bark.

E. Manure: Well-rotted, unleached, stable or cattle manure containing not more than 25 percent by volume of straw, sawdust, or other bedding materials; free of toxic substances, stones, sticks, soil, weed seed, debris, and material harmful to plant growth.

3.04 FERTILIZERS

A. Bonemeal: Commercial, raw or steamed, finely ground; a minimum of 4 percent nitrogen and 20 percent phosphoric acid.

B. Superphosphate: Commercial, phosphate mixture, soluble; a minimum of 20 percent available phosphoric acid.

C. Commercial Fertilizer: Commercial-grade complete fertilizer of neutral character, consisting of fast- and slow-release nitrogen, 50 percent derived from natural organic sources of urea formaldehyde, phosphorous, and potassium in the following composition:
1. Composition: 1 lb/1000 sq. ft. of actual nitrogen, 4 percent phosphorous, and 2 percent potassium, by weight.
2. Composition: Nitrogen, phosphorous, and potassium in amounts recommended in soil reports from a qualified soil-testing laboratory.

D. Slow-Release Fertilizer: Granular or pelleted fertilizer consisting of 50 percent water-insoluble nitrogen, phosphorus, and potassium in the following composition:
1. Composition: 20 percent nitrogen, 10 percent phosphorous, and 10 percent potassium, by weight.
2. Composition: Nitrogen, phosphorous, and potassium in amounts recommended in soil reports from a qualified soil-testing laboratory.

E. Planting Tablets: Tightly compressed chip type, long-lasting, slow-release, commercial-grade planting fertilizer in tablet form. Tablets shall break down with soil bacteria, converting nutrients into a form that can be absorbed by plant roots.
1. Size: 10-gram tablets.
2. Nutrient Composition: 20 percent nitrogen, 10 percent phosphorous, and 5 percent potassium, by weight plus micronutrients.

F. Chelated Iron: Commercial-grade FeEDDHA for dicots and woody plants, and commercial-grade FeDTPA for ornamental grasses and monocots.

3.05 PLANTING SOILS

A. Planting Soil: ASTM D5268 topsoil, with pH range of 5.5 to 7, a minimum of 6 percent organic material content; free of stones 1/2 inch or larger in any dimension and other extraneous materials harmful to plant growth. Mix ASTM D5268 topsoil with soil amendments and fertilizers in quantities, as directed by qualified soil testing lab, to produce planting soil.

B. Planting Soil: Existing, native surface topsoil formed under natural conditions with the duff layer retained during excavation process and stockpiled on-site. Verify suitability of native surface topsoil to produce viable planting soil by testing. Clean soil of roots, plants, sod, stones, clay lumps, and other extraneous materials harmful to plant growth.

1. Supplement with another specified planting soil when quantities are insufficient.
2. Mix existing, native surface topsoil with soil amendments and fertilizers in quantities, as directed by qualified soil testing lab, to produce planting soil.

C. Planting Soil: Imported topsoil or manufactured topsoil from off-site sources. Obtain topsoil displaced from naturally well-drained construction or mining sites where topsoil occurs at least 4 inches deep; do not obtain from agricultural land, bogs, or marshes.
   1. Additional Properties of Imported Topsoil or Manufactured Topsoil: Screened and free of stones 1/2 inch or larger in any dimension; free of roots, plants, sod, clods, clay lumps, pockets of coarse sand, paint, paint washout, concrete slurry, concrete layers or chunks, cement, plaster, building debris, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, acid, and other extraneous materials harmful to plant growth; free of obnoxious weeds and invasive plants including quackgrass, Johnsongrass, poison ivy, nutsedge, nimblewill, Canada thistle, bindweed, bentgrass, wild garlic, ground ivy, perennial sorrel, and bromegrass; not infested with nematodes; grubs; or other pests, pest eggs, or other undesirable organisms and disease-causing plant pathogens; friable and with sufficient structure to give good tilth and aeration. Continuous, air-filled pore space content on a volume/volume basis shall be at least 15 percent when moisture is present at field capacity. Soil shall have a field capacity of at least 15 percent on a dry weight basis.
   2. Mix imported topsoil or manufactured topsoil with soil amendments and fertilizers in quantities, as directed by qualified soil testing lab, to produce planting soil.

D. Lightweight On-Structure Planting Soil: Mix produced by modifying planting soil or by a custom blend to produce a lightweight soil for rooftop applications. Brand and type to be specified by the project Landscape Architect to fit planting conditions.

3.06 MULCHES

A. Organic Mulch: Free from deleterious materials and suitable as a top dressing of trees and shrubs, consisting of one of the following:
   1. Type: Shredded hardwood mulch or approved equal used as a 3-inch top dressing in all plant beds and around trees as shown in construction details.
   2. Size Range: 3 inches maximum, 1/2 inch minimum.
   3. Color: Natural.

B. Mineral Mulch: Hard, durable stone, washed free of loam, sand, clay, and other foreign substances, of following type, size range, and color:
   1. Type: Rounded riverbed gravel or smooth-faced stone, Crushed stone or gravel, Granite chips.
   2. Size Range: Varies, as specified in construction details.
   3. Color: Uniform color range acceptable to Landscape Architect.

3.07 WEED-CONTROL BARRIERS

A. Nonwoven Geotextile Filter Fabric: Polypropylene or polyester fabric, 3 oz./sq. yd. minimum, composed of fibers formed into a stable network so that fibers retain their relative position. Fabric shall be inert to biological degradation and resist naturally-encountered chemicals, alkalis, and acids.

3.08 PESTICIDES

A. General: Pesticide registered and approved by EPA, acceptable to authorities having jurisdiction, and of type recommended by manufacturer for each specific problem and as required for Project conditions and application. Do not use restricted pesticides unless authorized in writing by authorities having jurisdiction.

B. Pre-Emergent Herbicide (Selective and Non-Selective): Effective for controlling the germination or growth of weeds within planted areas at the soil level directly below the mulch layer.

C. Post-Emergent Herbicide (Selective and Non-Selective): Effective for controlling weed growth that has already germinated.

3.09 TREE STABILIZATION MATERIALS

A. Stakes and Guys:

1. Upright and Guy Stakes: Stakes shall be six-foot steel “T” fencing post. Three (3) posts per tree.
2. Guys and Tie Wires: ASTM A641/A641M, Class 1, galvanized-steel wire, two-strand, twisted, 0.106 inch in diameter.
3. Tree-Tie Webbing: UV-resistant polypropylene or nylon webbing with brass grommets.
4. Guy Cables: Five-strand, 3/16-inch-diameter, galvanized-steel cable, Hose shall be two-ply fiber-bearing rubber garden hose, not less than ½-inch inside diameter, black or green, and of suitable length.
5. Flags: Standard surveyor's plastic flagging tape, white, 6 inches long.

B. Root-Ball Stabilization Materials:
1. Upright Stakes and Horizontal Hold-Down: Rough-sawn, sound, new hardwood or softwood, free of knots, holes, cross grain, and other defects, 2-by-2-inch nominal by length indicated; stakes pointed at one end.
2. Wood Screws: ASME B18.6.1.
3. Proprietary Root-Ball Stabilization Devices: Proprietary at- or below-grade, or on structure stabilization systems as specified by the Landscape Architect, to secure each new planting by root ball; sized per manufacturer's written recommendations unless otherwise indicated.

C. Palm Bracing: Battens or blocks, struts, straps, and protective padding as indicated.
1. Battens or Blocks and Struts: Rough-sawn, sound, new hardwood or softwood, free of knots, holes, cross grain, and other defects, 2-by-4-inch nominal by lengths indicated.
2. Straps: Adjustable steel or plastic package banding straps.
3. Padding: Burlap.
4. Proprietary Palm-Bracing Devices: Proprietary systems as specified by the Landscape Architect, to secure each new planting by trunk; sized per manufacturer's written recommendations unless otherwise indicated.

3.10 LANDSCAPE EDGINGS

A. Aluminum Edging: Standard-profile extruded-aluminum edging, ASTM B221, Alloy 6063-T6, fabricated in standard lengths with interlocking sections with loops stamped from face of sections to receive stakes.
1. Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
2. Edging Size: 3/16 inch wide by 5-1/2 inches deep.
3. Stakes: Aluminum, ASTM B221, Alloy 6061-T6, approximately 1-1/2 inches wide by 12 inches long.
4. Finish: Mill (natural aluminum) or Black anodized.

3.11 TREE GRATES

A. Tree Grates and Frames: ASTM A48/A48M, Class 35 or better, aluminum or gray-iron castings of shape, pattern, finish and size indicated.

3.12 MISCELLANEOUS PRODUCTS

A. Wood Pressure-Preservative Treatment: AWPA C2, with waterborne preservative for soil and freshwater use, acceptable to authorities having jurisdiction, and containing no arsenic; including ammoniacal copper arsenate, ammoniacal copper zinc arsenate, and chromated copper arsenate.

B. Root Barrier: Black, molded, modular panels manufactured with 50 percent recycled polyethylene plastic with ultraviolet inhibitors, 85 mils thick, and each panel 18 inches to 24 inches wide.

C. Antidesiccant: Water-insoluble emulsion, permeable moisture retarder, film forming, for trees and shrubs. Deliver in original, sealed, and fully labeled containers and mix according to manufacturer's written instructions.

D. Burlap: Non-synthetic, biodegradable.

E. Mycorrhizal Fungi: Dry, granular inoculant containing at least 5300 spores per lb of vesicular-arbuscular mycorrhizal fungi and 95 million spores per lb of ectomycorrhizal fungi, 33 percent hydrogel, and a maximum of 5.5 percent inert material.

PART 3 EXECUTION

4.01 EXAMINATION

A. Examine areas to receive plants for compliance with requirements and conditions affecting installation and performance.
   1. Verify that no foreign or deleterious material or liquid such as paint, paint washout, concrete slurry, concrete layers or chunks, cement, plaster, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, or acid has been deposited in soil within a planting area.
   2. Do not mix or place soils and soil amendments in frozen, wet, or muddy conditions.
   3. Suspend soil spreading, grading, and tilling operations during periods of excessive soil moisture until the moisture content reaches acceptable levels to attain the required results.
   4. Uniformly moisten excessively dry soil that is not workable and which is too dusty.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

C. If contamination by foreign or deleterious material or liquid is present in soil within a planting area, remove the soil and contamination as directed by Architect and replace with new planting soil.

4.02 PREPARATION

A. Protect structures, utilities, sidewalks, pavements, and other facilities and turf areas and existing plants from damage caused by planting operations.

B. Install erosion-control measures to prevent erosion or displacement of soils and discharge of soil-bearing water runoff or airborne dust to adjacent properties and walkways.

C. Lay out individual tree and shrub locations and areas for multiple plantings. Stake locations, outline areas, adjust locations when requested, and obtain Architect's acceptance of layout before excavating or planting. Make minor adjustments as required.

D. Lay out plants at locations directed by Architect. Stake locations of individual trees and shrubs and outline areas for multiple plantings.

E. Apply antidesiccant to trees and shrubs using power spray to provide an adequate film over trunks (before wrapping), branches, stems, twigs, and foliage to protect during digging, handling, and transportation.
   1. If deciduous trees or shrubs are moved in full leaf, spray with antidesiccant at nursery before moving and again two weeks after planting.

F. Wrap trees and shrubs with burlap fabric over trunks, branches, stems, twigs, and foliage to protect from wind and other damage during digging, handling, and transportation.

4.03 PLANTING AREA ESTABLISHMENT

A. Loosen subgrade of planting areas to a minimum depth of 6 inches. Remove stones larger than 1 inch in any dimension and sticks, roots, rubbish, and other extraneous matter and legally dispose of them off Owner's property.
   1. Apply fertilizer directly to subgrade before loosening.
   2. Thoroughly blend planting soil off-site before spreading.
      a. Delay mixing fertilizer with planting soil if planting will not proceed within a few days.
      b. Mix lime with dry soil before mixing fertilizer.
   3. Spread planting soil to a depth of 12 inches but not less than required to meet finish grades after natural settlement. Do not spread if planting soil or subgrade is frozen, muddy, or excessively wet.
      a. Spread approximately one-half the thickness of planting soil over loosened subgrade. Mix thoroughly into top 4 inches of subgrade. Spread remainder of planting soil.

B. Finish Grading: Grade planting areas to a smooth, uniform surface plane with loose, uniformly fine texture. Roll and rake, remove ridges, and fill depressions to meet finish grades.

C. Before planting, obtain Architect's acceptance of finish grading; restore planting areas if eroded or otherwise disturbed after finish grading.

D. Application of Mycorrhizal Fungi: At time directed by Architect, broadcast dry product uniformly over prepared soil at application rate indicated on Drawings.

4.04 EXCAVATION FOR TREES AND SHRUBS

A. Planting Pits and Trenches: Excavate circular planting pits with sides sloping inward at a 45-degree angle. Excavations with vertical sides are not acceptable. Trim perimeter of bottom leaving center area of bottom raised slightly to support root ball and assist in drainage away from center. Do not further disturb base. Ensure that root ball will sit on undisturbed base soil to prevent settling. Scarify sides of planting pit smeared or smoothed during excavation.
   1. Excavate approximately three times as wide as ball diameter for balled and burlapped grown stock.
   2. Do not excavate deeper than depth of the root ball, measured from the root flare to the bottom of the root ball.
   3. If area under the plant was initially dug too deep, add soil to raise it to the correct level and thoroughly tamp the added soil to prevent settling.
   4. Maintain required angles of repose of adjacent materials as shown on the Drawings. Do not excavate subgrades of adjacent paving, structures, hardscapes, or other new or existing improvements.
   5. Maintain supervision of excavations during working hours.
   6. Keep excavations covered or otherwise protected when unattended by Installer's personnel.
   7. If drain tile is shown on Drawings or required under planting areas, excavate to top of porous backfill over tile.

B. Subsoil and topsoil removed from excavations may not be used as planting soil.

C. Obstructions: Notify Architect if unexpected rock or obstructions detrimental to trees or shrubs are encountered in excavations.
   1. Hardpan Layer: Drill 6-inch- diameter holes, 24 inches apart, into free-draining strata or to a depth of 10 feet, whichever is less, and backfill with free-draining material.

D. Drainage: Notify Architect if subsoil conditions evidence unexpected water seepage or retention in tree or shrub planting pits.

E. Fill excavations with water and allow to percolate away before positioning trees and shrubs.

F. Planting Percolation Test: A minimum of two tests, per development site is required. Mark testing locations with visible stake. Prior to testing, submit site plan with proposed test locations marked for approval by Landscape Architect. Additional tests may be needed as required by Landscape Architect.
   1. Fill planting hole with water and allow it to drain completely.
   2. Hardpan Layer: Drill 6-inch diameter holes, 24 inches apart, into Hardpan Layer
   3. Fill planting hole with water again and immediately measure the depth of the water in the pit with a ruler. Record the time.
   4. After 15 minutes have passed, measure the depth of the water in the pit again.
   5. Multiply the number of inches that have drained by 4 to get drainage in inches per hour.
   6. Drainage will fall into one of three categories:
      a. Poorly drained = less than 2” per hour
      b. Well drained = 3” to 6” per hour
      c. Excessively drained = more than 6” per hour
   7. Prepare written test results and submit to Landscape Architect. If soils are poorly drained, immediately notify Landscape Architect of this condition. Upon direction, contractor shall install a drain stack at the bottom of the planting pit. Auger a 4” minimum diameter hole to a depth of 42” from the bottom of the plant pit and fill it with ¾” gravel. Cover the gravel with filter fabric and install plant material as directed.

4.05 TREE, SHRUB, AND VINE PLANTING

A. Install plants in accordance with the steps and requirements in the standard planting details shown on the plans and specific to each plant stock type.

B. Before planting, verify that root flare is visible at top of root ball according to ANSI Z60.1. If root flare is not visible, remove soil in a level manner from the root ball to where the top-most root emerges from the trunk. After soil removal to expose the root flare, verify that root ball still meets size requirements.

C. Remove stem girdling roots and kinked roots. Remove injured roots by cutting cleanly; do not break.

D. Set stock plumb and in center of planting pit or trench with root flare 1 inch above adjacent finish grades.
   1. Use planting soil for backfill.
   2. After placing some backfill around root ball to stabilize plant, carefully cut and remove burlap, rope, and wire baskets from tops of root balls and from sides, but do not remove from under root balls. Remove pallets, if any, before setting. Do not use planting stock if root ball is cracked or broken before or during planting operation.
   3. Backfill around root ball in layers, tamping to settle soil and eliminate voids and air pockets. When planting pit is approximately one-half filled, water thoroughly before placing remainder of backfill. Repeat watering until no more water is absorbed.
   4. Place planting tablets in each planting pit when pit is approximately one-half filled; in amounts recommended in soil reports from soil-testing laboratory. Place tablets beside the root ball about 1 inch from root tips; do not place tablets in bottom of the hole.
   5. Continue backfilling process. Water again after placing and tamping final layer of soil.

E. When planting on slopes, set the plant so the root flare on the uphill side is flush with the surrounding soil on the slope; the edge of the root ball on the downhill side will be above the surrounding soil. Apply enough soil to cover the downhill side of the root ball.

4.06 MECHANIZED TREE SPADE PLANTING

A. Trees may be planted with an approved mechanized tree spade at the designated locations. Do not use tree spade to move trees larger than the maximum size allowed for a similar field-grown, balled-and-burlapped root-ball diameter according to ANSI Z60.1, or larger than the manufacturer's maximum size recommendation for the tree spade being used, whichever is smaller.

B. When extracting the tree, center the trunk within the tree spade and move tree with a solid ball of earth.

C. Cut exposed roots cleanly during transplanting operations.

D. Use the same tree spade to excavate the planting hole as was used to extract and transport the tree.

E. Plant trees as shown on Drawings, following procedures in "Tree, Shrub, and Vine Planting" Article.

F. Where possible, orient the tree in the same direction as in its original location.

4.07 TREE, SHRUB, AND VINE PRUNING

A. Remove only dead, dying, or broken branches. Do not prune for shape.

B. Prune, thin, and shape trees, shrubs, and vines as directed by Architect.

C. Prune, thin, and shape trees, shrubs, and vines according to standard professional horticultural and arboricultural practices. Unless otherwise indicated by Architect, do not cut tree leaders; remove only injured, dying, or dead branches from trees and shrubs; and prune to retain natural character.

D. Do not apply pruning paint to wounds.

4.08 TREE STABILIZATION

A. Install trunk stabilization as follows unless otherwise indicated:
   1. Upright Staking and Tying: Stake trees of 2- through 5-inch caliper. Stake trees of less than 2-inch caliper only as required to prevent wind tip out. Use a minimum of three stakes of length required to penetrate at least 18 inches below bottom of backfilled excavation and to extend one-third of trunk height above grade. Set vertical stakes and space to avoid penetrating root balls or root masses.

B. Staking and Guying: Stake and guy trees more than 14 feet in height and more than 2 inches in caliper unless otherwise indicated. Securely attach no fewer than three guys to stakes 30 inches long, driven to grade.

C. Root-Ball Stabilization: Install at- or below-grade stabilization system to secure each new planting by the root ball unless otherwise indicated.
   1. Proprietary Root-Ball Stabilization Device: Install root-ball stabilization system sized and positioned as recommended by manufacturer unless otherwise indicated and according to manufacturer's written instructions.

D. Palm Bracing: Install bracing system at three or more places equally spaced around perimeter of trunk to secure each palm until established unless otherwise indicated.
   1. Proprietary Palm-Bracing Device: Install palm-bracing system sized and positioned as recommended by manufacturer unless otherwise indicated and according to manufacturer's written instructions.

4.09 ROOT-BARRIER INSTALLATION

A. Install root barrier to protect paving or other hardscape elements, such as walls, curbs, and walkways as shown on Drawings.

4.10 PLANTING IN PLANTERS

A. Place a layer of drainage gravel at least 4 inches thick in bottom of planter. Cover bottom with filter fabric and wrap filter fabric 6 inches up on all sides. Duct tape along the entire top edge of the filter fabric, to secure the filter fabric against the sides during the soil-filling process.

B. Fill planter with lightweight planting soil as indicated on structure. Place soil in lightly compacted layers to an elevation of 1-1/2 inches below top of planter, allowing natural settlement.

4.11 GROUND COVER AND PLANT PLANTING

A. Set out and space ground cover and plants other than trees, shrubs, and vines as indicated in even rows with triangular spacing.

B. Use planting soil for backfill.

C. Dig holes large enough to allow spreading of roots.

D. For rooted cutting plants supplied in flats, plant each in a manner that will minimally disturb the root system but to a depth not less than two nodes.

E. Work soil around roots to eliminate air pockets and leave a slight saucer indentation around plants to hold water.

F. Water thoroughly after planting, taking care not to cover plant crowns with wet soil.

G. Protect plants from hot sun and wind; remove protection if plants show evidence of recovery from transplanting shock.

4.12 PLANTING AREA MULCHING

A. Mulch backfilled surfaces of planting areas and other areas indicated.
   1. Trees in Turf Areas: Apply mulch ring of 3-inch average thickness, with radius around trunks or stems as shown on drawings. Do not place mulch within 3 inches of trunks or stems.
   2. Organic Mulch in Planting Areas: Apply 3-inch average thickness of organic mulch over whole surface of planting area, and finish level with adjacent finish grades. Do not place mulch within 3 inches of trunks or stems.

4.13 WATERING

A. During Installation, provide watering equipment and forces on the project capable of completely watering plants as often as necessary to maintain soil moisture in the root zones.

B. Within two hours of installation, saturate the backfill soil of each plant with water. After settling, provide additional backfill to fill in the voids.

4.14 EDGING INSTALLATION

A. Aluminum Edging: Install aluminum edging where indicated according to manufacturer's written instructions. Anchor with aluminum stakes spaced approximately 36 inches apart, driven below top elevation of edging.

B. Shovel-Cut Edging: Separate mulched areas from turf areas with a 45-degree, 4- to 6-inch- deep, shovel-cut edge as shown on Drawings.

4.15 TREE GRATE INSTALLATION

A. Tree Grates: Set grate segments flush with adjoining surfaces as shown on Drawings. Shim from supporting substrate with soil-resistant plastic. Maintain a 3-inch- minimum growth radius around base of tree; break away units of casting, if necessary, according to manufacturer's written instructions.

4.16 PLANT MAINTENANCE

A. Maintain plantings by pruning, cultivating, watering, weeding, fertilizing, mulching, restoring planting saucers, adjusting and repairing tree-stabilization devices, resetting to proper grades or vertical position, and performing other operations as required to establish healthy, viable plantings. Spray or treat as required to keep trees and shrubs free of insects and disease.

B. Fill in as necessary soil subsidence that may occur because of settling or other processes. Replace mulch materials damaged or lost in areas of subsidence.

C. Apply treatments as required to keep plant materials, planted areas, and soils free of pests and pathogens or disease. Use integrated past management practices whenever possible to minimize the use of pesticides and reduce hazards. Treatments include physical controls such as hosing off foliage, mechanical controls such as traps, and biological control agents.

4.17 PESTICIDE APPLICATION

A. Apply pesticides and other chemical products and biological control agents in accordance with authorities having jurisdiction and manufacturer's written recommendations. Coordinate applications with Owner's operations and others in proximity to the Work. Notify Owner before each application is performed.

B. Pre-Emergent Herbicides (Selective and Non-Selective): Apply to tree, shrub, and ground-cover areas in accordance with manufacturer's written recommendations. Do not apply to seeded areas.

C. Post-Emergent Herbicides (Selective and Non-Selective): Apply only as necessary to treat already-germinated weeds and in accordance with manufacturer's written recommendations.

4.18 RODENT PROTECTION

A. Place rodent protection around trees and other plant materials in accordance with standard planting details shown on the plans to mitigate damage.

4.19 CLEANUP AND PROTECTION

A. During planting, keep adjacent paving and construction clean and work area in an orderly condition.

B. Repair any damaged turf areas impacted during construction.

C. Protect plants from damage due to landscape operations and operations of other contractors and trades. Maintain protection during installation and maintenance periods. Treat, repair, or replace damaged plantings.

D. After installation and before Substantial Completion, remove nursery tags, nursery stakes, tie tape, labels, wire, burlap, and other debris from plant material, planting areas, and Project site.

4.20 DISPOSAL

A. Remove surplus soil and waste material including excess subsoil, unsuitable soil, trash, and debris and legally dispose of them off Owner's property.

4.21 DURATION OF MAINTENANCE

A. Maintenance of Turf and Grasses shall continue until Owner accepts that the processes listed above have been completed.

PART 4 PLANT ESTABLISHMENT PERIOD

5.01 ESTABLISHMENT PERIOD

A. Plant Establishment Period (PEP) begins on the date that initial planting operations (Substantial Completion) on the project are completed and continues until final acceptance of the project, and will last for the following period:
   1. 2 calendar years.

5.02 ESTABLISHMENT WORK

A. Keep plants in a healthy growing condition in accordance with the Landscape Standards throughout the establishment period and submit Life Time Landscape Contractor Inspection Reports. Perform plant establishment work throughout the growing seasons and as necessary during the dormant seasons (As defined by Landscape Architect). The Landscape Architect may perform inspections throughout the PEP to verify compliance. The Landscape Architect will consider the Contractor non-compliant if the Contractor does not maintain plants throughout the PEP and does not submit Inspection reports.

B. In plant establishment work, perform the following:
   1. Inspect to assess the condition of the plants and the planting site and factors that may influence plant health, vigor, and establishment success. Inspect these conditions at least every two weeks during the growing season and at least every month during the dormant season;
   2. Submit a written Inspection report to the Landscape Architect via e-mail by the 1st and 15th of each month during the growing season and by the 1st of each month during the dormant season. The Landscape Architect will use the report-frequency and content to assess plant establishment compliance. The report may include scanned copies of the plan sheets with the Contractor notes, copies of the report form found in the Life Time Landscape Standards Manual. Include the following in the report:
      a. The project number;
      b. Engineer’s name;
      c. Name of Contractor’s responsible scout or representative;
      d. Dates work was performed;
      e. Work locations;
      f. Work completed;
      g. Prevailing weather conditions;
      h. Soil moisture assessments;
      i. Insect, animal, vehicular, weather, or other damage;
      j. Disease problems;
      k. Treatment recommendations;
      l. Assessment of overall plant conditions including weed competition and control.
   3. Maintain soil moisture in accordance with the watering guidelines of the standard planting details shown on the plans.
   4. Repair, adjust, or replace staking and guying, mulch material, planting soil, rodent protection, seedling tree shelters, tree paint, and other incidental items in accordance with the plans.
   5. Maintain healthy, vigorous plants. free of harmful insects, fungus, and disease;
   6. Remove dead, dying, and unsightly plants. Provide and install replacement plants in accordance with Replacement Requirements and according to Construction Drawings and Specifications;
   7. Maintain plants in a plumb condition at the planting depth shown on the planting details in the plans;
   8. Maintain planting areas in a weed-free condition as follows:
      a. Remove weeds, top growth and roots, within the mulch limits by hand pulling. Pre-water mulched areas to ensure weed top growth and roots are entirely removed. Ensure weeding operations do not contaminate the mulch or project with weed seed, weed-laden soil or propagating weed parts. Remove State and County-regulated noxious weeds to at least 5 ft [900 mm] beyond the mulch limits. Remove weed parts or weed-laden material from the project to avoid the spread of weed infestations;
      b. Do not spray chemicals for weed control in mulched planting areas during the PEP. The Contractor may apply a non-selective, non-residual post-emergent herbicide containing 41 percent glyphosate, as the active ingredient with a surfactant on a spot treatment basis with

a brush or wick applicator. The Contractor may also apply a broad-spectrum dichlobenil based granular, pre-emergent herbicide in accordance with product labeling and manufacturer's recommendations;

c. Do not weed whip or weed clip as weed control;

9. Prune to remove dead, rubbing, damaged or diseased branches, unwanted suckers, and to improve plant form and structure;
10. Prevent or repair rutting and other damage that may lead to soil erosion and weed infestation;
11. Perform plant establishment operations consistent with plant care and horticultural practices detailed in the Life Time Landscape Standards.
12. Remove excess material, obsolete temporary erosion control devices, rocks, and debris from the project.

5.03 REPLACEMENT REQUIREMENTS

A. Within the first half of the PEP, determine which plants need replacing. Replace dead, defective, or missing plants and incidental materials in accordance with initial installation requirements, including plants lost due to accidents, vandalism, theft, rodent and pest damage, damage caused by the Contractor, or if ordered by the Landscape Architect, at no additional cost to the Owner. Conduct plant replacement operations as needed within the first half of the PEP. At least one week before plant replacement, submit a summary report of proposed plant replacements to the Architect. Include by attachment, copies of plan sheets with the proposed replacement quantities and locations identified and a Life Time Certificate of Compliance for Plant Stock, Landscape Material, and Equipment, in the report. Using brightly colored paint, mark on site plants requiring replacement. Provide replacement plants and incidental materials that are equal to or better than the initial material required by the contract.

5.04 FINAL ACCEPTANCE

A. As a condition for terminating the PEP and conducting the final inspection, the Landscape Architect and Facility Manager may require the Contractor to bring the plant establishment work into compliance. At the end of the PEP, the Landscape Architect and Facility Manager along with the Establishment Contractor will perform a final inspection of the project.

5.05 TRANSITION TO LONG TERM MAINTENANCE

A. Upon final acceptance, the project will transition from Establishment Contractor care of plantings to Long Term Maintenance. A coordination meeting to transition from the Establishment Contractor to Long-Term Maintenance Contractor will take place one week prior to conclusion of the Establishment period to ensure all requirements are met and the Long-Term Contractor understands their role and when they will take over Maintenance.

END OF SECTION

This page intentionally left blank

SECTION 32 9300

PLANTS

PART 1 - GENERAL

1.1 SUMMARY

A. Includes But Not Limited To:
   1. Furnish and install landscaping plants as described in Contract Documents.

B. Related Requirements:
   1. Section 32 8423: 'Irrigation System'
   2. Section 32 9001: 'Common Landscape Requirements'
      a. Pre-installation conference held jointly with other common planting related sections.
   3. Section 32 9120: 'Topsoil and Placement'
   4. Section 32 9121: 'Topsoil Physical Preparation' (section included based on Topsoil Testing Report)
   5. Section 32 9122: 'Topsoil Grading'

1.2 REFERENCES

A. Definitions:
   1. Crop Coefficients and Hydro-Zones: Crop coefficients (Kc) are used with ETo to estimate specific plant evapotranspiration rates. Crop coefficient is dimensionless number (between 0 and 1.2) that is multiplied by ETo value to arrive at plant ET (ETc) estimate. Plants grouped by water needs, organized into one irrigation zone.
   2. Eco-Region Irrigation Design: Bio-regional approach to irrigation and planting design that is relevant to geographic area for which planting plan and irrigation system is designed.
   3. Hardiness Zone: Hardiness zone is more precisely geographically-defined zone within an Eco-Region in which specific category of plant life is capable of growing, as defined by temperature hardiness, or ability to withstand minimum temperatures of zone. Hardiness Zones may be defined by one of two sources:
      a. Sunset Western Garden Book Maps.
      b. USDA Hardiness Zone Map.

      Plant Hardiness zone sources shall be listed by Landscape Architect through planting and irrigation design process.
   4. Hydro-Zone: Plants grouped by water needs (similar Crop Coefficients (Kc), organized into one irrigation zone.
   5. Reference Evapotranspriation (ETo): Total water lost from the soil (evaporation) and from plant surface (transpiration) over some period.

B. Reference Standards:
   1. American Nursery & Landscape Association / American National Standards Institute:
      a. ANLA / ANSI Z60.1-2004, 'American Standard for Nursery Stock.'

1.3 ADMINISTRATIVE REQUIREMENTS

A. Pre-Installation Conference:
   1. Participate in pre-installation conference as specified in Section 32 9001.

1.4 SUBMITTALS

A. Action Submittals:

1. Samples:
    a. Top dressing mulch for approval before delivery to site.

B. Closeout Submittals:
1. Include following in Operations And Maintenance Manual:
    a. Maintenance Contracts:
        1) See Site Management Plan (SMP) for Establishment Period Maintenance.
    b. Operations And Maintenance Data:
        1) Installer Instructions:
            a) Provide written instructions covering maintenance requirements by Owner for one year beyond Contract maintenance period specified in Section 32 9001.
    c. Warranty Documentation:
        1) Include final, executed copy of warranty.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Delivery And Acceptance Requirements:
1. Deliver trees, shrubs, ground covers, and plants after preparations for planting have been completed and install immediately.
2. Do not prune before delivery, except as approved by Landscape Architect.
3. Protect bark, branches, and root systems from sun scald, drying, whipping, and other handling and tying damage.
4. Do not bend or bind-tie trees or shrubs in such a manner as to destroy natural shape.
5. Provide protective covering during delivery.

B. Storage And Handling Requirements;
1. Handle balled stock by root ball or container. Do not drop trees and shrubs during delivery.
2. If planting is delayed more than six hours after delivery, set planting materials in shade and protect from weather and mechanical damage.
3. Set balled stock on ground and cover ball with soil, saw dust, or other acceptable material approved by Landscape Architect.
4. Do not remove container-grown stock from containers before time of planting.
5. Do not store plant material on pavement.
6. Water root systems of trees and shrubs stored on site with fine spray. Water as often as necessary to maintain root systems in moist condition. Do not allow plant foliage to dry out.

1.6 WARRANTY

A. Special Warranty:
1. Provide written warranties as follows:
    a. Guarantee shrubs, ground covers, and vines to live and remain in strong, vigorous, and healthy condition for 90 days minimum from date landscape installation is accepted as complete and meet or exceed material standards set forth in Materials heading of Part 2 of this specification.
    b. Guarantee trees to live and remain in strong, vigorous, and healthy condition and meet or exceed material standards set forth in Materials heading of Part 2 of this specification for one year from date landscape installation is accepted as complete.
    c. When trees are completely accepted at end of warranty period, remove staking.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Plants:
1. Conform to requirements of Plant List and Key on Contract Documents and to ANLA / ANSI Z60.1.
2. Nomenclature:

a. Plant names used in Plant List conform to 'Standardized Plant Names' by American Joint Committee on Horticultural Nomenclature except in cases not covered. In these instances, follow custom of nursery trade. Plants shall bear tag showing genus, species, and variety of at least 10 percent of each species delivered to site.

3. Quality:
   a. Plants shall be sound, healthy, vigorous, free from plant disease, insect pests or their eggs, noxious weeds, and have healthy, normal root systems. Container stock shall be well established and free of excessive root-bound conditions.
   b. Do not prune plants or top trees prior to delivery.
   c. Plant materials shall be subject to approval by Landscape Architect as to size, health, quality, and character.
   d. Bare root trees are not acceptable.
   e. Provide plant materials from licensed nursery or grower.
4. Measurements:
   a. Measure height and spread of specimen plant materials with branches in their normal position as indicated on Contract Documents or Plant List.
   b. Measurement should be average of plant, not greatest diameter. For example, plant measuring 15 inches (375 mm) in widest direction and 9 inches (225 mm) in narrowest would be classified as 12 inch (300 mm) stock.
   c. Plants properly trimmed and transplanted should measure same in every direction.
   d. Measure caliper of trees 6 inches (150 mm) above surface of ground.
   e. Where caliper or other dimensions of plant materials are omitted from Plant List, plant materials shall be normal stock for type listed.
   f. Plant materials larger than those specified may be supplied, with prior written approval of Landscape Architect, and:
      1) If complying with Contract Document requirements in all other respects.
      2) If at no additional cost to Owner.
      3) If sizes of roots or balls are increased proportionately.
5. Shape and Form:
   a. Plant materials shall be symmetrical or typical for variety and species and conform to measurements specified in Plant List.
   b. Well grown material will generally have height equal to or greater than spread. However, spread shall not be less than 2/3's of height.

2.2 ACCESSORIES

A. Planting Mix:
   1. Mixture of three (3) parts excavated soil and one part well rotted composted manure, approved commercial mix, or other amendment recommended in 'Topsoil Testing Report'.

B. Fertilizer:
   1. Fertilizer as recommended on ‘Topsoil Testing Report’.

C. Tree Stakes:
   1. Acceptable Products:
      a. 2 inch (50 mm) diameter Lodgepole Pine.
      b. Equal as approved by Landscape Architect before installation.

D. Tree Staking Ties:
   1. Acceptable Products:
      a. 32 inch (800 mm) Cinch-Tie tree ties by V.I.T. Products Inc, Escondido, CA www.vitproducts.com.
      b. Flex strap Tree Ties by Aquarius Brands Inc, Ontario, CA www.aquariusbrands.com.
      c. Equal as approved by Landscape Architect before installation.

E. Tree Guys:
   1. Acceptable Products:
      a. Duckbill Model 68DTS guying kit.
      b. Equal as approved by Landscape Architect before installation.

F. Pre-Emergent Herbicide:
   1. Acceptable Products:
      a. Chipco Dimension Granular by The Andersons Inc, Maumee, IL www.andersonsinc.com.
      b. Elanco XL2G granular by Crop Data Management Systems, Marysville, CA www.cdms.net.
      c. Ronstar G granular by Bayer Crop Science, Monheim, Germany www.bayercropscience.com.
      d. Surflan AS liquid by United Phosphorous Inc, Trenton, NJ www.upi-usa.com.
      e. Oryzalin 4 A.S. liquid by FarmSaver, Seattle, WA www.farmsaver.com.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Evaluation And Assessment:
   1. Before proceeding with work, check and verify dimensions and quantities. Report variations between Drawings and site to Landscape Architect before proceeding with work of this Section.
   2. Plant totals are for convenience only and are not guaranteed. Verify amounts shown on Contract Documents. All planting indicated on Contract Documents is required unless indicated otherwise.
   3. Do not commence with this Work until grading tolerances specified in Section 32 9122 ‘Topsoil Grading’ are met.

3.2 PREPARATION

A. Plant Approval:
   1. Compliance:
      a. Prior to any plant installation, evaluate plants for compliance with material standards.
      b. Remove plants from site that do not comply.
   2. Inspection:
      a. Prior to any tree installation, inspect one (1) extra deciduous tree and one (1) extra evergreen tree for root health.
      b. In presence of Landscape Architect or by video recording, remove root container/packing material and inspect root balls for soil depth, firmness and root structure by washing soil off of roots.
      c. If delivered plants exhibit soil 1 inch (25 mm) or more above root collar, demonstrate that all trees have had excess soil removed prior to planting or that they meet standard.
      d. If roots are loose, significantly circling, significantly asymmetrical or damaged, all tree plant material to be removed from site and replaced.
      e. Continue inspection process until trees meet standard.

B. Layout individual tree and shrub locations and areas for multiple plantings:
   1. Stake locations and outline areas.
   2. Secure Landscape Architect 's acceptance before planting.
   3. Make minor adjustments as may be requested.

3.3 INSTALLATION

A. Interface With Other Work:
   1. Do not commence work of this Section until work of Section 32 9122 has been completed and approved.

B. Excavation:
   1. If underground construction work or obstructions are encountered in excavation of planting holes, Landscape Architect will select alternate locations.
   2. Plant Excavation Size:
      a. Diameter: Twice diameter of root ball or container minimum.
      b. Depth: Equal to container or rootball depth.

3. Unless excavated material meets topsoil requirements as specified in Section 32 9113, remove from landscape areas and do not use for landscaping purposes.
4. Roughen sides and bottoms of excavations.
5. With approval of Landscape Architect, select five (5) typical planting excavations throughout site for drainage testing.
    a. Fill selected excavations with water and verify that water drains away at rate of 3 inches (75 mm) per hour minimum. Inform Landscape Architect in writing of excavations where water does not drain properly.
    b. Select three (3) excavations approximately 5 feet (1 500 mm) away from each non-draining excavation and repeat tests. Continue testing process until non-draining areas have been identified.
    c. In excavations located in identified non-draining areas, auger 6 inch (150 mm) diameter hole 4 feet (1 200 mm) deep in low point of each excavation and fill with tamped planting mix.
    d. Do not plant trees or shrubs in holes that do not properly drain.

C. Planting:
1. Removing Binders And Containers:
    a. Remove top one / third of wire basket and burlap binders.
    b. Remove plastic and twine binders from around root ball and tree trunk.
    c. Remove plastic containers.
    d. Remove wood boxes from around root ball. Remove box bottoms before positioning plant in hole. After plant is partially planted, remove remainder of box without injuring root ball.
2. Plant immediately after removing binding material and containers:
    a. Place tree and shrub root balls on undisturbed soil.
    b. After watering and settling, top of tree root balls shall be approximately two inches (50 mm) higher than finished grade and trunk flare is visible.
    c. Shrub root balls shall be approximately one inch (25 mm) higher than finished grade.
3. Properly cut off broken or frayed roots.
4. Center plant in hole, remove remaining wire basket and burlap taking care not do damage root ball:
    a. Replace damaged material.
    b. Backfill with specified planting mix.
    c. Except in heavy clay soils, make ring of mounded soil around hole perimeter to form watering basin.
5. Add fertilizer in plant pit as per ‘Topsoil Testing Report’ and during proper season.
6. Fill landscape excavations with tamped planting mix and recommended fertilizer:
    a. Compact in 6 inch (150 mm) lifts.
    b. Settle by watering to ensure top of root ball is 2 inches (50 mm) higher for trees and one inch (25 mm) higher for shrubs than surrounding soil following compaction and settling.
7. Do not use muddy soil for backfilling.
8. Make adjustments in positions of plants as directed by Landscape Architect.
9. Thoroughly water trees and shrubs immediately after planting.
10. At base of each tree, leave 36 inch (900 mm) diameter circle free of any grass.

D. Supports for New Trees:
1. Provide new supports for trees noted on Contract Documents to be staked.
    a. Remove nursery stakes delivered with and attached to trees.
    b. Support shall consist of at least two (2) tree stakes driven into hole base before backfill so roots are not damaged. Place stakes vertically and run parallel to tree trunk. Install stakes so 3 feet (900 mm) of stake length is below finish grade.
    c. Deciduous Trees:
        1) Place tree ties 6 to 12 inches (150 to 300 mm) below crotch of main tree canopy. Second set of tree ties may be required 18 to 24 inches (450 to 600 mm) above finish grade, if directed by Landscape Architect.
        2) Remove tops of tree stakes so top of stake is 6 inches (150 mm) below main tree canopy to prevent damage to tree branches and canopy growth.
    d. Evergreen Trees:
        1) Place tree ties 2/3's of height of tree up from root ball.
2. Provide root guying kits to support 24 inch (600 mm) box, 3 inch (75 mm) caliper and larger trees.
3. Staking and guying should allow some tree movement.

E. Vines:
1. Remove from stakes, untie, and securely fasten to wall or fence next to which they are planted.

F. Ground Covers:
   1. Container-grown unless otherwise specified on Contract Documents. Space evenly to produce a uniform effect, staggered in rows and intervals shown.

G. Post Planting Weed Control:
   1. Apply specified pre-emergent herbicide to shrub and ground cover planting areas and grass-free areas at tree bases after completion of planting.
   2. Areas shall be weed free growth before application of herbicide.

H. Weed Barrier Fabric:
   1. After planting and application or herbicide in shrub beds, apply covering of specified weed barrier fabric.
   2. Achieve 100 percent coverage over ground areas.
   3. Overlap seams 6 inches (150 mm) minimum.
   4. Staple at 5 feet (1500 mm) on center each way and within 3 inches (75 mm) of edge of shrub bed, with two (2) at each corner.

I. Mulching:
   1. After application of herbicide, mulch shrub and ground cover planting areas with 3 inches (75 mm) deep layer of specified top dressing or rock mulch.
   2. Cover grass-free area at tree bases with 3 inches (75 mm) of top dressing mulch or rock mulch.
   3. Place mulch to uniform depth and rake to neat finished appearance.

SECTION 33 08 00
COMMISSIONING OF UTILITIES

PART 1 GENERAL

1.01 SUMMARY

A. This section includes specific requirements that apply to the implementation of the Commissioning Process and this Division Contractors' participation in this process. This section details the project specific equipment and systems that are included in the Commissioning Process. For general descriptions and responsibilities, refer to SECTION 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

1.02 RELATED DOCUMENTS

A. The Owner's Project Requirements (OPR) document.

B. The Basis of Design (BoD) document.

C. The Project Commissioning Plan (CxP) document.

D. ASHRAE Standard 202-2013 - Commissioning Process for Buildings and Systems.

E. LEED v4 for Building Design and Construction.

1.03 RELATED SECTIONS

A. SECTION 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS

B. SECTION 07 08 00 - COMMISSIONING OF THERMAL AND MOISTURE PROTECTION

C. SECTION 08 08 00 - COMMISSIONING OF OPENINGS

D. SECTION 11 08 00 - COMMISSIONING OF EQUIPMENT

E. SECTION 13 08 00 - COMMISSIONING OF SPECIAL CONSTRUCTION

F. SECTION 14 08 00 - COMMISSIONING OF CONVEYING SYSTEMS

G. SECTION 21 08 00 - COMMISSIONING OF FIRE SUPPRESSION SYSTEMS

H. SECTION 22 08 00 - COMMISSIONING OF PLUMBING SYSTEMS

I. SECTION 23 08 00 - COMMISSIONING OF MECHANICAL SYSTEMS

J. SECTION 25 08 00 - COMMISSIONING OF INTEGRATED AUTOMATION SYSTEMS

K. SECTION 26 08 00 - COMMISSIONING OF ELECTRICAL SYSTEMS

L. SECTION 27 08 00 - COMMISSIONING OF COMMUNICATIONS SYSTEMS

M. SECTION 28 08 00 - COMMISSIONING OF SAFETY AND SECURITY SYSTEMS

1.04 DEFINITIONS

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

1.05 RESPONSIBILITIES

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

PART 2 PRODUCTS

2.01 NO PRODUCTS SUPPLIED

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

B. Contractors and/or Vendors shall provide the specialty testing equipment necessary to fulfill the functional testing requirements, for the duration of the testing period.

PART 3 EXECUTION

3.01 GENERAL

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.02 MEETINGS

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.03 SYSTEM START-UP

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.04 PRE-FUNCTIONAL CHECKLISTS

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.05 FUNCTIONAL PERFORMANCE TESTING

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.06 TRAINING

A. For general descriptions, definitions, and responsibilities, refer to Section 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS.

3.07 SYSTEMS TO BE COMMISSIONED

A. GENERAL
   1. Commissioning specifications supplement the requirements of individual specifications sections but shall not be interpreted to replace or diminish the specified scope of any individual section.
   2. For all systems listed below, Division Contractor shall comply with all commissioning requirements specified.

B. APPLICABLE SYSTEMS
   1. Water Service
   2. Sanitary Sewers
   3. Electrical Services
   4. Communication Services

PART 1 GENERAL

1.01 SUMMARY

A. This Section includes water-distribution piping and related components outside the building for water service, fire-service mains, and combined water service and fire-service mains.

B. Utility-furnished products include water meters that will be furnished to the site, ready for installation.

1.02 RELATED SECTIONS

A. Section 00 31 00 - Available Project Information.

B. Section 01 33 00 - Submittal Procedures.

C. Section 01 40 00 - Quality Requirements.

D. Section 01 60 00 - Product Requirements.

E. Section 01 91 13 - General Commissioning Requirements.

F. Section 33 08 00 - Commissioning of Utilities.

1.03 DEFINITIONS

A. DIP: Ductile iron pipe

B. EPDM: Ethylene propylene diene monomer rubber.

C. LLDPE: Linear, low-density polyethylene plastic.

D. PA: Polyamide (nylon) plastic.

E. PE: Polyethylene plastic.

F. PP: Polypropylene plastic.

G. PVC: Polyvinyl chloride plastic.

H. RTRF: Reinforced thermosetting resin (fiberglass) fittings.

I. RTRP: Reinforced thermosetting resin (fiberglass) pipe.

1.04 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings: Detail precast concrete vault assemblies and indicate dimensions, method of field assembly, and components.
   1. Wiring Diagrams: Power, signal, and control wiring for alarms.

C. Coordination Drawings: For piping and specialties including relation to other services in same area, drawn to scale. Show piping and specialty sizes and valves, meter and specialty locations, and elevations.

D. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

E. Operation and Maintenance Data: For water valves and specialties to include in emergency, operation, and maintenance manuals.

1.05 QUALITY ASSURANCE

A. Regulatory Requirements:
   1. Comply with requirements of Local Water District. Include tapping of water mains and backflow prevention.

2. Comply with standards of Local Water District for potable-water-service piping, including materials, installation, testing, and disinfection.
3. Comply with standards of authorities having jurisdiction for fire-suppression water-service piping, including materials, hose threads, installation, and testing.

B. Piping materials shall bear label, stamp, or other markings of specified testing agency.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

D. Comply with ASTM F645 for selection, design, and installation of thermoplastic water piping.

E. Comply with FMG's "Approval Guide" or UL's "Fire Protection Equipment Directory" for fire-service-main products.

F. NFPA Compliance: Comply with NFPA 24 for materials, installations, tests, flushing, and valve and hydrant supervision for fire-service-main piping for fire suppression.

G. NSF Compliance:
1. Comply with NSF 14 for plastic potable-water-service piping. Include marking "NSF-pw" on piping.
2. Comply with NSF 61 for materials for water-service piping and specialties for domestic water.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Preparation for Transport: Prepare valves, including fire hydrants, according to the following:
1. Ensure that valves are dry and internally protected against rust and corrosion.
2. Protect valves against damage to threaded ends and flange faces.
3. Set valves in best position for handling. Set valves closed to prevent rattling.

B. During Storage: Use precautions for valves, including fire hydrants, according to the following:
1. Do not remove end protectors unless necessary for inspection; then reinstall for storage.
2. Protect from weather. Store indoors and maintain temperature higher than ambient dew-point temperature. Support off the ground or pavement in watertight enclosures when outdoor storage is necessary.

C. Handling: Use sling to handle valves and fire hydrants if size requires handling by crane or lift. Rig valves to avoid damage to exposed parts. Do not use handwheels or stems as lifting or rigging points.

D. Deliver piping with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe-end damage and to prevent entrance of dirt, debris, and moisture.

E. Protect stored piping from moisture and dirt. Elevate above grade. Do not exceed structural capacity of floor when storing inside.

F. Protect flanges, fittings, and specialties from moisture and dirt.

G. Store plastic piping protected from direct sunlight. Support to prevent sagging and bending.

1.07 PROJECT CONDITIONS

A. Interruption of Existing Water-Distribution Service: Do not interrupt service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary water-distribution service according to requirements indicated:
1. Notify Architect/Engineer no fewer than two days in advance of proposed interruption of service.
2. Do not proceed with interruption of water-distribution service without Architect's/Engineer’s written permission.

1.08 COORDINATION

A. Coordinate connection to water main with local water district.

PART 2 PRODUCTS

2.01 GENERAL

A. All products shall be per Local Water District approved products list.

2.02 COPPER TUBE AND FITTINGS

A. Soft Copper Tube: ASTM B88, Type K, water tube, annealed temper.
   1. Copper, Solder-Joint Fittings: ASME B16.18, cast-copper-alloy or ASME B16.22, wrought-copper, solder-joint pressure type. Furnish only wrought-copper fittings if indicated.
   2. Copper, Pressure-Seal Fittings:
      a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
         1) Viega; Plumbing & Heating Systems.
         2) Or approved equal.
      b. NPS 2 (DN 50) and Smaller: Wrought-copper fitting with EPDM O-ring seal in each end.
      c. NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Bronze fitting with stainless-steel grip ring and EPDM O-ring seal in each end.

B. Hard Copper Tube: ASTM B88,Type K, water tube, drawn temper.
   1. Copper, Solder-Joint Fittings: ASME B16.18, cast-copper-alloy or ASME B16.22, wrought-copper, solder-joint pressure type. Furnish only wrought-copper fittings if indicated.
   2. Copper, Pressure-Seal Fittings:
      a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
         1) Viega; Plumbing & Heating Systems.
         2) Or approved equal.
      b. NPS 2 (DN 50) and Smaller: Wrought-copper fitting with EPDM O-ring seal in each end.
      c. NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Bronze fitting with stainless-steel grip ring and EPDM O-ring seal in each end.

C. Bronze Flanges: ASME B16.24, Class 150, with solder-joint end. Furnish Class 300 flanges if required to match piping.

D. Copper Unions: MSS SP-123, cast-copper-alloy, hexagonal-stock body with ball-and-socket, metal-to-metal seating surfaces, and solder-joint or threaded ends.

2.03 DUCTILE-IRON PIPE AND FITTINGS

A. Ductile Iron Pipe, Ductile-Iron Pipe shall be cement lined with an AWWA C151/21.51 ductile or grey iron standard pattern Wall Thickness Class 52 and with a pressure class rating of 350 psi. Cement lining shall comply with ANSI/AWWA C104/A21.4.

B. Mechanical-Joint, Ductile-Iron Pipe: AWWA C151, with mechanical-joint bell and plain spigot end unless grooved or flanged ends are indicated.
   1. Mechanical-Joint, Ductile-Iron Fittings: AWWA C110, ductile- or gray-iron standard pattern or AWWA C153, ductile-iron compact pattern.
   2. Glands, Gaskets, and Bolts: AWWA C111, ductile- or gray-iron glands, rubber gaskets, and steel bolts.

C. Push-on-Joint, Ductile-Iron Pipe: AWWA C151, with push-on-joint bell and plain spigot end unless grooved or flanged ends are indicated.
   1. Push-on-Joint, Ductile-Iron Fittings: AWWA C110, ductile- or gray-iron standard pattern or AWWA C153, ductile-iron compact pattern.
   2. Gaskets: AWWA C111, rubber.

D. Grooved-Joint, Ductile-Iron Pipe: AWWA C151, with cut, rounded-grooved ends.
   1. Grooved-End, Ductile-Iron Pipe Appurtenances:
      a. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      b. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
         1) Anvil International, Inc.
         2) Victaulic Company of America.

3) Or approved equal.

c. Grooved-End, Ductile-Iron Fittings: ASTM A47/A47M, malleable-iron castings or ASTM A536, ductile-iron castings with dimensions matching pipe.

d. Grooved-End, Ductile-Iron-Piping Couplings: AWWA C606, for ductile-iron-pipe dimensions. Include ferrous housing sections, gasket suitable for water, and bolts and nuts.

E. Flanges: ASME 16.1, Class 150, cast iron.

2.04 POLY VINYL CHLORIDE (PVC) PIPE

A. Poly Vinyl Chloride (PVC) Water Main Pipe Material compound shall meet ASTM D1784 Cell Class 1245B and AWWA C900. Pipes shall be plain end or gasket bell end, Pressure Class 150 (DR18) with cast iron pipe equivalent OD.

B. Poly Vinyl Chloride (PVC) Water Main Fittings shall be gray-iron or ductile iron conforming to AWWA C110/A21.10 or AWWA C153/A21.53 and shall have cement motor lining conforming to AWWA C104/A21.4, standard thickness unless noted otherwise on drawings. Fittings shall be Mechanical Joints.

C. PVC joints and jointing materials shall be as follows:
1. Pipe Joints shall be pushed on joints as specified in ASTM D3139.
2. Joints between pipe and metal fittings, valves and other accessories shall be mechanical joints as specified in AWWA C111/A21.11.
3. Provide each joint connection with an elastomeric gasket suitable for bell or coupling for which it is intended.
4. Gaskets for push on joints for pipe shall conform to ASTM F477.
5. Gaskets for push on joints and compression type joints or mechanical joints for connections between pipes and metal fittings, valves and other accessories shall be as specified in AWWA C111/A21.11.
6. Sleeves type mechanically coupled joints may be used in lieu of push on joints on plain-end PVC plastic joints in ASTM D3139.

2.05 JOINING MATERIALS

A. Refer to Division 2 Section "Piped Utilities - Basic Materials and Methods" for commonly used joining materials.

B. Brazing Filler Metals: AWS A5.8, BCuP Series.

C. Bonding Adhesive for Fiberglass Piping: As recommended by fiberglass piping manufacturer.

D. Plastic Pipe-Flange Gasket, Bolts, and Nuts: Type and material recommended by piping system manufacturer, unless otherwise indicated.

2.06 CORROSION-PROTECTION PIPING ENCASEMENT

A. Encasement for Underground Metal Piping:
1. Standards: ASTM A674 or AWWA C105.
2. Material: LLDPE film of 0.008-inch (0.20-mm) minimum thickness.
3. Color: Black.

2.07 GATE VALVES

A. AWWA, Cast-Iron Gate Valves:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. American AVK Co.; Valves & Fittings Div.
b. American Cast Iron Pipe Co.; American Flow Control Div.
c. American Cast Iron Pipe Co.; Waterous Co. Subsidiary.
d. Crane Co.; Crane Valve Group; Stockham Div.
e. East Jordan Iron Works, Inc.
f. McWane, Inc.; Clow Valve Co. Div. (Oskaloosa).
g. McWane, Inc.; Kennedy Valve Div.

h. McWane, Inc.; M & H Valve Company Div.
i. McWane, Inc.; Tyler Pipe Div.; Utilities Div.
j. Mueller Co.; Water Products Div.
k. NIBCO INC.
l. S. Pipe and Foundry Company.

2. Non-rising-Stem, Metal-Seated Gate Valves:
   a. Description: Gray- or ductile-iron body and bonnet; with cast-iron or bronze double-disc gate, bronze gate rings, bronze stem, and stem nut.
      1) Standard: AWWA C500.
      2) Minimum Pressure Rating: 250 psig (1380 kPa).
      3) End Connections: Mechanical joint.
      4) Interior Coating: Complying with AWWA C550.
3. Non-rising-Stem, Resilient-Seated Gate Valves:
   a. Description: Gray- or ductile-iron body and bonnet; with bronze or gray- or ductile-iron gate, resilient seats, bronze stem, and stem nut.
      1) Standard: AWWA C509.
      2) Minimum Pressure Rating: 250 psig (1380 kPa).
      3) End Connections: Mechanical joint.
      4) Interior Coating: Complying with AWWA C550.
4. Non-rising-Stem, High-Pressure, Resilient-Seated Gate Valves:
   a. Description: Ductile-iron body and bonnet; with bronze or ductile-iron gate, resilient seats, bronze stem, and stem nut.
      1) Standard: AWWA C509.
      2) Minimum Pressure Rating: 250 psig (1725 kPa).
      3) End Connections: Push on or mechanical joint.
      4) Interior Coating: Complying with AWWA C550.
5. OS&Y, Rising-Stem, Metal-Seated Gate Valves:
   a. Description: Cast- or ductile-iron body and bonnet, with cast-iron double disc, bronze disc and seat rings, and bronze stem.
      1) Standard: AWWA C500.
      2) Minimum Pressure Rating: 250 psig (1380 kPa).
      3) End Connections: Flanged.
6. OS&Y, Rising-Stem, Resilient-Seated Gate Valves:
   a. Description: Cast- or ductile-iron body and bonnet, with bronze or gray- or ductile-iron gate, resilient seats, and bronze stem.
      1) Standard: AWWA C509.
      2) Minimum Pressure Rating: 250 psig (1380 kPa).
      3) End Connections: Flanged.

B. UL/FMG, Cast-Iron Gate Valves:
   1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. American Cast Iron Pipe Co.; American Flow Control Div.
      b. American Cast Iron Pipe Co.; Waterous Co. Subsidiary.
      c. Crane Co.; Crane Valve Group; Stockham Div.
      d. McWane, Inc.; Clow Valve Co. Div. (Oskaloosa).
      e. McWane, Inc.; Kennedy Valve Div.
      f. McWane, Inc.; M & H Valve Company Div.
      g. Mueller Co.; Water Products Div.
      h. NIBCO INC.
      i. S. Pipe and Foundry Company.
   3. UL/FMG, Nonrising-Stem Gate Valves:

a. Description: Iron body and bonnet with flange for indicator post, bronze seating material, and inside screw.
1) Standards: UL 262 and FMG approved.
2) Minimum Pressure Rating: 250 psig (1207 kPa).
3) End Connections: Flanged.

4. OS&Y, Rising-Stem Gate Valves:
a. Description: Iron body and bonnet and bronze seating material.
1) Standards: UL 262 and FMG approved.
2) Minimum Pressure Rating: 250 psig (1207 kPa).
3) End Connections: Flanged.

C. Bronze Gate Valves:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Crane Co.; Crane Valve Group; Crane Valves.
b. Crane Co.; Crane Valve Group; Jenkins Valves.
c. Crane Co.; Crane Valve Group; Stockham Div.
d. Hammond Valve.
e. Milwaukee Valve Company.
f. NIBCO INC.
g. Red-White Valve Corporation.
2. OS&Y, Rising-Stem Gate Valves:
a. Description: Bronze body and bonnet and bronze stem.
1) Standards: UL 262 and FMG approved.
2) Minimum Pressure Rating: 250 psig (1207 kPa).
3) End Connections: Threaded.
3. Non-rising-Stem Gate Valves:
a. Description: Class 125, Type 1, bronze with solid wedge, threaded ends, and malleable-iron handwheel.
1) Standard: MSS SP-80.

2.08 GATE VALVE ACCESSORIES AND SPECIALTIES

A. Tapping-Sleeve Assemblies:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. American Cast Iron Pipe Co.; Waterous Co. Subsidiary.
b. East Jordan Iron Works, Inc.
c. Flowserve.
d. McWane, Inc.; Clow Valve Co. Div. (Oskaloosa).
e. McWane, Inc.; Kennedy Valve Div.
f. McWane, Inc.; M & H Valve Company Div.
g. Mueller Co.; Water Products Div.
h. S. Pipe and Foundry Company.
2. Description: Sleeve and valve compatible with drilling machine.
a. Standard: MSS SP-60.
b. Tapping Sleeve: Cast- or ductile-iron or stainless-steel, two-piece bolted sleeve with flanged outlet for new branch connection. Include sleeve matching size and type of pipe material being tapped and with recessed flange for branch valve.
c. Valve: AWWA, cast-iron, nonrising-stem, resilient-seated gate valve with one raised face flange mating tapping-sleeve flange.

B. Valve Boxes: Comply with AWWA M44 for cast-iron valve boxes. Include top section, adjustable extension of length required for depth of burial of valve, plug with lettering "WATER," and bottom section with base that fits over valve and with a barrel approximately 5 inches (125 mm) in diameter.

1. Operating Wrenches: Steel, tee-handle with one pointed end, stem of length to operate deepest buried valve, and socket matching valve operating nut.

C. Indicator Posts: UL 789, FMG-approved, vertical-type, cast-iron body with operating wrench, extension rod, and adjustable cast-iron barrel of length required for depth of burial of valve.

2.09 CHECK VALVES

A. AWWA Check Valves:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. American AVK Co.; Valves & Fittings Div.
b. American Cast Iron Pipe Co.; American Flow Control Div.
c. APCO Williamette; Valve and Primer Corporation.
d. Crane Co.; Crane Valve Group; Crane Valves.
e. Crane Co.; Crane Valve Group; Stockham Div.
f. McWane, Inc.; Clow Valve Co. Div. (Oskaloosa).
g. McWane, Inc.; Kennedy Valve Div.
h. McWane, Inc.; M & H Valve Company Div.
i. Mueller Co.; Water Products Div.
j. NIBCO INC.
k. Watts Water Technologies, Inc.
2. Description: Swing-check type with resilient seat. Include interior coating according to AWWA C550 and ends to match piping.
a. Standard: AWWA C508.
b. Pressure Rating: 175 psig (1207 kPa).

B. UL/FMG, Check Valves:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. American Cast Iron Pipe Co.; Waterous Co. Subsidiary.
b. Crane Co.; Crane Valve Group; Stockham Div.
c. Globe Fire Sprinkler Corporation.
d. Kidde Fire Fighting.
e. MATCO-NORCA, Inc.
f. McWane, Inc.; Clow Valve Co. Div. (Oskaloosa).
g. McWane, Inc.; Kennedy Valve Div.
h. Mueller Co.; Water Products Div.
i. NIBCO INC.
j. Reliable Automatic Sprinkler Co., Inc.
k. Tyco Fire & Building Products.
l. United Brass Works, Inc.
m. Victaulic Company of America.
n. Viking Corporation.
o. Watts Water Technologies, Inc.
2. Description: Swing-check type with pressure rating; rubber-face checks, unless otherwise indicated; and ends matching piping.
a. Standards: UL 312 and FMG approved.
b. Pressure Rating: 250 psig (1725 kPa).

2.10 DETECTOR CHECK VALVES

A. Detector Check Valves:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Ames Fire & Waterworks; a division of Watts Regulator Co.
b. Badger Meter, Inc.

c. FEBCO; SPX Valves & Controls.
d. Globe Fire Sprinkler Corporation.
e. McWane, Inc.; Kennedy Valve Div.
f. Mueller Co.; Hersey Meters.
g. Victaulic Company of America.
h. Viking Corporation.
i. Watts Water Technologies, Inc.

2. Description: Galvanized cast-iron body, bolted cover with air-bleed device for access to internal parts, and flanged ends. Include one-piece bronze disc with bronze bushings, pivot, and replaceable seat. Include threaded bypass taps in inlet and outlet for bypass meter connection. Set valve to allow minimal water flow through bypass meter when major water flow is required.
   a. Standards: UL 312 and FMG approved.
   b. Pressure Rating: 250 psig (1207 kPa).
   c. Water Meter: AWWA C700, disc type, at least one-fourth size of detector check valve. Include meter, bypass piping, gate valves, check valve, and connections to detector check valve.
3. Description: Iron body, corrosion-resistant clapper ring and seat ring material, flanged ends, with connections for bypass and installation of water meter.
   a. Standards: UL 312 and FMG approved.
   b. Pressure Rating: 250 psig (1207 kPa).

2.11 CORPORATION VALVES AND CURB VALVES

A. Manufacturers:
   1. Manufacturers:
      a. Mueller Co.; Water Products Div.
      b. Or approved equal.

B. Service-Saddle Assemblies: Comply with AWWA C800. Include saddle and valve compatible with tapping machine.
   1. Service Saddle: Copper alloy with seal and AWWA C800, threaded outlet for corporation valve.
   2. Corporation Valve: Bronze body and ground-key plug, with AWWA C800, threaded inlet and outlet matching service piping material.
   3. Manifold: Copper fitting with two to four inlets as required, with ends matching corporation valves and outlet matching service piping material.

C. Curb Valves: Comply with AWWA C800. Include bronze body, ground-key plug or ball, and wide tee head, with inlet and outlet matching service piping material.

D. Service Boxes for Curb Valves: Similar to AWWA M44 requirements for cast-iron valve boxes. Include cast-iron telescoping top section of length required for depth of burial of valve, plug with lettering "WATER," and bottom section with base that fits over curb valve and with a barrel approximately 3 inches (75 mm) in diameter.
   1. Shutoff Rods: Steel, tee-handle with one pointed end, stem of length to operate deepest buried valve, and slotted end matching curb valve.

2.12 WATER METERS

A. Water meters will be furnished by utility company.

2.13 BACKFLOW PREVENTERS

A. Reduced-Pressure-Principle Backflow Preventers:
   1. Manufacturers: As approved by Local Water District.

B. Double-Check, Backflow-Prevention Assemblies:
   1. Manufacturers: As approved by Local Water District.

C. Reduced-Pressure-Detector, Fire-Protection Backflow Preventer Assemblies:
   1. Manufacturers: As approved by Local Water District.

D. Double-Check, Detector-Assembly Backflow Preventers:

1. Manufacturers: As approved by Local Water District.

E. Backflow Preventer Test Kits:
1. Manufacturers: Subject to approval by Local Water District.
2. Description: Factory calibrated, with gages, fittings, hoses, and carrying case with test-procedure instructions.

2.14 WATER METER BOXES

A. Description: Cast-iron body and cover for disc-type water meter, with lettering "WATER METER" in cover; and with slotted, open-bottom base section of length to fit over service piping.
1. Option: Base section may be cast-iron, PVC, clay, or other pipe.

B. Description: Cast-iron body and double cover for disc-type water meter, with lettering "WATER METER" in top cover; and with separate inner cover; air space between covers; and slotted, open-bottom base section of length to fit over service piping.

C. Description: Polymer-concrete body and cover for disc-type water meter, with lettering "WATER" in cover; and with slotted, open-bottom base section of length to fit over service piping. Include vertical and lateral design loadings of 15,000 lb minimum over 10 by 10 inches (6800 kg minimum over 254 by 254 mm) square.

2.15 CONCRETE VAULTS

A. Description: Precast, reinforced-concrete vault, designed for A-16 load designation according to ASTM C857 and made according to ASTM C858.
1. Ladder: ASTM A36/A36M, steel or polyethylene-encased steel steps.
2. Manhole: ASTM A48/A48M Class No. 35A minimum tensile strength, gray-iron traffic frame and cover.
a. Dimension: 24-inch (610-mm) minimum diameter, unless otherwise indicated.
3. Manhole: ASTM A536, Grade 60-40-18, ductile-iron traffic frame and cover.
a. Dimension: 24-inch- (610-mm-) minimum diameter, unless otherwise indicated.
4. Drain: ASME A112.6.3, cast-iron floor drain with outlet of size indicated. Include body anchor flange, light-duty cast-iron grate, bottom outlet, and integral or field-installed bronze ball or clapper-type backwater valve.

2.16 PROTECTIVE ENCLOSURES

A. Freeze-Protection Enclosures:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Aqua Shield.
b. BF Products, Inc.
c. DekoRRa Products.
d. Dunco Manufacturing, Inc.
e. G&C Enclosures.
f. Hot Box, Inc.
g. HydroCowl, Inc.
h. Watts Water Technologies, Inc.
2. Description: Insulated enclosure designed to protect aboveground water piping, equipment, or specialties from freezing and damage, with heat source to maintain minimum internal temperature of 40 deg F (4 deg C) when external temperatures reach as low as minus 34 deg F (minus 36 deg C).
a. Standard: ASSE 1060.
b. Class I: For equipment or devices other than pressure or atmospheric vacuum breakers.
c. Class I-V: For pressure or atmospheric vacuum breaker equipment or devices. Include drain opening in housing.
1) Housing: Reinforced fiberglass construction.
(a) Size: Of dimensions indicated, but not less than those required for access and service of protected unit.

(b) Drain opening for units with drain connection.
(c) Access doors with locking devices.
(d) Insulation inside housing.
(e) Anchoring devices for attaching housing to concrete base.
2) Electric heating cable or heater with self-limiting temperature control.

B. Weather-Resistant Enclosures:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Aqua Shield.
b. BF Products, Inc.
c. DekoRRa Products.
d. Dunco Manufacturing, Inc.
e. G&C Enclosures.
f. Hot Box, Inc.
g. HydroCowl, Inc.
h. Watts Water Technologies, Inc.
2. Description: Uninsulated enclosure designed to protect aboveground water piping, equipment, or specialties from weather and damage.
a. Standard: ASSE 1060.
b. Class III: For equipment or devices other than pressure or atmospheric vacuum breakers.
c. Class III-V: For pressure or atmospheric vacuum breaker equipment or devices. Include drain opening in housing.
1) Housing: Reinforced fiberglass construction.
(a) Size: Of dimensions indicated, but not less than those required for access and service of protected unit.
(b) Drain opening for units with drain connection.
(c) Access doors with locking devices.
(d) Anchoring devices for attaching housing to concrete base.

C. Enclosure Bases:
1. Description: 4-inch minimum thickness precast concrete, of dimensions required to extend at least 6 inches (150 mm) beyond edges of enclosure housings. Include openings for piping.

2.17 FIRE HYDRANTS

A. Dry-Barrel Fire Hydrants:
1. Manufacturers: As pre-approved by water purveyor Local Water District.
2. Description: Freestanding, with one NPS 4-1/2 (DN 115) and two NPS 2-1/2 (DN 65) outlets, 5-1/4-inch (133-mm) main valve, drain valve, and NPS 6 (DN 150) mechanical-joint inlet. Include interior coating according to AWWA C550. Hydrant shall have cast-iron body, compression-type valve opening against pressure and closing with pressure.
a. Standard: AWWA C502.
b. Pressure Rating: 250 psig.
3. Description: Freestanding, with one NPS 4-1/2 (DN 115) and two NPS 2-1/2 (DN 65) outlets, 5-1/4-inch (133-mm) main valve, drain valve, and NPS 6 (DN 150) mechanical-joint inlet. Hydrant shall have cast-iron body, compression-type valve opening against pressure and closing with pressure.
a. Standards: UL 246, FMG approved.
b. Pressure Rating: 250 psig.
c. Outlet Threads: NFPA 1963, with external hose thread used by local fire department. Include cast-iron caps with steel chains.
d. Operating and Cap Nuts: Pentagon, 1-1/2 inches (38 mm) point to flat.
e. Direction of Opening: Open hydrant valve by turning operating nut to left or counterclockwise.
f. Exterior Finish: Red alkyd-gloss enamel paint, unless otherwise indicated.

2.18 FIRE DEPARTMENT CONNECTIONS

A. Fire Department Connections:
   1. Manufacturers: As acceptable to the local fire department:

PART 3 EXECUTION

3.01 EARTHWORK

A. Refer to Division 2 Section "Earthwork" for excavating, trenching, and backfilling.

3.02 PIPING APPLICATIONS

A. General: Use pipe, fittings, and joining methods for piping systems according to the following applications.

B. Transition couplings and special fittings with pressure ratings at least equal to piping pressure rating may be used, unless otherwise indicated.

C. Do not use flanges or unions for underground piping.

D. Flanges, unions, grooved-end-pipe couplings, and special fittings may be used, instead of joints indicated, on aboveground piping and piping in vaults.

E. Underground water-service piping as shown on the plan shall be any of the following:
   1. Soft copper tube, ASTM B88, Type K.
   2. PE, ASTM pipe; insert fittings for PE pipe; and clamped joints.
   3. PVC, Schedule 40 pipe; PVC, Schedule 40 socket fittings; and solvent-cemented joints.
   4. NPS 1 to NPS 3 (DN 25 to DN 80) fiberglass, AWWA RTRP, Class 250; RTRF; and bonded joints.
   5. Fiberglass, AWWA RTRP, Class 150; RTRF; and bonded joints.

F. Underground water-service piping as shown on the plans shall be any of the following:
   1. Soft copper tube, ASTM B88, Type K; wrought-copper, solder-joint fittings; and brazed joints.
   2. Ductile-iron, push-on-joint pipe; ductile-iron, push-on-joint fittings; and gasketed or mechanical-joint pipe; ductile-iron, mechanical-joint fittings.
   3. PE, AWWA pipe; PE, AWWA fittings; and heat-fusion joints.
   4. PVC, Schedule 40 pipe; PVC, Schedule 40 socket fittings; and solvent-cemented joints.
   5. NPS 4 and NPS 6 (DN 100 and DN 150): NPS 6 (DN 150) PVC, AWWA Class 150 pipe; PVC, AWWA Class 150 fabricated fittings; and gasketed joints.
   6. NPS 8 (DN 200): PVC, AWWA Class 200 pipe; push-on-joint, ductile-iron or mechanical-joint, ductile-iron fittings; and gasketed joints.

G. Water Meter Box Water-Service Piping NPS 3/4 to NPS 2 shall be same as underground water-service piping.

H. Aboveground and Vault Water-Service Piping NPS 3/4 to NPS 3 shall be any of the following:
   1. Hard copper tube, ASTM B88, Type K; copper, pressure-seal fittings; and pressure-sealed joints.
   2. PVC, Schedule 80 pipe; PVC, Schedule 80 joints.

I. Aboveground and vault water-service piping NPS 4 to NPS 8 (DN 100 to DN 200) shall be any of the following:
   1. Ductile-iron, flanged-end pipe; ductile-iron, flanged-end appurtenances; and flanged joints.

J. Underground Fire-Service-Main Piping NPS 4 to NPS 12 (DN 100 to DN 300) shall be any of the following:
   1. Ductile-iron, push-on-joint pipe; ductile-iron, push-on-joint fittings; and gasketed mechanical-joint pipe; ductile-iron, mechanical-joint fittings; and mechanical ductile-iron-pipe appurtenances; and joints.

K. Aboveground[and Vault Fire-Service-Main Piping NPS 4 to NPS 12 (DN 100 to DN 300) shall be ductile-iron, flanged-end pipe; ductile-iron-pipe appurtenances; and flanged joints.

L. Underground Combined Water-Service and Fire-Service-Main Piping NPS 6 to NPS 12 (DN 150 to DN 300) shall be any of the following:

1. Ductile-iron pressure Class 350, push-on-joint pipe; ductile-iron, push-on-joint fittings; and gasketed mechanical-joint pipe; ductile-iron, mechanical joint fittings; and mechanical joints.

M. Aboveground and Vault Combined Water Service and Fire-Service-Main Piping [NPS 6 to NPS 12 (DN 150 to DN 300)] shall be ductile-iron, flanged-end pipe; ductile-iron-pipe appurtenances; and flanged joints.

3.03 VALVE APPLICATIONS

A. General Application: Use mechanical-joint-end valves for NPS 3 (DN 80) and larger underground installation. Use threaded- or flanged-end valves for installation in vaults. Use UL/FMG, nonrising-stem gate valves for installation with indicator posts. Use corporation valves and curb valves with ends compatible with piping, for NPS 2 (DN 50) and smaller installation.

B. Drawings indicate valve types to be used. Where specific valve types are not indicated, the following requirements apply:
   1. Underground Valves, NPS 3 (DN 80) and Larger: AWWA, cast-iron, non-rising-stem-seated gate valves with valve box.
   2. Underground Valves, NPS 4 (DN 100) and Larger, for Indicator Posts: UL/FMG, cast-iron, nonrising-stem gate valves with indicator post.
   3. Use the following for valves in vaults and aboveground:
      a. Gate Valves, NPS 2 (DN 50) and Smaller: Bronze, non-rising stem.
      b. Gate Valves, NPS 3 (DN 80) and Larger: AWWA, cast iron, OS&Y rising stem, resilient seated.
      c. Check Valves: AWWA C508, swing type.
   4. Pressure-Reducing Valves: Use for water-service piping in vaults and aboveground to control water pressure.
   5. Relief Valves: Use for water-service piping in vaults and aboveground.
      a. Air-Release Valves: To release accumulated air.
      b. Air/Vacuum Valves: To release or admit large volume of air during filling of piping.
      c. Combination Air Valves: To release or admit air.
   6. Detector Check Valves: Use for water-service piping in vaults and aboveground to detect unauthorized use of water.

3.04 PIPING SYSTEMS - COMMON REQUIREMENTS

A. See Division 2 Section "Piped Utilities - Basic Materials and Methods" for piping-system common requirements.

3.05 PIPING INSTALLATION

A. Water-Main Connection: Arrange with utility company for tap of size and in location indicated in water main.

B. Water-Main Connection: Tap water main according to requirements of water utility company and of size and in location indicated.

C. Make connections larger than NPS 2 (DN 50) with tapping machine according to the following:
   1. Install tapping sleeve and tapping valve according to MSS SP-60.
   2. Install tapping sleeve on pipe to be tapped. Position flanged outlet for gate valve.
   3. Use tapping machine compatible with valve and tapping sleeve; cut hole in main. Remove tapping machine and connect water-service piping.
   4. Install gate valve onto tapping sleeve. Comply with MSS SP-60. Install valve with stem pointing up and with valve box.

D. Make connections NPS 2 (DN 50) and smaller with drilling machine according to the following:
   1. Install service-saddle assemblies and corporation valves in size, quantity, and arrangement required by utility company standards.
   2. Install service-saddle assemblies on water-service pipe to be tapped. Position outlets for corporation valves.
   3. Use drilling machine compatible with service-saddle assemblies and corporation valves. Drill hole in main. Remove drilling machine and connect water-service piping.

4. Install corporation valves into service-saddle assemblies.
5. Install manifold for multiple taps in water main.
6. Install curb valve in water-service piping with head pointing up and with service box.

E. Comply with NFPA 24 for fire-service-main piping materials and installation.
1. Install PE corrosion-protection encasement according to ASTM A674 or AWWA C105.
2. Install copper tube and fittings according to CDA's "Copper Tube Handbook."

F. Install ductile-iron, water-service piping according to AWWA C600 and AWWA M41.
1. Install PE corrosion-protection encasement according to ASTM A674 or AWWA C105.

G. Install PE pipe according to ASTM D2774 and ASTM F645.

H. Install PVC, AWWA pipe according to ASTM F645 and AWWA M23.

I. Install fiberglass AWWA pipe according to AWWA M45.

J. Bury piping with depth of cover over top at least 48 inches, with top at least 12 inches below level of maximum frost penetration, and according to the following:

K. Install piping by tunneling or jacking, or combination of both, under streets and other obstructions that cannot be disturbed.

L. Extend water-service piping and connect to water-supply source and building-water-piping systems at outside face of building wall in locations and pipe sizes indicated.
1. Terminate water-service piping at building wall until building-water-piping systems are installed. Terminate piping with caps, plugs, or flanges as required for piping material. Make connections to building-water-piping systems when those systems are installed.

M. Sleeves are specified in Division 15 Section "Sleeves and Sleeve Seals for Plumbing Piping."

N. Mechanical sleeve seals are specified in Division 15 Section "Sleeves and Sleeve Seals for Plumbing Piping."

O. Install underground piping with restrained joints at horizontal and vertical changes in direction. Use restrained-joint piping, thrust blocks, anchors, tie-rods and clamps, and other supports.

P. See Division 13 Section "Fire-Suppression Piping" for fire-suppression-water piping inside the building.

Q. See Division 15 Section "Domestic Water Piping" for potable-water piping inside the building.

3.06 JOINT CONSTRUCTION

A. Make pipe joints according to the following:
1. Copper-Tubing, Pressure-Sealed Joints: Use proprietary crimping tool and procedure recommended by copper, pressure-seal-fitting manufacturer.
2. Ductile-Iron Piping, Gasketed Joints for Water-Service Piping: AWWA C600 and AWWA M41.
3. Ductile-Iron Piping, Gasketed Joints for Fire-Service-Main Piping: UL 194.
4. Ductile-Iron Piping, Grooved Joints: Cut-groove pipe. Assemble joints with grooved-end, ductile-iron-piping couplings, gaskets, lubricant, and bolts according to coupling manufacturer's written instructions.
5. PE Piping Insert-Fitting Joints: Use plastic insert fittings and fasteners according to fitting manufacturer's written instructions.
6. PVC Piping Gasketed Joints: Use joining materials according to AWWA C900. Construct joints with elastomeric seals and lubricant according to ASTM D2774 or ASTM D3139 and pipe manufacturer's written instructions.
7. Fiberglass Piping Bonded Joints: Use adhesive and procedure recommended by piping manufacturer.
8. Dissimilar Materials Piping Joints: Use adapters compatible with both piping materials, with OD, and with system working pressure. Refer to Division 2 Section "Piped Utilities - Basic Materials and Methods" for joining piping of dissimilar metals.

3.07 ANCHORAGE INSTALLATION

A. Anchorage, General: Install water-distribution piping with restrained joints. Anchorages and restrained-joint types that may be used include the following:
   1. Concrete thrust blocks.
   2. Locking mechanical joints.
   3. Set-screw mechanical retainer glands.
   4. Bolted flanged joints.
   5. Heat-fused joints.
   6. Pipe clamps and tie rods.

B. Install anchorages for tees, plugs and caps, bends, crosses, valves, and hydrant branches. Include anchorages for the following piping systems:
   1. Gasketed-Joint, Ductile-Iron, Water-Service Piping: According to AWWA C600.
   2. Gasketed-Joint, PVC Water-Service Piping: According to AWWA M23.
   3. Bonded-Joint Fiberglass, Water-Service Piping: According to AWWA M45.
   4. Fire-Service-Main Piping: According to NFPA 24.

C. Apply full coat of asphalt or other acceptable corrosion-resistant material to surfaces of installed ferrous anchorage devices.

3.08 VALVE INSTALLATION

A. AWWA Gate Valves: Comply with AWWA C600 and AWWA M44. Install each underground valve with stem pointing up and with valve box.

B. AWWA Valves Other Than Gate Valves: Comply with AWWA C600 and AWWA M44.

C. UL/FMG, Gate Valves: Comply with NFPA 24. Install each underground valve and valves in vaults with stem pointing up and with vertical cast-iron indicator post.

D. UL/FMG, Valves Other Than Gate Valves: Comply with NFPA 24.

E. MSS Valves: Install as component of connected piping system.

F. Corporation Valves and Curb Valves: Install each underground curb valve with head pointed up and with service box.

G. Pressure-Reducing Valves: Install in vault or aboveground between shutoff valves.

H. Relief Valves: Comply with AWWA C512. Install aboveground with shutoff valve on inlet.

3.09 WATER METER INSTALLATION

A. Install water meters, piping, and specialties according to utility company's written instructions.

B. Water Meters: Install meter supplied by the water purveyor.

3.10 ROUGHING-IN FOR WATER METERS

A. Rough-in piping and specialties for water meter installation according to utility company's written instructions.

3.11 VACUUM BREAKER ASSEMBLY INSTALLATION

A. Install pressure vacuum breaker assemblies of type, size, and capacity indicated. Include valves and test cocks. Install according to requirements of plumbing and health department and authorities having jurisdiction.

B. Do not install pressure vacuum breaker assemblies in vault or other space subject to flooding.

3.12 BACKFLOW PREVENTER INSTALLATION

A. Install backflow preventers of type, size, and capacity indicated. Include valves and test cocks. Install according to requirements of plumbing and health department and authorities having jurisdiction.

B. Do not install backflow preventers that have relief drain in vault or in other spaces subject to flooding.

C. Do not install bypass piping around backflow preventers.

D. Support NPS 2-1/2 (DN 65) and larger backflow preventers, valves, and piping near floor and on brick or concrete piers.

3.13 WATER METER BOX INSTALLATION

A. Install water meter boxes in paved areas flush with surface.

B. Install water meter boxes in grass or earth areas with top 2 inches (50 mm) above surface.

3.14 CONCRETE VAULT INSTALLATION

A. Install precast concrete vaults according to ASTM C891.

3.15 PROTECTIVE ENCLOSURE INSTALLATION

A. Install concrete base level and with top approximately 2 inches (50 mm) above grade.

B. Install protective enclosure over valves and equipment.

C. Anchor protective enclosure to concrete base.

3.16 FIRE HYDRANT INSTALLATION

A. General: Install each fire hydrant with separate gate valve in supply pipe, anchor with restrained joints or thrust blocks, and support in upright position.

B. Wet-Barrel Fire Hydrants: Install with valve below frost line. Provide for drainage.

C. AWWA Fire Hydrants: Comply with AWWA M17.

D. UL/FMG Fire Hydrants: Comply with NFPA 24.

3.17 FLUSHING HYDRANT INSTALLATION

A. Install post-type flushing hydrants with valve below frost line and provide for drainage. Support in upright position. Include separate gate valve or curb valve and restrained joints in supply piping.

B. Install ground-type flushing hydrants with valve below frost line and provide for drainage. Install hydrant box flush with grade. Include separate gate valve or curb valve and restrained joints in supply piping.

C. Install sampling stations with valve below frost line and provide for drainage. Attach weather-resistant housing and support in upright position. Include separate curb valve in supply piping.

3.18 FIRE DEPARTMENT CONNECTION INSTALLATION

A. Install ball drip valves at each check valve for fire department connection to mains.

B. Install protective pipe bollards where indicated on the plan each fire department connection. Pipe bollards are specified in Division 5 Section "Metal Fabrications."

3.19 ALARM DEVICE INSTALLATION

A. General: Comply with NFPA 24 for devices and methods of valve supervision. Underground valves with valve box do not require supervision.

B. Supervisory Switches: Supervise valves in open position.
   1. Valves: Grind away portion of exposed valve stem. Bolt switch, with plunger in stem depression, to OS&Y gate-valve yoke.
   2. Indicator Posts: Drill and thread hole in upper-barrel section at target plate. Install switch, with toggle against target plate, on barrel of indicator post.

C. Locking and Sealing: Secure unsupervised valves as follows:
   1. Valves: Install chain and padlock on open OS&Y gate valve.
   2. Post Indicators: Install padlock on wrench on indicator post.

D. Pressure Switches: Drill and thread hole in exposed barrel of fire hydrant. Install switch.

E. Water-Flow Indicators: Install in water-service piping in vault. Select indicator with saddle and vane matching pipe size. Drill hole in pipe, insert vane, and bolt saddle to pipe.

F. Connect alarm devices to building fire alarm system. Wiring and fire-alarm devices are specified in Division 13 Section "Fire Alarm."

3.20 CONNECTIONS

A. Piping installation requirements are specified in other Division 2 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. See Division 2 Section "Piped Utilities - Basic Materials and Methods" for piping connections to valves and equipment.

C. Connect water-distribution piping to utility water main. Use tapping sleeve and tapping valve or service clamp and corporation valve as approved by Local Water District.

D. Connect water-distribution piping to interior domestic water and fire-suppression piping.

E. Ground equipment according to Division 16 Section "Grounding and Bonding."

F. Connect wiring according to Division 16 Section "Conductors and Cables."

3.21 FIELD QUALITY CONTROL

A. Piping Tests: Conduct piping tests before joints are covered and after concrete thrust blocks have hardened sufficiently. Fill pipeline 24 hours before testing and apply test pressure to stabilize system. Use only potable water.

B. Hydrostatic Tests: Test at not less than one-and-one-half times working pressure for two hours.
   1. Increase pressure in 50-psig (350-kPa) increments and inspect each joint between increments. Hold at test pressure for 1 hour; decrease to 0 psig (0 kPa). Slowly increase again to test pressure and hold for 1 more hour. Maximum allowable leakage is 2 quarts (1.89 L) per hour per 100 joints. Remake leaking joints with new materials and repeat test until leakage is within allowed limits.

C. Prepare reports of testing activities.

3.22 IDENTIFICATION

A. Install continuous underground warning tape during backfilling of trench for underground water-distribution piping. Locate below finished grade, directly over piping. Underground warning tapes are specified in Division 2 Section "Earthwork."

B. Permanently attach equipment nameplate or marker indicating plastic water-service piping, on main electrical meter panel. See Division 2 Section "Piped Utilities - Basic Materials and Methods" for identifying devices.

3.23 CLEANING

A. Clean and disinfect water-distribution piping as follows:
   1. Purge new water-distribution piping systems and parts of existing systems that have been altered, extended, or repaired before use.
   2. Use purging and disinfecting procedure prescribed by authorities having jurisdiction or, if method is not prescribed by authorities having jurisdiction, use procedure described in NFPA 24 for flushing of piping. Flush piping system with clean, potable water until dirty water does not appear at points of outlet.
   3. Use purging and disinfecting procedure prescribed by authorities having jurisdiction or, if method is not prescribed by authorities having jurisdiction, use procedure described in AWWA C651 or do as follows:
      a. Fill system or part of system with water/chlorine solution containing at least 50 ppm of chlorine; isolate and allow to stand for 24 hours.
      b. Drain system or part of system of previous solution and refill with water/chlorine solution containing at least 200 ppm of chlorine; isolate and allow to stand for 3 hours.
      c. After standing time, flush system with clean, potable water until no chlorine remains in water coming from system.
      d. Submit water samples in sterile bottles to authorities having jurisdiction. Repeat procedure if biological examination shows evidence of contamination.

B. Prepare reports of purging and disinfecting activities.

END OF SECTION

SECTION 33 30 00
SANITARY SEWERAGE UTILITIES

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Pipe and fittings.
   2. Non-pressure couplings.
   3. Expansion joints and deflection fittings.
   4. Cleanouts.
   5. Encasement for piping.
   6. Manholes.

1.02 RELATED SECTIONS

A. Section 00 31 00 – Available Project Information: Geotechnical Report

1.03 SUBMITTALS

A. Shop Drawings: For manholes. Include plans, elevations, sections, details, and frames and covers.

B. Product Certificates: For each type pipe and fitting, from manufacturer.

C. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

D. Field quality-control reports.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Do not store plastic manholes, pipe, and fittings in direct sunlight.

B. Protect pipe, pipe fittings, and seals from dirt and damage.

C. Handle manholes per manufacturer's written rigging instructions.

1.05 PROJECT CONDITIONS

A. Interruption of Existing Sanitary Sewerage Service: Do not interrupt service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary service per requirements indicated:
   1. Notify Local Water District no fewer than three (3) days in advance of proposed interruption of service.
   2. Do not proceed with interruption of service without Local Water District written permission.

PART 2 PRODUCTS

2.01 DUCTILE-IRON, GRAVITY SEWER PIPE AND FITTINGS N/A

A. Pipe: ASTM A746, for push-on joints.

B. Standard Fittings: AWWA C110, ductile or gray iron, for push-on joints.

C. Compact Fittings: AWWA C153, ductile iron, for push-on joints.

D. Gaskets: AWWA C111, rubber.

2.02 VITRIFIED CLAY PIPE (VCP) AND FITTINGS

A. All pipe and fittings shall conform to Local Water District standards and specifications

2.03 PVC PIPE AND FITTINGS

A. All pipe and fittings shall conform to Local Water District standards and specifications

2.04 PVC GRAVITY SEWER PIPING

A. All pipe and fittings shall conform to Local Water District standards and specifications

B. All cleanouts shall conform to Local Water District standards and specifications

2.05 MANHOLES

A. Standard Precast Concrete Manholes:

B. Designed Precast Concrete Manholes:

C. Manhole Frames and Covers:

D. Manhole-Cover Inserts:

E. All manhole-cover inserts shall conform to Local Water District standards and specifications
   1. Campbell.
   2. East Jordan.
   3. Neenah.

2.06 CONCRETE

A. General: Cast-in-place concrete complying with ACI 318, ACI 350/350R (ACI 350M/350RM), and the following:
   1. Shall be in accordance with the plans and these specifications.
   2. Cement: ASTM C150, Type II.
   3. Fine Aggregate: ASTM C33, sand.
   4. Coarse Aggregate: ASTM C33, crushed gravel.
   5. Water: Potable.

B. Portland Cement Design Mix: 4000 psi (27.6 MPa) minimum, with 0.45 maximum water/cementitious materials ratio.
   1. Reinforcing Bars: ASTM A615/A615M, Grade 60 (420 MPa) deformed steel.
   2. Reinforcing Bars: ASTM A615/A615M, Grade 60 (420 MPa) deformed steel

C. Manhole Channels and Benches: Factory or field formed from concrete. Portland cement design mix, 2500 psi (27.6 MPa) minimum, with 0.45 maximum water/cementitious materials ratio. Include channels and benches in manholes.
   1. Channels: Concrete invert, formed to same width as connected piping, with height of vertical sides to three-fourths of pipe diameter. Form curved channels with smooth, uniform radius and slope.
   2. Benches: Concrete, sloped to drain into channel with an 8% slope towards channel.

D. Ballast and Pipe Supports: Portland cement design mix, 3000 psi (20.7 MPa) minimum, with 0.58 maximum water/cementitious materials ratio.
   1. Reinforcing Fabric: ASTM A185/A185M, steel, welded wire fabric, plain.
   2. Reinforcing Bars: ASTM A615/A615M, Grade 60 (420 MPa) deformed steel.

PART 3 EXECUTION

3.01 EARTHWORK

A. Excavating, trenching, and backfilling shall be in conformance with Local water District standards or the geotechnical engineer’s recommendations, whichever is more stringent.

3.02 PIPING INSTALLATION

A. Shall be in accordance with the

B. Local Water District standards and specifications

3.03 PIPE JOINT CONSTRUCTION

A. Join gravity-flow, non-pressure, drainage piping per the following:
   1. Join ductile-iron, gravity sewer piping per AWWA C600 for push-on joints.
   2. Join PVC Type PSM sewer piping per ASTM D2321 and ASTM D3034 for elastomeric-seal joints or ASTM D3034 for elastomeric-gasket joints.

3. Join PVC gravity sewer piping per ASTM D2321-92 and -ASTM D3034 for elastomeric-gasket joints.
4. Join reinforced-concrete sewer piping per ACPA's "Concrete Pipe Installation Manual" for rubber-gasket joints.

B. Pipe couplings, expansion joints, and deflection fittings with pressure ratings at least equal to piping rating may be used in applications below unless otherwise indicated.
1. Use nonpressure flexible couplings where required to join gravity-flow, nonpressure sewer piping unless otherwise indicated.
2. Use pressure pipe couplings for force-main joints.

3.04 MANHOLE INSTALLATION

A. General: Shall be in accordance with Local Water District standards and specifications

3.05 CONCRETE PLACEMENT

A. Place cast-in-place concrete per ACI 318.

3.06 CLEANOUT INSTALLATION

A. Install cleanouts and riser extensions from sewer pipes to cleanouts at grade. Use cast-iron soil pipe for riser extensions to cleanouts in paved areas. Install piping so cleanouts open in direction of flow in sewer pipe.
1. Use PVC in earth or unpaved foot-traffic areas with non-slip covers.

B. Set cleanout frames and covers in earth in cast-in-place-concrete block, 18 by 18 by 12 inches (450 by 450 by 300 mm) deep. Set with tops 1 inch (25 mm) above surrounding grade.

C. Set cleanout frames and covers in concrete pavement and roads with tops flush with pavement surface.

3.07 CONNECTIONS

A. Connect nonpressure, gravity-flow drainage piping to building's sanitary building drains specified in Division 15 Section "Sanitary Waste and Vent Piping."

B. Make connections to existing piping and underground manholes.
1. Use commercially manufactured wye fittings for piping branch connections. Remove section of existing pipe, install wye fitting into existing piping, and encase entire wye fitting plus 6-inch (150-mm) overlap with not less than 6 inches (150 mm) of concrete with 28-day compressive strength of 3000 psi (20.7 MPa).
2. Make branch connections from side into existing piping, NPS 4 to NPS 20 (DN 100 to DN 500). Remove section of existing pipe, install wye fitting into existing piping, and encase entire wye with not less than 6 inches (150 mm) of concrete with 28-day compressive strength of 3000 psi (20.7 MPa).
3. Make branch connections from side into existing piping, NPS 21 (DN 525) or larger, or to underground manholes by cutting opening into existing unit large enough to allow 3 inches (76 mm) of concrete to be packed around entering connection. Cut end of connection pipe passing through pipe or structure wall to conform to shape of and be flush with inside wall unless otherwise indicated. On outside of pipe or manhole wall, encase entering connection in 6 inches (150 mm) of concrete for minimum length of 12 inches (300 mm) to provide additional support of collar from connection to undisturbed ground.
a. Use concrete that will attain a minimum 28-day compressive strength of 3000 psi (20.7 MPa) unless otherwise indicated.
b. Use epoxy-bonding compound as interface between new and existing concrete and piping materials.
4. Protect existing piping and manholes to prevent concrete or debris from entering while making tap connections. Remove debris or other extraneous material that may accumulate.

C. Connect to grease interceptors.

3.08 IDENTIFICATION

A. Materials and their installation are specified in Division 2 Section "Earthwork." Arrange for installation of green warning tapes directly over piping and at outside edges of underground manholes.
   1. Use detectable warning tape over ferrous piping.
   2. Use detectable warning tape over nonferrous piping and over edges of underground manholes.

3.09 FIELD QUALITY CONTROL

A. Inspect interior of piping to determine whether line displacement or other damage has occurred. Inspect after approximately 24 inches (600 mm) of backfill is in place, and again at completion of Project.
   1. Submit separate report for each system inspection.
   2. Defects requiring correction include, but are not limited to the following:
      a. Alignment: Less than full diameter of inside of pipe is visible between structures.
      b. Deflection: Flexible piping with deflection that prevents passage of ball or cylinder of size not less than 92.5 percent of piping diameter.
      c. Damage: Crushed, broken, cracked, or otherwise damaged piping.
      d. Infiltration: Water leakage into piping.
      e. Exfiltration: Water leakage from or around piping.
   3. Replace defective piping using new materials, and repeat inspections until defects are within allowances specified.
   4. Reinspect and repeat procedure until results are satisfactory.

B. Test new piping systems, and parts of existing systems that have been altered, extended, or repaired, for leaks and defects.
   1. Do not enclose, cover, or put into service before inspection and approval.
   2. Test completed piping systems per requirements of authorities having jurisdiction.
   3. Schedule tests and inspections by authorities having jurisdiction with at least 72 hours' advance notice.
   4. Submit separate report for each test.
   5. Hydrostatic Tests: Test sanitary sewerage per requirements of authorities having jurisdiction and the following:
      a. Fill sewer piping with water. Test with pressure of at least 10-foot (3-m) head of water, and maintain such pressure without leakage for at least 15 minutes.
      b. Close openings in system and fill with water.
      c. Purge air and refill with water.
      d. Disconnect water supply.
      e. Test and inspect joints for leaks.
   6. Air Tests: Test sanitary sewerage per requirements of authorities having jurisdiction, UNI-B-6, and the following:
      a. Option: Test plastic gravity sewer piping per ASTM F1417.
      b. Option: Test concrete gravity sewer piping per ASTM C924 (ASTM C924M).
   7. Force Main: Perform hydrostatic test after thrust blocks, supports, and anchors have hardened. Test at pressure not less than 1-1/2 times the maximum system operating pressure, but not less than 150 psig (1035 kPa).
      a. Ductile-Iron Piping: Test per AWWA C600, "Hydraulic Testing" Section.
      b. PVC Piping: Test per AWWA M23, "Testing and Maintenance" Chapter.
   8. Manholes: Perform hydraulic test per ASTM C969 (ASTM C969M).

C. Leaks and loss in test pressure constitute defects that must be repaired.

D. Replace leaking piping using new materials, and repeat testing until leakage is within allowances specified.

3.10 CLEANING

A. Clean dirt and superfluous material from interior of piping. Flush with potable water.

END OF SECTION

SECTION 33 40 00
STORM DRAINAGE UTILITIES

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
1. Pipe and fittings.
2. Nonpressure transition couplings.
3. Pressure pipe couplings.
4. Expansion joints and deflection fittings.
5. Backwater valves.
6. Cleanouts.
7. Drains.
8. Encasement for piping.
9. Manholes.
10. Channel drainage systems.
11. Catch basins.
12. Stormwater inlets.
13. Stormwater detention structures.
14. Pipe outlets.
15. Dry wells.
16. Stormwater disposal systems.

1.02 DEFINITIONS

A. FRP: Fiberglass-reinforced plastic.

1.03 RELATED SECTIONS

A. Section 00 31 00 – Available Project Information (Geotechnical Evaluation)

1.04 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings:
1. Manholes: Include plans, elevations, sections, details, frames, and covers.
2. Catch basins and stormwater inlets. Include plans, elevations, sections, details, frames, covers, and grates.
3. Stormwater Detention Structures: Include plans, elevations, sections, details, frames, covers, design calculations, and concrete design-mix reports.

C. Coordination Drawings: Show pipe sizes, locations, and elevations. Show other piping in same trench and clearances from storm drainage system piping. Indicate interface and spatial relationship between manholes, piping, and proximate structures.

D. Profile Drawings: Show system piping in elevation. Draw profiles at horizontal scale of not less than 1 inch equals 50 feet (1:500) and vertical scale of not less than 1 inch equals 5 feet (1:50). Indicate manholes and piping. Show types, sizes, materials, and elevations of other utilities crossing system piping.

E. Product Certificates: For each type of cast-iron soil pipe and fitting, from manufacturer.

F. Procurement:
1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
2. Submit inventory to Owner within 5 days of delivery of materials.
3. See Sections 01 33 00 and 01 60 00.

G. Field quality-control reports.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Do not store plastic manholes, pipe, and fittings in direct sunlight.

B. Protect pipe, pipe fittings, and seals from dirt and damage.

C. Handle manholes per manufacturer's written rigging instructions.

D. Handle catch basins and stormwater inlets per manufacturer's written rigging instructions.

1.06 PROJECT CONDITIONS

A. Interruption of Existing Storm Drainage Service: Do not interrupt service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary service per requirements indicated:
   1. Notify Architect no fewer than two days in advance of proposed interruption of service.
   2. Do not proceed with interruption of service without Architect's written permission.

PART 2 PRODUCTS

2.01 HUB-AND-SPIGOT, CAST-IRON SOIL PIPE AND FITTINGS

A. Pipe and Fittings: ASTM A74, Service class.

B. Gaskets: ASTM C564, rubber.

C. Calking Materials: ASTM B29, pure lead and oakum or hemp fiber.

2.02 HUBLESS CAST-IRON SOIL PIPE AND FITTINGS

A. Pipe and Fittings: ASTM A888 or CISPI 301.

B. CISPI-Trademarked, Shielded Couplings:
   1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
      a. ANACO-Husky.
      b. Dallas Specialty & Mfg. Co.
      c. Fernco Inc.
      d. Mission Rubber Company; a division of MCP Industries, Inc.
      e. Stant; a Tompkins company.
      f. Tyler Pipe.
   2. Description: ASTM C1277 and CISPI 310, with stainless-steel corrugated shield; stainless-steel bands and tightening devices; and ASTM C564, rubber sleeve with integral, center pipe stop.

C. Heavy-Duty, Shielded Couplings:
   1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
      a. ANACO-Husky.
      b. Clamp-All Corp.
      c. Dallas Specialty & Mfg. Co.
      d. Mission Rubber Company; a division of MCP Industries, Inc.
      e. Stant; a Tompkins company.
      f. Tyler Pipe.
   2. Description: ASTM C1277 and ASTM C1540, with stainless-steel shield; stainless-steel bands and tightening devices; and ASTM C564, rubber sleeve with integral, center pipe stop.

D. Cast-Iron, Shielded Couplings:
   1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
      a. MG Piping Products Company.
   2. Description: ASTM C1277 and ASTM A48/A48M, two-piece, cast-iron housing; stainless-steel bolts and nuts; and ASTM C564, rubber sleeve with integral, center pipe stop.

2.03 DUCTILE-IRON, CULVERT PIPE AND FITTINGS

A. Pipe: ASTM A716, for push-on joints.

B. Standard Fittings: AWWA C110, ductile or gray iron, for push-on joints.

C. Compact Fittings: AWWA C153, for push-on joints.

D. Gaskets: AWWA C111, rubber.

2.04 DUCTILE-IRON, PRESSURE PIPE AND FITTINGS

A. Push-on-Joint Piping:
   1. Pipe: AWWA C151, for push-on joints.
   2. Standard Fittings: AWWA C110, ductile or gray iron, for push-on joints.
   3. Compact Fittings: AWWA C153, for push-on joints.
   4. Gaskets: AWWA C111, rubber, of shape matching pipe and fittings.

B. Mechanical-Joint Piping:
   1. Pipe: AWWA C151, with bolt holes in bell.
   2. Standard Fittings: AWWA C110, ductile or gray iron, with bolt holes in bell.
   3. Compact Fittings: AWWA C153, with bolt holes in bells.
   4. Glands: Cast or ductile iron, with bolt holes and high-strength, cast-iron or high-strength, low-alloy steel bolts and nuts.
   5. Gaskets: AWWA C111, rubber, of shape matching pipe, fittings, and glands.

2.05 STEEL PIPE AND FITTINGS

A. Corrugated-Steel Pipe and Fittings: ASTM A760/A760M, Type I with fittings of similar form and construction as pipe.
   1. Special-Joint Bands: Corrugated steel with O-ring seals.
   2. Standard-Joint Bands: Corrugated steel.
   3. Coating: Aluminum.

2.06 ALUMINUM PIPE AND FITTINGS

A. Corrugated Aluminum Pipe and Fittings: ASTM B745/B745M, Type I with fittings of similar form and construction as pipe.
   1. Special-Joint Bands: Corrugated steel with O-ring seals.
   2. Standard-Joint Bands: Corrugated steel.

2.07 ABS PIPE AND FITTINGS

A. ABS Sewer Pipe and Fittings: ASTM D2751, with bell-and-spigot ends for gasketed joints.
   1. NPS 3 to NPS 6 (DN 80 to DN 150): SDR 35.
   2. NPS 8 to NPS 12 (DN 200 to DN 300): SDR 42.

B. Gaskets: ASTM F477, elastomeric seals.

2.08 PE PIPE AND FITTINGS

A. Corrugated PE Drainage Pipe and Fittings NPS 3 to NPS 10 (DN 80 to DN 250): AASHTO M 252M, Type S, with smooth waterway for coupling joints.
   1. Silttight Couplings: PE sleeve with ASTM D1056, Type 2, Class A, Grade 2 gasket material that mates with tube and fittings.
   2. Soiltight Couplings: AASHTO M 252M, corrugated, matching tube and fittings.

B. Corrugated PE Pipe and Fittings NPS 12 to NPS 60 (DN 300 to DN 1500): AASHTO M 294M, Type S, with smooth waterway for coupling joints.
   1. Silttight Couplings: PE sleeve with ASTM D1056, Type 2, Class A, Grade 2 gasket material that mates with pipe and fittings.
   2. Soiltight Couplings: AASHTO M 294M, corrugated, matching pipe and fittings.

2.09 PVC PIPE AND FITTINGS

A. PVC Cellular-Core Piping:
   1. PVC Cellular-Core Pipe and Fittings: ASTM F891, Sewer and Drain Series, PS 50 minimum stiffness, PVC cellular-core pipe with plain ends for solvent-cemented joints.
   2. Fittings: ASTM D3034, SDR 35, PVC socket-type fittings.

B. PVC Corrugated Sewer Piping:
   1. Pipe: ASTM F949, PVC, corrugated pipe with bell-and-spigot ends for gasketed joints.
   2. Fittings: ASTM F949, PVC molded or fabricated, socket type.
   3. Gaskets: ASTM F477, elastomeric seals.

C. PVC Profile Sewer Piping:
   1. Pipe: ASTM F794, PVC profile, gravity sewer pipe with bell-and-spigot ends for gasketed joints.
   2. Fittings: ASTM D3034, PVC with bell ends.
   3. Gaskets: ASTM F477, elastomeric seals.

D. PVC Type PSM Sewer Piping:
   1. Pipe: ASTM D3034, SDR 35, PVC Type PSM sewer pipe with bell-and-spigot ends for gasketed joints.
   2. Fittings: ASTM D3034, PVC with bell ends.
   3. Gaskets: ASTM F477, elastomeric seals.

E. PVC Gravity Sewer Piping:
   1. Pipe and Fittings: ASTM F679, T-1 wall thickness, PVC gravity sewer pipe with bell-and-spigot ends and with integral ASTM F477, elastomeric seals for gasketed joints.

F. PVC Pressure Piping:
   1. Pipe: AWWA C900, Class 150 PVC pipe with bell-and-spigot ends for gasketed joints.
   2. Fittings: AWWA C900, Class 150 PVC pipe with bell ends
   3. Gaskets: ASTM F477, elastomeric seals.

G. PVC Water-Service Piping:
   1. Pipe: ASTM D1785, Schedule 40 PVC, with plain ends for solvent-cemented joints.
   2. Fittings: ASTM D2466, Schedule 40 PVC, socket type.

2.10 FIBERGLASS PIPE AND FITTINGS

A. Fiberglass Sewer Pipe: ASTM D3262, RTRP for gasketed joints fabricated with Type 2, polyester or Type 4, epoxy resin.
   1. Liner: Reinforced thermoset.
   2. Grade: Reinforced, surface layer matching pipe resin.
   3. Stiffness: [9 psig (62 kPa)] [18 psig (124 kPa)] [36 psig (248 kPa)] [72 psig (496 kPa)].
   4. Reinforcement: Grade with finish compatible with resin.

B. Gaskets: ASTM F477, elastomeric seals.

2.11 CONCRETE PIPE AND FITTINGS

A. Nonreinforced-Concrete Sewer Pipe and Fittings: ASTM C14 (ASTM C14M), [Class 1] [Class 2] [Class 3], with [bell-and-spigot] [or] [tongue-and-groove] ends and [gasketed joints with ASTM C443 (ASTM C443M), rubber gaskets] [sealant joints with ASTM C990 (ASTM C990M), bitumen or butyl-rubber sealant].

B. Reinforced-Concrete Sewer Pipe and Fittings: ASTM C76 (ASTM C76M).
   1. [Bell-and-spigot] [or] [tongue-and-groove] ends and [gasketed joints with ASTM C443 (ASTM C443M), rubber gaskets] [sealant joints with ASTM C990 (ASTM C990M), bitumen or butyl-rubber sealant]
   2. Class I, Wall A.
   3. Class II, Wall B.
   4. Class III, Wall B.
   5. Class IV, Wall C.
   6. Class V, Wall C.

2.12 NONPRESSURE TRANSITION COUPLINGS

A. Comply with ASTM C1173, elastomeric, sleeve-type, reducing or transition coupling, for joining underground nonpressure piping. Include ends of same sizes as piping to be joined, and corrosion-resistant-metal tension band and tightening mechanism on each end.

B. Sleeve Materials:
   1. For Concrete Pipes: ASTM C443 (ASTM C443M), rubber.
   2. For Cast-Iron Soil Pipes: ASTM C564, rubber.
   3. For Fiberglass Pipes: ASTM F477, elastomeric seal or ASTM D5926, PVC.
   4. For Plastic Pipes: ASTM F477, elastomeric seal or ASTM D5926, PVC.
   5. For Dissimilar Pipes: ASTM D5926, PVC or other material compatible with pipe materials being joined.

C. Unshielded, Flexible Couplings:
   1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
      a. Dallas Specialty & Mfg. Co.
      b. Fernco Inc.
      c. Logan Clay Pipe.
      d. Mission Rubber Company; a division of MCP Industries, Inc.
      e. NDS Inc.
      f. Plastic Oddities; a division of Diverse Corporate Technologies, Inc.
   2. Description: Elastomeric sleeve with stainless-steel shear ring and corrosion-resistant-metal tension band and tightening mechanism on each end.

D. Shielded, Flexible Couplings:
   1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
      a. Cascade Waterworks Mfg.
      b. Dallas Specialty & Mfg. Co.
      c. Mission Rubber Company; a division of MCP Industries, Inc.
   2. Description: ASTM C1460, elastomeric or rubber sleeve with full-length, corrosion-resistant outer shield and corrosion-resistant-metal tension band and tightening mechanism on each end.

E. Ring-Type, Flexible Couplings:
   1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
      a. Fernco Inc.
      b. Logan Clay Pipe.
      c. Mission Rubber Company; a division of MCP Industries, Inc.
   2. Description: Elastomeric compression seal with dimensions to fit inside bell of larger pipe and for spigot of smaller pipe to fit inside ring.

2.13 PRESSURE PIPE COUPLINGS

A. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
   1. Cascade Waterworks Mfg.
   2. Dresser, Inc.
   3. Ford Meter Box Company, Inc. (The); Pipe Products Div.
   4. JCM Industries, Inc.
   5. Romac Industries, Inc.
   6. Smith-Blair, Inc.; a Sensus company.
   7. Victaulic Depend-O-Lok, Inc.
   8. Viking Johnson.

B. Description: AWWA C219, tubular-sleeve coupling, with center sleeve, gaskets, end rings, and bolt fasteners.

C. Metal, bolted, sleeve-type, reducing or transition coupling, for joining underground pressure piping. Include 150-psig (1035-kPa) minimum pressure rating and ends sized to fit adjoining pipes.

D. Center-Sleeve Material: Manufacturer's standard.

E. Gasket Material: Natural or synthetic rubber.

F. Metal Component Finish: Corrosion-resistant coating or material.

2.14 EXPANSION JOINTS AND DEFLECTION FITTINGS

A. Ductile-Iron Flexible Expansion Joints:
   1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
      a. EBAA Iron Sales, Inc.
      b. Romac Industries, Inc.
      c. Star Pipe Products.
   2. Description: Compound fitting with combination of flanged and mechanical-joint ends complying with AWWA C110 or AWWA C153. Include two gasketed ball-joint sections and one or more gasketed sleeve sections, rated for 250-psig (1725-kPa) minimum working pressure and for offset and expansion indicated.

B. Ductile-Iron Expansion Joints:
   1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
      a. Dresser, Inc.
      b. EBAA Iron Sales, Inc.
      c. JCM Industries, Inc.
      d. Smith-Blair, Inc.; a Sensus company.
   2. Description: 3-piece assembly of telescoping sleeve with gaskets and restrained-type, ductile-iron, bell-and-spigot end sections complying with AWWA C110 or AWWA C153. Include rating for 250-psig (1725-kPa) minimum working pressure and for expansion indicated.

C. Ductile-Iron Deflection Fittings:
   1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
      a. EBAA Iron Sales, Inc.
   2. Description: Compound-coupling fitting, with ball joint, flexing section, gaskets, and restrained-joint ends, complying with AWWA C110 or AWWA C153. Include rating for 250-psig (1725-kPa) minimum working pressure and for up to 15 degrees of deflection.

2.15 BACKWATER VALVES

A. Cast-Iron Backwater Valves:
   1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
      a. Josam Company.
      b. Smith, Jay R. Mfg. Co.
      c. Tyler Pipe.
      d. Watts Water Technologies, Inc.
      e. Zurn Specification Drainage Operation; Zurn Plumbing Products Group.
   2. Description: ASME A112.14.1, gray-iron body and bolted cover, with bronze seat.
   3. Horizontal type; with swing check valve and hub-and-spigot ends.
   4. Combination horizontal and manual gate-valve type; with swing check valve, integral gate valve, and hub-and-spigot ends.
   5. Terminal type; with bronze seat, swing check valve, and hub inlet.

B. Plastic Backwater Valves:
   1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
      a. Canplas LLC.
      b. IPS Corporation.
      c. NDS Inc.
      d. Plastic Oddities; a division of Diverse Corporate Technologies, Inc.
      e. Sioux Chief Manufacturing Company, Inc.

f. Zurn Light Commercial Products Operation; Zurn Plumbing Products Group.

2. Description: Horizontal type; with PVC body, PVC removable cover, and PVC swing check valve.

2.16 CLEANOUTS

A. Cast-Iron Cleanouts:
   1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
      a. Josam Company.
      b. MIFAB, Inc.
      c. Smith, Jay R. Mfg. Co.
      d. Tyler Pipe.
      e. Watts Water Technologies, Inc.
      f. Zurn Specification Drainage Operation; Zurn Plumbing Products Group.
   2. Description: ASME A112.36.2M, round, gray-iron housing with clamping device and round, secured, scoriated, gray-iron cover. Include gray-iron ferrule with inside calk or spigot connection and countersunk, tapered-thread, brass closure plug.
   3. Top-Loading Classification(s): Heavy Duty.
   4. Sewer Pipe Fitting and Riser to Cleanout: ASTM A74, Service class, cast-iron soil pipe and fittings.

B. Plastic Cleanouts:
   1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
      a. Canplas LLC.
      b. IPS Corporation.
      c. NDS Inc.
      d. Plastic Oddities; a division of Diverse Corporate Technologies, Inc.
      e. Sioux Chief Manufacturing Company, Inc.
      f. Zurn Light Commercial Products Operation; Zurn Plumbing Products Group.
   2. Description: PVC body with PVC threaded plug. Include PVC sewer pipe fitting and riser to cleanout of same material as sewer piping.

2.17 DRAINS

A. Cast-Iron Area Drains:
   1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
      a. Josam Company.
      b. MIFAB, Inc.
      c. Smith, Jay R. Mfg. Co.
      d. Tyler Pipe.
      e. Watts Water Technologies, Inc.
   2. Description: ASME A112.6.3 gray-iron round body with anchor flange and round secured grate. Include bottom outlet with inside calk or spigot connection, of sizes indicated.
   3. Top-Loading Classification(s): Heavy Duty.

B. Cast-Iron Trench Drains:
   1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
      a. Josam Company.
      b. MIFAB, Inc.
      c. Smith, Jay R. Mfg. Co.
      d. Tyler Pipe.
      e. Watts Water Technologies, Inc.
      f. Zurn Specification Drainage Operation; Zurn Plumbing Products Group.

2. Description: ASME A112.6.3, 6-inch- (150-mm-) wide top surface, rectangular body with anchor flange or other anchoring device, and rectangular secured grate. Include units of total length indicated and quantity of bottom outlets with inside calk or spigot connections, of sizes indicated.
3. Top-Loading Classification(s): Heavy Duty.

C. Steel Trench Drains:
1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
a. Rockford Sanitary Systems, Inc.
2. Description: Factory fabricated from ASTM A242/A242M, welded steel plate, to form rectangular body with uniform bottom downward slope of 2 percent toward outlet, anchor flange, and grate. Include units of total length indicated, bottom outlet of size indicated, outlet strainer, acid-resistant enamel coating on inside and outside surfaces, and grate with openings of total free area at least two times cross-sectional area of outlet.
3. Plate Thicknesses: 1/4 inch (6.4 mm).
4. Overall Widths: 7-1/2 inches (190 mm).
a. Grate Openings: Selected by Architect from manufacturer's full standard range. [1/4 inch (6.4 mm) circular] [3/8 inch (9.5 mm) circular] [3/8 inch (9.5 mm) circular or 3/8-by-3-inch (9.5-by-76-mm) slots] [3/8-by-3-inch (9.5-by-76-mm) slots].

2.18 ENCASEMENT FOR PIPING

A. Standard: ASTM A674 or AWWA C105.

B. Material: Linear low-density polyethylene film of 0.008-inch (0.20-mm) minimum thickness.

C. Form: Sheet.

D. Color: Natural.

2.19 MANHOLES

A. Standard Precast Concrete Manholes:
1. Description: ASTM C478 (ASTM C478M), precast, reinforced concrete, of depth indicated, with provision for sealant joints.
2. Diameter: 48 inches (1200 mm) minimum unless otherwise indicated.
3. Ballast: Increase thickness of precast concrete sections or add concrete to base section as required to prevent flotation.
4. Base Section: 6-inch (150-mm) minimum thickness for floor slab and 4-inch (102-mm) minimum thickness for walls and base riser section, and separate base slab or base section with integral floor.
5. Riser Sections: 4-inch (102-mm) minimum thickness, and lengths to provide depth indicated.
6. Top Section: Eccentric-cone type unless concentric-cone or flat-slab-top type is indicated, and top of cone of size that matches grade rings.
7. Joint Sealant: ASTM C990 (ASTM C990M), bitumen or butyl rubber.
8. Resilient Pipe Connectors: ASTM C923 (ASTM C923M), cast or fitted into manhole walls, for each pipe connection.
9. Steps: Individual FRP steps, wide enough to allow worker to place both feet on one step and designed to prevent lateral slippage off step. Cast or anchor steps into sidewalls at 12- to 16-inch (300- to 400-mm) intervals. Omit steps if total depth from floor of manhole to finished grade is less than 60 inches (1500 mm).
10. Adjusting Rings: Interlocking HDPE rings with level or sloped edge in thickness and diameter matching manhole frame and cover, and of height required to adjust manhole frame and cover to indicated elevation and slope. Include sealant recommended by ring manufacturer.
11. Grade Rings: Reinforced-concrete rings, 6- to 9-inch (150- to 225-mm) total thickness, to match diameter of manhole frame and cover, and height as required to adjust manhole frame and cover to indicated elevation and slope.

B. Designed Precast Concrete Manholes:

1. Description: ASTM C913; designed per ASTM C890 for A-16 (AASHTO HS20-44), heavy-traffic, structural loading; of depth, shape, and dimensions indicated, with provision for sealant joints.
2. Ballast: Increase thickness of one or more precast concrete sections or add concrete to manhole as required to prevent flotation.
3. Joint Sealant: ASTM C990 (ASTM C990M), bitumen or butyl rubber.
4. Resilient Pipe Connectors: ASTM C923 (ASTM C923M), cast or fitted into manhole walls, for each pipe connection.
5. Steps: Individual FRP steps, wide enough to allow worker to place both feet on one step and designed to prevent lateral slippage off step. Cast or anchor steps into sidewalls at 12- to 16-inch (300- to 400-mm) intervals. Omit steps if total depth from floor of manhole to finished grade is less than 60 inches (1500 mm).
6. Adjusting Rings: Interlocking HDPE rings with level or sloped edge in thickness and diameter matching manhole frame and cover, and of height required to adjust manhole frame and cover to indicated elevation and slope. Include sealant recommended by ring manufacturer.
7. Grade Rings: Reinforced-concrete rings, 6- to 9-inch (150- to 225-mm) total thickness, to match diameter of manhole frame and cover, and of height required to adjust manhole frame and cover to indicated elevation and slope.

C. Fiberglass Manholes:
1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
   a. Associated Fiberglass Enterprises.
   b. Containment Solutions, Inc.
   c. F. Manufacturing, Inc.
2. Description: ASTM D3753.
3. Diameter: 48 inches (1200 mm) minimum unless otherwise indicated.
4. Ballast: Increase thickness of concrete base as required to prevent flotation.
5. Base Section: Concrete, 6-inch (150-mm) minimum thickness.
6. Resilient Pipe Connectors: ASTM C923 (ASTM C923M), cast or fitted into manhole walls, for each pipe connection.
7. Steps: Individual FRP steps, wide enough to allow worker to place both feet on one step and designed to prevent lateral slippage off step. Cast or anchor steps into sidewalls at 12- to 16-inch (300- to 400-mm) intervals. Omit steps if total depth from floor of manhole to finished grade is less than 60 inches (1500 mm).
8. Adjusting Rings: Interlocking HDPE rings with level or sloped edge in thickness and diameter matching manhole frame and cover, and of height required to adjust manhole frame and cover to indicated elevation and slope. Include sealant recommended by ring manufacturer.
9. Grade Rings: Reinforced-concrete rings, 6- to 9-inch (150- to 225-mm) total thickness, to match diameter of manhole frame and cover, and height as required to adjust manhole frame and cover to indicated elevation and slope.

D. Manhole Frames and Covers:
1. Description: Ferrous; 24-inch (610-mm) ID by 7- to 9-inch (175- to 225-mm) riser with 4-inch- (102-mm-) minimum width flange and 26-inch- (660-mm-) diameter cover. Include indented top design with lettering cast into cover, using wording equivalent to "STORM SEWER."
2. Material: ASTM A536, Grade 60-40-18 ductile iron unless otherwise indicated.

2.20 CONCRETE

A. General: Cast-in-place concrete per ACI 318, ACI 350/350R (ACI 350M/350RM), and the following:
1. Cement: ASTM C150, Type II.
2. Fine Aggregate: ASTM C33, sand.
3. Coarse Aggregate: ASTM C33, crushed gravel.
4. Water: Potable.

B. Portland Cement Design Mix: 4000 psi (27.6 MPa) minimum, with 0.45 maximum water/cementitious materials ratio.

1. Reinforcing Fabric: ASTM A185/A185M, steel, welded wire fabric, plain.
2. Reinforcing Bars: ASTM A615/A615M, Grade 60 (420 MPa) deformed steel.

C. Manhole Channels and Benches: Factory or field formed from concrete. Portland cement design mix, 4000 psi (27.6 MPa) minimum, with 0.45 maximum water/cementitious materials ratio. Include channels and benches in manholes.
1. Channels: Concrete invert, formed to same width as connected piping, with height of vertical sides to 3/4 of pipe diameter. Form curved channels with smooth, uniform radius and slope.
a. Invert Slope: 2 percent through manhole.
2. Benches: Concrete, sloped to drain into channel.
a. Slope: 8 percent.

D. Ballast and Pipe Supports: Portland cement design mix, 3000 psi (20.7 MPa) minimum, with 0.58 maximum water/cementitious materials ratio.
1. Reinforcing Fabric: ASTM A185/A185M, steel, welded wire fabric, plain.
2. Reinforcing Bars: ASTM A615/A615M, Grade 60 (420 MPa) deformed steel.

2.21 POLYMER-CONCRETE, CHANNEL DRAINAGE SYSTEMS

A. General Requirements for Polymer-Concrete, Channel Drainage Systems: Modular system of precast, polymer-concrete channel sections, grates, and appurtenances; designed so grates fit into channel recesses without rocking or rattling. Include quantity of units required to form total lengths indicated.
1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
2. ABT, Inc.
3. ACO USA.
4. Innovative Plastic, Inc.; a subsidiary of T-H Marine Supplies, Inc.
5. Mea-Josam Div.; Josam Company.
6. Poly-Cast.

B. Sloped-Invert, Polymer-Concrete Systems:
1. Channel Sections:
a. Interlocking-joint, precast, modular units with end caps.
b. 4-inch (102-mm) inside width and deep, rounded bottom, with built-in invert slope of 0.6 percent and with outlets in quantities, sizes, and locations indicated.
c. Extension sections necessary for required depth.
d. Frame: Include gray-iron or steel frame for grate.
2. Grates:
a. Manufacturer's designation "Heavy Duty," with slots or perforations that fit recesses in channels.
b. Material: Gray iron.
3. Covers: Solid gray iron if indicated.
4. Locking Mechanism: Manufacturer's standard device for securing grates to channel sections.

C. Narrow-Width, Level-Invert, Polymer-Concrete Systems:
1. Channel Sections:
a. Interlocking-joint, precast, modular units with end caps.
b. 5-inch (127-mm) inside width and 9-3/4-inch- (248-mm-) deep, rounded bottom, with level invert and with NPS 4 (DN 100) outlets in quantities, sizes, and locations indicated.
2. Grates:
a. Slots or perforations that fit recesses in channels.
b. Material: Gray iron.
3. Covers: Solid gray iron if indicated.
4. Locking Mechanism: Manufacturer's standard device for securing grates to channel sections.

D. Wide-Width, Level-Invert, Polymer-Concrete Systems:
1. Channel Sections:

a. Interlocking-joint, precast, modular units with end caps.
b. 8-inch (203-mm) inside width and 13-3/4-inch- (350-mm-) deep, rounded bottom, with level invert and with outlets in quantities, sizes, and locations indicated.

2. Grates:
a. Slots or other openings that fit recesses in channels.
b. Material: Gray iron.
3. Covers: Solid gray iron if indicated.
4. Locking Mechanism: Manufacturer's standard device for securing grates to channel sections.

E. Drainage Specialties: Precast, polymer-concrete units.
1. Large Catch Basins:
a. 24-by-12-inch (610-by-305-mm) polymer-concrete body, with outlets in quantities and sizes indicated.
b. Gray-iron slotted grate.
c. Frame: Include gray-iron or steel frame for grate.
2. Small Catch Basins:
a. 19- to 24-inch by approximately 6-inch (483- to 610-mm by approximately 150-mm) polymer-concrete body, with outlets in quantities and sizes indicated.
b. Gray-iron slotted grate.
c. Frame: Include gray-iron or steel frame for grate.
3. Oil Interceptors:
a. Polymer-concrete body with interior baffle and four steel support channels and two 1/4-inch- (6.4-mm-) thick, steel-plate covers.
b. Steel-plate covers.
c. Capacity: 260 gallon (984 L).
d. Inlet and Outlet: NPS 6 (DN 150).
4. Sediment Interceptors:
a. 27-inch- (686-mm-) square, polymer-concrete body, with outlets in quantities and sizes indicated.
b. 24-inch- (610-mm-) square, gray-iron frame and slotted grate.

F. Supports, Anchors, and Setting Devices: Manufacturer's standard unless otherwise indicated.

G. Channel-Section Joining and Fastening Materials: As recommended by system manufacturer.

2.22 PLASTIC, CHANNEL DRAINAGE SYSTEMS

A. General Requirements for Plastic, Channel Drainage Systems:
1. Modular system of plastic channel sections, grates, and appurtenances.
2. Designed so grates fit into frames without rocking or rattling.
3. Number of units required to form total lengths indicated.
4. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
5. ACO USA.
6. MultiDrain Systems, Inc.
7. NDS Inc.
8. Tuf-Tite Corporation.
9. Zurn Light Commercial Products Operation; Zurn Plumbing Products Group.

B. Fiberglass Systems:
1. Channel Sections:
a. Interlocking-joint, fiberglass modular units, with built-in invert slope of approximately 1 percent and with end caps.
b. Rounded or inclined inside bottom surface, with outlets in quantities, sizes, and locations indicated.
c. Width: 8 inches (203 mm).
2. Factory- or field-attached frames that fit channel sections and grates.

a. Material: Galvanized steel.
3. Grates with slots or perforations that fit frames.
a. Material: Gray iron.
4. Covers: Solid gray iron if indicated.
5. Drainage Specialties:
a. Large Catch Basins: 24-inch- (610-mm-) square plastic body, with outlets in quantities and sizes indicated. Include gray-iron frame and slotted grate.
b. Small Catch Basins: 12-by-24-inch (305-by-610-mm) plastic body, with outlets in quantities and sizes indicated. Include gray-iron frame and slotted grate.

C. PE Systems:
1. Channel Sections: Interlocking-joint, PE modular units, 4 inches (102 mm) wide, with end caps. Include rounded bottom, with level invert and with outlets in quantities, sizes, and locations indicated.
2. Grates: PE, ladder shaped; with stainless-steel screws.
3. Color: Gray unless otherwise indicated.
4. Drainage Specialties: Include the following PE components:
a. Drains: 4-inch- (102-mm-) diameter, round, slotted top; with NPS 4 (DN 100) bottom outlet.
b. Drains: 8-inch- (203-mm-) diameter, round, slotted top; with NPS 6 (DN 150) bottom outlet.
c. Drains: 4-inch- (102-mm-) square, slotted top; with NPS 3 (DN 80) bottom outlet.
d. Drains: 8-inch- (203-mm-) square, slotted top; with NPS 6 (DN 150) bottom outlet.
e. Catch Basins: 12-inch- (305-mm-) square plastic body, with outlets in quantities and sizes indicated. Include PE slotted grate 11-3/4 inches (298 mm) square by 1-1/8 inches (28.6 mm) thick.

D. Supports, Anchors, and Setting Devices: Manufacturer's standard unless otherwise indicated.

E. Channel-Section Joining and Fastening Materials: As recommended by system manufacturer.

2.23 CATCH BASINS

A. Standard Precast Concrete Catch Basins:
1. Description: ASTM C478 (ASTM C478M), precast, reinforced concrete, of depth indicated, with provision for sealant joints.
2. Base Section: 6-inch (150-mm) minimum thickness for floor slab and 4-inch (102-mm) minimum thickness for walls and base riser section, and separate base slab or base section with integral floor.
3. Riser Sections: 4-inch (102-mm) minimum thickness, 48-inch (1200-mm) diameter, and lengths to provide depth indicated.
4. Top Section: Eccentric-cone type unless concentric-cone or flat-slab-top type is indicated. Top of cone of size that matches grade rings.
5. Joint Sealant: ASTM C990 (ASTM C990M), bitumen or butyl rubber.
6. Adjusting Rings: Interlocking rings with level or sloped edge in thickness and shape matching catch basin frame and grate. Include sealant recommended by ring manufacturer.
7. Grade Rings: Include two or three reinforced-concrete rings, of 6- to 9-inch (150- to 225-mm) total thickness, that match 24-inch- (610-mm-) diameter frame and grate.
8. Steps: Individual FRP steps, wide enough to allow worker to place both feet on one step and designed to prevent lateral slippage off step. Cast or anchor steps into sidewalls at 12- to 16-inch (300- to 400-mm) intervals. Omit steps if total depth from floor of manhole to finished grade is less than 60 inches (1500 mm).
9. Pipe Connectors: ASTM C923 (ASTM C923M), resilient, of size required, for each pipe connecting to base section.

B. Designed Precast Concrete Catch Basins: ASTM C913, precast, reinforced concrete; designed per ASTM C890 for A-16 (ASSHTO HS20-44), heavy-traffic, structural loading; of depth, shape, and dimensions indicated, with provision for joint sealants.
1. Joint Sealants: ASTM C990 (ASTM C990M), bitumen or butyl rubber.

2. Adjusting Rings: Interlocking rings with level or sloped edge in thickness and shape matching catch basin frame and grate. Include sealant recommended by ring manufacturer.
3. Grade Rings: Include two or three reinforced-concrete rings, of 6- to 9-inch (150- to 225-mm) total thickness, that match 24-inch- (610-mm-) diameter frame and grate.
4. Steps: Individual FRP steps, wide enough to allow worker to place both feet on one step and designed to prevent lateral slippage off step. Cast or anchor steps into sidewalls at 12- to 16-inch (300- to 400-mm) intervals. Omit steps if total depth from floor of manhole to finished grade is less than 60 inches (1500 mm).
5. Pipe Connectors: ASTM C923 (ASTM C923M), resilient, of size required, for each pipe connecting to base section.

C. Frames and Grates: ASTM A536, Grade 60-40-18, ductile iron designed for A-16, structural loading. Include flat grate with small square or short-slotted drainage openings.
1. Size: 24 by 24 inches (610 by 610 mm) minimum unless otherwise indicated.
2. Grate Free Area: Approximately 50 percent unless otherwise indicated.

D. Frames and Grates: ASTM A536, Grade 60-40-18, ductile iron designed for A-16, structural loading. Include 24-inch (610-mm) ID by 7- to 9-inch (175- to 225-mm) riser with 4-inch (102-mm) minimum width flange, and 26-inch- (660-mm-) diameter flat grate with small square or short-slotted drainage openings.
1. Grate Free Area: Approximately 50 percent unless otherwise indicated.

2.24 STORMWATER INLETS

A. Curb Inlets: Made with vertical curb opening, of materials and dimensions per utility standards.

B. Gutter Inlets: Made with horizontal gutter opening, of materials and dimensions per utility standards. Include heavy-duty frames and grates.

C. Combination Inlets: Made with vertical curb and horizontal gutter openings, of materials and dimensions per utility standards. Include heavy-duty frames and grates.

D. Frames and Grates: Heavy duty, per utility standards.

2.25 STORMWATER DETENTION STRUCTURES

A. Cast-in-Place Concrete, Stormwater Detention Structures: Constructed of reinforced-concrete bottom, walls, and top; designed per ASTM C890 for A-16 (AASHTO HS20-44), heavy-traffic, structural loading; of depth, shape, dimensions, and appurtenances indicated.
1. Ballast: Increase thickness of concrete as required to prevent flotation.
2. Grade Rings: Include two or three reinforced-concrete rings, of 6- to 9-inch (150- to 229-mm) total thickness, that match 24-inch- (610-mm-) diameter frame and cover.
3. Steps: Individual FRP steps, wide enough to allow worker to place both feet on one step and designed to prevent lateral slippage off step. Cast or anchor steps into sidewalls at 12- to 16-inch (300- to 400-mm) intervals. Omit steps if total depth from floor of manhole to finished grade is less than 60 inches (1500 mm).

B. Manhole Frames and Covers: ASTM A536, Grade 60-40-18, ductile-iron castings designed for heavy-duty service. Include 24-inch (610-mm) ID by 7- to 9-inch (175- to 225-mm) riser with 4-inch (102-mm) minimum width flange, and 26-inch- (660-mm-) diameter cover. Include indented top design with lettering cast into cover, using wording equivalent to "STORM SEWER."

2.26 PIPE OUTLETS

A. Head Walls: Cast-in-place reinforced concrete, with apron and tapered sides.

B. Riprap Basins: Broken, irregularly sized and shaped, graded stone per NSSGA's "Quarried Stone for Erosion and Sediment Control."
1. Average Size: NSSGA No. R-3, screen opening 2 inches (51 mm).
2. Average Size: NSSGA No. R-4, screen opening 3 inches (76 mm).
3. Average Size: NSSGA No. R-5, screen opening 5 inches (127 mm).

C. Filter Stone: Per NSSGA's "Quarried Stone for Erosion and Sediment Control," No. FS-2, No. 4 screen opening, average-size graded stone.

D. Energy Dissipaters: Per NSSGA's "Quarried Stone for Erosion and Sediment Control," No. A-1, 3-ton (2721-kg) average weight armor stone, unless otherwise indicated.

2.27 DRY WELLS

A. Description: ASTM C913, precast, reinforced, perforated concrete rings. Include the following:
   1. Floor: Cast-in-place concrete.
   2. Cover: Liftoff-type concrete cover with cast-in lift rings.
   3. Wall Thickness: 4 inches (102 mm) minimum with 1-inch (25-mm) diameter or 1-by-3-inch- (25-by-76-mm-) maximum slotted perforations arranged in rows parallel to axis of ring.
      a. Total Free Area of Perforations: Approximately 15 percent of ring interior surface.
      b. Ring Construction: Designed to be self-aligning.
   4. Filtering Material: ASTM D448, Size No. 24, 3/4- to 2-1/2-inch (19- to 63-mm) washed, crushed stone or gravel.

B. Description: Manufactured PE side panels and top cover that assemble into 50-gal. (190-L) storage capacity units.
   1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
      a. NDS Inc.
   2. Side Panels: With knockout ports for piping and seepage holes.
   3. Top Cover: With knockout port for drain.
   4. Filter Fabric: As recommended by unit manufacturer.
   5. Filtering Material: ASTM D448, Size No. 24, 3/4- to 2-1/2-inch (19- to 63-mm) washed, crushed stone or gravel.

C. Description: Constructed-in-place aggregate type. Include the following:
   1. Lining: Clay or concrete bricks.
   2. Lining: Concrete blocks or precast concrete rings with notches or weep holes.
   3. Filtering Material: ASTM D448, Size No. 24, 3/4- to 2-1/2-inch (19- to 63-mm) washed, crushed stone or gravel.
   4. Cover: Precast, reinforced-concrete slab, designed for structural loading per ASTM C890 and made per ASTM C913. Include slab dimensions that will extend 12 inches (300 mm) minimum beyond edge of excavation, with bituminous coating over entire surface. Cast cover with opening for manhole in center.
   5. Manhole: 24-inch- (610-mm-) diameter, reinforced-concrete access lid with steel lift rings. Include bituminous coating over entire surface.

2.28 STORMWATER DISPOSAL SYSTEMS

A. Chamber Systems:
   1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
      a. Advanced Drainage Systems.
      b. CULTEC, Inc.
      c. Hancor Inc.
      d. Infiltrator Systems, Inc.
      e. StormTech LLC.
   2. Storage and Leaching Chambers: Molded PE with perforated sides and open bottom. Include number of chambers, distribution piping, end plates, and other standard components as required for system total capacity.
   3. Filtering Material: ASTM D448, Size No. 24, 3/4- to 2-1/2-inch (19- to 63-mm) washed, crushed stone or gravel.
   4. Filter Mat: Geotextile woven or spun filter fabric, in one or more layers, for minimum total unit weight of 4 oz./sq. yd. (135 g/sq. m).

B. Pipe Systems: Perforated manifold, header, and lateral piping complying with AASHTO M 252M for NPS 10 (DN 250) and smaller, AASHTO M 294M for NPS 12 to NPS 60 (DN 300 to DN 1500). Include proprietary fittings, couplings, seals, and filter fabric.

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
   a. Advanced Drainage Systems.
   b. Hancor Inc.

PART 3 EXECUTION

3.01 EARTHWORK

A. Excavation, trenching, and backfilling are specified in Division 31 Section "Earthwork."

3.02 PIPING INSTALLATION

A. General Locations and Arrangements: Drawing plans and details indicate general location and arrangement of underground storm drainage piping. Location and arrangement of piping layout take into account design considerations. Install piping as indicated, to extent practical. Where specific installation is not indicated, follow piping manufacturer's written instructions.

B. Install piping beginning at low point, true to grades and alignment indicated with unbroken continuity of invert. Place bell ends of piping facing upstream. Install gaskets, seals, sleeves, and couplings per manufacturer's written instructions for use of lubricants, cements, and other installation requirements.

C. Install manholes for changes in direction unless fittings are indicated. Use fittings for branch connections unless direct tap into existing sewer is indicated.

D. Install proper size increasers, reducers, and couplings where different sizes or materials of pipes and fittings are connected. Reducing size of piping in direction of flow is prohibited.

E. When installing pipe under streets or other obstructions that cannot be disturbed, use pipe-jacking process of microtunneling.

F. Install gravity-flow, nonpressure drainage piping per the following:
   1. Install piping pitched down in direction of flow.
   2. Install piping NPS 6 (DN 150) and larger with restrained joints at tee fittings and at changes in direction. Use corrosion-resistant rods, pipe or fitting manufacturer's proprietary restraint system, or cast-in-place concrete supports or anchors.
   3. Install piping with 24 inch (915-mm) minimum cover.
   4. Install hub-and-spigot, cast-iron soil piping per CISPI's "Cast Iron Soil Pipe and Fittings Handbook."
   5. Install hubless cast-iron soil piping per CISPI 310 and CISPI's "Cast Iron Soil Pipe and Fittings Handbook."
   6. Install ductile-iron piping and special fittings per AWWA C600 or AWWA M41.
   7. Install corrugated steel piping per ASTM A798/A798M.
   8. Install corrugated aluminum piping per ASTM B788/B788M.
   9. Install ABS sewer piping per ASTM D2321 and ASTM F1668.
   10. Install PE corrugated sewer piping per ASTM D2321.
   11. Install PVC cellular-core piping per ASTM D2321 and ASTM F1668.
   12. Install PVC sewer piping per ASTM D2321 and ASTM F1668.
   13. Install PVC profile gravity sewer piping per ASTM D2321 and ASTM F1668.
   14. Install PVC water-service piping per ASTM D2321 and ASTM F1668.
   15. Install fiberglass sewer piping per ASTM D3839 and ASTM F1668.
   16. Install nonreinforced-concrete sewer piping per ASTM C1479 and ACPA's "Concrete Pipe Installation Manual."
   17. Install reinforced-concrete sewer piping per ASTM C1479 and ACPA's "Concrete Pipe Installation Manual."

G. Install force-main pressure piping per the following:
   1. Install piping with restrained joints at tee fittings and at horizontal and vertical changes in direction. Use corrosion-resistant rods, pipe or fitting manufacturer's proprietary restraint system, or cast-in-place concrete supports or anchors.
   2. Install piping with 36 inch (915-mm) minimum cover.

3. Install ductile-iron pressure piping per AWWA C600 or AWWA M41.
4. Install ductile-iron special fittings per AWWA C600.
5. Install PVC pressure piping per AWWA M23, or ASTM D2774 and ASTM F1668.
6. Install PVC water-service piping per ASTM D2774 and ASTM F1668.

H. Install corrosion-protection piping encasement over the following underground metal piping per ASTM A674 or AWWA C105:
1. Hub-and-spigot, cast-iron soil pipe and fittings.
2. Hubless cast-iron soil pipe and fittings.
3. Ductile-iron pipe and fittings.
4. Expansion joints and deflection fittings.

3.03 PIPE JOINT CONSTRUCTION

A. Join gravity-flow, nonpressure drainage piping per the following:
1. Join hub-and-spigot, cast-iron soil piping with gasketed joints per CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for compression joints.
2. Join hub-and-spigot, cast-iron soil piping with calked joints per CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for lead and oakum calked joints.
3. Join hubless cast-iron soil piping per CISPI 310 and CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for hubless-coupling joints.
4. Join ductile-iron culvert piping per AWWA C600 for push-on joints.
5. Join ductile-iron piping and special fittings per AWWA C600 or AWWA M41.
6. Join corrugated steel sewer piping per ASTM A798/A798M.
7. Join corrugated aluminum sewer piping per ASTM B788/B788M.
8. Join ABS sewer piping per ASTM D2321 and ASTM D2751 for elastomeric-seal joints.
9. Join corrugated PE piping per ASTM D3212 for push-on joints.
10. Join PVC cellular-core piping per ASTM D2321 and ASTM F891 for solvent-cemented joints.
11. Join PVC corrugated sewer piping per ASTM D2321 for elastomeric-seal joints.
12. Join PVC sewer piping per ASTM D2321 and ASTM D3034 for elastomeric-seal joints or ASTM D3034 for elastomeric-gasketed joints.
13. Join PVC profile gravity sewer piping per ASTM D2321 for elastomeric-seal joints or ASTM F794 for gasketed joints.
14. Join fiberglass sewer piping per ASTM D3839 for elastomeric-seal joints.
15. Join nonreinforced-concrete sewer piping per ASTM C14 (ASTM C14M) and ACPA's "Concrete Pipe Installation Manual" for rubber-gasketed joints.
16. Join reinforced-concrete sewer piping per ACPA's "Concrete Pipe Installation Manual" for rubber-gasketed joints.
17. Join dissimilar pipe materials with nonpressure-type flexible couplings.

B. Join force-main pressure piping per the following:
1. Join ductile-iron pressure piping per AWWA C600 or AWWA M41 for push-on joints.
2. Join ductile-iron special fittings per AWWA C600 or AWWA M41 for push-on joints.
3. Join PVC pressure piping per AWWA M23 for gasketed joints.
4. Join PVC water-service piping per ASTM D2855 for solvent-cemented joints.
5. Join dissimilar pipe materials with pressure-type couplings.

3.04 BACKWATER VALVE INSTALLATION

A. Install horizontal-type backwater valves in piping where indicated.

B. Install combination horizontal and manual gate-valve type in piping and in manholes where indicated.

C. Install terminal-type backwater valves on end of piping and in manholes where indicated.

3.05 CLEANOUT INSTALLATION

A. Install cleanouts and riser extensions from sewer pipes to cleanouts at grade. Use cast-iron soil pipe fittings in sewer pipes at branches for cleanouts and cast-iron soil pipe for riser extensions to cleanouts. Install piping so cleanouts open in direction of flow in sewer pipe.

1. Use Light-Duty, top-loading classification cleanouts in earth or unpaved foot-traffic areas.
2. Use Medium-Duty, top-loading classification cleanouts in paved foot-traffic areas.
3. Use Heavy-Duty, top-loading classification cleanouts in vehicle-traffic service areas.
4. Use Extra-Heavy-Duty, top-loading classification cleanouts in roads.

B. Set cleanout frames and covers in earth in cast-in-place concrete block, 18 by 18 by 12 inches (450 by 450 by 300 mm) deep. Set with tops 1 inch (25 mm) above surrounding earth grade.

C. Set cleanout frames and covers in concrete pavement and roads with tops flush with pavement surface.

3.06 DRAIN INSTALLATION

A. Install type of drains in locations indicated.
1. Use Light-Duty, top-loading classification drains in earth or unpaved foot-traffic areas.
2. Use Medium-Duty, top-loading classification drains in paved foot-traffic areas.
3. Use Heavy-Duty, top-loading classification drains in vehicle-traffic service areas.
4. Use Extra-Heavy-Duty, top-loading classification drains in roads.

B. Embed drains in 4-inch (102-mm) minimum concrete around bottom and sides.

C. Fasten grates to drains if indicated.

D. Set drain frames and covers with tops flush with pavement surface.

E. Assemble trench sections with flanged joints.

F. Embed trench sections in 4-inch (102-mm) minimum concrete around bottom and sides.

3.07 MANHOLE INSTALLATION

A. General: Install manholes, complete with appurtenances and accessories indicated.

B. Install precast concrete manhole sections with sealants per ASTM C891.

C. Where specific manhole construction is not indicated, follow manhole manufacturer's written instructions.

D. Set tops of frames and covers flush with finished surface of manholes that occur in pavements. Set tops 3 inches (76 mm) above finished surface elsewhere unless otherwise indicated.

3.08 CATCH BASIN INSTALLATION

A. Construct catch basins to sizes and shapes indicated.

B. Set frames and grates to elevations indicated.

3.09 STORMWATER INLET INSTALLATION

A. Construct inlet head walls, aprons, and sides of reinforced concrete, as indicated.

B. Construct riprap of broken stone, as indicated.

C. Install outlets that spill onto grade, anchored with concrete, where indicated.

D. Install outlets that spill onto grade, with flared end sections that match pipe, where indicated.

E. Construct energy dissipaters at outlets, as indicated.

3.10 DRY WELL INSTALLATION

A. Excavate hole to diameter of at least 6 inches (150 mm) greater than outside of dry well. Do not extend excavation into ground-water table.

B. Install precast, concrete-ring dry wells per the following:
1. Assemble rings to depth indicated.
2. Extend rings to height where top of cover will be approximately 8 inches (203 mm) below finished grade.
3. Backfill bottom of inside of rings with filtering material to level at least 12 inches (300 mm) above bottom.
4. Extend effluent inlet pipe 12 inches (300 mm) into rings and terminate into side of tee fitting.

5. Backfill around outside of rings with filtering material to top level of rings.
6. Install cover over top of rings.

C. Install manufactured, PE dry wells per manufacturer's written instructions and the following:
1. Assemble and install panels and cover.
2. Backfill bottom of inside of unit with filtering material to level at least above bottom.
3. Extend effluent inlet pipe 12 inches (300 mm) into unit and terminate into side of tee fitting.
4. Install filter fabric around outside of unit.
5. Install filtering material around outside of unit.

D. Install constructed-in-place dry wells per the following:
1. Install brick lining material dry and laid flat, with staggered joints for seepage. Build to diameter and depth indicated.
2. Install block lining material dry, with staggered joints and 20 percent minimum of blocks on side for seepage. Install precast concrete rings with notches or weep holes for seepage. Build to diameter and depth indicated.
3. Extend lining material to height where top of manhole will be approximately 8 inches (203 mm) below finished grade.
4. Backfill bottom of inside of lining with filtering material to level at least 12 inches (300 mm) above bottom.
5. Extend effluent inlet pipe 12 inches (300 mm) into lining and terminate into side of tee fitting.
6. Backfill around outside of lining with filtering material to top level of lining.
7. Install manhole over top of dry well. Support cover on undisturbed soil. Do not support cover on lining.

3.11 CONCRETE PLACEMENT

A. Place cast-in-place concrete per ACI 318.

3.12 CHANNEL DRAINAGE SYSTEM INSTALLATION

A. Install with top surfaces of components, except piping, flush with finished surface.

B. Assemble channel sections to form slope down toward drain outlets. Use sealants, adhesives, fasteners, and other materials recommended by system manufacturer.

C. Embed channel sections and drainage specialties in 4-inch (102-mm) minimum concrete around bottom and sides.

D. Fasten grates to channel sections if indicated.

E. Assemble channel sections with flanged or interlocking joints.

F. Embed channel sections in 4-inch (102-mm) minimum concrete around bottom and sides.

3.13 STORMWATER DISPOSAL SYSTEM INSTALLATION

A. Chamber Systems: Excavate trenches of width and depth, and install system and backfill per chamber manufacturer's written instructions. Include storage and leaching chambers, filtering material, and filter mat.

B. Piping Systems: Excavate trenches of width and depth, and install piping system, filter fabric, and backfill, per piping manufacturer's written instructions.

3.14 CONNECTIONS

A. Connect nonpressure, gravity-flow drainage piping in building's storm building drains specified in Section 22 14 16 "Storm Drainage Piping."

B. Connect force-main piping to building's storm drainage force mains specified in Section 22 14 16 "Storm Drainage Piping." Terminate piping where indicated.

C. Make connections to existing piping and underground manholes.
1. Use commercially manufactured wye fittings for piping branch connections. Remove section of existing pipe; install wye fitting into existing piping; and encase entire wye fitting, plus 6-inch

(150-mm) overlap, with not less than 6 inches (150 mm) of concrete with 28-day compressive strength of 3000 psi (20.7 MPa).

2. Make branch connections from side into existing piping, NPS 4 to NPS 20 (DN 100 to DN 500). Remove section of existing pipe, install wye fitting into existing piping, and encase entire wye with not less than 6 inches (150 mm) of concrete with 28-day compressive strength of 3000 psi (20.7 MPa).
3. Make branch connections from side into existing piping, NPS 21 (DN 525) or larger, or to underground manholes and structures by cutting into existing unit and creating an opening large enough to allow 3 inches (76 mm) of concrete to be packed around entering connection. Cut end of connection pipe passing through pipe or structure wall to conform to shape of and be flush with inside wall unless otherwise indicated. On outside of pipe, manhole, or structure wall, encase entering connection in 6 inches (150 mm) of concrete for minimum length of 12 inches (300 mm) to provide additional support of collar from connection to undisturbed ground.
   a. Use concrete that will attain a minimum 28-day compressive strength of 3000 psi (20.7 MPa) unless otherwise indicated.
   b. Use epoxy-bonding compound as interface between new and existing concrete and piping materials.
4. Protect existing piping, manholes, and structures to prevent concrete or debris from entering while making tap connections. Remove debris or other extraneous material that may accumulate.

D. Connect to sediment interceptors specified in Division 22.

E. Pipe couplings, expansion joints, and deflection fittings with pressure ratings at least equal to piping rating may be used in applications below unless otherwise indicated.
1. Use nonpressure-type flexible couplings where required to join gravity-flow, nonpressure sewer piping unless otherwise indicated.
   a. [Unshielded] [Shielded] flexible couplings for same or minor difference OD pipes.
   b. Unshielded, increaser/reducer-pattern, flexible couplings for pipes with different OD.
   c. Ring-type flexible couplings for piping of different sizes where annular space between smaller piping's OD and larger piping's ID permits installation.
2. Use pressure-type pipe couplings for force-main joints.

3.15 CLOSING ABANDONED STORM DRAINAGE SYSTEMS

A. Abandoned Piping: Close open ends of abandoned underground piping indicated to remain in place. Include closures strong enough to withstand hydrostatic and earth pressures that may result after ends of abandoned piping have been closed. Use either procedure below:
1. Close open ends of piping with at least 8-inch- (203-mm-) thick, brick masonry bulkheads.
2. Close open ends of piping with threaded metal caps, plastic plugs, or other acceptable methods suitable for size and type of material being closed. Do not use wood plugs.

B. Abandoned Manholes and Structures: Excavate around manholes and structures as required and use one procedure below:
1. Remove manhole or structure and close open ends of remaining piping.
2. Remove top of manhole or structure down to at least 36 inches (915 mm) below final grade. Fill to within 12 inches (300 mm) of top with stone, rubble, gravel, or compacted dirt. Fill to top with concrete.

C. Backfill to grade per Division 31 Section "Earthwork."

3.16 IDENTIFICATION

A. Materials and their installation are specified in Division 31 Section "Earthwork." Arrange for installation of green warning tape directly over piping and at outside edge of underground structures.
1. Use warning tape or detectable warning tape over ferrous piping.
2. Use detectable warning tape over nonferrous piping and over edges of underground structures.

3.17 FIELD QUALITY CONTROL

A. Inspect interior of piping to determine whether line displacement or other damage has occurred. Inspect after approximately 24 inches (610 mm) of backfill is in place, and again at completion of Project.
   1. Submit separate reports for each system inspection.
   2. Defects requiring correction include the following:
      a. Alignment: Less than full diameter of inside of pipe is visible between structures.
      b. Deflection: Flexible piping with deflection that prevents passage of ball or cylinder of size not less than 92.5 percent of piping diameter.
      c. Damage: Crushed, broken, cracked, or otherwise damaged piping.
      d. Infiltration: Water leakage into piping.
      e. Exfiltration: Water leakage from or around piping.
   3. Replace defective piping using new materials, and repeat inspections until defects are within allowances specified.
   4. Reinspect and repeat procedure until results are satisfactory.

B. Test new piping systems, and parts of existing systems that have been altered, extended, or repaired, for leaks and defects.
   1. Do not enclose, cover, or put into service before inspection and approval.
   2. Test completed piping systems per requirements of authorities having jurisdiction.
   3. Schedule tests and inspections by authorities having jurisdiction with at least 24 hours' advance notice.
   4. Submit separate report for each test.
   5. Gravity-Flow Storm Drainage Piping: Test per requirements of authorities having jurisdiction, UNI-B-6, and the following:
      a. Exception: Piping with soiltight joints unless required by authorities having jurisdiction.
      b. Option: Test plastic piping per ASTM F1417.
      c. Option: Test concrete piping per ASTM C924 (ASTM C924M).
   6. Force-Main Storm Drainage Piping: Perform hydrostatic test after thrust blocks, supports, and anchors have hardened. Test at pressure not less than 1-1/2 times the maximum system operating pressure, but not less than 150 psig (1035 kPa).
      a. Ductile-Iron Piping: Test per AWWA C600, "Hydraulic Testing" Section.
      b. PVC Piping: Test per AWWA M23, "Testing and Maintenance" Chapter.

C. Leaks and loss in test pressure constitute defects that must be repaired.

D. Replace leaking piping using new materials, and repeat testing until leakage is within allowances specified.

3.18 CLEANING

A. Clean interior of piping of dirt and superfluous materials. Flush with water.

END OF SECTION

SECTION 33 41 00 - STORM UTILITY DRAINAGE PIPING

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes gravity-flow, nonpressure storm drainage outside the building, with the following components:

1. Cleanouts.
2. Precast concrete manholes.

1.2 PERFORMANCE REQUIREMENTS

A. Gravity-Flow, Nonpressure, Drainage-Piping Pressure Rating: 10-foot head of water.

1.3 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings: For manholes, catch basins and inlet boxes (include sections, details, frames and covers, and catch basin frames and grates).

C. Coordination Drawings: Show pipe sizes, locations, and elevations.

D. Field quality-control test reports. Product Data: For each type of product indicated.

PART 2 - PRODUCTS

2.1 PIPING MATERIALS

A. Refer to Part 3 "Piping Applications" Article for applications of pipe, fitting, and joining materials.

2.2 HDPE PIPE AND FITTINGS

A. Corrugated HDPE Drainage Pipe and Fittings NPS 10 and Smaller: AASHTO M 252M, Type S, with smooth waterway for coupling joints.

1. Watertight Couplings: AASHTO M 252M, corrugated, matching tube and fittings.

B. Corrugated HDPE Drainage Pipe and Fittings NPS 12 and Larger: AASHTO M 294M, Type S, with smooth waterway for coupling joints.

1. Watertight Couplings: AASHTO M 294M, corrugated, matching pipe and fittings.

2.3 NONPRESSURE-TYPE PIPE COUPLINGS

A. Comply with ASTM C 1173, elastomeric, sleeve-type, reducing or transition coupling, for joining underground nonpressure piping. Include ends of same sizes as piping to be joined and corrosion-resistant-metal tension band and tightening mechanism on each end.

B. Sleeve Materials:

1. For Cast-Iron Soil Pipes: ASTM C 564, rubber.
2. For Plastic Pipes: ASTM F 477, elastomeric seal or ASTM D 5926, PVC.
3. For Dissimilar Pipes: ASTM D 5926, PVC or other material compatible with pipe materials being joined.

C. Unshielded Flexible Couplings: Elastomeric sleeve with stainless-steel shear ring and corrosion-resistant-metal tension band and tightening mechanism on each end.

2.4 CLEANOUTS

A. Gray-Iron Cleanouts: ASME A112.36.2M, round, gray-iron housing with clamping device and round, secured, scoriated, gray-iron cover. Include gray-iron ferrule with inside calk or spigot connection and countersunk, tapered-thread, brass closure plug.

1. Top-Loading Classification(s): Light and Heavy duty.
2. Sewer Pipe Fitting and Riser to Cleanout: ASTM A 74, Service class, cast-iron soil pipe and fittings.

2.5 CONCRETE

A. General: Cast-in-place concrete according to ACI 318/318R, ACI 350R, and the following:

1. Cement: ASTM C 150, Type II.
2. Fine Aggregate: ASTM C 33, sand.
3. Coarse Aggregate: ASTM C 33, crushed gravel.
4. Water: Potable.

2.6 STORM DRAIN BOXES

A. Standard Precast Concrete Catch Basins: ASTM C 478, precast, reinforced concrete, of depth indicated, with provision for sealant joints.

1. Base Section: 6-inch minimum thickness for floor slab and 4-inch minimum thickness for walls and base riser section, and having separate base slab or base section with integral floor.
2. Joint Sealant: ASTM C 990, bitumen or butyl rubber.

PART 3 - EXECUTION

3.1 PIPING APPLICATIONS

A. Pipe couplings and fittings with pressure ratings at least equal to piping rating may be used in applications below, unless otherwise indicated.

1. Use nonpressure-type flexible couplings where required to join gravity-flow, nonpressure sewer piping, unless otherwise indicated.

a. Unshielded flexible couplings for same or minor difference OD pipes.
b. Unshielded, increaser/reducer-pattern, flexible couplings for pipes with different OD.
c. Ring-type flexible couplings for piping of different sizes where annular space between smaller piping's OD and larger piping's ID permits installation.

B. Gravity-Flow, Nonpressure Sewer Piping: Use the following pipe materials for each size range:
1. NPS 3 to NPS 6: Corrugated PE drainage pipe and fittings, watertight couplings, and coupled joints.
2. NPS 8 to NPS 15: Corrugated PE drainage pipe and fittings, watertight couplings, and coupled joints.
3. NPS 18 to NPS 30: Corrugated PE pipe and fittings, watertight couplings, and coupled joints.

3.2 PIPING INSTALLATION

A. General Locations and Arrangements: Drawing plans and details indicate general location and arrangement of underground storm drainage piping. Location and arrangement of piping layout take design considerations into account. Install piping as indicated, to extent practical. Where specific installation is not indicated, follow piping manufacturer's written instructions.

B. Install piping beginning at low point, true to grades and alignment indicated with unbroken continuity of invert. Place bell ends of piping facing upstream. Install gaskets, seals, sleeves, and couplings according to manufacturer's written instructions for using lubricants, cements, and other installation requirements.

C. Install manholes for changes in direction unless fittings are indicated. Use fittings for branch connections unless direct tap into existing sewer is indicated.

D. Install proper size increasers, reducers, and couplings where different sizes or materials of pipes and fittings are connected. Reducing size of piping in direction of flow is prohibited.

E. Install gravity-flow, nonpressure drainage piping according to the following:

1. Install piping pitched down in direction of flow, at slope indicated.
2. Install piping with 24-inch minimum cover.

F. Clear interior of piping and manholes of dirt and superfluous material as work progresses.

3.3 CLEANOUT INSTALLATION

A. Install cleanouts and riser extensions from sewer pipes to cleanouts at grade. Use cast-iron soil pipe fittings in sewer pipes at branches for cleanouts and cast-iron soil pipe for riser extensions to cleanouts. Install piping so cleanouts open in direction of flow in sewer pipe.

1. Use light-duty, top-loading classification cleanouts in earth or unpaved foot-traffic areas.
2. Use heavy-duty, top-loading classification cleanouts in vehicle-traffic service areas.

B. Set cleanout frames and covers in earth in cast-in-place-concrete block, 18 by 18 by 12 inches deep. Set with tops 1 inch above surrounding grade.

C. Set cleanout frames and covers in concrete pavement with tops flush with pavement surface.

3.4 CATCH BASIN INSTALLATION

A. Set lids to elevations indicated.

3.5 CONNECTIONS

A. Connect nonpressure, gravity-flow drainage piping to building's storm building drains specified in Division 22 Section "Facility Storm Drainage Piping."

B. Make connections to existing piping and underground manholes.

1. Use commercially manufactured wye fittings for piping branch connections. Remove section of existing pipe; install wye fitting into existing piping; and encase entire wye fitting, plus 6-inch overlap, with not less than 6 inches of concrete with 28-day compressive strength of 3000 psi.

3.6 FIELD QUALITY CONTROL

A. Inspect interior of piping to determine whether line displacement or other damage has occurred. Inspect after approximately 24 inches of backfill is in place, and again at completion of Project.

1. Submit separate report for each system inspection.
2. Defects requiring correction include the following:

a. Alignment: Less than full diameter of inside of pipe is visible between structures.
b. Deflection: Flexible piping with deflection that prevents passage of ball or cylinder of size not less than 92.5 percent of piping diameter.
c. Crushed, broken, cracked, or otherwise damaged piping.
d. Infiltration: Water leakage into piping.
e. Exfiltration: Water leakage from or around piping.

3. Replace defective piping using new materials, and repeat inspections until defects are within allowances specified.
4. Reinspect and repeat procedure until results are satisfactory.

B. Test new piping systems, and parts of existing systems that have been altered, extended, or repaired, for leaks and defects.

1. Do not enclose, cover, or put into service before inspection and approval.
2. Test completed piping systems according to requirements of authorities having jurisdiction.
3. Schedule tests and inspections by authorities having jurisdiction with at least 24 hours' advance notice.
4. Submit separate report for each test.
5. Air Tests: Test storm drainage according to requirements of authorities having jurisdiction, UNI-B-6, and the following:

a. Option: Test plastic gravity sewer piping according to ASTM F 1417.

C. Leaks and loss in test pressure constitute defects that must be repaired.

D. Replace leaking piping using new materials, and repeat testing until leakage is within allowances specified.

END OF SECTION 334100

SECTION 41 00 10
DIVISION 41 TABLE OF CONTENTS

DIVISION 41 - MATERIAL PROCESSING AND HANDLING EQUIPMENT

41 22 00 - Hoists and Cranes

END OF SECTION

This page intentionally left blank

SECTION 41 22 00
HOISTS AND CRANES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Cranes, Hoists and Lifts of the Following Types:
   1. Portable, Manual Davit Crane.

1.02 REFERENCE STANDARDS

A. American Institute of Steel Construction (AISC) - Manual of Steel Construction, Part 5, Specification for Structural Joints Using ASTM A325 or ASTM A490 Bolts.

B. ASTM International (ASTM):
   1. ASTM A36 - Carbon Structural Steel.
   2. ASTM A325 - Structural Bolts, Steel, Heat Treated, 120/150 ksi Minimum Tensile Strength.
   3. ASTM A490 - Structural Bolts, Alloy Steel, Heat Treated, 150 ksi Minimum Tensile Strength.
   4. ASTM B221 - Aluminum-Alloy Extruded Bar, Rod, Wire, Shape, and Tube.

C. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes; 2021.

D. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

E. American Welding Society (AWS) D1.1 - Structural Welding Code.

F. Occupational Safety and Health Administration (OSHA) - Specification 1910.179 - Overhead and Gantry Cranes.

1.03 RELATED SECTIONS

A. Section 01 31 00 - Project Management and Coordination.

B. Section 01 33 00 - Submittal Procedures.

C. Section 01 40 00 - Quality Requirements.

D. Section 01 60 00 - Product Requirements.

E. Section 03 30 00 - Cast-in-Place Concrete.

F. Section 05 31 00 - Steel Decking.

G. Section 26 05 00 - Common Work Results for Electrical.

1.04 SUBMITTALS

A. Submit under provisions of Section 01 30 00 - Administrative Requirements.

B. Product Data: Manufacturer's data sheets on each product to be used, including:
   1. Describe capacities, performance, operation, and applied forces to foundation.
   2. Preparation instructions and recommendations.
   3. Storage and handling requirements and recommendations.
   4. Installation methods.

C. Shop Drawings: Shop drawings showing configuration, dimensions, service area, and construction and installation details.

D. Procurement:
   1. Submit proof of procurement for all materials within 30 days of product submittal approval. Include proof of payment, delivery schedule and storage information.
   2. Submit inventory to Owner within 5 days of delivery of materials.
   3. See Sections 01 33 00 and 01 60 00.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in designing and manufacturing cranes with 25 years successful experience.

B. Installer Qualifications: Company experienced in assembly and installation of cranes with 5 years successful experience and acceptable to crane manufacturer.
   1. Perform welding by certified operators in accordance with AWS D14.1.
   2. Bolted connections shall be in accordance with torque tightening procedures specified in AISC Manual, Part 5.
   3. Clearly label crane with rated load capacity. Place label at height and location easily read from floor level and loading position.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufacturer's unopened packaging until ready for installation.

1.07 PROJECT CONDITIONS

A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's recommended limits.

1.08 WARRANTY

A. Manufacturer's Warranty: On manufacturer's standard form, in which manufacturer agrees to repair or replace assemblies and components that fail in materials and workmanship within warranty period from date of Substantial Completion.
   1. 2 years warranty to cover defects in materials and workmanship.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Thern Winches and Cranes. 5712 Industrial Park Road, Winona, MN USA 1-800-843-7648. Phone 1.800.843.7648. www.thern.com

B. Substitutions: Not permitted.

2.02 PORTABLE DAVIT CRANE

A. Performance:
   1. Crane shall be designed, fabricated, and installed in accordance with ANSI B30.11 and OSHA 1910-179.
   2. Crane shall be designed for minimum effort manual rotation.
   3. Boom shall not drift when at rest.
   4. Maximum deflection at boom end: 1/150 span based on capacity plus 15 percent for hoist weight.
   5. Crane shall be designed to withstand the following:
      a. Live load capacity equal to net rated hook load: 850 pounds (386 kg).

B. Free Standing Portable Crane: Crane shall consist of mast requiring foundation support and a 360 degree rotating boom. Provide rotating collector assembly with service entrance and festoon service support as indicated.
   1. Acceptable Model:
      a. Crane:
         1) Product: First Mate 5PF5X-M3.
      b. Base:
         1) Pedestal base: 5BP5X
      c. Wire Rope Assembly:
         1) Galvanized Aircraft Cable: 36" length, 1/4" Dia (6.4 mm) WA25-36NS
      d. Accessories:
         1) Wire Rope Keeper:
            (a) RK19-25S

2. Construction: Fabricate from ASTM A36 steel sections with finished ends and surfaces.
3. Mast: Steel pipe, with cap, slides into and fastens to pedestal base.
4. Boom: Three-position adjustable steel tube boom, attached to mast with quick release stainless steel fasteners by Manufacturer.
5. Hoist Assembly: Manually operated spur gear - Stainless Steel.
6. Finish:
    a. Epoxy gray, where applicable.

2.03 SHOP FINISHING

A. Steel: See selections above:
    1. Finish color: Gray.

B. Aluminum or Stainless Steel: Mill finish.

C. Provide spray can of matching color, air-drying paint for field touch-up.

PART 3 EXECUTION

3.01 EXAMINATION

A. Do not begin installation until support structures have been properly prepared.

B. Design and construction of reinforced concrete footings and slabs as detailed on Drawings and specified in other sections. Verify that accurate crane applied forces and anchor bolt patterns are provided for foundation design.

3.02 INSTALLATION

A. Install units and accessories in accordance with manufacturer's instructions and approved shop drawings. Do not modify crane components in any manner without advance written approval by crane manufacturer.

B. Clearances for Moving Crane Components:
    1. 3 inches (76.2 mm) minimum vertical clearance from any overhead obstruction.
    2. 2 inches (50.8 mm) minimum horizontal clearance from any lateral obstruction.
    3. Prior to applying proper torque to the bolts, ensure runways are:
        a. Level to within plus or minus 1/8 inch (3.18 mm) in 20 feet (609.6 cm).
        b. Parallel with opposite runway to within plus or minus 0.12 inch (3 mm) in 6.67 yard (6.1 meter)).

3.03 FIELD QUALITY CONTROL

A. Perform field quality control testing as recommended by manufacturer. Move bridge and hoist trolley through entire travel to ensure crane is clear of obstructions and moves freely and smoothly. Inspect installed crane. Verify all bolts are tight and lock washers fully compressed.

B. Field test crane and accessories for operating functions. Ensure crane movement is smooth and proper. Adjust as required and correct deficiencies.

C. Clean surfaces. If necessary, touch-up paint damage, scratches, and blemishes with manufacturer provided matching paint. Protect crane from other construction operations.

3.04 DEMONSTRATING AND TRAINING

A. Provide demonstration and training session for Owner's representative covering operation and maintenance.
    1. Include multiple copies of operational use and safety material for Owner's use.

3.05 PROTECTION

A. Protect installed products until completion of project.

B. Touch-up, repair or replace damaged products before Substantial Completion.

Standard Terms

ITEM 1 - OFFICE EQUIPMENT - BY OTHERS

OFFICE EQUIPMENT - By Others

ITEM 2 - WALK IN, COMBINATION COOLER/FREEZER (1 REQ'D)

Custom Model WALK-IN

Custom walk-in cooler, freezer, 8'6" high Sized per plans with floorless cooler and freezer, stainless steel where exposed, 2ea 4' Flourescent Lights (one per box, bulbs not included), Diamond tread plate on front and back of all doors, S/s enclosure to walls and drop ceiling (9'). Vinyl U shaped screed. s/s thresholds in both doors

---

ITEM 3A - EVAPORATOR (1 REQ'D)

Custom Model EVAPORATORS

Walk-In Cooler Evaporator, Included in 3B

ITEM 3B - COMPRESSORS (1 REQ'D)

Custom Model COMPRESSORS

Walk-In Cooler Outdoor Compressor System (208 volt 1 phase)

1 ea	Model WARRANTY 5 year compressor body warranty
1 ea	Model WARRANTY 1 year labor warranty

ITEM 4A - EVAPORATOR (1 REQ'D)

Custom Model EVAPORATOR

Walk-In Freezer Evaporator. (208 Volt 1 Phase)Included in 4B, 208V Reach-in Evap Coil

ITEM 4B - COMPRESSORS (1 REQ'D)

Custom Model COMPRESSORS

Walk-In Freezer Outdoor Compressor System. (208 Volt 1 Phase)

1 ea Model WARRANTY 5 year compressor body warranty

1 ea Model WARRANTY 1 year labor warranty

ITEM 4C - HEAT TAPE - BY OTHERS

Heat Tape - By Others

ITEM 5 - BUN / SHEET PAN RACK (2 REQ'D)

John Boos Model ABPR-1820-3KD-X Dimensions: 69(h) x 20.5(w) x 26(d)

Bun Pan Rack, mobile, (20) pan capacity, 3" spacing, front loading, 26"W x 20-1/2"D x 69"H, 1" square tube frame with bolted cross bracing, 5" swivel casters, 6063 aluminum construction, KD, NSF (Available in Effingham and Nevada)

ITEM 6 - SHELVING (1 lt REQ'D)

Centaur Model WALK-IN SHELVING

Walk-In freezer Shelving , 4 tier, 74" posts, green epoxy finish with chromate substrate, NSF, Sized Per Plan

4 ea Model C2142K Centaur®K Series Shelving, wire, 42"W x 21"D, green epoxy, NSF

16 ea Model C2148K Centaur®K Series Shelving, wire, 48"W x 21"D, green epoxy, NSF

20 ea Model C74K Centaur® Stationary Post, 74-5/8"H, with leveling bolt & cap, green epoxy

ITEM 7 - SHELVING (1 REQ'D)

Centaur Model WALK-IN SHELVING

Walk-In Cooler Shelving, 4-Tier, 74" posts, green epoxy finish with chromate substrate, NSF Sized Per Plan

20 ea Model C2148K Centaur®K Series Shelving, wire, 48"W x 21"D, green epoxy, NSF

4 ea Model C2130K Centaur®K Series Shelving, wire, 30"W x 21"D, green epoxy, NSF

4 ea Model C2136K Centaur®K Series Shelving, wire, 36"W x 21"D, green epoxy, NSF

28 ea Model C74K Centaur® Stationary Post, 74-5/8"H, with leveling bolt & cap, green epoxy

ITEM 8 - MOP SINK - BY OTHERS

Mop Sink - By Others

ITEM 8A - SHELVING, WALL MOUNTED (1 REQ'D)

John Boos Model EWS8-1224-X Dimensions: 9.5(h) x 24(w) x 12(d)

Shelf, wall-mounted, 24"W x 12"D, Stallion Safety Edge front, 1-1/2"H rear up-turn, includes (2) support brackets, 18/430 stainless steel with # 4 polish, KD, NSF (Available in Effingham)

ITEM 8B - MOP HOLDER - BY OTHERS

Mop Holder - By Others

ITEM 9 - SHELVING (1 lt REQ'D)

Centaur Model SHELVING

Dish drying Shelving, 5-Tier, 86" posts, green epoxy finish with chromate substrate, NSF Sized Per Plan

- 5 ea Model C1854C Centaur® C Series Shelving, wire, 54"W x 18"D, chrome plated finish, NSF (priced per each, 4 each per pack)
- 4 ea Model C86K Centaur® Stationary Post, 86-5/8"H, with leveling bolt & cap, green epoxy

---

ITEM 10 - SHELVING (1 REQ'D)

Centaur Model SHELVING

Chemical Shelving, 5-Tier, 86" posts, green epoxy finish with chromate substrate, NSF Sized Per Plan

- 5 ea Model C2124K Centaur®K Series Shelving, wire, 24"W x 21"D, green epoxy, NSF
- 4 ea Model C86K Centaur® Stationary Post, 86-5/8"H, with leveling bolt & cap, green epoxy

---

ITEM 11 - THREE (3) COMPARTMENT SINK (1 REQ'D)

John Boos Model 3B16204-2D24-X Dimensions: 43(h) x 99(w) x 25.5(d)

"B" Series Sink, 3-compartment, 99-1/4"W x 25-1/2"D x 44"H overall size, (3) 16"W x 20" front-to-back x 14" deep compartments, (2) 24" left & right drainboards, 10"H boxed backsplash with 45° top and 2" return, (1) set of splash mount faucet holes with 8" centers, 3-1/2" die-stamped drain openings, 16/300 stainless steel construction, stainless steel legs, adjustable side bracing, adjustable bullet feet, NSF, CSA-Sanitation (Available in Effingham and Nevada)

- 1 ea Fisher Model 32530 Faucet, wall mount, 8" adjustable centers, 12" swing spout, lever handles with color coded indexes, 1/2" NPT female inlets, brass, ADA Compliant

---

ITEM 11A - SHELF, WALL-MOUNTED (1 lt REQ'D)

John Boos Model WALL SHELF

Wall Shelf With Brackets as follows:.

- 1 ea Model EWS8-1296-X Shelf, wall-mounted, 96"W x 12"D, Stallion Safety Edge front, 1-1/2"H rear up-turn, includes (3) support brackets, 18/430 stainless steel with # 4 polish, KD, NSF (Available in Effingham)
- 1 ea Model EWS8-1696-X Shelf, wall-mounted, 96"W x 16"D, Stallion Safety Edge front, 1-1/2"H rear up-turn, includes (3) support brackets, 18/430 stainless steel with # 4 polish, KD, NSF (Available in Effingham)

ITEM 12 - HAND SINK (1 REQ'D)

John Boos Model PBHS-W-1410-SSLR-X

Pro-Bowl Hand Sink, wall mount, 14"W x 10" front-to-back x 5" deep bowl, splash mount faucet holes with 4" centers, 1-7/8" drain opening with basket drain, with left & right side splashes, includes mounting bracket, all stainless steel construction, NSF, CSA-Sanitation (faucet NOT included) (Available in Effingham and Nevada)

1 ea Fisher Model 19960 Faucet, backsplash mount, 4" centers, 6"H swivel gooseneck spout, 2.2 gpm, check valves, lever handles with color coded indexes, 1/2" NPT male inlets, low lead

---

ITEM 13 - DISHTABLE (1 REQ'D)

INFINITY METAL FABRICATING Model DISHTABLE

Clean dish table with under shelf, 6', left to right , 10" Backsplash, 16/304 stainless steel top, 10"H boxed back splash, stainless steel legs & undershelf, stainless steel bullet feet, Per plan. Field Verify, NSF

ITEM 14 - SHELF, WALL-MOUNTED (1 lt REQ'D)

John Boos Model WALL SHELF

Wall Shelf With Brackets as follows:.

1 ea Model EWS8-1248-X Shelf, wall-mounted, 48"W x 12"D, Stallion Safety Edge front, 1-1/2"H rear up-turn, includes (2) support brackets, 18/430 stainless steel with # 4 polish, KD, NSF (Available in Effingham)

ITEM 15 - SPARE NO.

ITEM 16 - DISHWASHER, DOOR TYPE (1 REQ'D)

Jackson WWS Model TEMPSTAR

TempStar® Dishwasher, door type, high temperature electric tank heat with built-in booster, universal (straight-thru/corner) type, approximately (63) racks/hour capacity (0.89 gallons per rack), stainless steel exterior, electro-mech controls, universal timer, Sani-Sure™, auto tank fill, door actuated start, dishtable not included, cETLus, ETL-Sanitation, ENERGY STAR®

1 ea 1 yr. parts & labor warranty, continental USA, Hawaii & Canada (std)
1 ea 208V/60/3, std.
1 ea 1 year parts & labor warranty, continental USA, standard
1 ea 70 degree rise booster heater, standard
1 ea Voltage to be verified with jobsite
1 ea Model 06401-004-85-80 Drain Water Tempering Kit (DynaStar models, TempStar® models and NXP-HTD)

ITEM 17 - HOOD (1 REQ'D)

Captive-Aire Model 4830VHB-G

4830VHB-G - 4ft 0" Long Condensate Hood, w/ Full Perimeter Gutter
- 430 SS - 100% Application
- EXHAUST RISER - Factory installed 12" Diameter X 4" Height

1 ea Model TRIM WRAPPER - FIELD WRAPPER 11.00" High Front, Right

---

ITEM 18 - DISHTABLE (1 REQ'D)

INFINITY METAL FABRICATING Model DISHTABLE

Soiled dishtable, 6' x 5' , provision for disposer package, open base.. , 16/304 stainless steel top, 10"H boxed back splash, 20"W x 20"D x 8"deep pre-rinse sink bowl, rack slide, with splash mount faucet holes 8" o/c, stainless steel legs & bracing, stainless steel bullet feet, Per plan Field Verify NSF

1 ea Fisher Model 22100 Pre-Rinse Assembly, 8" adjustable centers, wall-mounted mixing valve, with spring action flexible gooseneck, with Ultra-Spray™/PLUS spray valve (1.15 gallons per minute @ 60 PSI), with wall bracket

1 ea Fisher Model 29060 Add-On-Faucet, for rigid control valves, with 6" swing spout, 3/8" male inlet, brass

---

ITEM 51A - WATER FILTRATION SYSTEM, FOR STEAM EQUIPMENT (1 REQ'D)

3M Purification Model SF165

(5624601) 3M™ Water Filtration Products Water Filtration System, with ScaleGARD™ HT scale control, 3 micron, 125 psi, 3.34 gpm flow rate, 35,000 gallons capacity, reduces sediment, chlorine taste & odor, for high and low-temperature applications, includes: (1) pressure gauge, (1) inlet shut-off valve and (1) outlet check valve, mounting bracket, (1) filter cartridge, & scale-feeding system, 3/4" NPT connections, NSF certified

---

ITEM 52 - WORK TABLE, 24", STAINLESS STEEL TOP (1 REQ'D)

John Boos Model ST6R5-3024SSK-X Dimensions: 40.75(h) x 24(w) x 30(d)

Work Table, 24"W x 30"D, 16/300 stainless steel top with 5" backsplash, with Stallion Safety Edge front, 90° turndown on sides, box channel understructure with sound deadening tape, stainless steel legs & adjustable undershelf, adjustable bullet feet, NSF, CSA-Sanitation, KD (Available in Effingham and Nevada)

ITEM 53 - SPARE NO.

ITEM 54 - SPARE NO.

ITEM 55 - CHARBROILER, GAS, COUNTERTOP (1 REQ'D)

Vulcan Model VCCB36 Dimensions: 14.75(h) x 36(w) x 27.25(d)

Charbroiler, gas, countertop, 36", (6) 14,500 BTU cast iron burners, infinite heat controls, reversible grates, stainless steel front, sides, top trim, backsplash & grease trough, 4" adjustable legs, 87,000 BTU, CSA, NSF

1 ea 1 year limited parts & labor warranty, standard

1 ea Natural gas (specify elevation if over 2,000 ft.)

1 kt Dormont Model 1675KIT48 Dormont Blue Hose™ Moveable Gas Connector Kit, 3/4" inside dia., 48" long, covered with stainless steel braid, coated with blue antimicrobial PVC, (1) SnapFast® QD, (1) full port valve, (2) 90° elbows, coiled restraining cable with hardware, 180,000 BTU/hr minimum flow capacity, limited lifetime warranty

---

ITEM 56 - EQUIPMENT STAND, REFRIGERATED BASE (1 REQ'D)

Hoshizaki Model CR72A Dimensions: 27(h) x 72.5(w) x 33.25(d)

Steelheart Series Refrigerated Low-Profile Equipment Stand, two-section, 72-1/2"W x 33-1/4"D x 26"H, (4) drawers: each will accommodate (2) 12" x 20" x 6" deep pans (pans not included), solid state digital controller with temperature alarms, LED display, stainless steel exterior front, sides, & top, stainless steel interior, (6) 4" casters, side-mounted self-contained refrigeration, R290 Hydrocarbon refrigerant, 1/5 HP, 115v/60/1-ph, 3.0 amps, cord with NEMA 5-15P, cETLus, ETL-Sanitation

1 ea Warranty: 7-Year labor on entire machine

1 ea Warranty: 7-Year parts on entire machine

1 ea Warranty: 7-Year parts on compressor

1 lt PREMIER Model DRAWER RAILS Drawer assembly divider bars

ITEM 57 - HOOD (1 REQ'D)

Captive-Aire Model 6024ND-2-PSP-F

6024ND-2-PSP-F - 12ft 6" Long Exhaust-Only Wall Canopy Hood with 20" Wide Front Perforated Supply Plenum with Built-in 3" Back Standoff
- 430 SS Where Exposed
- Insulation for the PSP Housing - Front
- Fire Cabinet on the Left Side 12.00" Width x 60.00" Length x 24.00" Height (Additional charges may apply for cabinet if not sold with fire system)
- FILTER - 20" tall x 16" (19.625" by 15.625") wide Stainless Steel Captrate Solo filter with hook, ETL Listed. Particulate capture efficiency: 85% efficient at 9 microns, 76% efficient at 5 microns. Used on hoods shipped AFTER 7/27/17.
- L55 Series E26 Canopy Light Fixture - High Temp Assembly, Includes Clear Thermal and Shock Resistant Globe (L55 Fixture), Bulbs By Others
- Extra Fixtures- L55 Series E26 Canopy Light Fixture - High Temp Assembly, Includes Clear Thermal and Shock Resistant Globe (L55 Fixture)
- EXHAUST RISER - Factory installed 14" Diameter X 4" Height
- SUPPLY RISER - 12"x 28" Supply Riser with Volume Dampers
- 1/2 Pint Grease Cup New Style, Flanged Slotted
- Electrical Package Installation in Utility Cabinet by Plant.
- RIGHT END STANDOFF (FINISHED) 1" Wide 60" Long Insulated
- STRUCTURAL FRONT PANEL
- INSULATION FOR BACK OF HOOD
- LEFT VERTICAL END PANEL 27" Top Width, 21" Bottom Width, 80" High Insulated 430 SS
- RIGHT WALL AS END PANEL

1 ea Model HOOD ACCESSORIES - FIELD WRAPPER 18.00" High Front, Left

- BACKSPLASH 122.00" High X 181.00" Long 430 SS Vertical (Back) (Includes End Caps & Divider Bars)

- RIGHT SIDESPLASH 122.00" High X 78.00" Long 430 SS Vertical (Right) (Includes End Caps & Divider Bars)

1 ea Model FACTORY SERVICES Service Design Verification for Hood

Service Design Verification for Site Meeting w/ additional mileage charge.

Service Design Verification for Standard Electrical Control Package

Service Design Verification for TANK Fire Suppression

Service Design Verification Mileage Charge

1 ea Model FREIGHT Freight to site

ITEM 57A - HOOD CONTROLS (1 REQ'D)

Captive-Aire Model HOOD CONTROLS

Hood Controls - Touch Screen

ITEM 58 - FIRE SYSTEM (1 REQ'D)

Captive-Aire Model FIRE SYSTEM

TANK-SP-3 Tank Fire Suppression 12 gallon Fire System in Utility Cabinet (includes pre-piped hood(s) with electric detection, tank(s), 24 VDC release mechanism, fire system agent, pressurized tanks, and electric pull station).
Includes piping for hood: 2.
- Pressure Switch - Monitors Tank Pressure, Supervised Signal, TANK FIRE SUPPRESSION
- Tank-based Fire Protection System equipped with Electronic Detection utilizing CORE board as a Listed Release Mechanism. Installed in Hood Utility Cabinet with integral hood prewire panel.
- Includes Final Field Connections and (1) Electric Gas Valve – Verify Size, Max. 2”. Electric Gas Valve is to be Installed by the Plumber Near the Hood Cooking Line.
Note: Customer is responsible for additional labor charges as a result of cooking equipment layout changes after the release of the order, union labor charges, or additional trips by fire system distributor caused by jobsite delays, permits, fees or test required by local authority. Submittal will specify applicable testing and approval agencies. Does Not Include Hand Held Extinguishers. Any audible or visual indicators required by local code is not included and is to be provided by others.
DOES NOT INCLUDE UNION LABOR

ITEM 59 - HEAT SENSOR (1 REQ'D)

Captive-Aire Model SC-011110MA

SC-011110MA Starter Coil Control Only w/ control for 1 Exhaust Fan, 1 Supply Fan, Exhaust on in Fire, Lights out in Fire, Relay On/Off with Supply Fan, Fan(s) On/Off Thermostatically Controlled. Room temperature sensor shipped loose for field installation. Includes 2 Duct Thermostat kits.
- CAT-5E CABLE - 15 Foot.
- Thermistor CABLE - 18/2 AWG GREEN WHITE, plenum rated. USED for thermistor duct stat. Per Foot Price.
- Digital Prewire Lighting Relay Kit. Includes hood lighting relay & terminal blocks. Allows for up to 1400W of lighting each.

ITEM 60 - OVERSHELF (1 REQ'D)

INFINITY METAL FABRICATING Model DOUBLE OVERSHELF

Custom 54" x 24" Double Overshelf With Shoe Box Style Plywood Core, Provision For 30" Heat Lamp

---

ITEM 61 - HEAT LAMP (1 REQ'D)

Hatco Model GRAH-36D3 Dimensions: 2.5(h) x 36(w) x 15(d)

Glo-Ray® Infrared Strip Heater, 36" W, high wattage, tubular metal heater rod, double heater rod housing 3" spacing, aluminum construction, 1600 watts, NSF, cULus, Made in USA

- 1 ea NOTE: Sale of this product must comply with Hatco's Minimum Resale Price Policy; consult order acknowledgement for details
- 1 ea NOTE: Includes 24/7 parts & service assistance, call 414-671-6350

Please note that sales and use tax rates are subject to change by the taxing jurisdictions in which we collect tax. When this occurs we are required by law to collect from our customers at the new rates per the rules provided by the taxing jurisdiction.

Above pricing is good for 30 days from quotation date. Please call for extensions.

30% down payment at time of order.
60% due before delivery of equipment
10% due upon job completion

All gas, plumbing and electric, including all control wiring and inter-connection of any individual items, is by others.

Ventilation does not include roof penetrations, duct work or fire rating duct work, light bulbs, sprinkling of duct work, roof curbs, permits, or interlock between exhaust fan and make-up air units. All roof top equipment to be by others. Receiving and installation of hoods by others. Hood pricing is based on ceiling grid being installed and fastened to top of hood and does not include any insulation on ventilator if exposed into ceiling or required by fire codes.

Fire extinguishing system does not include final connection of surface and duct collar nozzles. Piping to test valve and drain to be done by Sprinkler Contractor. Gas solenoid valve provided by Premier and installed by others. Shunt trip circuit breakers to be provided and installed by others.

Walk-in boxes do not include any enclosures to ceiling unless otherwise specified and noted. Light bulbs and fluorescent light bulbs are not included and are to be by others.

Dunnage removal by others. The dunnage will be stacked, piled and loaded into a dumpster provided by others on jobsite at time of installation. If provisions to remove dunnage from jobsite are not made, additional cost incurred by Premier to do so will be added to our invoice.

Permit, plan review fee, health department and inspection fees by others.

Prices and specifications subject to changes after review of local inspectors and health department.

Orders will not be executed until all credit terms and contract documents have been completed and approved.

Installation price does not include any crane or special unloading equipment charges or overtime rates. Our installation quote is based on the site being ready to accept equipment. The site is ready for equipment installation and fixtures when:
1. Access is clear to enter the building and kitchen for setting equipment from a finished parking lot surface suitable for fork truck.
2. The finished floor must be complete, grouted, and clean of construction materials and debris.
3. Walls have finish material applied.
4. Ceiling grid and pads are installed. If not installed, owner will take responsibility for any equipment damage caused by other trades people.
5. Plumber and electrician are on the job site.
Any additional trips to the site, movement or storage of equipment resulting from site being inaccessible or not ready, will be charged as an extra to the contract.

Final set and sealing will only be done once. If a second trip is required due to lack of other trade or customer cooperation, the additional labor will be added as an extra to the contract at prevailing rates. Any overtime costs incurred for reasons beyond our control required to complete this installation within the time frame outlined will be charged as an extra to the contract.

All equipment is to be started up at the same time. If additional trips are required due to lack of other trade or customer cooperation, the additional labor will be added as an extra to the contract at prevailing rates.

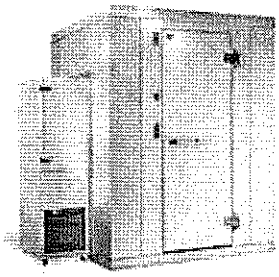
Manufacturer's standard catalog items are returnable subject to manufacturer's acceptance. Items must be unused and packaged in original carton. Manufacturer's standard restocking charge plus return freight to factory will be deducted from the credit issued by Premier. If not in original carton, a cartoning or crating charge will apply. Custom equipment is not returnable.

The research and compliance with governmental and insurance code requirements not specifically addressed in this proposal, is and remains the responsibility of others.

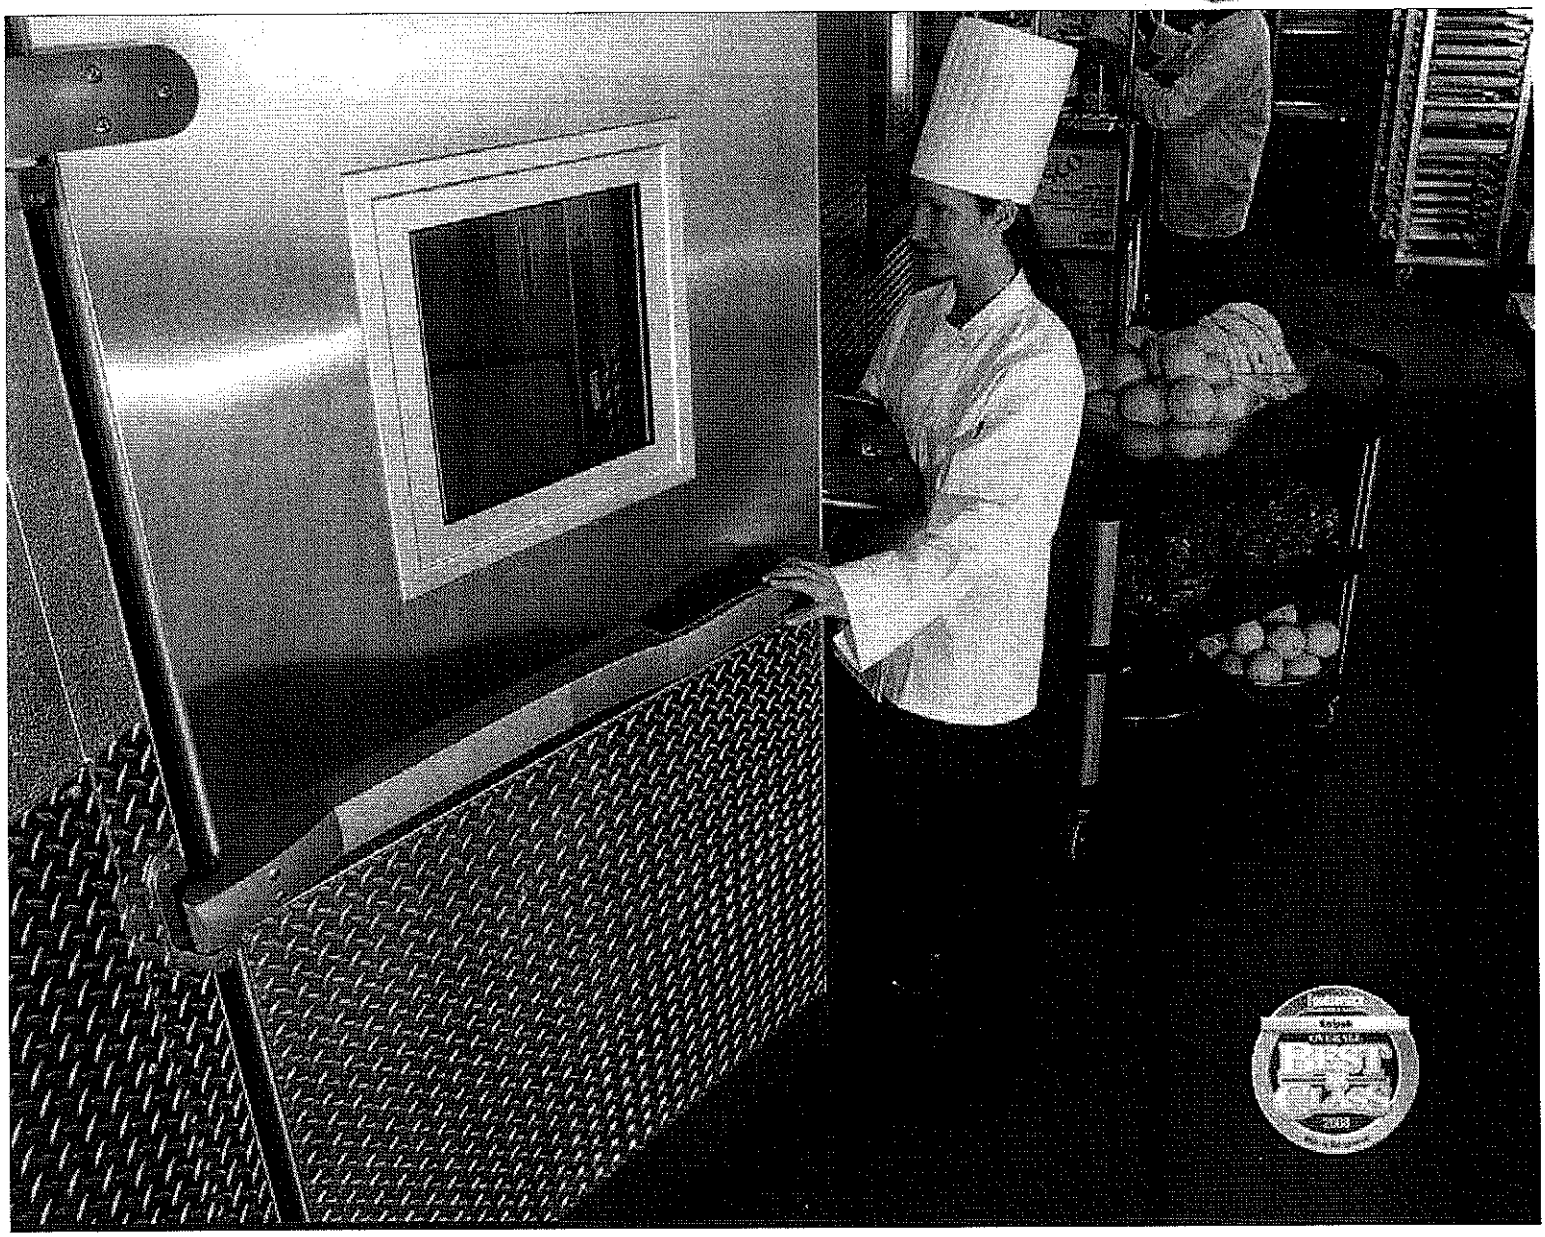
Premier extends the same warranties on the equipment quoted as are extended to Premier by the Manufacturer. All warranty information is available at the principal offices of Premier.

Sales Tax as listed above is based on current tax rates and codes. If there are changes to the tax rate and/or tax code, sales tax on the final invoice will be based on the prevailing rate at the time the project is completed, regardless of when the contract was signed. Premier is not liable for legislative changes that affect sales tax.

Thank you for the opportunity to quote on the above items. If you have any questions please feel free to call. We look forward to the opportunity to work with you on this project.



Sincerely,

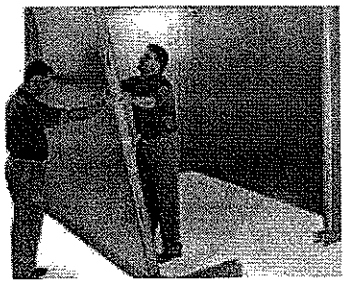


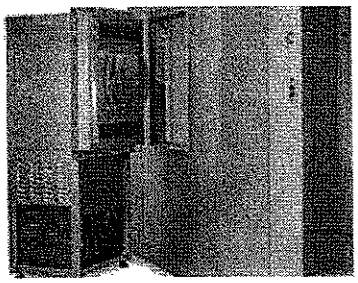
Todd Olson C.F.S.P.
Premier Restaurant Equipment Co.

Above pricing does not include construction, plumbing, electrical, HVAC, Hanging of hoods, ductwork, fans, make up air, hood controls, hood sensors, and is subject to health dept. approval. Note: Non Union Installation Pricing quoted **NOTE: SOME LOCATIONS DO NOT ALLOW FOR THE USE OF HEAT SENSORS IN THE EXHAUST DUCT. THEY REQUIRE A “DRAFT INTERLOCK” TO BE PLACED IN THE KITCHENS WITH SENSORS TO BRING ON THE FANS. WE DO NOT INCLUDE THE “DRAFT INTERLOCK” DEVICES IN OUR PROPOSAL. THIS IS MOST COMMONLY SUPPLIED AND INSTALLED BY THE PLUMBING OR HVAC CONTRACTOR. THEY ARE NOT INCLUDED IN THIS PROPOSAL.**

Kolpak

Three ways to get Kolpak quality in your kitchen





Manitowoc

Kolpak Polar-Pak

Walk-in to convenience

Polar-Pak®can easily be installed in practically no time at all without the services of a refrigeration technician or plumber.

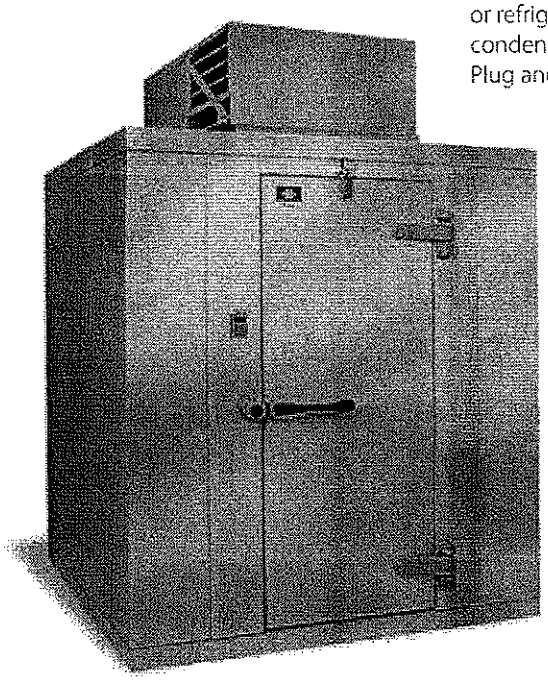
Available in both top-mount and side-mount models.

Unsurpassed quality - Host of standard features

Polar-Pak coolers and freezers are made with the same rugged, high performance construction that has made Kolpak the leader in walk-in refrigeration. The Polar-Pak modular panels of 4" 100% foamed in place non-CFC urethane foam offer superior insulating capabilities. The exterior and interior of top-quality galvanized metal offer an attractive and rugged finish. Polar-Pak also offers superior air circulation around the coils making it both economical and efficient to run.

- Top-mount refrigeration is flush to the interior
- Hot gas condensate evaporator
- Superior door construction to seal in cold, prevent condensation
- Posi-Loc panel fasteners for a perfect airtight fit
- Adjustable hinges and durable handle
- Interior safety release to prevent accidental entrapment
- Coved corners on floor panels for easier cleaning, greater sanitation
- Heated air-vents on freezers to eliminate vacuum and pressure build-up

No other manufacturer offers you greater flexibility



Polar-Pak is flexible enough to be used in virtually any configuration. There is no need for numbered panels. Some standard 7'6" high units are part of our Polar-Pak program, and will ship within 7 working days after your order has been received. Orders specifying options will require standard lead times.

100% usable storage space

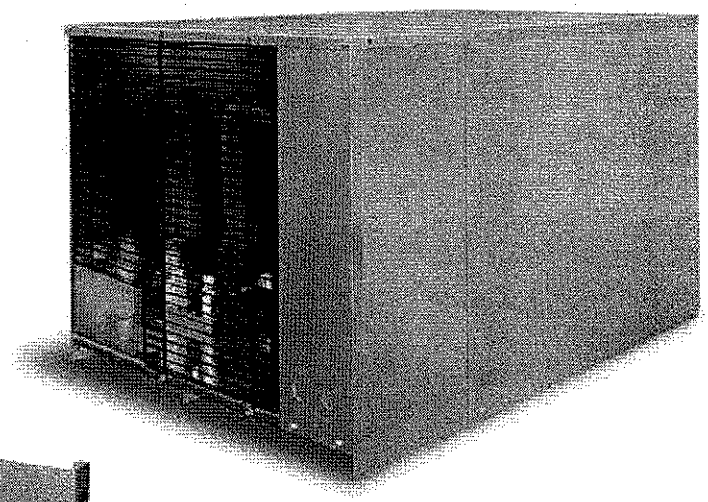
Flush fit ceiling coil design allows full use of walk-in interior for storage.

Quick and cost-saving installation

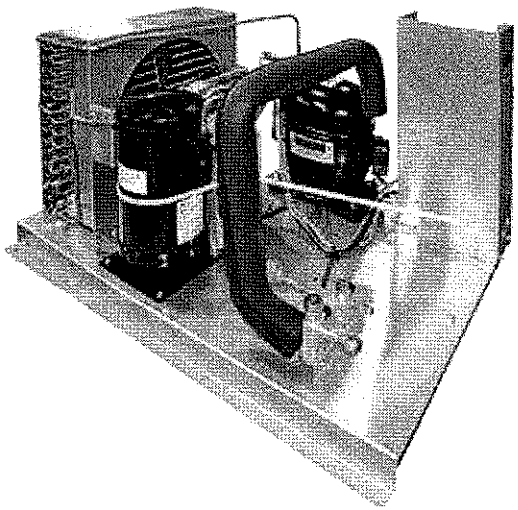
The top-mount self-contained refrigeration package significantly reduces refrigeration labor costs. Installation is quick and easy and can be completed without the services of a plumber or refrigeration technician. Plumbing is not required. The standard automatic condensate evaporator eliminates the need for a drain line on indoor units. Plug and play design.

Design flexibility

Available in cooler, freezer, or combination cooler/freezer. You can choose from top or side-mount refrigeration. Floor or floorless application, indoor or outdoor, two ceiling heights (6'6" or 7'6") and standard panels allow for various layouts.



NSF.

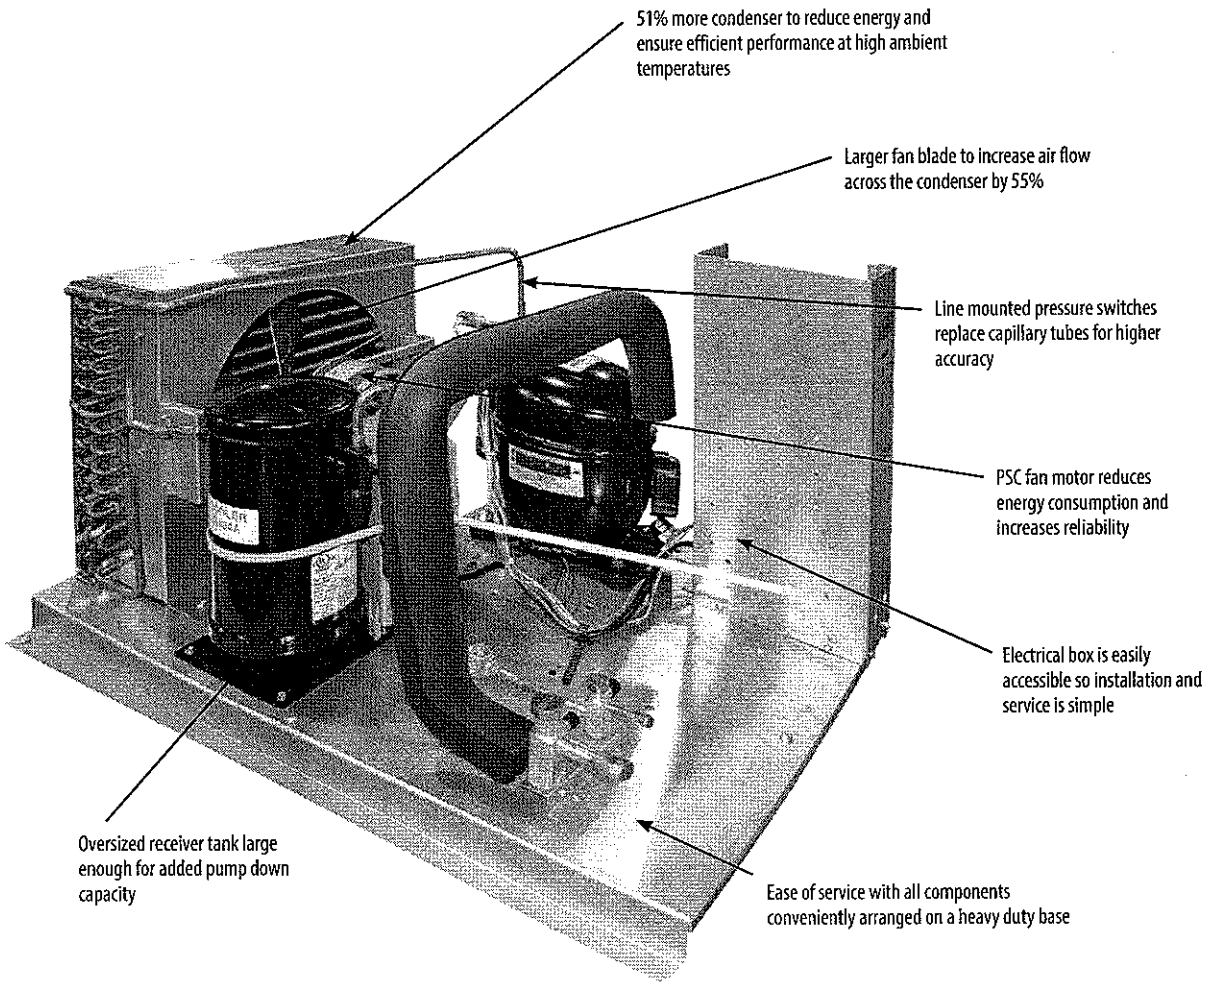


Kolpak

120 Series Refrigeration Systems

Air Cooled Indoor/Outdoor Condensing Units

Hermetic / Scroll / Semi-Hermetic
½ thru 6 Hp Models



Manitowoc

Kolpak 120

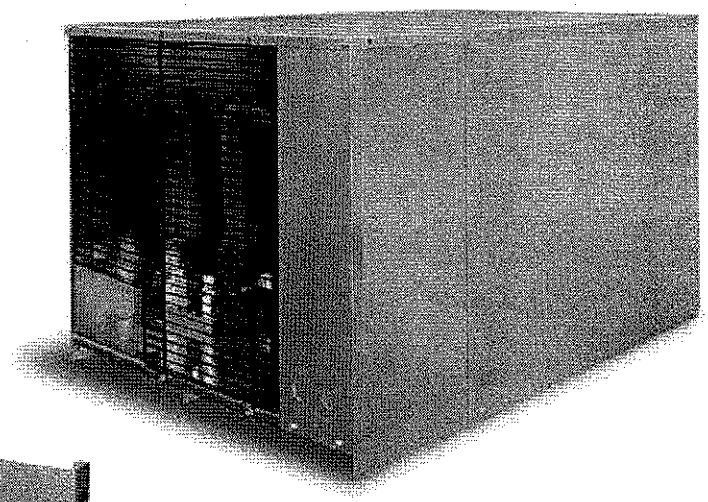
The 120 High Side System is a high efficiency air-cooled refrigeration condensing unit designed specifically to operate on Walk-ins over a wide range of ambient temperatures.

Features and benefits of the 120 System:

Operates effectively from -20°F to +120°F without exceeding the design and safety criteria of components.

Ease of service with all components conveniently arranged on a heavy duty base to be accessible for adjustments and repairs when necessary.

Provides an efficient balance between compressor, condenser surface, air movement and controls. The units are equipped with extra condensing surface, oversized fan blades and PSC fan motors. The oversized fan blade powered by the PSC motor moves air more efficiently to use less electricity.



High accuracy pressure switches are used in place of capillary tubes to eliminate possible leakage points.

ITEM #: _____ QTY: _____

MODEL #: _____

PROJECT NAME: _____

063017

3601 S. Banker St. Effingham, IL 62401 • P.O. BOX 609 • Ph: (888) 431-2667 • Fax: (800) 433-2667

"EWS8" WALL SHELVES - STAINLESS STEEL 18GA

W/ 1.5" REAR RISER

FEATURES:

- TYPE 430 STAINLESS STEEL W/ #4 POLISH, SATIN FINISH
- FINISHED W/ A SAFETY STALLION FRONT EDGE
- 1-1/2" TURNED UP BACKSPLASH
- 12" OR 16" DEPTH
- SHIPPED KNOCKED-DOWN, EASY-TO-ASSEMBLE (MOST SHIP UPS)
- ALL MODELS ARE NSF CERTIFIED

EWS8-1236

CONSTRUCTION:

- STAINLESS STEEL SHELVES ARE TIG WELDED
- EXPOSED WELDS ARE POLISHED TO MATCH ADJACENT SURFACE

MATERIAL:

- SHELF: 18 GAUGE TYPE 430 STAINLESS STEEL W/ #4 POLISH, SATIN FINISH
- BRACKETS: 18 GAUGE TYPE 430 STAINLESS STEEL W/ #4 POLISH, SATIN FINISH

EWS8-1636

"3B-2D" "B-SERIES" SINKS

FEATURES:

- 16GA STAINLESS STEEL
- TYPE 300 STAINLESS STEEL WITH #4 POLISH, SATIN FINISH
- 14" DEEP BOWLS
- ALL CORNERS, BOTH VERTICAL AND HORIZONTAL, COVED AT 3/4" RADIUS
- BOTTOMS OF BOWLS FORMED FOR DRAINAGE TO 3-1/2" DIAMETER DIE STAMPED OPENING
- FULL LENGTH **10" HIGH BOXED BACKSPLASH,** WITH 2" RETURN TO WALL AT 45 DEGREE AND 1" TURNED DOWN REAR LIP
- 1" FAUCET HOLES IN BACKSPLASH
- ALL OUTSIDE CORNERS OF ASSEMBLY ARE BULLNOSED TO PROVIDE SAFE, CLEAN, AND POLISHED EDGE
- STANDARD STAINLESS STEEL LEGS 1-5/8" DIAMETER

CONSTRUCTION:

- TOP: STAINLESS STEEL SINKS ARE TIG WELDED, EXPOSED WELDS ARE POLISHED TO MATCH ADJACENT SURFACE
- BASE: STAINLESS STEEL BASES ARE MIG WELDED

MATERIAL:

- BOWLS & TOP: 16GA TYPE 300 STAINLESS STEEL WITH #4 POLISH, SATIN FINISH
- LEGS: 1-5/8" ROUND O.D. STAINLESS STEEL
- BRACING: 1-1/4" ROUND O.D. STAINLESS STEEL
- GUSSETS: STAINLESS STEEL
- FEET: 1" ADJUSTABLE STAINLESS STEEL BULLET FEET

"EWS8" WALL SHELVES - STAINLESS STEEL 18GA

W/ 1.5" REAR RISER

FEATURES:

- TYPE 430 STAINLESS STEEL W/ #4 POLISH, SATIN FINISH
- FINISHED W/ A SAFETY STALLION FRONT EDGE
- 1-1/2" TURNED UP BACKSPLASH
- 12" OR 16" DEPTH
- SHIPPED KNOCKED-DOWN, EASY-TO-ASSEMBLE (MOST SHIP UPS)
- ALL MODELS ARE NSF CERTIFIED

EWS8-1236

CONSTRUCTION:

- STAINLESS STEEL SHELVES ARE TIG WELDED
- EXPOSED WELDS ARE POLISHED TO MATCH ADJACENT SURFACE

MATERIAL:

- SHELF: 18 GAUGE TYPE 430 STAINLESS STEEL W/ #4 POLISH, SATIN FINISH
- BRACKETS: 18 GAUGE TYPE 430 STAINLESS STEEL W/ #4 POLISH, SATIN FINISH

Standard Features

- Multi-cycle timer (Extra Heavy, Heavy, Medium, Normal)
- Specially designed stainless steel nozzles provide superior cleaning action
- Built-in 70 °F (38.9 °C) rise booster heater with Sani-Sure™ final rinse system is standard; 40 °F (22.2 °C) rise booster heater is available but must be specified at time of order
- 17-1/4" (438 mm) door opening accepts 18" (457 mm) trays
- Interchangeable wash/rinse arms screw out for simple cleanup
- Auto tank fill
- Door actuated start
- Delime/manual wash switch
- Vent fan control - shuts vent fan off when machine is idle
- Low watt density electric wash tank heater
- Hi-limit thermostat and low water protection
- Top mounted controls for ease of operation
- Adjustable bullet feet
- Uses standard 20" X 20" (508 mm X 508 mm) racks
- Front dress panel
- Detergent/rinse additive signal connection fuse box
- Self-draining stainless steel pump
- Large scrap basket

Mandatory Specs

Specify:
Specify voltage _____
Specify booster size _____

Options

- ☐ Optional 40 °F (22.2 °C) rise booster heater is available at no additional cost (must be specified on P.O.)
- ☐ 460V Electrical
- ☐ Single Phase
- ☐ Pressure Regulator
- ☐ Drain Water Tempering Kit
- ☐ Scaltrol
- ☐ Water Hammer Arrestor
- ☐ Flanged Feet
- ☐ False Panel (for corner installations, kit required)
- ☐ Door Interlock
- ☐ Security Package

Accessories

- ☐ 36-Compartment Rack
  - ☐ 4-1/8" tall (105 mm)
  - ☐ 5-5/8" tall (143 mm)
  - ☐ 7" tall (178 mm)
- ☐ Combination Rack
- ☐ Peg Rack

Specifications

- Uses 0.89 gallons (3.37 liters) of water per rack
- Total automatic (normal) cycle - 57 seconds
- 63 (58)* racks per hour (normal) cycle
- 1 hp wash pump motor
- Single point connections for all utilities
- Field convertible from straight through to corner and vice versa (kit required)
- Field convertible from 3-phase to single-phase and vice versa (kit required)
- Durable stainless steel construction
- 1-year parts and labor warranty

We reserve the right to change specifications in this bulletin without incurring any obligation for equipment previously or subsequently sold.

The VHB Series is CaptiveAire's Premier Type II, Exhaust Only hood to be used over equipment not producing grease laden vapors. Type II hoods are used for condensation or heat removal applications.

Advantages

- **Exhaust Flow Rates:** Superior exhaust flow rates.
- **Construction:** Single wall type hood fabricated of Type 304 stainless steel, #3 or #4 polish, on all exposed surfaces when used in condensate applications. Type 430 stainless steel, #3 or #4 polish available when used for heat applications. Pre-punched hanging angles on each end of hood. Additional set provided for hoods longer than 12'.
- **Condensate Applications:** Integral 4-sided perimeter gutter and one drain standard for high-moisture exhaust.
- **Reduced Lead Times and Shipping Costs:** Produced on a high volume assembly line at one of five manufacturing facilities to reduce lead times and shipping costs.
- **Optional REM Construction:** Two options available when removable condensation baffles are required for heavy condensate applications. Designs available for one baffle or two baffle configuration to collect and drain condensation into gutter.
- **Optional Double Wall Construction:** Double wall front used when switches are needed on the face of the hood and/or lights are desired. Mechanical baffle provides a built-in wiring chase for optimal positioning of electrical controls and outlets on the front face of the hood.
- **Optional Lights:** Incandescent, LED and fluorescent lights are available.
- **Optional Make-Up Air:** Up to 80% make-up air can be supplied through optional front and/or side plenums (PSP Accessory).
- **Optional Enclosure Panels:** Constructed of stainless steel. Sized to extend from hood top to ceiling, enclosing pipe and hanging parts.

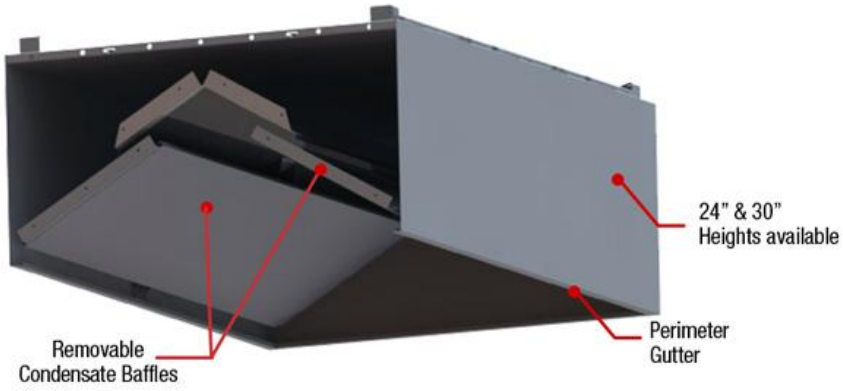
Recommended Duct Sizing: Exhaust - Based on 800 FPM

Features



VHB Model

VHB Model with One REM Baffle

VHB Model with Two REM Baffles

Certifications

The VHB Model has been certified by ITS. This certification mark indicates that the product has been tested to and has met the minimum requirements of a widely recognized (consensus) U.S. and Canadian products safety standard, that the manufacturing site has been audited, and that the applicant has agreed to a program of periodic factory follow-up inspections to verify continued performance.

Models VHB are ETL Listed under file number 3186625SAT-001 and complies with UL710, ULC710 and ULC-S646 Standards.

"SDT-I" SOILED ISLAND DISHTABLES PRO-BOWL

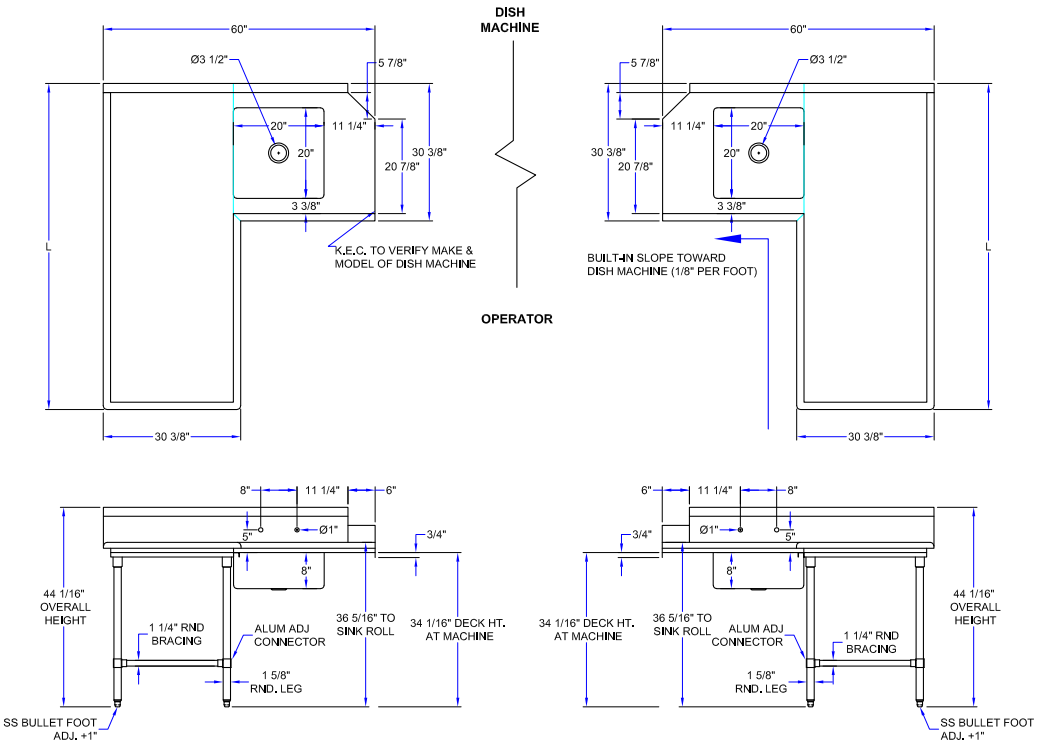
FEATURES:

- TYPE 300 STAINLESS STEEL WITH # 4 POLISH, SATIN FINISH
- 8" DEEP BOWLS (BOWL SIZE 20" X 20" X 8")
- BOTTOM OF BOWLS FORMED FOR DRAINAGE TO 3-1/2" DIAMETER DIE STAMPED OPENING
- FULL LENGTH **10" HIGH BOXED BACKSPLASH,** WITH 2" RETURN TO WALL AT 45 DEGREE AND 1/2" TURNED DOWN REAR LIP
- 1" FAUCET HOLES IN BACKSPLASH, 8" O/C
- ALL OUTSIDE CORNERS OF ASSEMBLY ARE BULLNOSED TO PROVIDE SAFE, CLEAN, AND POLISHED EDGE
- STANDARD 1-5/8" DIAMETER LEGS

CONSTRUCTION:

- TOP: STAINLESS STEEL TOPS ARE TIG WELDED, EXPOSED WELDS ARE POLISHED TO MATCH ADJACENT SURFACE.

MATERIAL:



- TOP: STAINLESS STEEL
- FEET: 1" ADJUSTABLE STAINLESS STEEL BULLET FEET

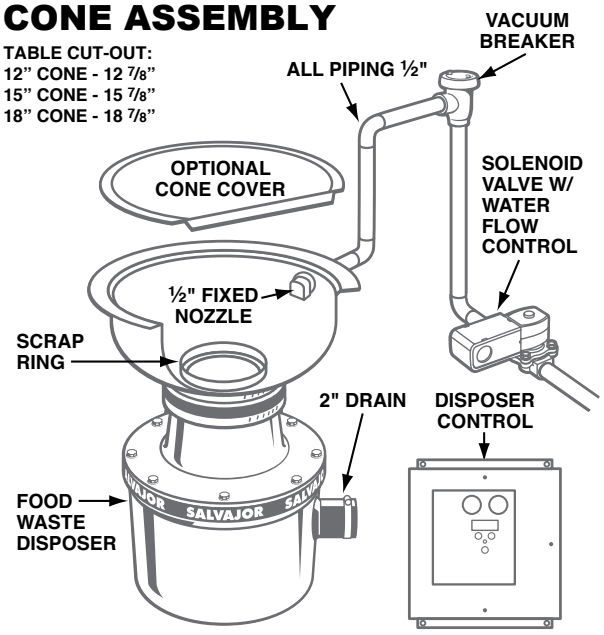
SALVAJOR® Food Waste Disposer 1 HP - Model 100

JOB: _____ **Item No.:** _____

SPECIFICATIONS:

CORROSION RESISTANT BODY
Permanent molded from heat treated aluminum alloy.

EXTENDED LIP WATER SEAL
Protects the motor from damage by water.



TAPERED ROLLER BEARING
Provides longer motor life, quiet operation and shock absorbing.

WATER COOLED MOTOR
Provides maximum efficiency and longer life.

QUIET OPERATION
Extra thick rubber mounting adaptor and drain outlet isolates sound and eliminates vibration.

Model 100 Food Waste Disposer

1 HP - 1 Phase & 3 Phase

SPECIFICATIONS:

MOUNTING – Rubber adaptor above grind chamber and rubber drain outlet isolates sound and eliminates vibration. No metal to metal contact.

EXTERIOR HOUSING – Permanent molded from heat treated, corrosion resistant aluminum alloy then computer machined to a smooth polished finish. Paint free.

SHREDDER – 8 inch diameter, machined high strength, wear resistant hardened carbide alloy.

ROTOR – 8 inch diameter with 2 cutter bars, machined high strength, wear resistant hardened carbide alloy.

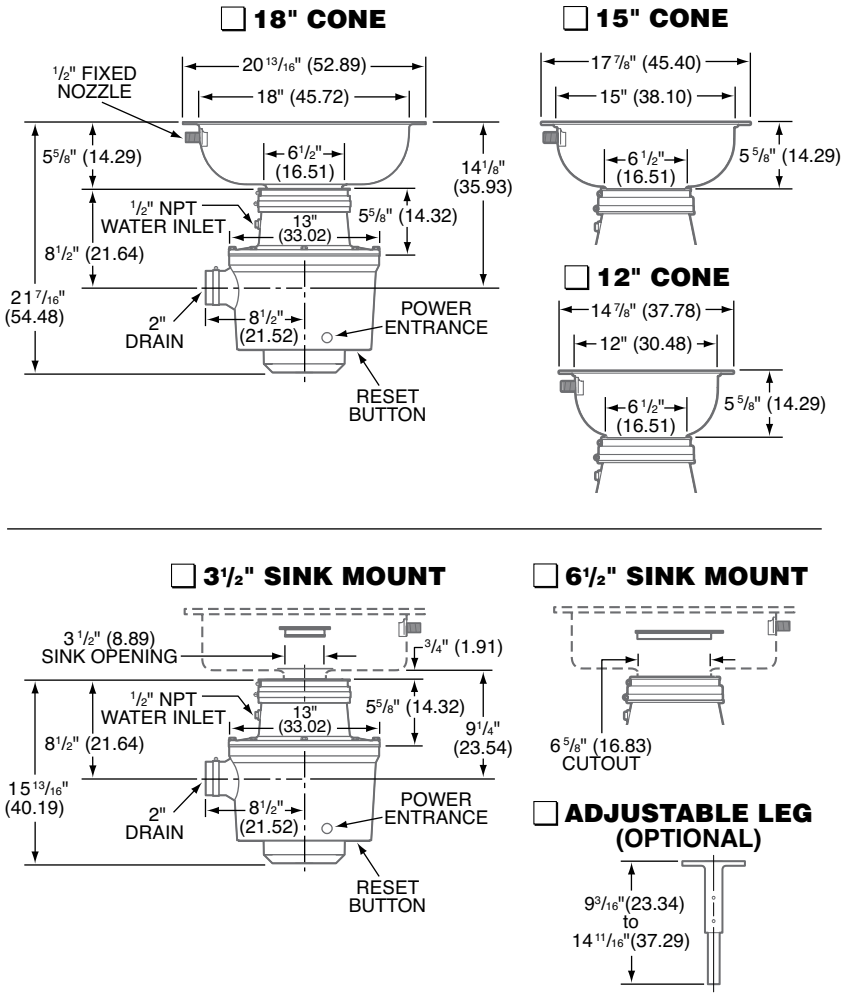
MOTOR – 1 HP totally enclosed. Water cooled for efficiency and longer life. Built-in manual reset thermal overload protection. Available in 208 volts or 115/230 volts, 60 cycle, 1 phase and 208-230/460 volts, 60 cycle, 3 phase.

BEARINGS – Tapered roller (top)
Sealed ball (bottom)

SEAL – Extended Lip Water Seal.

WATER REQUIREMENT – 5 gallons of cold water per minute.

WASTE OUTLET – Rubber drain accepts 2" piping.



DUAL DIRECTION GRINDING – Designed to operate in either direction. Direction of rotation can be controlled when installed with automatic reversing controls. ***Reversing rotation can double cutting teeth life.***

LEG SUPPORT (Optional) – Single leg, adjustable.

ASSEMBLIES: (See Specification Sheet)
CA – Cone Assembly with 12", 15" or 18" Cone
SA – Sink Assembly with 3½" or 6½" Sink Collar

DISPOSER CONTROLS: (See Specification Sheet)
MSS: (Non Reversing)
MRSS: (Manual Reversing)
ARSS-2: (Automatic Reversing)
ARSS: (Automatic Reversing with Water Saver)

Big Stik® Heavy-Duty Immersion Blenders

The high-efficiency variable speed motor that powers Waring's Big Stik® Immersion Blenders drives through the thickest ingredients to produce sauces, batters and soups in just minutes. Complete with rubberized comfort grip and second handle (patent pending), the lightweight, ergonomic design allows for safe and controlled operation during any job, large or small. The easily removable stainless steel shafts are available in five sizes (up to 21") and are completely sealed and dishwasher safe. With the Big Stik® line, you can mix, purée and emulsify up to 50 gallons. Blend smoothly, and carry the Big Stik®.

Features

- **Heavy-Duty Motor** – High efficiency 1 HP motor, 750 watts, 18,000 RPMs processing speed on high
- **Variable Speed Motor** – Unlimited speed adjustment from 5,000 – 18,000 RPMs provides full control and consistency, from light mixing to puréeing and emulsifying
- **Lightweight and Ergonomic** – Rubberized comfort grip and second handle allow for safe and controlled operation
- **Completely Sealed Shafts** – Stainless steel shafts are easily removable and dishwasher safe
- **Continuous On Operation**
- **Versatility** – All five stainless steel shafts are interchangeable with one universal motor housing (Power pack – WSBPP)
- **Limited One Year Warranty**
- **ETL, NSF**

* 5" width and 5.5" depth are the same for all five immersion blenders and whisk

WARING® COMMERCIAL IMMERSION BLENDERS

Optional Accessories

Waring makes it easy to do more than just blend. The 10" Stainless Steel Whisk Attachment quickly transforms the Big Stik® into a gentle giant as it whips delicate egg whites, creams to any consistency and mashes potatoes in record time with its heavy-duty construction. The bowl clamp lightens the load for hands-free operation while the wall-mount hanger provides an easy storage option.

SPEC SHEET

"EWS8" WALL SHELVES

Type 430 Stainless Steel w/1.5" Rear Riser

FEATURES:

- 18GA, Type 430 Stainless Steel With #4 Polish, Satin Finish
- Finished With A Safety Stallion Front Edge
- 1-1/2" Turned Up Backsplash
- 12" Or 16" Depth
- Shipped Knocked-Down, Easy-To-Assemble
- All Models Are NSF Certified

SPECIFICATIONS:

- Stainless Steel Shelves Are TIG Welded
- Exposed Welds Are Polished To Match Adjacent Surface
- Shelf: 18GA Type 430 Stainless Steel With #4 Polish, Satin Finish
- Brackets: 18GA Type 430 Stainless Steel With #4 Polish, Satin Finish

CERTIFICATIONS:

EWS8-1636

HEAVY DUTY PORTABLE BARS WITH DOORS

w/ ALL STAINLESS STEEL BARTENDER SIDE

Designed For **HEAVY DUTY** Use

Item #:_____ Qty #:_____
Model #:_____
Project #:_____

FEATURES:

All stainless steel bartender side.

19" x 13-1/2" x 11" stainless steel insulated integral ice bin with cover. Complete with drain & shut-off valve.

Stainless steel speed rails.

Center stainless steel panel for extra support.

Hinged door with lock on left and right side of center support panel.

Full perimeter bumpers.

Four 5" heavy duty swivel casters (2 with brakes).

Bottom shelf for glass rack storage.

-7 Models Includes above features with additional 7-circuit post mix cold plate in right ice bin.

MATERIAL:

Top & Front: Mica laminate, black finish
Unit: Stainless steel work top, back, sides & bottom
Bartender Side: Stainless steel
Casters: Rubber
Speed Rails: Stainless steel

Operating Limits

- Ambient Temp Range 45 - 100°F
- Water Temp Range 45 - 90°F
- Water Pressure 10 - 113 PSIG
- Voltage Range 187-253V

Service

- Panels easily removed and all components accessible for service.
- Allow 12" (30 cm) clearance at rear, sides, and top for proper air circulation and ease of maintenance/service.

Plumbing

- Icemaker Water Supply Line: Min. 3/8" Nominal ID Copper Water Tubing or Equivalent
- Icemaker Drain Line: Min. 3/4" Nominal ID Hard Pipe or Equivalent

Water-Cooled Model (Lines Must Be Independent of Icemaker)

- Condenser Water Supply Line: Min. 3/8" Nominal ID Copper Water Tubing or Equivalent
- Condenser Drain/Return Line: Min. 3/8" Nominal ID Hard Pipe (open drain system) or Copper Water Tubing (closed loop system) or Equivalent

Water Filter

Please refer to water filter spec sheet for recommended configurations.

HOSHIZAKI H9320 FILTER

Available in single, double and triple configurations. Rated NSF Class 1, STD 42, for taste, odor and chlorine reduction and for mechanical filtration (95.6% removal of particles one (1) micron and larger in size.)

- Keep ice makers functioning at full capacity
- 93.7% average reduction of chlorine from incoming water supply, eliminating tastes and odors of the ice
- Filters are rated as one (1) micron nominal producing crystal clear ice
- Decrease machine maintenance by reducing lime scale build-up

Model	Filter	Max Flow Rate	Working Pressure	Temperature	Capacity
H9320-51	4HC-H	2 gpm	10-125 psi	35-100°F	21,000 gal
H9320-52	4HC-H	4 gpm	10-125 psi	35-100°F	42,000 gal
H9320-53	4HC-H	6 gpm	10-125 psi	35-100°F	63,000 gal

Plumbing

Inlet/Outlet Connections: Single: (2) 3/8" FNPT
Double & Triple: (1) 3/4" MNPT / (1) 3/4" FNPT

The H9320 Filters and their respective cartridges have been tested and listed by NSF only for the functions listed above. Check for compliance with state and local laws and regulations. Do not use where the water is microbiologically unsafe, or with waters of unknown quality without adequate disinfection before or after the unit. The H9320 filter can be used with water that may contain filterable cysts.

The H9320 System is tested and certified by NSF International against NSF/ANSI Standard 42 for the reduction of:

Std. No. 42 - Aesthetic effects

E-10 PREFILTER
(9795-80)

E-20 PREFILTER
(9795-90)

E-10 PREFILTER
(9795-80)
Recommended for single configuraton

E-20 PREFILTER
(9795-90)
Recommended for twin and triple configuraton

E-10 and E-20 Prefilters can be used for ice. Everpure prefilters are designed to increase the life of Hoshizaki 4HC-H water filters in areas with an unusual amount of dirt in the water. With a 10 micron (nominal) rating, the economical Everpure prefilter traps much of the dirt which contributes to scale buildup in ice makers, and clogs the delicate orifices of other water-using equiment.

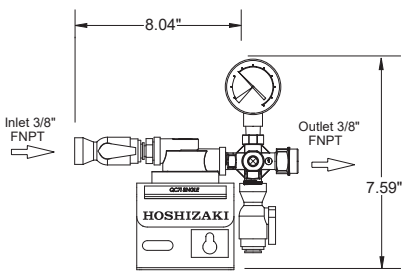
When you install an Everpure prefilter, the Hoshizaki 4HC-H water filters can concentrate on what they do best: remove particles one (1) micron nominal and larger in size.

Replacement Cartridges:
E-10 Prefilters: 12 pack (9534-12)
40 pack (9534-40)

E-20 Prefilters: 6 pack (9534-26)
20 pack (9534-20)

Warranty:

One Year replaceable elements*
One Year the entire system
* Warranty applies to material defects in materials & workmanship only.



Hoshizaki reserves the right to change specifications without notice.

Options

- ☐ Additional epoxy shelves
- ☐ Stainless steel shelves
- ☐ Tray/Pan slides
- ☐ Additional air filter
- ☐ Foot pedal

Warranty

* 3 Year - parts and Labor on entire machine.
5 Year - Parts on Compressor
Valid in United States, Canada, Puerto Rico and U.S. Territories. Contact factory for warranty in other countries.

Features

- **Maximum interior storage capacity with smallest external footprint**
- **Stainless steel interior with stainless steel exterior front, sides and top**
- **Unique ducted air distribution system**
- (2x) Energy efficient interior LED lights
- Environmentally friendly R290 hydrocarbon refrigerant
- Solid state digital controller with temperature alarms and LED display (Fahrenheit or Celsius)
- Cabinet is insulated with 2-3/8” of CFC free,foamed in place polyurethane
- Glass doors are energy efficient multi-pane, argon filled with locks
- Exclusive stepped door design to protect recessed door gasket
- Spring assisted self-closing doors with stay open feature
- Sturdy 8 gauge stainless steel hinge plate with welded hinge pin
- Extruded aluminum flush mount door handle
- Field reversible doors
- Evaporator coils are epoxy electrocoated (E-Coat) to help fight corrosion
- Energy efficient automatic hot gas condensate evaporator
- Top mount refrigeration comes standard with a condenser filter
- Refrigerant flow is controlled with thermostatic expansion valve
- Stainless steel shelf supports
- (3) epoxy coated wire shelves are standard
- Standard with 4” casters (two with brakes)
- Stackable (two units high) to conserve warehouse floor space
- 10 ft. cord and plug

Note: Made to order. Allow 4-6 weeks.

Hoshizaki reserves the right to change specifications without notice.

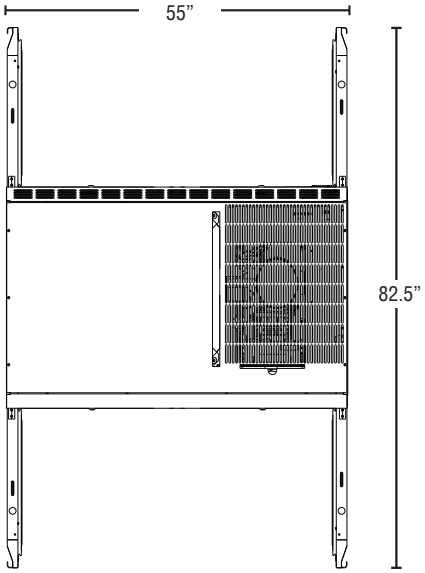
FRONT VIEW



BACK VIEW

SIDE VIEW

PLAN VIEW

Cabinet Construction

The exterior cabinet front, sides, and top are constructed of high quality stainless steel. The cabinet interior is constructed of stainless steel with a unique ducted air flow system. Three (3) heavy duty epoxy coated shelves per section are standard. Mounted on stainless steel pilasters shelves are adjustable in 1” increments. Cabinet walls are insulated with 2-3/8” of environmentally friendly, CFC free, foamed in place polyurethane. (2x) interior LED lights provide energy efficient illumination. 4” polyolefin, casters (two with brakes) are standard.

Door Construction

Glass doors are constructed of high grade silver anodized aluminum with a full length chrome handle. Door glass is energy efficient multi pane, argon filled with locks. The door hinges are all metal and include an adjustable torsion spring closure that will not wear out like traditional cam-lift hinges. Hinge plates are constructed of heavy duty stainless steel. Doors stay open at 90° and are self-closing at 75°. Snap-in magnetic door gaskets are durable and easily removed for cleaning. Door hinging is field reversible.

Refrigeration System

The high efficiency refrigeration system is self-contained with an epoxy electrocoated (E-Coat) evaporator for extended life. Top mounted refrigeration system is easily accessible for service and includes a condenser filter with easy access from the top of the unit. The refrigeration system components are assembled on a high density expanded polypropylene platform that is removable from the main unit. A unique ducted air flow system achieves uniform air distribution within the cabinet to eliminate hot spots. Condensate removal is accomplished with a top mounted energy efficient non-electric evaporation system. A thermostatic expansion valve (TXV) controls the flow of environmentally friendly R290 refrigerant through the evaporator. Solid state digital controls monitor the operation and performance of the refrigeration system. The controls also provide visual high and low temperature and high and low voltage alarms. A LED display shows the cabinet temperature and is adjustable to Fahrenheit or Celsius. 115 volt units are equipped with a ten foot cord and plug (20.0 amps or less).

Centaur™

Wire Shelving

PROJECT NAME: _____ LOCATION: _____

ITEM: _____ MODEL: _____

LOAD CAPACITY:
Up to 48" (1219mm) Length
= 800 lbs. (363kg)
54"-72" (1372-1829mm) Length
= 600 lbs. (272kg)

WIRE SHELVING

- **Unique Design:** The open wire design of these heavy-gauge carbon-steel shelves minimizes dust accumulation and allows a free circulation of air, greater visibility of stored items and greater light penetration.
- **Versatile Construction:** Centaur wire shelving can change as quickly as your needs change.
- **Fast, Secure Assembly:** Posts have circular grooves at 1" (25mm) intervals. A tapered split sleeve snaps together around each post. Tapered openings in the shelf corners slide over the tapered split sleeves providing a positive lock. Shelf is assembled in minutes without the use of any special tools.
- **Shelf Mat Wires:** Run front to back, allowing you to slide items on and off shelves smoothly.
- **Shelf Accessibility:** Shelves can be loaded/unloaded easily from all sides. This open construction allows use of maximum storage space of cube.
- **Adjustability:** Shelves can be adjusted at 1" (25mm) intervals along the entire length of the post.
- **Finish Options:** Chromate for dry storage. Green epoxy with chromate substrate for walk-in coolers and other damp environments.
- **Posts:** Bolt levelers compensate for surface irregularities on stationary posts. Posts also available for mobile application.

*Height includes leveling bolt and cap on stationary units.
**Casters sold separately. A 5" (127mm) caster adds approximately 6" (152mm) to overall height.

Posts are grooved at 1" (25mm) increments and numbered at 2" (50mm) increments. Posts are double-grooved every 8" (203mm) for easy identification.

Shelf Dividers for Shelves

Keep shelf contents orderly with these 8" (203mm) high, pressure-fit dividers.

Shelf Width (in.)	(mm)	Approx. Pkd. Wt. (lbs.)	(kg)	Plated
18	457	2.25	1.0	CDD18C

60	1524	4.0	1.81	CL60-4C
72	1828	5.0	2.25	CL72-4C

Note: Actual ledge length is approximately 1" (25mm) shorter than nominal shelf length/width.

Replacement Plastic Split Sleeves

One bag required per shelf; 4 pairs per bag.
Cat. No. C9985

"S" Hook

Two are required for each storage level.
Cat. No. C9995Z

Foot Plates

Use to bolt units to the floor, or when a broader, more stable foot is desired.
Zinc. Cat. No. C9993Z

Stem Casters — Resilient Rubber (Order By Each)

Use with posts to create a mobile shelving unit to meet your special needs. Each caster is constructed of resilient rubber wheels and plated components. Load rating is 200 lbs. (90kg) per caster. Sold by the piece.

Wheel Diameter (in.)	(mm)	Face (in.)	(mm)	Load Rating (lbs.)	(kg)	Type	Wheel Tread	Approx. Pkd. Wt. (lbs.)	(kg)	Cat. No.
5	127	1 1/4	32	200	90	Stem/Swivel	Resilient	2 1/2	1.1	C5
5	127	1 1/4	32	200	90	Stem/Brake	Resilient	2 5/8	1.2	C5B

Stem Caster Kit — High Modulus Rubber (One Kit = Four Casters)

Kit consists of four swivel casters with brakes. Each caster is constructed of durable, non-marking high modulus rubber. Load rating is 300 lbs. (136kg) per caster.

Wheel Diameter (in.)	(mm)	Face (in.)	(mm)	Load Rating (lbs.)	(kg)	Type	Wheel Tread	Approx. Pkd. Wt. (lbs.)	(kg)	Cat. No.
5	127	1 1/4	32	300	136	Stem/Brake	Flat High Modulus Rubber	9	4.1	C5FBA-4

Direct Wall Mounts

Single Shelf Support

Double Shelf Support

Each consists of one shelf support and mounting plate. Use single support at shelf ends; double support for adjoining shelves. (Single — Two required per shelf.)

Shelf Width (in.)	(mm)	Approx. Pkd. Wt. (lbs.)	(kg)	SINGLE Chrome	SINGLE Green Epoxy	Approx. Pkd. Wt. (lbs.)	(kg)	DOUBLE Chrome	DOUBLE Green Epoxy

"PBHS-14" PRO-BOWL HAND SINKS

FOR SPLASH MOUNT FAUCETS

FEATURES:

- ONE PIECE DEEP DRAWN BOWL
- ALL SINK BOWLS HAVE LARGE LIBERAL RADII CORNERS
- INCLUDES BASKET DRAIN
- SPLASH MOUNT FAUCET HOLES 4" ON-CENTER
- 1-1/2" DRAIN PLUMBING CONNECTION

CONSTRUCTION:

- BOWL: STAINLESS STEEL TOPS ARE TIG WELDED, EXPOSED WELDS ARE POLISHED TO MATCH ADJACENT SURFACE.

MATERIAL:

- BOWL: TYPE 300 STAINLESS STEEL POLISH, SATIN FINISH
- BRACKET: TYPE 300 STAINLESS STEEL POLISH, SATIN FINISH

4448NP Mega Top

Front-Breathing Self-Contained Mega Top Refrigerated Bases

Models

- 4448NP-6M Two section with doors, six pan capacity
- D4448NP-6M Two section with drawers, six pan capacity
- 4448NP-12M Two section with doors, twelve pan capacity
- D4448NP-12M Two section with drawers, twelve pan capacity
- 4448NP-18M Two section with doors, eighteen pan capacity
- D4448NP-18M Two section with drawers, eighteen pan capacity

4448NP-18M
Shown with optional display in nosing.

Standard Features

- Patented air screen ensures product stays cold without drying it out
- 100% front breathing, which allows the unit to be pushed against a wall or built into a cabinet or an existing line up
- Durable, rugged stainless steel sides, top and front
- Features Delfield's exclusive ABS interior (on sides). ABS is extremely durable - it won't dent, chip or corrode and is backed by a limited lifetime warranty
- Delfield supplies 1/6 size pans and positive placement adapter bars for top opening
- Dual level pan brackets allow the pans to be lowered an additional inch in the unit without tools to provide additional pan temperature holding performance
- Mega top refrigerators are standard with 8" wide, dishwasher safe polyethylene cutting board mounted on heavy-duty brackets
- "D" prefix models feature Delfield's drawer system. Drawers are backed by a 10-year warranty on the track assembly
- Environmentally friendly R290 refrigerant
- High density foamed in place environmentally friendly, Kyoto Protocol Compliant, Non ODP (Ozone Depletion Potential), Non GWP (Global Warming Potential) polyurethane keeps energy costs low
- Bent in full length handle
- Standard on 5" casters for easy cleaning and installation
- 10' cord and plug supplied
- One epoxy coated wire shelf standard, installed per door section
- ACT solid state electronic control
- Three year parts and labor warranty and an additional two year compressor parts warranty

Options & Accessories

- Various lid options
- 18" wide single tier overshelf
- Stainless steel finish on back
- Plastic laminate on front
- Additional wire shelves
- 3" casters, 4" ride height
- Door lock
- Exterior thermometer

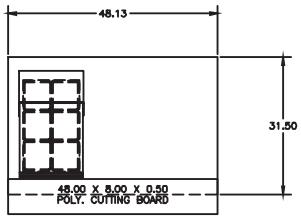
WELBILT®



DELFIELD®

Specifications

Exterior top is one-piece 22-gauge stainless steel with integral 2.12" (5.4cm) square nosing on the front. Top of drawer unit has openings to accept eighteen 1/6 size plastic pans 4" (10cm) deep. Top of door unit has openings to accept eighteen 1/6 size plastic pans 4" or 6" (10cm or 15cm) deep. Adapter bars and 1/6 size pans are supplied by Delfield. Top has one telescoping lid is constructed of 20-gauge stainless steel. Temperature in top openings maintains 33°F (1°C) to 41°F (5°C), with pans recessed 2.5" (6.4cm) at 86°F ambient room temperature, meeting NSF 7 requirements. One 48" x 8" x .5" (121.9cm x 20.3cm x 1.3cm) polyethylene cutting board is mounted on the top at the front edge.

Dual level pan brackets allow the pans to be lowered an additional inch in the unit without tools to provide additional pan temperature holding performance.

Exterior back and bottom are two-piece 24-gauge galvanized steel. Exterior ends are stainless steel.

Interior sides are thermoformed ABS plastic with integral shelf supports. Base is fully insulated with high-density foamed in place environmentally friendly, Kyoto Protocol Compliant, Non ODP (Ozone Depletion Potential), Non GWP (Global Warming Potential) polyurethane.

Refrigeration system uses environmentally friendly R290 refrigerant. Condenser coil and hot gas condensate evaporator mounted on rear of the cabinet. Evaporator coil is located on the interior rear wall of the cabinet. Refrigerant flow is controlled by a capillary tube. Cabinet maintains an interior cabinet temperature of 33°F to 40°F (0°C to 4°C).

ACT control: ACT electronic, solid state control, mounted on the exterior rear of the cabinet, allows unit to maintain precise temperatures in heavy duty conditions.

Electrical connections are 115 volt, 60 Hertz, single phase. Unit has a 10' (3m) long electrical cord and NEMA 5-15P plug.

Casters: Equipment is mounted on 5" (13cm) diameter plate casters with front two locking. Equipment clearance above the floor is 2.5" (6cm).

Doors have a 22-gauge stainless steel exterior, with thermoformed ABS plastic interior liner. Cabinet has one adjustable epoxy-coated wire shelf per door opening.

Drawers have 22-gauge stainless steel exterior with thermoformed ABS plastic interior liner. Drawer frames are 12-gauge stainless steel. Drawer slides are 11-gauge stainless steel with Delrin bearings. Each top drawer will hold one 12" x 20" (30.5cm x 50.8cm) pan and three 1/9 size 4"-6" (10.1cm-15.2cm) deep pans. Each bottom drawer holds one 12" x 20" (30.5cm x 50.8cm) pan and three 1/9 size 4" (10.1cm) deep pans. Pans are supplied by others.

Welbilt reserves the right to make changes to the design or specifications without prior notice.

High Speed Oven

Merrychef conneX® 16

Stainless steel

Carbon black

Features

- The conneX®16 is the most versatile, high speed oven on the market.
- An all-in-one unit ideally suited to rapidly cook, toast, grill and reheat fresh or frozen food, eliminating the need for other appliances.
- Cooking up to 20x faster than other cooking methods it can provide hot food on demand.
- It has the largest cavity 40.5cm x 40.5cm (16" x 16") to oven width 45.5cm (18") ratio, and fits on a 700mm worktop, perfect when space is at a premium.
- Suitable for front-of-house, operating quietly and easy to install due to ventless cooking capabilities through a built-in catalytic converter, eliminates the need for an extraction fan.
- Cool to touch exterior makes it safe to locate anywhere with no need to allow space around the unit.
- Easy to operate with a 7" HD widescreen display and new generation easyTouch®2.0, icon driven controller, ensuring consistent, high quality dishes.
- Stainless steel cavity and casework, with a sealed rounded edged cavity makes it easy to clean.
- Patented easy access front mounted monitored air filter.
- Wi-fi/ethernet connected with access to KitchenConnect cloud for easy menu updates (or, via a USB memory stick).

Options

- Stainless steel or carbon black finishes. Highly robust glass surrounds the easyTouch® 2.0 controller.

Included accessories

- Flat cook plate.
- Guarded hand paddle with supporting side walls.
- Cooking tray, full size.
- Cool down pan.
- Cook plate liner.

For a wide range of accessories recommended to get greater flexibility out of the conneX®16 and significantly reduce cleaning time visit **www.merrychef.com/products/accessories**

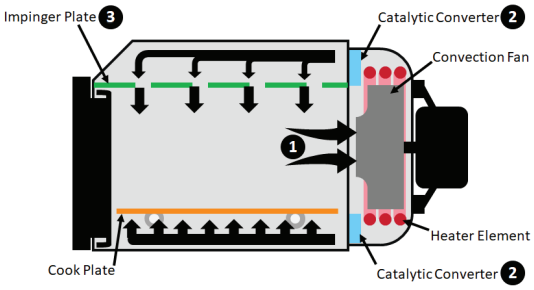
Specifications

High speed Technology® combines three heat technologies:
-Microwave
-Convection
-Tuned impingement.

MICROWAVE POWER

- Microwave setting options: Off and 5-100% in 1% increments.
- Microwave distribution system uses a rotating active antenna to ensure even heating throughout the food.

CONVECTED HEAT



- Temperature setting options: Off and 212°F (100°C) to 527°F (275°C) in 1°C increments.
- The Heat distribution system is via Tuned Impingement, ensuring the most even browning.

VENTILATION

- Ventless certification. EPA 202 tested (8 hr).
- Internal catalytic filtration to limit grease and odour emissions.

easyTouch® 2.0 CONTROL SYSTEM

- Icon driven, HD colour touch screen control panel with unlimited storage for multi-stage cooking profiles.
- Each cooking profile offers up to six (6) stages with programmable cooking times, microwave power settings and written and/or pictorial user instructions for each stage.
- Self diagnostics capability to monitor components.
- Easy menu updates or data transfer via USB memory stick and KitchenConnect cloud.

HOW IT WORKS
The convection fan pulls air in through the back of the cavity (1). This is then heated and returned to the cavity through the catalytic converters (2) and impinger plate (3) to produce an even heat pattern in the oven. This heat pattern allows food to cook evenly and produces a crisp golden finish, every time.

- ❑ **101:** 1" Steel plate
- ❑ **201:** 30"d Steel plate
- ❑ **105:** 1" Hexavalent Chrome Plated
- ❑ **CO1:** ¾" Rapid Recovery™ Composite
  Note: 72" composite is not available.

Example: MSA36-201 is 36" Griddle with 30" deep steel plate
MSA48-CO1 is 48" Griddle with Rapid Recovery™ composite

STANDARD FEATURES

- Stainless steel front, sides and front top ledge with "Cool Bullnose" design
- Fully welded stainless and aluminized steel chassis frame
- 11" low profile cooking height on 4" adjustable legs
- 1" thick polished steel griddle plate with 12 gage, 4" stainless steel back and tapered side splashes
- Spatula wide 3½" grease gutter and chute is fully welded for easier cleaning and to stop grease migration
- One 27,000 BTU/hr. "U" shaped aluminized steel burner for every 12" of griddle width
- One embedded snap action thermostat per burner with temperature adjust from 200°F to 550°F on Steel or Chrome plate; temperature adjusts from 200°F to 450°F on Rapid Recovery™ plate
- Large 6 quart stainless steel grease drawer (2 drawers on 60" and 72" models)
- Heavy duty chromed thermostat knob guards
- One pilot safety valve for every two burners; safety will completely shut off gas to pilot and burners if pilot extinguishes
- Manual ignition
- Bottom heat shields
- ¾" rear gas connection and gas pressure regulator
- One year limited parts and labor warranty

SPECIFIER STATEMENT

Low profile heavy duty gas griddle, Vulcan Model No._____. Stainless steel front, sides and front top ledge. Fully welded stainless and aluminized steel body frame. 11" low profile cooking height on 4" legs. 1" thick polished steel griddle plate with 12 gauge, 4" stainless steel back and tapered side splashes. Grease chute is fully welded to stop grease migration. One 27,000 BTU/hr. "U" shaped aluminized steel burner and mechanical snap action thermostat for each 12" of griddle width. Chrome thermostat knob guards. Temperature adjusts from 200° to 550°F. One pilot safety for every two burners. 3½" wide stainless steel grease trough. ¾" rear gas connection and gas pressure regulator.

Exterior Dimensions:
_____"w x 33" d x 15½" h on 4" legs.

CSA design certified. NSF listed.

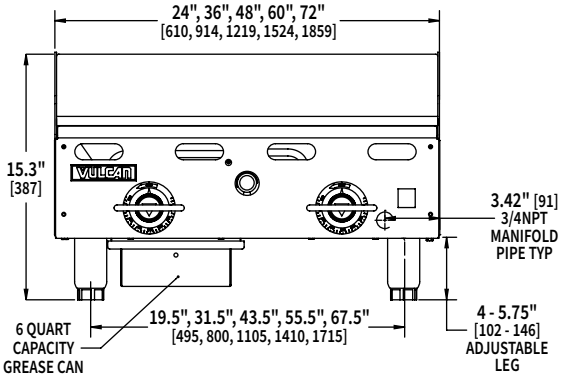
INSTALLATION INSTRUCTIONS

INSTALLATION MANUAL

1. A gas pressure regulator supplied with the unit must be installed;

   Natural Gas 4.0" (102 mm) W.C.
   Propane Gas 10.0" (254 mm) W.C.

2. All models require a 6" (152 mm) clearance at both sides and rear adjacent to combustible and 0" from non-combustible constructions. All models require a 4" (102mm) bottom clearance and must be installed with minimum 4" legs.



3. These units are manufactured for installation in accordance with ANSI/NFPA-70, National Electrical code.

   An adequate ventilation system is required for Commercial Cooking Equipment (NFPA No. 96). Information may be obtained by writing to the National Fire Protection Association, Batterymarch Park, Quincy, MA 02169.

4. These units are manufactured for installation in accordance with National Fuel Gas Code, ANSI-Z223.1/NFPA #54 (latest edition). Copies may be obtained from The American Gas Association, Accredited Standards Committee Z223 @ 400 N. Capital St. NW, Washington, DC 20001, or the Secretary Standards Council, NFPA, 1 Batterymarch Park, Quincy, MA 02169-7471.

   NOTE: In The Commonwealth of Massachusetts
   All gas appliances vented through ventilation hood or exhaust system equipped with a damper or with a power means of exhaust shall comply with 248 CMR.

SnapFast® Quick-Disconnect Assemblies

Sizes: ½" to 1¼"

SnapFast Quick-Disconnect Assemblies feature flexible movement and the one-handed quick-disconnect fitting with a unique thermal shut-off design that automatically shuts off the gas when the internal temperature exceeds 350°F (177°C).

Features

SnapFast® One-Handed Quick-Disconnect

Quick-Disconnect	Brass body, aluminum collar
Thermal Shut-off	Shuts off gas when internal temperatures exceed 350°F (177°C)

Additional Components

Restraining Device	PVC coated, steel multi-strand cable and mounting hardware
Valve	Full port, brass body
Elbow	Malleable iron
*Deluxe Kits Include	The Dormont Blue Hose, valve, restraining device, elbows, SnapFast, display box

Specifications

The Dormont Blue Hose®

Tubing	Annealed, 304 stainless steel
Braiding	Multi-strand, stainless steel wire
Coating	Blue antimicrobial PVC, melts at 350°F (177°C); coating will not hold a flame
End Fittings	Carbon steel; zinc trivalent chromate
Stress Guard®	360° rotational end fitting at both ends

Safety System™ The Dormont Safety System™ is the first and only complete gas equipment connection system specifically engineered for the commercial kitchen. The Safety System consists of the famous Dormont Blue Hose and a variety of accessories designed for improved safety and performance in commercial kitchens. Because they are manufactured in the USA under an ISO qualified production process and to multiple design certifications, you can Connect with Confidence with the Dormont Safety System.

Options

The Dormont Blue Hose®

The Dormont Blue Hose is a commercial, moveable-grade gas connector designed for use with moveable equipment.

Moveable equipment is defined in ANSI Standard Z21.69/CSA 6.16 as gas utilization equipment that may be mounted on casters or otherwise be subject to movement.

SnapFast

- One-handed quick-disconnect fitting
- Thermal shut-off when internal temperature exceeds 350°F (177°C)

Restraining Device

- ANSI Z21.69 Standard section 1.7.4 states: Connectors when used on caster-mounted equipment shall be installed with a restraining device, which prevents transmission of the strain to the connector

Safety-Set®

Benefits

- Can be used with all caster-mounted equipment including cooking appliances, warming carts, salad bars, and refrigerators
- Crush Resistant
- Resistant to oils and greases
- Open-floor design allows appliance to rest level on the floor to ensure even cooking

Features

- Compatible with 4", 5", and 6" casters
- Certified to NSF/ANSI Standard 169 – Special Purpose Food Equipment & Devices
- Flexible, tough injection molded Thermoplastic Polyurethane (TPU)
- Able to withstand 1,000 PSI of crush pressure

Ordering Instructions:

The Saftey-Set wheel positioning product can be ordered individually or with the Blue Hose Kit.

The Safety-Set model name is "PS" and the ordering number is 0241002.

When ordering the Safety-Set with the Blue Hose kit, simply add the letters "PS" to the end of the model number.

We guarantee our commercial gas connectors for the life of the original appliance to which it is connected.

VCRH SERIES
RESTAURANT SERIES GAS HOTPLATE

Model VCRH36

- ☐ **VCRH12** 12" wide
- ☐ **VCRH24** 24" wide
- ☐ **VCRH36** 36" wide

STANDARD FEATURES

- Stainless steel front, sides and front top ledge.
- Full width front crumb trays.
- 13" cooking height on 4" adjustable legs.
- 25,000 BTU/hr. open burners with lift-off heads.
- Cast iron top grates.
- One infinite heat control valve for each burner.
- Standing pilot ignition system.
- ¾" rear gas connection and convertible gas pressure regulator for LP service.
- Constructed standard for natural gas service. LP conversion kit supplied with unit.
- One year limited parts and labor warranty.

SPECIFICATIONS

Low profile gas hotplate, Vulcan model No._____. Stainless steel front, sides and front top ledge. 13" cooking height on 4" legs. 25,000 BTU/hr. open burners with lift-off heads. Cast iron top grates. Full width front crumb trays. One infinite heat control valve for each burner. Standing pilot ignition system. ¾" rear gas connection and convertible gas pressure regulator for LP service.

Exterior Dimensions:
_____"w x 29.3" d x 13.3" h on 4" legs.

CSA Design Certified. NSF Certified.

NOTE: Models are constructed standard for natural gas service. Propane conversion kit is supplied with the unit. Conversion is the customer's responsibility. Please indicate propane or natural gas when processing your order.

NOTE: Elevation orifice kit is available free of charge for high-elevation applications. Installation is the customer's responsibility. Please indicate elevation when processing your order.

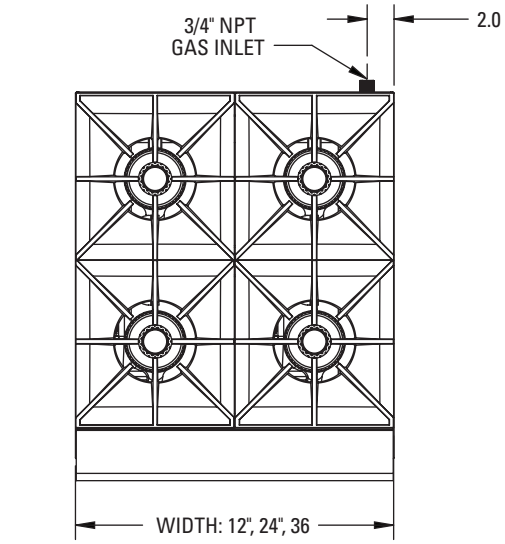
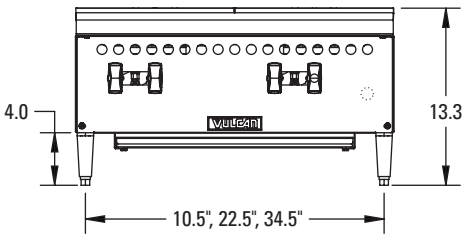
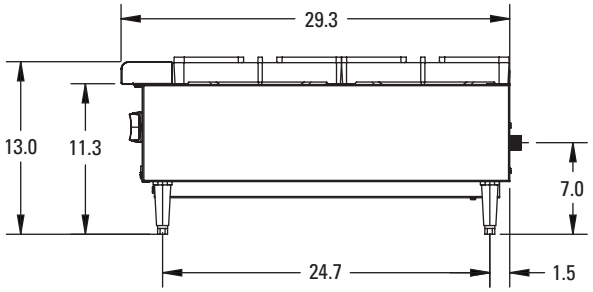
GRIDDLES & BROILERS



VCRH SERIES
RESTAURANT SERIES GAS HOTPLATE



INSTALLATION INSTRUCTIONS:



1. A gas pressure regulator supplied with the unit must be installed:
   Natural Gas 4.0" (102 mm) W.C.
   Propane Gas 10.0" (254 mm) W.C.
2. All models require a 11" (279 mm) clearance at both sides and 11" (279 mm) to the rear adjacent to combustible constructions. All models require 0" clearance at both sides and to the rear adjacent to non-combustible constructions. All models require a 4" (102mm) bottom clearance and must be installed with minimum 4" legs.

   An adequate ventilation system is required for Commercial Cooking Equipment (NFPA No. 96). Information may be obtained by writing to the National Fire Protection Association, Batterymarch Park, Quincy, MA 02169.
3. These units are manufactured for installation in accordance with National Fuel Gas Code, ANSI-Z223.1/NFPA #54 (latest edition). Copies may be obtained from The American Gas Association, Accredited Standards Committee Z223 @ 400 N. Capital St. NW, Washington, DC 20001, or the Secretary Standards Council, NFPA, 1 Batterymarch Park, Quincy, MA 02169-7471.

   NOTE: In The Commonwealth of Massachusetts
   All gas appliances vented through ventilation hood or exhaust system equipped with a damper or with a power means of exhaust shall comply with 248 CMR.
4. This appliance is manufactured for commercial installation only and is not intended for home use.

SnapFast® Quick-Disconnect Assemblies

Sizes: ½" to 1¼"

SnapFast Quick-Disconnect Assemblies feature flexible movement and the one-handed quick-disconnect fitting with a unique thermal shut-off design that automatically shuts off the gas when the internal temperature exceeds 350°F (177°C).

Features

SnapFast® One-Handed Quick-Disconnect

Quick-Disconnect	Brass body, aluminum collar
Thermal Shut-off	Shuts off gas when internal temperatures exceed 350°F (177°C)

Additional Components

Restraining Device	PVC coated, steel multi-strand cable and mounting hardware
Valve	Full port, brass body
Elbow	Malleable iron
*Deluxe Kits Include	The Dormont Blue Hose, valve, restraining device, elbows, SnapFast, display box

Specifications

The Dormont Blue Hose®

Tubing	Annealed, 304 stainless steel
Braiding	Multi-strand, stainless steel wire
Coating	Blue antimicrobial PVC, melts at 350°F (177°C); coating will not hold a flame
End Fittings	Carbon steel; zinc trivalent chromate
Stress Guard®	360° rotational end fitting at both ends

Safety System™ The Dormont Safety System™ is the first and only complete gas equipment connection system specifically engineered for the commercial kitchen. The Safety System consists of the famous Dormont Blue Hose and a variety of accessories designed for improved safety and performance in commercial kitchens. Because they are manufactured in the USA under an ISO qualified production process and to multiple design certifications, you can Connect with Confidence with the Dormont Safety System.

NOTICE

The information contained herein is not intended to replace the full product installation and safety information available or the experience of a trained product installer. You are required to thoroughly read all installation instructions and product safety information before beginning the installation of this product.

Dormont product specifications in U.S. customary units and metric are approximate and are provided for reference only. For precise measurements, please contact Dormont Technical Service. Dormont reserves the right to change or modify product design, construction, specifications, or materials without prior notice and without incurring any obligation to make such changes and modifications on Dormont products previously or subsequently sold. Refer to the owner's manual for warranty information.

Dormont® A WATTS Brand

Approvals & Certifications

NSF/ANSI 169 – Special-purpose food equipment and devices
ANSI Z21.69 / CSA 6.16 – Connectors for moveable gas appliances
ANSI Z21.41 / CSA 6.9 – Quick-disconnect devices for use with gas fuel appliances
ANSI Z21.15 / CSA 9.1 – Manually operated gas valves for appliances, appliance connectors
Meets requirements of ANSI Z223.1 / NFPA 54 National Fuel Gas Code
Not for use in temperatures less than 32°F (0°C). For indoor use only.
Max operating pressure 1/2 psi.
Refer to the catalog for additional approvals and certifications or go to www.dormont.com.
A restraining device is required for all moveable gas equipment.

SnapFast® Quick-Disconnect Deluxe Kit Assembly

Typical Installation

Options

The Dormont Blue Hose®

The Dormont Blue Hose is a commercial, moveable-grade gas connector designed for use with moveable equipment.

Moveable equipment is defined in ANSI Standard Z21.69/CSA 6.16 as gas utilization equipment that may be mounted on casters or otherwise be subject to movement.

SnapFast

- One-handed quick-disconnect fitting
- Thermal shut-off when internal temperature exceeds 350°F (177°C)

Restraining Device

- ANSI Z21.69 Standard section 1.7.4 states: Connectors when used on caster-mounted equipment shall be installed with a restraining device, which prevents transmission of the strain to the connector

Safety-Set®

Benefits

- Can be used with all caster-mounted equipment including cooking appliances, warming carts, salad bars, and refrigerators
- Crush Resistant
- Resistant to oils and greases
- Open-floor design allows appliance to rest level on the floor to ensure even cooking

Features

- Compatible with 4", 5", and 6" casters
- Certified to NSF/ANSI Standard 169 – Special Purpose Food Equipment & Devices
- Flexible, tough injection molded Thermoplastic Polyurethane (TPU)
- Able to withstand 1,000 PSI of crush pressure

Ordering Instructions:

The Saftey-Set wheel positioning product can be ordered individually or with the Blue Hose Kit.

The Safety-Set model name is "PS" and the ordering number is 0241002.

When ordering the Safety-Set with the Blue Hose kit, simply add the letters "PS" to the end of the model number.

We guarantee our commercial gas connectors for the life of the original appliance to which it is connected.

Datasheet

iCombi® Pro 10-half size E/G

Capacity
> Ten (10) Half-size sheet pans or Ten (10) Steam table pans or Ten (10) 1/1 GN accessories
> Removable standard hinging rack with 2 5/8 inch rack spacing (68 mm)
> Large selection of accessories for various cooking procedures, such as grilling, braising or baking
> For use with 1/1, 1/2, 2/3, 1/3 GN accessories

Combi-steamer mode
> Steaming 86 °F - 266 °F
> Convection 86 °F – 572 °F
> Combination of steam and convection 86 °F – 572 °F

Description
Intelligent, connectable cooking system with the operating modes poultry, meat, fish, egg dishes/desserts, side dishes/vegetables, baked goods and finishing as well as the cooking methods roasting, cooking, baking and grilling.
> Combi steamer as per DIN 18866 (in manual mode).
> For most cooking processes used in commercial kitchens.
> For using steam and convection, individually, one after the other, or combined.

Ventilation approvals: The electrical appliance conforms to the EPA 202 test in accordance with ANSI/NFPA 96 "Ventilation Control and Fire Protection of Commercial Cooking Operations" Refer to UL Listing KNLZ.E148536 (America) or KNLZ7.E148536 (Canada).
The following intelligent assistants are available:

Intelligent assistant
iDensityControl iProductionManager iCookingSuite iCareSystem

iDensityControl
iDensityControl is the iCombi Pro's intelligent climate management. The interaction among intelligent sensors, a high-performance heating system and fresh steam generator, and active dehumidification ensures that the right cooking cabinet climate is always available. Intelligent air circulation ensures the best possible energy input into the food. Consequently, this ensures extraordinary productivity while maintaining high levels of food quality, even cooking and minimum energy consumption.

iCookingSuite
The iCookingSuite is the iCombi Pro's cooking intelligence. The user starts by selecting the right cooking path for the food, choosing from among 6 operating modes and / or 5 cooking methods. Users also specify the desired cooking result. The unit suggests settings for browning and degree of doneness. Intelligent sensors detect the size, quantity and condition of the food. While the cooking path is in progress, the system adjusts key parameters like cooking cabinet temperature, airspeed, and cooking time accurately to the second. The selected desired results are achieved, yielding the best possible quality in the shortest possible time. It is possible to optionally influence the cooking sequence and adapt the cooking result. Users can change to iProductionManager or manual mode at any time. Thanks to iCookingSuite you can simply save time, raw materials, and energy while maintaining a standardized food quality without having to check the procedure.

iProductionManager
iProductionManager intelligently and flexibly organizes the production process. This includes which products can be prepared together on different trays, the ideal sequence of dishes, and monitoring the cooking sequence. iProductionManager supports users with prompts to load or unload dishes. Depending on kitchen processes you can freely position orders (up to two per level) or schedule them on the basis of a certain target time. iProductionManager arranges the sequence of dishes accordingly and automatically specifies the correct settings. Users decide whether dishes are cooked based on optimum energy consumption or a certain target time. Simple monitoring activities are no longer required, saving you working time and energy.

iCareSystem
The iCareSystem is the intelligent iCombi Pro cleaning and descaling system. It recommends the amount of chemicals and ideal cleaning stage from the nine available programs based on usage and any limescale in the steam generator. Ultra-fast interim cleaning cleans iCombi Pro in only 12 minutes, all cleaning programs can also run overnight without the need for supervision. The iCareSystem is particularly efficient and environmentally friendly, consuming small quantities of phosphate-free care products, water, and energy. This means that the iCombi Pro is always hygienically clean without manual work and at minimal costs.

Datenblatt, Version 14 - 9/11/2020 8:17 AM - We reserve the right to make technical changes.

Unit description and functions

Intelligent functions
> Intelligent climate management that measures, adjusts and controls the humidity down to the exact percentage
> The actual measured humidity in the cooking cabinet can be adjusted and viewed
> Dynamic air turbulence in the cooking cabinet thanks to two intelligent, reversible, high-performance fan wheels with five fan wheel speeds, intelligently actuated and manually programmable
> Intelligent cooking path regulation and automatic adjustment of cooking steps in order to achieve the target results, e.g., browning and degree of doneness, safely and efficiently - regardless of product size, load quantity, or who is using the unit
> Monitoring accurate to the second and calculation of browning on the basis of the Maillard reaction to reproduce ideal cooking results
> Adjust intelligent cooking methods or switch between iCookingSuite and iProductionManager for maximum flexibility
> Intelligent cooking step to proof baked goods
> Individual, intuitive programming of up to 1,200 cooking programs with up to 12 steps using drag-and-drop.
> Easy transfer of cooking programs to other cooking systems through secure cloud connection with ConnectedCooking or via USB stick
> iProductionManager, the automated, intelligent planning and controlling tool, organizes multiple cooking processes and mixed loads perfectly. Automatic closing of planning gaps. Automatically optimize schedules and energy consumption in planning and target time preparation to start or end cooking dishes at the same time.
> Visual indication of loading and removal requests using energy-saving LED lighting
> Automatically resumes and optimally completes cooking processes following power outages lasting less than 15 minutes
> Intelligent cleaning system suggests cleaning programs and the required amount of care products based on the degree of soiling within the cooking system
> Display of the current cleaning and descaling status
> Condensation/exhaust air hoods (accessories) with situational adjustment of the extraction performance and transfer of service messages.

Cooking functions
> High-performance steam generator for optimal steaming performance even at low temperatures below 212°F
> Power-steam function: increased steaming power available for Asian applications
> Integrated, maintenance-free grease separation system without an additional grease filter
> Cool-down function to quickly cool down the cooking cabinet; additional fast cooling using internal water nozzle
> Core temperature probe with six measuring points and automatic error correction in the event of incorrect positioning. Optional positioning tool for soft or very small cooking products (accessory)
> Delta-T cooking for extremely gentle preparation with minimal cooking losses
> Precise burst-steam injection; water quantities can be set to 4 different levels within a temperature range of 85°F – 500°F for convection or steam-convection combination modes
> Digital temperature display, can be set to °C or °F, displays target and actual values
> Cooking cabinet humidity and time displayed digitally; displays target and actual values
> Time can be set to display in 12- or 24-hour format
> 24-hour real-time clock with automatic adjustment for daylight savings time when connected to ConnectedCooking
> Automatic pre-selected starting time with variable date and time
> Integrated hand shower with automatic retraction and switchable spray/jet function
> Energy-saving, long-lasting LED lighting in the cooking cabinet, with excellent color fidelity to allow quick determination of cooking progress
> No-charge 4-hour RATIONAL certified chef assistance program

Occupational and operating safety
> Electronic safety temperature limiter for steam generator and convection heating
> Integrated fan wheel brake
> Contact temperature of the cooking cabinet door max. 163 °F
> Use of Active Green cleaning tabs and Care tabs (solid cleaning agent) for ideal occupational safety levels
> HACCP data storage and output via USB or optional storage and management in the cloud-based networking solution ConnectedCooking
> Tested according to national and international standards for unsupervised operation
> Maximum tray height must not exceed 63 inch when using a RATIONAL stand
> Ergonomic door handle with right- / left-handed door opening and swing-shut function

Networking
> Integrated, IP-protected Ethernet interface for wired connection to the cloud-based ConnectedCooking networking solution
> Integrated Wi-Fi interface for wireless connection to the cloud-based networking solution ConnectedCooking
> Integrated USB interface for local data exchange
> Cloud-based ConnectedCooking solution allows central unit management; recipe, shopping cart and program management; HACCP data management; maintenance management

Cleaning and care
> Automatic, water pressure-independent cleaning and maintenance system for cooking cabinet and steam generator
> Nine cleaning programs for unsupervised cleaning, also overnight, with automatic cleaning and removal of limescale deposits within the steam generator
> Ultrafast cleaning in only 12 minutes for practically uninterrupted, hygienic production
> Automatic cleaning routine following power outages, ensuring that cooking cabinet remains free of cleaning agents even after the cleaning process has been canceled
> Use of phosphate and phosphorus-free Active-Green cleaning agent tabs and Care tabs
> Hygienic setup that is flush with the counter without feet for simple, safe cleaning

Datenblatt, Version 14 - 9/11/2020 8:17 AM - We reserve the right to make technical changes.

> Triple glass pane cooking cabinet door with rear ventilation, thermally reflecting special coating and swiveling glass panes for easy cleaning
> Inside and outside material: stainless steel DIN 1.4301 / ASTM 304, seamless hygienic cooking cabinet with rounded corners and optimized air flow
> Glass and stainless steel surfaces allow easy, safe external cleaning; IPX5-class protection against spraying water in all directions
> Monitoring option for automatic cleaning using the cloud-based ConnectedCooking networking solution

Operation

> High-resolution 10.1 inch TFT color display and capacitative touchscreen with self-explanatory icons for simple, intuitive operation with gestures like swiping and dragging
> Acoustic prompts and visual messages when user action is required
> Central dial with Push function for intuitive selection and confirmation of entries
> User interface and help function can be set to over 55 languages
> Basic national cuisine preferences can be selected regardless of language settings. Possible to select additional, local cuisine
> Specially adapted cooking parameters for international or country-specific dishes can be selected and started regardless of unit language settings
> Extensive search function including all cooking paths, application examples and settings
> Context-sensitive support that always shows the current help content for the displayed screen content
> Start application examples from help file
> Simple selection of cooking paths using six operating modes and/or five cooking methods
> Cockpit function to display information about the processes within a cooking path
> Customization and control of user profiles to prevent operator errors
> Interactive notifications regarding cooking paths, requested actions, intelligent functions and warnings thanks to Messenger

Installation, maintenance and environment

> Professional installation by RATIONAL-certified technicians recommended
> Fixed waste water connection conforming to SVGW requirements is permitted
> Adaptation to the installation site (height above sea level) through automatic calibration
> Operation without water softener and without additional manual descaling possible
> Installation flush with the floor and wall through connection in the base area *
> Service diagnostic system with automatic service message display, self-test function for active testing of unit functions
> Remote diagnosis via ConnectedCooking by certified RATIONAL service partners
> 2-year RATIONAL warranty including parts, labor, and travel and 5-year steam generator warranty**
> Regular maintenance is recommended. Servicing by RATIONAL service partner according to manufacturer recommendations
> Energy efficiency in accordance with ENERGY STAR tested and passed. Published at www.energystar.gov

* See the installation or planner manual for details

** Terms and conditions apply, see manufacturer warranty statement at www.rational-online.com

Options

> Cooking cabinet door, left-hinged
> MarineLine - marine version
> SecurityLine – prison / security version
> MobilityLine – mobile variant
> HeavyDutyLine – particularly heavy-duty version
> Integrated fat drain
> Mobile oven rack package
> Protection for control panel
> Safety door lock
> Lockable control panel

Datenblatt, Version 14 - 9/11/2020 8:17 AM - We reserve the right to make technical changes.

Technical specifications

Dimensions and weights

Dimensions (W x H x D)	
Cooking system (body)	33 1/2 x 39 7/8 x 30 1/2 inches
Cooking system (total)	33 1/2 x 41 7/8 x 33 1/8 inches
Cooking system with packaging	36 3/4 x 49 1/4 x 37 5/8 inches
Maximum working height of top level*	≤ 5 ft. 2 7/8 inches

*when using a corresponding RATIONAL stand

Weights	
Maximum load size per level	33 lb
Maximum total load capacity	99 lb
Weight - electric unit without packaging	279 lb
Weight - electric unit with packaging	324 lb
Weight - gas unit without packaging	341 lb
Weight - gas unit with packaging	385 lb

Electrical connection conditions

Voltage 3 AC 208 V /240V	
Connected loads - electric	18.9 kW
Steam power	18 kW
Convection power	18 kW
Breaker	60 A
RCD type	B
Cable diameter	AWG 4 140°F
Voltage 3 AC 440 V / 480 V	
Connected loads - electric	18.9 kW
Steam power	18 kW
Convection power	18 kW
Breaker	30 A
RCD type	B
Cable diameter	AWG 8 140°F

Connected loads - gas

Natural gas G20	
Nominal heat load, total	83500 BTU
Nominal heat load, Steam mode	76000 BTU
Nominal heat load, Hot Air mode	83500 BTU
Required connection flow pressure	6.5 – 10 inch w.c.
Liquid gas	
Nominal heat load, total	82000 BTU
Nominal heat load, Steam mode	74500 BTU
Nominal heat load, Hot Air mode	82000 BTU
Required connection flow pressure	10 – 15 inch w.c.

3/4" NPT with 3/4" gas shut off
Additional gas types and voltages available on request

Connected loads - gas

Voltage 2 AC 208 V	
Connected loads - gas	0.9 kW
Breaker	15 A
RCD Type	B
Voltage 1 NAC 120 V	
Connected loads - gas	0.9 kW
Breaker	15 A
RCD Type	B

Connection conditions water

Water inlet (pressure hose), each	3/4"
Water pressure (flow pressure), each	14.5-87.0 psi
Water drain, each	2" OD
Maximum flow rate per cooking system	3.17 gal/min

Water quality requirements

Untreated water can be 0 to 24.5 gr/gal (0 to 420ppm) hardness. We do not recommend treated water hardness < 5 gr/gal (86ppm) because the water could be corrosive. Sodium ion exchangers are not recommended; H+ Ion exchange systems are recommended. Water that does not meet the following minimum standards will require the proper conditioning

Contaminant	Water Requirements	If > than recommended
Sand / Particles	< 15 µm	Particle filter
Chlorine (Cl2)	< 0.12 gr/gal (0.2 ppm)	Active carbon filter
Chloride (Cl-)	< 4.68 gr/gal (80 ppm)	RO

Connected loads - exhaust air and thermal load

Latent heat load	3269 BTU
Sensible heat emission	4344 BTU
Sound level (electric)	55 dBA
Sound level (gas)	60 dBA

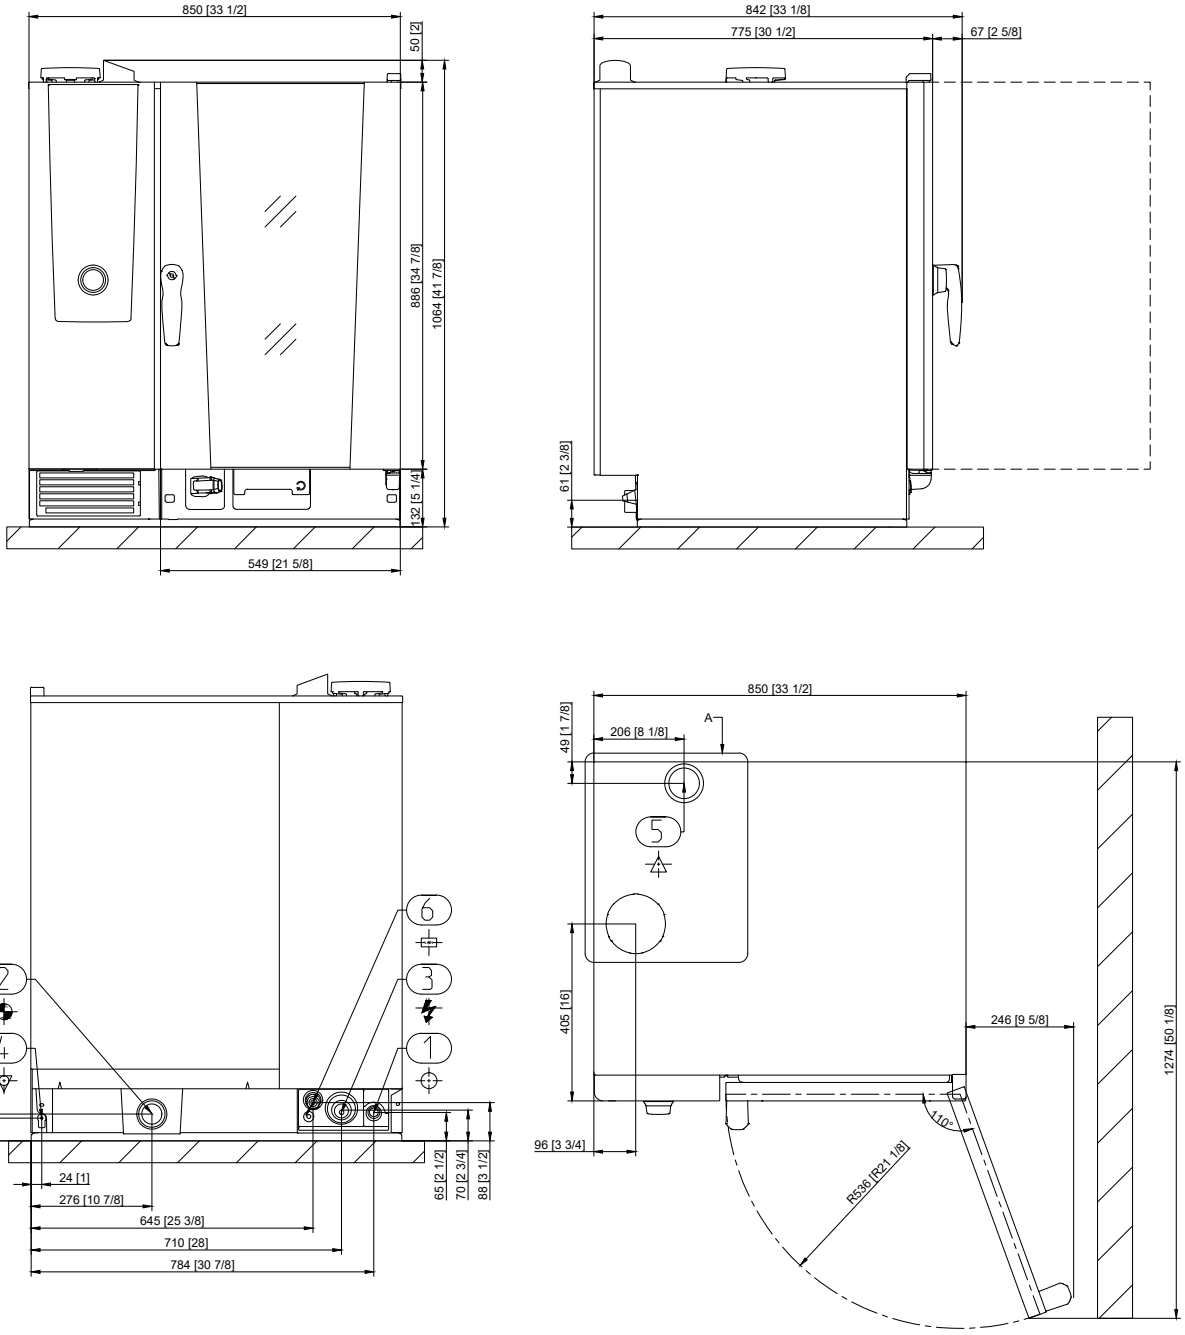
Connection loads - data

LAN data interface	RJ45
WiFi data interface	IEEE 802.11 a/g/n

Minimum distances at installation

Clearance Requirements
To facilitate servicing, we recommend leaving a 20" (500 mm) gap on the left-hand side of the unit. If there is not 20" (500 mm) left side clearance available, provisions for moving the unit to the left for service access must be made. Such provisions include, but are not limited to, having quick connections (water, gas, etc.) and lengthened electrical connections with flexible cords.
If there are no external heat sources acting on the unit, there should be at least 2" (50 mm) of clearance on either side of the unit. The back of the unit can be mounted flush with the wall.
If a high temperature heat source is on the left side of the unit, clearance of at least 14" (350 mm) must be maintained on the left-hand side. This clearance may be reduced to 2" (50 mm) if a heat shield is used (see accessories).
Recommended clearance from unobstructed rear exhaust pipes and any surface collecting grease or flammable material; 16" (400 mm) gas, 10" (254 mm) electric. It is recommended to have a hood overhang of 6" (150 mm) to 18" (450 mm) at the front of the unit and 6" (150 mm) on the sides if installed at the end of the cooking line. Please refer to the Installation Manual for additional technical data and for instructions on installation and setup.

Datenblatt, Version 14 - 9/11/2020 8:17 AM - We reserve the right to make technical changes.



Terms and conditions of installation

> Observe all local and country-specific standards and regulations regarding the installation and operation of industrial cooking appliances. The local standards and regulations for interior ventilation systems must also be taken into account.
> To use ConnectedCooking, an RJ45 network socket or a WLAN connection option (IEEE 802.11 a/g/n) must be in place on-site. For optimal performance, a data rate of at least 100 MB/s is required.

Accessories

Accessories	Item number
RATIONAL Active Green cleaning agent tabs – guarantee the best cleaning performance	Item no. 56.01.535
RATIONAL Care tabs – effectively prevent limescale deposits	Item no. 56.00.562
Stands are available in various versions - standard, with casters, or with anchorable stainless steel feet	See Cooking Systems and Accessories catalog
Run-in rail for mobile rack and mobile plate rack Size 6-half size, 10-half size	Item no. 60.75.115
Condensation breaker – diverts steam and vapors to an existing exhaust air system Sizes 6-half size, 10-half size, 6-full size and 10-full size	Item no. 60.72.592
RATIONAL USB stick – to securely transfer cooking programs and HACCP data	Item no. 42.00.162
Finishing system for banquets Size 10-half size, 26 plates	Item no. 60.11.629
Finishing system for banquets Size 10-half size, 32 plates	Item no. 60.11.628
Hinging racks – Size 10-half size	Item no. 8 racks 60.11.547
Heat shield – for installing a unit near a heat source, e.g. a grill - Size 10-half size	Item no. left side 60.75.773 Item no. right side 60.75.771
Mobile catering stand - especially for heavy mobile catering usage	Item no. 60.31.164
Mobile oven rack and mobile plate oven rack – for simple loading outside the cooking system	See Cooking Systems and Accessories catalog
Transport trolley for mobile rack and mobile plate rack - height-adjustable - Sizes 6-full size, 10-full size	Item no. 60.75.606
Transport trolley for mobile rack and mobile plate rack - standard - Sizes 6-half size, 10-half size	Item no. 60.74.000
UltraVent recirculating hood - for Size 6-half size, 10-half size electric units only	Item no. 60.67.179
UltraVent Plus recirculating hood - for Size 6-half size, 10-half size electric units only	Item no. 60.76.177
Stackable Combi-Duo kit Size 6-half size E/G on Size 6-half size E or Size 10-half size E	Item no. 60.73.991
RATIONAL Single Water Filter - for all single models and Combi-Duo XS/XS, 6-half size/6-half size and 6-half size/10-half size	Item no. 1900.1154US

We offer a wide range of cooking accessories to help you achieve ideal cooking results; for more information, please consult our accessories brochure, ask your dealer, or visit www.rational-online.com

Installation Kit
Article no. 8720.1560US

The RATIONAL Installation Kit ensures that the installer has all the essential connection materials on hand at the time of install. Not all parts are used in every installation.

Gas RATIONAL Combi Oven 6-half size G (120v/60/1ph) or (208v/60/1ph)
Gas RATIONAL Combi Oven 10-half size G (120v/60/1ph) or (208v/60/1ph)
Gas RATIONAL Combi Oven 6-full size (208-240v/60/1ph)

The Installation Kit for the above models includes:

1	ea	Gas Connector Hose, 3/4" NPT connection, 48" long, stainless steel braid with Plastic coat exterior, brass push to connect quick disconnect coupling, for castered equipment with cable strain relief
1	ea	90 degree black iron elbows, 3/4" NPT
2	ea	90 degree black iron street elbows, 1" NPT
1	ea	18" long × 3/4" NPT black iron pipe
1	ea	10" long × 3/4" NPT black iron pipe
1	ea	8" long × 3/4" NPT black iron pipe
1	ea	Close nipple 3/4" NPT black iron pipe
2	ea	45 degree black iron elbows, 3/4" NPT
2	ea	2" Minnies
1	ea	3/4" minnies
2	ea	3/4" Water Connector Hose, 5/8" ID, 3/4" female hose thread both ends, 60" long rubber coated, NSF approved
1	ea	Male union 3/4" × 3/4" MHT
2	ea	90 deg Fresh water elbow
8	feet	2" copper pipe (two 4' pieces)
2	ea	2" copper pipe 90 degree elbow
1	ea	2" copper pipe T fitting
2	ea	2" copper pipe 45 degree elbow
1	ea	2" copper pipe 90 degree elbow female to male
1	ea	2" copper pipe 90 degree long sweep
1	ea	2" copper pipe coupling
1	ea	Receptacle NEMA 6-15R 15A-250V
1	ea	NEMA 6-15R cover plate single junction box
1	ea	NEMA 6-15P
1	ea	NEMA 5-15P

Please note that installation kits are non-discountable.

Water Filtration Products.

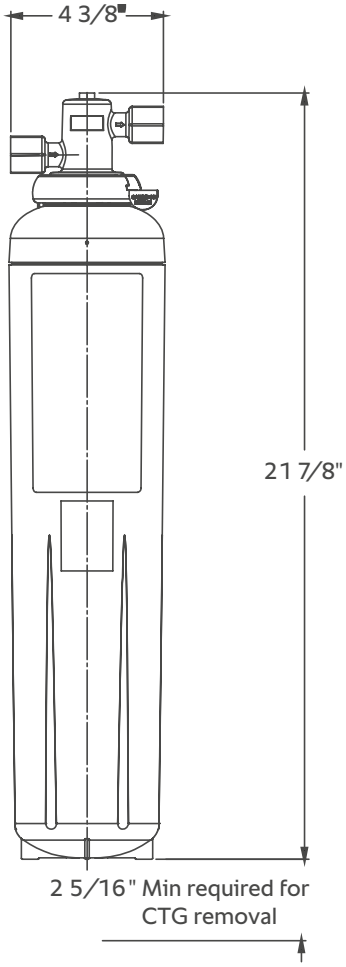
R195-CL

R195-CL

RATIONAL Water Filtration Products Model R195-CL single cartridge water filtration system helps provide consistent high quality water for your RATIONAL combi by reducing the effects of sediment, chloramines, chlorine, taste & odor while providing the required flow rates for any single Combi model or Combi-Duo models 6-half size/6-half size or 6-half size/10-half size or XS/XS.

Product Benefits

- Carbon block technology effectively reduces chloramines, chlorine, taste, and odor for better equipment protection.
- NSF Standard 42 and FDA CFR-21 compliant materials.
- Sanitary Quick Change (SQC) encapsulated cartridge design allows for fast and easy cartridge change-outs with ¼" turn.
- ½" FNPT horizontal inlet and outlet ports allow direct or easily adaptable connections to existing plumbing lines.



Model Number	Article No.	Reduction Claims	Nominal Micron Rating	Capacity	Service Flow Rate	Replacement Cartridge
R195-CL	1900.1154US	Sediment, Chloramines [1], Chlorine, Taste and Odor	5.0 [2]	30,000 gallons (113,550 liters)	2.5 gpm (9.5 lpm)	R95-CL 1900.1155US

1 As tested and certified by independent third party laboratory
2 NSF Certified for Particulate Reduction

Visit www.nsf.org for the claims associated with products that are NSF listed.

Application Guide

› Any single RATIONAL combi
› XS/XS Combi-Duo
› 6-half size/6-half size Combi-Duo
› 6-half size/10-half size Combi-Duo

Important: Installation Tips

These installation tips are for informational purposes only and are not intended to be used as actual installation instructions. Caution: To reduce the risk associated with property damage due to water leakage:

› Read and follow Use Instructions before installation and use of this system.
› Installation and use must comply with all state and local plumbing codes.
› Protect from freezing, remove filter cartridge when temperatures are expected to drop below 40°F (4.4°C).
› Do not install on hot water supply lines. The maximum operating water temperature of this filter system is 100°F (37.8°C).
› Do not install if water pressure exceeds 125 psi (862 kPa). If your water pressure exceeds 80 psi (552 kPa), you must install a pressure limiting valve. Contact a plumbing professional if you are uncertain how to check your water pressure.
› Do not install where water hammer conditions may occur. If water hammer conditions exist you must install a water hammer arrester. Contact a plumbing professional if you are uncertain how to check for this condition.
> The disposable filter cartridge must be replaced every 12 months, at the rated capacity or sooner if a noticeable reduction in flow rate occurs.

Warning

To reduce the risk associated with the ingestion of contaminants:
Do not use with water that is microbiologically unsafe or of unknown quality without adequate disinfection before or after the system.

RATIONAL recommends regularly scheduled maintenance and replacement of the filter cartridge(s) in order for the product to perform as advertised/sold. RATIONAL shall not be liable for system failures due to improper maintenance.

Limited Warranty
RATIONAL warrants this Product will be free from defects in material and manufacture for five (5) years from the date of purchase: The filter cartridge or filter membrane is warranted to be free from defects in material and manufacture for one (1) year. This warranty does not cover failures resulting from abuse, misuse, alteration or damage not caused by RATIONAL Water Filters or failure to follow installation and use instructions. No warranty is given as to the service life of any filter cartridge or membrane as it will vary with local water conditions and water consumption. RATIONAL MAKES NO OTHER WARRANTIES OR CONDITIONS, EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, ANY IMPLIED WARRANTY OR CONDITION OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR ANY IMPLIED WARRANTY OR CONDITION ARISING OUT OF A COURSE OF DEALING, CUSTOMER OR USAGE OF TRADE. If the Product fails to satisfy this Limited Warranty during the warranty period, RATIONAL will replace the Product or refund your Product purchase price. This warranty does not cover labor. The remedy stated in this paragraph is Customer's sole remedy and RATIONAL exclusive obligation. For additional information, see the entire Limited Warranty located in the product Installation and Operating Instruction Manual.
Limitation of Liability. RATIONAL will not be liable for any loss or damage arising from this RATIONAL product, whether direct, indirect, special, incidental, or consequential, regardless of the legal theory asserted, including warranty, contract, negligence or strict liability. Some states and countries do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation or exclusion may not apply to you.

Safety Data Sheet

according to 29 CFR 1910.1200(g)

Oven Delimer Tablets for RATIONAL SelfCookingCenter®, Art. Nr. 56.00.560, 56.00.562

1. Identification

Product identifier

Oven Delimer Tablets for RATIONAL SelfCookingCenter®, Art. Nr. 56.00.560, 56.00.562

Recommended use of the chemical and restrictions on use

Use of the substance/mixture

Preservative agent

Details of the supplier of the safety data sheet

Company name:	Rational AG	
Street:	Iglinger Strasse 62	
Place:	D-86899 Landsberg	
Telephone:	+49 (0)8191-3270	Telefax: +49 (0)8191-21735
Responsible Department:	Responsible for the safety data sheet: reinigung@rational-online.de	

Emergency phone number: In North America contact Info Trac at 1-800-535-5053
outside USA/CA contact +49 89 19240

2. Hazard(s) identification

Classification of the chemical

Regulation (EC) No. 1272/2008

Hazard categories:
Skin corrosion/irritation: Skin Irrit. 2
Serious eye damage/eye irritation: Eye Irrit. 2
Hazard Statements:
Causes skin irritation
Causes serious eye irritation

Label elements

Regulation (EC) No. 1272/2008

Signal word: Warning

Pictograms:

Hazard statements

Causes skin irritation
Causes serious eye irritation

Precautionary statements

Keep out of reach of children.
If medical advice is needed, have product container or label at hand.
Wear protective gloves/protective clothing/eye protection/face protection.
If on skin: Wash with plenty of water.
If in eyes: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing.
If exposed or concerned: Get medical advice/attention.

Hazards not otherwise classified

Not known.

3. Composition/information on ingredients

Mixtures

Rational AG

Safety Data Sheet

according to 29 CFR 1910.1200(g)

Hazardous components

CAS No	Components	Quantity
77-92-9	Citric acid	> 20 %
617-48-1	Malic acid	> 20 %
124-04-9	Adipic acid	1 - 5 %

4. First-aid measures

Description of first aid measures

General information

If you feel unwell, seek medical advice.

After inhalation

Move to fresh air in case of accidental inhalation of dust or fumes from overheating or combustion.

After contact with skin

In case of contact with skin wash off immediately with soap and water.
Consult a doctor if skin irritation persists.

After contact with eyes

Rinse immediately with plenty of water, also under the eyelids, for at least 15 minutes.
Seek medical treatment by eye specialist.

After ingestion

Rinse out mouth thoroughly with water.
Do not induce vomiting.
Never give anything by mouth to an unconscious person.
Summon a doctor immediately.

Most important symptoms and effects, both acute and delayed

WARNING !
Causes serious eye irritation.
Causes skin irritation.

OSHA Hazard Communication: This material is considered hazardous by the OSHA Hazard Communication Standard 29CFR 1910.1200.

Indication of any immediate medical attention and special treatment needed

Treat symptoms.

5. Fire-fighting measures

Extinguishing media

Suitable extinguishing media

Product does not burn, fire-extinguishing activities according to surrounding.

Unsuitable extinguishing media

Full water jet.

Specific hazards arising from the chemical

Fire may produce:
Irritant/corrosive, flammable as well as toxic distillation gases (carbonization gases).

Special protective equipment and precautions for fire-fighters

Use breathing apparatus with independent air supply.
Protective suit.

Additional information

Cool containers at risk with water spray jet.
Fire residues and contaminated firefighting water must be disposed of in accordance with the local regulations.

Rational AG

Safety Data Sheet

according to 29 CFR 1910.1200(g)

Oven Delimer Tablets for RATIONAL SelfCookingCenter®, Art. Nr. 56.00.560, 56.00.562

6. Accidental release measures

Personal precautions, protective equipment and emergency procedures

No special precautions required.

Environmental precautions

Do not discharge into the drains/surface waters/groundwater.

Methods and material for containment and cleaning up

Pick up mechanically, avoiding dust, and provide disposal in suitable recipients.
Flush rests with sufficient amount of water.

Reference to other sections

Observe protective instructions (see Sections 7 and 8).
Information for disposal look up chapter 13.

7. Handling and storage

Precautions for safe handling

Advice on safe handling

Avoid the formation of dust.
Avoid contact with eyes, skin or mucous membrane.

Advice on protection against fire and explosion

No special protective measures against fire required.

Conditions for safe storage, including any incompatibilities

Requirements for storage rooms and vessels

Keep in the original sealed container.
Keep containers tightly closed in a dry, well-ventilated place.

Further information on storage conditions

Keep away from food, drink and animal feeding stuffs.

8. Exposure controls/personal protection

Control parameters

Exposure controls

Appropriate engineering controls

Provide appropriate exhaust ventilation at machinery and at places where dust can be generated.

Protective and hygiene measures

Avoid contact with eyes and skin.
Wash hands before breaks and at the end of workday.
When using do not eat, drink or smoke.
Remove and wash contaminated clothing before re-use.

Eye/face protection

Tightly fitting goggles.
Eye wash bottle with pure water.

Hand protection

Protective gloves resistant to chemicals made off natural-rubber latex, Minimum coat thickness 0.6 mm, Permeation resistance (wear duration) approx. 480 minutes, i.e. protective glove <Lapren 706> made by www.kcl.de.
This recommendation refers exclusively to the chemical compatibility and the lab test conforming to EN 374 carried out under lab conditions.
Requirements can vary as a function of the use. Therefore it is necessary to adhere additionally to the recommendations given by the manufacturer of protective gloves.

Rational AG

Safety Data Sheet

according to 29 CFR 1910.1200(g)

Respiratory protection

No personal respiratory protective equipment normally required.
Breathing apparatus (particle filter) only if dust is formed.

9. Physical and chemical properties

Information on basic physical and chemical properties

Physical state:	Tablet
Color:	White
Odor:	Characteristic

		Test method
pH-Value:	2,5	(1%)

Changes in the physical state

Flash point:	n.a.
Lower explosion limits:	n.a.
Upper explosion limits:	
Ignition temperature:	n.a.

Oxidizing properties
n.a.

Vapor pressure: (at 20 °C)	n.a.
Water solubility: (at 20 °C)	Soluble
Partition coefficient:	n.d.

Other information

Bulk density: approx. 800 g/L

10. Stability and reactivity

Reactivity

No decomposition if stored and applied as directed.

Chemical stability

Stability: Stable

Stable under normal conditions.

Possibility of hazardous reactions

Hazardous reactions: Will not occur

No hazardous reactions known.

Conditions to avoid

Protect from moisture.

Incompatible materials

No materials to be especially mentioned.

Hazardous decomposition products

No hazardous decomposition products known.

11. Toxicological information

Information on toxicological effects

Rational AG

Safety Data Sheet

according to 29 CFR 1910.1200(g)

Route(s) of Entry

Skin and eye contact, inhalation and ingestion.

Acute toxicity

Based on available data, the classification criteria are not met.
Citric acid
LD50/oral/rat: 6730 mg/kg
Adipic acid
LD50/oral/rat: 11000 mg/kg
Malic acid
LD50/oral/rat: >3200 mg/kg

CAS No	Components				
	Exposure routes	Method	Dose	Species	Source
77-92-9	Citric acid				
	oral	LD50	11700 mg/kg	Rat	
	dermal	LD50	> 2000 mg/kg	Rat	

Irritation and corrosivity

Causes skin irritation
Causes serious eye irritation
Skin irritation: Irritant
Eye irritation: Irritant

Sensitizing effects

Based on available data, the classification criteria are not met.
Irritant

Specific target organ toxicity (STOT) - single exposure

Based on available data, the classification criteria are not met.

Severe effects after repeated or prolonged exposure

Based on available data, the classification criteria are not met.
STOT - Single exposure: Not classified.
STOT - Repeated exposure: Not classified.
Aspiration hazard: Not classified.

Carcinogenic/mutagenic/toxic effects for reproduction

Based on available data, the classification criteria are not met.
Carcinogenicity: Not classified.
Mutagenicity: Not classified.
Teratogenicity: Not classified.

Carcinogenicity (NTP): Not listed
Carcinogenicity (IARC): Not listed
Carcinogenicity (OSHA): Not listed

Aspiration hazard

Based on available data, the classification criteria are not met.

Practical experience

Other observations

Ingestion causes irritation of upper respiratory system and gastrointestinal disturbance.
Inhalation of dust may cause shortness of breath, tightness of the chest, a sore throat and cough.

12. Ecological information

Ecotoxicity

Citric acid :
LC50/Leuciscus idus/96 h: 440 - 706 mg/l

Rational AG

Safety Data Sheet

according to 29 CFR 1910.1200(g)

EC50/Daphnia magna: 85 mg/l
Adipic acid:
LC50/Pimephales promelas/96 h: 97 mg/l

Persistence and degradability

Product is biodegradable.

Bioaccumulative potential

No data available.

Mobility in soil

The product is soluble in water.

Other adverse effects

No data available.

13. Disposal considerations

Waste treatment methods

Advice on disposal

Remove in accordance with local official regulations.

Contaminated packaging

Empty containers should be taken for local recycling, recovery or waste disposal.
Contaminated packaging should be emptied as far as possible and after appropriate cleansing may be taken for reuse.
Packaging that cannot be cleaned should be disposed of like the product.

14. Transport information

US DOT 49 CFR 172.101

Proper shipping name: Not regulated.

Other applicable information

Non hazardous material as defined by the transport regulations.

15. Regulatory information

U.S. Regulations

National Inventory TSCA

All of the components are listed on the TSCA inventory.

National regulatory information

SARA Section 304 CERCLA:
Adipic acid (124-04-9): Reportable quantity = 5,000 (2270) lbs. (kg)
SARA Section 311/312 Hazards:
Citric acid (77-92-9): Immediate (acute) health hazard
Malic acid (617-48-1): Immediate (acute) health hazard
Adipic acid (124-04-9): Immediate (acute) health hazard

SARA

To the best of our knowledge this product contains no toxic chemicals subject to the supplier notification requirements of Section 313 of the Superfund Amendments and Reauthorization Act (SARA/EPCRA) and the requirements of 40 CFR Part 372.

State Regulations

Safe Drinking Water and Toxic Enforcement Act of 1986 (Proposition 65, State of California)

This product contains no chemicals known to the State of California to cause cancer, birth defects or other reproductive harm.

3M™ Water Filtration Products

SPEC# _____

QUANTITY _____

application: **SCALE CONTROL**

model:

SF165

The 3M Purification Inc. Water Filtration Products SF165 Scale-GARD™ HT System helps provide consistent Recipe Quality Water™ with reduced sediment and chlorine taste and odor. Operating cost savings from the controlled and metered addition of scale-inhibitors reduces the ability of calcium and magnesium to precipitate as hard scale in both high and low temperature applications, including ice machines, coffee, tea, espresso brewers and steamers*.

- ScaleGARD HT, SF165 combines chlorine taste and odor reduction withs ediment reductions and helps protect against the effects of scale formation at flow rates to 3.34 gpm (12.6 lpm) for 35,000 gallons (132,000 liters).

PRODUCT BENEFITS

- Advanced Integrated Membrane Pre-Activated Carbon Technology ("IMPACT") filtration media combines a membrane in series with premium activated carbon to provide superior throughput and cartridge life.
- Reduced sediment and chlorine taste and odor for equipment protection and great tasting hot and cold beverages and ice.
- A forced-feed orifice carefully controls and meters the addition of a proprietary scale inhibitor to reduce scale build-up on heating coils.
- Superior scale reduction performance in equipment from ice machines to equipment heating water to temperatures over 200°F (93°C).
- Sanitary Quick Change (SQC) HF65 encapsulated cartridge design allows for fast and easy change-outs with a 1/4 turn while minimizing the possibility of leakage and contamination.
- 3/4" FNPT inlet and outlet ports allow direct or easily adaptable connections to existing plumbing lines.
- FDA CFR-21 and/or NSF compliant materials.
- System includes a pressure gauge, inlet shut-off valve and outlet check valve for simple installation and operation.

PRODUCT SPECIFICATIONS

3M Purification Inc. Water Treatment Products

⚠**WARNING: To reduce the risk associated with the ingestion of contaminants:**

- **Do not use with water that is microbiologically unsafe or of unknown quality without adequate disinfection before or after the system.**

3M Purification Inc. recommends regularly scheduled maintenance and replacement of the filter cartridge(s) in order for the product to perform as advertised/sold. 3M Purification shall not be liable for system failures due to improper maintenance.

PHYSICAL SPECIFICATIONS

- System includes a manifold with built-in pressure gauge, inlet water shut-off valve, outlet check valve, mounting bracket, filter cartridge and scale-feeding system.
- Inlet and outlet plumbing connections are 3/4" FNPT.
- Filter cartridges are o-ring seal type.
- System maximum operating pressure of 125 psi (862 kPa) and operating temperatures of 100°F (37.8°C).
- Recommended service flow rate is up to 3.34 gpm (12.6 lpm)
- Filter cartridge incorporates carbon block media protected by a pleated pre-filter membrane.
- All wetted parts and media are FDA CFR-21 compliant.
- Cartridges are sanitary in design, requiring no contact with the filter media during cartridge change-out.
- Filter cartridges requires no pre-activation.
- Shipping Weight: 6 lbs. (2.7 kg).
- Operating Weight: 12 lbs. (5.4 kg).

IMPORTANT: INSTALLATION TIPS

These installation tips are for informational purposes only and are not intended to be used as actual installation instructions. CAUTION: To reduce the risk associated with property damage due to water leakage:

- **Read and follow** Use Instructions before installation and use of this system.
- Installation and use **MUST** comply with all state and local plumbing codes.
- **Protect from freezing,** remove filter cartridge when temperatures are expected to drop below 40°F (4.4°C).
- **Do not install on hot water supply lines.** The maximum operating water temperature of this filter system is 100°F (37.8°C).
- **Do not install** if water pressure exceeds 125 psi (862 kPa). If your water pressure exceeds 80 psi (552 kPa), you must install a pressure limiting valve. Contact a plumbing professional if you are uncertain how to check your water pressure.
- **Do not install** where water hammer conditions may occur. If water hammer conditions exist you must install a water hammer arrester. Contact a plumbing professional if you are uncertain how to check for this condition.
- The disposable filter cartridge **MUST** be replaced every 12 months, at the rated capacity or if a noticeable reduction in flow rate occurs.

LIMITED WARRANTY

3M Purification Inc. warrants this Product will be free from defects in material and manufacture for five (5) years from the date of purchase: The filter cartridge or filter membrane is warranted to be free from defects in material and manufacture for one (1) year. This warranty does not cover failures resulting from abuse, misuse, alteration or damage not caused by 3M Purification Inc. or failure to follow installation and use instructions. No warranty is given as to the service life of any filter cartridge or membrane as it will vary with local water conditions and water consumption. **3M PURIFICATION INC. MAKES NO OTHER WARRANTIES OR CONDITIONS, EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, ANY IMPLIED WARRANTY OR CONDITION OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR ANY IMPLIED WARRANTY OR CONDITION ARISING OUT OF A COURSE OF DEALING, CUSTOMER OR USAGE OF TRADE.** If the Product fails to satisfy this Limited Warranty during the warranty period, 3M Purification Inc. will replace the Product or refund your Product purchase price. This warranty does not cover labor. **The remedy stated in this paragraph is Customer's sole remedy and 3M Purification Inc.'s exclusive obligation. For additional information, see the entire Limited Warranty located in the product Installation and Operating Instruction Manual.**

Limitation of Liability: 3M Purification Inc. will not be liable for any loss or damage arising from this 3M Purification Inc. product, whether direct, indirect, special, incidental, or consequential, regardless of the legal theory asserted, including warranty, contract, negligence or strict liability. Some states and countries do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation or exclusion may not apply to you.

"ST6R5-SSK" STAINLESS STEEL TOP WORK TABLES

16GA TOP W/ 5" RISER AND STAINLESS STEEL LEGS AND ADJUSTABLE UNDERSHELF

FEATURES:

- 16 GAUGE STAINLESS STEEL TOP W/ 5" RISER & TURNDOWN
- TYPE 300 STAINLESS STEEL WITH # 4 POLISH, SATIN FINISH
- TOP IS SOUND DEADENED
- REINFORCED WITH 1"X2" CHANNEL RUNNING ENTIRE LENGTH OF TABLE
- 1-1/2" STALLION EDGE ON FRONT SIDE EDGES 90 DEGREE BEND DOWN FOR TABLE LINE-UP
- STAINLESS STEEL BASE WITH ADJUSTABLE UNDERSHELF
- ADJUSTABLE BULLET FEET
- SHIPPED KNOCKED-DOWN, EASY-TO-ASSEMBLE
- NSF AND CSA CERTIFIED

ST6R5-3048SSK

CONSTRUCTION:

- TOP: STAINLESS STEEL TOPS ARE TIG WELDED, EXPOSED WELDS ARE POLISHED TO MATCH ADJACENT SURFACE.

MATERIAL:

- TOP: 16 GAUGE STAINLESS STEEL TYPE 300 STAINLESS STEEL WITH # 4 POLISH, SATIN FINISH
- SHELF: 18 GAUGE STAINLESS STEEL, (36" WIDE TABLES, 16 GAUGE LOWER SHELF)
- LEGS: 1-5/8" ROUND O.D. 16 GAUGE TUBULAR STAINLESS STEEL
- GUSSETS: STAINLESS STEEL
- FEET: 1" ADJUSTABLE STAINLESS BULLET FEET

GRIDDLES & BROILERS

VULCAN

VCCB SERIES
COUNTER MODEL GAS CHARBROILER

Model VCCB47

- ☐ **VCCB25** 25¼" wide
- ☐ **VCCB36** 36" wide
- ☐ **VCCB47** 46¾" wide
- ☐ **VCCB60** 60" wide
- ☐ **VCCB72** 72" wide

STANDARD FEATURES

- Stainless steel sides, control panel, top trim, backsplash and grease trough.
- Full width front grease drawers.
- Heavy duty cast iron char-radiants and burners.
- 5¼" wide sloped cast iron grates are reversible for "level" broiling or self-cleaning. Cast in pitched grease trough in each grate blade provides fat run-off and controls flare-ups.
- One 14,500 BTU/hr. burner for each broiler grate.
- Standing pilot ignition system.
- One infinite heat control valve for each burner.
- Underburner deflector system reflects heat upwards creating a "Cool Zone" in the grease drawer and drip areas.
- 4" adjustable legs.
- ¾" rear gas connection and gas pressure regulator.
- One year limited parts and labor warranty.

SPECIFICATIONS

Low profile, high volume gas charbroiler, Vulcan Model No. _____. Stainless steel front, sides, top trim and grease trough. Full width front grease collection drawers. Heavy duty cast iron char-radiants and burners. 5¼" wide cast iron grates. One 14,500 BTU/hr. burner for each broiling grate. Underburner deflector system reflects heat upwards. Standing pilot ignition system. One infinite heat control valve for each burner. 4" adjustable legs. ¾" rear gas connection and gas pressure regulator.

Exterior Dimensions:
_____" wide x 27¼" deep x 13" working height.

CSA design certified. NSF listed.

SPECIFY TYPE OF GAS WHEN ORDERING.
SPECIFY ALTITUDE WHEN ABOVE 5,999 FT.

ACCESSORIES

- ☐ 10" deep plate rail.
- ☐ 6" back and side splash kit.
- ☐ Diamond and waffle pattern cast iron grates.
- ☐ Stainless steel diamond grate.
- ☐ Welded steel round rod grate.
- ☐ Stainless steel stand with undershelf and casters.

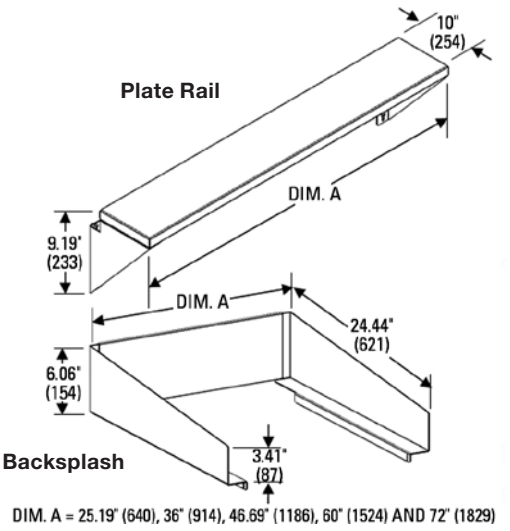
GRIDDLES & BROILERS

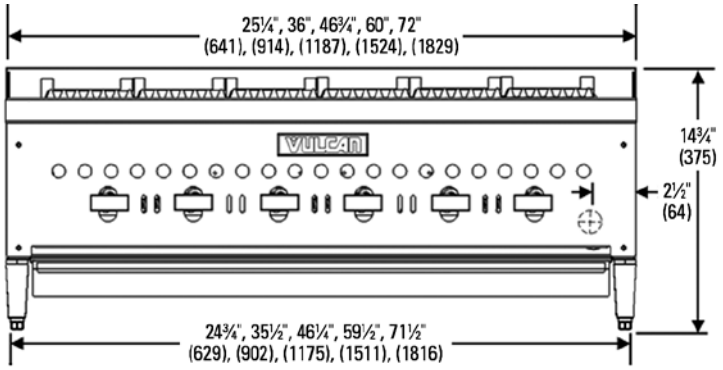
VCCB SERIES
COUNTER MODEL GAS CHARBROILER

INSTALLATION REQUIREMENTS:



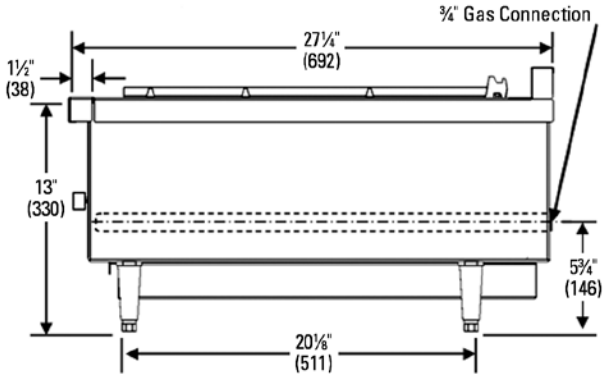
1. A gas pressure regulator supplied with the unit must be installed:
   Natural Gas 5.0" (127 mm) W.C.
   Propane Gas 10.0" (254 mm) W.C.
2. An adequate ventilation system is required for commercial cooking equipment. Information may be obtained by writing to the National Fire Protection Association, Batterymarch Park, Quincy, MA 02269. When writing refer to NFPA No. 96.
3. These units are manufactured for installation in accordance with National Fuel Gas Code, ANSI-Z223.1/NFPA #54 (latest edition). Copies may be obtained from The American Gas Association, Accredited Standards Committee Z223 @ 400 N. Capital St. NW, Washington, DC 20001, or the Secretary Standards Council, NFPA, 1 Batterymarch Park, Quincy, MA 02169-7471.

NOTE: In The Commonwealth of Massachusetts
All gas appliances vented through a ventilation hood or exhaust system equipped with a damper or with a power means of exhaust shall comply with 248 CMR.



4. CLEARANCES – This model series is for installation in noncombustible locations with the following clearances:

	Back	Right Side	Left Side
Above grid level	3"	0"	0"
Below grid level	3"	0"	0"



5. This appliance is manufactured for commercial installation only and is not intended for home use.

DIM. A = 25.19" (640), 36" (914), 46.69" (1186), 60" (1524) AND 72" (1829)

Dormont®

Foodservice Moveable Equipment Installation Products

The Dormont Blue Hose™ is the heart of the Safety System, specifically engineered for caster-mounted commercial cooking equipment. The Blue Hose includes an antimicrobial protective PVC coating, and our Stress Guard® technology that makes the hose easier to install and dramatically reduces stress on the hose ends.

The fuel gas codes require the use of an ANSI Z21.69/CSA 6.16 moveable gas connector with all appliances that may or may not utilize casters and, under normal use, are moved on a regular basis for service, positioning or area cleanliness.

STRESS GUARD TECHNOLOGY

Rotation technology reduces stress on both ends of the hose

Stainless Steel Construction
Heavy-duty, flexible, corrugated 304 stainless steel tubing

Stainless Steel Braid
Tight-weave braid prevents corrugations from stretching as equipment is moved

Antimicrobial PVC Coating
Inhibits growth of bacteria, mold and mildew on the gas connector

A Watts Water Technologies Company USA: 6015 Enterprise Drive, Export, PA 15632 • 1-800-DORMONT • Dormont.com

The Dormont Safety System™ is the first and only complete gas equipment connection system specifically engineered for the commercial kitchen. It is a complete system of connection products designed with the safety of your kitchen, the food you serve, your employees, and your business in mind.

The Safety System includes the famous Dormont Blue Hose and our exclusive safety-based fittings - the SnapFast quick-disconnect, the Safety Quik quick-disconnect valve, and the Swivel MAX. Safe, unique, and affordable, the Dormont Safety System provides peace of mind for the gas connections in your commercial kitchen.

Safety Quik
- Prevents user from turning on gas while appliance is disconnected
- Thermal shut-off when internal temperature exceeds 350°F (177°C)

SnapFast
- One-handed quick-disconnect fitting
- Thermal shut-off when internal temperature exceeds 350°F (177°C)

SwivelMAX
- Reduces stress on connector
- Increases kitchen aisle space by allowing connector to be positioned closer to the wall

Restraining Cable
- Prevents transmission of strain to connector
- Provided 1' shorter than the gas connector

Safety-Set
Always on the mark
- Ensures cooking equipment is always positioned in design-specified location
- Fast installation with choice of adhesive foam tape or thumbscrews

CR72A

72” Low-Profile Refrigerated Chef Base

CR72A
05/12/25
Item # 13490

W x D x H
72.5” x 32.25” x 26”*
*to work surface with 4” casters

Item #: _____
Project: _____
Qty: _____
AIA#: _____

Features

- **Heavy duty 16 gauge stainless steel top with marine edge (front/rear), drip edge (sides)**
- **Ceramic heat shield integral to top protects food from high heat**
- **1500 pound capacity provides sturdy base for cooking equipment**

- Environmentally friendly R290 hydrocarbon refrigerant
- Stainless steel exterior front, sides and top
- Stainless steel interior sides and back with stainless steel interior floor
- Solid state digital controller with temperature alarms and LED display (Fahrenheit or Celsius)
- Cabinet and drawers are insulated with 2” CFC free foamed in place polyurethane
- Stainless steel exterior drawer with stainless steel interior
- Drawer module frames, acetal rollers and drawer stops are formed of heavy duty stainless steel all welded construction and securely fastened in the cabinet
- Drawers will accommodate (2) 12” x 20” x 6” deep pans (pans by others)
- Drawers are equipped with finger cut-outs for easy removal of pans
- Extruded aluminum flush mount drawer handles
- Magnetic drawer gasket is easily removable for cleaning
- Removable stainless steel end panel for access to refrigeration system
- E-coated evaporator coil
- Energy efficient automatic hot gas condensate evaporator
- Standard with (6) 4" casters all with brakes
- 10 ft. cord and plug

If GFCI is required, a GFCI breaker MUST be used in lieu of GFCI receptacle

Dimensions / Capacity	Two-Section CR72A
Interior Storage Capacity (CF)	17.26 ft³
Interior Storage Capacity (CF) (AHAM)	15.44 ft³
Overall Width x Depth (including 1” bumper)	72.5” x 33.25”
Overall Height (including 4” casters)	27”
Height To Work Surface (including 4” casters)	26”
Depth with Drawer Fully Open (including 1” bumper)	55.75”
Drawer Opening Width	27.75”
Pan Capacity (12” x 20”) / per drawer	8 total / 2 per drawer
Maximum Pan Depth	6”
Maximum Load Capacity	1500 lbs.
Crated Shipping Weight	500 lbs.
Crated Length x Width x Height	74” x 34.5” x 30.5”

Electrical / Refrigeration	Two-Section CR72A

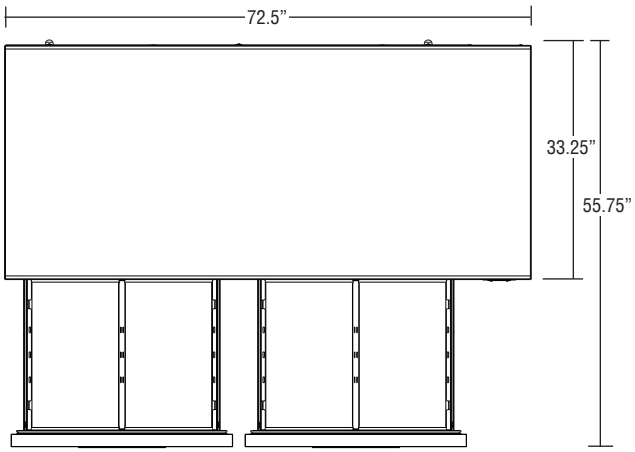
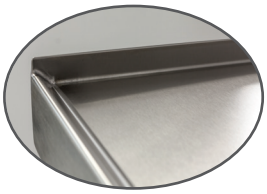
72” Low-Profile Refrigerated Chef Base



FRONT VIEW

SIDE VIEW



PLAN VIEW

CLEARANCES

- Top: A minimum of 4” (11cm) clearance is required between the bottom of the cooking equipment heating element and the appliance top. Temperature at the appliance top must not exceed 180°F (82°C).
- Sides: 1” (25mm) clearance
- Rear: The factory installed rear bumpers must be in place to ensure proper rear clearance.

16 gauge stainless steel top with built in heat shield and 1” drip edge

Cabinet Construction

The exterior cabinet front, sides, and top are constructed of high quality stainless steel. The exterior back and bottom are constructed of coated steel. The cabinet interior walls and ceiling are stainless steel. The floor is constructed of heavy gauge stainless steel with coved corner construction. Heavy duty ABS thermal breaks are used to reduce heat transfer in the frames. Cabinet walls and drawers are insulated with 2” of environmentally friendly CFC free, foamed in place polyurethane. 4” heavy duty platform casters (all with brakes) are standard and installed at the factory.

Drawer Construction

Drawer fronts are constructed of high grade stainless steel with stainless steel interior and are insulated with CFC free, foamed in place polyurethane. Each drawer accommodates (2) 12” X 20” X 6” deep pans (pans by others). (Drawers will also accept 1/2, 1/3rd and 1/6th size pans with optional adapter bars). Drawer module frames are formed of heavy duty stainless steel all welded construction and securely fastened in the cabinet. The drawer slides are constructed of heavy duty stainless steel with durable acetal rollers with stainless steel ball bearings to prevent metal to metal contact. The drawer slides have been life tested (fully loaded) three hundred thousand cycles without showing significant wear. The flush mount handles are constructed of extruded aluminum. Snap-in magnetic drawer gaskets are durable and easily removed for cleaning.

Refrigeration System

Solid state digital controller with temperature alarms maintains optimum cabinet temperature. A LED display shows the cabinet temperature and is adjustable to Fahrenheit or Celsius. The CR72A has a front breathing refrigeration system. The high efficiency refrigeration system is standard with an E-coated evaporator for extended life. Condensate removal is accomplished with an energy efficient hot gas condensate evaporator system. A capillary tube controls the flow of environmentally friendly R290 refrigerant through the evaporator. Refrigeration system utilizes an automatic, time-initiated, heated defrost to eliminate any ice on the evaporator coil. 115 volt units are equipped with a ten foot cord and plug (20.0 amps or less).

ND Series

Exhaust-Only Hood

Captive-Aire's flagship ND hood is a wall canopy exhaust-only unit that operates at low CFM. It is ETL Listed for use over 450°F, 600°F, and 700°F cooking surface temperatures.

Offering A Fully Integrated Package, Pre-Engineered For Optimum Performance

ADVANTAGES

- **Exhaust Flow Rates:** Superior exhaust flow rates. A 4' Hood can operate at 150 CFM/ft or 600 total CFM.
- **ETL Listed:** ETL Listed for use over 450°F, 600°F and 700°F cooking surface temperatures, provides flexibility in designing kitchen ventilation systems. ETL Listed to Canadian safety standards, NSF Listed and built in accordance with NFPA 96.
- **Front Design:** Double Wall front design prevents condensation and directs grease-laden vapors toward the exhaust filter bank.
- **Stainless Steel Construction:** Polished stainless steel on the interior and exterior of the front enhance aesthetics.
- **Optional Make-Up Air:** Up to 80% make-up air can be supplied through an optional front plenum (ND Series with PSP Accessory), or up to 90% with an optional rear plenum (ND-BR Series), or front and rear plenums (ND-BR Series with PSP Accessory).
- **Sturdy Construction:** Sturdy stainless steel construction with double wall, insulated front panel.
- **Pre-wiring at Factory:** Factory pre-wired lighting to illuminate the cooking surface.
- **Industrial Grease Baffle Filters:** All hoods come standard with aluminum baffle filters. Stainless steel filters are optional. High velocity cartridge filters are available on the CND series.
- **Clearance to Combustibles:** Optional integral clearance to combustibles reduction system to meet NFPA 96 requirements.
- **Face Mounted Controls:** Optional UL Listed light and fan control switches flush mounted and pre-wired through electrical chaseway.
- **Capture & Containment:** Exceptional capture and containment of cooking vapors. This is accomplished with the signature ND "triangle" on the front of the hood's capture area and the "C-shaped" design of the hood's capture area.
- **ETL Listed Fire Damper:** Optional ETL Listed exhaust fire damper on the ND-100 model.

PERFORMANCE

Max. Avg. Cooking Surface Temp. (°F)	Configuration	Min. Exhaust CFM/ft.
450°F - Ovens, Steamers, Kettles, Open-Burner Ranges, Griddles, Fryers	Single Wall Hood	150
	2 Wall Hoods Back-to-Back in an Island Configuration	300
600°F - Gas Charbroilers, Electric Charbroilers, Woks	Single Wall Hood	200
	2 Wall Hoods Back-to-Back in an Island Configuration	400
700°F - Mesquite Grills, Charcoal Charbroilers, Gas Conveyor Charbroilers	Single Wall Hood	250
	2 Wall Hoods Back-to-Back in an Island Configuration	500

Recommended Duct Sizing:

- Exhaust - Based on 1500 FPM

FEATURES

- Available in single wall type or two piece back-to-back island configuration.
- Fabricated of Type 430 stainless steel, #3 or #4 polish, on all exposed surfaces. Optional type 304 stainless steel available.
- Double-wall, insulated front increases rigidity and reduces condensation.
- Fitted with UL Classified, aluminum filters, removable for cleaning. Optional stainless steel and ETL Listed high velocity cartridge filters available. (Model CND)
- Grease drain system (1/8" per foot minimum slope) with removable pint cup for easy cleaning.
- Pre-punched hanging angles on each end of hood. Additional set provided for hoods longer than 12'.
- Optional integral clearance to combustibles reduction system to meet NFPA 96 requirements.
- Fitted with UL Listed, pre-wired, incandescent light fixtures and plastic-coated glass globes to hold up to a standard 100 watt bulb. Recessed incandescent and recessed fluorescent lights optional.
- A built-in wiring chase provided for optimal positioning of electrical controls and outlets on the front face of the hood without penetrating capture area or requiring external chaseway.
- Optional ETL Listed exhaust fire damper (Model ND-100).
- ETL Listed for 450°F, 600°F and 700°F cooking surfaces (File 3054804-001 without exhaust damper; File 3054804-002 with exhaust damper), NSF Listed and built in accordance with NFPA Standard 96.

OPTIONS

Utility Cabinet: ETL Listed for integral side mount on the Captive-Aire Systems ventilation hood...fabricated of same material as hood...the cabinet houses factory pre-piped UL Listed fire suppression system* and ETL Listed, pre-wired electrical controls...pre-wire package* contains light switches, lighted fan control switches and internal factory wiring and components (starters, relays, etc.) to reduce field wiring requirements. ETL tests confirm temperatures do not exceed 120°F inside the cabinet during fire condition. (120°F is the maximum allowed storage temperature for the UL Listed fire suppression system and the ETL Listed Industrial control panel.) (*Dimensional restrictions may apply)

Rear Make-Up Air Plenum: Provides make-up air for the kitchen, discharged below cooking equipment...welded...stainless steel exposed surfaces...unexposed surfaces made of aluminized metal...shipped separately, requiring field connection...insulated to prevent condensation...perforated diffuser plates for even air distribution. Provides required clearance from limited combustibles per NFPA 96 Standards.

Front Perforated Supply Plenum: Provides low velocity make-up air for the kitchen, discharged in front of the hood...welded...stainless steel...perforated diffuser plates for even air distribution...supply riser includes a volume damper for easy balancing.

Removable, ETL Listed, High Velocity Cartridge Filters: Constructed of stainless steel...uses centrifugal force to remove grease and other particulates...National Institute of Standards and Technology methodology used by an independent agency to evaluate performance...tests indicate 95 percent extraction efficiency.

Enclosure Panels: Constructed of stainless steel...mounting channel factory-welded to hood for field installation of panels over 11" high...under 11", factory-welded and integrally installed into hood front ends...sized to extend from hood top to ceiling, enclosing pipe and hanging parts.

End Panels: Should be used to maximize hood performance and eliminate the effects of cross drafts in kitchen...units constructed of stainless steel and sized according to hood width and cooking equipment. Exposed edges hemmed for safety and rigidity.

Exhaust Fire Damper: ETL Listed...installed in exhaust collar...activated by a ETL Listed, 212°F, 10-lb. minimum rated fusible link.

Roof Top Package: Combination ETL Listed exhaust/supply air unit with factory prewired and mounted motors, trunkline and curb vented on exhaust side. Various models perform up to 14,000 CFM exhaust and up to 3 inches static pressure...weatherproofed...galvanized construction... washable mesh filters...exhaust/supply air fans share common roof penetration...internal wiring drops directly through curb, requiring no pitch pockets...exhaust outlets/air intakes spaced to conform to code regulations...automatic reset/thermal overload protection on all single phase motors and on three phase motors if pre-wire assembly is included in package...standard single-point power connections...UL 705, 762 Listed exhaust fans rated for high grease applications...optional backdraft dampers.

Separate Exhaust and/or Make-Up Air Fans: ETL Listed single exhaust fans and supply-air fans and curbs available...same features, construction methods and performance ratings as roof top package above.

Heated Make-Up Air Unit: ETL Listed direct fired gas heated make-up air unit manufactured... ETL Listed for natural gas and propane... design integrates the blower and burner into a single package... heavy duty, weather resistant, galvanized steel construction... units available in Roof Top Package or as a stand alone heated make-up air module... several sizes available to meet almost any performance rating specification.

Fire Suppression System: UL 300 pre-piped fire suppression system...Custom designed to your cooking equipment line-up.

Construction: 430 and 304 stainless steel construction...On exposed surfaces or 100%.

Clearance to Combustibles: Integral clearance to combustibles system that meets NFPA 96 requirements.

Electrical Controls: ETL listed controls... Face mounted switches.

New York City School Construction Authority Requirements: The CND Series hood with the SCA option package (CND-SCA) is manufactured to meet New York City School Construction Authority requirements. Contact a Captive-Aire sales representative for more information.

FULLY INTEGRATED PACKAGE

Captive-Aire sells this hood as a stand-alone appliance to be integrated into a kitchen ventilation application. Captive-Aire also provides this hood as part of a **FULLY INTEGRATED PACKAGE** designed by Captive-Aire and pre-engineered for **OPTIMUM PERFORMANCE**. The package consists of the hood, an integral ETL Listed utility cabinet, factory pre-wired ETL Listed electrical controls, and a factory pre-piped UL Listed fire suppression system. Other options include a ETL Listed exhaust damper, a ETL Listed exhaust fan, a ETL Listed non-tempered make-up air fan, and/or a ETL Listed direct-fired heated make-up air unit. Fire suppression systems include final hookup and inspection.

CERTIFICATIONS

The ND Model has been certified by ITS. This certification mark indicates that the product has been tested to and has met the minimum requirements of a widely recognized (consensus) U.S. and Canadian products safety standard, that the manufacturing site has been audited, and that the applicant has agreed to a program of periodic factory follow-up inspections to verify continued performance.

Models ND are ETL Listed under file number 3054804-001 and complies with UL710 Standards and ULC710 Standards.

Glo-Ray® Aluminum Dual Infrared Strip Heaters

Models:

GRA-18D, -24D, -30D, -36D, -42D, -48D, -54D, -60D, -66D, -72D, -84D, -96D, -108D, -120D, -132D, -144D

GRAH-18D, -24D, -30D, -36D, -42D, -48D, -54D, -60D, -66D, -72D, -84D, -96D, -108D, -120D, -132D, -144D

Create a deeper holding area with Glo-Ray® Aluminum Dual Infrared Foodwarmers with two heaters mounted side-by-side, keeping hot food at optimum serving temperatures. The pre-focused heat pattern directs heat from a metal sheathed element across the entire holding surface. The continuous aluminum housing and heavy-duty mountings ensure the durability and quality of Hatco products.

Standard features

- Provides even heat distribution – no “cold spots”
- Pre-focused heat maintains safe serving temperatures longer
- Sturdy extruded aluminum housings that do not sag, from 18" to 144" (457 to 3658 mm)
- Reflector does not blacken, maintaining a consistent heat pattern
- Reinforced wire guards provide operator safety without affecting heat distribution
- 3" or 6" (76 or 152 mm) spacer available as a center section between two 6" (152 mm) heater sections for a deeper holding area
- Heavy-duty insulation minimizes heat loss
- Optional sneeze guard made of shatterproof, easy-to-clean acrylic provide safe food serving environment
- Additional reflector styles and lower wattage elements also available, please consult factory for more information
- Metal sheathed heating element part guaranteed against burnout and breakage for two years

Options (available at time of purchase only)

Housing – clear Anodized finish Standard
☐ 15" (4572 mm) ☐ 18" (457 mm)
Designer Color or Gloss Finish⊗▪
☐ Warm Red ☐ Black ☐ Gray Granite ☐ White Granite
☐ Navy Blue ☐ Hunter Green ☐ Antique Copper
☐ Radiant Red ☐ Glossy Gray ☐ Bold Black ☐ Gleaming Gold
☐ Brilliant Blue

☐ Indicator Light (Remote only)

Leads – Extended Beyond Standard 3' (914 mm) Conduit
Please specify lead length
☐ 1'-5' (305-1525 mm) ☐ 6'-10' (1829-3048 mm)
☐ 11'-15' (3352-4572 mm) ☐ 16'-20' (4877-6096 mm)

Sneeze Guard
☐ 9.375" (238 mm) – One Side ☐ 9.375" (238 mm) – Two Sides
☐ 14" (356 mm) – One Side ☐ 14" (356 mm) – Two Sides

☐ Remote Infinite Switches in lieu of Toggle (max. 12.2 amps)

☐ Remote Toggle Switches (max. 15 amps)

☐ Remote Box (RMB) – clear Anodized finish Standard
Designer Color or Gloss Finish⊗▪
☐ Warm Red ☐ Black ☐ Gray Granite ☐ White Granite
☐ Navy Blue ☐ Hunter Green ☐ Antique Copper
☐ Radiant Red ☐ Glossy Gray ☐ Bold Black ☐ Gleaming Gold
☐ Brilliant Blue

☐ Factory attaches Control Box to Strip Heater (Export only)

☐ Adjustable Tubular Stands 10"-14" (254-356 mm)
(not available in *Designer* Colors)

Non-Adjustable Tubular Stands – matches housing color – Choose clearance below⊗▪
☐ 10" (254 mm) ☐ 12" (305 mm) ☐ 14" (356 mm) ☐ 16" (406 mm)

Accessories

Adjustable Angle Brackets (with clearance above unit)
☐ 1"-2" (25-51 mm) ☐ 7" (178 mm) - GRA-xxD models only

☐ Chain Suspension

⊗ Non-standard colors are non-returnable

NOTE: Install Remote Box outside Heat Zone or damage will occur.

▪ **IFS anti-microbial coatings use naturally-occurring, environmentally sustainable, silver ions to help inhibit the growth of microbes on the powder coated surface. See www.hatcocorp.com/antimicrobial-paint for more information.**

For operation, location and safety information, please refer to the Installation and Operating Manual.

▲ Shipping weight includes packaging, and does not include RMB.
✖ CE not available.
⁄ 100V and 120V models may require additional switches, consult factory for applications.
† Glo-Ray models 108"-144" (2743-3658 mm) and 120 volt models of GRAH-84 and GRAH-96 contain tandem (end-to-end) elements that may be individually controlled.
⊙ Available with RMB (Remote Box) or remote switch only. Consult factory for additional charges.

TOGGLE SWITCH: Amps: Max. 15 amps. Location: Chef's left side.
INFINITE SWITCH: Max. 12.2 amps Location: remote installation only
CONDUIT: 3' (914 mm) conduit standard on 120V and 208V models only
LEADS: **US/Canada:** 6" (152 mm) leads, server's right side
Euro/UK GRAH-xxD: 6" (152 mm) pigtail leads with no conduit, servers right side

RECOMMENDED MOUNTING HEIGHTS

(Refer to the Installation section of the Manual on the Hatco website)

Units with 3" (76 mm) and 6" (152 mm) Spacers
Standard Watt: 10"-14" (254-356 mm) **High Watt:** 14"-18" (356-457 mm)

MINIMUM CLEARANCES

Combustibles
Cannot be installed in combustible surroundings

Non-Combustibles

Dual Units with Built-In Switches
Unit to surface below: 10" (254 mm)
Must be installed in pass through area, back wall installation not allowed
Below overshelf: 1" (25 mm) clearance

Dual Units with Remote Switches:
Unit to surface below: 8" (203 mm)
Unit to wall: 3" (76 mm)
Below overshelf: 0" (0 mm) clearance, can be flush to an overshelf

REMOTE CONTROL ENCLOSURES

Must order one RMB control box per Strip Heater - If RMB2 is used, multiple warmers can be controlled from one box.

Click here to download the RMB Choose Remote Box Excel Spreadsheet
or follow this file path: www.hatcocorp.com > Resources > Choose Remote Box

PRODUCT SPECS

Infrared Foodwarmers

The Aluminum Dual Infrared Foodwarmer shall be a Glo-Ray®, manufactured by the Hatco Corporation, Milwaukee,WI 53234 U.S.A.

The Foodwarmer shall be a Glo-Ray model ... , rated at ... watts, ... volts, single phase, and be ... inches (millimeters) in overall width. The Glo-Ray shall consist of an aluminum housing and include four shelf mounting tabs, and 3' (914 mm) conduit with leads.

The infrared heating element shall be tubular metal sheathed. The foodwarmer shall be factory-assembled ready for electrical installation.

Options and accessories shall include adjustable or non-adjustable tubular stand, angle brackets, suspension chain and fittings, sneeze guard and indicator light. Housing and RMB shall be offered in Optional *Designer* Color and Gloss Finish anti-microbial paint.

Warranty consists of 24/7 parts and service assistance (U.S. and Canada only).

Delfield®

4448NP

Front-Breathing Self-Contained Flat Top Refrigerated Bases

Models

- 4448NP Single Section with Doors
- D4448NP Single Section with Drawers
- ST4448NP Single Section with Doors with Backsplash
- STD4448NP Single Section with Drawers with Backsplash

4448NP

Standard Features

- All 4400 Series units are 100% front breathing, which allows the unit to be pushed against a wall or built into a cabinet, or an existing lineup.
- Durable, rugged stainless-steel sides, top and front
- Features Delfield's exclusive ABS interior (on sides). ABS is extremely durable – it won't dent, chip or corrode and is backed by a limited lifetime warranty.
- "D" prefix models feature Delfield's new drawer system. Drawers are backed by a lifetime warranty on the track assembly.
- Bent in full length handle on doors and drawers.
- Standard on 5" casters for easy cleaning and installation
- One wire shelf standard, installed per door section.
- ACT solid state electronic control
- Environmentally friendly R290 refrigerant
- High density foamed in place, environmentally friendly, Kyoto Protocol Compliant, Non ODP (Ozone Depletion Potential), Non GWP (Global Warming Potential) polyurethane keeps energy costs low.
- 10' cord and plug supplied
- Three-year parts and labor warranty and a seven-year compressor parts warranty

Options & Accessories

- 18" wide single tier over shelf
- Stainless steel finish on back
- Cutting Boards
- Plastic laminate on front
- Additional wire shelves
- 3" casters, 4" ride height available
- Door lock
- Exterior thermometer (some models excluded)

Specifications

Exterior top is one-piece, 22-gauge stainless steel with integral 2.12" (5.4cm) square nosing on the front. ST and STD models have standard backsplash, full width and 4" (10cm) tall.

Exterior back and bottom are two-piece 24-gauge galvanized steel. Exterior ends are stainless steel. Interior sides are thermoformed ABS plastic with integral shelf supports. Base is fully insulated with high density foamed in place, environmentally friendly, Kyoto Protocol Compliant, Non ODP (Ozone Depletion Potential), Non GWP (Global Warming Potential) polyurethane.

Refrigeration system uses environmentally friendly R290 refrigerant. Condenser coil and hot gas condensate evaporator mounted on rear of cabinet. Evaporator coil is located on the interior rear wall of cabinet. Refrigerant flow is controlled by a capillary tube. Cabinet maintains an interior temperature of 33°F to 41°F (0°C to 4°C).

ACT control: ACT electronic, solid-state control, mounted on the exterior rear of the cabinet, allows unit to maintain precise temperatures in heavy duty conditions.

Electrical connection is 115 volt, 60 Hertz, single phase. Unit has a 10' (3m) long electrical cord and NEMA 5-15 plug.

Casters: Equipment is mounted on 5" (13cm) diameter plate casters with front two locking brakes. Equipment clearance above the floor is 2.5" (6cm).

Doors have a 22-guage stainless steel exterior, with thermoformed ABS plastic interior liner. Cabinet has one adjustable wire shelf.

Drawers have a 22-gauge stainless steel exterior, with thermoformed ABS plastic interior liner. Drawer frames are 12-gauge stainless steel. Drawer slides are 11-gauge stainless steel with Delrin bearings. Top drawer holds one full size 12" x 20", 4"-6" (30.5cm x 50.8cm x 10.2cm) deep pan, and three 1/6 size pans. Bottom drawer holds one full size 12" x 20" and three 1/6 size, 4" deep pans. Pans are supplied by others.

DELFIELD®

Specifications

Exterior top is one-piece 22-gauge stainless steel with integral 2.12" (5.4cm) square nosing on the front. Top of drawer unit has openings to accept eighteen 1/6 size plastic pans 4" (10cm) deep. Top of door unit has openings to accept eighteen 1/6 size plastic pans 4" or 6" (10cm or 15cm) deep. Adapter bars and 1/6 size pans are supplied by Delfield. Top has one telescoping lid is constructed of 20-gauge stainless steel. Temperature in top openings maintains 33°F (1°C) to 41°F (5°C), with pans recessed 2.5" (6.4cm) at 86°F ambient room temperature, meeting NSF 7 requirements. One 48" x 8" x .5" (121.9cm x 20.3cm x 1.3cm) polyethylene cutting board is mounted on the top at the front edge.

Dual level pan brackets allow the pans to be lowered an additional inch in the unit without tools to provide additional pan temperature holding performance.

Exterior back and bottom are two-piece 24-gauge galvanized steel. Exterior ends are stainless steel.

Interior sides are thermoformed ABS plastic with integral shelf supports. Base is fully insulated with high-density foamed in place environmentally friendly, Kyoto Protocol Compliant, Non ODP (Ozone Depletion Potential), Non GWP (Global Warming Potential) polyurethane.

Refrigeration system uses environmentally friendly R290 refrigerant. Condenser coil and hot gas condensate evaporator mounted on rear of the cabinet. Evaporator coil is located on the interior rear wall of the cabinet. Refrigerant flow is controlled by a capillary tube. Cabinet maintains an interior cabinet temperature of 33°F to 40°F (0°C to 4°C).

ACT control: ACT electronic, solid state control, mounted on the exterior rear of the cabinet, allows unit to maintain precise temperatures in heavy duty conditions.

Electrical connections are 115 volt, 60 Hertz, single phase. Unit has a 10' (3m) long electrical cord and NEMA 5-15P plug.

Casters: Equipment is mounted on 5" (13cm) diameter plate casters with front two locking. Equipment clearance above the floor is 2.5" (6cm).

Doors have a 22-gauge stainless steel exterior, with thermoformed ABS plastic interior liner. Cabinet has one adjustable epoxy-coated wire shelf per door opening.

Drawers have 22-gauge stainless steel exterior with thermoformed ABS plastic interior liner. Drawer frames are 12-gauge stainless steel. Drawer slides are 11-gauge stainless steel with Delrin bearings. Each top drawer will hold one 12" x 20" (30.5cm x 50.8cm) pan and three 1/9 size 4"-6" (10.1cm-15.2cm) deep pans. Each bottom drawer holds one 12" x 20" (30.5cm x 50.8cm) pan and three 1/9 size 4" (10.1cm) deep pans. Pans are supplied by others.

Cabinet maintains an interior cabinet temperature of 33°F to 40°F (0°C to 4°C).

ACT control: ACT electronic, solid state control, mounted on the exterior rear of the cabinet, allows unit to maintain precise temperatures in heavy duty conditions.

Electrical connections are 115 volt, 60 Hertz, single phase. Unit has a 10' (3m) long electrical cord and NEMA 5-15P plug.

Casters: Equipment is mounted on 5" (13cm) diameter plate casters with front two locking. Equipment clearance above the floor is 2.5" (6cm).

Doors have a 22-gauge stainless steel exterior, with thermoformed ABS plastic interior liner. Cabinet has one adjustable epoxy-coated wire shelf per door opening.

Drawers have 22-gauge stainless steel exterior with thermoformed ABS plastic interior liner. Drawer frames are 12-gauge stainless steel. Drawer slides are 11-gauge stainless steel with Delrin bearings. Each top drawer will hold one 12" x 20" (30.5cm x 50.8cm) pan and three 1/9 size 4"-6" (10.1cm-15.2cm) deep pans. Each bottom drawer holds one 12" x 20" (30.5cm x 50.8cm) pan and three 1/9 size 4" (10.1cm) deep pans. Pans are supplied by others.

4472NP Mega Top

Front-Breathing Self-Contained Mega Top Refrigerated Bases

Models

• 4472NP-18M	Three section with doors, eighteen pan capacity
• D4472NP-18M	Three section with drawers, eighteen pan capacity
• 4472NP-24M	Three section with doors, twenty-four pan capacity
• D4472NP-24M	Three section with drawers, twenty-four pan capacity
• 4472NP-30M	Three section with doors, thirty pan capacity
• D4472NP-30M	Three section with drawers, thirty pan capacity

4472NP-30M

Standard Features

- Patented air screen ensures product stays cold without drying it out
- All 4400 Series units are 100% front breathing, which allows the unit to be pushed against a wall or built into a cabinet or an existing line up
- Durable, rugged stainless steel sides, top and front
- Features Delfield's exclusive ABS interior (on sides). ABS is extremely durable - it won't dent, chip or corrode and is backed by a limited lifetime warranty
- Delfield supplies 1/6 size pans and positive placement adapter bars for top opening
- Dual level pan brackets allow the pans to be lowered an additional inch in the unit without tools to provide additional pan temperature holding performance
- Mega top refrigerators are standard with 8" wide, dishwasher safe polyethylene cutting board mounted on heavy-duty brackets
- "D" prefix models feature Delfield's new drawer system. Drawers are backed by a 10-year warranty on the track assembly
- Environmentally friendly R290 refrigerant
- High density foamed in place environmentally friendly, Kyoto Protocol Compliant, Non ODP (Ozone Depletion Potential), Non GWP (Global Warming Potential) polyurethane keeps energy costs low
- Bent in full length handle
- Standard on 5" casters for easy cleaning and installation
- 10' cord and plug supplied
- One epoxy coated wire shelf standard, installed per door section
- ACT solid state electronic control
- Three year parts and labor warranty and an additional two year compressor parts warranty

Options & Accessories

- Various lid options
- 18" wide single tier overshelf
- Stainless steel finish on back
- Plastic laminate on front
- Additional wire shelves
- 3" casters, 4" ride height
- Door lock
- Exterior thermometer

WELBILT®

DELFIELD®

Specifications

Exterior top is one-piece 22-gauge stainless steel with integral 2.12" (5.4cm) square nosing on the front. Telescoping lid is constructed of 20-gauge stainless steel. Top of drawer unit has openings to accept 18, 24 or 30 1/6 size plastic pans 4" (10cm) deep. Top of door unit has openings to accept 18, 24 or 30 1/6 size plastic pans 4" or 6" (10cm or 15cm) deep. Adapter bars and 1/6 size pans are supplied by Delfield. Temperature in top openings maintains 33°F (1°C) to 41°F (5°C), with pans recessed 2.5" (6.4cm) at 86°F ambient room temperature, meeting NSF 7 requirements. One 72" x 8" x .5" (183cm x 20.3cm x 1.3cm) polyethylene cutting board is mounted on the top at the front edge.

Dual level pan brackets allow the pans to be lowered an additional inch in the unit without tools to provide additional pan temperature holding performance.

Exterior back and bottom are two-piece 24-gauge galvanized steel. Exterior ends are stainless steel.

Interior sides are thermoformed ABS plastic with shelf supports. Base is fully insulated with high-density foamed in place environmentally friendly, Kyoto Protocol Compliant, Non ODP (Ozone Depletion Potential), Non GWP (Global Warming Potential) polyurethane.

Refrigeration system uses R290 refrigerant. Compressor is .35 H.P., with condenser coil and hot gas condensate evaporator mounted on rear of the cabinet. Evaporator coil is located on the interior rear wall of the cabinet. Refrigerant flow is controlled by a capillary tube. Cabinet maintains an interior cabinet temperature of 36°F to 40°F (2°C to 4°C).

ACT control: ACT electronic, solid state control, mounted on the exterior rear of the cabinet, allows unit to maintain precise temperatures in heavy duty conditions.

Electrical connections are 115 volt, 60 Hertz, single phase. Unit has a 10' (3.3m) long electrical cord and NEMA 5-15P plug.

Casters: Equipment is mounted on 5" (13cm) diameter plate casters with front two locking. Equipment clearance above the floor is 2.5" (6cm).

Doors have a 22-gauge stainless steel exterior, with thermoformed ABS plastic interior liner. Cabinet has one adjustable epoxy-coated wire shelf per door opening.

Drawers have 22-gauge stainless steel exterior with thermoformed ABS plastic interior liner. Drawer frames are 12-gauge stainless steel. Drawer slides are 11-gauge stainless steel with Delrin bearings. Each top drawer holds one 12" x 20" (30.5cm x 50.8cm) pan and three 1/9 size pans 4"-6" (10.2cm-15.2cm) deep. Each bottom drawer holds one 12" x 20" (30.5cm x 50.8cm) pan and three 1/9 size pans 4" (10.1cm) deep. Pans are supplied by others.

WELBILT®

200-HW Series
Waterless Hot Food Well

Unlike traditional steam tables or dry wells, waterless hot food wells from Alto-Shaam feature radiant Halo Heat® technology that evenly surrounds food without the use of extremely hot elements, added humidity or fans. Extend hold times, maintain food quality and reduce operating costs to maximize return on investment.

200-HW/D4

Standard Features

- Extend food holding times with efficient, precise Halo Heat® technology
- Maintain food quality without the use of extremely hot elements, added humidity or fans
- Increase sales with attractive food presentation and quality
- Reduce installation and operating costs with no water or plumbing needed
- Save on maintenance costs, eliminating lime and scale buildup associated with traditional steam tables
- Increase employee and customer safety with elimination of hot water and steam
- Provide optimal holding temperatures with an adjustable thermostat that can be flush-mounted into the counter or a location out of sight from customers
- Set ideal holding temperatures for any dish with an individual well control option
- HWLF models feature a large flange
- HWI and HWILF models are controlled by two (2) separate adjustable thermostats
- 200-HW/D4, 200-HW/D6, 200-HWLF/D4, and 200-HWLF/D6 models include four (4) half/third-size divider bars and one (1) large pan divider bar
- 200-HW/D443 and 200-HW/D643 models include six (6) third-size divider bars and one (1) large pan divider bar
- 200-HWI/D4, 200-HWI/D6, 200-HWILF/D4, and 200-HWILF/D6 models include four (4) half/third-size divider bars
- 200-HWI/D443 and 200-HWI/D643 models include six (6) third-size divider bars

^Large flange wells only.

*Allow 6" (152mm) clearance from control box to conduit bend.

CHECK FIRST

- Appliance must be installed level and must not be installed in any area where it may be directly affected by steam, grease, dripping water, high temperatures, or any other severely adverse conditions.
- Some foods may require additional overhead heating. Always monitor the food temperature and add overhead heating when needed.
- Countertop material must withstand temperatures up to 200°F (93°C).
- A stainless steel heat shield is recommended if the area under the appliance is used for storage.

16GA Top w/5" Riser & Stainless Steel Legs & Adjustable Undershelf

FEATURES:

- 16GA Stainless Steel Top w/5" Riser & Turndown
- Type 300 Stainless Steel With #4 Polish, Satin Finish
- Top Is Sound Deadened
- Reinforced With 1"x2" Channel Running Entire Length Of Table
- 1-1/2" Stallion Edge On Front Side Edges 90 Degree Bend Down For Table Line-Up
- Stainless Steel Base With Adjustable Undershelf
- Adjustable Bullet Feet
- Ships Knocked-Down Easy-To-Assemble

SPECIFICATIONS:

- Top: Stainless Steel Tops Are TIG Welded, Exposed Welds Are Polished To Match Adjacent Surface
- Top: 16GA Stainless Steel Type 300 Stainless Steel With #4 Polish, Satin Finish
- Shelf: 18GA Stainless Steel, (36" Wide Tables, 16 GA Lower Shelf)
- Legs: 1-5/8" Round O.D. 16GA Tubular Stainless Steel
- Gussets: Stainless Steel
- Feet: 1" Adjustable Stainless Bullet Feet

"EWS8" WALL SHELVES

Type 430 Stainless Steel w/1.5" Rear Riser

FEATURES:

- 18GA, Type 430 Stainless Steel With #4 Polish, Satin Finish
- Finished With A Safety Stallion Front Edge
- 1-1/2" Turned Up Backsplash
- 12" Or 16" Depth
- Shipped Knocked-Down, Easy-To-Assemble
- All Models Are NSF Certified

SPECIFICATIONS:

- Stainless Steel Shelves Are TIG Welded
- Exposed Welds Are Polished To Match Adjacent Surface
- Shelf: 18GA Type 430 Stainless Steel With #4 Polish, Satin Finish
- Brackets: 18GA Type 430 Stainless Steel With #4 Polish, Satin Finish

CAYENNE® MODEL 1001 WARMERS

MODELS

Item No	Model No	Description
71001	1001	Full-Size Warmer

DESCRIPTION

Cayenne® Model 1001 Warmers are designed to attractively display and maintain the serving temperature of your prepared foods with less energy than a traditional warmer.

PERFORMANCE CRITERIA

Cayenne® Model 1001 Warmers are designed to hold heated prepared foods at temperatures above the HACCP "danger zone" of 140° F (60° C). The performance standard is measured using the NSF mixture preheated to 165° F (73.9° C). The unit will hold the temperature of this product above 150° F (65.6° C). The temperature will be maintained best when the food product is held using pans with covers, the proper water level is maintained in the well, and the food product is stirred regularly.

FEATURES

- Features Vollrath's Direct Contact Heating System in which the heating element is in direct contact with the water for the most efficient heat transfer possible
- Cast-in non-stick aluminum dome heating element uses up to 25% less energy and reduces scale build-up for easy cleaning and longer operating life
- Thermoset fiber-reinforced self-insulating resin well provides maximum energy efficiency, prevents scale build-up and is easy to clean
- Increased water capacity reduces labor costs and improves food quality by maintaining maximum moist heat
- Recessed controls reduce accidental changes in temperature settings
- Low-water indicator light eliminates guesswork
- Capillary tube thermostat control supplies constant temperature and power only when needed for maximum power efficiency
- Wide dripless lip catches and drains moisture back into the well and creates more uniform fit with food pans and insets
- Stainless steel exterior meets UL surface temperature standards for operator and customer safety and concentrates heat inside the well, not to the outside surface and rim
- Meets NSF4 Performance Standards for hot food holding equipment
- Non-skid feet help keep unit from sliding on countertop
- Bottom exit 6 ft. (183 cm) power cord adapts to receptacle location for safe installation and allows for 360° control placement

WARRANTY

All models shown come with Vollrath's standard warranty against defects in materials and workmanship. For full warranty details, please refer to www.Vollrath.com.

Results of Independent Testing:

Units were filled with water per care/use instructions. Units were preheated to operating temperature. 4" (100 cm) food pan containing NSF test mixture at 160° F (71.1° C) was inserted. All tests were made with the cover off. Temperature was monitored continuously for four hours.

- Model 1001 with 700 watt dome element maintained temperature of the food product above the temperature 160° F (71.1° C) for the duration of the test.
- Competitive all-stainless unit (#1) with 1200W tubular element under the well. Temperature dropped below 140° F (60° C) in eight minutes. Continued testing saw temperature rise above 140° F (60° C).
- Competitive all-stainless unit (#2) with thermostatic control and 1500W tubular element under the well. Temperature dropped below 140° F (60° C) safety zone within the first hour and did not recover. Test was aborted after 2 hours.

HEATED HOLDING

VP18
18 PAN NON-INSULATED HEATED HOLDING & PROOFING CABINET

Model VP18

SPECIFICATIONS

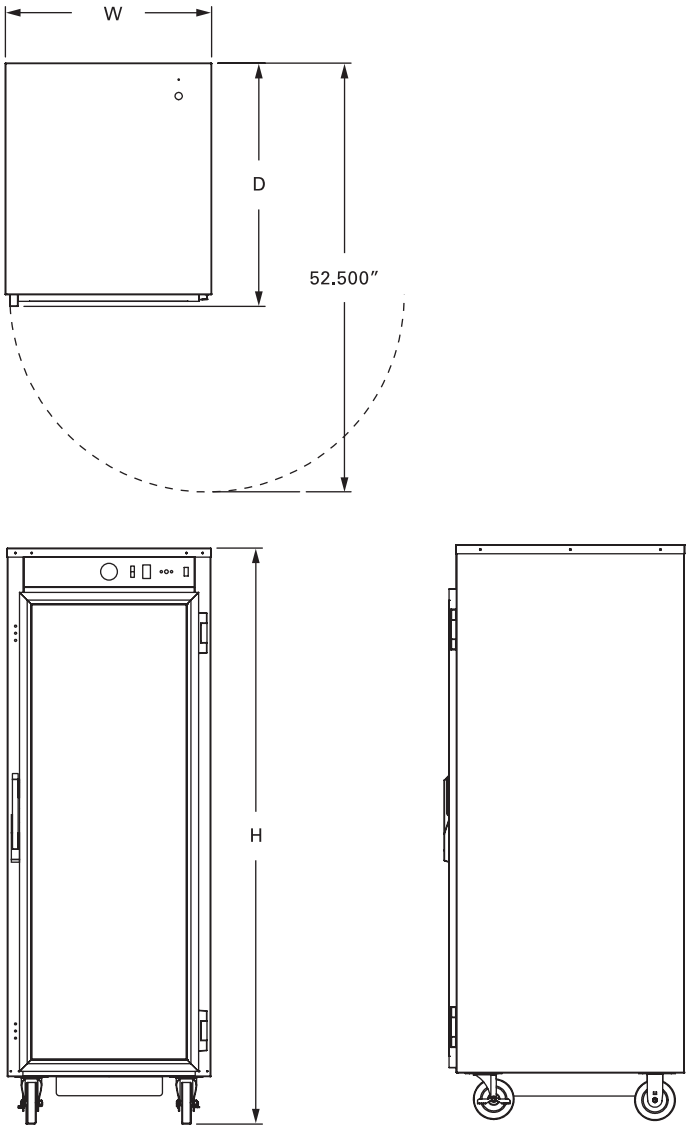
Eighteen level heated holding and proofing cabinet, Vulcan Model No. VP18. Heavy duty 20 gauge polished stainless steel cabinet. Four 5" casters, two swivel with brakes, two rigid. Glass door with heavy duty hinges, door latch mechanism and gaskets. Adjustable interior pan supports adjust on 3" centers and are removable for easy cleaning. Accommodates up to eighteen 18" x 26" sheet pans and thirty six 12" x 20" x 2¾" steam table pans. Includes ½ gallon water pan for proofing, drip trough and removable condensation pan on the bottom of cabinet. Top mounted, control panel includes fan on/off switch, dial thermostat adjustable from ambient to 190°F, cabinet temperature thermometer, and switch to change from proofing to holding. 2,000 total watt heating elements with stainless steel cover, 16.7 total amp draw. One year limited parts and labor warranty. After the first year, 10-year parts warranty on the heating elements. Requires 120 volt single phase power supply. Furnished with top mounted power cord with strain relief and NEMA 5-20 plug.

Exterior Dimensions:

25¼" W x 30¾" D x 71" H

UL Listed. Classified by UL to NSF Std. #4.

STANDARD FEATURES



- Eighteen level heated holding and proofing cabinet accepts eighteen 18" x 26" pans or thirty-six 12" x 20" pans.
- Heavy duty 20 gauge polished stainless steel cabinet.
- Set of 5" casters, two swivel with brakes and two rigid.
- Full size glass door with field reversible heavy duty hinges, door latch mechanism, and gaskets provide visibility of the contents in the cabinet.
- Adjustable interior pan supports adjust on 3" centers and are removable for easy cleaning.
- Top mounted, control panel includes fan on/off switch, dial thermostat adjustable from ambient to 190°F, cabinet temperature thermometer, and switch to change from proofing to holding.
- Top mounted control panel is easy to use and out of the way of brooms, mops, and feet. Control panel on top eliminates removing control panel for cleaning.
- Fan and air tunnel provide even heat distribution.
- 2,000 total watt heating elements with stainless steel cover, 16.7 amps total draw.
- Requires 120 volt, single phase power supply.
- Furnished with top mounted power cord with strain relief and NEMA 5-20 plug (except for Canada which comes with a 5-30 plug).
- Furnished with ten pairs of tray slides.
- Includes ½ gallon water pan for proofing, drip trough and removable condensation pan on the bottom of cabinet.
- One year limited parts and labor warranty. After the first year, 10-year parts warranty on the heating elements.

Delfield®

4448NP

Front-Breathing Self-Contained Flat Top Refrigerated Bases

Models

- 4448NP Single Section with Doors
- D4448NP Single Section with Drawers
- ST4448NP Single Section with Doors with Backsplash
- STD4448NP Single Section with Drawers with Backsplash

4448NP

Standard Features

- All 4400 Series units are 100% front breathing, which allows the unit to be pushed against a wall or built into a cabinet, or an existing lineup.
- Durable, rugged stainless-steel sides, top and front
- Features Delfield's exclusive ABS interior (on sides). ABS is extremely durable – it won't dent, chip or corrode and is backed by a limited lifetime warranty.
- "D" prefix models feature Delfield's new drawer system. Drawers are backed by a lifetime warranty on the track assembly.
- Bent in full length handle on doors and drawers.
- Standard on 5" casters for easy cleaning and installation
- One wire shelf standard, installed per door section.
- ACT solid state electronic control
- Environmentally friendly R290 refrigerant
- High density foamed in place, environmentally friendly, Kyoto Protocol Compliant, Non ODP (Ozone Depletion Potential), Non GWP (Global Warming Potential) polyurethane keeps energy costs low.
- 10' cord and plug supplied
- Three-year parts and labor warranty and a seven-year compressor parts warranty

Options & Accessories

- 18" wide single tier over shelf
- Stainless steel finish on back
- Cutting Boards
- Plastic laminate on front
- Additional wire shelves
- 3" casters, 4" ride height available
- Door lock
- Exterior thermometer (some models excluded)

Specifications

Exterior top is one-piece, 22-gauge stainless steel with integral 2.12" (5.4cm) square nosing on the front. ST and STD models have standard backsplash, full width and 4" (10cm) tall.

Exterior back and bottom are two-piece 24-gauge galvanized steel. Exterior ends are stainless steel. Interior sides are thermoformed ABS plastic with integral shelf supports. Base is fully insulated with high density foamed in place, environmentally friendly, Kyoto Protocol Compliant, Non ODP (Ozone Depletion Potential), Non GWP (Global Warming Potential) polyurethane.

Refrigeration system uses environmentally friendly R290 refrigerant. Condenser coil and hot gas condensate evaporator mounted on rear of cabinet. Evaporator coil is located on the interior rear wall of cabinet. Refrigerant flow is controlled by a capillary tube. Cabinet maintains an interior temperature of 33°F to 41°F (0°C to 4°C).

ACT control: ACT electronic, solid-state control, mounted on the exterior rear of the cabinet, allows unit to maintain precise temperatures in heavy duty conditions.

Electrical connection is 115 volt, 60 Hertz, single phase. Unit has a 10' (3m) long electrical cord and NEMA 5-15 plug.

Casters: Equipment is mounted on 5" (13cm) diameter plate casters with front two locking brakes. Equipment clearance above the floor is 2.5" (6cm).

Doors have a 22-guage stainless steel exterior, with thermoformed ABS plastic interior liner. Cabinet has one adjustable wire shelf.

Drawers have a 22-gauge stainless steel exterior, with thermoformed ABS plastic interior liner. Drawer frames are 12-gauge stainless steel. Drawer slides are 11-gauge stainless steel with Delrin bearings. Top drawer holds one full size 12" x 20", 4"-6" (30.5cm x 50.8cm x 10.2cm) deep pan, and three 1/6 size pans. Bottom drawer holds one full size 12" x 20" and three 1/6 size, 4" deep pans. Pans are supplied by others.

Item Number:

Quantity:

E122/F122 COUNTERTOP SHAKE FREEZERS OR FROZEN BEVERAGE DISPENSERS

E122

F122

NSF C UL US LISTED

DESCRIPTION

Compact, space-saver machines offer the convenience to serve frozen beverages, shakes, smoothies or frozen cocktails. IntelliTec2™ control communicates with the operator through a multi-line graphics LCD using full text instructions.

INTELLITEC2™ CONTROL FEATURES

- Programmable and configurable through multi-line graphics display.
- Upload firmware and download statistics through a USB connection.
- Performance and error logs provide data to maximize profitability.
- Senses product consistency or temperature to customize for a wide variety of mixes.
- Standby and sleep modes conserve energy and automatically defrost product, maintaining small ice crystals and delivering a superior mouthfeel.
- Tamper-proof controls for self-serve applications.

STOELTING WHITE GLOVE SERVICE NETWORK

Every machine includes Stoelting's White Glove Service. One call does it all – customer service, technical service, parts or warranty information, installation, startup, sales, on-site service dispatch and much more. Available 24 hours a day, seven days a week year-round.

Continuous research leads to ongoing product improvements; therefore, these specifications are subject to change without notice and should not be used as installation specifications.

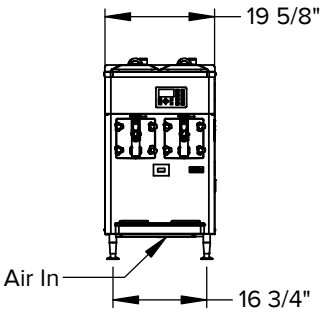
FEATURES



- NSF approved food grade plastic blades provide quiet operation and superior durability.
- Simplified design for quick assembly after cleaning.
- On demand defrost prevents ice buildup and ensures a smooth frozen treat with consistent quality.
- Clear door displays circulating product for merchandising appeal.
- Highly efficient auger design gently folds the entire contents of the freezing cylinder, delivering a thick, smooth, and creamy product.
- Efficient freezing cylinder and auger design deliver a consistent uniform creamy product and a quick recovery time.
- Compact counter-top design saves valuable counter space.
- Single switch for simple operation and cleaning.

Standard Features

- All 4400 Series units are 100% front breathing, which allows the unit to be pushed against a wall or built into a cabinet, or an existing lineup.
- Durable, rugged stainless-steel sides, top and front
- Features Delfield's exclusive ABS interior (on sides). ABS is extremely durable – it won't dent, chip or corrode and is backed by a limited lifetime warranty.
- "D" prefix models feature Delfield's new drawer system. Drawers are backed by a lifetime warranty on the track assembly.
- Bent in full length handle on doors and drawers.
- Standard on 5" casters for easy cleaning and installation
- One wire shelf standard, installed per door section.
- ACT solid state electronic control
- Environmentally friendly R290 refrigerant
- High density foamed in place, environmentally friendly, Kyoto Protocol Compliant, Non ODP (Ozone Depletion Potential), Non GWP (Global Warming Potential) polyurethane keeps energy costs low.
- 10' cord and plug supplied
- Three-year parts and labor warranty and a seven-year compressor parts warranty

Options & Accessories

- 18" wide single tier over shelf
- Stainless steel finish on back
- Cutting Boards
- Plastic laminate on front
- Additional wire shelves
- 3" casters, 4" ride height available
- Door lock
- Exterior thermometer (some models excluded)

Specifications

Exterior top is one-piece, 22-gauge stainless steel with integral 2.12" (5.4cm) square nosing on the front. ST and STD models have standard backsplash, full width and 4" (10cm) tall.

Exterior back and bottom are two-piece 24-gauge galvanized steel. Exterior ends are stainless steel. Interior sides are thermoformed ABS plastic with integral shelf supports. Base is fully insulated with high density foamed in place, environmentally friendly, Kyoto Protocol Compliant, Non ODP (Ozone Depletion Potential), Non GWP (Global Warming Potential) polyurethane.

Refrigeration system uses environmentally friendly R290 refrigerant. Condenser coil and hot gas condensate evaporator mounted on rear of cabinet. Evaporator coil is located on the interior rear wall of cabinet. Refrigerant flow is controlled by a capillary tube. Cabinet maintains an interior temperature of 33°F to 41°F (0°C to 4°C).

ACT control: ACT electronic, solid-state control, mounted on the exterior rear of the cabinet, allows unit to maintain precise temperatures in heavy duty conditions.

Electrical connection is 115 volt, 60 Hertz, single phase. Unit has a 10' (3m) long electrical cord and NEMA 5-15 plug.

Casters: Equipment is mounted on 5" (13cm) diameter plate casters with front two locking brakes. Equipment clearance above the floor is 2.5" (6cm).

Doors have a 22-guage stainless steel exterior, with thermoformed ABS plastic interior liner. Cabinet has one adjustable wire shelf.

Drawers have a 22-gauge stainless steel exterior, with thermoformed ABS plastic interior liner. Drawer frames are 12-gauge stainless steel. Drawer slides are 11-gauge stainless steel with Delrin bearings. Top drawer holds one full size 12" x 20", 4"-6" (30.5cm x 50.8cm x 10.2cm) deep pan, and three 1/9 size pans. Bottom drawer holds one full size 12" x 20" and three 1/9 size, 4" deep pans. Pans are supplied by others.

Notes:

1. This product is designed to meet the National Electric Code (NEC), ETL Listed (UL 507 and CSA 22.2) and AMCA 211 Certified.
2. (2) 1/2" key hole slots and (2) 7/16" mounting holes provided for wall mounting and (4) 7/16" mounting holes for overhead mounting provided, (2) on each end.
3. All units have a self contained one piece cabinet, fire retardant and corrosion proof paint lock metal double protected with baked on Obsidian Black color, rust preventative electrostatic polyurethane powder coating.
4. Cabinet has sufficient strength for fastening to wall on both ends without intermediate support.
5. Internal J-Box(es) for electrical wiring: one motor-(1) 2"x 4"; two motors-(1) 4"x 4"; three motors-(2) 4"x 4".
6. Unit is to be installed such that air flow is unobstructed. Air discharge nozzle containing adjustable air directional vanes with 40° sweep front to back.
7. Circuit protection as per NEC by others.
8. Optional motor control panel, door limit switch and mounting brackets are field installed and/or wired by others. The door limit switch is to be mounted such that the air curtain turns on as door begins to open. To prevent unit damage, the mounting brackets must be installed such that the bottom of the air curtain is not below the door header.

* - Use corresponding letters in "Electrical Data" columns to complete the model numbers.

Note: Data above for 1725 RPM at 60 Hz, 50 Hz is 1425 RPM with a 17% reduction in the performance data.

1. The AMCA Certified Ratings Seal applies to airflow rate, average outlet velocity, outlet velocity uniformity, velocity projection and power rating at free delivery only.
2. Rated data shown are only for base (unheated) units, as shown.

Features:

- 1/2 HP Continuous Duty TEAO Motors
- Sleek self-contained one piece heavy gauge corrosion proof paint lock metal design
- ETL Certified to conform to UL 507 (US) and CSA 22.2 (Canada) Standards
- AMCA Certified to AMCA 211 (see table above for models available)
- (4) 7/16" top and wall mounting holes provided, (2) on each end
- Cabinet has sufficient strength for fastening to wall on both ends without intermediate support
- Adjustable air directional vanes with 40° sweep front to back
- Standard color is Obsidian Black
- Rust preventative electrostatic polyurethane powder coating
- 5 year parts warranty
- Freight Included (FOB Continental USA)
- Proudly Made in the USA

Options and Accessories: (see Accessories Brochure)

- Motor Control Panels
- Wall and Overhead Bracket
- Multi-speed motors and controls
- Washdown units and accessories (NEMA 4 & 4X)
- Explosion Resistant units and accessories (Class I, Div. I, Group D)
- Custom colors and finishes (304SS, 316SS)

Sound Levels: (measured at 10' in an open field)

1 Motor Unit = 66 dBA, 2 Motor Unit = 68 dBA, 3 Motor Unit = 71 dBA & 4 Motor Unit = 73 dBA

Date _____

204 Series: Water And Ice Station

Models

- 204 Water and ice station with glass filler
- 204P Water and ice station with pitcher filler

204

Standard Features

- Top is 18-gauge stainless steel with raised die stamped opening
- Chrome plated wire strainer
- Glass filler is 9.5" high
- Pitcher filler is 13.5" high
- One-piece 20-gauge stainless steel lift-off cover with handle
- Liner of ice bin is high-impact ABS plastic with coved corners
- 1" diameter drain plumbed out the bottom
- High density environmentally friendly, Kyoto Protocol Compliant, Non ODP (Ozone Depletion Potential), Non GWP (Global Warming Potential) polyurethane foam throughout unit
- Exterior tank is made of galvanized steel

Specifications

Top is 18-gauge stainless steel, has 1.37" (3 cm) overhang all around. Glass filler is 9.5" (24 cm) high, over die-stamped drain opening fitted with chrome-plated wire strainer. Pitcher filler is 13.5" (34 cm) high, over die-stamped drain opening fitted with chrome-plated wire strainer. Ice bin opening is die-stamped with .19" (5 mm) raised edges, measures 15.12" x 10.5" (38 cm x 27 cm), has one-piece 20-gauge stainless steel lift-off cover.

Liner of ice bin is high-impact ABS plastic, has rounded corners and is pitched to 1" (25 mm) diameter drain. Bin is insulated all around with high-density environmentally friendly, Kyoto Protocol Compliant, Non ODP (Ozone Depletion Potential), Non GWP (Global Warming Potential) polyurethane. Ice bin holds 45 pounds of ice.

Exterior body is 24-gauge galvanized steel.

Cutout dimensions are 21" (53 cm) x 17.75" (45 cm).

Glo-Ray® Aluminum Dual Infrared Strip Heaters

Models:

GRA-18D, -24D, -30D, -36D, -42D, -48D, -54D, -60D, -66D, -72D, -84D, -96D, -108D, -120D, -132D, -144D

GRAH-18D, -24D, -30D, -36D, -42D, -48D, -54D, -60D, -66D, -72D, -84D, -96D, -108D, -120D, -132D, -144D

Create a deeper holding area with Glo-Ray® Aluminum Dual Infrared Foodwarmers with two heaters mounted side-by-side, keeping hot food at optimum serving temperatures. The pre-focused heat pattern directs heat from a metal sheathed element across the entire holding surface. The continuous aluminum housing and heavy-duty mountings ensure the durability and quality of Hatco products.

Standard features

- Provides even heat distribution – no “cold spots”
- Pre-focused heat maintains safe serving temperatures longer
- Sturdy extruded aluminum housings that do not sag, from 18" to 144" (457 to 3658 mm)
- Reflector does not blacken, maintaining a consistent heat pattern
- Reinforced wire guards provide operator safety without affecting heat distribution
- 3" or 6" (76 or 152 mm) spacer available as a center section between two 6" (152 mm) heater sections for a deeper holding area
- Heavy-duty insulation minimizes heat loss
- Optional sneeze guard made of shatterproof, easy-to-clean acrylic provide safe food serving environment
- Additional reflector styles and lower wattage elements also available, please consult factory for more information
- Metal sheathed heating element part guaranteed against burnout and breakage for two years

Options (available at time of purchase only)

Housing – clear Anodized finish Standard
☐ 15" (4572 mm) ☐ 18" (457 mm)
Designer Color or Gloss Finish⊗▪
☐ Warm Red ☐ Black ☐ Gray Granite ☐ White Granite
☐ Navy Blue ☐ Hunter Green ☐ Antique Copper
☐ Radiant Red ☐ Glossy Gray ☐ Bold Black ☐ Gleaming Gold
☐ Brilliant Blue

☐ Indicator Light (Remote only)

Leads – Extended Beyond Standard 3' (914 mm) Conduit
Please specify lead length
☐ 1'-5' (305-1525 mm) ☐ 6'-10' (1829-3048 mm)
☐ 11'-15' (3352-4572 mm) ☐ 16'-20' (4877-6096 mm)

Sneeze Guard
☐ 9.375" (238 mm) – One Side ☐ 9.375" (238 mm) – Two Sides
☐ 14" (356 mm) – One Side ☐ 14" (356 mm) – Two Sides

☐ Remote Infinite Switches in lieu of Toggle (max. 12.2 amps)

☐ Remote Toggle Switches (max. 15 amps)

☐ Remote Box (RMB) – clear Anodized finish Standard
Designer Color or Gloss Finish⊗▪
☐ Warm Red ☐ Black ☐ Gray Granite ☐ White Granite
☐ Navy Blue ☐ Hunter Green ☐ Antique Copper
☐ Radiant Red ☐ Glossy Gray ☐ Bold Black ☐ Gleaming Gold
☐ Brilliant Blue

☐ Factory attaches Control Box to Strip Heater (Export only)

☐ Adjustable Tubular Stands 10"-14" (254-356 mm)
(not available in *Designer* Colors)

Non-Adjustable Tubular Stands – matches housing color – Choose clearance below⊗▪
☐ 10" (254 mm) ☐ 12" (305 mm) ☐ 14" (356 mm) ☐ 16" (406 mm)

Accessories

Adjustable Angle Brackets (with clearance above unit)
☐ 1"-2" (25-51 mm) ☐ 7" (178 mm) - GRA-xxD models only

☐ Chain Suspension

⊗ Non-standard colors are non-returnable

NOTE: Install Remote Box outside Heat Zone or damage will occur.

▪ **IFS anti-microbial coatings use naturally-occurring, environmentally sustainable, silver ions to help inhibit the growth of microbes on the powder coated surface. See www.hatcocorp.com/antimicrobial-paint for more information.**

For operation, location and safety information, please refer to the Installation and Operating Manual.

[a] Shipping weight includes packaging, and does not include RMB.
[b] 100V and 120V models may require additional switches, consult factory for applications.
‡ CE approved units for 220–230V utilize a 220V heating system; 230–240V CE units utilize a 240V heating system.
[c] 100V and 120V models with infinite switch require tandem (end-to-end) elements, consult factory for applications.
[⚯] Contain tandem (end-to-end) elements that may be individually controlled.
[⊙] Available with RMB or remote switch only. Consult factory for additional charges.

▲ Shipping weight includes packaging, and does not include RMB.
✖ CE not available.
⁄ 100V and 120V models may require additional switches, consult factory for applications.
† Glo-Ray models 108"-144" (2743-3658 mm) and 120 volt models of GRAH-84 and GRAH-96 contain tandem (end-to-end) elements that may be individually controlled.
⊙ Available with RMB (Remote Box) or remote switch only. Consult factory for additional charges.

TOGGLE SWITCH: Amps: Max. 15 amps. Location: Chef's left side.

INFINITE SWITCH: Max. 12.2 amps Location: remote installation only

CONDUIT: 3' (914 mm) conduit standard on 120V and 208V models only

LEADS: **US/Canada:** 6" (152 mm) leads, server's right side
Euro/UK GRAH-xxD: 6" (152 mm) pigtail leads with no conduit, servers right side

RECOMMENDED MOUNTING HEIGHTS

(Refer to the Installation section of the Manual on the Hatco website)

Units with 3" (76 mm) and 6" (152 mm) Spacers

Standard Watt: 10"-14" (254-356 mm) **High Watt:** 14"-18" (356-457 mm)

MINIMUM CLEARANCES

Combustibles

Cannot be installed in combustible surroundings

Non-Combustibles

Dual Units with Built-In Switches

Unit to surface below: 10" (254 mm)
Must be installed in pass through area, back wall installation not allowed
Below overshelf: 1" (25 mm) clearance

Dual Units with Remote Switches:

Unit to surface below: 8" (203 mm)
Unit to wall: 3" (76 mm)
Below overshelf: 0" (0 mm) clearance, can be flush to an overshelf

REMOTE CONTROL ENCLOSURES

Must order one RMB control box per Strip Heater - If RMB2 is used, multiple warmers can be controlled from one box.

Click here to download the RMB Choose Remote Box Excel Spreadsheet
or follow this file path: www.hatcocorp.com > Resources > Choose Remote Box

Model	Width	Toggle Switches
RMB-3	6" (150 mm)	2 maximum
RMB-7	9.375" (239 mm)	4 maximum
RMB-14	14.375" (366 mm)	6 maximum

Model RMB-14E with infinite controls

RMB-3F with toggle switch and indicator light

PRODUCT SPECS

Infrared Foodwarmers

The Aluminum Dual Infrared Foodwarmer shall be a Glo-Ray®, manufactured by the Hatco Corporation, Milwaukee,WI 53234 U.S.A.

The Foodwarmer shall be a Glo-Ray model ... , rated at ... watts, ... volts, single phase, and be ... inches (millimeters) in overall width. The Glo-Ray shall consist of an aluminum housing and include four shelf mounting tabs, and 3' (914 mm) conduit with leads.

The infrared heating element shall be tubular metal sheathed. The foodwarmer shall be factory-assembled ready for electrical installation.

Options and accessories shall include adjustable or non-adjustable tubular stand, angle brackets, suspension chain and fittings, sneeze guard and indicator light. Housing and RMB shall be offered in Optional *Designer* Color and Gloss Finish anti-microbial paint.

Warranty consists of 24/7 parts and service assistance (U.S. and Canada only).

4448NP

Front-Breathing Self-Contained Flat Top Refrigerated Bases

Models

- 4448NP Single Section with Doors
- D4448NP Single Section with Drawers
- ST4448NP Single Section with Doors with Backsplash
- STD4448NP Single Section with Drawers with Backsplash

4448NP

Standard Features

- All 4400 Series units are 100% front breathing, which allows the unit to be pushed against a wall or built into a cabinet, or an existing lineup.
- Durable, rugged stainless-steel sides, top and front
- Features Delfield's exclusive ABS interior (on sides). ABS is extremely durable – it won't dent, chip or corrode and is backed by a limited lifetime warranty.
- "D" prefix models feature Delfield's new drawer system. Drawers are backed by a lifetime warranty on the track assembly.
- Bent in full length handle on doors and drawers.
- Standard on 5" casters for easy cleaning and installation
- One wire shelf standard, installed per door section.
- ACT solid state electronic control
- Environmentally friendly R290 refrigerant
- High density foamed in place, environmentally friendly, Kyoto Protocol Compliant, Non ODP (Ozone Depletion Potential), Non GWP (Global Warming Potential) polyurethane keeps energy costs low.
- 10' cord and plug supplied
- Three-year parts and labor warranty and a seven-year compressor parts warranty

Options & Accessories

- 18" wide single tier over shelf
- Stainless steel finish on back
- Cutting Boards
- Plastic laminate on front
- Additional wire shelves
- 3" casters, 4" ride height available
- Door lock
- Exterior thermometer (some models excluded)

Specifications

Exterior top is one-piece, 22-gauge stainless steel with integral 2.12" (5.4cm) square nosing on the front. ST and STD models have standard backsplash, full width and 4" (10cm) tall.

Exterior back and bottom are two-piece 24-gauge galvanized steel. Exterior ends are stainless steel. Interior sides are thermoformed ABS plastic with integral shelf supports. Base is fully insulated with high density foamed in place, environmentally friendly, Kyoto Protocol Compliant, Non ODP (Ozone Depletion Potential), Non GWP (Global Warming Potential) polyurethane.

Refrigeration system uses environmentally friendly R290 refrigerant. Condenser coil and hot gas condensate evaporator mounted on rear of cabinet. Evaporator coil is located on the interior rear wall of cabinet. Refrigerant flow is controlled by a capillary tube. Cabinet maintains an interior temperature of 33°F to 41°F (0°C to 4°C).

ACT control: ACT electronic, solid-state control, mounted on the exterior rear of the cabinet, allows unit to maintain precise temperatures in heavy duty conditions.

Electrical connection is 115 volt, 60 Hertz, single phase. Unit has a 10' (3m) long electrical cord and NEMA 5-15 plug.

Casters: Equipment is mounted on 5" (13cm) diameter plate casters with front two locking brakes. Equipment clearance above the floor is 2.5" (6cm).

Doors have a 22-guage stainless steel exterior, with thermoformed ABS plastic interior liner. Cabinet has one adjustable wire shelf.

Drawers have a 22-gauge stainless steel exterior, with thermoformed ABS plastic interior liner. Drawer frames are 12-gauge stainless steel. Drawer slides are 11-gauge stainless steel with Delrin bearings. Top drawer holds one full size 12" x 20", 4"-6" (30.5cm x 50.8cm x 10.2cm) deep pan, and three 1/6 size pans. Bottom drawer holds one full size 12" x 20" and three 1/6 size, 4" deep pans. Pans are supplied by others.

204 Series: Water And Ice Station

Models

- 204 Water and ice station with glass filler
- 204P Water and ice station with pitcher filler

204

Standard Features

- Top is 18-gauge stainless steel with raised die stamped opening
- Chrome plated wire strainer
- Glass filler is 9.5" high
- Pitcher filler is 13.5" high
- One-piece 20-gauge stainless steel lift-off cover with handle
- Liner of ice bin is high-impact ABS plastic with coved corners
- 1" diameter drain plumbed out the bottom
- High density environmentally friendly, Kyoto Protocol Compliant, Non ODP (Ozone Depletion Potential), Non GWP (Global Warming Potential) polyurethane foam throughout unit
- Exterior tank is made of galvanized steel

Specifications

Top is 18-gauge stainless steel, has 1.37" (3 cm) overhang all around. Glass filler is 9.5" (24 cm) high, over die-stamped drain opening fitted with chrome-plated wire strainer. Pitcher filler is 13.5" (34 cm) high, over die-stamped drain opening fitted with chrome-plated wire strainer. Ice bin opening is die-stamped with .19" (5 mm) raised edges, measures 15.12" x 10.5" (38 cm x 27 cm), has one-piece 20-gauge stainless steel lift-off cover.

Liner of ice bin is high-impact ABS plastic, has rounded corners and is pitched to 1" (25 mm) diameter drain. Bin is insulated all around with high-density environmentally friendly, Kyoto Protocol Compliant, Non ODP (Ozone Depletion Potential), Non GWP (Global Warming Potential) polyurethane. Ice bin holds 45 pounds of ice.

Exterior body is 24-gauge galvanized steel.

Cutout dimensions are 21" (53 cm) x 17.75" (45 cm).

4448NP-18M
Shown with optional display in nosing.

Standard Features

- Patented air screen ensures product stays cold without drying it out
- 100% front breathing, which allows the unit to be pushed against a wall or built into a cabinet or an existing line up
- Durable, rugged stainless steel sides, top and front
- Features Delfield's exclusive ABS interior (on sides). ABS is extremely durable - it won't dent, chip or corrode and is backed by a limited lifetime warranty
- Delfield supplies 1/6 size pans and positive placement adapter bars for top opening
- Dual level pan brackets allow the pans to be lowered an additional inch in the unit without tools to provide additional pan temperature holding performance
- Mega top refrigerators are standard with 8" wide, dishwasher safe polyethylene cutting board mounted on heavy-duty brackets
- "D" prefix models feature Delfield's drawer system. Drawers are backed by a 10-year warranty on the track assembly
- Environmentally friendly R290 refrigerant
- High density foamed in place environmentally friendly, Kyoto Protocol Compliant, Non ODP (Ozone Depletion Potential), Non GWP (Global Warming Potential) polyurethane keeps energy costs low
- Bent in full length handle
- Standard on 5" casters for easy cleaning and installation
- 10' cord and plug supplied
- One epoxy coated wire shelf standard, installed per door section
- ACT solid state electronic control
- Three year parts and labor warranty and an additional two year compressor parts warranty

Options & Accessories

- Various lid options
- 18" wide single tier overshelf
- Stainless steel finish on back
- Plastic laminate on front
- Additional wire shelves
- 3" casters, 4" ride height
- Door lock
- Exterior thermometer

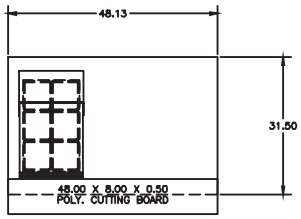
WELBILT®



DELFIELD®

Specifications

Exterior top is one-piece 22-gauge stainless steel with integral 2.12" (5.4cm) square nosing on the front. Top of drawer unit has openings to accept eighteen 1/6 size plastic pans 4" (10cm) deep. Top of door unit has openings to accept eighteen 1/6 size plastic pans 4" or 6" (10cm or 15cm) deep. Adapter bars and 1/6 size pans are supplied by Delfield. Top has one telescoping lid is constructed of 20-gauge stainless steel. Temperature in top openings maintains 33°F (1°C) to 41°F (5°C), with pans recessed 2.5" (6.4cm) at 86°F ambient room temperature, meeting NSF 7 requirements. One 48" x 8" x .5" (121.9cm x 20.3cm x 1.3cm) polyethylene cutting board is mounted on the top at the front edge.

Dual level pan brackets allow the pans to be lowered an additional inch in the unit without tools to provide additional pan temperature holding performance.

Exterior back and bottom are two-piece 24-gauge galvanized steel. Exterior ends are stainless steel.

Interior sides are thermoformed ABS plastic with integral shelf supports. Base is fully insulated with high-density foamed in place environmentally friendly, Kyoto Protocol Compliant, Non ODP (Ozone Depletion Potential), Non GWP (Global Warming Potential) polyurethane.

Refrigeration system uses environmentally friendly R290 refrigerant. Condenser coil and hot gas condensate evaporator mounted on rear of the cabinet. Evaporator coil is located on the interior rear wall of the cabinet. Refrigerant flow is controlled by a capillary tube. Cabinet maintains an interior cabinet temperature of 33°F to 40°F (0°C to 4°C).

ACT control: ACT electronic, solid state control, mounted on the exterior rear of the cabinet, allows unit to maintain precise temperatures in heavy duty conditions.

Electrical connections are 115 volt, 60 Hertz, single phase. Unit has a 10' (3m) long electrical cord and NEMA 5-15P plug.

Casters: Equipment is mounted on 5" (13cm) diameter plate casters with front two locking. Equipment clearance above the floor is 2.5" (6cm).

Doors have a 22-gauge stainless steel exterior, with thermoformed ABS plastic interior liner. Cabinet has one adjustable epoxy-coated wire shelf per door opening.

Drawers have 22-gauge stainless steel exterior with thermoformed ABS plastic interior liner. Drawer frames are 12-gauge stainless steel. Drawer slides are 11-gauge stainless steel with Delrin bearings. Each top drawer will hold one 12" x 20" (30.5cm x 50.8cm) pan and three 1/9 size 4"-6" (10.1cm-15.2cm) deep pans. Each bottom drawer holds one 12" x 20" (30.5cm x 50.8cm) pan and three 1/9 size 4" (10.1cm) deep pans. Pans are supplied by others.

Welbilt reserves the right to make changes to the design or specifications without prior notice.

DishStar® ADA-SEER

DishStar® ADA-SEER

High Temperature Sanitizing Undercounter with Steam Elimination & Energy Recovery

Standard Features

- ADA Compliant
- Fits easily beneath 34" countertops
- Steam Elimination
- Energy Recovery System collects the hot water vapor inside the machine and uses it to preheat the incoming rinse water
- Operates on a single cold water connection
- Soft Start helps protect glassware and dishes from chipping and breaking
- Energy Saver Mode
- Door interlock
- Pressure regulator and water hammer arrestor
- Recirculating wash design with fresh water rinse
- Built-in booster heater with Sani-Sure™ final rinse system ensures proper rinse temperature
- Solid-state controls with three selectable timed cycles for warewashing flexibility and performance
- Digital LED temperature/operator display
- Automatic tank fill with push button start
- Delime cycle
- Automatic pumped drain for floor and wall drain installations
- Built-in chemical pumps with automatic prime
- Stainless steel wash pump
- Above-water scrap basket
- Door switch
- Labyrinth-type door seal design
- Double-wall cabinet for quiet operation and heat retention
- Durable stainless steel construction
- One (1) each peg and combination rack included

Note:
A vent hood is not recommended above the Jackson DishStar ADA-SEER, as it does not produce excessive vapors. *Always check with the local building code to know what type of ventilation is required for commercial dishmachine installations in your area.*

Specification Statement

Specified unit will be an ADA-compliant Jackson DishStar ADA-SEER high temperature sanitizing door-type undercounter. Unit will be rated to NSF/ANSI Standard 3 by ETL Sanitation, will be ENERGY STAR® certified, and will operate on a single 3/4" cold water supply. Unit to include SEER, steam elimination and energy recovery. Unit to be rated for 24 racks per hour, 0.60 gallons per rack, and will include a 70 °F rise booster heater with Sani-Sure™ final rinse system, Energy Saver Mode, three (3) selectable timed cycles, and solid-state controls with digital LED temperature/operator display. Other features include Soft Start to protect glassware from chipping and breakage, built-in chemical pumps with automatic prime, automatic tank fill, above-water scrap basket, delime cycle, 3/4 HP stainless steel wash pump motor, pumped drain, pressure regulator, water hammer arrestor, door interlock switch, labyrinth-style door seal, and double-wall cabinet. Constructed of durable stainless steel.

1-year parts and labor warranty.

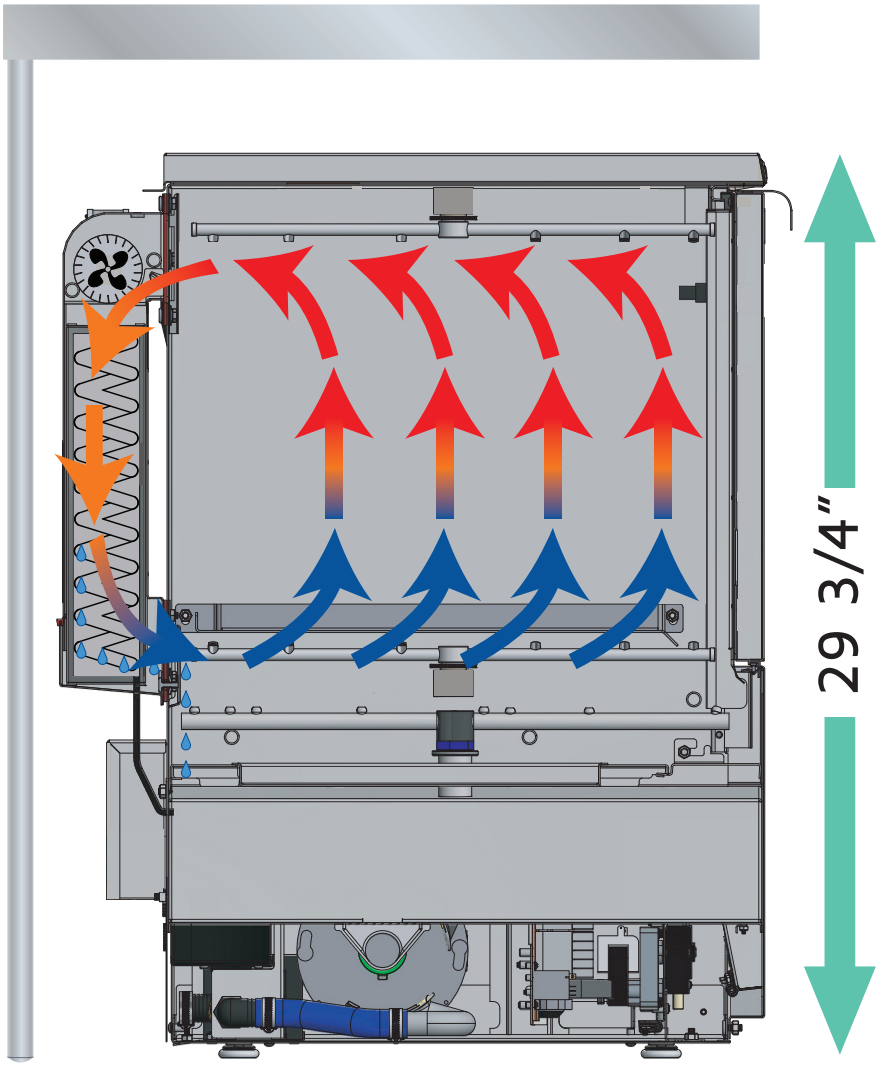
Options & Accessories

- Drain Water Tempering Kit
- Scale Prevention System (SPS)
- Replacement Cartridge for SPS
- Rear Dress Panel
- Tie Down
- Casters (set of four)
- 36-Compartment Rack
  4-1/8" tall (105 mm)
  5-5/8" tall (143 mm)
  7" tall (178 mm)
- Combination Rack
- Peg Rack

DishStar® ADA-SEER

Jackson Warewashing Systems

SEER



STEAM ELIMINATION AND ENERGY RECOVERY

Fan extracts the hot water vapor from the chamber

Vapor passing over the coils inside the Heat Exchanger provides a 40 °F rise in temperature to the water inside the coils

The cooler vapor returns back into the chamber, and as the vapor condenses it is channeled into the wash tank

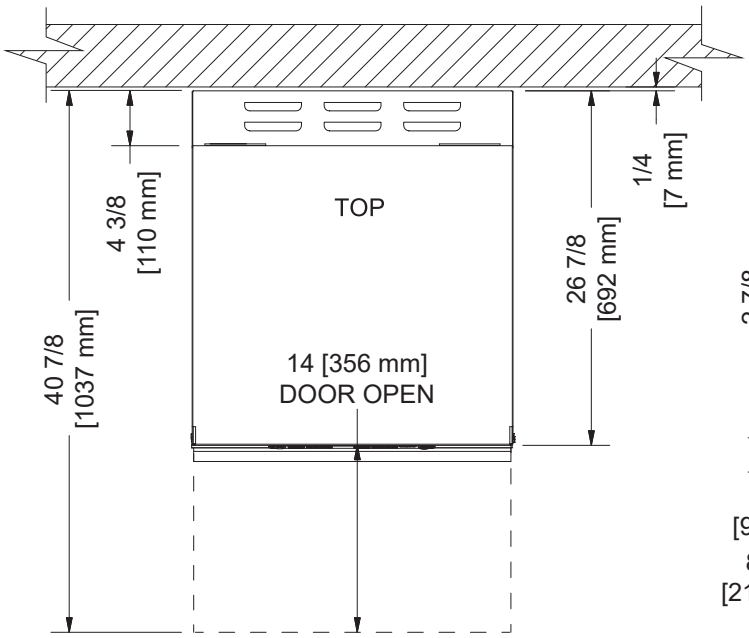
This process virtually eliminates the steam inside the chamber

Cutaway side view of the DishStar® ADA-SEER

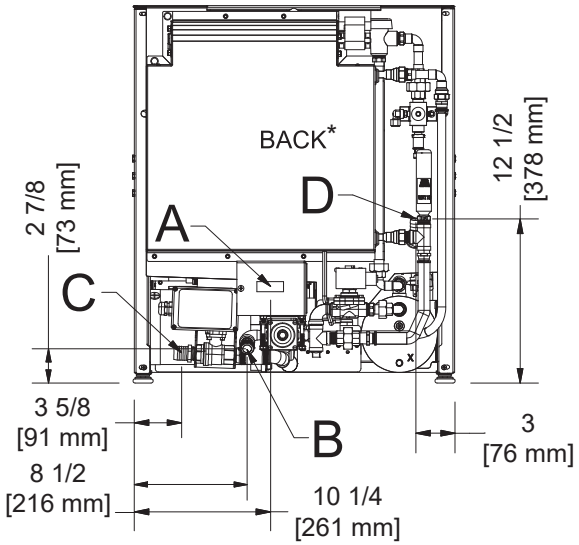
Jackson Warewashing Systems

DishStar® ADA-SEER

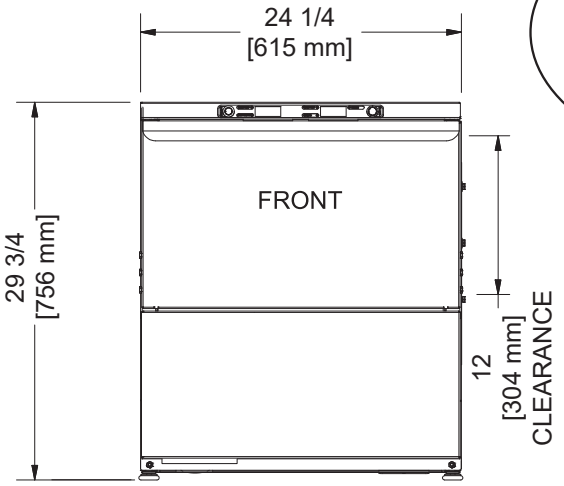
LEGEND



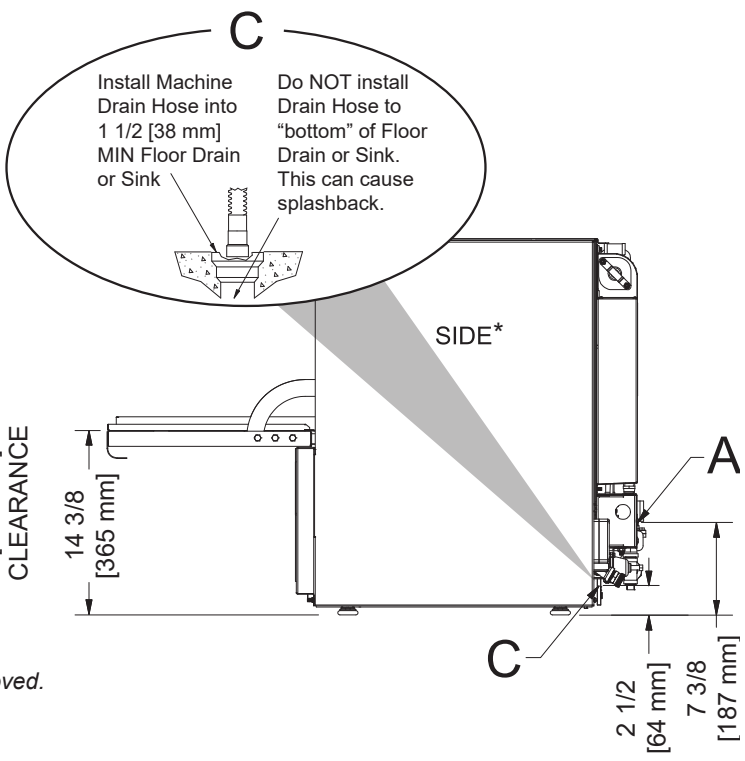
A - Electrical Connection



B - Water Inlet (with 5' Hose) (3/4" Male GHT, connect to true 1/2" ID line, 40–90 °F)



C - Drain Connection (5/8" ID, install into MIN 1 1/2" Drain with Air-gap)



D - Chemical Port

All dimensions from the floor can be increased 1" using the machine's adjustable feet.

Delfield®

4448NP

Front-Breathing Self-Contained Flat Top Refrigerated Bases

Models

- 4448NP Single Section with Doors
- D4448NP Single Section with Drawers
- ST4448NP Single Section with Doors with Backsplash
- STD4448NP Single Section with Drawers with Backsplash

4448NP

Standard Features

- All 4400 Series units are 100% front breathing, which allows the unit to be pushed against a wall or built into a cabinet, or an existing lineup.
- Durable, rugged stainless-steel sides, top and front
- Features Delfield's exclusive ABS interior (on sides). ABS is extremely durable – it won't dent, chip or corrode and is backed by a limited lifetime warranty.
- "D" prefix models feature Delfield's new drawer system. Drawers are backed by a lifetime warranty on the track assembly.
- Bent in full length handle on doors and drawers.
- Standard on 5" casters for easy cleaning and installation
- One wire shelf standard, installed per door section.
- ACT solid state electronic control
- Environmentally friendly R290 refrigerant
- High density foamed in place, environmentally friendly, Kyoto Protocol Compliant, Non ODP (Ozone Depletion Potential), Non GWP (Global Warming Potential) polyurethane keeps energy costs low.
- 10' cord and plug supplied
- Three-year parts and labor warranty and a seven-year compressor parts warranty

Options & Accessories

- 18" wide single tier over shelf
- Stainless steel finish on back
- Cutting Boards
- Plastic laminate on front
- Additional wire shelves
- 3" casters, 4" ride height available
- Door lock
- Exterior thermometer (some models excluded)

Specifications

Exterior top is one-piece, 22-gauge stainless steel with integral 2.12" (5.4cm) square nosing on the front. ST and STD models have standard backsplash, full width and 4" (10cm) tall.

Exterior back and bottom are two-piece 24-gauge galvanized steel. Exterior ends are stainless steel. Interior sides are thermoformed ABS plastic with integral shelf supports. Base is fully insulated with high density foamed in place, environmentally friendly, Kyoto Protocol Compliant, Non ODP (Ozone Depletion Potential), Non GWP (Global Warming Potential) polyurethane.

Refrigeration system uses environmentally friendly R290 refrigerant. Condenser coil and hot gas condensate evaporator mounted on rear of cabinet. Evaporator coil is located on the interior rear wall of cabinet. Refrigerant flow is controlled by a capillary tube. Cabinet maintains an interior temperature of 33°F to 41°F (0°C to 4°C).

ACT control: ACT electronic, solid-state control, mounted on the exterior rear of the cabinet, allows unit to maintain precise temperatures in heavy duty conditions.

Electrical connection is 115 volt, 60 Hertz, single phase. Unit has a 10' (3m) long electrical cord and NEMA 5-15 plug.

Casters: Equipment is mounted on 5" (13cm) diameter plate casters with front two locking brakes. Equipment clearance above the floor is 2.5" (6cm).

Doors have a 22-guage stainless steel exterior, with thermoformed ABS plastic interior liner. Cabinet has one adjustable wire shelf.

Drawers have a 22-gauge stainless steel exterior, with thermoformed ABS plastic interior liner. Drawer frames are 12-gauge stainless steel. Drawer slides are 11-gauge stainless steel with Delrin bearings. Top drawer holds one full size 12" x 20", 4"-6" (30.5cm x 50.8cm x 10.2cm) deep pan, and three 1/9 size pans. Bottom drawer holds one full size 12" x 20" and three 1/9 size, 4" deep pans. Pans are supplied by others.

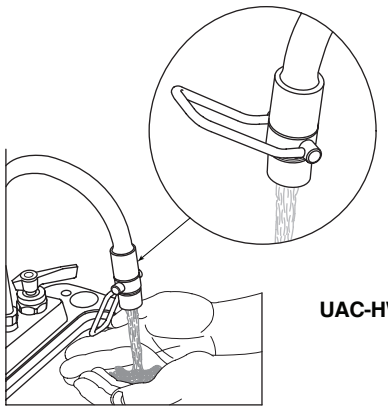
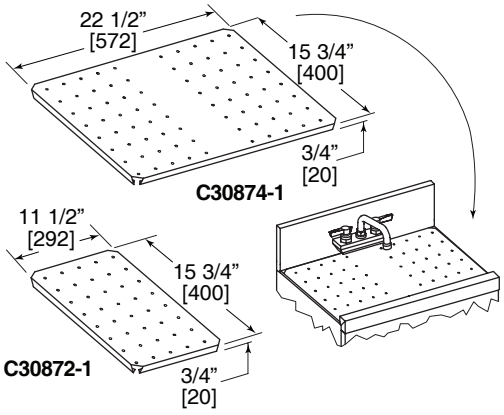
ELECTRONIC "TOUCH-FREE" FAUCET ADAPTER



PART NO.	UAC-EFA
APPLICATION	Converts most faucets into an automatic "Touch-Free" faucet. Simply remove the faucet aerator and install the adapter to end of spout with a simple screw-on installation.
FLOW RATE	2.2 GPM Aerator. Infrared sensor stops water flow automatically. 3-minute automatic time-out feature minimizes chance of overflow. Manual on/off over-ride button provides constant flow to fill sink or containers.
WATER TEMP.	Manually set the faucet handles to desired temperature.
POWER SUPPLY	(4) AAA Batteries (not included). Low battery indicator.
SENSOR RANGE	2"- 10" (5- 25cm) based on sink type and illumination.
WORKING PRESSURE	10-125 psi

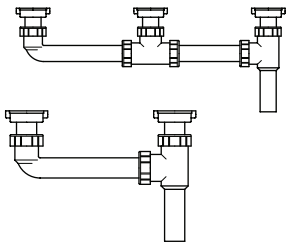
UAC-EFA

AUTOMATIC FAUCET CONTROLLER



PART NO.	UAC-HWFC
APPLICATION	Converts any faucet to "Hands-Free". Simply remove the faucet aerator and install controller to end of spout (supplied with universal adapters).
FLOW RATE WATER TEMP	Manually set the faucet handles to desired water flow and temperature.
MATERIALS	Brass and stainless steel with an anti-microbial coated lever
OPERATION	Automatic self-closing "Hands-Free" full on position

UAC-HWFC



PERFORATED COVER-STAINLESS STEEL

DF

Rotary Type Fully Automati
Glasswashing Machine

(Optional DF71 drain tray and waste collector is available but not shown)

STANDARD FEATURES

- 12" glass clearance accepts taller stemware
- Internal upper drain screen for improved filtration and ease of cleaning
- Self flushing rinse chamber reduces maintenance
- Reduced water usage
- Improved shut off mechanism
- Three-pump injection system for precise chemical dispensing
- Upper and lower wash and rinse arms produce sparkling clean glasses every time
- Double walled construction for quieter operation
- Cool final rinse water provides a cool glass ready for immediate use
- An internal shelf provides storage for three, 1-gallon (4 liter) containers
- Polypropylene conveyor eliminates chipping of fine stemware
- Internal rinse water tempering valve

SPECIFIER STATEMENT

Specified unit will be Moyer Diebel model DF Rotary Type, fully automatic glasswasher.

Unit will have detergent pump, sanitizer pump and rinse aid pump, standard upper and lower wash/rinse arms, wash tank heater, cold water final rinse, polypropylene conveyor, splash curtain, double-walled construction, storage space for three 1-gallon containers.

Other sizes available in 1" increments from 12" up to 30".

KEY PRODUCT FEATURES AND BENEFITS

- Drainboard tops are pitched to the drain, so water is evacuated quickly and effectively. With the matching insert, you still get a flat, level space to store your glassware.
- The default option of 'stadium' shaped perforated inserts enable great air flow for efficient glassware drying, maximize glass storage, and are designed to hold up to a busy bar environment abuse.
- Our new, more robust Perlick Quick Clamp leg attachment still features easy tool-less installation.
- All stainless construction with 18 gauge seamless stainless steel front apron for durability and cleanability.
- All Perlick drainboards are NSF-certified, so you can feel confident knowing your equipment will meet health code standards.

Additional Features:

- Optional Perlick Flex Mount leg relocation kit moves rear legs forward for additional space behind the equipment or moves forward legs rearward to help avoid pesky floor drains, available on TSF units.
- Swap out the perforated insert for a flat top insert when needs change and want to use the drainboard as a workspace Available on 12", 18", 24", 30".
- Stainless steel legs with adjustable thermoplastic feet install without tools for freestanding applications.

KEY PRODUCT FEATURES AND BENEFITS

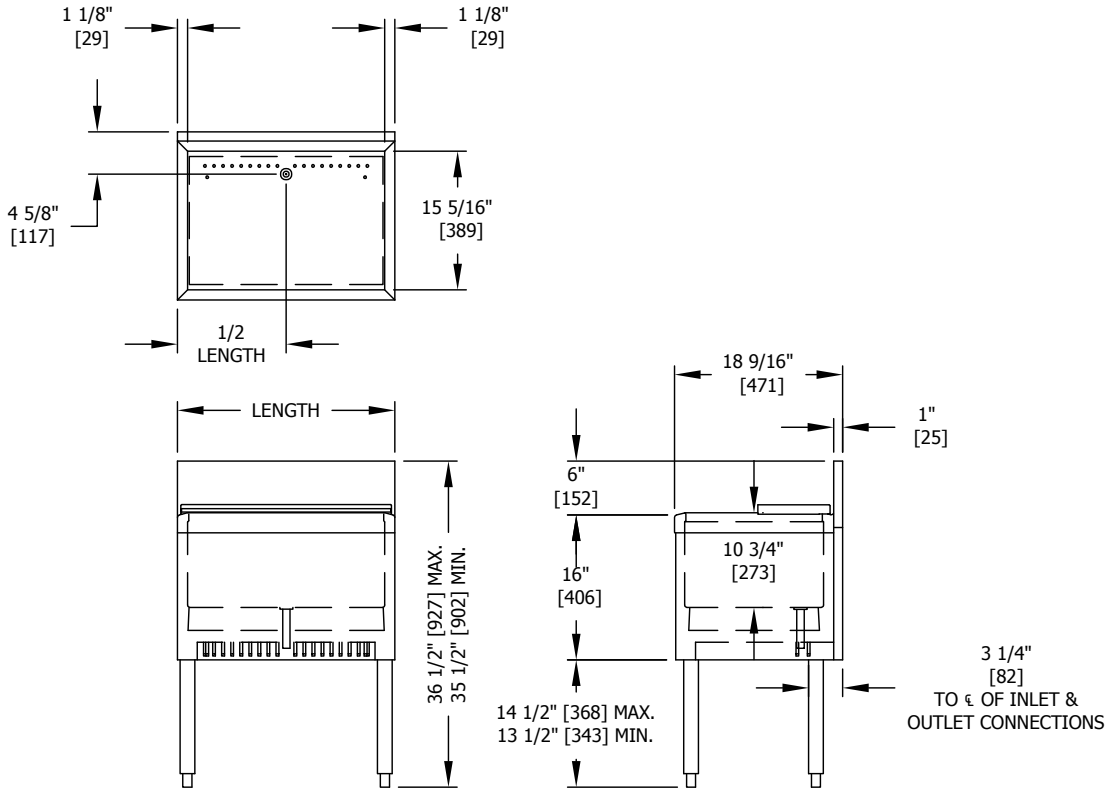
- All stainless for durable easy to clean surfaces
- Fully insulated to reduce ice melt in warm climates
- Highly efficient cold plates instantly chill your soft drinks to the correct temperature
- Eco-friendly foam insulation is efficient and has zero impact on global warming or ozone depletion
- Stainless steel legs with adjustable thermoplastic feet are strong and install easily without tools
- Available with or without a cold plate to suit your bartender's needs

Quick Features:



- Fully insulated with highly efficient eco-friendly polyurethane foam
- Built with stainless steel to maximize the lifespan
- Boldly innovative cold plate design increases thermo efficiency to instantly chill your soft drink to the right temperature

KEY PRODUCT FEATURES AND BENEFITS

- Drainboard tops are pitched to the drain, so water is evacuated quickly and effectively. With the matching insert, you still get a flat, level space to store your glassware.
- The default option of 'stadium' shaped perforated inserts enable great air flow for efficient glassware drying, maximize glass storage, and are designed to hold up to a busy bar environment abuse.
- Our new, more robust Perlick Quick Clamp leg attachment still features easy tool-less installation.
- All stainless construction with 18 gauge seamless stainless steel front apron for durability and cleanability.
- All Perlick drainboards are NSF-certified, so you can feel confident knowing your equipment will meet health code standards.

Additional Features:

- Optional Perlick Flex Mount leg relocation kit moves rear legs forward for additional space behind the equipment or moves forward legs rearward to help avoid pesky floor drains, available on TSF units.
- Swap out the perforated insert for a flat top insert when needs change and want to use the drainboard as a workspace Available on 12", 18", 24", 30".
- Stainless steel legs with adjustable thermoplastic feet install without tools for freestanding applications.

KEY PRODUCT FEATURES AND BENEFITS

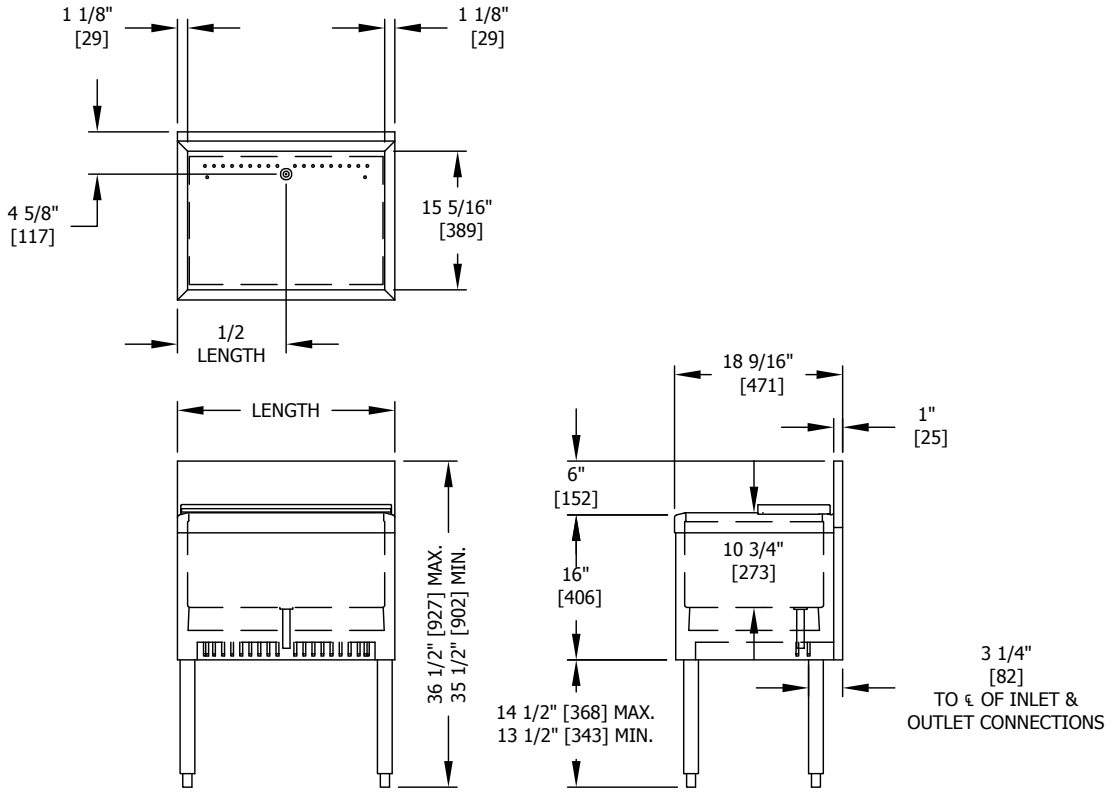
- All stainless for durable easy to clean surfaces
- Fully insulated to reduce ice melt in warm climates
- Highly efficient cold plates instantly chill your soft drinks to the correct temperature
- Eco-friendly foam insulation is efficient and has zero impact on global warming or ozone depletion
- Stainless steel legs with adjustable thermoplastic feet are strong and install easily without tools
- Available with or without a cold plate to suit your bartender's needs

Quick Features:



- Fully insulated with highly efficient eco-friendly polyurethane foam
- Built with stainless steel to maximize the lifespan
- Boldly innovative cold plate design increases thermo efficiency to instantly chill your soft drink to the right temperature

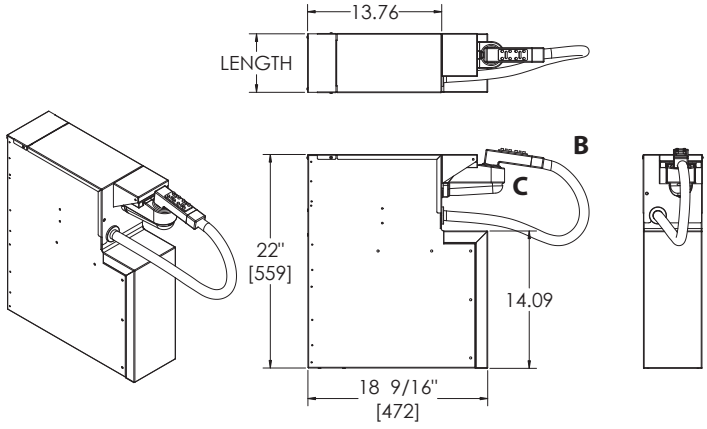
Standard 6″ Backsplash Height

Shown attached to TS24IC10

Note: Soda manifold, hose gun and drip cup NOT included. Shown for clarity of use only.

Features



- All stainless steel construction
- Universal design accepts either Wunder-Bar® and Schroeder America™ 8-14 product soda manifolds and drip cups
- Interior mounted manifold conceals unsightly soda lines
- Tool-less removal of Top Cover provides easy service access
- Integrated drip cup mounting allows conceled routing of drip tube to waste drain
- Accessory Speed Rails can by-pass or terminate on Soda Gun Filler
- Speed rails can cross or terminate on soda gun filler.

KEY PRODUCT FEATURES AND BENEFITS

- Drainboard tops are pitched to the drain, so water is evacuated quickly and effectively. With the matching insert, you still get a flat, level space to store your glassware.
- The default option of 'stadium' shaped perforated inserts enable great air flow for efficient glassware drying, maximize glass storage, and are designed to hold up to a busy bar environment abuse.
- Our new, more robust Perlick Quick Clamp leg attachment still features easy tool-less installation.
- All stainless construction with 18 gauge seamless stainless steel front apron for durability and cleanability.
- All Perlick drainboards are NSF-certified, so you can feel confident knowing your equipment will meet health code standards.

Additional Features:

- Optional Perlick Flex Mount leg relocation kit moves rear legs forward for additional space behind the equipment or moves forward legs rearward to help avoid pesky floor drains, available on TSF units.
- Swap out the perforated insert for a flat top insert when needs change and want to use the drainboard as a workspace Available on 12", 18", 24", 30".
- Stainless steel legs with adjustable thermoplastic feet install without tools for freestanding applications.

KEY PRODUCT FEATURES AND BENEFITS

- 5-1/8" front panel improves bottle retention and prevents bottles from tipping forward
- Lower bottle height provides improved clearance to ice bin
- Plastic extrusion on bottom support provides sound deadening
- Plastic clear extrusion on front top edge of rail provides sound deadening and protection for bottle location labels

Quick Features:

- Single or Dual tier models to fit your storage needs
- Locking covers are available to secure your inventory
- Stainless steel construction for durability
- Supplemental "hang-on" lengths for added storage when needed
- Sound-deadening work surfaces for quiet operation

KEY PRODUCT FEATURES AND BENEFITS

- Stainless steel interior & top standard on all perlick Back Bar refrigeration for long life durability and easy to clean hygienic storage
- 2" Foamed-in-place eco-friendly insulation provides energy savings with zero ozone depletion
- NSF/ANSI Standard 7 Listed for open food, beverage, and garnish storage
- End wall compressor & evaporator design increases storage capacity by 14% compared to top mounted designs
- Anti-Sweat heaters prevent condensation from forming, extending door gasket life and protecting flooring below from damage or slip hazards
- Multiple door and drawer styles available in any compartment:
    - Choose between Glass, Stainless-Steel, or Black Vinyl or Customer Provided Overlay
    - Choose between Refrigerator, Wine, or Liquor Drawers designed by Tobin Ellis

Quick Features

- Integrated door & drawer locks standard on all units
- Choose compressor mounted on left or right side of cabinet to match your space
- NSF Rated digital controller allows for easy and precise temperature changes
- Choose between three temperature ranges
    - Refrigerator (34°F-42°F) Factory set to 38°F
    - White Wine (40°F-65°F) Factory set to 45°F
    - Red Wine (40°F-65°F) Factory set to 60°F
- Choose between 6000K white LED lighting or cool blue display lighting
- 1 Year Parts and Labor Warranty, 5 Year Compressor Warranty
- Made in USA

KEY PRODUCT FEATURES AND BENEFITS

- Drainboard tops are pitched to the drain, so water is evacuated quickly and effectively. With the matching insert, you still get a flat, level space to store your glassware.
- The default option of 'stadium' shaped perforated inserts enable great air flow for efficient glassware drying, maximize glass storage, and are designed to hold up to a busy bar environment abuse.
- Our new, more robust Perlick Quick Clamp leg attachment still features easy tool-less installation.
- All stainless construction with 18 gauge seamless stainless steel front apron for durability and cleanability.
- All Perlick drainboards are NSF-certified, so you can feel confident knowing your equipment will meet health code standards.

Additional Features:

- Optional Perlick Flex Mount leg relocation kit moves rear legs forward for additional space behind the equipment or moves forward legs rearward to help avoid pesky floor drains, available on TSF units.
- Swap out the perforated insert for a flat top insert when needs change and want to use the drainboard as a workspace Available on 12", 18", 24", 30".
- Stainless steel legs with adjustable thermoplastic feet install without tools for freestanding applications.

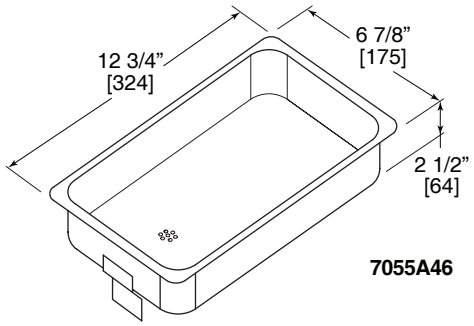
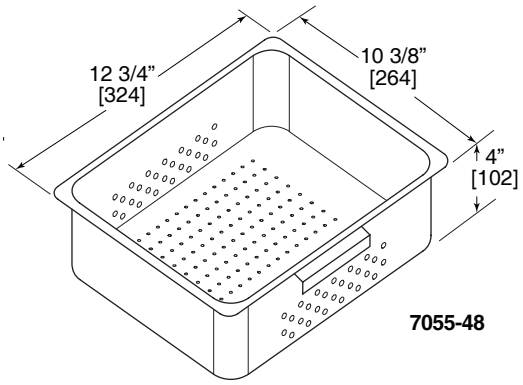
WET WASTE BOX- PERFORATED



PART NO.	7055-52
APPLICATION	Perforated pan allows liquid to drain from wet waste into 12" and 14" stainless steel Blender Station bowls. Not applicable on full size stainless steel sinks.
MATERIAL	¼ size clear polycarbonate pan (2.7 quart) with 1/8" diameter holes in bottom.

7055-52

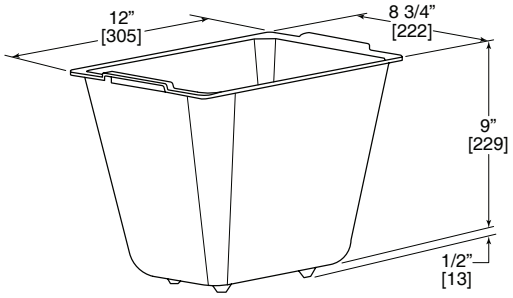
WET WASTE BOX- WITH DRAIN TUBE



PART NO.	7055A46
APPLICATION	TS Series: Drains into standpipe on three and four tank sinks. **NOTE**: Use on sinks bowls without faucet (faucet body interferes with Wet Waste Box). TSD Series: Drains into standpipe on one, two, three and four tank sinks.
MATERIAL	1/3 size stainless steel pan (2.25 quart) with integral strainer and ¾" diameter x 2 3/8" long drain tube.

7055A46

WET WASTE BOX- PERFORATED



PART NO.	7055-48
APPLICATION	Perforated pan allows liquid to drain from wet waste into any sink with full size stainless steel bowl. Not applicable on 12" and 14" blenders.
MATERIAL	½ size stainless steel pan (7 quart) with 1/8" diameter holes in bottom and ¼" diameter holes on two sides.

7055-48

WET WASTE BOX - PERFORATED (UNIVERSAL)

PART NO.	UAC - WWB
APPLICATION	Perforated pan allows liquid to drain from wet waste into any sink with full size stainless steel bowl. Not applicable on 12" and 14" blenders.
MATERIAL	Black ABS (11 quart) with 3/16" diameter holes in bottom.

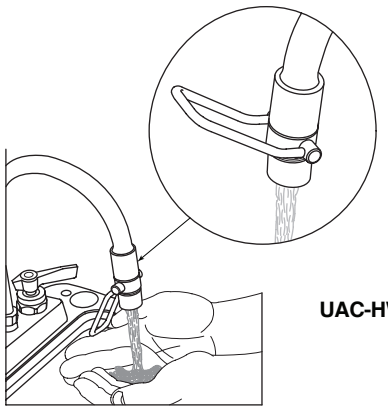
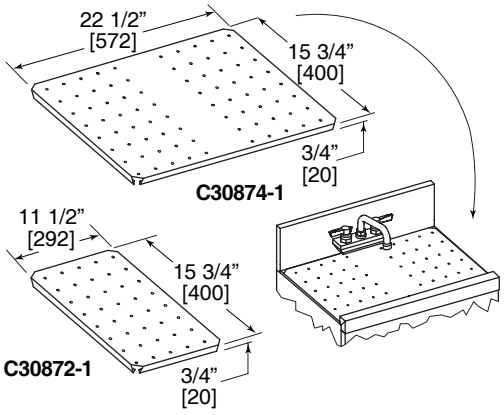
ELECTRONIC "TOUCH-FREE" FAUCET ADAPTER



PART NO.	UAC-EFA
APPLICATION	Converts most faucets into an automatic "Touch-Free" faucet. Simply remove the faucet aerator and install the adapter to end of spout with a simple screw-on installation.
FLOW RATE	2.2 GPM Aerator. Infrared sensor stops water flow automatically. 3-minute automatic time-out feature minimizes chance of overflow. Manual on/off over-ride button provides constant flow to fill sink or containers.
WATER TEMP.	Manually set the faucet handles to desired temperature.
POWER SUPPLY	(4) AAA Batteries (not included). Low battery indicator.
SENSOR RANGE	2"- 10" (5- 25cm) based on sink type and illumination.
WORKING PRESSURE	10-125 psi

UAC-EFA

AUTOMATIC FAUCET CONTROLLER



PART NO.	UAC-HWFC
APPLICATION	Converts any faucet to "Hands-Free". Simply remove the faucet aerator and install controller to end of spout (supplied with universal adapters).
FLOW RATE WATER TEMP	Manually set the faucet handles to desired water flow and temperature.
MATERIALS	Brass and stainless steel with an anti-microbial coated lever
OPERATION	Automatic self-closing "Hands-Free" full on position

UAC-HWFC

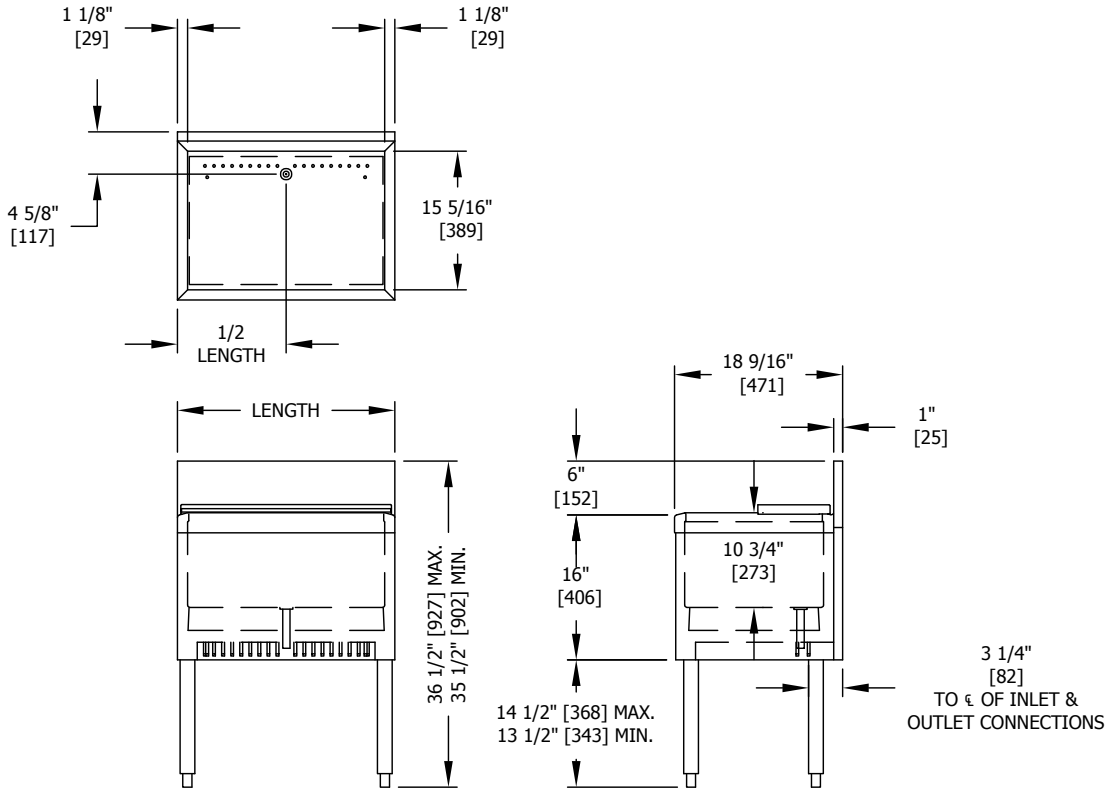
KEY PRODUCT FEATURES AND BENEFITS

- All stainless for durable easy to clean surfaces
- Fully insulated to reduce ice melt in warm climates
- Highly efficient cold plates instantly chill your soft drinks to the correct temperature
- Eco-friendly foam insulation is efficient and has zero impact on global warming or ozone depletion
- Stainless steel legs with adjustable thermoplastic feet are strong and install easily without tools
- Available with or without a cold plate to suit your bartender's needs

Quick Features:



- Fully insulated with highly efficient eco-friendly polyurethane foam
- Built with stainless steel to maximize the lifespan
- Boldly innovative cold plate design increases thermo efficiency to instantly chill your soft drink to the right temperature
